

Placement Rate Calculation Methodology

The calculation of our placement rates takes into consideration program completers of the Medical Assistant, Dental Assistant, and Patient Care Technician programs from December 2021 to November 2022. The placement rate is based on graduated students who were placed in a paid job for a reasonable period of time after completion aligned with a majority of the education and training objectives of the program.

The employment classification is verified by the school (and verifiable by third parties such as our Accrediting Commission of Career School and Colleges (ACCSC)) as follow:

1. Regular Employment
2. Self-Employment
3. Career Advancement (Students that are already employed at the time of graduation can be considered employed when completing the program of study)

We track placement with the graduate or the employer verification.

Graduates in the following categories are excluded from the calculation of placement rates:

1. Graduates pursuing further education
2. Graduates unavailable to work due to a medical condition
3. Graduates incarcerated
4. Graduates performing military duties
5. Graduates diseased
6. Graduates living outside the United States

Who affects the placement rates?

1. Graduates employed in unrelated field
2. Graduates unemployed
3. Graduates unknown (After multiple attempts to communicate with the graduate, using communication by phone, emails, Facebook or other ways, it was impossible to obtain information, therefore we declare it Graduates unknown)

In the calculation of this placement rate are included the total graduates between September 2018 to August 2019 for Medical Assistant, Dental Assistant and Patient Care Technician programs minus exclusions divided by graduates employed in the field.

Placement Rates by Program Report Date 2024

Formula: Placement Rate = Graduate employed in the field / Total graduate with the exclusions
