4290. India House, grand opening by Yogananda's Self Realization Fellowship (SRF) in Los Angeles (Photograph). 1951.

• **Summary:** India House is a vegetarian restaurant located at 4860 Sunset Blvd., Los Angeles, California. This photo shows the grand opening, with 3 palm trees along the street, three cars (including one Cadillac from the 1950s) parked along the sidewalk, an American flag at half mast by the side of the restaurant, and about 100 people, all dressed formally, standing on the sidewalk outside the restaurant.

Note: We know that India House was open by March 1952, for it is mentioned in Yogananda's obituary; he died on 7 March 1952.

• **Summary:** Ellen White, founder of the Seventh-day Adventists, expressed her views on vegetarianism after she was converted to this diet in 1864. See Bibliography p. 679-703.

4293. Nicolici, Dumitru. 1951. *The original diet*. New ed. 4th impression [printing]. Summer Hill, NSW, Australia: Printed by Religious Liberty Publishing Assoc. 151 p. Illust. 21 cm. [81* footnotes]

• **Summary:** Quoting extensively from Biblical scriptures and the writings of Ellen G. White, this Seventh-day Adventist book presents the principles of vegetarian nutrition, and gives details of the adverse effects on health and character from consumption of meat, dairy products, eggs, alcohol, spicy condiments, and stimulants of all kinds. Contains recipes for fruit, nut, grain, and vegetable dishes. The author was born in 1896.

Chapter 9, titled “Milk, Butter, Eggs & Cheese” is very critical of these products as foods, and suggests that they be dispensed with as soon as possible. “Thousands of infants die annually because of indigestion set up by the use of cow's milk.” Cow's milk contains large numbers of germs, some of which produce diseases such as typhoid fever and tuberculosis. “Cheese must certainly be ruled off our tables as unfit for human food” since it contains large numbers of germs and microbes—“in every pound nearly twice as many as there are people upon the face of the earth.”

Chapter 10, titled “The Soya Bean,” provides an alternative to dairy products and meat. It begins: “The soybean has been referred to as the Wonder Food of the world... It is called the ‘meat without bones.’” It is an “ideal source of protein.” From soybeans can be made soya milk which is “entirely free from the disease germs that make milk a potential disease carrier.” Soy-related recipes include: Mayonnaise without egg (p. 138). Soy-bean mayonnaise (with soy-bean milk, p. 138). Cooked dressing (with soy bean flour, p. 138). Soy-bean milk (p. 139). Baked soy-bean croquettes (with cooked, ground soybeans, p. 139).

• **Summary:** About vegetarianism. The 3rd edition was published in 1946. An 8th edition was published in 1955. The author is a woman and a physician. Address: Humlebæk,

Denmark.

4295. Oldfield, Josiah. 1951. My friend Gandhi. In: Chandrashankar Shukla, ed. 1953. *Reminiscences of Gandhiji*. Bombay, India: Vora & Co. Publishers Ltd. See p. 187-89.

• **Summary:** This book contains articles by 48 contributors. Josiah Oldfield, who wrote this article on 25 Oct. 1948, became M.K. Gandhi's closest friend during the latter's last year in London (1891). He and Gandhi shared "digs" in St. Stephens Square, Bayswater, and together founded the West London Food Reform Society. Oldfield outlived Gandhi. He wrote this reminiscence on 25 Oct. 1948 at Doddington. "The name Gandhi always touches a warm corner of my heart. It recalls one day in London, when this young, shy, diffident youth, slim and a little weakly, came to see me on the question of his diet... He had fallen into the hands of doctors who had told him that unless he ate meat and took beef-tea he would surely die. Gandhi related to me quite simply the conflict that had gone through his soul. He told me how, in India, he had with some other youths tried the experiment of tasting flesh-food to prepare before coming to England. He found, however, that the meal was so repulsive that he then decided that, coming to England, he would still hold to his faith and that nothing should induce him to break his religious vows."

When the doctor assured Gandhi, "on his honour as a physician and from the experience of the whole medical profession, that people could not live in England without meat," Gandhi asked the doctor to give him a day to think about the problem. He returned and explained "that if it were God's will that I should die I must die, but that I was sure that it could not be God's will that I should break the oath that I made at my mother's knee before I left India."

"It is interesting here to note that within a few years this doctor was dead, that Gandhi lived on to move the world by his heroism, and that today it is becoming quite the habit of the higher classes in England to adopt a fruitarian dietary."

"From that time on I saw Gandhi frequently. I got him elected on the London Vegetarian Society's Committee, and then later on we took rooms together in St. Stephen's Square, Bayswater, London, and founded the West London Food Reform Society."

"These were happy days of consciousness that we were helping to make the world better, and they formed a fine training ground in which Gandhi learnt that by quiet persistence he could do far more to change men's minds than by any oratory or loud trumpeting."

"Gandhi will always remain to me the type of the honest man who was in search of Truth and justice for mankind. He was indeed a type of 'A good shepherd who was always out to seek and to save the wounded and downtrodden and homeless and oppressed.'" Address: Doddington, England.

• **Summary:** Page 94 discusses complete, partially incomplete, and incomplete proteins: "On the basis of tests, such as those of Osborne and Mendel already mentioned, in which young experimental animals are fed diets containing only a single, isolated protein, the following qualitative classification of proteins has been suggested and considerably used in teaching:

"(1) 'Complete' proteins: those which maintain life and provide for normal growth of the young when used as the sole protein food. Casein is the example of a complete protein in the preceding discussion. Other proteins in this group include lactalbumin of milk; ovalbumin and ovovitellin of egg; glycinin of soybean; excelsin of Brazil nut; and edestin [from hemp], glutenin, and maize glutelin of the cereal grains.

"(2) 'Partially incomplete' proteins: those which maintain life but do not support normal growth... Gliadin is representative of this group.

"(3) 'Incomplete' proteins: those which, as sole dietary protein, are incapable of supporting either growth or life. Zein clearly belongs to this class, as does also gelatin."

"When grain products, vegetables, fruits and milk have all been given their full places in the diet, the result is a food supply and dietary of such excellence that the extent to which meats, fats, and sweets are added is of relatively little consequence" (p. 334).

The following nutritional information about soyfoods is given: Amino acid content of soybean flour (p. 336). Nutritional composition of soybean flour, flakes, and grits—medium fat (p. 403). Mineral and vitamin content of soybean flour, flakes, and grits—medium fat (p. 413). Address: Columbia Univ., New York.

4300. Wassmer, Lawrence C.; Payne, Charles K. 1951. *Butler, New Jersey in story and pictures*. Butler, New Jersey: Butler Argus. 144 p. Illust. Portraits. Index. 31 cm.

• **Summary:** On 7 August 1901, Albert Straeble [Stroeble, Stroebele] was issued a passport. He was born in Kranchenwer [Krauchenwies], Hohenzollern, Germany on 1 May 1852. He had come to the US aboard the Main from

Bremen, Germany on or about 14 August 1876. He became a naturalized citizen 2 November probably 1885. He was a missionary.

“A small school was built and placed in charge of the Franciscan Sisters of Peekskill. Seven years later Father Francis left and in January 1890 it was decided to establish a ‘residencia’ in Butler with Father Albert Stroeble as Superior.”

Page 82: “Louisa Stroeble [pronounced STRU-bul], who had studied the methods of Louis Kuhne and Arnold Rickli [sic, Rikli] and had taken courses in London, opened ‘Bellvue’ [Bellevue] in 1894 and successfully practiced the methods of her teachers. At this time, Dr. Benedict Lust had a hydrotherapeutic or water cure institute and came to Butler to participate in religious song fests. Here he met, and on June 11, 1901, married Miss Stroeble. Together they eventually made the Butler Yungborn the best known institution [of its kind] in the world.

“Bellvue [Bellevue] was started on the slope along Boonton Avenue, opposite the Catholic Cemetery, but later was moved to its present location in Grace Valley. Here the Butler Yungborn, patterned after the famous ‘Jungborn’ established by Adolph Just in the Harz Mountains of Germany opened September 15, 1896. Dr. and Mrs. Lust with Miss Caroline Meyer and the late Miss Lillie Franz as assistants. established the institution as the center of Nature Cure in America. In time, sun and air baths, many sleeping cabins, a swimming pool, and treatment rooms were constructed. A natural food and remedy store was established at 110 East 41st St., New York. In 1896 the American School of Naturopathy was founded. It was incorporated under the laws of the State of New York in 1905.

“Dr. Lust was justifiably known as the Father of Naturopathy. He instituted the *Kneipp Blaetter* in 1898, the *Naturopath and Herald of Health* in 1900 and the *Nature’s Path* in 1925. In addition to these labors, he translated many books by German authors into English, among them Just’s *Return to Nature*; the *Unity of Disease*, by Louis Kuhne; *The Water Cure* by Priesnitz [sic, Priessnitz] and Kneipp; and *The Sun and Air Cure* by Arnold Rickli [sic, Rikli]. While carrying on these activities he lectured all over America, founded the World Reform League [sic, or was it Dr. Benjamin Lusk?], *The American Naturopathic Association Inc.*, international in scope, and published the *Universal Naturopathic Encyclopedia* [1918, with Edward Earle Purinton].

“Some years after the Butler Yungborn was in successful operation, a Yungborn was established in Tangerine, Florida [in Dec. 1913].

“Mrs. Louisa Stroeble Lust, the manager at Butler died July 10, 1925. Dr. Lust carried on until his death September 5, 1945. The Yungborn is not in operation at the present time.”

4301. White, Julius Gilbert. 1951. *Abundant health: Expounding the Learn-how-to-be-well system of daily living*. 5th printing. Pine Mountain Valley, Georgia: Health and Character Education Institute. xix + 477 p. Illust. 24 cm. See p. 367-82. [25 ref]

• **Summary:** About vegetarianism, diet, and hygiene. Note that the author was formerly (for 11 years) head of the Lecture Bureau at Madison College, a Seventh-day Adventist college and sanitarium. A portrait photo (p. vi) shows Julius G. White.

One chapter titled “The soybean: The wonder food of the world” (p. 367-82) discusses (with some recipes) the nutritional value of soybeans, Soybean milk and the pulp left after making it, soy flour, whole soybeans, vegetable meat (meat substitutes), soybean cheese [tofu], home-made soy butter (made from 4 tablespoons each soy flour and water, 1 cup of oil, a little salt and butter color if desired), soy mayonnaise, soy acidophilus milk, soy sprouts, soy sauce, soy coffee, and soy protein substitute for egg-white.

4302. Winsten, Stephen. 1951. *Salt and his circle*. London and New York, NY: Hutchinson and Co., Ltd. 224 p. Illust. 22 cm. Preface by George Bernard Shaw. Illust. 22 cm. [47 ref]

• **Summary:** A colorful biography of Henry Stephens Salt (1851-1939). Contains 29 illustrations, mostly black-and-white photos, with many of Salt, his wife (Kate Joynes Salt), ancestors, and friends.

His many friends included Edward Carpenter, Clarence Darrow, Havelock Ellis, Mahatma Gandhi, Algernon Charles Swinburne, John Galsworthy, Thomas Hardy, Rudyard Kipling, Havelock Ellis, Count Leo Tolstoy, William Morris, Peter Kropotkin, Ouida, George Bernard Shaw, Robert Cunninghame-Graham, James Keir Hardie and Fabian Society co-founders Hubert Bland and Annie Besant.

Appendix 2 is a bibliography of books by Henry Salt in chronological order. During his lifetime Salt wrote almost 40 books. His first, *A Plea for Vegetarianism* (1886) was published by the Vegetarian Society, and in 1890, he produced an acclaimed biography of philosopher Henry David Thoreau, two interests that later led to a friendship with Mahatma Gandhi.

Salt is credited with being the first writer to argue explicitly in favour of animal rights, in his *Animals’ Rights: Considered in Relation to Social Progress* (1894), rather than focusing on improvements to animal welfare. He wrote: “If we are ever going to do justice to the lower races, we must get rid of the antiquated notion of a ‘great gulf’ fixed between them and mankind, and must recognize the common bond of humanity that unites all living beings in one universal brotherhood.”

Note: The author has been a strict vegetarian [vegan] for over 30 years.

4304. **Product Name:** Dr. Bronner's Balanced Mineral Salt (Powdered).

Manufacturer's Name: Dr. Bronner & Associates.

Manufacturer's Address: 447 South Hope St., Los Angeles, California. Phone: 619-745-7069.

Date of Introduction: 1952 January.

New Product–Documentation: Talk with Dr. E.H. Bronner himself. 1990. Feb. 8. He is a rabbi and soap maker, age 82. He introduced this powdered product in Jan. 1949. He was born and raised in Germany, in a family of soap-makers. The first soap plant was started by his grandfather. He is a nephew of Albert Einstein. Neither a PhD nor an M.D. (physician), he has a German doctor of chemistry degree (SSMC: Seifensieder Meister Chemiker, or SMMC: Soap Maker Master Chemist, recognized by the American Chemical Society). He came to America in 1929 and became superintendent of a large soap plant in Pennsylvania. From 1929 to 1944 he built 3 soap factories in America.

His discovery of this product went through at least 6 steps, but there were two main ones. First, in 1933-34, when Hitler came to power and German imports were unpopular in America, he began to look for potassium salts (potassium hydroxide) for soap making. The imported German potassium source made a better product. He found a natural mineralized dulse (that had been overlooked by others) which he used with good results in his soaps.

Second, in 1938, as a young man with 3 lovely children, he had dental plates—he had lost his teeth. His body had craved calcium since he was a young boy in Germany and he would eat eggs with the shells. In 1941 he read the front-page headlines about “The town without a toothache,” Hereford, Deaf Smith County, Texas. The American Dental Association (83rd annual convention, Houston, TX) discovered that the high calcium, phosphorus, magnesium, vitamin D, and fluoride content of the food and water was instrumental in preventing tooth decay. That article plus his own personal experience led him to believe that there was a great need for a balanced mineral seasoning that contains calcium, phosphorus, magnesium, potassium, sodium, iodine, iron—all the minerals in the right proportion. He wanted to make both a seasoning and a mineral / vitamin supplement that was a balanced food. He started by using what the Romans called *sal digestivus* or “digestion salt,” a red mineral salt containing potassium, sodium, iron, chloride, found in deposits on the surface of the earth, produced by Chief Chemist God from ocean dulse (a sea vegetable), i.e. mineralized dulse. He uses it to this day as the source of potassium in his mineral seasoning. The only ingredient listed on the original product was “mineralized dulse.” This innovative ingredient became the key ingredient in his

various products. In about 1952, to add more flavor, he first began to add a powdered HVP (made by hydrolysis of corn, whole wheat, and soybeans), which he bought as powdered HVP (from a company whose name he no longer remembers and which no longer exists) and blended it with the minerals and vitamins in the right proportions. HVP was developed in America in the 1930s and became commercially available in the 1940s. His present source of HVP is a “military secret.” This powdered mineral seasoning was his first soy product. It got off to a very slow start. This product (which still exists) has remained basically unchanged since 1952. It and its liquid counterpart are doing well, especially considering the fact that he has no salesmen and no advertising. His original company was located on Hope Street (at 5th and Hope) in Los Angeles, in a 10-story building. In 1955 he got his current building at Box 28, Escondido, CA 92025. From 1955 to 1962 he commuted between the two locations and in 1962 moved everything to Escondido.

He became a rabbi in 1962-63 after a lecture in Watts, the black ghetto near Los Angeles. The 200 blacks applauded but a white man shouted: “You stole that brilliant speech. You stole it from Rabbi Hillel’s 2,000 year old Torah. You stole it.” Hillel was a top man in the Dead Screen Scrolls. Hillel said that “A great teacher must first a self-supporting, creative handworker be.” Otherwise he can be bought and sold. In about 1963 he changed the name of his company from Dr. Bronner & Associates to All God One Faith, he changed the name of this product to Dr. Bronner's Balanced Mineral Seasoning, and he began to add spiritual messages to the labels of his products. But only the quart sizes are large enough to contain his full message. The pint is too small to make sense.

From 1949 to about 1970, 90% of his sales were food products. From 1970 on, about 90% of his sales have been his soaps and the food is only 10%.

Today Dr. Bronner is totally blind. In 1944 he buried his wife in central Illinois. Weighing 71 pounds, her jaw bones broken, she had been beaten and starved to death by Jewish people. She was German Catholic and he is German Jewish. In 1941 he lived in Chicago as director of research for a soap and perfume company. A relative wired him for funds (which he did not have) to save their mother from the Nazis. His wife tried to commit suicide, so she was sent to a state hospital where Jewish refugees were in charge. The day before she was to go home, she was forced to do demeaning work by a Jewish doctor. She refused and said “No you damned Jew.” The doctor sent her to a ward where she was further starved and beaten. *Readers Digest* (Feb. 1962) did an article on the subject, titled “The progeny of the same people who get put away.” Now Dr. Bronner began to investigate what was going on and to speak on peace. At the University of Chicago he was captured as a Jew and for 3 months was unconscious and almost dead, having been given shock treatments that burned the back of his eyes.

He escaped from that place in Central Illinois and fled to California to forget the whole thing. Between 1971 and 1973 he went blind from the electrical shock. He has two sons: A teacher in Milwaukee, and chemist in Glendale, California. They will continue his business. Though Hitler killed 6 million Jews, the Soviet Communists, especially Stalin, killed 66 million people, including 16 million Jews. Today there is a great danger of a nuclear warehouse exploding; it would destroy the world. Dr. Bronner says that no good, in-depth article has ever been published about his work with food.

Paul Bragg was a brilliant lecturer and personal friend of Dr. Bronner's. His product was introduced after Dr. Bronner's, in about 1955.

4305. *Science News Letter*. 1952. Meatless diet adequate: Both vegetarian and carnivorous types of diet adequate to feed mankind. Milk and other foods of animal origin are not necessary for nourishment. 61(5):70. Feb. 2.

• **Summary:** This according to Dr. Robert S. Harris, Inst. of Technology, at the International Conference on Vitamins held in Havana, Cuba. He adds:

"There is not enough land in the world to feed all mankind on a meat and milk type of diet. But people can be well nourished on a diet that is rich in cereals, such as wheat, corn and rice, and in legumes, or beans, and other vegetables and fruits."

"There is no indispensable food and it is now obvious that there are many ways to compound a good diet... It does not matter whether the calcium comes from milk or tortilla, whether the iron comes from meat or tamapa, ... whether the tryptophane comes from eggs or soybeans... so long as these nutrients are available." Address: USA.

4306. *Science News Letter*. 1952. Meatless diet adequate: Both vegetarian and carnivorous types of diet adequate to feed mankind. Milk and other foods of animal origin are not necessary for nourishment. 61:70. Feb. 2. [7 ref]

• **Summary:** Dr. Robert S. Harris of the Massachusetts Institute of Technology (MIT) recently declared at the International Conference on Vitamins (held in Havana, Cuba) that "Both the vegetarian type and the carnivorous type of diet can adequately feed mankind." There is not enough land in the world to feed all mankind on a meat and milk type of diet. "It does not matter whether the calcium comes from milk or tortilla, whether the iron comes from meat or tamapa, whether the niacin comes from liver or peanuts, whether the tryptophan comes from eggs or soybeans, or whether the calories come from wheat or rice, so long as the nutrients are available." Address: Nutritional Biochemistry Labs., MIT, Cambridge, Massachusetts.

Obstbau 71:23. Feb. 1. [Ger]*

4308. Jones, Herbert H. 1952. Food and fads. *Vegetarian Messenger and Health Review* (Manchester, England). Jan/Feb. p. 31-34. *

• **Summary:** A critique of a recent speech by Dr. Charles Hill on vegetarian and vegan diets.

4309. Nasich, Pinchas. 1952. [Letter about vegetarianism in Israel and the Meals for Millions organization in Los Angeles]. *Vegetarian News Digest* (Los Angeles) 2(7):19. Winter.

• **Summary:** "There are about 8,000 vegetarians in Israel and their number is steadily increasing. On the 17th of October the Vegetarians of Israel had a meeting in Jerusalem. There is already a vegetarian settlement in Mishmar Hashivah. The founding of a new vegetarian village has begun, also a Vegetarian Home for Children; also every effort will be made to open vegetarian restaurants in Jerusalem, Tel-Aviv and Haifa.

"Dear editor, could you kindly induce Meals for Millions, the Los Angeles organization which produces the most famous Multi-Purpose Foods, to do their best to sell their MPF in Israel? There is a great protein scarcity here, and we vegetarians would like very much to enjoy this food which is now almost unobtainable in Israel." Address: Rishon, LeZion, Israel.

4310. Simonsen, Helen. 1952. New vegetarian society grows fast in Minnesota. *Vegetarian News Digest* (Los Angeles) 2(7):27. Winter.

• **Summary:** "At our first meeting held June 3, 1951, fifteen persons attended; at the second, July 1, forty-one persons attended; the two following meetings (July 22 and August 19) were at the country home of our president, near River Falls, Wisconsin, and the attendance at each of these exceeded one hundred. On September 30, we held a meeting at Minnehaha Falls in observance of World Day for Animals; at which seventy-five persons were present. On October 27 at the St. Paul YMCA, we had a vegetarian banquet, at which there were 127 guests. A strictly vegetarian meal was served, the recipe for the principal dish being taken from our own published 24-page, loose-leaf cook book currently being sold at 35¢ a copy.

"Each meeting has produced new members. We are a very tolerant group and realize that vegetarians are made and not born. While keeping our society on a practical footing, we are very conscious of the aesthetic value in the Vegetarian Way of Life and are constantly promoting the physiological benefits derived from a vegetarian diet. If the society continues to grow as rapidly as it has in the last six months, we shall soon be obliged to incorporate it into a legal entity.

"We have received a most generous proposition from one of our philanthropic members, namely, that when we

have 1000 members he will deed 500 acres, surrounding a beautiful lake, for a summer camp, or permanent habitation. This land is in northern Wisconsin, and we are therefore hopeful of securing members from states adjoining Minnesota, although we realize it is not impossible to achieve that goal in Minnesota.” Address: Secretary, 881 Forest St., St. Paul 6, Minnesota.

4311. *Vegetarian News Digest (Los Angeles)*. 1952. Organic food market opens in New York City. 2(7):27. Winter.

• **Summary:** “Directed by and under the personal ownership of Alec Burleigh, and sponsored by the New York Natural Hygiene Society, an establishment offering organically-grown fruits, nuts and vegetables for the benefit of vegetarians and health-minded individuals has opened its doors at 236 West 10th Street, New York City.

“The new distributing center will be known as Guaranteed Organic Foods Market and will offer exclusively foods grown in this nature and certified as to their source to be authentically cultivated according to the best organic principles.

“Mr. Burleigh has made an intensive study of the subject and during the past few months has established personal contact with many farmers and growers who have dedicated themselves to this method of food growing.

“He will offer all fruits and vegetables in season and will specialize in whole grain products with bread that will be made from completely unrefined flour which has been stone-ground and slow-oven baked. Cookies of the same ingredients will also be on sale to cultivate the tastes of the young in the direction of organically-grown products.”

Note: This is the earliest document seen (March 2020) with the term “organic food” (or “organic foods”) in the title.

4312. *Vegetarian News Digest (Los Angeles)*. 1952. New York vegetarians enjoy a memorable Thanksgiving Day. 2(7):34. Winter.

• **Summary:** “On Nov. 22 the New York Vegetarian Society celebrated its 20th Annual Thanksgiving Day Dinner in the main ballroom of the Empire Hotel in New York City. The dinner was in reality a banquet and was enjoyed by 220 members and their friends...” A list of speakers is given.

4313. Winquist, O.A. 1952. Vegetarian restaurant expected to open in San Francisco. *Vegetarian News Digest (Los Angeles)* 2(7):29. Winter.

• **Summary:** “The San Francisco Vegetarian Society, which meets on the second Sunday of each month at 142 McAllister Street, is now getting pledges for supporting memberships to open a vegetarian restaurant in San Francisco.”

• **Summary:** American Vegetarian Union scores Vice

Presidential nominee S. Gould.

4315. *Time*. 1952. Diet and health. 59:72-73. April 21. *

• **Summary:** A study by Dr. Mervyn Hardinge, a Seventh-day Adventist, working toward a Harvard University degree in public health, found that vegetarians are as healthy as flesh-eaters.

4316. *Soybean Digest*. 1952. Vegetable diet can be adequate. April. p. 13.

• **Summary:** This is a summary, with several long excerpts, from: *Science News Letter*. 1952. “Meatless diet adequate: Both vegetarian and carnivorous types of diet adequate to feed mankind. Milk and other foods of animal origin are not necessary for nourishment.” Feb. 2. p. 70.

There is not enough land in the world to feed all mankind on a meat and milk type of diet. But people can be well-nourished on a diet that is rich in cereals, such as wheat, corn and rice, and in legumes, or beans, and other vegetables and fruits.

“Dr. Harris fears that ‘considerable harm’ has been done by shipping an excellent food, such as milk, into undeveloped areas for use in school lunch programs and telling children and their parents that milk and other foods of animal origin are necessary for their nourishment.

“‘It does not matter,’ Dr. Harris stated, ‘whether the calcium comes from milk or tortilla, whether the iron comes from meat or tampala, whether the niacin comes from liver or peanuts, whether the tryptophane [tryptophan] comes from the eggs or soybeans, or whether the calories come from wheat or rice, so long as these nutrients are available.’”

4317. Gallup, George. 1952. 1943 Gallup poll shows 2,800,000 vegetarians in U.S. *Vegetarian News Digest (Los Angeles)* 2(8):36. Spring.

• **Summary:** “Princeton, N.J., Oct. 1, 1943—Selecting a true cross-section of our adult population by age, sex, income level, religious belief and other factors, the Institute put the following question to the public from coast to coast: “‘Some people in the United States are vegetarians, that is, people who eat no fish, fowl or meat of any kind. Do you happen to be a vegetarian?’

“When the percentage claiming to be vegetarians is applied to the number of adults in the population, excluding members of the armed forces, the total comes to 2,800,000 vegetarians.

“The vegetarians encountered in the survey were asked why they happen to be vegetarians. The principal explanations given by them were reasons having to do with health, with religious or humanitarian considerations, or with taste preferences in food.

“So far as geographical location is concerned, the vegetarians seem to be fairly evenly distributed throughout the country. However, more of them are found in cities

than are found in small towns or farm areas. Cities of over 100,000 population show the highest percentage of people practicing vegetarianism, the survey finds.

"In common usage, a vegetarian, according to authorities on the subject, is one who abstains from flesh foods of all kinds, but who does use milk and eggs, along with products of the vegetable kingdom. In other words, most vegetarians should be described technically as 'lacto-ovo-vegetarians.' This is generally contracted to 'lacto-vegetarians,' but even that term is used infrequently, the simple word "vegetarian" sufficing to describe those who use the non-meat diet.

"George Gallup, Director. American Institute of Public Opinion."

4318. *Nature's Path* (New York City). 1952. Read *The American Vegetarian* (Ad). May. p. 24.

• **Summary:** This small (2¼ by 4¼ inch) ad states: "If you are interested in investigating the merits of the vegetarian diet and the principles, economic and ethical, of the vegetarian way of living, read *The American Vegetarian*. A Monthly which is edited in a vital, dynamic, up-to-the-minute manner featuring articles by well-known authorities on: Progressive health. Program for peace on earth. Unique personality sketches. Campaigns for medical liberty. Human interest stories. Meatless recipes. Striking photographs. Reports of world-wide activities." \$2.00 for 12 monthly issues. P.S. "Send for a free list of books on vegetarianism." Address: 117 W. 48th St., New York City, NY.

• **Summary:** This is an application for membership, limited to residents of Illinois.

4321. *Vegetarian News Digest* (Los Angeles). 1952. News from afar... [International Vegetarian Union]. 2(8):19. Spring.

• **Summary:** "We are pleased to inform our readers that Mr. Hanworth Walker, Secretary, International Vegetarian Union, with headquarters at 247 Tottenham Court Rd., London, W. 1, England, has accepted an invitation from the American Vegetarian Union to visit these United States during May, June and July. On May 15, Mr. Walker will have a conference with Dr. Jesse Mercer Gehman, president, American Vegetarian Union, in New York City. On June 26 Mr. Walker is expected to be in the City of the Angel; a complete itinerary of his many stops may be obtained through the A.V.U. office, P.O. Box 1725, Paterson, NJ [New Jersey].

"We again wish to announce the 1953 International

Congress to be held at Sigtuna, ancient capital of Sweden, from Aug. 1 to 8, inclusive... Vegetarians from all parts of the world will gather together in the above-mentioned village, and bear with them messages of goodwill to their Swedish hosts and to each other... The Swedish Vegetarian Society has arranged a most attractive program covering lectures, business meetings, excursions and civic receptions. Further details may be obtained by writing to the International Office..."

4322. *Vegetarian News Digest* (Los Angeles). 1952. In Memorium: Death of an editor. 2(8):21. Spring.

• **Summary:** "Edward L. Pratt, formerly editor, publisher and founder of *The American Vegetarian*, a monthly vegetarian newspaper still published at Pismo Beach, California, died on March 15, 1952, at Scott's Convalescent Home, Fair Oaks, Arroyo Grande, California, of heart trouble."

"Mr. Pratt was 76, and was born in the South. He originally published a year book in June 1942, devoted to promoting vegetarianism throughout the world. It was so well received that he launched *The American Vegetarian* in newspaper format in September 1942, and gradually built a worldwide circulation among vegetarians."

4323. *Vegetarian News Digest* (Los Angeles). 1952. Newsy Notes... [New York Vegetarian Society]. 2(8):22. Spring.

• **Summary:** "The New York Vegetarian Society has its sociables on every third Saturday of the month at Adelphia Hall, 74 Fifth Avenue, New York City—lectures, folk dancing and refreshments are offered to members, friends and the public. The society announces that in no way can it become connected or involved with the American Vegetarian Party and its political program since it is an educational and membership organization."

4324. *Vegetarian News Digest* (Los Angeles). 1952. Chicago Vegetarian Society comes of age. 2(8):35. Spring.

• **Summary:** On 15-16 Feb. 1952 the Society celebrated its second anniversary in epoch-making style.

"Highlighting the gala two-day event were Dr. Herbert M. Shelton of San Antonio, Texas, one of the foremost authorities on natural healing methods, and editor and publisher of the *Hygienic Review*; and Symon Gould, a dynamite-packed little New Yorker, with a flair for publicity, drive and promotion, inspired by his zealous efforts for vegetarianism."

4325. *Vegetarian News Digest* (Los Angeles). 1952. A vegetarian city! 2(8):36. Spring.

• **Summary:** Keene, Texas, populated solely by Seventh-day Adventists, is entirely vegetarian. Furthermore, the women wear no make-up, alcohol and tobacco are not sold, and there are no police, courts, or judges.

4326. *Vegetarian News Digest (Los Angeles)*. 1952. Death of an Indian [Paramahansa Yogananda]. 2(8):44. Spring.

• **Summary:** An obituary. Yogananda, a vegetarian and founder of the Self-Realization Fellowship Church of All Religion, died on 7 March 1952, at the Biltmore Hotel in Los Angeles. Age 60, he was delivering a speech before 250 persons and introducing Ambassador Binay Ranjen Sen, new envoy to India.

Self-Realization "Fellowship headquarters are at 3880 San Rafael Avenue on Mt. Washington in Highland Park [a residential area in the city of Los Angeles], where Yogananda also made his home. His physician said he had treated the leader for a heart condition last month.

"India House, a beautiful vegetarian dining establishment, is operated by the Fellowship at 4860 Sunset Blvd., in Los Angeles; hours are 11 a.m. to 8 p.m., closed Mondays only."

• **Summary:** "On 14 May 1952, R. Hanworth Walker, Secretary of the International Vegetarian Union, spoke before a capacity audience at the Great Northern Hotel in New York City. The meeting was called by the Vegetarians' Advancement Federation, and Mr. Walker was introduced by Dr. Jesse Mercer Gehman, president of the American Vegetarian Union. Twenty-four new members joined the Federation as a result of the meeting."

Excerpts from the speech, titled "A Logical Approach to World Peace," are given. A portrait photo shows Hanworth Walker.

4338. *Vegetarian News Digest (Los Angeles)*. 1952. American Vegetarian Union cannot engage in politics and tells why. 2(9):40. Summer.

• **Summary:** "The American Vegetarian Union, Inc., a non-sectarian, non-political and nonprofit organization, formed at Lake Geneva, Wisconsin, in 1949, recently reiterated its position in relation to political activity. The Union definitely does not as an organization endorse any party and has no connection whatsoever with the American Vegetarian Party instituted by Symon Gould, a New York City vegetarian and hygienist.

“Dr. Jesse Mercer Gehman, president of the American Vegetarian Union, Inc., P.O. Box 1725, Paterson, N.J., has issued the following statement:

“Our philosophy is not based on food alone, though the keystone of our foundation is: ‘All Life is Sacred.’ We would repeat the context of the philosophy of Vegetarianism, as it appears in our Constitution:

“(1) Vegetarianism is conducive to better living and to the physical, mental, moral, ethical and spiritual development of the entire human race.

“(2) It is the natural way of life that enlivens man of every race, creed and color.

“(3) It upholds the sacredness of life as an inviolable principle.

“(4) It respects the birthright of every creature to life and perfection under the eternal laws of nature.

“(5) It advocates a natural diet excluding fish, flesh and fowl.

“(6) It claims the liberty and inalienable right of everyone to use the healing forces of nature for the maintenance and restoration of health.

“(7) It seeks peace through Universal Brotherhood.”

4339. *Vegetarian News Digest* (Los Angeles). 1952. Should vegetarians engage in politics? [Gen. Herbert Holdridge hopes to be the first U.S. vegetarian president]. 2(9):2, 54-55. Summer.

• **Summary:** A long, rambling statement. The short answer is “It’s OK.”

4340. Watchtower B. and T. Society, Inc. 1952. Jehovah’s witnesses’ reply (Letter to the editor). *Vegetarian News Digest* (Los Angeles) 2(9):16-17. Summer.

• **Summary:** “April 1, 1952. Dear Mr. Striegel: The reported discussion as presented in your letter does not express the Watchtower Society’s view on vegetarianism. We hold to what the Bible says on this matter, and it is that God gave instructions that man could eat meat if he wished to do so but that those who ate meat should not criticize those who did not and those who did not should not criticize those who did. It is an individual matter for each one to decide for himself, and not a matter over which one should criticize another. The apostle Paul certainly showed it is not a matter of Christian belief when he said at I Corinthians 8:8, ‘But meat commendeth us not to God; for neither, if we eat, are we the better; neither, if we eat not, are we the worse.’ This is the Christian principle. It was firmly established long before, at the time Noah came out of the ark after the flood. Then it was that God said, ‘And the fear of you and the dread of you shall be upon every beast of the earth, and upon every fowl of the air, upon all that moveth upon the earth, and upon all the fishes of the sea; into your hand are they delivered. Every moving thing that liveth shall be meat for you; even as the green herb have I given you all things’ (Gen. 9:2, 3)...”

4341. Badenoch, A. Guthrie. 1952. Diet and stamina. *British Medical Journal* ii(4785):668. Sept. 20.

• **Summary:** Two vegans were found to be anemic, probably deficient in iron and riboflavin. Address: Edinburgh, Scotland.

4342. Hauser, Gayelord. 1952. Be happier, be healthier. New York, NY: Farrar, Straus and Young. 278 p. No index. 22 cm. [63* ref]

• **Summary:** This book advocates natural health and prevention using the sun, earth, air, water, and food. His faithful companion is Deucey, his dog. The chapter titled “Discoverers and recoverers” (p. 71-90) discusses: Priessnitz, Father Kneipp (began treatment in 1855), Louis Kuhne (first of the urban pioneers in natural healing, he established a clinic in Leipzig, Germany. A vegetarian, he wrote *Die Neue Heilwissenschaft*, which enjoyed worldwide success), Schweningen, Edward Hooker Dewey, Adolf Just (his Jungborn clinic was in the Harz mountains), Dr. Bircher-Benner, Arnold Rikli, Samuel Hahnemann (founder of homeopathy), Dr. Lahmann (his Weisser Hirsch Sanatorium in Dresden was famous; Hauser was partly cured by his Lacto-Vegetarian Diet), Dr. Möller (taught fasting in Dresden), Ragnar Berg (Swedish chemist; from 1909 to 1921 he was in charge of Dr. Lahmann’s sanatorium), Mikkel Hindhede (story of his nationwide experiment in Denmark during World War I; he practiced what he preached). A table (p. 129) gives the ideal weight for men and women of different height and 3 different frames (small, medium, large).

The chapter titled “Food is our salvation” (p. 138-66) discusses: The appestat (discovered by Dr. Norman Jolliffe), the food cure idea (started by Dr. Heinrich Lahmann in Dresden; Möller, Berg, and Bircher-Benner), the value of vegetables and vitamins, start all meals with fresh (raw) food, Dr. Brauchle’s sanatorium at Schoenau (Black Forest, Germany), breakfast, lunch and dinner (which should include “a good protein. Your choice of meat, fish, eggs, cheese, nuts, soya beans or mushrooms {p. 249}”), beware of harmful snacks, hidden hunger test (eat liver, kidney, or heart twice a week; incl. broiled meats and fish), get your chlorophyll from mixed greens, eat natural, unprocessed foods.

