

STREAMING ANALYTICS AT SCALE

4x MORE DATA 4x LOWER COST

Hydrolix is a cloud data platform built to power data-intensive applications. Hydrolix combines stream processing, decoupled storage, and indexed search to deliver real-time query performance at terabyte scale for a radically lower cost than other cloud data platforms.

GET A DEMO

Powering the next generation of data-intensive applications

OBSERVABILITY AND SIEM

Combine data from multiple streaming sources. Extend your hot data retention window from weeks to years. Stop sampling, using rollups, or simply throwing data away. Analyze all your data whether it's an hour or a year old.

RETAIL

Collect and retain years worth of user data. Make better real-time recommendations, personalize the shopping experience based on more behavior data, and scale up for flash sale events without overprovisioning.

ADTECH

Extend your reporting windows, build better programmatic models, and improve campaign performance for a tiny fraction of what it costs with standard AdTech analysis and reporting tools.

AI OPS

For your data science team, more data in hot storage means better models and fewer delays. For your ops team, track model and feature drift detection, input and output data quality, model explainability, API issues, and performance. And reduce the cost of building, deploying, and managing AI-enabled products across your organization.

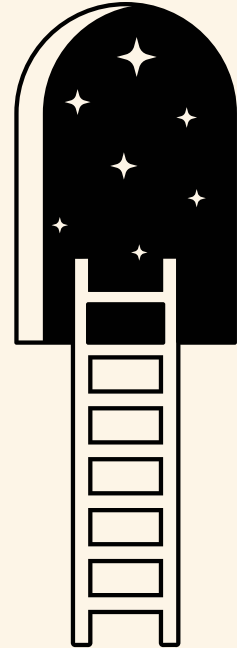

MEDIA DELIVERY

Combine and normalize logs from multiple CDN vendors, creating real-time views to manage traffic distribution and troubleshoot issues.

Key Benefits

- › Hot storage performance at object storage prices.
- › No overprovisioning. Scale up for peak activity. Scale down when activity subsides.
- › Run in your VPC and control your data.
- › Reduce your data footprint and storage costs with 20-50x compression.
- › Achieve sustainability goals with smart resource utilization and a lower carbon footprint.
- › Bring your own dashboard. No proprietary interface. Connect via SQL or Spark APIs.

At MediaMath, we chose Hydrolix because, with Hydrolix, we could store more data for a lot less, which in turn allowed us to not just greatly improve auction performance and ML model quality but build new products for our customers.

– Andy Ellenthal
EVP Sales & Service | MediaMath

We have a lot of seasonality in our traffic and just being able to scale on-demand infrastructure just from an ingest and query standpoint, that gives us a ton of flexibility.

– Patrice Boffa
Chief Customer Officer | Arkose Labs

About Hydrolix

Hydrolix is a cloud data platform designed for real-time log analytics that powers next-gen, data-intensive applications in observability, security, AdTech, media, AI, and other sectors.

With our unique design, you can save 75% or more on log management and analytics while retaining 4x more data. And by lowering your data footprint, you can also reduce your application's carbon footprint.

Stop throwing away your data or paying too much for it.