The chapter on “Happilogue” tells how he and Marion Preminger, in Sept. 1952, had an unforgettable visit with Albert Schweitzer who was doing organ recordings of Bach in his native town of Guenbach near Strasbourg. “It was one of the great experiences of my life.” They had dinner with Dr. Schweitzer at his home: Green salad with tomatoes, “delicious cold cuts of meats with two kinds of cheese—Swiss and cottage. There was one cooked vegetable, a basket of grapes, and yes there was a bottle of dry Rhine wine. This simple meal turned out to be a feast for me, the place, the food, the company.” Schweitzer was very familiar

with Bircher-Benner and Dr. Gerson of New York City. "There was a bowl of soya beans on the table and I took some because I love them and told him that even in America protein foods were getting more and more expensive, only the rich can afford steak and roast, and for years I have looked for cheaper proteins and that the best I found and popularized were powdered skim milk, dry food yeast, and soya bean flour." Dr. Schweitzer said that "he has now planted soya beans. He realizes they are a good protein, but the natives [in Gabon] so far won't eat them, and all the arguments about how good and how healthful they are will not make them change their minds—they won't touch them." Then Schweitzer said, with a twinkle in his eyes, that he would do with his soya beans what Parmentier did with potatoes when they were first introduced into France from America. At first the French people did not like their taste and refused to eat them. Then Parmentier had a brilliant idea—which Schweitzer describes. "And that is what I'll do to my soya beans." After dinner, Dr. Schweitzer showed his guests a large oil painting of his hospital in Gabon (p. 213-15).

Note 1. This is the earliest document seen (March 2021) concerning soybeans in Gabon, or the cultivation of soybeans in Gabon. This document contains the earliest date seen for soybeans in Gabon, or the cultivation of soybeans in Gabon (1952 or before). The source of these soybeans is unknown.

Note 2. Antoine-Augustin Parmentier was born on 12 Aug. 1737 at Montdidier, France, and died on 13 Dec. 1813 (aged 76). He is buried in Paris below a large tomb.

Soy-related recipes: When baking bread at home, "substitute unbleached flour for white flour and try adding a tablespoon each of wheat germ, brewers' yeast, skim milk powder and soya flour for each loaf you bake" (p. 220). Dinnertime: Vegetable chop suey with [mung] bean sprouts and soy sauce (p. 233). Many recipes call for the use of red meat (steak), chicken, fish, and shellfish. Food tables, showing "percentages of daily recommendations," include soy beans (p. 261) plus many meats (p. 266-69). A photo (back cover) shows Hauser standing by the sea at Taormina, Sicily, Italy in Sept. 1952. Address: Los Angeles, California.

4347. *Vegetarian News Digest (Los Angeles)*. 1952. News from afar... [Canadian Vegetarian Union, film of Geoffrey Hodson of New Zealand on vegetarianism; vegetarian news from Israel, Holland, Scotland, Japan, and Madras (India)]. 2(10):18. Fall.

• **Summary:** "From the Canadian Vegetarian Union, Toronto Unit, we learn that the well-known lecturer on economics, Scott Nearing, will speak before their group on October 18. Details of the event will be given later. Inquiries may be directed to Eva M. Budd, Secretary, 28 Walker Avenue, Toronto, Ont., Canada.

"Mr. Geoffrey Hodson, president of the New Zealand Vegetarian Society, shall make a 16 m.m. sound film on Vegetarianism, describing every phase, with photographs and animated cartoons of diagrams and anatomy. It will be available at ten pounds each to help pay the initial cost. Applications for this novel, long-needed medium to publicize the Vegetarian Way of Living may be made to Geoffrey Hodson, 10 Belvedere Street, Epsom, S.E. 3, Auckland, New Zealand. Mr. Hodson will soon be in the United States to lecture to some thirty different Vegetarian Societies, as arranged by Mr. Hanworth Walker, Secretary of the International Vegetarian Union, with offices at 247 Tottenham Court Road, London, W.1, England.

"* Israel—A very strong Vegetarian Society in Israel is rapidly gaining strength and has already founded a Vegetarian Village, a Vegetarian Settlement, and a Vegetarian Home for Children. They are planning the building of a Temple and Educational Block to the memory of Dr. Zamenhof, the Creator of Esperanto, in order that Jewish children may learn the Esperanto language and receive vegetarian education.

"* Holland—The Dutch Vegetarian Society has formed a Medical Research Group comprised mainly of doctors, dentists, food research workers and chemists for the purpose of making a scientific study of nutrition. They are at present engaged in examining the vegan diet. Information may be obtained from Dr. Tine Kazyk, Stationsplein 21, Arnheim, Holland."

Note: Items marked with an asterisk (*) are from the periodical *World Forum*.

4348. *Vegetarian News Digest (Los Angeles)*. 1952. Boston Vegetarian Society plans activities. 2(10):34. Fall.

• **Summary:** "Organized only last Fall, Boston's Vegetarian

Society now has almost 25 members, and hopes to double that number before long. A quantity of the *Vegetarian News Digest* has been sent to Mrs. Elizabeth Hanron, Secretary, 16 Glenside Avenue, Jamaica Plain, Mass., for distribution.

"The society's president, Rose Millen, operates a Summer Health Resort from May to November at 350-372 Newport Rd., Nantasket Beach, Mass. It is a strictly vegetarian resort; unsprayed vegetables from a farm close by are used daily in the bill of fare.

"Miss Rose Millen is one of Boston's pioneers in health food activities, and is the author of *Light on Dietetics* (\$1.00 postpaid from the Digest office). Miss Millen was in the health food business for about thirty years and conducted a vegetarian restaurant in Boston for more than nine years."

4349. *Vegetarian News Digest (Los Angeles)*. 1952. Obituary [Elizabeth Gilliam Bronner]. 2(10):40. Fall.

• **Summary:** "Elizabeth Gilliam Bronner, wife of Emanuel H. Bronner, and a Los Angeles resident, passed away on Wednesday, Sept. 10, 1952, in Hereford, Texas, after a case of indigestion, fever, and 'colitis-attack' as reported by her husband. Mr. and Mrs. Bronner had been on a nationwide tour visiting cities which contemplated fluoridating their water supplies, a practice which Dr. Bronner, a research chemist was strongly opposing and exposing. Dr. Bronner's tribute to his dear wife, known as 'Lisa,' follows:

"My wife, Lisa, has done great work, in fact, she practiced what most of us only preach: Good deeds, good teamwork, good will, and good courage that will leave its footprints in the 'sands of time.'"

Note: Dr. Bronner was best known for his Dr. Bronner's Castile Soap, and the beautiful sayings on each container based on his "All-One-God-Faith" personal experience.

4350. Dunkel, Joan. 1952. The effect of vitamin B-12 on a certain vegetarian diet. *Walla Walla College Publications of the Department of Biological Sciences and the Biological Station* 1(4):59-64. Dec. 10. [18 ref]

• **Summary:** The introduction gives a brief history of the discovery of vitamin B-12 starting in July 1947. "Summary: A vegetarian diet [supplemented with vitamin B-12] has been developed which has produced five generations of rats, inferior to omnivores only in that their size was somewhat decreased. However, this diet was unable to sustain the animals beyond the seventh generation. Supplementing the diet with vitamin B-12, either oral or parenteral, did not result in any appreciable increase in the growth rate" (i.e. did not make the rats gain more weight in the same time). The five main ingredients in this diet were ground whole wheat (40%), rolled oats (10%), rye flour (10%), soy curd (10%), and brewer's yeast. This research was conducted in the physiology department of the College of Medical Evangelists, Loma Linda, California. Address: Walla Walla College, Washington.

4351. Hough, James. 1952. Vegetarianism and the healthy life. *Vegetarian Messenger and Health Review (Manchester, England)*. Nov/Dec. p. 188-90. *

• **Summary:** Physical, mental, and moral fitness are enhanced by the vegetarian diet.

4352. Adams, F. 1952. Hippocratic writings. In: *Great Books of the Western World*. London: Encyclopedia Britannica. Series editor: R.M. Hutchins. * Address: Greece.

4353. Kordel, Lelord. 1952. Eat and grow younger. Cleveland and New York: World Publishing Co. 315 p. Index. 22 cm.

• **Summary:** The author's basic message: Eat more protein (especially complete proteins) and get plenty of vitamins and minerals. "One advantage of a high-protein diet is that you can eat less bulk, yet be well nourished..." There are no references and no "about the author" section. He is opposed to vegetarianism (high-starch dishes take the place of high-protein foods) which is a "fad" and believes (incorrectly) that vegetarians do not consume milk, dairy products or eggs (see p. 43-49, 114, 117, 120, 228, 261).

He mentions soybeans only in passing; they do not even appear in the index. For example: (1) The protein from lentils, legumes, soybeans and nuts is not complete and cannot counterbalance all the pure starches eaten to satisfy hunger (p. 43-44). (2) While soybeans, nuts, peas, and beans do contain protein, their protein content is "very low and incomplete when compared with meat, eggs, milk products and seed cereals" (p. 47). In a 4-page chart titled "Vegetable proteins" (p. 235-38) neither soybeans nor soyfood products are mentioned.

Contents: Part I: How to stay young. 1. Of course you want to stay young! 2. How old is "old"? 3. The secret of staying young. 4. Who is this fellow "protein"? 5. How much protein is "enough"? 6. "But I'm a vegetarian!" 7. Too much starch is dangerous. 8. These eight determine your age. 9. Six commandments for a long "young" life. 10. Seeds hold the germ of life: Millet, sunflower seeds, sesame seeds. 11. Best milks for humans. 12. Honey belongs on your table. 13. The sure way to good looks and charm. 14. Do your eyes look young? 15. Don't invite "old" hair and skin. 16. Your bones and muscles can be tattletales. 17. Your nerves must stay young, too. 18. Your blood can make you look younger. 19. Youth begins at breakfast. 20. What about food combinations? 21. Eating habits for longer life.

Part II: Your diet program. 22. Start now to eat and grow younger. 23. High-protein meats, poultry and fish. 24. Meat substitutes that are protein. 25. Egg and cheese dishes for every meal. 26. Eat plenty of seed cereals. 27. Salads are important. 28. Delicious baking with protein foods. 29. Sweets and treats that are "dividends."

Millet is the best of the seed cereals. Pythagoras praised its high nutritional value and advised his followers (all vegetarians) to adopt millet as the mainstay of their diets. Dr. John Harvey Kellogg said that millet is the only cereal capable of supporting life when used as the sole item in the diet. Millet is “a *safe* vegetable protein. Moreover it is almost a necessity in a vegetarian diet, because it can provide a *complete* protein without the need of eating a lot of bulk...” (p. 114-17).

Note: The popular website DrCoop.com lists Mr. Kordel (born in 1904) in its section on “Roots of modern food faddism.” Court records state that he began producing and marketing supplements in 1941, operating under various trade names. In 1946 he was convicted of misbranding and fined \$4,000. He had a brush with the Federal Trade Commission (FTC) in 1957 and two more with the FDA in 1961. In 1971 he was fined \$10,000 and served one year in prison. Address: SC.D., author of *Health Through Nutrition*.

4354. Leonardo da Vinci. 1952. Selections from the notebooks of Leonardo da Vinci. Edited with commentaries by Irma A. Richter. London and New York: Oxford University Press. xiii + 417 p. See p. 375. Illust. 15 cm. The World's Classics, no. 580.

• **Summary:** Mention of Leonardo's interest in vegetarianism appears in this tiny book.

Page 375: “His love of animals and the belief that plants afford sufficient nutriment for man induced him to forgo animal food (cf. p. 382).

“‘King of animals’ as thou hast been described. I should rather say ‘king of beasts’, thou being the greatest, because thou dost only help them in order that they may give thee their children for the benefit of the gullet, of which thou hast tried to make a sepulchre for all animals...”

“Now does not nature produce enough simple [i.e. vegetarian] food for thee to satisfy thyself? And if thou art not content with such canst thou not by the mixture of them make infinite compounds, as Platina describes* and other writers on food (162).” * Footnote: “Bartolomeo Sacchi, called *Il Platina*, *De Arte Coquinaria*.”

Page 382: “In a letter dated 1515 Andrea Corsali writes to Giuliano de’ Medici of some gentle people called Guzzati who refused to partake of food that had blood, who had agreed among themselves to do no harm to any living thing, ‘just like our Leonardo da Vinci’.”

Concerning Leonardo's notebooks, the Preface states (p. vi-vii): “We are enabled to gain insight into his thoughts by reading his notebooks. He used to carry these about with him to sketch instantaneous impressions or to write down ideas as they occurred on the spur of the moment—observations made during walks and travels, reflections on events and persons, on his domestic problems, on his work, on life in general. Manuscripts have survived containing drafts of letters, fanciful descriptions and fables, rough copies of treatises on

the power of water, on the art of painting, on the anatomy and movement of the human figure, &c. But they are just notes. Often, remarks on diverse subjects are scribbled on one and the same page, or restatements and clarifications of one and the same idea occur on another page. The following words written on the front sheet of a manuscript on physics is descriptive of his method of writing.

“‘This is to be a collection without order, taken from many papers, which I have copied here, hoping afterwards to arrange them according to the subjects of which they treat; and I believe that I shall have to repeat the same thing several times; for which, O reader, blame me not because the subjects are many, and memory cannot retain them... all the more because of the long intervals between one time of writing and another.’

“Leonardo's intention to sort his notes was never carried out. The present volume constitutes an attempt to co-ordinate a selection of them on subjects of general interest. The choice has often been difficult since he was fascinated and distracted by so many problems, depending on his mood and circumstances. We have limited ourselves to quoting typical examples of the main themes. The number at the end of each excerpt refers to pp. 394ff. where the sources are given.”

Note: Leonardo da Vinci lived 1452-1519. Address: Florence in Tuscany, Rome [in today's Italy].

4358. Sherman, Henry C. 1952. Chemistry of food and nutrition. 8th ed. New York, NY: The Macmillan Co. viii + 721 p. [300+* ref]

• **Summary:** An important pioneering work in nutrition science. The first edition was published in 1911. Chapter 13 is titled “Nutritional aspects of the acid-base balance.” “Notwithstanding the large amounts of acid produced in metabolism, the reaction of the blood plasma normally remains remarkably constant and slightly alkaline, between pH 7.33 and pH 7.51.” Blood is highly buffered, mostly by hemoglobin with a small contribution from plasma proteins. Diet influences this acid-base balance. An approximate estimate of the potential acid- or base-forming properties of a food may be made from a consideration of the amounts and proportions of the inorganic elements which it contains.

Examples of foods in which acid-forming elements predominate are oysters (15 cc. normal acid per 100 gm), beef, oatmeal, and whole wheat (each 12), eggs (11), rice (9).

Examples of foods in which the base-forming elements predominate are carrots (14), turnips (11), dried beans (10), fresh beets (10), potatoes (9), bananas (8), orange or juice (5), tomatoes (5), lemon or juice (4), apples (3). Conclusion: "This knowledge of the blood does not... permit one to say with confidence whether the balance of acid-forming and base-forming elements in food is or is not of practical significance in human nutrition."

"The customary combination of baked beans and brown bread makes a main dish that ranks with meat as a source of nutritionally good proteins and vitamins of the B group" (p. 601-02). Address: Mitchill Prof. Emeritus of Chemistry, Columbia Univ., New York.

Bimonthly.

• **Summary:** Continues: *The Vegetarian Messenger and Health Review*. Continued by *The British Vegetarian*. The title page of issue No. 1 (Jan/Feb. 1953) states that this is the official magazine of The Vegetarian Society, Bank Square, Wilmslow, Manchester. Address: Wilmslow, Manchester, England.

4365. *Vegetarian News Digest (Los Angeles)*. 1953. News from afar... [vegetarian revival in Italy]. 2(11):18-19. Winter.

• **Summary:** "We farther report encouraging news and from the land of Italy where a vegetarian revival is taking place. Mr. Walker, IVU Secretary, visited there also, and at an evening session a meeting was held at Perugia, a center of culture from pre-Roman times, and opened by Professor Aldo Capitini who proposed the formation of an Italian Vegetarian Society to be affiliated with the I.V.U. and work in close collaboration therewith. The suggestion was warmly received and appointments were made. The official address is Centro di Orientamento Religioso, Via dei filosofi 33, Perugia, Italy, and vegetarian societies and individuals throughout the world are asked to send letters of encouragement to this latest addition to the vegetarian family, also to send contributions to their vegetarian library which they are forming for the furtherance of the Vegetarian Ideal in Italy."

Gezondheid, voeding en veganisme: Voorlopige mededelingen omtrent een onderzoek naar de voedings-toestand van personen, die zich uitsluitend met plantaardige middelen voeden [Health, food, and veganism: Further information about an investigation concerning the nutritional condition of persons who are strict vegetarians]. *Voeding* 14(3):153-178. March 15. [8 ref. Dut; eng]

• **Summary:** "A study was carried out on 60 adult volunteers, who lived for periods varying from several months to 2 years and longer on a vegan diet, i.e. entirely free from animal food."

"The intakes of calories, total protein and calcium were in the vegans below the norms... the vitamin B-12 intake, especially in women, was below standard and also the vitamin D intake was low... Clinical deficiency-symptoms were observed in 9 of the vegans." The study also found lower levels of cholesterol, basal metabolism, and body weight. Medical control is urged for vegan diets, since macrocytosis, carotenaemia and relatively high alkaline serum phosphatase were observed. Address: Utrecht, Netherlands.

balanced vegetarian diet. Address: England.

4368. Lasser, Ferne. 1953. Health in the news: third anniversary celebrated by Chicago vegetarians with Mother Gloria as guest of honor. *Vegetarian News Digest (Los Angeles)* 2(12):37. Spring.

• **Summary:** “The Chicago Vegetarian Society held its great Anniversary Banquet on Saturday evening, Feb 21, 1953, at the society’s headquarters, 17 N. State Street. It proved to be the most outstanding event of the year, and was tremendously enjoyed by everyone.

Guest of honor was Mrs. Gloria Gasque who came from Mexico to be present and speak on ‘The Relation of Diet to the Higher Nature,’ a topic which proved most enlightening. A gifted and interesting speaker, Mrs. Gasque is vice-president of the International Vegetarian Union and American Vegetarian Union, is known as ‘Mother Gloria’ in the Mazdaznan Movement, is a tireless worker for the Vegetarian Cause and the betterment of mankind. Mrs. Gasque’s wide experience and contacts, in the field of Vegetarianism in its broadest aspects, throughout the world fits her so well for her present offices. She is aiding materially in promoting universally the feeling of brotherliness, ‘oneness,’ and peace—the basis of Vegetarianism, which she lives and sincerely expounds.

“Notable in the entertainment was the fact that it was all given by members of the C.V.S. Don Middleton, vegetarian pianist, entertained with music during dinner and made an instant ‘hit.’ Mr. Palmer W. Johnson of the Chicago Society gave his famous comedy skits, and sang several songs in his own incomparable style, accompanied by Blanche Branche. Dr. Harlan Tarbell, a master magician, who acted as master of ceremonies, gave a demonstration of his ‘eyeless vision’ which he has made internationally popular on the stage and on TV. Dr. Tarbell is world-famous as a magician, and is the former president of ‘American Magicians.’

“A most delicious and delightful vegetarian dinner was served with an eye to combinations and health.

“Chicago Vegetarians enjoyed a peppy and vitally stimulating meeting on Wednesday, March 4, when their famous member, Dr. Geo. W. MacGregor, and the society’s president, Dr. John T. Heinrichson, conducted a Vegetarian Forum. Alois Knapp, vice president acted as moderator. Members were invited to participate, and a most interesting discussion took place. Prominent among the speakers were Mrs. Marion Ramsey, Dr. John Upton and Mrs. Dorothy Dunkleman.—Ferne Lasser, Secretary.

A photo shows many people seated around a table on a stage: “Reading left to right: at head table: Blanche Branch, accompanist: Palmer Johnson, entertainer; Dr. Gerald Benesh of Avon, Ohio; Mother Gloria, Guest of Honor; Dr. Harlan Tarbell, Master of Ceremonies; Dr. John T. Heinrichson, President, C.V.S.; John Peter Persona of Milwaukee; and Anna Huber, Emma Herwig and Helen Buchanan of the

Mazdaznan Movement in Chicago.”

Note: These people are apparently unaware that vegetarian societies were established in Chicago in Nov. 1889 and in 1894. Address: Secretary.

4369. *Vegetarian News Digest (Los Angeles)*. 1953. An open, urgent letter to our readers. 2(12):7-8. Spring.

• **Summary:** Joel Striegel appeals for people to assist him publishing *Vegetarian News Digest*, answering inquiries, and in doing the extensive related work of helping vegetarians and those who wish to become vegetarians.

4370. *Vegetarian News Digest (Los Angeles)*. 1953. San Francisco vegetarians plan an entertaining spring frolic. 2(12):36. Spring.

• **Summary:** “Bay Region Vegetarians and their friends are planning a glorious Spring frolic to be held Friday, April 10, 1953, at the California Hall in San Francisco, at 7 p.m. A splendid dinner will be served by Mrs. Clover Murphy and a corps of assistants.

“After the dinner entertainment will feature the celebrated vaudeville-act of Wick & Wack, a pair of fun-mad comedians who will please the entire family from the baby up. Other good talent, including *Juggling Jones*, is being secured to round out the program. After the entertainment there will be dancing provided by Brothers Whipple and Perkins.

“Admission shall be by reservation only, as the price of entrance, including dinner, will be only one dollar a person; children, half price. Twelve new members were admitted into the Brotherhood during January, all being persons who have been recommended by members.

“On April 1, E.G. Perkins, Secretary of the Vegetarian Brotherhood of America, Inc., will be in Los Angeles to enjoy a family reunion and to speak before the Vegetarian Society in that city. He hopes to add a large number of new members to the Brotherhood at that time. Anyone desiring further information may write to E.G. Perkins, Feters Hot Springs, Calif., which is fifty miles north of San Francisco.

“At Agua Caliente, where the Vegetarian Brotherhood is located (situated in the world famous ‘Valley of the Moon’), some very important research is being done—without the use of cats, dogs, monkeys or other animals but human beings who are experimenting upon themselves, trying different diets and comparing notes with one another. Already members have learned how to remove piles, give relief and sleep to rheumatic victims, make whole wheat bread at home, and many other matters of merit, all of which are available to the members.”

4371. *Vegetarian News Digest (Los Angeles)*. 1953. News from afar... vegetarian advancement in Europe continues [Luxembourg now has national vegetarian society named ALPAR]. 2(12):23. Spring.

• **Summary:** “The Duchy of Luxembourg is the latest addition to the world family of vegetarian nations. Their national vegetarian society takes the name of ALPAR—*Association Luxembourgeoise pour L’Alimentation Rationnelles*. The progress and formation of this society is largely the work of Henri Meier, a most learned and multi-lingual gentleman in the prime of life at 65 years. He welcomes correspondence with Vegetarians and Nature Cure adherents in other lands. Address him at 38 Rue Sainte Barbe, Esch-Alzette, Luxembourg.”

4372. *Vegetarian News Digest (Los Angeles)*. 1953. [Research funds raised by nine health agencies to combat disease]. 2(12):24. Spring.

• **Summary:** The top four organizations in funds raised for disease research in the USA were: National Foundation for Infantile Paralysis \$18.6 million, National Tuberculosis Association \$18.6 million, American Cancer Society \$13.2 million, and American Heart Association \$2.5 million.

4373. Wynne-Tyson, Esmé. 1953. The significance of vegetarianism. *Vegetarian (The) (Manchester, England)* 1(3):90-92. May/June.

• **Summary:** The truly compassionate human being is trying to help all humanity to reach a higher state of evolution—the new man. “Despite the unregeneracy of the bulk of humanity, the leaven of the Way of Compassion has consistently been at work throughout the centuries in the minds and hearts of receptive individuals.” By renouncing violence toward his fellow human beings and fellow creatures, the humane vegetarian becomes the outward expression of conscience and applied compassion. Address: England.

4375. Cheng, Edmund; Story, C.D.; Yoder, L.; Hale, W.H.; Burroughs, W. 1953. Estrogenic activity of isoflavone derivatives extracted and prepared from soybean oil meal. *Science* 118(3058):164-65. Aug. 7. [8 ref]

• **Summary:** The article begins: “Implantation of diethylstilbestrol (synthetic estrogenic substance) pellets under the skin of cattle and sheep stimulates live-weight gains and increased feed efficiency during the fattening period. Recently, naturally occurring estrogenic substances have been detected in varying amounts in various plant herbage, both pasture and hays, fed to cattle and sheep.

Genistein (5,7,4'- trihydroxyisoflavone) has been suggested by Curnow and Bennetts as the chemical constituent responsible for estrogenic activity in one of these herbage, namely, subterranean clover. The glucoside of genistein, genistin (5,4'-dihydroxy-7- glucosidoisoflavone) has been shown by Walter (1941) to be present in substantial amounts (0.1%) in soybean oil meal.”

An estrogenically active isoflavone, and its glycoside, genistin, were first isolated from soybean meal. Both the isoflavone and the isoflavone glucosides exhibit the same amount of estrogenic activity. Address: Iowa Agric. Exp. Station, Ames.

4378. Sandborn, William Cruzan. 1953. The history of Madison College. PhD Thesis, Dep. of Education, George Peabody College for Teachers, Nashville, Tennessee. 201 p. Aug. 28 cm. [75* ref]

• **Summary:** The first and perhaps the best, most detailed, and most objective history of the Nashville Agricultural Normal Institute (renamed Madison College in 1937), and of its food factory, Madison Foods, both located in Madison (near Nashville), Tennessee. Madison, the only self-supporting college in America, was a remarkable experiment in education.

Contents: Summary. 1. From Battle Creek to Madison. 2. Years of faith, work, and frugality. 3. The school program. 4. Schools for men of the mountains. 5. The gospel of healthful living. 6. The A.B.C. of education. 7. The institutional plant. Appendix. Charter. Chronology. List of graduates. Bibliography.

The school land was located and the school founded in 1904 by Prof. E.A. Sutherland and P.T. Magan with the help of Mrs. Ellen G. White. The farm of 412 acres at Neely's Bend on the Cumberland River (known as the Nelson Place), was purchased in June 1904 from Mr. Ferguson for \$12,723. In 1925 some 296 acres were added for a total of 708 acres. In its early years, Madison was neither a college nor a high school. “It was a special school [a normal school] organized for the purpose of training self-supporting missionary teachers and workers. The only entrance requirements were a mature mind and an intense interest in self-supporting missionary endeavor. The school was accredited as a high school in 1927 and as a junior college in 1928.

Prof. E.A. Sutherland had learned a great deal about

health and sanitarium work from his contact with Dr. John Harvey Kellogg in Battle Creek, Michigan. A history of the Food Factory is given in a separate record.

Education: Ellen white believed and taught that agriculture should be basic to all other studies. The farm had a dairy (with 34 cows in 1930 and 115 in 1943; pasteurization of milk began in 1937), a fruit farm with over 3,000 apple and peach trees, and a poultry raising industry. "During the year 1937 the name of the school was changed from the Nashville Agricultural and [sic] Normal Institute to Madison College. This was the consequence of the school's obtaining a government post office which was called the Madison College Post Office, in order to avoid confusion with the village post office (p. 67). The years from 1930 to 1940 were the "Golden Age of Madison." The peak year for enrollment was 1940, with 458 students enrolled. The next decade might be termed the "Fateful Forties." The enrollment dropped during the period, reaching a low of 154 during the 1944-45 school year. In Feb. 1946 Dr. Sutherland resigned as president to accept another position. The school never had an organized athletic program.

Chronology (p. 168-82):

"1904 June. Trip of the boat *Morning Star* up the Cumberland to Carthage with Mrs. E.G. White, P.T. Magan, and E.A. Sutherland on board.

"1904 June. School farm of 412 acres purchased from Mr. Ferguson.

"1904 Oct. Possession of school farm was obtained.

"1904 Oct. The first term of the Nashville Agricultural Normal Institute opened with fifteen students in attendance.

"1904 Fall. Elder and Mrs. S.N. Haskell deeded the property over to the new corporation.

"1905 Aug. 4. Charter of Incorporation applied for.

"1905 Sept. 10. First meeting of the incorporators of the Nashville Agricultural and Normal Institute.

"1906 March 28. First annual meeting of the Patrons of the Nashville Agricultural and Normal Institute.

"1908 March 30. First meeting of the Board of Managers of the Nashville Agricultural and Normal Institute.

"1906 June 3. Special Board meeting held in tent in Nashville at which time it was voted to establish a sanitarium in connection with the school.

"1908 Oct. 23. Board increased from fifteen to seventeen members.

"1908. Faculty wage \$13 a month.

"1904-1908. About twenty buildings erected, some were: Nebraska Cottage, Boulder Cottage, Ames Cottage, Oregon Cottage, Upper Columbia Cottage, Miller Cottage, Peach Cottage, Patton Cottage, Phelps Cottage, Druillard Cottage, Lenker Cottage, Magan Cottage, and Sutherland Cottage.

"1912 Nov. 29. Meeting of Patrons of N.A.N.I. accepted gift of cow barn by Nis Hansen, Sr.

"1912. One and one-half miles of blacktop road built

into campus.

"1908-1912. Buildings erected: Taylor Cottage, Matheisen Cottage, Davison Cottage, Kinne Kitchen, The Fruit House, The Implement and Carriage House, and The Mechanical Shop.

"1910-1914. E.A. Sutherland and P.T. Magan took the Medical course.

"1914. Books of the school audited for the first time by Conference auditor, E. H. Rees.

"1914 Oct. 13. Ellen G. White resigns as a member of the Board of Trustees, due to failing health.

"1915. Nurses training course was lengthened from one to two years.

"1916. Dr. Sutherland succeeded S.N. Haskell as president of the Board of Trustees. (S.N. Haskell had held this position since founding of the school in 1904).

"1917. Miss M. Bessie DeGraw succeeded Dr. Magan as secretary of the Board of Trustees.

"1917 April 3. School donated 2,000 copies of 'Christ's Object Lessons' to the Ooltewah building fund.

"1917 Dec. 6. Annual meeting, of the Board of Managers, of the Board of Trustees, and of the constituents of the Nashville Agricultural and Normal Institute.

"1917 Dec. 13. Fall, short courses begin.

"1917 Dec. Doctors Percy and Lillian Magan left to join the College of Medical Evangelists.

"1917-1918. Food Factory moved to campus from Edgefield.

"1918. Faculty received twelve cents an hour in addition to their \$13 monthly allotment.

"1919. *Madison Survey* first published. Note: At this time the school is named "Nashville Agricultural Normal Institute." The word "and" does not appear before the word "Normal."

"1919 fall. Rural center and home purchased on Gallatin Pike for the Nashville cafeteria and treatment room workers.

"1918-1919. Polk Street Settlement House came into hands of the Madison School.

"1920 Jan. Cottage Number Fourteen burned (housed one dozen students).

"1920. Mrs. E. A. Sutherland conducted classes in dietetics and cooking at several of the Southern Campmeetings.

"1921. Faculty received twelve cents an hour.

"1921 Jan. 7. Electric lights turned on for the first time in the Sanitarium.

"1921 Jan. 26. New greenhouse in use.

"1921 Oct. Steam heat replaced stoves in the Sanitarium for the first time.

"1921 Nov. 9. New sewage system under construction.

"1921 March. Heavy frosts the last of March, seriously injured the fruit crop.

"1921 June 21. Board of Managers accepted seventy-two acres of land South of Neely's Bend Road, purchased by

Mrs. Lida Scott.

"1922. Co-operative work and study plan inaugurated. (Six weeks in classwork followed by six weeks in work department).

"1922 Feb. 8. Clark Cottage under construction.

"1922 Feb. 16. Action taken to incorporate the Board of Managers.

"1922 March 8. The city cafeteria bus was involved in a wreck on Gallatin Pike and overturned; three were injured, but none seriously.

"1922 July. Women's treatment room at the Sanitarium undergoing remodeling.

"1922 May. New Sanitarium kitchen, the gift of Mrs. Lida Scott, opened during the first week of May.

"1922 July. Destructive hail storm ruined the school gardens and much of the fruit.

"1922 Oct. 5. Helen Funk Assembly Hall dedicated, (gift from Mrs. Lida Scott in memory of her mother.)

"1922 Oct. 8. Power house in Sanitarium destroyed by fire. October 11, 1922. Death of Elder S.N. Haskell.

1923 April 13-14. Madison admitted to the Association of Southern Junior Colleges.

"1923 April 23. Nashville Vegetarian Cafeteria opened in its new location.

"1923 May. Madison School Band gave its first concert away from home (at Goodlettsville).

"1923 July. Library reading room opened in new assembly hall.

"1923 Aug. Dr. E. A. Sutherland and Mrs. Lida Scott not injured in derailment of Dixie Flier.

"1923 Aug. 14. Death of Christine Owens Kinsman, one of Madison's first students.

"1923 Aug. 29. Black-topping of Neely's Bend road completed by the county (replaces old stony road).

"1923 Nov. 7. Dittes Cottage under construction.

"1924. Faculty received fourteen cents an hour in addition to their \$13 monthly allotment.

"1924 Jan. The Layman Foundation organized.

"1924 Jan. Madison College leased fifty acres of orchard land at Ridgetop from the Layman Foundation.

"1924 Jan. 30. Mechanical Arts Building under construction.

"1924 Feb. 27. Two-room cottage under construction on Mrs. Scott's lot.

"1924 April. Steam-heated hot water tanks installed in the Assembly Hall, Gotzian Home, and the Sanitarium to eliminate heating water with stoves" (Continued). Address: George Peabody College for Teachers, Nashville, Tennessee.

4379. Sandborn, William Cruzan. 1953. History of the Madison Food Factory (Document part). In: W.C. Sandborn. 1953. PhD Thesis, Dep. of Education, George Peabody College for Teachers, Nashville, Tennessee. 201 p. See p. 123-27, 159. Aug. 28 cm. [1 ref]

• **Summary:** The Food Factory (formerly a "large flakefood factory" built at Edgefield, near what is now Edenwold) was purchased in 1917, dismantled, and in 1917-18 moved from Edgefield near Amqui, a nearby community, to its present location [Note: This food factory had formerly been operated by Jethro Kloss.] It began operation at Madison [Tennessee] in 1918 (p. 123; the 1918 date was verified by Elmer Bush who helped move the factory). Mr. and Mrs. Andrew Wheeler were in charge of the work, under the direction of Mrs. Druillard, who had had years of experience in other institutions. The principal foods manufactured are protein foods made from gluten, soy beans, and peanuts. "Some of the trade names today are Zoyburger, Yum, Mock Chicken, Nu-Steak, Not-Meat, Vigoroast, and Ches-O-Zoy. A cereal substitute for coffee is Zoy-Coff" [Zoy-Koff] (p. 124). The meatless protein foods serve as substitutes for meat in the diet of vegetarians. Both the College and the Sanitarium hold to a meatless diet. The College ran a successful vegetarian cafeteria in Nashville.

"Some of the men who played an important part in the later growth and development of the food factory were Joe Hansen, C.H. Dye, T.A. McFarland, Captain Calvin Bush, Edwin Bisalski, George Norris, Leslie Brooks, John Brownlee, H.M. Mathews and Frank Holland. Of this group, H.M. Mathews and John Brownlee played a very important part in experimentation and development of the foods. E.M. Bisalski was outstanding in the group as a promoter and sales-manager. It was during Mr. Bisalski's term as manager of the Food Factory that great expansion took place. A practically new plant, with one section four stories in height, was constructed in 1941. Shortly after, the sales began to drop off, and it has never been necessary to use the new building to its capacity. The Food Factory (now known as Madison Foods) is operating, on a much smaller scale than formerly, under the management of Mr. Frank Holland. The Madison Foods Company also operates a bakery, making whole wheat and soy bread. A daily bread route is served in Nashville.

"Another type of health work carried on by the Madison School was the operation of a treatment room and vegetarian cafeteria in Nashville, Tennessee. Workers drove back and forth each day from the School to Nashville to carry on the work. The work was started in 1917, in rented quarters. After five years, because of advancing rents, it was thought best to close down the work and build a new building on a permanent location at 151 Sixth Avenue, North. This was done at the end of the year 1922. The new location was occupied in the spring of 1923. [It opened on April 23.] A successful work was carried on in the new location for over a decade" (p. 125).

"The Food Factory was remodeled, in fact, practically a new structure was built, in 1942. The work actually started in November, 1941, and was completed in October, 1942. E.M. Bisalski was the prime mover in promoting the project,

which cost between \$30,000 and \$40,000" (p. 159). Address: George Peabody College for Teachers, Nashville, Tennessee.

4380. Sandborn, William Cruzan. 1953. The history of Madison College (Continued—Document part II). PhD Thesis, Dep. of Education, George Peabody College for Teachers, Nashville, Tennessee. 201 p. Aug. 28 cm. [75* ref]

• **Summary:** (Continued): "1924 April. A Ford jitney [bus] and a Ford sedan, gifts of Mrs. Druillard, put into service between the Madison station and the school.

"1924 April 1. The new corporation of the Board of Managers was named the Rural Educational Association.

"1924 May. New charter for Rural Educational Association applied for. June 1, 1924. The R.E.A. began to operate officially.

"1924 July. Hawkin's Cottage under construction.

"1924 Oct. 29. New bakery and new bakery brick oven completed.

"1925. Students paid ten cents an hour.

"1925. Faculty received fifteen cents an hour in addition to their \$13 monthly allotment.

"1925. Union Hill Orchard purchased.

"1925. Twenty-seven acres (apple orchard) purchased at Ridgetop for the sum of \$2,500.

"1925 Jan. 1. Erection of the sawmill completed.

"1925 Jan. 6. Board of Trustees sold five and three-eighths acres of land south of Neely's Bend road to Mayor Howse for sum of \$538.

"1925 March. Private telephone service installed in patients' rooms.

"1925 April. Mr. and Mrs. Wilson sailed as missionaries to Africa.

"1925 June. The Wilson farm of 296 acres purchased by the Layman Foundation and traded to the school for the property south of Neely's Bend Road with exception of approximately thirteen acres.

"1926. Student hospital completed.

"1926 Nov. 10. Walter Wilson cottage under construction.

"1927. The school lost the Love lawsuit in the State Supreme Court. Cost to the school was \$7,171.45. Litigation had been in process for more than ten years, over alleged contamination of Mr. Love's spring by Madison sewage.

"1927 Jan. 5. Cumberland River at floodstage with water over Neely's Bend road (exceeded flood of 1882).

"1927 July 10. Orchestra broadcast over station WDAD.

"1927 Aug. 10. Twelve-room stucco cottage for Sanitarium completed.

"1927 fall. Three student cottages of four rooms each, completed.

"1927 Oct. 1. Student wages raised to twenty cents an hour.

"1927 Nov. 30-Dec. 2. Madison High School accepted into the Southern Association.

"1926-1927. Solarium constructed at Sanitarium.

"1926-1927. Six-room cottage added to Sanitarium.

"1928. Madison accredited as a Junior College.

"1928. Madison ceased to make its own electric current and connected to the city current. Institution equipment held as a standby.

"1928 Feb. 1. Concrete bridge under construction across the Cumberland river near the college.

"1928 Feb. 2. Fountain Head Sanitarium burned.

"1928 July. Cumberland river overflowed its banks onto the bottom land. This is unusual for midsummer.

"1928 Oct. The X-ray Department was first to move into the new Administration Building.

"1929. W.E. Straw elected Dean.

"1929. The annual convention of self-supporting workers was not held this year due to illness of Dr. E.A. Sutherland.

"1929. Last year of plan of dividing profits among faculty members. No cash paid that year, each member being given a note. (Some notes are still held up to this year, 1953).

"1929 Jan. 13. Death of Mrs. Anton Williman.

"1929 April. College and Sanitarium gave up their own water system and connected to the New Lakewood water system.

"1929 May. John Stenger seriously injured in tractor accident.

"1929 May. Joe Sutherland cottage completed.

"1929 May. Kenneth Sheriff cottage completed.

"1929 May-June. Twenty-four hundred feet of six-inch water main laid on the campus.

"1929 June. The sixty foot by twenty-five foot water standpipe on campus was completed.

"1929 Aug. County surfaced road from Neely's Bend Road to the Sanitarium.

"1929 Aug. New street light posts installed on the Sanitarium grounds.

"1929 Oct. County surfaced road from Larkin Spring's Road up to the campus.

"1929 Nov. 8. Death of Mrs. C.L. Kendall.

"1930. The annual convention of self-supporting workers was postponed until the Spring of 1931.

"1930. Plans laid to make Madison an accredited senior college.

"1930. C.H. Dye became sales manager for Madison Foods.

"1930 March 8. Mr. and Mrs. Clifton Smith sailed for China. Mrs. Smith graduated in 1923.

"1930 April 8. Magan cottage caught fire and roof was damaged.

"1930 June. *Nashville Banner* published article and pictures on the Madison program.

"1930 Aug. 13. Death of Professor Sidney Brownsberger.

"1930 Aug. 27. Boys' Cabin Court under construction.

"1930 Oct. 8. Installation of Public Address System in the Sanitarium completed.

"1932 July 27-Aug. 6. Health Institute held with J.G. White leading out assisted by P.A. Webber.

1932 Aug. 1. Four students began operating the Nashville Vegetarian Cafeteria on a project basis (Irma Rocke, Esther Sanford, Mrs. Karl Erickson, and Howard Davidson)."

"1933 Nov. 8. *Survey* stated that the College was accepted as a four-year college by the Tennessee College Association.

"1934. Magan and Kendall cottages moved to make room for the new library.

"1934. Madison dropped its Junior College accreditation.

"1935 Feb. 10. Fountain Head Sanitarium burned to the ground for the second time.

"1935 spring. *Food For Life*, by Frances Dittes, published.

1935 April 15. First issue of the Student Paper, *The Peptimist Crier*.

"1935 May 15. Frances Dittes received her Ph.D. in Nutrition at Peabody College.

"1935 Sept. 15. Farewell for Dr. and Mrs. P.A. Webber who returned to Japan.

"1935 Sept. 30. Death of Josephine Cotzian.

"1935 Oct. Application filed with Washington [DC] for a campus post office.

"1936. Decision made to discontinue the high school with close of school year, June, 1937..." Address: George Peabody College for Teachers, Nashville, Tennessee.

4381. *Vegetarian (The) (Manchester, England)*. 1953. Soya debittered. 1(4):133-34. July/Aug.

• **Summary:** "The soya bean contains 40 per cent. protein and 20 per cent. fat and is without starch.

"During the war its nutritive value was recognised and food manufacturers were compelled to use it as a substitute for meat protein in various proportions. Sausage makers, for instance, were allowed 37½ per cent. fresh meat plus 7½ percent. soya thus giving the nutritional value of 60 per cent. meat—a striking tribute to the properties of soya.

"The bitter taste, however, was unpopular so after the war this valuable food was dropped by the authorities. Experimental work has solved the problem of debittering soya and recent taste tests showed that 75 per cent. of votes were cast in favour of sausages containing the new product. It is hoped that soya will again be recognised as an important source of human nutrition."

4382. Ehret Publishing Co. 1953. University scientists find "mucoprotein" causes hardened arteries: Supports theory advanced by Arnold Ehret 30 years ago (Ad). *Let's Live* 21(9):20. Sept.

• **Summary:** Describes "Professor" Ehret's teachings and healing system. "Almost 30 years ago, Professor Arnold Ehret pointed out the oneness of all diseases—the fundamental cause being waste; foreign matter, mucus and poisons. To loosen this waste, to eliminate it intelligently and thoroughly and still control this elimination can only be done perfectly by the Ehret Mucusless Diet Healing System."

More than 125,000 copies of his book *Mucusless Diet Healing System* have been printed. Send \$1 for your copy. Address: 833 East 6th St., Los Angeles 21, California.

4383. Gould, Symon. 1953. Vegetarian views and news. *Let's Live* 21(9):44. Sept.

• **Summary:** Discusses: The International Conference of Vegetarians in Sweden. A quotation from the writer Thomas Wolfe who "refers to a certain brand of seekers after truth as 'embattled vegetarians.'" Pacifism. Freedom from hunger.

"Note—Symon Gould is a well-known New Yorker, active in the vegetarian, health and organic movements. He is director of The Health Guild" [in New York City] and apparently runs a book store (see ad on p. 21. Send for a "free 18-page catalog of books on diet, natural healing, sex, herbs, and organiculture"). Address: 117 W. 48th St., New York City 36.

4384. Chhuttani, P.N.; Taylor, G.F. 1953. Nutritional peripheral neuropathy related to "the shoulder girdle syndrome" in Persia and Iraq force 1944-45. *Indian Medical Gazette* 88:509-20. Oct.; 88:563-70. Nov. [20 ref]

• **Summary:** In observations on a group of 82 cases of peripheral neuritis, vegetarians were also studied. Address: 1. Dep. of Clinical Medicine, Medical College, Amritsar, India.

4385. Gould, Symon. 1953. Vegetarian views and news. *Let's Live* 21(10):44. Oct.

• **Summary:** Discusses: "The latest proof of vegetarian stamina is the amazing feat of David Will Power, of California, a 61-year-old World War I veteran, who is the first to walk from the Pacific to the Atlantic Ocean. He started in the surf at Santa Monica, walked an average of 43½ miles per day for a total of 72½ days, consecutively, and ended up in the surf at Coney Island, New York. Power received his nutritional sustenance from rolled oats, raisins, raw salads of cabbage, lettuce, onions and greens, some whole wheat bread daily with oleomargarine; and depended for his protein on meat substitutes. When I was a guest at the Physical Culture Center in Dansville, New York, where I go each summer to deliver my annual lecture, I witnessed Power's extraordinary exercise demonstration for a full hour. Power lives at Hemet, California, where he conducts an organic farm."

Last month he was snowed under with requests for his publication on protein and meatless recipes. An excellent and popular book is *314 Meatless Recipes or Better Food at Less*

Cost, by Dr. [Max] Warmbrand and his wife Ruth. They run the Florida Health Conservatory.

"The New York Natural Hygiene Society has been in the forefront of those organizations campaigning for wider use of organic foods and has been the first to sponsor and establish an organic market in New York City and also a delivery service." The society "has just issued a Bulletin which lists 44 different sources of supply of organically-produced vegetables, fruits, cereals, nuts, etc." Address: 117 W. 48th St., New York City 36.

4386. *Daily News (Los Angeles, California)*. 1953. L.A. vegetarian group meets today. Nov. 26. p. 47.

• **Summary:** "Members of the Los Angeles Vegetarian Society Inc. will meet at Trouper's Hall at 5 p.m. today for their annual banquet, but there will be no Thanksgiving turkey on the menu.

"Instead the main dish will be vita roast.

"The ingredients: assorted cereals, vegetables and nuts."

4387. Gould, Symon. 1953. Vegetarian views and news. *Let's Live* 21(12):44-45. Dec.

• **Summary:** The great philosopher Alfred North Whitehead said: "All truths are half-truths, and it is trying to behave as though they were whole truths that plays the devil; that dogmatic finality is the fatal fallacy—those surest they are right are most likely to be wrong;..."

Ruth Warmbrand, wife of Dr. Max Warmbrand, is considered by vegetarian writer Symon Gould to be "the best vegetarian cook in the country."

He has just received a colored poster from the Minister of Health of Argentina exhorting the public to "eat more vegetables for your health's sake!" Argentineans are said to eat meat 3 times a day. Address: 117 W. 48th St., New York City 36.

4388. Nearing, Scott. 1953. Food without animal residues. *Vegetarian (The) (Wilmslow, Manchester, England)* 1(6):188-89. Nov/Dec.

• **Summary:** At the 13th World Vegetarian Congress in Sigtuna, Sweden, Prof. Nearing described his and Helen Nearing's 20-year experiment in gardening without animal manure in Vermont at an elevation of 1,800 feet. Initially the land was depleted. The fertility was regained by heavy mulching with hay, sawdust and vegetable compost supplied by minerals—ground phosphate rock, green sand for potash, ground limestone for calcium, and colloidal earth which is a dehydrated clay containing 13 or 14 trace elements. Leaves were another important source of trace elements. Soybean meal, and the meal of several other common seeds (depending on availability and cheapness) were also added to provide protein (nitrogen) for the soil.

"Heavy mulching with sawdust or hay prevents the growth of weeds, encourages the activities of worms and

soil organisms, prevents erosion and retains moisture in the hottest weather as well as protecting the soil from frost."

Address: Prof., Vermont.

4389. **Product Name:** Willow Run Oleomargarine—Soy Bean Spread.

Manufacturer's Name: Shedd-Bartush Foods, Inc.

Manufacturer's Address: 14401 Dexter Blvd., Detroit, MI 48238.

Date of Introduction: 1953 December.

New Product—Documentation: Spot in *Soybean Digest*.

1953. Dec. p. 9. "Market new all-soy margarine." This product is made completely from the soybean (soybean oil and soy milk) except for added salt and vitamin A. A photo shows the carton.

Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 19. "Willow Run Margarine, soybean spread, 1 lb.

Ad (full page, green, black, and white) in Natural Foods Merchandiser. 1989. Feb. "Shedd's Willow Run Soybean Margarine. Guaranteed all vegetable. No artificial flavors or preservatives. Pareve. Lactose free. Kosher and pareve. A natural part of a healthy lifestyle. Copyright 1989 by Lever Brothers Co. For more information contact Shedd's Baltimore: 301-644-4900."

4390. Worley, Ted R. 1953. Bypaths of Arkansas history. *Arkansas Historical Quarterly* 12(4):394-98. Winter. [3 ref]

• **Summary:** This is part of a section of shorter articles for young people titled "The Junior Historian." On p. 395-95 we read: *Harmony Springs Vegetarians*. In April 1859, an entire church was tried at Bentonville for Sabbath breaking. The members called themselves 'Reformed Christians,' maintained that all days were holy, and gave to charity the results of their labor for two-thirds of two days a week. They dated their ages from conversion, that is from the 'second birth.' But the Bentonville convicted them:..."

"The church's principal leader was Dr. J.D. Spencer, who published at Harmony Springs a little paper called the *Theocrat*, dedicated to minding its own business and promoting the welfare of all 'who appreciate that Progress is associated with life, truth, and virtue.' The Doctor was an eclectic who was convinced that the beneficial effects of any drug was 'proportional to its animal influence,' and he depended on electric currents for treatment of a variety of diseases. At Harmony Springs Spencer established the Harmonial Healing Institute designed to treat disease by the hydro-electric system. The system, said Spencer, 'subsoils exhausted nature.' (Fayetteville *Arkansasian*, April 30, May 21, and June 11, 1859)."

Note 1. It was apparently against the law to fail to keep the Sabbath. This seems like the state mandating religion.

Note 2. On 29 Oct. 1860 James and Martha Spencer sold 520 acres to a group that established the Harmonial

Vegetarian Society at Harmony Springs, Benton Co., Arkansas. The relationship between the two groups is unclear. We have no reason to believe that James and Martha Spencer were vegetarians or interested in vegetarianism.

4391. *Blauenroter: Jahrbuch der Lebensreform (Also called Vegeta-Jahrbuch der Lebensreform)*. 1953. Serial/periodical. Published in Ebhausen im Schwarzwald, West Germany: Vegeta-Verlag. 15 cm. [Ger]

• **Summary:** A German vegetarian yearbook. Issues include sections on Reformhäuser, Reform-Kuranstalten und Reform-Kur- und Erholungsheime, Reform-Gaststätten, Reform-Aerzte, and Reform Heilpraktiker. Address: Ebhausen, West Germany.

4392. Agee, James. 1953. A mother's tale. In: Martha Foley, ed. 1953. *The Best American Short Stories, 1953*. Boston: Houghton Mifflin Co. See p. 1-18.

• **Summary:** The story of a mother cow and her calves who are taken by railroad on the terrible, sad journey to a slaughterhouse. One bull had escaped from the slaughterhouse and warned his companions, including the mother cow, of what awaits them. Full of pain, the mother tells the calves the story as they ride the train to slaughter. The story, originally printed in *Harper's Bazaar*, was made into a motion picture in 1976.

4393. Brockhaus, Wilhelm. 1953. *Von der Ehrfurcht vor dem Leben und dem Recht der Tiere* [Reverence for life and the rights of animals]. Luedenscheid, Germany: Verlag Rudolf Buecker. 16 p. [Ger]*

4394. Bush, Maxine Conwell; Fewer, Edward Patrick. 1953. *Magic recipes for the Bush & Fewer Liqua-dizer*: Consisting entirely of original recipes created by the authors. 3rd ed., revised and enlarged. Mehoopany, Pennsylvania: Published by the authors. 108 p. Portrait. Illust. 22 cm.

• **Summary:** A vegetarian cookbook that uses a sort of blender. The 1st ed. was copyrighted in 1950. Pages 53-56 give 24 recipes for Nut Milks, including almond milk, cashew milk, walnut milk, pecan milk, peanut-banana milk, almond-peach milk, etc. Pages 57-62 give 31 dairy-free recipes for Soy Milks, each containing 1-4 tablespoons of soybean powder [flour], including pineapple-strawberry-soy milk, banana-strawberry milk shake, blackberry-soy milk, casaba-soy milk, fresh peach-soy milk, peach-pecan-soy milk, raisin-soy drink, plain soy milk, cocoanut-soy milk, vanilla-banana-soy milk, etc.

The section titled "Eggless Dressings," makes abundant use of soybean powder in mayonnaise-like recipes such as lemon-aise, orange-aise, apricot-peanut butter-aise, olive oil mayonnaise, thousand island soy, and soy tartar sauce. Address: 1. D.C., PhD, N.D., nationwide lecturer for more than 25 years on practical psychology, physiology, pathology

and nutrition, chiropractic and naturopathic philosophies; 2. D.C., PhC, N.D., national lecturer on bio-chemistry and nutrition, formerly Prof. of Anatomy and Physiology, Dean and Clinical Director of the Standard Chiropractic School. Both: Mehoopany, Pennsylvania.

4395. Ehret, Arnold. 1953. *A scientific method of eating your way to health*: Prof. Arnold Ehret's mucusless-diet healing system. A complete course for those who desire to control their health. Revised 9th ed. Los Angeles, California: Ehret Literature Publishing Co. 195 p. Portrait. Illust. Index. 18 cm.

• **Summary:** A therapeutic system based on fasting and vegetarian diet designed to prevent mucus formation. The author lived 1866-1922. This book was first published in the 1920s. This edition was copyrighted in 1952. The "Publisher's note" states: "Thirty years ago Professor Arnold Ehret completed his now world famous Mucusless Diet Healing System Lesson Course... Since Professor Ehret's untimely death..." On pages 102-03 Prof. Ehret expresses his antipathy towards "faddists" and notes that the majority of what Ragnar Berg calls "acid forming" foods are what Ehret calls "mucus forming." Ehret likes acid-binding or mucusless foods. Of the various grains and beans (p. 109), soy beans are the best, with an acid-binding score of 26.58. All fruits and most vegetables are also good (acid binding).

Ad in *Let's Live*. 1960. April. p. 39. Ehret Publishing Co. is now in Beaumont, California.

4396. El Molino Mills. 1953. *El Molino best recipes*: Tested in El Molino kitchens. Alhambra, California: El Molino Mills. 132 p. Illust. No index. 17 cm. [4 ref]

• **Summary:** This book is contained in a 13-ring loose-leaf binder "so that you can add your favorite recipes and new ones, too." Thus the recipes (more than 900) and not the pages are numbered. This is largely, but not entirely, a vegetarian cookbook.

Contents: Equivalents. Products offered by El Molino Mills (specializing in whole grains, flours, and mixes; ask for them at all health food stores; incl. soya beans {whole}, soya grits, soya meal, soya flour, soya powder {for milk}, soy bean flour-raw, alfalfa seed-for sprouts or tea, carob powder, cottonseed flour, flaxseed {whole}, garbanza beans {chick peas, whole}, lentils, mung beans-for sprouting, rice-brown, short or long grain, sesame seed {hulled, whole}, sesame seed meal, seven grain cereal {incl. soybeans}, sunflower seed {hulled, whole}, gluten flour, wheat germ cookies).

Photo of outside of the mill. Brief history of El Molino (started in 1926 by Edward Allen Vandercook). El Molino distributors by state: California-Kahan & Lessin Co. (Los Angeles & San Francisco). Colorado-Health Food Sales Co. (Denver). Michigan-Health Food Distributors (Detroit). New York-Sherman Foods, Inc. and Balanced Foods Inc. (New York City). Oklahoma-Akin

Distributors (Tulsa). Washington—Kahan & Lessin Co. and Vital Foods Distributors (Seattle). Illinois—Health Food Jobbers, Inc. (Chicago). Oregon—Nu Vita Foods (Portland). Massachusetts—Food, Inc. (Cambridge). Tennessee—Collegedale Distributors (Collegedale).

Guide to recipes: Breads and rolls (incl. soya flour 100A-C, Cornell triple rich bread with full fat soya flour 101, Whole wheat soya bread—sponge method 107, soya bread 107A), Biscuits. Coffee cake. Muffins. Wheat sticks. Cakes & pastries (incl. Spicy banana soy bars 202D). Cookies. Casseroles (incl. cost and nutritional value of soybeans vs. beef, Cooking soybeans 301, Soybean paste (cooked soybeans that have been drained then put through a food press or sieve, or mashed thoroughly) 302, Soy chile con carne 303, Meatless soy chile con carne 304, Baked soybeans 305). Cereals. Drinks (incl. Milk from soya powder 504, Soya-pineapple tonic 507). Gluten. Hot cakes & waffles. Soups and sprouts (incl. Soya soup 806, Sprouting, incl. alfalfa seed, hulled sunflower seed, radish seed, wheat, mung beans, soybeans, lentils 850-850A. A recipe for Alfalfa Sandwich mentions “alfalfa sprouts”). Allergy recipes and helpful hints (incl. Soya-rice flour banana bread 904, Soya muffins 905, Soya rice waffles 907, Soya-rice flour coffee cake 909, Soya, carob cup cakes 910, Soya cake 910A). Sifting. Skin cleanser. Sour milk. Glossary of products offered by El Molino Mills, with numbers of recipes in which each product is used. Recommended daily dietary allowances (Revised 1948, NRC). Approximate composition of foods—100 grams edible portion.

Note 1. This is the earliest document seen (July 2021) which states that alfalfa seeds can be sprouted for use as human food. This is also the earliest English-language document seen (July 2021) that contains the term “alfalfa sprouts.”

Note 2. This is the earliest document seen (March 2006) that mentions Balanced Foods Inc. (a health-food distributor in New York City).

Note 3. An ad for this book in *Natural Food and Farming* (April 1957, p. 13) states that El Molino Mills is now located at 3060 West Valley Blvd., Alhambra, California.

Note 4. This is the earliest English-language document seen (June 2013) that uses the term “soybean paste” to refer to cooked soybeans that have been drained then put through a food press or sieve, or mashed thoroughly. The term “soybean paste” is also widely used to refer to miso. Address: 3036 W. Valley Blvd., Alhambra, California. Phone: CUMberland 3-3764.

4397. Gourou, Pierre. 1953. *L’Asie* [Asia, 2nd ed., revised]. Paris: Librairie Hachette. 541 p. Illust. Maps (some colored). 23 cm. Series: *Les Cinq Parties du Monde*. [300+* ref. Fre]
• **Summary:** Soy (*soja*) is mentioned on many pages of this book; 6 times on page 154 (Manchuria), 4 times on page

55 (vegetarian food), 3 times on page 129 (agricultural techniques in China), 2 times each on pages 253, 254 (Japanese vegetarian food, tofu, shoyu), and 261 (agricultural production in Japan), and once on pages 65, 135, 147, 148, 259, 275, 280, and 532.

Hervé Berbille of Bordeaux, France writes (22 July 2014). “This book is very important because P. Gourou (a French geographer) was “the father” of the concept of “plant-based civilization” (*civilisation du végétal*), which he created after his first work in Tonkin (part of French Indochina) in the 1920’s.

“I draw your attention to the importance of this concept because it is in direct relation to soybean, as stated by Gourou himself. “La civilisation du végétal” can be mainly achieved by the use of soybean as a staple in food.

“Gourou first applied this concept to Indochina, then in the 1950s he extended it in China. Other scholars (geographers but also ethnologists) then gradually extended it to other countries (Indonesia, Tibet, etc.), including non-Asian (New Caledonia).” Address: Prof. at the College of France and at the Free University of Brussels (*College de France at à l Université libre de Bruxelles*).

4399. Heath, Ambrose [psuedonym: Francis G. Miller]. 1953. Dishes without meat: How to make them. London: Herbert Jenkins. 96 p. 19 cm. *

4400. Jones, Herbert Hilton. 1953. Food and famine (A survey of the world food problem). Manchester, England: The Vegetarian Society. 22 p. [5 ref]

• **Summary:** Contents: Introduction. World population (predicted to reach 4,000 million in 1996). Limiting factors in food production: Space, labour, time, failure of crops, waste, soil erosion and fertility, competition between animal and man for food. Famine areas. A World Food Organization. Speculation in food. Factors requiring adjustment. Appendixes.

This is an economic examination from a vegetarian viewpoint of world food supplies and production with regard to world population. Recommends that less land be devoted to livestock production, international control of staple foodstuffs, soil conservation, and elimination of speculation in food. 1.6 acres of land per person are required to produce a pre-war British diet, but only 0.33 to 0.75 acres per person are required to produce a very varied vegetarian diet; the 0.33 acre figure is for a diet free of dairy products. Today Britain has only 1 acre of land available for food production. Address: B.A., England.

4401. Kloss, Jethro. 1953. *Back to Eden: A human interest story of health and restoration to be found in herb, root, and bark*. 5th printing. Coalmont, Tennessee: Longview Publishing House. 671 + xiii p. Portrait. Illust. Index. 22 cm.
• Summary: A portrait photo of Jethro Kloss (wearing rimless glasses, a dark suit and white tie), first published in the *Washington Post* on 21 May 1933, appears as the frontispiece of this book (facing the title page). The copyright page states: "Copyright, 1939, by Jethro Kloss. All rights reserved. Fourth printing, 1952. Fifth printing, 1953, by permission of the legal heirs of Jethro Kloss, deceased."

The text is exactly the same and on exactly the same pages in this 1953 printing as it was in the original 1939 edition.

4402. Pritchard, Florence; Pritchard, Edgar W. 1953. *A scientific meatless diet: Being the principles and practice of lacto-vegetarianism based on the latest scientific discoveries, with original recipes*. 4th ed. Marryatville, South Australia: Published by the authors. 19 p. 22 cm.
• Summary: Discusses the advantages of a lacto-vegetarian diet, with recipes.

Concerning soya beans, page 7 contains a paragraph which states: "These beans deserve much more attention than they have hitherto received... In China and Japan they are a staple food, being made into innumerable dishes including soya bean milk and cheese [tofu]." There are also recipes for Boiled soya beans (p. 9), and Soya bean rissoles (p. 11). Address: 31 Yeronga Ave., North Kensington Park, Marryatville P.O., South Australia.

4403. Rotondi, Pietro. 1953. *Your vegetarian baby: Its care and development*. Hollywood, California: Published by the author. *

• Summary: This introduction to prenatal and child care emphasizes hygiene, emotional control, animal-free [vegan] foods, and consistent training of the child.

4404. *Vegetarian Handbook*. 1953--.. Serial/periodical. London: London Vegetarian Society. *

• Summary: Continues: *The Food Reformer's Year Book and Health Seeker's Guide*. This serial subsequently went through 3 name changes. After this it was named *International Vegetarian Health Food Handbook*, then *International Vegetarian Handbook*. The 1965 ed. is 92 p., eventually becoming 330 pages in length. The books are mostly about vegetarian restaurants and retail outlets. Address: 53 Marloes Rd., London W.8.

4405. Warmbrand, Max. 1953? *Better food at less cost*. New York, NY: J.R. Profit. 64 p. Undated. 27 cm. *

• Summary: Ruth Warmbrand, the doctor's wife, is considered by vegetarian writer Symon Gould to be "the best vegetarian cook in the country." Address: Florida Health

Conservatory.

4406. Ruttan, Vernon W. 1954. Technological progress in the meatpacking industry, 1919-47. *Marketing Research Report (USDA Agricultural Marketing Service)* No. 59. 38 p. Jan. [50 ref]

• Summary: Contains "A history of mechanical and scientific development in the meatpacking industry" (p. 2-3). "Since its emergence before the Civil War, the meatpacking industry has passed through four stages of development—the country slaughterhouse; winter slaughtering and packing plants; year-round meat-packing plants; and the present integrated food-processing establishments." During this period the major operations performed have remained relatively unchanged, although the methods used to perform them have changed. In short, animals are killed, eviscerated, either depilated (hair or feathers removed) or skinned, chilled, then cut into primal cuts which are either sold fresh or processed further (cured or canned). The byproducts and the edible offal or variety meats, such as tongue, liver, heart, are separated out. "Finally the fresh and processed meats, and the byproducts are disposed of through channels of distribution."

Refrigeration has played the main role in the industry's progress, followed by transportation and power. Before the Civil War, packing plants operated mainly in winter. In the 1860s, coolers were developed in the form of large iceboxes. During the late 1870s and early 1880s, mechanical ice-making machines were perfected and adopted by meat packers. Yet many operations in meatpacking plants are still done by hand. Address: Research Asst. in Agricultural Economics, Univ. of Chicago.

4407. Simons, Madeline A. 1954. Rousseau's natural diet. *Romanic Review (Columbia Univ., New York)* 45(1):18-28. Feb. [46 footnotes]

• Summary: "In the *Discourse on Inequality* Rousseau [the French philosopher and writer, lived 1712-1778] revealed for the first time to the public his interest in dietary questions, affirming that the frugivorous diet was the most natural of all and therefore the most suitable to man's health." He believed that human beings were not created carnivorous, and that their ideal diet was a seasonal and indigenous vegetarian diet.

Although he was never a vegetarian, Rousseau judged dietary questions important enough to discuss them in almost all of his writings, for he believed that spiritual health was a function of bodily health. It is significant that the models he proposed for mankind, Emile and Julie, were vegetarians. Address: Arlington, Virginia.

4408. Einstein, Albert. 1954. Re: Living without eating meat. Letter to Hans Muehsam, March 30.

• Summary: "So I am living without fats, without meat, without fish, but am feeling quite well this way. It almost

seems to me that man was not born to be a carnivore.”

Source: Calaprice, Alice. comp. and ed. 2005. *The New Quotable Einstein*. Princeton, New Jersey: Princeton University Press. 440 p. See p. 281. Einstein Archive 60-058. Footnote: “Einstein was probably not a vegetarian by choice. He had lifelong stomach problems that required him to watch his diet; this also may have been why he was a teetotaler.” Address: Center for Advanced Studies, Princeton, New Jersey.

4409. Graefe, Gerd. 1954. Vernuenftige Rohkost [Sensible raw food]. *Reich der Landfrau* No. 17. p. 135-36. April 29. [Ger]*

4410. Hardinge, Mervyn G.; Stare, Fredrick J. 1954. Nutritional studies of vegetarians. I. Nutritional, physical, and laboratory studies. *American J. of Clinical Nutrition* 2(2):73-82. March/April. [19 ref]

• **Summary:** “A comparative study of 112 vegetarian (incl. 86 lacto-ovo-vegetarians and 26 ‘pure’ vegetarians) and 88 non-vegetarian adults, adolescents, and pregnant women is described. Most of the people studied were residents of Central and Southern California. They were “located through questionnaires circulated in commercial and sectarian magazines and among church and social groups.” (Note: Thus many, but not all, were probably Seventh-day Adventists.) The results show that although the dietary intake of nutrients varied widely among individuals, the average intake of all groups, with the exception of the adolescent ‘pure’ vegetarian, approximated or exceeded the amounts recommended by the National Research Council. Non-vegetarian adolescents consumed significantly more protein than did lacto-ovo-vegetarian and ‘pure’ vegetarian adolescents. No evidence was obtained to indicate that a lacto-ovo-vegetarian diet failed to provide an adequate dietary for an expectant mother.” The report concluded that it was actually quite difficult to eat a varied vegetarian diet that would not exceed protein requirements for the human body (p. 76).

Among the various groups studied, no significant differences in height, weight, blood pressure, childbirth, or hematological data were found. Pure vegetarians [vegans] weighed an average of 20 pounds less than lacto-ovo-vegetarians and non-vegetarians, despite similar caloric intakes and physical activity. Dietary intakes of all groups, except the adolescent pure vegetarians [vegans] approximated or exceeded the amounts recommended by the National Research Council.

The data presented in this paper represent partial fulfillment (by Hardinge) of the requirements for the degree of Doctor of Public Health at the Harvard School of Medicine. Address: 1. School of Medicine, College of Medical Evangelists, Loma Linda, California; 2. Dep. of Nutrition, Harvard School of Public Health, Boston,

Massachusetts.

4411. Hardinge, Mervyn G.; Stare, Fredrick J. 1954. Nutritional studies of vegetarians. II. Dietary and serum levels of cholesterol. *American J. of Clinical Nutrition* 2(2):83-88. March/April. [19 ref]

• **Summary:** The subjects studied were the same as in part I of this study. Dietary cholesterol intakes and serum cholesterol levels were highest in non-vegetarians and lowest in ‘pure’ vegetarians [vegans]. Address: 1. School of Medicine, College of Medical Evangelists, Loma Linda, California; 2. Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

4412. Natural Food Associates. 1954. Directory listing (Ad). *Natural Food and Farming (Atlanta, Texas)* 1(1):16. April.

• **Summary:** The Directory in this first issue of the magazine begins: “Rate: \$12 per year for four lines—additional lines \$3 per line—payable to Natural Food Associates.” Entries include:

“Organically grown citrus fruit in season. Normal season, Dec. thru June. Write for prices. L.P. DeWolf, Crescent City, Fla. [Florida].

“Send card for price list of organic whole grain flours, cereals, etc. Paul Keene, Walnut Acres, Penns Creek Pa. [Pennsylvania].

Note: this short entry / ad ran for the entire year. Walnut Acres did not run any other ads in volume 1 of this magazine.

“Azomite Soil-Ayd (Catalyst). A natural mineral rock soil conditioner. Mined and milled by AUMCO, Sterling, Utah.

“For a variety of naturally-grown foods, cereals, mixes, fruits, nuts, etc., write for free list. Ella Hanford, Hershey, Pa.

“Serving N.Y. City area with organic fruits, vegetables, nuts and bread. Organic Food Market, 236 W. 10th St., New York 24, N.Y.

“Wanted: Organic Farm Products, April to Nov., to sell at our roadside farm market. H.E. Abbott, Woodbury (phone 120) Conn. [Connecticut].

“Raisins: Sweet, seedless, grown without chemicals. Write for prices to grower. Gilberts Organic Farm, Sultana, Ca. [California].

“Organically grown, whole grain flours, cereals, baked goods, etc.; shipped nation wide. Write for free catalog. Stone Mill Products, 1014 Franklin St., S.E., Grand Rapids, Michigan. Department NF.”

“Books lent. No obligation to buy. Postage only charge... Ask for list. Mildred Hatch, St. Johnsbury, Vermont.”

“Certified Organically Grown” produce, dates, pecans, grapefruit and grapes. Prices on request. Lee Anderson, Covalda Date Co., Hy 99 [Highway 99], Coachella, Calif.” These advertisements are divided into the following

categories: Organic foods (listed alphabetically by state), juicers, books, miscellaneous, ladybugs, business opportunities, soil building. Within each category, they are organized by state. About two-thirds of the ads are for organic foods (especially fruits), with California (9 ads), New York (6), Illinois (4), Pennsylvania (4), and Wisconsin (4) having the most ads.

For example: Lee Anderson of the Covalda Date Co. (Highway 99, Coachella, California), is selling "Certified organically grown" produce, dates, pecans, grapefruit and grapes. Prices on request.

Pacific Sunblest of Orange, California, is selling "Oranges—Organically grown by us for 25 years."

Health Research, Mokelumne Hill, California, offers "25 lbs. assorted organically grown fruits and nuts—\$12.50. F.O.B. Health Book Catalogue free!"

"Barton Whole Foods, organically grown for 38 years. Naval oranges, cold-pressed olive oil, dried fruits and mountain apples in season... Porterville, California.

Walter Buschman of Juniper Farm, Sugarloaf, Orange Co., New York, is selling Bio-dynamic (BD) whole wheat flour and cereal, BD rye flour and cereal, BD cornmeal, BD white pastry flour, organic oatmeal and soybeans, and Cheddar cheese made from unpasteurized milk.

Helen and Scott Nearing of Harborside, Maine, are selling their book *Living the Good Life*, a "how-to-do-it" book for Vegetarians and Organic Gardeners. 210 pages. Photographs. \$3.50."

In Pennsylvania, Paul and Betty Keene of Walnut Acres Natural Foods in Penns Creek are "One of the first in the supplying of organic and other natural foods direct from the farm where grown and milled. One of the most complete lines in the country, conscientiously chosen."

In Texas: "5 lbs. Deaf Smith County stone ground 100 per cent organic flour \$1.50 postpaid. Write for list of organic foods. Natural Organic Foods, Atlanta, Texas."

Many of the ads are from individuals who grow and sell organic foods. One is from L.E. Schnoor (Comptonville, California), who sells ladybugs for natural insect control. There are ten ads for soil building materials. At the bottom right corner of p. 23 is a box that states: "Eat organic food."

Note: This ad also appeared in the next issue (May 1956, p. 18-19).

4413. Graefe, Gerd. 1954. Vernuenftige Rohkost [Sensible raw food]. *Reich der Landfrau* No. 18. p. 142. May 6. [Ger]*

4414. Wijn, J.F. de; Donath, W.F.; Meulen-van Eysbergen, H.C. van der. 1954. A study of the effects of completely vegetarian diets on human subjects (Abstract). *Proceedings of the Nutrition Society (London)* 13:xiv-xv. May 22.

• **Summary:** This dietary study of 13 vegans (who had consumed no animal food for from 2 to 15 years previous to the investigation) revealed low intakes of calories, protein,

calcium, and riboflavin. Amino acid composition and vitamin B-12 levels were normal. Address: The Dutch Inst. of Preventive Medicine, Leyden, Netherlands.

4415. Chhuttani, P.N. 1954. Vegetarians and malnutrition. *Indian Medical Gazette* 89(5):289-92. April. [5 ref]

• **Summary:** Soldiers who ate meat had a lower incidence of anemia than vegetarians, and the addition of weekly meat rations improved the overall nutritional status of the meat-eaters. The author while serving with the Indian Army during World War II, noticed that "nearly all of our seriously ill anemia patients were vegetarians... The vegetarians had never taken meat, fish, or eggs." Severe anemia "occurred at a rate of 24.7 per 1,000 per year in the vegetarian group and 0.16 per 1,000 in the meat-eaters." Address: Dep. of Clinical Medicine, Medical College, Amritsar, Punjab, India.

4416. Gould, Symon. 1954. Vegetarian views and news. *Let's Live* 22(5):44. May.

• **Summary:** Discusses a book titled *The Triumph of the Tree*, by John Stewart Collins, who says: "It is clear that before America comes to terms with Nature, if she ever does, we will see a great deal more punishment exacted." Man must try to live in harmony with Nature, for "Nature always has the last word."

Also: The values of organic culture and the dangers to those who consume DDT and other poisons in their food. The annual convention of the Natural Hygienists in Chicago, Illinois. Tobacco as a cause of lung cancer. The dangers of coal tar dye, known as Red No. 32, in the skin of sprayed oranges which are picked green. Address: 117 W. 48th St., New York City 36.

4417. Anderton, R. 1954. Meat-eating delusions. *Vegetarian (The) (London)* 10(2):76-80. May/June. *

• **Summary:** The author believes that meat eaters are not deliberately inhumane, they are simply misinformed or unaware of alternatives. Explores the ethical issues involved in hunting and the slaughter of animals for food or sport.

4418. Konemann, E. 1954. Ernährungs-Markblatt [Nutritional information leaflet]. *Bionomica* 5:84. June. [Ger]*

4419. Burroughs, Wise; Culbertson, C.C.; Kastelic, J.; Cheng, E.; Hale, W.H. 1954. The effects of trace amounts of diethylstilbestrol in rations of fattening steers. *Science* 120(3106):66-67. July 9. [1 ref]

• **Summary:** The presence of estrogenic substances in feed can be good or bad depending upon the purpose of feeding the animal. It was shown that the addition of 5 mg/day of stilbestrol to steer rations can increase live-weight gains by as much as 35% over control animals not receiving stilbestrol, with a reduced feed cost per unit of gain of

as much as 20%. Soybean-oil meal was part of the diet. Address: Iowa Agric. Exp. Station, Ames, Iowa.

4420. Gould, Symon. 1954. Vegetarian views and news. *Let's Live* 22(7):44. July.

• **Summary:** The American Cancer Society emphasizes cure, not prevention. They seem to be little interested in the possible causes of cancer—such as nutritional deficiencies, devitalized foods, and chemical poisons in our food and environment. Of course, the society “would wave aside the example of the Hunza Tribes in Northern India who live on organically-grown foods, practically 95% vegetarian diet, and among whom there has never been found a case of cancer, according to one British doctor, Dr. Wrench, who lived among them for almost 30 years.”

Tells the story of how in 1910 in London, Mahatma Gandhi, a young lawyer from India, came upon a small pamphlet, “A Plea for Vegetarianism,” by Henry Salt. He states in his autobiography that he was much impressed by it. The eloquent Salt started a chain of events that resulted in Great Britain giving independence to India. Address: 117 W. 48th St., New York City 36.

4421. Balu, V. 1954. There need be no shortage of lactic foods in India now that scientists & research workers have succeeded in milking the ground-nut. *Times of India (The Bombay)*. Aug. 1. p. 5.

• **Summary:** “Milk is a perfect and satisfying food.” Dr. E.V. McCollum, the famous U.S. nutritionist of Johns Hopkins University, said in the early 1920s: “The people who have achieved, who have become large, strong, vigorous people, who have reduced their infant mortality, who have the best trades in the world, who have an appreciation of art, literature, and music, who are progressive in science and in every activity of the human intellect, are the people who have used liberal amounts of milk and its products.”

But there is an acute shortage of cow and buffalo milk in India, and it is unequally distributed.

Vegetable milk has been part of the diet in Far Eastern countries for thousands of years. The soya bean had attracted public attention in India by the early 1930s. “Even Mahatma Gandhi, the Father of the Nation, experimented with it for a brief period during the early days of the Gramodyog Sangh (Village Industries Association), since it is one of the most concentrated and nutritive of foods known to man.”

As early as 1945, Dr. V. Subrahmanyam and co-workers in Bangalore found that the quality and digestibility of soya bean are greatly improved when it is soaked in water, drained, germinated [sprouted], made into a paste and then processed to make soya milk. They also found that if it is suitably fortified with calcium, soya milk is about 90% as good as cow's milk in its over-all nutritional value.

The smell and taste of the curd [tofu] and butter-milk prepared from soya milk resemble those of animal milk

products.

Scientists at the Central Food Technological Research Institute [CFTRI], Mysore, after more than 3 years of intense research, have also developed a good, fortified vegetable milk from ground-nut. While the soya bean is new to India and not grown extensively, India is the world's largest producer of ground-nuts—3.5 million tons a year.

Since 1951 CFTRI in Mysore has been making vegetable milk from ground-nuts on a semi-large scale and distributing it to locally to the public through hotels and catering services. It has been well accepted.

In early 1954 CFTRI set up a vegetable [ground-nut] milk plant for a private firm in Mysore. During his election tour, Mr. Nehru visited the plant, tasted the curds and butter-milk prepared there, and expressed his appreciation of them.

4430. Carrington, Hereward; Shelton, Herbert M. 1954. The history of natural hygiene: The basic teachings of doctors Jennings, Graham, Trall, and Tilden. And principles of natural hygiene. Health Research, P.O. Box 70, 70 Lafayette Street, Mokelumne Hill, CA 95245. 96 p. Index. 22 cm.

Spiral bound. 2nd edition 1964.

• **Summary:** Contents: Foreword, by Dr. R.G. Wilborn. The basic health teachings of Dr. Isaac Jennings, Sylvester Graham, Dr. R.T. Trall, and Dr. J.H. Tilden, by Hereward Carrington. Principles of natural hygiene, by Dr. Herbert M. Shelton. Dr. Isaac Jennings on vitality and disease. Graham's lectures on the science of human life. Impaired elimination, by Dr. James C. Jackson. Sunlight, and causes of disease, by Dr. Susanna W. Dodds. Natural hygiene science, by Dr. Robert Walter. Natural hygiene (anonymous). Toxemia, by Dr. J.H. Tilden. The unity and simplicity of disease, by G.R. Clements. Letters to Hereward Carrington from famous health reformers. List of illustrations: Dr. R.T. Trall, Dr. J.H. Tilden, Dr. Herbert M. Shelton.

The author, born in 1880, earned a PhD degree and wrote numerous popular books. The title page lists him as the author of "Vitality, Fasting & Nutrition," "The Natural Food of Man," "Fasting for Health and Long Life," "Death Deferred," etc. He also wrote books on spiritualism, psychic phenomena and powers, ghost stories, and yoga philosophy. The publisher, Health Research, commissioned Carrington to write this book. The title is misleading; it is not a history, though it does discuss the views of pioneers in the field. Nor is it simply a new edition of the author's 1912 work "The Natural Food of Man."

4431. Chase, Alice. 1954. Nutrition for health. New York, NY: Hermine Press, Inc. 343 p. Portrait. Illust. No index. 24 cm.

• **Summary:** Advocates a vegetarian diet as a means of improving health and prolonging life. Stresses the use of fresh raw fruits and vegetables, dairy products and eggs. Contains a chapter titled "The case against animal meats" (p. 186-89).

Reprinted in 1967 by Parker Pub. Co. in West Nyack, New York. The author was born in 1899. Address: Dr.

4432. Davis, Adelle. 1954. Let's eat right to keep fit. New York, NY: Harcourt, Brace & World. 322 p. Index. 21 cm. [14 ref]

• **Summary:** Advises Americans to eat more vitamins, minerals, and protein—as well as wheat germ and tiger's milk [Tiger's Milk]—to reduce their risks of possible deficiencies. Meats, fish, and fowl are considered excellent sources of protein. "Other superior sources are eggs, fresh milk, buttermilk, yogurt, powdered milk, cheese, soybeans, and powdered yeast" (p. 26). "Proteins from brewers' yeast, certain nuts, soybeans, cottonseed, and the germ of cereals are complete proteins (p. 29). A table (p. 32-33) lists good sources of protein including: Low fat soybean flour (1 cup has 60 gm of complete protein). Cooked soybeans (½ cup has 20 gm of complete protein).

"If milk, cheese, or eggs are disliked or unobtainable, getting adequate protein becomes a serious matter indeed.

When the complete proteins of wheat germ, soybeans, brewers' yeast, and nuts are eaten, it is possible to obtain sufficient amounts of essential amino acids, provided the diet is planned with utmost care. Some of the world's leading athletes and scholars have been vegetarians. Unless a vegetarian is trained in nutrition, however, he usually becomes an unhealthy vegetarian."

Lecithin and its benefits are described on pages 38, 41, 78, 80, 115, and 219. "When oils are refined or hydrogenated, lecithin is discarded." Soybeans are a good source of pantothenic acid (p. 86) and vitamin B-1 (p. 101).

"If there is no health-food store in your community, you can purchase stone-ground flour from El Molino Mills, Alhambra, California; Paul Keene, Walnut Acres, Penns Creek, Pennsylvania; Great Valley Mills, Kellers Church, Bucks County, Pennsylvania; Elam Mills, Chicago, Illinois; Wight's Grist Mill, Old Sturbridge Village, Sturbridge, Massachusetts; Stone Buhr Milling Company, 3509 Evanston St., Seattle, Washington; Whole Grain Flour Mills, 2611 North Jones St., Chicago 47, Illinois; Huni Health Products, 207 East 87th St., New York City; The Vermont Country Store, Weston, Vermont" (p. 107).

"At first it may seem complicated to get your B vitamins from natural foods. Perhaps I can help you most by telling you how I have solved the problem in my family. I have had no white flour in the house for perhaps 20 years. All my flour is stone-ground whole wheat; [Sources of such flour, nationwide, are listed.] it is usually 'organically grown,' that is, grown on soil rich in humus, without commercial fertilizers. Such flour has a flavor infinitely more delicious than that of ordinary varieties... So-called 'enriched' flour is my idea of outright dishonesty... I rarely serve cereals because they contain so much starch... Soy flour, which supplies protein, cholin, inositol, and some anti-stress vitamins, I use in tiger's milk (p. 114) and the best hotcakes" (p. 109).

"Many authorities believe that the deficiency of calcium is more widespread than that of any other nutrient; milk is the only dependable source in the America diet... A certain amount of calcium can be obtained from mustard and turnip greens, soybeans, and blackstrap molasses, but these foods are rarely eaten daily... Certainly there are healthy people who do not drink milk, but each has a source of calcium; the Hawaiians' source is poi; the Orientals', soybean curds [tofu]."

"During hot weather, salty foods, such as salted nuts or soybeans, cheeses or potato chips, should be kept near the drinking water, and at least one well-salted food should be served with each meal." Address: Los Angeles, California.

4433. Dean, R.F.A. 1954. Treatment of kwashiorkor at Mulago* [Uganda]. In: Malnutrition in African Mothers, Infants and Young Children: Report of the Second Inter-African Conference on Nutrition. London: Her Majesty's

Stationery Office. 398 p. See p. 308-14. Held 19-27 Nov. 1952 at Fajara, Gambia, under the auspices of the Commission for Technical Cooperation in Africa South of the Sahara (CCTA). [2 ref]

• **Summary:** A footnote (p. 308) referring to the title of this article states: "The cases of kwashiorkor mentioned in this paper were considered to have no important complicating disease. Thompson, working at Mulago, has recently extended our preliminary observations on the use of soya diets by attempting the treatment of an unselected series of 43 children, admitted with the diagnosis of kwashiorkor. One-third of these children had some active complication.

"The records of five children could not be used, for various reasons. Of the remaining 38 children, 22 were deemed to progress satisfactorily on the soya diet, nine progressed poorly, but did better on a milk protein diet, and seven died despite change to the milk diet."

The article begins: "The conception of kwashiorkor as a protein-deficiency disease has led to treatment with diets rich in protein... Probably the protein should be rich in methionine, because vegetarian diets of the kind on which children seem to contract kwashiorkor are likely to be short of the amino-acid. Methionine is known to be lipotropic. It is concerned in the formation of choline, which is also lipotropic... Cyanocobalamin (vitamin B-12) must be added, not merely because it too is lipotropic but also because it may help in transmethylation."

"After assessing the results of treatment of over a hundred cases of kwashiorkor, it was decided that a minimum of 50g protein daily is needed for the cure of fairly severe cases... Milk seems to be the most suitable of the animal foods; peanuts and soya are the best of the plant foods but cereals are impractical."

"Since the results of the use of the diets based on soya bean preparations were published (Dean 1953, *British Medical Journal*, ii, 791) some modification of the preparations has been made. Soya beans are cooked for eight to ten hours and not autoclaved... We are still unable to say exactly the extent to which the soya-banana diets will replace milk protein diets but, on the whole, the good results obtained at first have been sustained."

"Ways will have to be found of making the soya more digestible... The soya preparation has been used regularly as a supplement to the usual diet of patients with the common diseases—mostly pneumonia and malaria, accompanied by some degree of kwashiorkor. It has been incorporated in a simple maize porridge and taken readily by the children, who appear to thrive on it. It seems to be a satisfactory source of protein and calories. It is certainly cheap and in its preparation no special apparatus is needed." Address: [Kampala, Uganda].

4434. Ebright, Donald Fossett. 1954. Free India: The first five years. An account of the 1947 riots, refugees, relief, and

rehabilitation. Nashville, Tennessee: Parthenon Press. 223 p. See p. 79, 80-81, 208, etc. Illust. 20 cm. [54 + 93 footnotes]
• Summary: This very interesting well written and carefully documented book suffers from lack of an index.

Contents: 1. Carving the Indian Union and Pakistan out of an old continent (1947). 2. The greatest mass migration in history (1947). 3. Meeting human need (1948). 4. Voluntary relief agencies. 5. Distinguished leadership (incl. the inspiring influence of Mohandas K. Gandhi, Dr. Rajendra Prasad, Jawaharlal Nehru {the first, and to date longest serving}, prime minister of India, 1947-1964, Rajkumari Amrit Kaur, etc.). 6. From refugee to famine relief (1950; the NCC Refugee Relief Committee). 7. Indo-American Relief Agreement (1951). 8. Kazakh-Turki flight to freedom. 9. India, the United States, and the United Nations. 10. Will India go Communist? 11. There yet remains (1953).

Multi-Purpose Food is mentioned on 8 pages in this book. Donald Ebright was born in 1910 and later joined the Meals for Millions Foundation.

Chapter 4, "Voluntary relief agencies," contains a section titled "Meals for Millions" (p. 79-81), located at 648 South Broadway, Los Angeles, California, U.S.A. (See footnote 47, p. 216). This section contains a good overview and brief history of MFM and its Multi-Purpose Food (MPF) based on "expeller-processed presscake of the soybean—a by-product of soy oil production, available in abundance and at present little used for human food. The soy cake is reduced to the consistency of corn meal and then fortified with minerals and vitamins." "Soy protein is probably the most complete of the vegetable proteins. It contains the ten essential amines [amino acids].

"Multi-Purpose Food also has the advantage of being pre-cooked. The expeller process of production consists of pressing the soybean in a steam-jacketed pipe at 250 to 275 degrees (F) temperature for 30-40 minutes. This reduces the time required for cooking to about ten minutes—a factor of convenience as well as fuel economy—when one considers its use in refugee camps and famine areas.

"We rejoiced at the large shipment of MPF and discovered that while it was unpopular eaten straight, it could be added to any soup, curry, stew, goulash, dough or batter—and made the batter better! Thank you, Florence Rose, for the lives you have saved in India through MPF Food."

When the British arrived in India 200 years ago, the population of India was 70 million. When they left in 1947, there were 360 million—a more than 5-fold increase. The population was once held in check by famine, disease, and internal warfare (p. 96).

Agricultural progress in India was retarded during British colonial rule "because the British kept India as a producer of raw materials for British factories and a market for its manufactured goods" (p. 103).

In Chapter 6 the section titled "Famine relief" notes: "Ralston cereal, wheat, milk-powder, sugar, vitamin tablets,

beans, barley, corn oil, prunes, raisins, rice and Multi-Purpose Food formed the bulk of our imports." Multi-Purpose Food is also mentioned (p. 106) as an important import. Meals for Millions is mentioned (p. 153) as a voluntary agency aiding India.

"India has had three terrific budgetary drains which have prevented the construction of new roads, bridges or schools. These are: (1) the annual cost of rehabilitating 7½ million people uprooted from their homes in Pakistan; (2) The food shortage of five million tons which plus a deficit in cotton cost the Indian government \$700 million in foreign currencies last year; and (3) the budget for defense, i.e., the army, navy and air force" [which accounts for 45-50% of the total national budget] (p. 186).

"India has dealt a death blow to feudalism by enacting the Zamindari Abolition and Land Reform Act of July 1, 1952, in Uttar Pradesh in North India of which Lucknow is the capital." "The Zamindari system arose at the time of the old British East India Company. The British found *zamindars* already collecting taxes and converted these tax gatherers into landowners. The *zamindars* became intermediaries between the peasant and the government" (p. 198).

A map of India (at front of book, facing the copyright page), titled Movement of Refugees, uses black arrows to show the movement of refugees from Pakistan (both east and west), and white arrows to show the movement toward Pakistan. The 13 million uprooted people traveled by truck, train, ship, convoy and plane.

Note: Donald Ebright earned his PhD at the University of Chicago where he was on the faculty. He was in India for 22 years during the Hindu / Muslim conflicts. He has more than 2,000 lectures, TV and radio programs to his credit. Address: PhD, Director, Refugees and Famine Relief (1949-1952) of the National Christian Council of India.

4435. Nearing, Helen; Nearing, Scott. 1954. Living the good life: Being a plain practical account of a twenty-year project in a self-subsistent homestead in Vermont. Harborside, Maine: Social Science Institute. xii + 209 p. Illust. Index. 21 cm. [160+* ref]

• Summary: A wonderful book; a classic indeed. After leaving New York City in 1932 for farms in Vermont, the authors pursued a lifestyle embracing vegetarianism, self-sufficiency, simplicity, and pacifism. Original thinkers and excellent writers, they sprinkle their inspiring story with many fine quotations from writers of previous centuries.

Concerning vegetarianism: "The society from which we had moved had rejected in practice and in principle our pacifism, our vegetarianism, and our collectivism" (p. vii). "7. We will keep no animals... We do not eat animals, or their products, and we do not exploit them. We thus escape the servitude and dependence which tie both farmer and animal together. The old proverb 'No man is free who has a servant' could well read 'No man is free who has an animal.'" "We

believe that all life is to be respected—non-human as well as human” (p. 27). “The foods we chose to live on were those that had the simplest, closest and most natural relationship to the soil. Jared Eliot called them ‘the clean productions of the Earth.’ All foods, animal as well as vegetable, come from the land, but raw fruits, nuts and vegetables are the simplest, come most directly and in the closest connection. They appeal to the taste with no adulterants, with no added flavoring or condiments, come crammed with vitamins and minerals and involve the least care and no cooking. We might call them primary foods.

“Dairy products are foods at second or third-hand, reaching humans through the bodies of animals which feed on the produce of the soil... Human milk should normally be for baby humans, cow’s milk for calves, etc. A calf doubles its weight in a month, a human baby in six months. Food intended by nature for one is not necessarily a desirable food for the other. Adults of any breed should have been weaned and past the milk stage of feeding.

“Humans eat another type of food which is the furthest removed from the soil,—the cooked carcasses of beasts, birds and fish” (p. 133-34). We “raised the food we ate. We found it be sufficient, nutritious, and nourishing. On this diet we maintained a rugged health and patronized no doctors” (p. 141).

“Our ways amused the neighbors [in Vermont], baffled them or annoyed them. Perhaps the most consistent and emphatic disapproval was directed against our diet... That we ate no meat was in itself strange...” Yet during two decades and innumerable long discussions on the subjects of “white flour, white bread, white sugar, pies and pastries, the necessity of eating raw vegetables, and the revolting practice of consuming decaying animal carcasses, no native Vermont family of our acquaintance made any noticeable change in its food habits” (p. 159).

“And so we evolved a form letter sent to inquirers who wrote and asked if they could come and stay a few days a week or a month and more. It ran something like this: We are a small family working out a way of living, and at the same time earning a living. Our accommodations are built for that purpose only and we do not conduct an inn or a sanitarium [sanitarium] or a vacation center. We work at bread labor at least four hours a day, plus the short time needed to get our simple, vegetarian meals. We all follow this daily routine and expect those who happen to stay here for a time to fit in. Meat, tobacco and alcohol are taboo on the place. Our living is simple and austere; some would say hard and comfortless. If you are ever passing this way, you are welcome to stop in. We are always glad to see people of our way of thinking and living, and to share with them whatever we have, do, feel and think” (p. 190).

Though soy was not an important part of their diet, it is mentioned several times in the chapter titled “Eating for health”: “We aimed to keep our diet at 50% fruit, 35%

vegetables, and 10% protein and starch... Our protein came from nuts, beans, olives, and the proteins contained in vegetables and in cereal grains and seeds. We believe that a far smaller amount of protein is necessary and healthful than usually advocated. The craving for concentrated protein foods is an acquired and a dangerous habit, in that it over-energizes the human organism and overloads the system with acid-forming elements. Our fats were derived from vegetable oils,—olive, soy, corn, peanut or safflower. We have a high opinion of the efficacy of olive oil. Avocado pears are also an important source of vegetable fat for people living on a vegetarian diet” (p. 135). To the vegetable soup they “added dried herbs and salt for seasoning. Occasionally barley, soy bean meal, oats or rice were included” (p. 138). Address: Vermont.

4436. Pietschman, Ann. comp. 1954. Food for thought: Over three hundred delightful recipes—mostly vegetarian. Los Angeles, California: Institute of Mentalphysics. 341 p. Undated. Illust. 22 cm. Series: A Mentalphysics Publication.

• **Summary:** Soybeans and/or soybean meal or flour are listed as good sources of vitamin B (thiamin), vitamin G (riboflavin), niacin (nicotinic acid), and protein (p. 4-6). Try using soy sauce to season swiss steak (p. 13). Soy-related recipes include: Scalloped soy beans (p. 136, 185). Soy bean loaf (p. 138). Whole-wheat bread with soya flour (p. 298). Soya nut bread (with soy flour, p. 306). Soy muffins (with soy flour, p. 312). Address: 213 South Hobart Blvd., Los Angeles 4, California.

4437. Price, Robert. 1954. Johnny Appleseed: Man and myth. Bloomington, Indiana: Indiana University Press. xv + 320 p. [18] p. of plates. Illust. Index. 22 cm. Reprinted in 1967 by Peter Smith. [56* + 289 endnotes]

• **Summary:** This carefully researched and documented book, which is widely considered to be the best biography of Johnny Appleseed, uses many sources in an attempt to separate the historical character from the legends and tales about him. Johnny Appleseed has clearly become one of America’s half dozen favorite folk heroes.

John Chapman (Johnny Appleseed, 1774-1845) is said by some to have been America’s first true, long-time vegetarian. Chapman was a very devout disciple of Emanuel Swedenborg (1688-1772), the famous Swedish Christian mystic, scientist, philosopher, and author. Vegetarians present solid evidence that Swedenborg was a vegetarian for about the last 20 years of his life, and there is no doubt that the founders of the Bible Christian Church (vegetarian) were disciples of Swedenborg. Yet Swedenborgians today present different evidence to support their view that Swedenborg was not a vegetarian. Surprisingly, in the index of this book there are no entries for diet, food, killing, or vegetarianism. Yet many passages, and at least one document quoted in the book make it clear that John Chapman was a friend to all animals

and would never eat, or even harm, them.

For example, in 1842 (p. 221-22), W.M. Glines of Ohio wrote about John Chapman, when he was visiting his half-sister, Sally Chapman Whitney. "I [Glines] proposed taking my gun along to kill some squirrels or rabbits; to this John demurred; he read me a severe lecture upon the subject of taking life from any living creature; he maintained that God was the Author of all life, hence it belonged to him whenever he was ready to demand it, and in as much as we could not give life to any creature, we were not at liberty to destroy life with impunity; after this lecture and to please him, I put up the gun and we moved on."

Another well-known incident, from about 1819, is described in a letter to the *Ohio Liberal* (1873, Aug. 13 and 20) in which E. Vandorn gives some of the earliest known reminiscences of John Chapman's common way of life in Ohio in these years. "'Johnny blamed the whites for all the mischief done by the Indians. He said the Indians had done him no harm, but were friendly. Two Indians came to his camp one night and told him the fire was coming, and they helped him to keep back the fire round his fire and nursery.'

"While fighting the fire they had pulled back an old log and disturbed a rattlesnake, which had protested with a vigorous rattle. 'The Indians don't kill snakes,' John told the boys... 'We walked around it with torches in our hands, talked to it and then left it to take care of itself... I killed one once that had bit me, and I am sorry for it.'" [said Chapman].

The author retells this story (p. 139): John's "religiously inspired mercies for wild creatures for instance, brought a multitude of laughs and an endless succession of yarns. Once when mowing he had been bitten by a rattlesnake, which he promptly killed with his scythe. Then, smitten with remorse, he had said, tears gathering in his eyes, 'Poor fellow! He only just touched me, when in an ungodly passion I put the heel of my scythe on him and killed him!' This tenderness, said the storytellers extended to bears, wolves, horses turned loose to die, wasps, mosquitoes, and flies. But why not? Had not Swedenborg said that all things in the world exist from a Divine Origin... clothed with such forms in nature as enable them to exist there and perform their use and thus to correspond to higher things'?"

Note 1. Talk with Arran Stephens. 2006. Aug. Arran believes that John Chapman was a vegetarian, as was stated in a book he read. He will try to find the title and author of the book. Note 2. John Chapman was born 68 years after Benjamin Franklin (1706-1790) and he died about 55 years after Franklin's death. Franklin experimented with vegetarianism for about a year when you was young, but did not continue.

A brief chronology of John Chapman: 1774 Sept. 26—He is born in Leominster, Massachusetts, the 2nd of three children of Nathaniel and Elizabeth (Symond) Chapman. His father fought in the American Revolution. His mother died when he was about 2 years old.

1780 July 24—His father remarries to Lucy Cooley of Longmeadow, Massachusetts; they have a family of 10 children born 1781-1803. John and his elder sister, Elizabeth, live with them for some time in Longmeadow.

1797 ca.—Chapman (age 23) enters Pennsylvania from the west, begins to lease or buy land and to establish nurseries of apple trees in Warren County and Venango County (p. 269; fold-out map at end of book). He collects apple seeds from local cider presses / mills, plants them in his nurseries, then sells the young trees to settlers moving westward. John Adams is president of the USA (p. 226).

1801—By now he had planted his established his first apple tree nurseries in central Ohio (Carroll Co., Belmont Co., and Jefferson Co.). Thomas Jefferson is president.

1812—He has several nurseries in Licking Co., Ohio.

1813—Chapman, age 39, settles into the general area of Mansfield, Ohio. Chapman had no home of his own. He either slept outdoors or spent the night with new settlers or relatives on his migration paths. By this time Chapman had become a follower of Emanuel Swedenborg, and he distributed his books wherever he went. "He was no blindly fanatical colporteur. He both read his tracts and discussed them freely and intelligently" (p. 133).

1815—Chapman is now in communication with leading Swedenborgians, members of the "New Church" (or "Church of the New Jerusalem") in Philadelphia—such as William Schattler. He must have been "one of the earliest New Church converts in America" (p. 121).

1817 Jan. 14—When he is age 42, the story of Chapman's unusual career is first told in print, not in the USA but 3,500 miles away in Manchester, England. "And it was the story, not of a nurseryman or of a frontier hero, but of a very devout Christian missionary. The account appeared in a report of the Manchester Society for Printing, Publishing and Circulating the Writings of Emanuel Swedenborg, and it had had been taken from a letter written to the Manchester Society by someone in Philadelphia." A long quotation from the report follows (p. 120). Also in 1817 the New Church held its first "General Convention" in Philadelphia (p. 119-22).

1822 Nov. 18—The sobriquet "John Appleseed is first applied to John Chapman in a letter by Rev. N. Holley, who corresponded with Chapman for 7 years. "The childish diminutive 'Johnny' came with old age and the myth."

1820-1840—Chapman spent his middle years in central and northern Ohio, where "a considerable number of small Swedenborgian societies sprang up and flourished" (p. 141). He moves with the seasons, going west in the spring and east in the late summer (p. 200-07). Although he lived an utterly simple life, "Altogether, in the course of his long wanderings, had owned either by deed outright or on long-time lease no less than 22 properties totaling nearly 1,200 acres" (p. 224). 1829—By now he had extended his operations westward into Indiana, moving with the frontier. By 1834 he

had a nursery in Allen Co., Indiana.

1854—He dies near Fort Wayne, Indiana.

1846—Chapman discussed at length in *Historical Collections of Ohio*, by Henry Howe. The April 1846 issue of *Hovey's Magazine of Horticulture* printed a sketch of Chapman's career as a pioneer horticulturist in the West.

1871 Nov.—An article in *Harper's Magazine* titled "Johnny Appleseed—A Pioneer Hero," by W.D. Haley (p. 830-36), gives him national popularity.

1948—The "Johnny Appleseed Song" is one of the segments from Walt Disney's 10th animated classic—*Melody Time*. It begins: "Oh, the Lord is good to me / and so I thank the Lord / For giving me the things I need / The sun, and the rain and the apple tree. / The Lord is good to me." Address: Otterbein College [Westerville, Ohio].

4438. Reddy, Saranya Kumari; Doraiswamy, T.R.; Sankaran, A.N.; Swaminathan, M.; Subrahmanyam, V. 1954. Effects on the general health and nutritional status of children of partial replacement of rice in a poor vegetarian diet by tapioca flour. *British J. of Nutrition* 8(1):17-21. [7 ref]

• **Summary:** "A feeding experiment lasting for a period of 6 months was carried out in a girls' orphanage in Mysore to evaluate the effect on the growth and nutritional status of children between 4 and 12 years of age of replacing 25% of the rice in a poor vegetarian rice diet by tapioca flour.

There were no significant effects. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

4440. Shelley, Percy Bysshe. 1954. Shelley's prose: Or, the trumpet of a prophecy. Edited by David Lee Clark, with an introduction and notes. Albuquerque, New Mexico: University of New Mexico Press. viii + 385 p. Portraits. 27 cm. [40+* ref]*

• **Summary:** Shelley's "A vindication of natural diet" (p. 81-90) is an eloquent statement supporting the vegetarian diet, which the author believes offers health, economic, and political advantages. It links physical degeneration and moral depravity to an unnatural diet and lifestyle by citing mythology, literature, and philosophy.

"Essay on the vegetable system of diet" (p. 91-96) argues that meat causes diseases of the body and mind because it is not a natural food for humans.

4441. Vollmer, Marion W. 1954. Food: Health and efficiency. Lessons in nutrition and healthful food preparation. Prepared for use in Home health education classes under the direction of the Medical Dept. of the General Conference of Seventh-

day Adventists. Nashville, Tennessee: Southern Publishing Assoc. 111 p. 24 cm.

• **Summary:** This Seventh-day Adventist book on vegetarian nutrition (with recipes) mentions soy in several places. To help make breakfast a hearty meal, waffles may be "reinforced with soy" (p. 19). When cooking processed breakfast cereals, "they can be made more nutritious by adding wheat germ, rice bran, soy flour, etc." Soybeans are given as the first example of a high-protein food that should be eaten daily (p. 26), and soybeans, soybean products, and gluten are listed as good sources of protein (p. 31). A table showing the protein content of common foods includes Soyalac (dry soy milk), meat substitutes (commercial gluten steaks, Proteena or dark meat substitutes, Nuteena or light-meat substitutes), and soybeans (p. 32).

The following recipes are given: Baked soybeans (p. 34). Gluten (how to prepare and serve at home, p. 35-36). Gluten, mushroom, and potato pot pie (p. 36). Holiday loaf (with Vegemeat Burger or other ground gluten, p. 37). Mushroom dressing with gluten slices (p. 37).

A second edition was published in 1964.

4442. White, Ellen G. 1954. A call to medical evangelism and health education: Selections from the writings of E.G. White. Nashville, Tennessee: Southern Publishing Assoc. 47 p. No index. 20 cm.

• **Summary:** Contents: 1. A Call to Service. 2. The Call of the Cities. 3. Ways of Working. 4. Christian Help Work. 5. A Complete Ministry. 6. Teaching Health Principles. 7. The Temperance Work. 8. Co-operation Between Medical and Evangelistic Work. 9. Equipment for Service.

A remarkable book, urging Seventh-day Adventists to become physicians and then missionaries. It is divided into chapters and each chapter into many sections, each with the source cited, for example, "Meeting God at the altar of self-sacrifice."

Note: Ellen Gould Harmon White lived 1827-1915. Address: USA.

4444. Walker, William Bentley. 1955. The health reform movement in the United States, 1830-1870. PhD thesis, Faculty of Philosophy, Johns Hopkins University, Baltimore, Maryland. 308 p. June. No index. 28 cm. [208 ref]

• **Summary:** Contents: Abstract of dissertation. Preface. Acknowledgements. 1. The genesis of sectarian medicine 1790-1830 (Dr. David Ramsay, Benjamin Rush, John Wesley, high level of scepticism toward systematic medicine in the USA and Europe, calomel and bleeding, the medical profession vs. "popular" medicine, the public is being "dosed and drugged" to death, decline of medical education standards, Andrew Jackson becomes president (1828)

and the rise of the common man, many state legislatures repeal medical licensing laws in the 1830s and 1840s to allow complete freedom of medical practice, the rise of medical reform and popular sectarian movements, Elisha Perkins (1741-99), Samuel Thompson (1769-1843) and the Thomsonians / Botanics with materia medica, Samuel Hahnemann and homeopathy, rise of homeopathy in America from 1826, homeopaths and botanics are the two leading groups, reform movements and commutarian experiments, phrenology, Lorenzo and Orson Fowler).

2. A diet of 'bran bread' 1832-1837 (detailed biography of Sylvester Graham, temperance, first Graham boarding-house founded in New York in 1833, Dr. Reuben Mussey, chastity vs. sexual indulgence, Onanism, advocating a "purely vegetable diet," Treatise on Bread {1837} advocating unbolted wheat meal bread and "bran bread," bakers attack Graham, his obituary in *Boston Medical and Surgical Journal*).

3. The program of physical education 1832-1837 (detailed biography of Dr. William Andrus Alcott. Graduation from Yale [in Connecticut] as an M.D. in 1825; he wrote his graduation thesis on preventing pulmonary consumption. "It was Alcott's vegetarianism which first evoked hostile criticism. A Boston newspaper {Boston Recorder, 29 June 1838} stated: "That total abstinence from animal food is... demanded by the laws of our physical nature, is more than any man of sound mind will contend..." Prior to this his teachings had been virtually devoid of controversy. He was often at odds with the followers of Sylvester Graham and with the medical profession which was largely indifferent or even hostile to the progress of health reform. In 1835 he began publishing a periodical, the *Moral Reformer* to express his views on a comprehensive program for keeping good health, including disease prevention. He argued that a physicians role was to maintain health. Influence on Horace Mann).

4. The medical profession and personal hygiene 1835-1840 (Dr. Reuben Mussey of Dartmouth, Dr. Benjamin Rush (temperance and exercise), Dr. John C. Coffin, emphasis on hygienic reform, sectarian leader Sylvester Graham, Edward Hitchcock on diet (1831), Robley Dunglison (1798-1869), American Physiological Society (organized Feb. 1837 in Boston, Massachusetts; W.A. Alcott, president; major goals were attempting to enlist legislative action "in favor of the vegetable Graham system" and outlawing the use of medicines), phrenology, the Graham bran bread system, the second American Health Convention of 1839, Graham Journal of Health and Longevity (started 1837, edited by David Campbell), influence of Alcott vs. Graham, public ridicule, *American Vegetarian and Health Journal* (1853)).

5. Physiological reform 1837-1845 (Events at Oberlin College {Oberlin, Ohio}, David Campbell and S. Graham, biography of Isaac Jennings and Orthopathy, Mrs. Mary Gove (one of the first woman leaders of the health

movement)).

6. The introduction of 'water cure' 1845-1850 (Priessnitz, Joel Shew, sitz baths, David Campbell, Mrs. Mary Gove, Fowlers & Wells, Orson Fowler, Samuel R. Wells, hydropathy, *Water-Cure Journal*, Dr. Russell Trall of New York {biography} and his synthesis).

7. The rise of the 'hygienic system' 1850-1860 (No. of water-cure houses rises from one in 1847 to 23 by 1851 to 62 by 1854, Dr. Conrad Wesselhoeft, *Green Mountain Spring*, New Lebanon Springs Water-Cure, David Campbell, Dr. Bedortha, Dr. James C. Jackson, Glenhaven and Dansville {from 1858; Livingston County, New York}, Dr. Russell Trall organizes American Anti-Tobacco Society of New York in April 1849, Rev. William Metcalfe of Philadelphia [Pennsylvania] and organization of the American Vegetarian Society in 1850, its history, public health and sanitary reform, Lemuel Shattuck, R.S. Houghton, Dr. J.C. Jackson and the National Health Convention {Dansville, Sept. 1859}, National Dress Reform Association, Miss Austin, Thomas Low Nichols).

8. The decline of the 'hygienic system' 1860-1875 (Death of Russell Trall severs one of last remaining links with an earlier generation of health reformers, effect of Civil War, Dr. James C. Jackson enters semi-retirement in 1871 at Dansville and dies in 1881, succeeded by his son Dr. James H. Jackson, need for American Health Reform Association, Dr. M.L. Holbrook, "as health reform became more prominently identified with physical culture, it gradually came to lose its identity as a system of medical practice," new discoveries in medical science by the 1870s, microorganisms, antisepsis and infection, the microscope, bacteriology, concept of immunity, reform in training procedures and licensing, reorganization of medical education from 1871 by president Eliot of Harvard, response of Botanics, Homeopaths, hygienists, three factors contributing to the decline of the health reform movement—economic weakness, the vogue of 'physical culture,' and the revival of scientific medicine, only the latter is decisive, health reform reduced to 'right living,' Dr. John Harvey Kellogg, hygiene movement lasted for 40 years, its legacy).

9. Aftermath; summary 1875-1880.

This is a good treatment of America's first health reform movement. Unfortunately, it has no index.

4445. Walker, William Bentley. 1955. America's first vegetarian society (Document part). In: Willaim B. Walker. 1955. The Health Reform Movement in the United States, 1830-1870. PhD thesis, Faculty of Philosophy, Johns Hopkins University, Baltimore, Maryland. 310 p. See p. 203-05. June. 28 cm. [8 ref]

• **Summary:** In April 1849 "the Reverend William Metcalfe of Philadelphia [Pennsylvania] wrote the *Water-Cure Journal* suggesting the formation of a vegetarian society modeled on that currently in vogue in England. In consequence a

convention was held in New York the following spring to organize the 'American Vegetarian Society.' William A. Alcott was chosen president," with Samuel R. Wells as Treasurer, and Russell T. Trall, Dr. I. Jennings of Oberlin, Dr. Reuben Mussey of Cincinnati (Ohio), and Thomas Low Nichols of New York as leading members of the Executive Committee. The most important role, however, was reserved for William Metcalfe, who became the corresponding secretary.

"The annual meetings were usually alternated between Philadelphia and New York, and were continued for more than ten years. At the original meeting the Society had decided to sponsor its own journal, *The American Vegetarian and Health Journal*, to run descriptive articles praising the healthful and curative virtues of vegetable diet, and to report on the activities of the parent body. Under the joint editorship of Alcott and Metcalfe, this periodical struggled along for four years, after which the Society decided to abandon it. In August 1854 an agreement was made with the *Water-Cure Journal* to reserve two pages in each issue for 'vegetarian news,' and this was faithfully observed throughout the life of the Society.

"The annual meetings invariably featured a vegetarian banquet, which on one occasion consisted of "three courses, containing over thirty cooked varieties of food, preserves, and a magnificent dessert..." At the meeting in 1853 this affair was attended by some 350 people, among them such well-known reformers as Lucy Stone, Amelia Bloomer, Susan B. Anthony and Horace Greeley. These feasts were thought to be "an admirable way of disseminating vegetarian principles...", and were intended to scotch the rumors that such a regime implied a slow form of starvation. Some critics, however, were still quick to observe that gluttony could be practiced without meat.

"Apparently attendance on this scale was not usual at the meetings, and when the Society convened in 1855 at Trall's water-cure in New York, the membership appeared to have shrunk to little more than the slate of officers. Though an evening session was held, the idea of a banquet appears to have been dropped. Nonetheless, the small remaining group continued to function, supported mainly by the efforts of the Reverend Mr. Metcalfe. This 'cleric' succeeded to the presidency following Dr. Alcott's death in 1859, and at the last recorded meeting, in 1861, he was energetically pointing to his own age—75—as proof of the enduring value of vegetarian principles."

4446. Wokes, Frank; Badenoch, J.; Sinclair, H.M. 1955. Human dietary deficiency of vitamin B-12. *Voeding* 16(6):590-602. June. [22 ref. Eng]

• **Summary:** Contents: Animal protein and vitamin B-12 intakes. Composition of groups of British, Dutch and American vegans. Health in relation to period of veganism. Rate of development of different clinical deficiency

symptoms. Serum B-12 levels compared with the period of veganism. Serum B-12 levels compared with red blood cells. Serum B-12 levels compared with haemoglobin levels. Tyrosyl derivatives and serum B-12 levels. Cyanide and thiocyanate metabolism and vitamin B-12. Urinary metabolic data on vegans and non-vegans. Serum B-12 levels compared with thiocyanate ratios in vegans. Comparison of British, Dutch and American vegans (table).

The paper is followed by a discussion. One must be a vegan for at least 4 years before severe vitamin B-12 deficiency signs appear. One such sign is megaloblastic anaemia. Such signs appear when serum B-12 levels fall below about 120 micro-micrograms per ml. If B-12 levels fall below 100 there will definitely be deficiency, but this did not occur until 6 years on a vegan diet. Address: 1. Ovaltine Research Labs., King's Langley, England.

4447. *Madison Survey (Madison, Tennessee)*. 1955. To the memory of Edward A. Sutherland—This issue of the Survey is affectionately dedicated. 36(7):1-8. July.

• **Summary:** Several inspiring tributes to the moving force behind Madison College for most of its early history. Page 7 contains a brief summary of his life. He was a doctor, a minister of the gospel, and above all a great educator. He was born on 3 March 1865 in a wagon train in Prairie du Chien, Wisconsin. He lived in Iowa as a young man and attended high school there. He graduated from Battle Creek College in the spring of 1890 with a bachelor's degree. That same year he married Sallie Bralliar, who died in 1953. In 1891 he was called to be head of the Bible department at Battle Creek College. He served as president of four colleges, including the new Walla Walla College in Washington from 1892 until Feb. 1897; Battle Creek College in Michigan from 1897. In 1901 he helped in moving Battle Creek College onto a beautiful farm in the countryside in Berrien Springs, Michigan. It was renamed Emmanuel Missionary College, and he continued as president until 1904; and Madison College from 1904 to 1946 when he was called to serve as secretary of the new denominational department known as the Association of Self-Supporting Institutions and the Commission on Rural Living. Having successfully accomplished this task, he returned to the campus at Madison that he loved.

In 1910 Dr. Sutherland and Dr. Magan began the study of medicine, earning their M.D. degrees in 1914.

He died on 20 June 1955 at the age of 90 years, 3 months, and 17 days.

Sandborn (1953, p. 23) states: "Professor Sutherland was also a reformer in certain respects concerning education and health. He had the tendency to push his reforms too rapidly and too independently and thus incurred the ill will of some denominational brethren. Three experiences might be considered examples of this. One was the instituting of a vegetarian diet in Battle Creek College, and another was the

ploughing up of the Battle Creek Athletic field and planting it to vegetables. The third and probably most important was the moving of Battle Creek College out of the city onto a farm in Berrien County, Michigan.”

4448. Todhunter, E.N. 1955. Biographical notes for the history of nutrition. Sylvester Graham—July 5, 1794–September 11, 1851. *J. of the American Dietetic Association* 31(7):711. July. [3 ref]

• **Summary:** “Sylvester Graham was considered to be an authority in dietetics in his day, but is now largely forgotten except insofar as his name on some grocery shelf may recall something besides crackers and flour to a few inquiring minds. For a brief period in the history of nutrition, he exerted some influence, but many of his ideas were those of the faddist. Some of his teachings were sound, and he did much to popularize the subject of diet. In a day when excessive eating and drinking were common practices, he helped to arouse interest in hygiene and health practices.

“Born at West Suffield, Connecticut, on July 5, 1794, Sylvester Graham was the seventeenth and last child of the seventy-two-year-old Reverend John Graham, Jr. His father died when he was two years old and his mother suffered a mental collapse so that he was unrestricted and neglected as he grew up in the care of uncles and older brothers. His education was interrupted by ill health; he worked on a farm for a time, but at nineteen became interested in education, had himself tutored, and became a teacher. His students were enthusiastic about him, but poor health caused him to give this up. At twenty-nine, he went to Amherst and studied hard, and though eloquent and forceful, he was arrogant and made enemies. He had a nervous breakdown and was nursed by Miss Sarah Earl, whom he later married. His expense book records that \$3 was paid for the marriage fee and 12½ cents to register the license.

“He next decided to become a Presbyterian minister and preached in Newark, New Jersey. He was an excellent speaker, and in 1830, the Pennsylvania Temperance Society appointed him agent to lecture on temperance.

“This stimulated his interest in physiology and he bought and studied the standard works of the day. Soon his interest in diet was aroused, and he studied Paris’s *A Treatise on Diet* (1826) and became an advocate of temperance in eating. He lectured on diet, chastity, clothing, intellectual and moral faculties, and other subjects and drew crowds in Philadelphia and throughout New York and New England. He became absorbed in questions of diet and promoted vegetarianism. He advocated bread that was at least 12 hr. old and made from unbolted, coarsely ground wheat, and he accused bakers of adulterating their bread. Hence, they and the butchers were violently opposed to this man who wrote and lectured everywhere against them. His followers were predominantly men, often elderly dyspeptics and chronic invalids. Graham boarding houses and restaurants sprang up

in Boston, New York, and other cities where his followers could obtain Graham bread and follow his regimen.

“There were many who ridiculed and persecuted Graham and his followers, and Graham was the butt of jokes and caustic editorials. Vain and convinced that he was right, he brooked no opposition and would not compromise on any of the practices that he advocated. In 1837, at the first meeting of the American Physiology Society (then composed of laymen and before physiology was established as a science), two lecture courses by Graham were supported: one a series of twelve lectures on diet, the other, a shorter course, on the Bible doctrine of wine, flesh, meat, and so on. By 1840, Graham’s influence began to wane as his followers found him conceited and long winded, and he finally retired to a farm in Northampton where he died September 11, 1851, at the age of fifty-seven.

“In 1837 he published *Treatise on Bread and Bread-Making*, and in 1839, his most ambitious work, *Lectures on the Science of Human Life* in two volumes. For many years, this was a basic text on diet and health. In 1837, he founded a magazine called the *Graham Journal of Health and Longevity* which lasted for only three years.

• **Summary:** Gives a history of the vegetarian movement in Britain from its founding in 1809.

4453. Lager, Mildred. 1955. Suggestions for the arthritic, with menus and recipes. Burbank, California: Published by the author. 46 p. Aug. No index. 20 cm. Saddle stitched.

• **Summary:** The dedication page states: "Dedicated to all arthritics—everywhere." Copyright 1938 by Mildred Lager. Seventh edition (Revised and enlarged) May 1948. Eighth edition [printing] January 1951. Ninth edition May 1952. Tenth edition August 1955.

Contents: Part I. Introduction. Types of arthritis (inflammation of the joints; rheumatoid and osteo-arthritis). Causes of arthritis. Suggestions. Foods for the arthritic (diet can make a big difference). My own case. Juice diet. Kind of juices. How to take juices. Limited diet: Breakfast, lunch, dinner. Salisbury diet. General diet: Breakfast, lunch, dinner, dessert. Other suggestions: Heat, baths, sweats, etc., massage, digestive aids (natural laxative foods and bulky foods), supplements, vegetarian diet. Mental attitude (positive mental attitude and healthy emotions are very important). Additions August 1955 (p. 28; "It is now more than 30 years since I began my battle with arthritis... Thanks to my diet I have led a very active life. I am still on the fundamental diet because I do not know of anything better... Cortisone and ACTH have been heralded as miracle drugs. I do not believe these drugs are the solution to the problem. In many cases they have brought temporary relief...").

Part II. Menus (p. 29-31). Vegetarian menus (p. 31-32). Approximate carbohydrate content of fresh fruits. Carbohydrate content of dried fruits. Carbohydrate content of fresh vegetables. Recipes (p. 33-46).

"My own case" (p. 10-14). Note: Mildred M. Lager was born on 19 Dec. 1900 at Superior, Wisconsin, of Swedish parents, who immigrated to America. In 1925 she started her lifelong battle with arthritis. "As diet was the greatest factor in my recovery, I am going into detail about my experience." After graduating from college, she began teaching. She continued trying every possible cure for more than two years. "As a last resort, I half-heartedly turned to diet. I found, to my surprise, that when I left out starches and sweets I felt better, but I still did not realize that I must make an about face and a complete change in my eating habits. I became very interested in food, however, and read every book and article I could read on the subject... I don't know how long I would have continued in this half way stage had not my doctor bluntly told me *the truth* as he put it He said that nothing could be done and I might as well know it. By this

time my elbows were locked (ankylosed)" and my wrists, hands, knees, ankles, and feet were badly affected. "I felt as if my body were nothing but 'sore joints.'"

So she started a strict diet of natural unsweetened fresh fruit juices only. She found orange, grapefruit, tomato, pineapple, and apple to be the best for her. One month later she took a teaching job in northern Michigan, arriving there in twenty degrees below zero. Within 9 months she had won her battle. There follows a list (p. 13) of six foods to avoid plus two general tips. Also, when using dried fruits, use only the unsulphured kind. "Liquified [sic, Liquefies] drinks: A liquefier is a blessing to any one who for some reason cannot tolerate raw green leafy vegetables" (p. 35).

By 1955 Mildred had already authored two books on soybeans and soyfoods, the first one (*The Useful Soybean*, 1945) a classic. This book contains soy in many of the menus and recipes: Soy oil for salad dressing (p. 18-19). Soybean melba toast (p. 20, 29, 31). The best sources of vegetable protein in a vegetable diet include soybean protein (p. 27). Baked soybeans for dinner (p. 31). Cooked soy grit cereal for breakfast (p. 32). Soy melba toast with avocado for lunch (p. 32). Recipes for: Soy bread, soy melba toast, soy gluten bread (p. 37). Meat substitute dishes (p. 39-42): Cooked soybeans with soy sauce. Canned or baked soybeans (available in most markets and all health food stores). Soy loaf (with cooked soybeans and melba toast crumbles). Soy grits. Cooked soy grits. Soy vegetable hash. Soy cheese or tofu. Tofu steak. Mock fish tofu. Gluten steak. Nut butters. Almond butter. Pecan spread. Nut sauce or gravy. Cashew gravy. Almond hamburgers.

Note 1. This book advocates a vegan diet, free of all animal products.

Note 2. This is the earliest English-language document seen (April 2013) that contains the term "Tofu steak." Address: Burbank, California.

4454. Burroughs, Wise; Culbertson, C.C.; Kastelic, J. 1955. Tell stilbestrol feeding results at nine experiment stations. *Flour & Feed* 56(9):26-27. Sept.

• **Summary:** Stilbestrol is of interest as a cattle feed ingredient based on 19 experiments with 548 cattle during the past year; it is reported to stimulate rate of weight gain and reduce feed cost. A full-page table shows the results. Soy is not mentioned. Address: Iowa State College.

4455. Wokes, Frank; Badenoch, J.; Sinclair, H.M. 1955. Human dietary deficiency of vitamin B-12. *American J. of Clinical Nutrition* 3(5):375-82. Sept/Oct. [22 ref]

• **Summary:** A study of the incidence of vitamin B-12 deficiency in British vegans in relation to the duration of the vegan diet. Presents symptoms and analyses of blood and urine. Compares the results with those of Dutch and American vegans. Note: This is the first description of a human dietary deficiency of vitamin B-12 (one of two).

Address: 1. Ovaltine Research Labs., King's Langley, England; 2-3. England.

4456. Gould, Symon. 1955. Vegetarian views and news. *Let's Live* 23(11):50-51. Nov.

• **Summary:** "On September 27, the President of the United States convened 139 leaders in education, government, medicine and athletics to attend a Conference on the Fitness of American Youth... But, to my mind, the group was sadly lacking in representatives who could really make a fundamental contribution to the President's objective" to help young people to become physically fit.

Dr. Leo Spira is "the accepted authority on the subject of poisoning our water supply through fluoridation."

At the start of 1956 he will embark on a world tour for Peace. Address: 117 W. 48th St., New York City 36.

4457. Lightowler, Ronald. 1955. Vital aspects of vegetarianism. *Vegetarian News (London)* 34(289):98-100, 106. Autumn.

• **Summary:** This is the substance of a paper presented at the Second Convention of Animal Welfare Societies, organised by the British Federation of Animal Welfare Societies, at Caxton Hall, London, in May 1955.

The writer discusses vegetarian food reform for physiological, psychological, economic, and ecological well-being. He strongly advocates a vegetarian diet as the first requirement for the "Good Life."

"In conclusion, I would say that having carefully studied the subject, I know of no aspect of the Good Life to which vegetarianism is unrelated or that would not benefit from its adoption in practice. It is not a reform which can wait until we have put the world right by political and other manoeuvring, it is a reform which is inherent by the pattern of the Good Life and one which needs to be embodied forthwith by all who sincerely desire to see that Life established here upon earth."

Note: This issue contains the XIVth (14th) International Congress Report.

4458. *Soybean Digest*. 1955. Soy loaf by monks. Nov. p. 33.

• **Summary:** "Trappist monks at the Holy Cross Monastery at Berryville, Virginia, have put their famous bread on the commercial market in the suburbs of Washington, D.C., 60 miles away.

"Called the 'Monk's Own Loaf,' the bread forms one of the staple parts of their meatless diet. It is dark firm bread made of whole-wheat flour, honey, nonfat dry milk solids, butter, white flour, yeast, sugar, salt, shortening and soy flour.

"Brother Kevin, baker for the Monastery, uses 3% soy flour in the bread formula. Soy flour is 40 to 50% protein, so the bread supplies protein which the monks miss in their meatless diet."

4459. Wickenden, Leonard. 1955. Our daily poison: The effects of DDT, fluorides, hormones, and other chemicals on modern man. New York, NY: Devin-Adair Co. xiv + 189 p. Foreword by Morton S. Biskind, M.D. Preface by William Coda Martin, M.D. Introduction by Jonathan Forman, M.D. Index. 21 cm. [7* ref]

• **Summary:** This book, about the poisons in our daily foods, is carefully researched and documented, and written in a professional, balanced, and fair manner. This is the earliest document seen (Sept. 2009) that makes a strong and convincing case for the health dangers of fluorides.

Contents: Foreword by Morton S. Biskind, M.D. Preface by William Coda Martin, M.D. Introduction by Jonathan Forman, M.D. Before you read. 1. Our poisoned world: Hepatitis and DDT. 2. The more sprays, the more pests. 3. Fluorides on trial—The case stated. 4. Fluorides on trial—The case of the proponents. 5. Fluorides on trial—The verdict. 6. The new cosmetics—The dangers of being beautiful. 7. The perils of hormones (such as diethylstilbestrol or stilbestrol [DES]).—Atomic radiation. 9. Poisoned soil. 10. Your doctored daily bread. 11. Postscript. 12. The choice facing us.

A great deal of interesting information comes from the hearings of the Delaney Committee (House Select Committee to Investigate the Use of Chemicals in Food Products) which met from Sept. 1950 to March 1952. The expert testimonies are shocking.

A table (p. 3) gives the quantity of various pesticides produced in the USA in 1951, as follows: Calcium arsenate 7.865 million lb. Lead arsenate 14.287 million lb. DDT 99.929 million lb. Benzene hexachloride 85.090 million lb. Parathion 2.365 million lb. TEPP 922,000 lb. Aldrin, chlordane, lindane, toxaphene and others 64.386 million lb. Total: 274.844 million lb. The total was sufficient to kill 15.2 billion human beings.

Chapter 7 tells the chilling story of artificial female hormones (such as diethylstilbestrol / stilbestrol [DES]) now implanted in pellet form into the upper necks more than 30 million U.S. chickens per year, and added to the feeds consumed by approximately half the beef cattle in the USA. The drug can cause reproductive problems, including sterility. The effects of residues often found in chicken meat are discussed in detail.

Chapter 10 praises the "Triple Rich bread," made according to a formula developed by Dr. Clive McCay, professor of nutrition at Cornell University. It contains 6% soy flour, 2% wheat germ, and 8% dried milk. "Dr. McCay found that rats could grow healthily on a diet of Triple Rich bread alone, but pined and died when fed on ordinary white bread" (p. 165).

The last chapter urges that we should not submit cheerfully, but should protest against "our poisoned food, our poisoned water, and our poisoned air." More than 300 communities have voted down fluoridation, including such

cities as Cambridge (Massachusetts), Boulder (Colorado), Erie (Pennsylvania), Peekskill (New York), Saginaw (Michigan), Kenosha (Wisconsin), and many others. Insects cannot be eliminated by poison sprays (such as DDT); they develop resistance so that larger amounts of more toxic insecticides are needed in the future. Address: Author, USA.

4460. Gould, Symon. 1955. Vegetarian views and news. *Let's Live* 23(12):50-51. Dec.

• **Summary:** "I had laid plans for a testimonial dinner to Bernarr Macfadden, the famous health pioneer, to take place on his 87th birthday. But the fates decreed otherwise, for the father of physical culture passed away October 15th.

"Very few know the full story of Bernarr Macfadden from his early days in the 1870s when left the orphan child of an alcoholic father and a sickly mother, he contracted tuberculosis. He was given up for lost by the medical practitioners who considered TB as death-dealing then as cancer is today. But the young Bernarr Macfadden came across some early ideas of physical culture, values of fresh air and sunshine, right living and thinking, and cured himself." Almost everyone teaching the principles of drugless healing has been influenced by the writings and publications of Macfadden. He dedicated his life to improving the health of his fellow Americans. "As United States Senator William Langer has said, 'This nation has lost a great man!'" Also discusses President Eisenhower's heart attack. Address: 117 W. 48th St., New York City 36.

• **Summary:** Describes the state of vegetarianism among high-caste Hindus.

4474. Cross, Leslie J. 1956. A Veganmilk Association. *Vegan (The) (England)* 9(8):2. Spring. [1 ref]
• **Summary:** “Provided sufficient support is forthcoming, an effort will be made as early in 1956 as possible to form an organization with the above suggested title, for the following purpose: To produce and make available to the general public in Great Britain a milk. the ingredients of which would be of plant origin; which would satisfy nutritional requirements; and which would be palatable, attractive, and simple to use for the purposes of which dairy milk is now used.

“The Association would probably function in three main stages: (1) It would conduct an enquiry into progress made in this and other countries in the manufacture of non-animal milks [Note: see Harry W. Miller, 1944. “The Story of Milk from the Soya Bean,” 37 p.]. (2) Based upon information thus collected and collated, it would consider the problems connected with the successful manufacture and sale of such a milk upon the general market in this country, including the question of scientific research and experiment. (3) Upon the successful manufacture on a small scale of an acceptable milk, the association would consider the question of large-scale manufacture and sale, including the organization required to promote such manufacture and sale; such, for example, as the formation of a Limited Company.

“While the work of the Association would be largely motivated by the ideals of vegetarianism and veganism, it would nevertheless function as a body with a precise practical job to do, and membership would be open to anyone prepared to support its work.

“The work would take a number of years and require considerable financial support. It would call for sustained and high endeavour, and though difficult, would be by no means impossible to achieve. Its successful outcome would be of immense value in many ways.

“Any persons interested in the proposal should send their name and address to Leslie J. Cross, Uxbridge, Middx. [Middlesex], who will, if support is sufficient act as convener of an inaugural meeting.”

Note: This is the earliest document seen (Aug. 2013) that uses the word “Veganmilk” to refer to plantmilk.
Address: Vice-President, The Vegan Society.

4475. Natural Food Associates. 1956. Directory listing (Ad).

Natural Food and Farming (Atlanta, Texas) 3(1):22-23. April.

• **Summary:** These advertisements are divided into the following categories: Organic foods (listed alphabetically by state), juicers, books, miscellaneous, ladybugs, business opportunities, soil building. Within each category, they are organized by state. About two-thirds of the ads are for organic foods (especially fruits), with California (9 ads), New York (6), Illinois (4), Pennsylvania (4), and Wisconsin (4) having the most ads.

For example: Lee Anderson of the Covalda Date Co. (Highway 99, Coachella, California), is selling “‘Certified organically grown’ produce, dates, pecans, grapefruit and grapes. Prices on request.

Pacific Sunblest of Orange, California, is selling “Oranges—Organically grown by us for 25 years.”

Health Research, Mokelumne Hill, California, offers “25 lbs. assorted organically grown fruits and nuts—\$12.50. F.O.B. Health Book Catalogue free!”

“Barton Whole Foods, organically grown for 38 years. Naval oranges, cold-pressed olive oil, dried fruits and mountain apples in season... Porterville, California.

Walter Buschman of Juniper Farm, Sugarloaf, Orange Co., New York, is selling Bio-dynamic (BD) whole wheat flour and cereal, BD rye flour and cereal, BD cornmeal, BD white pastry flour, organic oatmeal and soybeans, and Cheddar cheese made from unpasteurized milk.

Helen and Scott Nearing of Harborside, Maine, are selling their book *Living the Good Life*, a “how-to-do-it book for Vegetarians and Organic Gardeners. 210 pages. Photographs. \$3.50.”

In Pennsylvania, Paul and Betty Keene of Walnut Acres Natural Foods in Penns Creek are “One of the first in the supplying of organic and other natural foods direct from the farm where grown and milled. One of the most complete lines in the country, conscientiously chosen.”

In Texas: “5 lbs. Deaf Smith County stone ground 100 per cent organic flour \$1.50 postpaid. Write for list of organic foods. Natural Organic Foods, Atlanta, Texas.”

Many of the ads are from individuals who grow and sell organic foods. One is from L.E. Schnoor (Comptonville, California), who sells ladybugs for natural insect control. There are ten ads for soil building materials. At the bottom right corner of p. 23 is a box that states: “Eat organic food.”

Note 1. This is the earliest document seen (Oct. 2006) that mentions Walnut Acres Natural Foods of Penns Creek, Pennsylvania.

Note: This full-page ad also appeared in the next issue (May 1956, p. 18-19).

4476. Beveridge, J.M.R.; Connell, W.F.; Mayer, G.A. 1956. Dietary factors affecting the level of plasma cholesterol in humans: The role of fat. *Canadian J. of Biochemistry and Physiology* 34(3):441-55. May. [15 ref]

• **Summary:** Diets containing significant amounts of beef drippings, chicken fat, lard, and butter elevate plasma cholesterol, whereas similar diets high in corn oil (i.e. vegetable oil) lead to a drop in cholesterol levels. Address: Depts. of Biochemistry and Medicine, Faculty of Medicine, Queen's Univ., Kingston, Ontario, Canada.

4477. Heron, John. 1956. Editorial: Vegetable milk. *Vegan (The) (England)* 9(8):1. Spring. [1 ref]

• **Summary:** "There can be few vegans, particularly vegan parents, who would not welcome the appearance of a nourishing and workable vegetable milk, ready-made and suitable for a wide variety of uses. Yet no such product is at present marketed in this country.

The use of a vegetable milk is not to be disparaged on the grounds that it is an aping of the animal milk habit. Like the compound solid vegan protein savoury, a compound liquid vegan protein food would be a valuable adjunct in broadening the scope and range of vegan catering. And it would undoubtedly have its place in providing quickly and conveniently for the needs of the growing vegan family.

"Such a product would also prove helpful and attractive to vegetarians and others wishing to make the change over to a vegan diet with the minimum of difficulty.

"Those with electric mixers can certainly make highly nutritious milks from nut creams, raw nuts, or soya flour, etc. But there is still room for a compound product of standardized vitamin, mineral and amino acid content. It is not that it is essential: but it would certainly be highly convenient.

"Is the time and are circumstances ripe for the marketing of such a product? Mr. Leslie J. Cross intends to find out. He has proposed an entirely independent body, the Veganmilk Association, in no way connected with any existing organisation, to determine the response of vegans, vegetarians, food reformers and those of orthodox dietary habits to the idea of getting a good non-animal milk on to the market. His announcement appears in this magazine. What is your response?" Address: Editor, *The Vegan: Journal of the Vegan Society*.

4478. James, W.S. 1956. A vegetarian in central Africa. *Vegetarian News (London)* 35:5-9. March/May. *

• **Summary:** The author gives impressions from his tour of Africa.

4479. White, Herbert Clarence. 1956. California meeting impresses physicians: Display of organically-grown produce earns favorable comment from Los Angeles medical group. *Organic Gardening and Farming* 3(5):70-71. May.

• **Summary:** "January 3, 4, and 5 of 1956 were three great days in the annals of Organiculture out here on the West Coast, During the history-making event, nearly 7,000 members of the Los Angeles County Medical Association

were brought face to face with the basic principles of natural farming and gardening under the most favorable environment possible."

At the annual mid-winter convention, Foods for Life, Inc. presented a magnificent exhibit of organically-grown fruits, vegetables, nuts and grains. It was favorably received, and so far as the writer could tell, not one unfavorable or disparaging comment was heard from these distinguished physicians about the value or soundness of the Foods for Life enterprise, which involves the growing and distribution of all many kinds of organic foods; all are grown without the use of chemical fertilizers or poison sprays.

"It is heartening to know that Dr. Jonathan Forman's basic concept of 'Creative Medicine' seems to be gaining ground among his fellow Allopathic practitioners. For the benefit of our readers it might be of interest to re-state Dr. Forman's dynamic views on this subject. Here is a paragraph from *The Land*, of which Dr. Forman is editor.

"It is no oversimplification to say that *our health comes from the soil*. No matter how many physicians and health officers we train, and how much *curative or preventive medicine* they may practice, we cannot attain optimal health until they and we have turned our attention to creative medicine, and thereby learned to keep and even improve our health. To build and maintain good soil is the real fundamental service. Creative medicine must be founded on growing the best foods. Thus alone can create real health for our people—through creating a sound and prosperous agriculture."

"The most important single attraction of the Foods for Life booth was the display of succulent, garden-fresh organic produce."

"But the biggest 'hit' of all was the bakery display. In front of the array of Foods for Life loaves, trays of delicious peanut-butter and creamed-cheese sandwiches were placed. These, of course, were made from the new 100% whole-grain loaf we have mentioned. A leaf or two of crisp bronze lettuce was also incorporated into each delightful sandwich. One of these dainty 'delicacies' was offered *free* to each visitor at the booth. The almost overwhelming popularity of this 'sandwich feature' is indicated by the simple fact that that nearly 3,000 of these tantalizing, titillating morsels 'disappeared' during the three day medical conclave.

Note: The founder and head of Food for Life, Inc. was Dr. George Johnstone, a Seventh-day Adventist physician, who also founded Behrens Memorial Hospital in Glendale, California. Address: Emmaus, Pennsylvania.

4483. *Vegan (The) (England)*. 1956. The Plantmilk Society. 10(3):14-16. Winter. [1 ref]

• **Summary:** "Editor's Note: We have great pleasure in including in this issue the full text of the Report of the first Annual General Meeting of the Plantmilk Society, held at Friends House, Euston Road, London, N.W.1, on October 6th, 1956. The aims and endeavours of this new Society are held by the Vegan Society in high esteem; the manufacture and sale of a first-grade plantmilk in this country would greatly assist in a practical way an increased adoption of the vegan diet. We are glad also to announce that three members of the Vegan Society Committee—Mrs. M. Drake. Miss C. Harvey and Mr. J. Sanderson—have been appointed to the Committee of the Plantmilk Society. We take this opportunity to wish the new Society an early and fruitful harvest to its labours, and to assure it of our wholehearted support.

"Mr. C.A. Ling (Chairman) was in the chair. After his opening remarks he called upon the Secretary for his report on progress since the inauguration, on June 23rd this year.

"The Secretary stated that the Society was now well established and was served by a number of persons whose qualifications would prove of considerable value. In addition, the general support and interest which the Society was attracting was a source of considerable encouragement.

"As an example of the interest being shown, the Secretary stated that almost every post continued to bring inquiries or other matters to be dealt with. He had kept in fairly regular contact with the Society's Chairman, and with the Chairman and Secretary of the Research Committee, and some other members, both by correspondence and by personal visits.

"The Society welcomed and was grateful for publicity which it was receiving in the Press. The vegetarian magazines and an animal welfare magazine had published good notices of the inaugural meeting. A report which appeared in the *London Evening News* ("Now your milk may come from a plant") had resulted in a number of inquiries for information, following which the Society had gained several new members, some with valuable qualifications. Inquiries for information were also received from journals which cater for the dairy trade, and from one which caters for the food trade in general. Two national weekly publications, with large circulations, had also made inquiries. Reports had appeared in the foreign Press, following which inquiries had been received from business firms in Spain and Portugal

concerning the possibility of manufacturing plantmilk in those countries. An organisation on the Gold Coast had ordered from the Society a supply of plantmilk—but they had had to be informed (regretfully!) that their order was a little premature.

"Further correspondence had taken place with the Californian company [Loma Linda Foods, Riverside, California] which manufactured and sold plantmilk in America. This company had sent a gift of two tins of one of their general-purpose plantmilks. This particular kind was a double-strength plantmilk, being mixed with an equal amount of water before use. In appearance, it is not unlike dairy milk, and it has a pleasant taste. It is suitable for use in tea, coffee and other beverages and for general domestic uses. It conforms to American standards of nutrition and hygiene.

"The Secretary continued by saying that an application to the Board of Trade made on behalf of a British company, for a licence to import this plantmilk had been refused on the grounds of the government's balance of payments policy. An application was to be made for an import licence for the special type of soya bean which is the basis of the American plantmilk. Should this be granted, the company concerned would consider the possibility of erecting a pilot factory for the manufacture of plantmilk in this country upon an experimental scale. The company would have available to it both the formula and the details of the manufacturing process involved in the production of the American milk. Knowledge gained during many years of research and experience in America would thus be available as the starting point for the production of plantmilk in Britain. The plan, however, depended upon certain preliminary factors, such as the import licence, and for these reasons optimism must for the moment be restrained.

"With regard to the function of the Society now and in the future, the Secretary said that it had brought together several qualified persons, who would not otherwise have come together, who would give the Society the scientific and practical backing which was necessary for the success of its work. In a general sense, the Society had acted as a focus, and had injected life into an idea which had existed theoretically in a number of places for a number of years. With regard to the future, the Society would, of course, pursue by every means available to it the object for which it was formed. It would co-operate with manufacturers interested in the plantmilk project and give them every possible encouragement. It would also keep alive the underlying humanitarian motive which had been the main cause of its formation.

"The Secretary concluded by saying that the future might see the growth of a quite novel partnership—that of the manufacturers on the one hand and the Society on the other, each working in their own way for a common end. Such a partnership would indeed be a partnership of principle and

practice, and an effective instrument for the achievement of the Society's aim.

"The meeting appointed the following Officers and Committee to serve until the next Annual General Meeting:—Chairman: Mr. C.A. Ling; Secretary and Treasurer: Mr. L.I. Cross; Committee: Dr. B.P. Allinson, M.R.C.S., L.R.C.P., Mr. E.T. Banks, Mrs. J. van Brugen, Mr. D. Fairclough, Mr. W.S. James, M.Sc., Dr. D. Latto. M.B., Ch.B., M.R.O.G., Mrs. Claire Lowenfeld, Mr. W. Ninniss, Mr. G.E. Norris. Dr. C.V. Pink, M.R.C.S., L.R.C.P., Mr. J. Sanderson, Dr. F. Wokes, Ph.D., B.Sc., F.P.S., etc., Mrs. M. Drake, Miss C. Harvey, Mr. W. Holtum. (The first twelve Committee members mentioned constitute the Research Committee, of which Dr. Wokes and Mr. Norris were re-elected as Chairman and Secretary.)

"It was also agreed that Dr. Franklin be approached with an invitation to serve upon the committee.

"A financial statement presented to the meeting showed that income up to October 6th was £227, with a balance at the Bank of £208. The majority of those who had originally expressed interest in the formation of the Society had now paid their subscriptions for the year ending September 1st, 1957. The amount of the balance at the Bank now made it possible for a number of matters to be considered by the Committee, notably the drafting and printing of literature, the need for which was becoming increasingly apparent.

"At the conclusion of the general meeting, a meeting of the Committee was held. Consideration was given in detail to the draft of a statement concerning the Plantmilk Society for issue to a food trade magazine which had requested such a statement for possible publication. The draft was finally approved. (In addition to the journal concerned, the statement has been supplied to two other trade journals whose Editors have applied to the Secretary for information.) A Literature sub-Committee was appointed by the Committee to consider the drafting of general literature. The sub-Committee consists of Mr. Fairclough, Mr. Ling, Dr. Wokes and the Secretary.

"At both the General meeting and the Committee meeting, several members expressed the view that the progress made during the few months since the Society's inauguration was encouraging. This view was endorsed by the Chairman, who also pointed out that the need for the Society would continue for some time even after a plantmilk industry had been established in this country. He asked members to continue to give the Society the sustained support which it would need in order to achieve the task it had set itself.

"The object of the Plantmilk Society is to promote the manufacture and sale of a satisfactory alternative to dairy or other animal milk used for human consumption, the ingredients of such alternative to be of exclusively plant origin. Any person willing to support the object of the Society is eligible for membership on payment of an

annual subscription of not less than five shillings payable on September 1st of each year. Subscription,... to be sent to the Secretary, Mr. Leslie J. Cross, Uxbridge, Middlesex."

Note 1. This is the earliest document seen (May 2015) concerning Plantmilk News or The Plantmilk Society.

Note 2. This is the earliest English-language document seen (Jan. 2020) with the word "Plantmilk" (regardless of capitalization) in the title or that uses that word to refer to soymilk.

Note 3. This is the earliest document seen (May 2015) that mentions C.A. Ling [Arthur Ling] in connection with plantmilk. "Ling" is an old English surname.

4484. *Vegetarier (Der) (Hannover)*. 1956. Unsere Ernahrung [Our nutrition]. 7(7/8):Supplement. [Ger]* Address: Vegetarier-Union Deutschland, Blumenstr. 3/4, Hannover, Germany.

4485. Baer, Wilma F. de. 1956. *Secretos de la buena mesa* [Secrets of the good table]. Mexico City: Ediciones Interamericanas. 192 p. Illust. (part color). 20 cm. No index. [Spa]

• **Summary:** A vegetarian cookbook from Mexico. A subsequent enlarged edition (200 p.) was published in 1965. Soy- and gluten-related recipes include: Croquetas de frijoles soya (p. 170). Gluten (p. 173). Bifes de gluten (p. 173-74).

4486. Chao, Buwei Yang. 1956. *How to cook and eat in Chinese*. London: Faber and Faber. 286 p. Illust. Index. 21 cm.

• **Summary:** The basic information about soy in this 1956 British edition is quite similar to that in the original 1945 American edition except: (1) British spelling is used (e.g., flavour instead of flavor), and additional information about European ingredients or substitutes; (2) The same (or almost the same) text appears on different pages. See pages 20-21 (Vesop is very much like soy sauce. Clear-simmering is slow-cooking without soy sauce. Red-cooking is slow-cooking with soy sauce), p. 43-44 (red beans, [probably azuki], horse beans, soy beans and their products, bean milk and bean curd [tofu]), p. 46 ([soy] bean oil and peanut oil), p. 47 (soy sauce), p. 49-50 (soy-bean sauce, soy sauce or *shi-yau* in Cantonese, "Acceptable substitutes for soy sauce in the order of preference, are as follows: 'Vesop' sauce (Italian), 'Maggi' (German), and 'Kub' (French))." "Similar to soy sauce is a soy jam, fermented flour jam, "In Cantonese the soy jam is called *mo-shi*." Oyster sauce, sesame oil, soy bean cheese (*fu-yü*).

Soy-related recipes include: Bean curd stirs meat slices (p. 84-85). Bean curd stirs shelled shrimps (p. 144). Arhat's fast or Vegetarian's ten varieties (with wheat gluten, bean curd skin [yuba], fried puffy bean curd, soy sauce, etc., p. 180-81). Plain stirred bean curd (p. 181-82). Oyster sauce bean curd. Mushrooms stir bean curd. Scallions stir bean

curd (p. 182-83). Pot-stuck bean curd (p. 184). Bean curd and meat-slice soup (p. 188). Huichou pot (with fried bean curd [large triangles or small cubes], p. 204-05). Sandy-pot bean curd (p. 205-06). Soy jam noodles (p. 224-25, with ½ can *yünshi* soy jam {also called *mo-shi* in Chinese foodshops}).

Pages 181-82 discuss bean curd. The Chinese characters for all recipe names are given on pages 257-71. Address: Cambridge, Massachusetts.

4487. Chen, Philip S.; Chen, Helen D. 1956. Soybeans for health, longevity, and economy. South Lancaster, Massachusetts: The Chemical Elements. xii + 241 p. Illust. Index. 21 cm. 2nd ed. Jan., 1962, 242 p. [24 ref]

• **Summary:** A comprehensive review of the subject. Contents: Preface, by the author (South Lancaster, Massachusetts, July 1956). Foreword, by Geo. M. Strayer, Vice-President and Secretary-Treasurer, American Soybean Association. Introduction. Part I: Nutritive value of the soybean. 1. Protein (incl. Dr. Wolfgang Tiling of Hamburg, Germany; Dr. Harry Miller). 2. Fat (incl. phosphatides, sterols and hormones). 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease (incl. Dr. Wolfgang Tiling of Germany).

Part II: Soy products. 8. Soybean oil: Composition and properties, processing and refining, reversion, uses, phosphatides, margarine, mellorine (vegetable frozen dessert). 9. Soybean oil meal: Heat treatment, Gelsoy, Multi-purpose Food. 10. Soy flour: Uses, soy bread vs. enriched white bread. 11. Soy milk. 12. Soy cheese (or soybean curd, “aptly described by the Chinese as ‘the meat without bones’”—incl. pressed tofu sheets and yuba). 13. Soy sauce: Preparation of kojis, brine fermentation, production yields, microorganisms are available. 14. Soybean sprouts.

Part III: Soybean culture and preservation. 15. Soybean culture: Two types of soybeans (commercial field vs. edible or vegetable varieties), inoculation, fertilizer, cultivation, harvest. 16. Preservation of soybeans: Shelling, canning, freezing, dehydration, harvesting dry mature soybeans.

Part IV: Recipes. 17. Soybeans and soybean pulp: Green or fresh soybeans, dry soybeans, soybean pulp (“prepared by pressing cooked soybeans through a coarse sieve or by grinding them in a food grinder”), recipes (incl. Soyburger, Scalloped green soybeans, and Roasted soybeans—dry roasted or deep-fried (p. 151). Describes how to make wheat gluten at home and praises monosodium glutamate for its ability to improve the flavor of recipes—though its use is called for only in the recipe for Soyburger). 18. Soy flour: Breads, cakes, cookies, pies, soups, other recipes (A recipe for Wafers, p. 180, calls for “½ cup roasted soybeans, finely chopped”).

19. Soy grits and soy flakes. 20. Soy milk. 21. Soy cheese. 22. Soybean sprouts.

Appendices: A. Soybean utilization (chart). B.

Manufacturers and handlers of soy foods (Source: 1956 *Soybean Blue Book*). C. References.

Chapter 1, “Protein,” begins: “The soybean is best known for its high protein content (p. 7). It then discusses the work of Dr. Harry Miller (p. 14-15).

Chapter 15, “Soybean Culture,” describes how to grow soybeans in a garden. Pages 126-27 discuss the two types of soybeans: the commercial field type and the edible vegetable type. Five major differences between the two types are discussed (p. 126). The edible varieties are larger in size, do not yield as heavily (though they yield more heavily than snap beans or lima beans), are more prone to shatter as they near maturity in the field, are superior in flavor, texture, and ease of cooking, and some edible varieties are also superior in the manufacture of soybean flour, soybean milk, roasted beans and other products. Table 31 (p. 130) lists eleven varieties of edible soybeans: Very early—Giant Green. Early—Bansei, Fuji. Midseason—Hokkaido, Jogun, Willomi. Late: Illington, Imperial, Funk Delicious, Emperor, Higan. Commercial—Illini.

Chapter 16, “Preservation of Soybeans,” describes how to preserve “green soybeans” by canning, freezing, and dehydration.

Photos show: (1) A sack of Lincoln soybeans (facing p. 1). (2) Soybean plants, showing pods and leaves (p. 3 and 4). (3) A beam balance with a small amount of soy flour balancing many animal products. “The protein value of soy flour: 1 lb. of soy flour contains protein values equal to 2 lbs. beef, or 34 eggs, or 6 quarts milk.” Source: Health and Character Education Institute (p. 6). A similar photo (p. 24) states: “1 lb of soy flour contains food calories equal to 3½ lbs beef, or 3 quarts milk, or 29 eggs. (4) Two views of a child. Left, suffering from marasmus. Right, after six months on a soy milk diet. Courtesy Dr. Wolfgang Tiling (p. 62). (5) A machine at the Northern Utilization Research Branch of USDA treating soybean oil with alkali (p. 72). (9) The Northern Utilization Research Branch, Agricultural Research Service, USDA—shows outside of the huge building (p. 113). (10) How to grow soy sprouts in a glass jar at home (p. 119). (11) Well nodulated soybean roots (p. 129; Courtesy The Nitragin Co.). (12) Baked soybeans in a crock (p. 144). (13) Soy flour used in numerous baked products (p. 159; Courtesy ADM). (14) Griddle cakes [pancakes] made with soy flour brown quickly (p. 173). (15) Soy peanut butter cookies (incl. peanut butter and soy flour; p. 185). (16) Soy grits in a glass jar (p. 198). (17) Freshly-cooked crisp soybean sprouts in a raw vegetable salad (p. 219).

Note 1. The first printing of this book (1956)

was dedicated "To Li Yu Ying and William J. Morse, *The Soybean Champions of the Eastern and Western Hemispheres*," but by the second printing (April 1957) the dedication had changed "To William J. Morse and Harry W. Miller, *The Soybean and Soy Milk Champions of Our Time*."

The publisher of this third printing was unable to sell all the books printed, so Chen apparently arranged for a company named "Outdoor Pictures" (Box 1326, Escondido, California) to sell them. On the title page, Outdoor Pictures pasted their name and address over that of "The Chemical Elements."

Note 2. According to the *National Union Catalog*, Philip Stanley Chen was born in 1903. The back cover states that he was born in China and is now a naturalized U.S. citizen. He is a graduate of Emmanuel Missionary College [in Berrien Springs, Michigan] and Michigan State University. Before writing this, his first book on diet, health, or soybeans, he wrote several books on chemistry: (1) *The Chloro Derivatives of m-cresol*. 1933. Easton, Pennsylvania: Mack Printing Co. 7 p. (Abstract of his PhD thesis, Michigan State College of Agriculture and Applied Science); (2) *The Chemical Elements*, Rev. ed. 1948. South Lancaster, Massachusetts: Chemical Elements (fold chart). (3) 500 Syntan Patent Abstracts, 1911-1950. 1950. South Lancaster, Massachusetts: Chemical Elements. 125 leaves. (4) *Syntans and Newer Methods of Tanning*. 1950. South Lancaster, Massachusetts: Chemical Elements. 128 p.

In 1962 Chen wrote *A New Look at God*, published by Chemical Elements (288 p.). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

4488. Chen, Philip S.; Chen, Helen D. 1956. The work of Dr. Harry Miller with soy milk (Document part). In: P.S. Chen and H.D. Chen. 1956. *Soybeans for Health, Longevity, and Economy*. South Lancaster, Massachusetts: The Chemical Elements. 241 p. See p. 14-15. [24 ref]

• **Summary:** Chapter 1, "Protein," begins: "The soybean is best known for its high protein content (p. 7). It then discusses the work of Dr. Harry Miller (p. 14-15): "The one who has done more with soy milk than any one else is Dr. Harry W. Miller, Director of Research, International Nutrition Research Foundation. He began his work with soy milk shortly after 1925 when he was in China as a medical missionary and saw the need of making a preparation for the feeding of babies and children. Referring to his work with soy milk, he said, 'I regarded that work as of far greater importance than the building up of the sanitarium because it had to do with the preservation of thousands of lives that otherwise would be lost if they did not have a proper substitute for mother's breast milk, because cow's milk is beyond the economic level of the Chinese people and almost all the Oriental races. We used this milk extensively and a long period of experimental work was carried on. Studies

were made of the development of babies and children as to their weight gains, their height gains, their disposition, their skin texture, their hair development, their dentition and bone development. We finally published the article in the Chinese Medical Journal in 1937."

"Dr. Miller was the first to put out a true soy milk, one that is homogenized and built to any formula. Finally he made it into a powdered milk by spray drying. Both 'Soyagen' and 'Soyalac,' which he perfected according to his patented process, are now widely used by infants and children who are allergic to cow's milk, as well as by grown-ups who prefer a vegetarian diet.

"Besides his factory in this country, Dr. Miller has established soy milk plants in Japan and Formosa [Taiwan], and has helped the United Nations build a plant in Indonesia. His formula is used by three large soy milk companies in Hong Kong, one of which puts out 75,000 bottles a day." Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

• **Summary:** This is perhaps the most authoritative, interesting, and well documented book ever published on the history of bread, with emphasis on the differences between white and brown breads. Trowell (1979, p. 2) says of this important book: "In that prolonged controversy almost everyone argued in terms of value of the absorbed nutriment, for fibre, often called roughage, was considered to be a gastro-intestinal irritant."

Contents: Preface. 1. Early Mediterranean civilisations. 2. Mediaeval and early modern England (1200-1700). 3. The eighteenth century (1700-1820). 4. Peace and plenty (1820-1914). 5. Shortages and war (1914-1921). 6. Return to plenty (1921-1939). 7. The second war (1939-1946). 8. Progress by experiment (1947-1949). 9. Past, present, and future.

“Preface: This book is the outcome of investigations that were made in German orphanages in 1947-49 to compare the nutritive value of different kinds of bread. The results which we obtained surprised us very much at the time, for in spite of all that we had been led to believe, white turned out to be just as good as brown, and all kinds of wheaten bread to have a nutritional value far in excess of anything we had been led to suppose.”

“Grinding and bolting [sifting] of cereals date from the earliest civilizations. In classical Greece and Italy [incl. Rome] both processes were directed by the baker; milling was not a separate trade. By classical times wheat had largely displaced barley for breadmaking. White flour was produced and used for fancy baking but it was expensive and its use was a sign of wealth and position. Wholemeal bread had an appeal to some people, to whom it symbolised the simple life and the good old times, then as always gone beyond recall.” During the period from 1200 to 1700 in England, a white wheaten loaf was produced largely for the rich, but the poor ate white bread whenever they could. Doctors considered, as Galen had, that white bread was more nutritious than brown.

“Peace and plenty (1820-1914): The laboring poor continued to demand white bread, and by 1860 the sale of the by-products enabled the millers to supply white flour at a price below that of brown. Under the influence of Graham, Carr and Allinson the intelligentsia came to believe that wholemeal bread was the great essential for those who wished to be simple, strong, temperate and healthy. Physiological work between 1870 and 1910 showed that the white flour provided more calories and protein than the same weight of wholemeal. Work on beriberi and the experiments prompted by the standard bread controversy of 1911, however, suggested once more that the wholemeal flour contained something of nutritional value absent from white flour, and most scientists interested in human nutrition reverted to the idea that brown bread was a more desirable than white. The loyalties of scientists associated with agriculture and milling tended to make them support the cause of white.” Page 46 adds: “By 1865 the white loaf had become cheaper than the brown... Reducing the price of white flour below that of brown brought about a complete reversal of the status of white and brown bread. ‘It (brown) has become a mark of luxury and not of poverty, and is the rich man’s instead of, as formerly, the poor man’s food (E. Smith 1865).’”

The introduction of silk bolting cloths and the replacement of mill-stones by steel rollers in about the year 1870 made a great difference to the mill products.

These improvements in technique were first introduced into Hungary and the USA to cope with the “hard” wheats grown there. The new techniques also enabled the millers to separate the wheat “germ” from the flour, and to further improve the separation of the bran. Now they could make a whiter flour for human consumption with keeping qualities far superior to those of stone-ground flour. “The risk of wastage and loss of wholemeal flour on storage helped to maintain its price above that of white flour for the next 70 years...” (p. 47).

“Bread for health: As in earlier times the laxative properties of bran continued to be advanced as a reason for eating brown bread.” “The great apostle of wholemeal bread as a natural food was Sylvester Graham.” In 1837 he wrote and published his first important book on the subject. An ardent vegetarian, he believed that most human health problems were caused by a departure from natural conditions. In bread, he taught, mankind should not “put asunder what God has joined together.” Much of Graham’s work with bread was sponsored by a society called the Bread Reform League. Graham’s counterpart in England during the last 20 years of the 1800s was Dr. T.R. Allison. Like Graham, he was a vegetarian, a strict teetotaler, and opposed to vaccination.

During World War I in England, importation of wheat was reduced by enemy action. By Government order, the extraction rate of wheat was raised from 70% to 76%, 81%, and finally 90%. By 1918 wheat was permitted to comprise no more than 80% of the flour used for bread-baking, the remainder being barley, oats, potato, or maize flour. The discovery of vitamins led nutritional experts to support the higher extraction rate and to advocate consumption of wholemeal bread. In 1941 all bread in England began to be fortified with vitamin B-1; the USA soon followed.

Chapter IX, “Past, present and future” notes that the “poor man of southern England has always made it one of his ambitions to have ‘white bread’ on his table, and by 1750 he had achieved this.” At present three groups are in favor of white bread: The common people, the millers and bakers, and the animal husbandmen who feed their pigs, poultry and horses the milling residues or “offals.” Address: 1. C.B.E., F.R.S., M.A., Ph.D., M.D., F.R.C.P., Prof. of Experimental Medicine, Univ. of Cambridge; 2. DSc, Ph.D.

4495. Powell, Horace B. 1956. *The original has his*

signature—W.K. Kellogg. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 358 p. Illust. No index. 24 cm.

• **Summary:** The lack of an Index and of any bibliographic references greatly reduce the value of this book.

W.K. Kellogg built a mighty breakfast cereal manufacturing company and established a major charitable foundation. In 1906 W.K. Kellogg started his own company making corn flakes.

“In February of this year [1956] the Kellogg Company observed the fiftieth anniversary of its founding, and June will complete the W.K. Kellogg Foundation’s twenty-fifth year as the vehicle of its founder’s investment in people.”

Pages 94-95: Most of the roughly 100 health foods that eventually were served on tables at the Battle Creek Sanitarium were developed during the period from 1895 to 1905. Dr. John Harvey Kellogg, M.D., an eminent health reform advocate and director of the Sanitarium in Battle Creek, Michigan, had become interested in nut foods, so another company, the Sanitas Nut Food Company, was created to market them. “Actually, one of the food products developed was peanut butter.”

W.K. Kellogg recalled that one day his brother, Dr. J.H. Kellogg asked him to secure a quantity of peanuts, remove the hulls, and put them through the Granose rolls. W.K. Kellogg bought 10 pounds of peanuts, roasted them in an oven for a little while, put them in a pillow case to remove the hulls, winnowed out the husks, put the peanuts “through the rolls and made the first peanut butter.” W.K. took it to Dr. Kellogg and he named it. “A quantity of peanut butter was made up, and it was sold almost entirely to Seventh-day Adventists. After awhile the doctor had an idea that roasted peanuts were not wholesome. They were then cooked by steam instead of being roasted and the little trade that was developed was lost.”

“No effort was made to promote the sale of peanut butter and others reaped the benefits of the sanitarium research.”

Soy is mentioned in passing on page 80 (“soy acidophilus milk” for Dr. Allan Dafoe and the Dionne quintuplets) and page 180 (the story behind “Kellogg’s Corn Soya,” launched in 1945).

Note: A short article titled “Corn Flakes maker Kellogg deceased,” in an unknown Oct. 1951 magazine states that “W.K. Kellogg died on 6 Oct. 1951, at age 91. He credited his longevity to his diet based on Kellogg’s Corn Flakes and other vegetarian foods. He developed the first wheat flake in 1894 at his brother’s sanitarium in Battle Creek, Michigan, and promoted the product tirelessly. He spent millions on charity.

“In 1907 a conflagration engulfed one of his factories. Will Keith was calm. ‘The fire is of no consequence,’ he said. ‘You can’t burn down what we have registered in the mind of the American woman.’”

A photo shows W.K. Kellogg and his seeing eye dog standing in front of the W.K. Kellogg Foundation.

4498. *Plantmilk News (England)*. 1957. Serial/periodical. England. No. 1 is Feb. 1957 *

• **Summary:** The Vegan, 1957 spring, p. 16. An article titled “Plantmilk News” (p. 15-16) ends by citing its source: “From ‘Plantmilk News,’ No. 1, February 1957. The Plantmilk Society is an organisation to promote the manufacture and sale for human consumption of a satisfactory non-animal alternative to dairy milk. General Secretary: 39 Willow Crescent, Uxbridge, Middlesex” [England]. Address: England.

4499. White, Herbert Clarence. 1957. *Natural Food Associates in action. Natural Food and Farming (Atlanta, Texas)* 3(10):12-14. Feb.

• **Summary:** See next 2 pages. Heroes of the Natural Foods Movement include Dr. Joe Nichols, Paul Pfund, Dr. Fred Miller, Earl Striplin, Leonard Wickenden, Dr. Royal Lee, and many others.

“But in this brief story I want to bring to our membership the thrilling story of another N.F.A. member from the medical profession who has gone ‘all the way’ in an effort to bring ‘Creative Medicine’—not only to his family, and to the patients in his 100 bed Behrens Memorial Hospital [Glendale, California], but to the *entire community*.

The article then focuses on the story of Dr. George A. Johnstone of Glendale, California, the Glendale, California, founder and president of Foods for Life, Incorporated, and of its first Foods For Life market and lunch counter, which opened in the late spring of 1950 in Glendale, California (on South Verdugo Road).

Dr. Johnstone has three farms—one in North Dakota and two in Southern California. After hearing the writer speak, he said: “I want to get onto this organic program—and Fast! Will you help me?” And that is how Foods for Life was conceived. Three months later the Foods for Life enterprise was “born” as a legal corporation with nearly twenty of Dr. Johnstone’s medical associates.

“One of the first projects of the new corporation was to make Dr. Jonathan Forman’s concept of ‘Creative Medicine’ not merely a ‘dream’ but a ‘living reality’ in the lives of the Glendale community. Southern California organic farmers from Escondido to Santa Barbara were sought out and their garden-fresh, vitamin-packed, mineral-rich produce was made available to city dwellers in the greater Los Angeles Metropolitan area.”

The second step was to establish the Foods for Life store.

One photo shows the outside, and three show the inside of the huge, modern natural foods supermarket—the first of its kind in the United States.

Note 1. Dr. George A. Johnstone was a Seventh-day Adventist and graduate of the College of Medical Evangelists (now Loma Linda University) School of Medicine Class of 1923.

Note 2. According to a small ad in *Modern Nutrition* magazine, in about 1961 Foods for Life was located at 821 E. Broadway, Glendale, California. It sold “Organically grown and unsprayed fruits and vegetables. Roger Jessup and Alta Dena certified Milk. Natural Vitamins and Minerals.”

Note 3. In 1968, Dr. Jonathan Forman established the Jonathan Forman Gold Medal Award, honoring those who had contributed to the field of clinical ecology. Dr. Forman was also president of Friends of the Land—and a professor of the history of medicine at Ohio State University.

Note 4. This is the earliest document seen (March 2020) that describes a natural foods supermarket.

4500. Nichols, Joe. 1957. President’s address, 1957 national convention. *Natural Food and Farming* (Atlanta, Texas) 3(11):5, 8-10. March.

• **Summary:** “Natural Food Associates was organized in January, 1953, at the Normandy House in Chicago, Illinois. A small group of men and women met together in an effort to effect a national organization which would have for its objective, the teaching of the advantages of natural, poison-free food and natural organic farming methods. This was not the beginning of the organic movement in America. Many people and a few organizations had practiced organic farming and had taught the values of natural foods for many years. Long before Sir Albert Howard’s book, *An Agricultural Testament*, was published in this in this country in 1946, there were organic farmers scattered all over this nation. Some of the people at our first Chicago convention had been taught organic farming by their fathers. The publication of Sir Albert’s book and the work of the Mr. J.I. Rodale of Emmaus, Pennsylvania, did much to increase the interest of thousands of American farmers. Books by Friend Sykes and Sir Lionel Picton in England, and the work of Lady Eve Balfour and her Soil Association, with members scattered all over the world increased interest in natural farming methods and emphasized the declining nutrition of both man and beast. Sir Robert McCarrison for years had tried to interest the medical profession in better nutrition. Our own Dr. Royal Lee, Dr. Henry Trautmann, Dr.

Jonathan Forman, Dr. Fred Miller, Dr. Coda Martin, Dr. Ray Evers and many, many others have recognized the values of natural foods grown on fertile soils for years. Dr. James Asa Shields of Richmond, Virginia, has been writing about the relationship of soils to health for a long time. The American Academy of Nutrition, organized on the West Coast in 1936, was an attempt by a group of doctors and dentists to find and publicize the truth about nutrition in relation to metabolic disease. Dr. E.E. Pfeiffer, who is perhaps the world's greatest soil scientist, has proved the principles of organic farming, long before some of you were born."

"The Mormons and the 7th Day Adventists have known and practiced these principles for decades."

"Modern scientific agriculture and modern scientific nutrition have failed. The plight of our farmers and the illness of our people prove that statement... The real cause of our farm problem is poor soil and the hordes of insects that have resulted from chemical farming. Chemical farming has failed... All history teaches us that every great civilization has failed when the fertile soil was destroyed." Address: Atlanta, Texas.

4501. *Vegan (The) (England)*. 1957. Plantmilk News. 10(4):15-16. Spring. [1 ref]

• **Summary:** Plantmilk tests. In the Western hemisphere at least three, possibly more, companies produce plantmilk commercially, One in Spain bases its product upon almonds, the other two (in America) use soya as a base. One of the American companies has recently made a gift to the Society of a small supply of various types of its plantmilk. Some are for general purposes and some for infant feeding, and

both types are available either as a powder or a liquid.

The gift was made so that we could test their qualities. For domestic purposes they have been found to be satisfactory. An advantage which they possess over plantmilks produced in England some years ago is that they may be successfully heated and brought to the boil. They are excellent for use in making white coffee, and entirely satisfactory for use in tea. For successful use in tea, the powder variety needs thorough emulsification, and for this an electric mixer is desirable. We understand that the manufacturers are considering processing the powder variety to make it instantly soluble. The liquid varieties require no preparation, except for the double-strength variety, which merely needs mixing with an amount of water equal to the amount of milk in the sealed tin. These plantmilks have also been tested for other domestic uses, and have been found to be satisfactory for making rice puddings, custard and blancmange. On the question of nutritional qualities, one sample of liquid plantmilk has been assayed and found to contain the amount of vitamin B-12 which was claimed. Further tests will be necessary to establish uniformity of the vitamin B-12 content throughout a series of samples, also the stability of the vitamin under different storage conditions. The question of assimilation of the vitamin in the liquid plantmilk, from the intestinal tract, will, of course, have to be settled before the plantmilk can be accepted as being equivalent to animal milk in this respect.

"Production. A British company was refused a license to import American plantmilk on the grounds of dollar policy. Since then, the company has given consideration to the question of plantmilk production on an experimental scale in this country. The board of directors has now decided not

to proceed with this proposal, and the position so far as the Society is concerned is now therefore an open one. It will be necessary for the committee to consider what action the Society should now take to further its object, and a meeting will be called in the near future. Meanwhile, the Society has been going into the question of the special type of soya bean used as a plantmilk base, and again we are indebted to the American company for valuable advice. It should be stated that this company has no pecuniary interests at stake, but its directors are in agreement with the principles that led to the formation of the Society. It may be possible to arrange for experiments to be made in this country in growing some of the suitable types of bean. The proprietor of a small site in France, north-east of Paris, states that during the war [World War II] he successfully grew one type of soya bean on the site.

“From ‘Plantmilk News,’ No. 1, February 1957. The Plantmilk Society is an organisation to promote the manufacture and sale for human consumption of a satisfactory non-animal alternative to dairy milk. General Secretary: 39 Willow Crescent, Uxbridge, Middlesex” [England].

4502. Kuppaswamy, S.; Joseph, K.; Narayana Rao, M.; et al. 1957. Supplementary value of Indian multipurpose food to poor vegetarian diets based on different cereals and millets. *Food Science (Mysore, India)* 6(4):84-86. April. [7 ref]

• **Summary:** Four formulations of Indian multipurpose food are given; they contain different proportions of low-fat groundnut meal (75-80%), low-fat sesame meal (10-20%), Bengalgram dhal, and black gram dhal. When any one of these formulations was used at the 12.5% level to fortify the poor rice diet of India, a marked improvement in the growth promoting value of the diet (in rats) was observed. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

4503. *Los Angeles Times*. 1957. Sciences accused as cause of most illness. May 22. p. B2.

• **Summary:** Dr. Joe D. Nichols, a “small town Texas banker, physician and nutritionist,” spoke yesterday before 75 physicians at a staff meeting in Behrens Memorial Hospital, Glendale, California. When he finished, he was applauded. Nichols is the spark plug behind “several organizations which are trying to change farming methods and the nation’s dietary habits.”

He said that we live in a country where we have more good physicians, more excellent medical schools and hospitals, more education, more outstanding scientists, and more money than any other country on earth.

“But despite all of this, everybody in the country is sick.” He said that he did not know anyone, anywhere, who did not have some physical disability. Even his own son, age 3, has three bad teeth!

Diseases such as heart disease, cancer, high blood pressure, stomach ulcers, rheumatism, diabetes, and mental diseases are all increasing in the USA. He believes that the basic cause of these problems is modern chemical farming—the way we mistreat our soil, with chemical fertilizers and sprays—and the effects of this on the crops and animals that consume the products of such farms. The plants are unhealthy, and so the animals (both human and non-human) are unhealthy.

He then discussed refined foods, such as white bread and white rice. He described white sugar as “the worst food in the American diet”—noting that not even a worm would eat it. By refining natural foods, American food processors are destroying their life-giving qualities. When people eat such foods, day after day, it is no surprise that they are poorly nourished.

Note 1. This is the earliest article seen (Aug. 2010) on “Joe D. Nichols” in the ProQuest suite of 15 digitized major American newspapers.

Note 2. Behrens Memorial Hospital was founded and is run by Seventh-day Adventist physicians.

4504. Colvin, Bernard. 1957. National service for a vegetarian. *Vegetarian News (London)* 36(295):4-9. March/May. *

• **Summary:** Recommendations for improving a vegetarian’s lot in the armed forces.

4505. Nichols, Joe D. 1957. Book reviews: Soybeans for Health, Longevity and Economy, by Philip S. Chen, Ph.D., Professor of Chemistry, Atlantic Union College. Reviewed by Joe D. Nichols, M.D. *Natural Food and Farming (Atlanta, Texas)* 4(2):13, 22. May.

• **Summary:** “The soybean is a food that is as nearly perfect as cow’s milk, but at the same time is rich in iron and vitamin C (when sprouted). Its milk is used as a substitute for cow’s milk for individuals who are allergic to it.

“This little book by Dr. Chen comes at an opportune time. The increasing incidence of cardio-vascular disease has focused the attention of the medical profession on nutrition. The possible relationship of ‘bad fats’ to cardio-vascular disease is in the news.”

“The book makes a good case for vegetarians. (So did the Symposium on fats at New Orleans last month sponsored by the American Medical Association Council on Food and Nutrition.)”

“Every doctor interested in nutrition should read this book. It is easy to read and can be ‘digested’ in an evening

“It is said that the future of medicine lies in the field of prevention. I believe the greatest part of prevention lies in the field of nutrition.” Address: M.D.

4506. Chen, Philip S. 1957. The soybean—A food without peer. *Let’s Live*. July. p. 3.

• **Summary:** Discusses the nutritional and economic benefits of the soybean. Contents: Introduction. Protein advantages. No cholesterol. Rich in iron. Economically cheaper. Varied assortment [of edible soy products]: Soy milk, soy milk powder, green soybeans, dry mature soybeans, soy sprouts, soy grits and flakes, and soy flour. Address: PhD, Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts.

4507. Keys, Ancel. 1957. Diet and the epidemiology of coronary heart disease. *J. of the American Medical Association* 164(17):1912-19. Aug. 24. [26 ref]

• **Summary:** An evaluation of the medical evidence to date supports the hypothesis that dietary fat is associated with coronary heart disease.

Note: *Webster's Dictionary* defines epidemiology (a word first used in about 1864) as "a branch of medical science that deals with the incidence, distribution, and control of disease in a population." This is the earliest document seen (Oct. 2009) that contains the word "epidemiology." Address: Ph.D., Director of the Lab. of Physiological Hygiene, School of Public Health, Univ. of Minnesota, Minneapolis, Minnesota.

4508. *Vegan (The) (England)*. 1957. Plantmilk News. 10(6):15. Autumn. [1 ref]

• **Summary:** "An extract from "Plantmilk News," No. 2, September, 1957, published by the Plantmilk Society. "A small but possibly significant factor has occupied the attention of the Society's officers in recent months: a limited but definite medical need for plantmilk in this country. A few inquiries have been received for a supply of plantmilk for infants suffering from a disease which prevents them from being able to metabolise lactose. These infants are therefore unable to utilise either animal or human milk, and a satisfactory plantmilk might thus result in saving the lives of some babies. One baby was given some of the American plantmilk donated by the American company for this purpose. Other babies have received an experimental plantmilk made by another British company. Although in its present form this experimental plantmilk is not sufficiently attractive for general use, it may prove suitable for medical requirements. This is a development which if pursued could possibly lead to plantmilk being prescribed also in cases of allergy and near-allergy to animal milk found among certain infants, who may amount to some thousands in this country, and who are particularly liable to be found among the babies of vegetarian parents..."

"The Plantmilk Society: The second Annual General Meeting will be held at Friends House, Euston Road, London, N.W.1, at 2.30 p.m., on Saturday, October 12th, 1957, at which meeting members and others interested will be welcome. The Plantmilk Society is an organisation recently formed to promote the manufacture and sale for

human consumption of a satisfactory non-animal alternative to dairy milk. General Secretary: Mr. Leslie I. Cross, Uxbridge, Middlesex [England].

4509. Carson, Gerald. 1957. *Cornflake crusade: From the pulpit to the breakfast table*. New York, NY: Rinehart & Company, Inc. xii + 305 p. Illust. Index. 22 cm. Also published in London by Victor Gollancz (1959). [150* footnotes]

• **Summary:** Though written in a light-hearted, often humorous and playful manner, this book is nevertheless extremely well researched and well written. The author has spent 12 years pursuing the social history of American eating and food reform movements. It contains an excellent history and chronology of the 19th century vegetarian food reform movement (inspired in large part by Seventh-day Adventist teachings), which led to the development of ready-to-eat breakfast cereals and other foods by W.K. Kellogg, John Harvey Kellogg, C.W. Post, Sylvester Graham, and others.

Contents: 1. Foodtown, U.S.A. (Battle Creek, Michigan). 2. The landing of the vegetarian pilgrims (Rev. William Cowherd, William Metcalfe, American Vegetarian Society, Bible Christian Church of Philadelphia (Pennsylvania), Rev. Henry Stephen Clubb). 3. The great American stomach ache (Dr. James Caleb Jackson of Dansville, New York, early American eating habits). 4. Sylvester Graham watched America starve. 5. Bloomers and bread crumbs (Dr. J.C. Jackson—more detail). 6. The grains, the nuts and the second coming (Seventh-day Adventists, Ellen G. White, the Millerite movement). 7. The Cornflake Kelloggs found a home in the West (The Kellogg family and Battle Creek, Michigan). 8. The cable address was "Health" (Dr. John Harvey Kellogg and the Battle Creek Sanitarium). 9. Ella Kellogg's dough board (flaked breakfast cereals, Granose flakes, Granola). 10. A sword of fire hung over Battle Creek (the Sanitarium burned in 1902, Sanitarium menu 1912). 11. C.W. Post; or, what is this strange power? 12. Our stock salesmen meet all the trains. 13. Few were chosen. 14. None genuine without this signature. 15. The Golden Rule and other good ideas. 16. The simple life in a nutshell. 17. Doctor Kellogg's last fight. Chronology (1794-1951). Sources and authorities; chapter notes.

Chapter 13 is a discussion of the genius of C.W. Post, and his new type of advertising, which was serious, focused, and potent. He was among the first to see the great potential power of advertising in selling a product and building a company—and he spent millions of dollars on advertising. He once said, "All I have I owe to advertising." He reminded people that they could "recover from any ordinary disease by discontinuing coffee and poor food, and using Postum Food Coffee and Grape Nuts." Other manufacturers soon adopted the new Post way to advertise food. The Ralston Health Food Co., for example, explained that when you open the package, you could see thousands of tiny grains "full of the Vegetable

phosphorus that makes children grow like magic and develop strong mentally,” giving the brain “all the phosphorus it can use in heavy thinking.”

Note 1. C.W. Post, developer of Postum Food Coffee, Grape Nuts, etc. is discussed throughout this book—often in depth. His Postum Cereal Company was eventually renamed General Foods Corporation.

Note 2. This book went on sale in Battle Creek, Michigan, in Oct. 1957. Address: Millerton, New York.

4510. Holbrook, Stewart H. 1957. *Dreamers of the American dream*. Garden City, New York, NY: Doubleday & Co., Inc. ix + 369 p. Series: Mainstream of America.

• **Summary:** Orson Squire Fowler, America’s leading phrenologist and a writer on eugenics, developed and popularized the “Octagon Mode of Building.” He built himself a huge, five-story octagonal house on the Hudson River, in New York. Fowler’s idea proved to be a fad (as did phrenology) but before it died, it was picked up by the Vegetarian Settlement Company and Henry Stephen Clubb, whose goal was to found Octagon City, a permanent home of vegetarians in the center of the United States (p. 46-51).

There are five principal classifications of dreamers [reformers] in this book. Address: American historian.

4511. *New York Times*. 1957. Vegetarianism urged: Prasad says it is the way to escape H-bomb. Nov. 10. p. 57, col. 6.

• **Summary:** President Prasad of India holds it key to ‘escape from hydrogen bomb’ in a speech at the World Vegetarian Conference held in Bombay, India.

Note: This is the earliest document seen (Nov. 2002) that concerns the dangers of nuclear war.

4512. *New York Times*. 1957. Vegetarian congress opens. Nov. 24. p. 27, col. 8.

• **Summary:** Discusses the World Vegetarian Conference held in Bombay, India.

4513. *Science Digest*. 1957. Meatless hamburger. Nov. p. 94.

• **Summary:** According to a patent issued to M.L. Anson of New York City, and assigned by him to Lever Brothers Co. of New York, “meatless hamburgers, meatless meat-loaves, and meatless luncheon meats” can be made from soybeans and wheat. “The synthetic meat is a mixture of a chewy protein gel obtained from the oilseed of either soybeans or peanuts and a dough made of wheat or rye flour. To this blended mixture is added flavoring and coloring materials.”

4514. Hewitt, Edward R. 1957. *Lecithin and health*. San Francisco, California: Health Publishing Co. xvi + 238 p. Illust. Index. 24 cm.

• **Summary:** Contents: 1. How to get relief from pains and aches without drugs. 2. Conditioning the body permanently for beauty and health. 3. Aches and pains relieved with the

fast [fasting]. 4. Food—Its relation to aches and pains. 5. The law of wholeness of foods. 6. The use of sea water for health. 7. What you should know about meat in your diet (... we should try to get along with as little flesh food as possible”). 8. The smoking problem. 9. The county without a toothache (fluoridation; calcium fluoride is probably beneficial, but sodium fluoride is an inorganic poison). 10. Cholesterol and lecithin. 11. The wonderful world of corrective foods and herbs. 12. The new diet for dynamic health. 13. Kruska and honey for new energy. Recipes and menus. 14. New menus for healthful living. 15. How to select healthful food combinations.

The section titled “Thirty daily menus for your health guidance” (p. 214-24) includes: “soy spread” (with many types of bread). Soy beans are mentioned as a good protein source (p. 226).

Note: A 16-page booklet, only 15.2 cm tall, was also published in 1957 by the same author with the same title. Address: D.C. [Doctor of Chiropractic].

4515. Jones, Joseph. 1957. Transcendental grocery bills: Thoreau’s *Walden* and some aspects of American vegetarianism. *Texas Studies in English* 36:141-54. [35* footnotes]

• **Summary:** Compares the vegetarian dietary principles of William A. Alcott (a cousin of Amos Bronson Alcott) and Henry David Thoreau. Both advocated return to a simpler life and a simpler, more natural and moral diet. For William, one of a band setting out during the 1830’s and 1840’s to reform and regenerate the inner man both spiritually and gastronomically, “temperance” meant abstaining from both liquor and from meat. “At the peak of their influence they commanded an impressive troop of followers and a commissariat consisting of a number of ‘reformed’ hotels and eating houses.” James Fenimore Cooper, who published *The American Democrat*, was another food reformer. Thoreau wrote *Walden* as apart of his campaign for simplification of daily life. “While never unflaggingly vegetarian, it was mainly so.” Thoreau’s ideas on diet, simplicity, and asceticism were strongly influenced by those of William Alcott. At the pond he lived an extremely frugal life, spending only \$8.74 in 8 months for food, exclusive of what he raised or was invited to eat. Included was \$0.22 for pork (probably salt pork for boiling with peas), an occasional mess of fish for dinner, and one woodchuck (“partly for experiment’s sake”). After 2 years and 2 months at the pond (1845-47), he left due to a pressing offer of employment at the Emersons’ while Ralph Waldo Emerson was away in England.

William Alcott and Bronson Alcott, though cousins were more like brothers; they were almost the same age, they had been brought up and schooled together in the first decade of the 1800s, and they traveled southward in each other’s company. To a marked degree, their later lives were

parallel. Both were reformers and indestructible idealists who developed a strong zeal for educational reform and for vegetarianism. Both were uncommonly high-minded men, even for so high-minded a time and locality, though William was the more practical of the two. Both Alcotts and Thoreau were strongly influenced by and “inclined to Grahamism,” as preached by Sylvester Graham.

The quarter century before the Civil War was one of great idealism and optimism, an era of messianics and reformers who urged their compatriots to follow higher laws and to return to a simpler, more natural way of life. A host of individuals such as Alcott were out to save the world by vegetarianism, temperance reform, phrenology, etc. But soon the abolitionist movement engulfed most other reform movements and enlisted the energies of their leaders. The fact that slavery was abolished, worldwide, in a relatively short period of time, gave the reformers even greater optimism that other reforms could also succeed—and promptly.

4516. Rudd, Geoffrey Leonard. 1957. *Why kill for food?* Wilmslow, Cheshire, England: The Vegetarian Society. xi + 126 p. Illust. 22 cm. *

• **Summary:** About vegetarianism. Originally presented in 1956 at the Indian Vegetarian Congress at Madras. Rudd also wrote the Preface in 1956, but no publication date is given in the book itself. Both the Library of Congress and the British Library, however, give the publication date as 1957. Address: England.

4517. Sanctilean, -. 1957. *Gar shu* cookbook. Coolidge, Arizona: Upland Trails Press. 94 p. 23 cm. Spiral bound. *

• **Summary:** The prehistoric word “gar” means vegetal, as in garden. “Shu” means sunlight. The gar shu diet includes foods grown from roots in sunshine. The ultimate in purity of diet is fresh fruits, cereals, nuts, and other vegetal foods that grow above the ground. All animal products such as dairy products, eggs, and honey are excluded. All parts of onions, leek, and garlic are excluded because they grow below the ground.

4518. Tinker, Hugh. 1957. *The Union of Burma*. Oxford, England: Oxford University Press. See p. 271. *

• **Summary:** “For instance, Buddhism abhors the taking of life and, with its ancient Hindu associations, particularly objects to the killing of cows for meat. Within recent years a vegetarian movement has gained ground among leading exponents of Buddhism in which U Nu is particularly prominent. The Prime Minister has disavowed any intention by those in power to prohibit the killing of animals for food. nevertheless this practice is definitely becoming increasingly restricted... in Lower Burma the sale of beef has ceased entirely, owing to restrictions (p. 171).”

4519. Zerfing, Sally D. 1957. *Sally’s recipes*. Glendale, California: Published by the author. vi + 221 p. Illust. No index. 25 cm.

• **Summary:** A remarkable vegetarian cookbook with a Christian message and references to many Biblical passages. It would be vegan, except for the use of honey. The author is a devout Christian and is probably a Seventh-day Adventist since (1) Ellen G. White is quoted on several pages (p. 2, 214-17, etc.), (2) it contains so many soy recipes at a relatively early date, and (3) it mentions some brands of soy products (e.g. Madison Health Food Company’s Cheze-O-Soy = tofu) made by Adventist companies. Page 14 has a short section on soy oil and page 14 a long section on soy beans, including soy milk. Soy-related recipes include: Soy beans (p. 44). Soy paste (with soy milk powder, p. 50). Soy-whole wheat noodles (with soy flour, p. 62). All purpose soy milk no. 1, no. 2, and no. 4 (made with El Molino Soya Milk Powder, p. 66-67). All purpose soy bean milk no. 3 (made from whole soy beans). Hot carob drink (with soy milk, p. 66). Almond milk. Cashew nut milk. Sesame milk (p. 67. “Liquefy together: 1 cup sesame seeds and 2 cups water. Then strain the milk through a fine cloth; squeeze to get out all the milk. Then liquefy with a little honey, salt, oil, or liquid lecithin”).

Note 1. This is the earliest English-language document seen (Feb. 2022) that contains the term “sesame milk”—or a recipe for making it at home.

Scrambled tofu (with Chef Bonneaus Aminotone, p. 73). French toast (with soy milk, p. 73). No. 2 health burgers (with tofu, p. 79). Scrambled tofu sandwich (p. 80). Creamed tofu and nut spread. Soy cream and olive sandwich on Boston bread (with soy creamed cheese, p. 80). Cheze-O-Soy sandwich (p. 81). Sesame tahini cheese spread (with Sally’s Soy Mayonnaise, p. 81). For other tahini recipes, see p. 82 and 111. For other sesame seed recipes: Sesame cream cheese (p. 82). Sesame salad dressing (p. 85). Sesame wheat germ candy (p. 148).

Soy creamed cheese (p. 82). Soy mayonnaise. Thousand island dressing (with soy mayonnaise, p. 83). Cucumbers with tofu cream dressing (p. 90). Homemade tofu cottage cheese (p. 91). Tofu cottage cheese (p. 91). Tofu vegetable jello-salad (p. 92). Tofu and rice croquettes (p. 100). Soy and rice patties (with ground soybeans, p. 101). Soy and eggplant patties (with ground soybeans, p. 101). Tartar sauce (with Sally’s Soy Mayonnaise, p. 104). Baked macaroni and soy cheese (with tofu). Cheze-O-Soy and millet hash. Baked soy beans (p. 104). Soy and millet loaf (p. 105). Thanksgiving loaf-Wheat, tofu and nut combination (p. 107). Cheze-O-Soy patties (p. 108). Spanish-style scrambled tofu (p. 115).

Note 2. This is the earliest document seen (Feb. 2012) that contains the term “Scrambled tofu” or that contains a recipe for “Scrambled tofu.” The book actually gives 3 recipes for scrambled tofu (pages 73, 80, and 115).

Ravioli (noodles made with soy flour and filling made

with Cheze-O-Soy, p. 116). Bean sprout entree (with Cheze-O-Soy, p. 117). Scalloped corn (with tofu). Tofu Chick Pea Foo Young (p. 117). Wonder of the sea loaf (baked, with tofu, p. 118). Chew mein vegetarian style (with soy sprouts, p. 119). Tofu and Sally's homemade tofu (p. 118-19; curded with lemon juice and sea salt). Homemade soy cheese (made with El Molino Soya Powder, p. 119). Tofu gravy (p. 120). Non-dairy ice creams (p. 149-53; most recipes call for 2 tablespoons El Molino soya milk powder). Banana split, Maple nut sundae, Fruit Sundae (each topped with "soy whipped cream," p. 151).

Note 3. We are unable to find a recipe or definition for "soy whipped cream" anywhere in this book.

Note 4. This is the earliest English-language document seen (Oct. 2013) that contains the term "soy whipped cream" (regardless of capitalization).

Date shake (with "2 cups soy milk No. 3 or No. 1," p. 152). Carob soy malt (with "2 cups all purpose soy milk No. 3," p. 152). Ice cream pie (topped with soy whipped cream, p. 153). Carob-wheat germ banana shake (with soy milk, p. 153). Soy pie crust (with "¼ cup stirred soy flour," p. 154). Pineapple soy cheese pie (with "1¼ cups tofu and ¼ cup soy milk powder," p. 156). Baby's soybean formula (p. 196). Composition of ¼ cup soy powder (p. 196). Tofu for babies (p. 200).

Chapter 18, "Grandma's remedies" is about fasting, including "A week or fourteen day fast" (p. 204). A large portrait photo on the front cover shows Sally Zerfing. Address: 24629 N. Arch St., Newhall, California.

4520. Singh, Gursham; Singh, K.; Bedwa, H.C. 1958. Soyabean—Now going up into the Punjab Hills. *Indian Farming* 7(10):32-34. Jan. Series 2. Summarized in Soybean Digest, April 1959, p. 30.

• **Summary:** "Soybean, before long, is destined to play an important part in the dietary of the people of Punjab, especially the hill population. The Punjab Department of Agriculture has not only developed an improved soybean type suited to Punjab conditions, but has also determined the best method of growing and handling the crop... In India, its importance is yet to be fully recognized and its cultivation is very limited. As our people are mostly vegetarian and the nutritional standards extremely poor, it is very essential that their diet is supplemented with some protein-rich food. Soyabean fits into this picture very well."

The new variety, named Punjab Soyabean No. 1, is particularly suited to the agro-climatic conditions of the Kangra Valley. It is an edible variety, containing 43.9% protein and only 9.2% fat. The chief merit of this variety is that its seeds are free from the general drawbacks of bitter taste and pungent, beany smell. It does well when cultivated with maize. Note 1. Kangra is a town in Himachal Pradesh, northwest India, about 40 miles east-southeast of Pathankot. Pathankot is located in India about 10 miles east of the

border with Pakistan.

Note 2. This is the earliest English-language document seen (Aug. 2010) that contains the term "agro-climatic" or the term "agro-climatic conditions."

"Soyabean flour: As the seeds of Punjab Soyabean No. 1 are free from the general drawbacks of bitter taste and pungent beany smell, soyabean flour can be extensively used for human consumption under local conditions. It can be mixed with wheat or maize flour up to 25 per cent, without any perceptibility, for making *chapaties*, leavened bread (*dabal roti*), sweetmeats, and bakery products like biscuits and cakes. The *chapaties* made from this combination are easy to cook and are very tasty. Soyabean green seed could be used as a vegetable like peas. It can be used for preparing artificial milk which compares favourably with cow's milk in chemical composition." It also makes a good cattle feed. Address: Dep. of Agriculture, Punjab [India].

4521. *Vegan (The) (England)*. 1958. Plantmilk for infant feeding. 10(8):17-18. Spring. [1 ref]

• **Summary:** "Plantmilks of different kinds have been used during the last few months for the treatment of a number of infants suffering from galactosæmia, which has been receiving some publicity in the medical and national Press.

In this disease there is lack of an enzyme needed for one stage of the metabolic pathway by which galactose is converted into glucose. If the baby's diet contains lactose (sugar of milk), which is a source of galactose, there is an accumulation in its tissues of a toxic substance. In severe cases this results in rapid wasting, with damage to the kidneys and especially to the liver, which can rapidly lead to death."

"In one instance, an American manufacturer of plantmilk kindly donated, through the Plantmilk Society, twelve pounds of plantmilk powder to meet an emergency. The Society has also been able to make available some further supplies as the result of a gift from one of its American sympathisers.

"The staff at one hospital considers that plantmilk has helped to save the life of a particular baby."

4522. Subrahmanyam, V.; Bhagawan, R.K.; Doraiswamy, T.R.; Joseph, K.; Bains, G.S.; Bhatia, D.S.; Sankaran, A.N.; Swaminathan, M. 1958. Effect of replacement of rice in a poor vegetarian diet by tapioca macaroni on the general health and nutritional status of children. *Food Science (Mysore, India)* 7(4):87-89. April. [6 ref]

• **Summary:** The nutritional status of the children on the tapioca-macaroni diet was slightly improved compared with those fed the rice diet. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

4523. Bansi, H. 1958. Stickstoffbilanz-Versuche bei rein vegetabilen Ernährung [Nitrogen-balance experiments on a

pure vegetarian diet]. *Angewandte Chemie* 70(12):378. June 21. [Ger]

• **Summary:** Based on the conception that the nutritional value of a protein depends on its composition of amino acids, various sources of plant protein were combined appropriately to give the optimum combinations. A nitrogen-balance investigation was conducted on 33 people consuming this pure vegetal [probably vegan] food. Address: Hamburg, Germany.

4524. Hyatt, Harold. 1958. Vegetarian heritage. *Vegetarian (The) (London)* 6(3):67-70. May/June. [6 ref]

• **Summary:** Vegetarians believe that the essence of animal welfare lies in being kind to animals by not eating them. Many passages in the Judeo-Christian teachings concern the treatment of animals. For example, "An ox must not be muzzled while it treads out the corn, for it is wrong to stimulate an animal's appetite and refuse to let it eat—(Deut. 25, 4). A weak and a strong animal must not be yoked together for the weaker animal would tire quickly at the expense of the stronger one—(Deut. 22, 10). In addition there are many ordinances that cattle must rest on the Sabbath day as well as man...

"The Talmudic writings contain evidence of the wickedness of flesh-eating and of the suffering that man brings upon himself by violating his natural feelings of *Rachmanos* (pity)...

"Christian teachings supplement the Hebrew moralities regarding the blood-free diet, so much so that—'... during the first four centuries the Christian heroes were not only non-flesh eaters but vegetarians of the extremest kind' (Howard Williams, M.A. *Ethics of Diet*, page 57). These worthy men were so convinced of vegetarianism implicit in the words of Jesus that their denunciation of flesh-eating Christians makes startling reading today." Address: Associate of the Royal Inst. of Public Health and Hygiene.

4525. *Vegan (The) (England)*. 1958. Plantmilk News. 11(1):16-17. Summer. [1 ref]

• **Summary:** "Reprinted, by kind permission, from Bulletin No. 5 (May, 1958) of the Plantmilk Society.

"The first British infant plantmilk: By the time of the next Annual General Meeting of the Plantmilk Society on October 4th, a pioneer British plantmilk may be on the market."

4526. Register, U.D. 1958. Are nonflesh proteins adequate? A scientist's report on some interesting research. *Review and Herald*. Aug. 7. p. 16-19. [18 ref]

• **Summary:** This review of the scientific literature, plus extensive new information based on investigations in progress, indicates the adequacy of vegetable proteins. Present-day research, based on controlled experiments, shows that the minimum requirement of protein for human

beings is much less than advocated by the two pioneer researchers in this field: Liebig and Voit. In the mid-1800s, the German chemist Justus Liebig (lived 1803-1873) believed that protein was the source of energy for work; thus the more a person works, the more protein he or she requires. But it is now known that protein requirements are not increased by activity. The German physiologist Voit, a contemporary of Liebig, recommended 118 grams of protein a day for a moderately active man. He based his recommendation simply on a survey of the average intake of protein by German workers. "In 1946 outstanding investigators at Harvard and the University of Illinois reported that the minimum requirement for adult men was approximately 30 grams of protein per day, whether the diet was of plant origin or from a mixture of plant and animal foods (Sahyun, *Proteins and Amino Acids in Nutrition* [1948], p. 159). As late as 1955, Dr. C.W. Rose of the University of Illinois, for more than 25 years outstanding in the field of protein research, concluded that the protein requirement of adult men was less than 25 grams per day (*J. Biol. Chem.* 217:997, 1955)."

4527. Simoons, Frederick J. 1958. The distribution and origin of widely held prejudices against certain animal foods in the Old World (Abstract). *Annals of the Association of American Geographers* 48(3):289. Sept. *

• **Summary:** Discusses prohibitions against the eating of beef, pork, and dog flesh, and evaluates explanations for their being held over widespread areas of the world.

4528. Hardinge, Mervyn G.; Chambers, A.C.; Crooks, H.; Stare, F.J. 1958. Nutritional studies of vegetarians. III. Dietary levels of fiber. *American J. of Clinical Nutrition* 6(5):523-25. Sept/Oct. [9 ref]

• **Summary:** The subjects studied, in Southern California, were the same as in part I of this study. Lacto-ovo-vegetarians consumed nearly twice as much fiber as non-vegetarians, and as little less than half that of the 'pure' vegetarians [vegans]. Address: 1-3. Dep. of Pharmacology, School of Medicine, College of Medical Evangelists, Loma Linda, California; 4. Prof. & Chairman, Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

• **Summary:** The author is a Seventh-day Adventist who advocates a vegetarian diet to prevent heart disease.

Dedication: "To President Dwight D. Eisenhower, Whose heart attack [24 Sept. 1955] inspired the writing of this book, ushered in a new era in heart disease research and education, and made every American more heart-disease conscious."

This is an outstanding primer for the laymen, starting with the structure and function of the heart.

Contents: Preface. Part I. 1. The heart. 2. Diseases of the heart. 3. Coronary artery disease. 4. Heart disease statistics.

Part II. 5. Atherosclerosis—Part I. 6. Atherosclerosis—Part II. 7. Cholesterol and lipoproteins. 8. Fat and oils. 9. Meat. 10. Milk and eggs. Part III: Prevention of heart disease. 11. Lecithin. 12. Sitosterol. 13. Heart disease and soybeans—Part 1. Soybean oil. 14. Heart disease and soybeans—Part 2. Soybean protein. 15. Heart disease and religion. 16. Future

dietary habits and practices.

Philip S. Chen, Jr. assisted in preparing part 1 of this book.

In the chapter on Lecithin (p. 127-34) we read: "Lecithin is the most important member of a group of fat-like substances known as phosphatides or phospholipids. They are so called because they contain phosphorus (also nitrogen) as well as the usual fat constituents of carbon, hydrogen, and oxygen. The structural relationship between a fat and lecithin is shown in Fig. 13.

"The word lecithin is derived from the Greek word *likithos* meaning 'yolk of an egg,' since egg yolk is very rich in lecithin content (over 6 per cent), and was at one time its chief source.

"Lecithin is a natural product occurring almost universally in the cells of plant and animal life. In the body the largest amounts are found in the brain and nerve tissues, heart, kidneys, and endocrine glands.

"The best commercial source of lecithin is soybeans. The phosphatides or 'soy lecithin' is present in the soybean oil to the extent of 2.5 per cent. According to Northern Utilization Research Branch, the phosphatides of soybean lecithin consist of 30 per cent lecithin, 30 per cent cephalins, and 40 per cent phospho-inositides or lipositol.

"One of the most important properties of lecithin is its effectiveness in lowering the surface tension of aqueous solutions. The reason is that one side of the molecule prefers fat, while the other side is attracted by water. It is this unique Jekyll and Hyde character that makes lecithin a most powerful emulsifying agent.

"Lecithin increases the digestibility and absorption of fats by virtue of its emulsifying property. It also enhances both the absorption and utilization of vitamin A and carotene and increases the blood level and storage of the former.

"Lecithin plays an important part in the metabolism of fat. The enzyme, lecithinase, which is produced in the body, sets free choline, which has the power to prevent the accumulation of fat in the liver. Such a substance as choline, which is able to alter fat into another form or otherwise remove its accumulation in an organ, is known as a 'lipotropic agent.' In addition to choline, the soybean contains another lipotropic agent, namely, inositol. It is also a constituent of soy lecithin. Both of these lipotropic agents are members of the vitamin B complex, and are important factors for growth and lactation.

"There are many cases on record showing the effectiveness of lecithin in lowering the cholesterol level of the blood. The following three cases were cited in American Lecithin Company's booklet, *Phospholipids*.

"Kesten and Silbowitz (*Proc. Soc. Exp. Biol. Med.*, 49, 71, 1942) found that feeding lecithin to rabbits lowered cholesterol levels from an average of 430 ± 150 to 210 ± 75 . Of the control rabbits with hypercholesterolemia, seven out of eight showed signs of atheromatic lesions (five to an

extreme degree; two to a moderate extent). In the rabbits in which the cholesterol level was decreased by lecithin feeding, only two out of seven had atherosclerosis, and these only to a minimal extent.

"In the human subjects, Adlersberg and Sobotka (*J. Mt. Sinai Hosp.*, 9, 955, 1943) showed that the administration of soy lecithin caused striking decreases of serum cholesterol in patients suffering from hypercholesterolemia.

"Morrison and associates (*Am. J. Med.*, 6, 388, 1949) reported an extensive series of studies on the value of lipotropic therapy in atherosclerosis. A group of 230 patients admitted in consecutive order to the Los Angeles [California] County General Hospital was found to have acute coronary thrombosis, with myocardial infarction. These patients were thereupon accepted as proved cases of atherosclerosis. One hundred and fifteen of these patients, selected alternatively, served as controls. They were given symptomatic medication only as required, and their progress followed periodically after discharge from the hospital over a three-year period. The remaining 115 patients were treated with choline, following recovery and discharged from the hospital.

"At the end of the three-year period, there were 35 deaths in the 115-patient control group (30 per cent) as compared to 14 deaths (12 per cent) in those patients treated with lipotropic materials. This work appears to offer conclusive evidence of the value of lipotropic therapy in atherosclerosis and heart disease.

"A similar but even more convincing piece of research was published by Pottenger, Jr. and Krohn in the *American Journal of Digestive Diseases* of April, 1952. Contrary to the common practice of giving the patient a low-fat diet to relieve hypercholesterolemia (high content of cholesterol in the blood), these doctors gave their patients the opposite diet—one high in fat and cholesterol-plus, soy lecithin.

"One hundred and twenty-two patients were put on a high-fat regimen that included internal organs of raw liver and raw brains—foods that are rich in cholesterol. Ninety-nine of the patients took a teaspoon of soy lecithin with each meal. The remaining twenty-three served as controls.

"The blood cholesterol showed a marked decrease in 79 per cent of the patients who took the lecithin, but no decrease in the patients who did not take lecithin. Thus we see that both choline and lecithin are effective in lowering blood cholesterol and preventing atherosclerosis.

"The cholesterol-lowering effect of lecithin is explained by the writer of American Lecithin Company's booklet *Phospholipids* as follows: 'Cholesterol in the blood stream does not in itself cause atherosclerosis. It is not until it has been precipitated out of the blood stream upon the arterial surface, whether from chylemicrons or from giant molecules, that it can act to produce characteristic atheromatic lesions. This precipitation is due to disturbance of the delicate balance necessary for the maintenance of colloidal stability. Fat and cholesterol *per se* are insoluble in water and equally

in blood plasma. A lipid particle containing fat or cholesterol is maintained in colloidal dispersion in the plasma by means of stabilizing, solubilizing, or emulsifying agents.

"In order to be an effective stabilizing or solubilizing agent, a compound must have both fat-soluble and water-soluble groups. The simple explanation usually given for this type of emulsification is that the fat-soluble groups are anchored in the fatty substrate of the particle with the water-soluble polar groups extending out into the aqueous medium. Soy lecithin has been well known for many years to be a very effective emulsifying and solubilizing agent for lipids.

"In the blood stream, also, it has been believed for many years that lecithin and other phospholipids act in a similar manner, along with other emulsifying or hydrotropic agents. These include the proteins, and, to a lesser extent, cholesterol esters. It is not difficult to believe that the concentration of lecithin and other phospholipids or, more appropriately, the ratio of phospholipid to cholesterol or phospholipid to total lipid (cholesterol plus fat) may be significant in maintaining stable colloidal dispersion. Thus, for example, with a given physical stress such as vibration, an unstable lipid dispersion may be precipitated, while a relatively more highly solubilized or stable dispersion will not be precipitated.

"In coronary thrombosis both phospholipids and cholesterol increases in the patient but cholesterol rises at a more rapid rate than the phospholipids. As the phospholipids are believed to be the controlling factor in keeping the cholesterol dissolved in the blood, the importance of influencing the disturbed balance is stressed. It can be achieved by either reducing cholesterol without lowering the phospholipid content of the blood or, in reverse, elevation of phospholipids and maintenance of the cholesterol at a constant level.'" Address: PhD, Prof. of Chemistry and Chairman of Div. of Natural Sciences, Atlantic Union College, South Lancaster, Massachusetts.

4535. Chen, Philip Stanley. 1958. Heart disease—Cause, prevention, and recovery (Continued—Document part II). South Lancaster, Massachusetts: Chemical Elements. 189 p. Illust. 21 cm. Summarized in Soybean Digest, May 1958, p. 37. [10 soy ref]

• **Summary:** (Continued): "In this connection, we wish to take up a seemingly paradoxical problem. In the chapter on cholesterol it was pointed out that eggs are among foods richest in cholesterol and that the easiest way to raise the cholesterol content of the blood is to eat a lot of eggs. It has just been shown that eggs are also very rich in lecithin and, because of that, eggs were used at one time as the chief source of lecithin. Naturally the question arises: Why doesn't the lecithin present in the eggs prevent its own cholesterol from rising in the blood of the user? One reason, as has been elucidated above, must be that the phospholipid to cholesterol ratio in the eggs is such that the liberation of

cholesterol is favored. Another reason is that the lecithin in the eggs contains an abundance of saturated or nonessential fatty acids. While there is disagreement among various investigators as to the actual fatty acids combined in egg lecithin, the main fatty acids reported by most workers are palmitic, stearic (saturated fatty acids), and oleic acids (unsaturated but non-essential). In this respect, it is unlike soy lecithin, which is abundant in the unsaturated essential linoleic acid, which has been found to the extent of 55 per cent of the total amount of fatty acids present (see Table 9). Thus, while soy lecithin is a powerful agent in lowering blood cholesterol, egg lecithin is ineffective.

“Levene and Rolf (*J. Biol. Chem.*, 62, 759, 1925) studied the phosphatides of soybeans and concluded that the proportion of saturated acids is lower than in animal lecithin. Thus we see that just as there are two kinds of fats, animal fats made up mostly of saturated fatty acids and vegetable fats made up mostly of unsaturated fatty acids, there are also two kinds of lecithins, animal lecithins composed of saturated or non-essential fatty acids and vegetable lecithins composed of unsaturated, essential fatty acids. In other words, there is a distinct similarity in fatty acid composition between the fat and the lecithin in the same food source, animal or vegetable. When one is saturated, the other is saturated; when one is unsaturated, the other is also unsaturated.

“Besides atherosclerosis and heart disease, soy lecithin has been found helpful in the treatment of the following diseases:

“1. Skin diseases, such as psoriasis, dry skin, nummular eczema, xanthoma, keratosis, infantile eczema, scleroderma, senile atrophy of the skin, seborrheas, acne and keloid formation, due to fat absorption, lipid transport, liver function, and probably cholesterol metabolism of the skin itself.

“2. Diabetes, in which lecithin decreases insulin requirements.

“3. Sprue and diarrhea, in which lecithin improves the absorption of fat and lowers the susceptibility to the disease.

“4. Liver dysfunction due to deranged fat metabolism.

“5. Hemorrhagic degeneration of the kidney due to a deficiency in choline, lecithin or other lipotropic agents.

“6. Vitreous opacities, in which lipotropic substances cause considerable clearing.”

Chapter 12. “Sitosterol: Both animal and vegetable fats contain a small amount of a group of closely related substances known as the sterols. In the animal fat, the sterol is cholesterol as we have already discussed. In the vegetable fat, the sterol is collectively known as phytosterol. Phytosterol is a mixture of several plant sterols, the most important being sitosterol. The several known sitosterols are: alpha-1, alpha-2, alpha-3, beta, and gamma sitosterols. Beta- and gamma-sitosterol are the most important. Beta-sitosterol is present in wheat germ oil, while both beta- and gamma-

sitosterol are present in soybean oil.” Address: PhD, Prof. of Chemistry and Chairman of Div. of Natural Sciences, Atlantic Union College, South Lancaster, Massachusetts.

4536. Clinkard, Charles Ernest. 1958. The uses of juices, extracted from raw fruits and vegetables. 6th ed. Auckland, New Zealand: C.E. Clinkard & Co. 31 p. 19 cm. *

• **Summary:** The author, born in 1883, also wrote a booklet about soya. Address: New Zealand.

4537. Dean, R.F.A. 1958. Use of processed plant proteins as human food. In: A.M. Altschul, ed. 1958. Processed Plant Protein Foodstuffs. New York: Academic Press. xv + 955 p. See p. 205-47. Chap. 9. [99* ref]

• **Summary:** Contents: General considerations: Early sources of protein for human food, competition for food between man and his domestic animals, vegetarianism and vitamin B-12, protein requirements (of children, of adults). Plant proteins now in use: Foods that can be prepared in the home (cereals, legumes {incl. groundnuts, soybean}, sunflower seed, sesame), plant foods used after factory processing (cereals, legumes, sunflower seed meal, cottonseed meal). Other forms of plant food: Plankton, algae, food yeast, leaf proteins (p. 237-38). Future extensions of the use of plant proteins: The theoretical basis of selection, assessment of the value of foods intended for human consumption, practical measures for the future.

In 1957 some 160,000 tons of soybeans were used to make tofu in Japan. “Magnesium or calcium salts are the precipitants of the curd from the soybean milk; the product is eaten by nearly every family in Japan with its breakfast miso-soup.”

During World War II, the attempt was made to introduce soya as a food crop to Uganda. But “no instruction was given in the necessary details of preparation, with the result that the crop was very reasonably declared inedible by the Africans. They retain a violent prejudice against it and are suspicious that it has been added to any food, such as yellow corn meal, that they find distasteful.

“One of the most interesting methods for making soya edible has evolved in Indonesia and was described in full by Van Veen and Schaeffer (1950). It takes advantage of the ability of the mold *Rhizopus oryzae* to grow on the bean and alter its constituents... The product made from soya is called *tempeh kedelee* (kedelee = soybean).” Details of the production process are given. A description of natto and its composition is also given (p. 218).

The section on algae gives detailed information on chlorella, a type photosynthetic single-cell protein. As early as 1954, Morimura and Tamiya in Japan were experimenting with the use of powdered *Chlorella ellipsoidea* in foods. Note: This is the earliest document seen (Aug. 1997—one of two documents) that mentions the use of algae or other photosynthetic single-cell protein as food.

The section on leaf proteins (p. 237-39) begins: "Protein synthesis is one of the chief activities of the leaf, and proteins are comparable to animal proteins in their amino acid composition (Lugg 1949). The young leaf is especially rich in protein..." Pirie (1953) has suggested a process for recovering the leaf protein from the fibrous residue left after mechanical separation; the protein is usually very difficult to free. Pirie (1953) has also described the likely structure of an efficient plant. "There are also obvious possibilities in such abundant and little-used material as the leaves of sugarcane, cassava, and bananas" (p. 238-39).

The section titled "Sesame" (p. 219-20) states that the Zande people of southwestern Sudan steep the seeds in water for a few minutes, then pound them lightly to loosen the outer coat. They then dry the seeds and the outer coat is sieved or winnowed away. The seeds are then roasted and ground to a paste, which is sometimes used to make a sauce (Culwick 1950). "The use of sesame as a sweetmeat or condiment is fairly widespread in the Near East. A sweetmeat called *tahinya* or *tahina* is made in the Gezira [Sudan] by cooking the roasted seeds in sugar; sometimes the seeds are crushed before the cooking, and sometimes not" (Culwick 1951). Describes how to make the condiment. Address: Medical Research Council, Mulago Hospital, Kampala, Uganda.

4539. Ford, Herbert P. 1958. The life story of Dr. Harry W. Miller. Unpublished manuscript. 169 p. Unpublished manuscript. 28 cm.

• **Summary:** This manuscript is the slightly edited second draft of the transcript of a single 7-8 hour interview that Mr. Ford did with Dr. Miller in 1958 in Chicago. According to Mr. Ford, Dr. Miller later gave a copy of the manuscript to Raymond S. Moore PhD, a Seventh-day Adventist educator, with the understanding that Moore would use it as the basis for a book. The book, titled *China Doctor*, was published in 1961. Dr. Miller was not very happy with the way the book turned out.

Pages 122-35 give a much more detailed account and history of Dr. Miller's work with soy milk, tofu, yuba, other soyfoods, meatlike products, and wheat gluten than is found in the finished book, *China Doctor*.

Concerning wheat gluten: Dr. Miller's company in Mt. Vernon, Ohio, International Nutrition Laboratory, "had protein foods in which they used wheat gluten and made meat patties and various kinds of stews, sprouted the green soybeans and made a chili with them and wheat gluten." They also developed a vegetarian wiener [Veja Links]

containing raw vital wheat gluten, soy flour, seasonings, and flavors. They stuffed these into wiener casings, submitted them to a smoke house and to cooking, then peeled off the casings/skins and canned the wieners. He developed these at the Mt. Vernon slaughterhouse.

"Soy milk manufacture in the U.S.A. (p. 131). In 1939 Dr. Miller returned to the United States having been so thoroughly convinced that soy milk was destined to have world-wide acceptance... His son, Harry Willis Miller, Jr. had returned preceding his father and had started a small soy milk plant in Utica, New York, where he made and bottled soy milk and also made and canned some of the protein foods out of wheat gluten for which they had developed recipes. This plant was later moved to Mt. Vernon, Ohio, after they started the soybean plant at Mt. Vernon. The plant was rather small at first as their capital was very limited. They had to build up the food plant out of his surgery earnings. As these products were mostly for export, the firm was called the International Nutrition Laboratory. It was called International because they didn't think of having any particular market for soy milk in the United States but anticipated making and packing soy powder which they could ship over to China, Japan, Korea, and other fields. Since the United States is a dairy country, they just thought they would have all kinds of difficulty getting it introduced over in America. They gave their attention largely in the early part of the work to making some products that went over quite well, which could be sold locally such as meat patties—vegaburgers. They would take the wheat flour, wash the starch from it, and make gluten patties. They actually built up a very fine product that was netting them earnings. The earnings of that, together with Dr. Miller's medical and surgery fees, to finally get together a spray dryer which they built with the aid of the know-how assistance of the Rogers Company, who sold these spray dryers... and through this home-made outfit they daily spray dried considerable powdered soy milk and placed it on the market. They made some ice cream mixes and they shipped out in barrels to the Philippines soy milk powder and also shipped consignments of the powder to Shanghai where they had formerly introduced a soy milk to the Shanghai Settlement. Thus they kept soy milk going up until the time of the world war in 1941 which cut them off from shipping to the Orient."

Note: This is the earliest document seen (Jan. 2014) concerning soy milk in international trade (for imported or export).

In the United States they found "an interest on the part of doctors in feeding babies that were covered with various kinds of rashes which they called atopic dermatitis. Many of these babies had asthma, diarrhea, projectal vomiting, nervous irritability and were unhappy babies, all because of the allergy to cow's milk formula." Doctors began to realize that babies with allergies and other sicknesses responded well to soybean milk; the market soon increased. Eggs and

milk are the chief causes of allergy, but some vegetable proteins like wheat, corn, and some legumes also cause allergic reactions in some cases. Then doctors began to ask for evidence that the milk was safe. They suggested that it be submitted to the American Medical Association [AMA]. So at once Dr. Miller contacted Dr. Earl Baxter, Professor of Pediatrics at the Ohio State University Medical School, and he agreed to conduct some feeding experiments with soy milk. These studies showed that “babies could be nourished as well on soy milk.” In Tokyo, Dr. Choei Ishibashi (later president of the Japan Medical Society) also did meticulous feeding tests with infants, using the powdered soy milk Dr. Miller had sent after World War II. Over a period of many months, he compared the blood, measurement, and growth records of babies fed soy milk with those fed animal milk [cow’s milk]. Then Dr. Miller took the results of the studies in Japan and at Ohio State and submitted them to the Council on Food and Nutrition of the American Medical Association. The Council has 15 members, the very best scientists on food and nutrition. “They examined the [soy] milk, examined the claims for it, looked over the research, and then gave the seal of approval which was placed on every can of soymilk thereafter.”

“Now that they had this seal of approval, they went to medical conventions and canvassed the doctors; the sale of soy milk grew very rapidly.” The plant began to get larger; it made great demands and there were many details to look after. These facts and his lack of capital to carry on this work adequately made Dr. Miller realize that he must do one of two things. He must either organize a corporation, issue stock, and enlarge the company greatly, or he must dispose of the plant and give his time and attention to research.

During this time, Dr. Miller received valuable help from the U.S. Department of Agriculture [USDA]. Dr. J.A. LeClerc (Senior Chemist, Agricultural Chemical Research Division) and Mr. L.H. Bailey, who investigated the use of “soybean milk in making breads” and made the results and analyses available to Dr. Miller. “Thus they got themselves very well established in this country as having a milk for people who did get along with cow’s milk.”

However the secretary of the AMA told Dr. Miller that he should not claim or advertise that his soy milk was a good alternative to cow’s milk for all babies, but only “for those babies who do not do well on cow’s milk.” However he added: “If you can take care of babies that cow’s milk does not take care of, there is no reason why you could not take care of the other babies that cow’s milk does agree with too.” This was his diplomatic way of counseling them not to make unfriendly comparisons with cow’s in a dairy country—even if those claims are valid. By following his advice, Dr. Miller was able to work well with the dairy industry without any conflicts.

The Loma Linda Food Company in California showed an interest in acquiring Dr. Miller’s company in Ohio. “They

had been making some soy milk in the liquid form, but they were interested in getting an Eastern branch.” So in 1950 they purchased the [soy] milk plant in Mt. Vernon and have been operating since that time. This took a great burden off Dr. Miller’s shoulders and left him free to do medical and nutritional research work. “It was then decided to start the International Nutrition Research Foundation and Dr. Miller was asked to be the Director of this Foundation. He placed a larger part of the purchase price of the factory into this Foundation, which would be devoted to food research only. From the day this research institution was started it has attracted a great deal of attention from all parts of the world; among those interested parties has been the World Health Organization of the United Nations. They came to the conclusion that soy milk had great possibilities in countries of low economic conditions where they could not afford to buy imported [cow’s] milk,” and in protein-deficient countries. They came to Mt. Vernon to investigate both the soy milk plant and the experimental research. Dr. Miller educated them on the many benefits of using protein from soybeans instead of from animals. As a result, the United Nations constructed a large soy milk plant in Djojakarta [Jogjakarta / Yogyakarta] Indonesia. It was built with the advice of Dr. S.S. De (who has headquarters in Bangkok, Thailand) and the support of the Government of Indonesia, FAO, UNICEF, and WHO.

• **Summary:** Ovaltine is a powdered chocolate malt which is mixed with hot or cold milk as a beverage. It was developed in Switzerland as Ovomaltine in 1904, then exported to England as Ovaltine in 1909.

4548. *British Vegetarian*. 1959. Flowers-Flour (Photo caption). Jan/Feb. p. 10.

• **Summary:** This photo shows: "The Lord Mayor of Leeds (Alderman Mrs. Mary Pearce), receiving a bouquet at the Queen's Hotel, Leeds, on November 24th, from Mrs. C.P. Allinson, wife of the Managing Director of Allinson Ltd., millers of wholewheat flour, whose mills are at Castleford, Yorkshire. The occasion was a reception to mark the centenary of the birth of the founder of the firm, Dr. T.R. Allinson."

Note: Dr. Allinson was the author of many books about both vegetarianism and wholemeal bread in the late 1800s and early 1900s. Address: M.R.C.S., L.R.C.P.

4549. Dowding, Lady. 1959. Challenges. *British Vegetarian*. Jan/Feb. p. 13-14.

• **Summary:** "Becoming a vegetarian is a step in the right direction from three angles, humanitarian, spiritual and physical, but it is not the end of the road. Already I can see the next challenge awaiting us, for to supply milk, butter and cheese nearly all the young bullocks must be slaughtered. There is a plant milk, I hope shortly coming on the market which should ease the next step for many of us."

A photo shows the lovely Lady Dowding, seated, holding a dog by her side. Address: Wife of Air Chief Marshal Lord Dowding.

4550. Nearing, Scott. 1959. Choose or be driven. *British Vegetarian*. Jan/Feb. p. 14.

• **Summary:** "Vegetarians consume a diet consisting of seeds, including nuts and grains; fruits; leafy vegetables such as cabbage, lettuce, spinach and root vegetables like potatoes, carrots, radishes, turnips. Vegetarians abstain from flesh, fish, fowl. They differ on the use of eggs, cheese and butter. Most vegetarians in the West use dairy products. All depend upon vegetable oils.

"Food comes from fertile acres. If land products are fed to animals—to chickens, pigs, sheep—a small fraction of the grain and forage consumed by the live-stock appears as edible flesh. The same acres, devoted to crops suitable for human consumption, will support from 4 or 5 to 10 to 12 times the number of human beings per acre (depending on soil, climate and the type of animal in question).

"From this point of view, population increase will

compel a steady reduction in the consumption of flesh and a corresponding increase in the use of seeds, fruits, leafy greens, root vegetables and vegetable oils and starches. Sheer economic necessity is forcing humanity toward a vegetarian diet.

“Vegetarians, however, do not enjoy being the driven slaves of necessity. They prefer to make choices and therefore become, to that extent, masters of their own destinies. This viewpoint associates vegetarians with several other groups of peoples who aim to live purposefully, rationally, deliberately. First among such purposive groups are the *ethicists* who believe in living a good life rather than a bad one. Second, come the *humanitarians*, who respect life and seek to increase and enhance it. Third come the *healthists* and *hygienists*, who hold that since health is normal and disease abnormal, people who live normal lives will be free from disease and will enjoy health. Thus vegetarians are intimately associated with purposeful, forward-looking people whose objective is a good life.

“Persons who are vegetarians may be and should be ethicists, seeking the good; humanitarians, respecting and enhancing life; healthists, promoting the normal functioning of body, mind and spirit.” Address: U.S.A.

4551. Rudd, Geoffrey L. 1959. Vegetarianism must be recognized: The British Vegetarian editorial. *British Vegetarian*. Jan/Feb. p. 1-6.

• **Summary:** Contents: Introduction. The point of crisis. Facts which are ignored. Points which indicate vegetarianism. Summary and suggestions.

“That the development of plant-milks should be actively encouraged, since these can be more closely adapted to human needs than animal milks, will have a longer shelf life, and be free from several health hazards inseparable from animal milk” (p. 5-6).

Note: This is the earliest English-language document seen (Aug. 2013) that contains the term “plant-milks” (or “plant-milk”—hyphenated). Address: Secretary of the Vegetarian Society.

4552. Walley, Ersel. 1959. India a logical protein market: Soybean Council of America, Inc. *Soybean Digest*. Feb. p. 20.

• **Summary:** “From an address before the Delhi Rotary Club, New Delhi, India, Jan. 8. Mr. Walley of Fort Wayne, Indiana, chairman of the market development committee of the American Soybean Association, and Howard L. Roach, president of the Soybean Council of America, Inc., were in charge of the soybean exhibit at the U.S. Trade Fair in New Delhi, Dec. 10 to Jan. 10.

“The soybean crop, introduced into the United States from the Orient at the turn of the century, did not assume commercial importance until after World War I. The estimated production for 1958 was 574 million bushels, and

increase of 70-fold in 30 years.

“As a pioneer grower it was my privilege to be identified with this very important and significant development in American agriculture.”

“In 1935 your own Mr. Gandhi said, ‘The soybean stands at the top of all known articles of diet...’

“My personal enthusiasm for the extended use of soybean products for direct human consumption began in Germany in 1948 when I saw the remarkable results secured from adding full fat soy flakes to the diet of emaciated men being returned as released war prisoners from the slave labor camps of Siberia. This interest in promoting the use of soybeans as an economic and valuable source of protein and fat for those whose diets are deficient in these essential elements has continued since that time.

“In the past 3 years it has been our privilege to cooperate with the Japanese soybean industries in promote the use of soybeans as food in Japan through increased use of such foods as tofu, miso, soya sauce and many other soya products more generally known. Hundreds of nutritionists have been trained to carry the story of soy proteins and fats to Japanese households.”

In Europe, the Soybean Council of America, Inc. is teaching processors how to blend “soybean oil with olive oil to produce an acceptable and cheaper cooking oil which will be available in larger quantities to more people.”

“Another important achievement in Europe is the increased use of soy flour in bread. Adding 5% soy flour greatly increases bread’s protein content and value.

“You may ask why we came to India. India is important. Here you have one-seventh of the world’s population and one-fifth of the free people of the world. Your future holds great promise. As you industrialize we feel you can and will need to import additional proteins and fats for food.” Address: American Soybean Assoc.

4553. *Vegan (The)*. 1959. Plantmilk News. 11(4):19. Spring.

• **Summary:** “No. 8, February, 1959, reprinted by kind permission of the Plantmilk Society.

“*Plantmilk News* takes pleasure in announcing that retail distribution of the first British plantmilk is planned to begin within a few weeks. Details of this product, which has been conceived and developed since the formation of the Plantmilk Society in June, 1956, are given below.”

4554. *Vegan (The)*. 1959. Soya-based plantmilk. 11(4):19-20. Spring.

• **Summary:** “The successful results obtained on a number of babies who have been receiving this plantmilk during the last year have encouraged the manufacturers to make arrangements for large-scale production.

“It is hoped that the product will be put on the market in a few weeks’ time under the name ‘Wanderlac,’ although this is not yet finally decided. The cost will be 6s. 8d. [6 shillings,

8 pence] for a tin containing one pound of the powder.

"When re-constituted with water, this will make about six pints of a liquid food closely resembling cows' milk in appearance, flavour, and nutritive value.

"The content of nutrients will in general closely resemble that of cows' milk, but in certain respects will be superior to cows' milk and more closely resemble that of human milk.

"Wanderlac can be used as a drink or as an ingredient in puddings and other dishes, replacing cows' milk for infants, children and adults. It should be available from health food stores in a few weeks' time.

"Further details can be obtained from A. Wander Limited, 42 Upper Grosvenor St., Grosvenor Square, London, W.1., who are already supplying Wanderlac to babies urgently needing it: or from Dr. Frank Wokes, King's Langley, Herts.

"The Plantmilk Society has taken a keen interest in the development of Wanderlac from its first conception. In the early days, the Society was able to give some practical assistance to meet an emergency, in a case of a baby who was unable to tolerate cow's milk. Supplies of American plantmilk were made available by the Society to supplement Wanderlac, then without any name and in its first experimental form

"Considerable credit is due to Dr. Frank Wokes for his skilful, persistent, and painstaking work on this piece of original research and development. In his turn, Dr. Wokes has acknowledged the value of the moral support and interest which the Society has been more than glad to afford him in his work.

"To date Wanderlac has been available only in cases of special need, for the feeding of infants unable to tolerate animal milk. There is evidence that in one case at least its use resulted in the saving of a baby's life. Once the product becomes available more generally, the reactions of consumers will be awaited with interest. Wanderlac is primarily intended to meet the nutritional needs of those who for various reasons would prefer not to include animal milk in their diet.

"The Plantmilk Society will retain considerable interest in the future development of Wanderlac. It is pointed out, however, that in future all enquiries concerning this product should be directed as overleaf, and not to the Plantmilk Society.

"It merely remains to wish Wanderlac every success, and to express the pleasure which every member of the society must feel in the fact that this product, so much in line with the Society's object, is about to become generally available."

The next article, titled "Leaf protein research," explains that the Plantmilk Society has been involved in this work since October of this year, when it granted Dr. Franklin a commission to proceed with research.

4555. *British Vegetarian*. 1959. Soya-based plantmilk. March/April. p. 65.

• **Summary:** This half-page article, reprinted from *Plantmilk News* (Feb. 1959), states: "The successful results obtained on a number of babies who have been receiving this plantmilk during the last year have encouraged the manufacturers to make arrangements for large-scale production.

"It is hoped that the product will be put on the market in a few weeks time under the name 'Wanderlac,' although this name is not yet finally decided. The cost will be 6s. 8d. for a tin containing one pound of the powder.

"When reconstituted with water, this will make about six pints of a liquid food closely resembling cows' milk in appearance, flavour, and nutritive value.

"The content of nutrients will in general closely resemble that of cows' milk, but in certain respects will be superior to cows' milk and more closely resemble that of human milk.

"Wanderlac' can be used as a drink or as an ingredient in puddings and other dishes, replacing cows' milk for infants, children and adults. It should be available from health food stores in a few weeks' time.

"Further details can be obtained from A. Wander Ltd., 42 Upper Grosvenor Street, Grosvenor Square, London, W.1, who are already supplying 'Wanderlac' to babies urgently needing it; or from Dr. Frank Wokes, King's Langley, Herts."

4556. Gandhi, Mohandas Karamchand. 1959. The moral basis of vegetarianism. Compiled by R.K. Prabhu. Ahmedabad, India: Navajivan Publishing House. 34 p. April. [25 ref]

• **Summary:** This booklet was compiled from 25 of Gandhi's earlier writings. Contents: 1. Food values: Milk, cereals, pulses, vegetables, fruits, ghee and oil, how often and how much to eat (from *Key to Health* 1956 ed., p. 13-27). 2. Unfired food (from *Young India* 1928-29). 3. Vital need for research (from *Young India* 1929, and *Harijan* 1935). 4. Vegetarianism (from *Young India* 1926, *Autobiography* 1958 ed. p. 237, *Harijan* 1933, and *India's Case for Swaraj* 1932 ed., p. 402-03). 5. Not an end in itself (from *Young India* 1921, 1928). 6. The moral basis of vegetarianism (Address to the London Vegetarian Society on 20 November 1931). 7. Our daily diet: Rice, wheat, cereals, milk, honey, gur [unrefined sugar], fruits, green leaves, condiments (from *Young India* 1929, *Harijan* 1935, 1942, and *Key to Health* 1956 ed., p. 27-29). 8. Minimum diet (from *Harijan* 1942).

M.K. Gandhi lived 1869-1948. The compiler, Ramachandra Krishna Prabhu was born in 1883. The first edition, 10,000 copies, was published in April 1959. Address: Bombay.

4557. Hoetzel, D. 1959. Heutiger Stand der Ernährungslehre [The present status of nutritional education]. *Ernährungs-Umschau* 6(3):82-85. May/June;

6(4):107-11. July/Aug. [Ger]

• **Summary:** Includes a discussion of the nutritional needs of vegetarians. Table 2 (p. 85) shows the weight of different foods that one must consume in order to get 75 gm of protein. Address: Institut fuer Ernahrungswissenschaft an der Justus-Liebig-Universitaet Giessen.

4558. Jolliffe, Norman; Archer, M. 1959. Cardiovascular: Statistical associations between international coronary heart disease death rates and certain environmental factors. *J. of Chronic Disease* 9(6):636-52. June. [32 ref]

• **Summary:** International food and mortality statistics support the hypothesis that coronary heart disease mortality is positively associated with intake of saturated fats and, to a lesser extent, with intake of animal protein. Address: Diet and Coronary Heart Disease Study Project, Bureau of Nutrition, Dep. of Health, City of New York.

4559. *British Vegetarian*. 1959. A vegetarian research centre. July/Aug. p. 138-40.

• **Summary:** A vegetarian research laboratory is being established in the Science Department of Stanborough School, Watford, Herts., England. Seventh-Day Adventists, who administer the Stanborough School, are making great efforts to raise funds to support the research. The laboratory will conduct nutritional investigations, focusing particularly on vegetarianism. Dr. Frank Wokes has been invited by the school board to organize the research. A life-long vegetarian, he is well known for his nutritional research during the last 18 years at the Ovaltine Research Laboratories. He has been a pioneer in showing the importance of vitamin B-12 in vegetarian diets and in improving the quality of vegetable protein. One outcome of this work was the development of a new soyamilk product, fortified with vitamin B-12 and launched recently under the name Wanderlac by A. Wander Ltd., which also makes Ovaltine. "This first British plantmilk has been used with success to replace milk in various allergic conditions, including the disease galactosaemia" [galactosemia].

Note. This is the earliest English-language document seen (Aug. 2013) that contains the term "replace milk" in connection with soyamilk.

Stanborough School provides a particularly suitable site for the research center, in part because it was the site, 27 years ago, of the first Experiments in Great Britain on the basal metabolism of vegetarians. The results were published in the *Journal of Biological Chemistry* (1932).

A photo shows the new laboratory at Stanborough Park. Note: *Webster's Dictionary* defines galactosemia (a term first used in 1934) as "an inherited metabolic disorder in which galactose accumulates in the blood due to deficiency of an enzyme catalyzing its conversion to glucose."

4560. *British Vegetarian*. 1959. Plantmilk is here! July/Aug.

p. 153.

• **Summary:** Vegetarians in Britain will be glad to know that "the first step towards overcoming dependence on dairy produce has been achieved with the of 'Wanderlac' to the market, to take the place of cow's milk." This product is made by A. Wander Ltd., manufacturers of the well-known Ovaltine. Though it was introduced some months ago, only very limited quantities have been available, solely for the treatment of sick children, "with such marked success in certain cases that the medical profession has become very interested indeed in its remedial uses."

The protein in Wanderlac is derived entirely from soyabeans, and its amino acid pattern is said to be similar to that of cow's milk. D.L.-Methionine, a limiting essential amino acid, and vitamin B-12 are added to increase the protein quality.

A table compares the nutritional composition of Wanderlac (reconstituted), cow's milk, and human milk. Wanderlac and cow's milk both contain 3.3% protein, vs. only 1.0% in human milk. Wanderlac contains 2.6% fat vs. 3.7% in cow's milk and 3.8% in human milk. Appreciation is expressed to the Plantmilk Society, to Dr. Frank Wokes, and to Messrs. A. Wander Ltd. "whose concerted efforts have resulted in this achievement, which brings vegetarians another step nearer to their final goal of a completely humane way of life."

Note. This is the earliest English-language document seen (May 2015) that contains the term "Plantmilk Society."

4561. Chhabra, Arun K. 1959. The scope of soybeans in India. *Soybean Digest*. Sept. p. 26-27.

• **Summary:** Mr. Chhabra, who helped the Soybean Council of America at two fairs, in New Delhi (with Howard Roach, president of the Council) and Calcutta (with Fred Hafner of General Mills), will enter Iowa State University this fall. "A little less than 2 million people attended the fair at each place," from poor peasants to Prime Minister Nehru.

"At Calcutta alone we distributed 200,000 pamphlets, mainly among adults. At our booth we had hung up some signs, notably, 'Soybeans for Healthy and Strong Bodies,' and 'Soybean Story—A Possible Solution to India's Food Problem.' Scores of people would gather around the booth and ask for an explanation.

We had kept the soybean oil, soy flour, and toasted soy proteins side by side on a table and we would explain to the people the importance and use of each of them. Particularly we told them that 2 ounces of soy proteins when mixed with a pound of rice double the protein content of the food and cost only 1½¢ in India. Many people took coins from their pockets and asked for the vials. Needless to say they felt disappointed when we told them we did not sell them."

The many women visitors "were interested in soybean oil, soy flour, soy milk, and various other baby foods."

"In collaboration with the wheat people we prepared

large quantities of doughnuts daily and distributed then freely among children, students, special invitees,” etc.

The fair was just one of the Council’s activities in India. “In order to create a market in another country you have to have (a) a genuine demand by the general public, (b) cooperation of the local business and industry, dealing in the same kind of article, and (c) approval by the government.”

“Most of the population is vegetarian and though the number of cattle is larger than anywhere in the world, religious proscriptions, both Buddhist and Brahmanist, help keep down the consumption of animal protein. Thus the diet in the North mainly consists of whole wheat bread and vegetables, while in the greater part of the country rice is eaten with vegetables and with small quantities of vegetable oils and fish. However, as there is comparatively more consumption of milk and its derivatives in the North, the people are healthier than their brethren living in the South.” A small photo shows Arun K. Chhabra. Address: Nagal Township, India.

4562. Kirschner, H.E. 1959. What about fasting? *Let’s Live*. Oct. p. 26-27.

• **Summary:** Dr. Kirschner, who advocates therapeutic use of raw food juices, was skeptical of therapeutic fasting at first—even though the natural hygienists have waxed eloquent for more than a century about this method of treating the sick. Though he was in normal good health, he decided to go to an institution in the mountains about 17 miles from Harrisburg, Pennsylvania, and undergo a supervised 7 day fast. For “seven days nothing but two quarts of water passed my lips each day. I was on what they call a ‘total fast.’ After the second day the pangs of hunger left me and I did not miss food. I was surprised that I did not become weak... I was amazed at the beneficial results. My blood pressure dropped from 175/95 to 120/80... But best of all I lost 15 pounds in weight...” Five additional days were required to “break” the fast—12 days in all... “I was happily surprised at the improvement in my eyesight, and how much better I felt in so many other ways...”

Leaders of the natural hygiene movement include Dr. Sylvester Graham, Dr. Trall, Dr. Jackson, “and my friend the late John Harvey Kellogg, M.D. of Battle Creek [Michigan] fame.” Address: M.D., 748 Crescent, Monrovia, California.

4563. Richard, C. 1959. Le chao: Fromage de soja fermenté, salé et alcoolisé [Chao: A fermented soy cheese, containing salt and alcohol]. *Societe des Etudes Indochinoises, Bulletin (Saigon)* 34(3):317-24. Oct. [14 ref. Fre]

• **Summary:** Contents: Introduction and types of soyfoods in Vietnam. Preparation of Chao. Chemical composition. Culinary uses of Chao: In vegetarian diets, in regular diets. Summary.

Chao, a “cheese analog,” is widely consumed in Vietnam. It is prepared as follows: Coagulate soymilk with

vinegar or nigari. Press the tofu well, cut it into cubes or parallelepipeds from 2 to 4 cm on a side, and let it dry on mats for 20-24 hours. Salt it and leave it for 24-48 hours. Then wash the tofu cubes to remove the excess salt. Put the cubes in pots of glazed stoneware with rice wine; leave for 20 days. Photos show: (1) Tofu in its earthenware pot. (2) Overhead view of the cubes of chao surrounded by the brining liquor.

Note: This is the earliest document seen (Oct. 2011) that uses the word *Chao* to refer to fermented tofu.

A table gives the chemical composition of five samples of Chao sold in South Vietnam. They contain on average: moisture 76%, salt 11%, alcohol 5%, protein 7%, oil 3.5%.

Culinary uses: In Vietnam, Chao—a true food condiment—serves to season various dishes and to aromatize or perfume (*aromatiser*) certain sauces. Because of its slightly tart and salty taste, it is much prized by vegetarians, for this soya cheese (*fromage de soja*) contains only vegetable proteins (*protéines végétales*). In vegetarian diets, it is incorporated into rice dishes and rice-based soups, and often accompanies various vegetables—such as cucumbers. Because of its low price, it is often used in place of *tuong* sauces—which are also made by enzymatic fermentation of soybeans. Among the upper classes in Vietnamese society, Chao is mixed with pimento, vinegar, sugar, and oil to make a tasty condiment called *Chao tói ớt*, which is used to enhance the taste of dishes that contain no meat or fish. On the 1st and 15th days of each month, when Buddhists eat no meat, garlic, or onions, they enjoy this tasty condiment.

In regular diets, one usually adds sugar, salt, oil, and pimento. The condiment thus obtained is used to add aroma to roasted or broiled meats, rice noodles, and various legumes. Sometimes it is used as a basting sauce for small pieces of chicken or pork. Address: Docteur en Pharmacie, Chef de Laboratoire, Institut Pasteur de Saigon.

• **Summary:** Article includes an interview with a British woman doctor, B. Moore, 56, who walked 373 miles from

Edinburgh, Scotland, to London to prove the merit of her vegetarian diet.

4567. Hedrick, H.B.; Boillot, James B.; Brady, D.E.; Numann, H.D. 1959. Etiology of dark-cutting beef. *Missouri Agricultural Experiment Station, Research Bulletin* No. 717. 60 p. Dec. [104 ref]

• **Summary:** Summary: "Dark-cutting beef is caused by cattle being subjected to prolonged ante-mortem stress. Any form of stress, such as excitement or trauma, which will arouse the sympathetic nervous system and stimulate the increased release of adrenaline over a prolonged period (approximately 24 hours or longer) can cause the depletion of glycogen and this condition to occur."

4568. McCay, Clive M. 1959. The struggle for better bread: Number four in the series Use and Abuse of Food. *Natural Food and Farming (Atlanta, Texas)* 6(7):12-13, 30. Dec.

• **Summary:** An excellent exposé of the U.S. baking industry and the poor white bread it makes. "Within the baking industry is an ever-increasing attempt to by the large bakers to gain a monopoly by destroying the intermediate and smaller bakers."

The best and most natural and wholesome breads are dark whole grain breads. "The first great opposition to the improvement of bread stems from the millers of flour. This has been true for more than a century since the campaigns of Sylvester Graham to give the world a better bread and flour."

Prof. McCay views compulsory enrichment of bread as a poor idea—as did E.V. McCollum, the dean of American nutritionists. The large bakers spend a few pennies on enrichment, then charge high prices for the bread. Typically three vitamins and iron are added in the enrichment process.

Concerning McCollum: "We need some celebrations for such men for their honesty and determined defense of public interests in the face of attacks from subsidized scientists and special predatory interests."

"Probably the greatest objection to enrichment is the millions of dollars spent in wasteful advertising by the bakers and millers. Such dollars could have been spent in research that would have given the world the best possible bread. If this money had been turned into useful research, both the bakers and millers might have discovered an astounding increase in the use of their products."

Excellent breads are made in Germany from Steinmetz flour (which is made after rubbing off only the outer fiber of the whole wheat grain) and in the USA from sprouted wheat—"which may have a future that is undreamed of today." Address: Ph.D., Prof. of Nutrition, Cornell Univ., Ithaca, New York.

4569. Axon, William E.A. 1959-1960. Brotherton, Joseph (1783-1857). In: *Dictionary of National Biography [UK]: From Earliest Times to 1900*. Oxford, England: Oxford

University Press. 27 vols. See vol. II (Beal-Browell), p. 1354.

• **Summary:** A reformer, incl. an parliamentary reformer. 1783 May 22—Born at Whittington, Chesterfield. the son of John Brotherton, who had been a schoolmaster and an exciseman. 1789—The family moved to Manchester and the father established a cotton mill. 1802 ca—Joseph became his father's partner. 1805—Joseph joined the Bible Christian Church. 1806—He married his cousin, Martha Harvey [1783-1861, a sister of William Harvey]. "As Bible Christians, they were vegetarians and total abstainers" [from intoxicating drinks]. 1812—Mrs. Brotherton published anonymously "Vegetable Cookery" in numbers [in a periodical]. 1818 ca.—He became pastor of his church. 1819—He retired from business with a competency [sufficient means to afford the necessities and conveniences of life]. 1819 ca—The book "Letters on Religious Subjects" is printed at Salford; he wrote two essays on abstinence from intoxicating liquors from and animal food which appeared in it. The first of these essays is regarded, in its separate form, as the earliest tract advocating teetotalism. The book was immediately reprinted in Philadelphia, Pennsylvania. 1821—Mrs. Brotherton's 'Vegetable Cookery' is first collected into book form. "He was a vigorous local politician, and subscribed to the sufferers at the Peterloo Massacre."

1832—He was elected as the first member of parliament (MP) from Salford [near Manchester] under the Reform Act of 1832. He was continuously re-elected until his death, his expenses being paid by his constituents. He was a reformer, a liberal, and a free trader. "His good temper secured him general respect." 1842 Feb.—In answer to an attack that he had amassed an enormous fortune by the factory system, he replied [based on a famous quotation from Epicurus] that his "riches consisted not so much in the largeness of his means as in the fewness of his wants."

1857 Jan. 7—He died suddenly in an omnibus [at about age 74]. A public subscription was established to form a fund for purchasing books for local institutions. He was buried in the Salford cemetery. His statue, by Matthew Noble, was erected in Peel Park—in part because he had helped to found the library attached to the Peel Park Museum. On the statue was inscribed (with small alteration) his 1832 statement about his riches and wants. One portrait by Wescott is in the Peel Park Museum, another by W. Bradley is in the Salford town hall, and a third is in the Manchester town hall.

1861 Jan. 25.—His widow, Martha Harvey Brotherton, died at age 79.

4570. Arie, T.H.D. 1959. Pythagoras and beans. *Oxford Medical School Gazette* 11(2):75-81. [28 ref]

• **Summary:** “Pythagoras forbade his disciples to eat beans. The Bean Veto, as we shall call it for shortness, was proverbial in Antiquity... The strict vegetarianism which he demanded seems a reasonable consequence of his doctrine of metempsychosis... Whenever they mention the Bean Veto ancient writers seem to feel a challenge to explain it.” Diogenes Laertius, Gellius, Empedocles, Philostratus, and Porphyry all addressed this question. “It will be no surprise to readers of this journal that my suggestion is that the origin of the taboo lies in the prevalence of favism in the Mediterranean lands. Certain evidence which I shall describe suggests that Pythagoras himself may have suffered from this condition... The locus classicus in the English literature, for favism as a clinical entity, is a paper by Luisada (1941). There is also an older Italian monograph by Manai. Brief descriptions are to be found in all the textbooks of haematology.”

Note: *Webster's Dictionary* defines metempsychosis as “the passing of the soul at death into another body either human or animal.”

Webster's Third New International Dictionary defines favism (derived from the Italian *favismo*, from *fava* = broad bean + *ismo* = ism), as “a severe allergic reaction caused by eating the broad bean or by inhaling its pollen that is marked by hemolytic anemia, eosinophilia, jaundice, fever, and often diarrhea and is observed chiefly in southern Italy.” Address: England.

4571. Baur, John E. 1959. The health seekers of southern California, 1870-1900. San Marino, California: Huntington Library. ix + 202 p. Foreword by John W. Caughey. Index. 24 cm. Series: Huntington Library Publications. [310 ref]

• **Summary:** Discusses: The gold rush and the health rush. California's population growth: The health seekers represented “the first big influx to southern California, and the chief dynamic in the region's development” in the 1870s, 1880s (the boom years), and 1890s. It was aided by the introduction of the navel orange, abetted by the arrival and promotions of the Southern Pacific and Santa Fe railroads, and swelled by the promotional antics of real estate developers and agents and chambers of commerce. Each of these elements contributed to the population growth to about 76,000 in 1880, to 221,000 in 1890, and 325,000 in 1900. At least a quarter of the new arrivals are estimated to have come as health seekers. In “almost every important respect—agricultural, commercial, residential, cultural—this health rush permanently changed southern California (p. viii-ix, by John W. Caughey). Medical advice, diet and outdoor living (p. 21-26).

The sanatorium / sanitarium belt, Los Angeles as a resort, diet. The main types of resorts were desert, mountain,

mineral springs, and seaside. (p. 32-38). Sanitariums and hospitals (p. 39-42). Health foods, diet, Seventh-day Adventists, and the Battle Creek Sanitarium, Michigan (p. 47-50). The health rush and its effects, Pasadena founded in 1874 as an early health resort and community for invalids from Indiana (p. 51-54). Sanatoriums (p. 57-58). Diet and Dr. Francis M. Pottenger, who came to Monrovia in 1895 for his wife's health. Despite her early death, he loved California and “in 1903 opened the Pottenger Sanatorium, a private residential hospital for tuberculars of all stages.” It was successful from the beginning and “the first modern sanitarium in southern California.” There were only 60 such hospitals in the USA at that time. Pottenger's sanitarium attracted considerable attention because of its advanced methods and high percentage of recoveries (p. 59-60).

Small southern California towns were often overwhelmed with the arrival of hundreds of health seekers, many of whom were unable to secure lodging. In 1872 Santa Barbara, which had long promoted itself as a resort for health and pleasure, suddenly became a sanitarium, and the Arlington Hotel was built (p. 67-68).

Not far from Santa Barbara lies the Ojai Valley, publicized as a resort town nationwide by Charles Nordhoff. Laid out in 1874, it had two well-patronized invalids' hotels for those “seeking relief from the ravages of tuberculosis and the discomforts of asthma” (p. 71-72).

In “1886 Dr. Wellwood Murray and his wife established a small resort at Palm Springs where they regained their health and soon began to welcome dozens of boarders, who were mostly tuberculars.” “It was not the climate that cured, but the new way of life—rest, relaxation, a psychology of serenity...” (p. 77-78).

The Idyllwild Sanatorium opened on 10 April 1901. It was an early example of medical philanthropy, funded by 40 local physicians and 20 other important citizens, who spurned profits and worked to get persons in the early stages of tuberculosis out of the hotels and boarding houses of large towns and into the sunshine and mountain air. Yet by 1907 this model resort failed. Its counterpart was Loma Linda, which took over a hotel already built (in 1886 in the midst of the great boom). “Unfortunately, Loma Linda shared the fate of Idyllwild, and its quarters once more reverted to hotel status” (p. 85-86).

By the 1890s, California doctors were at least as advanced in the study of lung diseases as their eastern colleagues. “Few individuals have written more words on tuberculosis than Francis M. Pottenger” (p. 86). Yet quackery was also common. “In 1905 a member of the local board of medical examiners called Los Angeles County the ‘Mecca of the quack.’ and few doctors would dispute the unpleasant nickname (p. 87). This area became known as the “Sanitarium Belt” (p. 88-89). The Pasadena Young Men's Christian Association (YMCA), established in 1886, was active in trying to help the sick. In December 1891 the

Cottage Hospital at Santa Barbara was opened (p. 97). In 1886 the Temecula Land and Water Co. laid out Murietta, a spa with mineral springs (p. 108).

Southern California grew up as a health resort and attracted famous people. While many historians have overlooked this unusual story, but James M. Guinn helped to organize the Historical Society of Southern California in 1883, and wrote two solid histories of the region in 1902 and 1907. Other good histories soon followed (p. 126-30).

One health seeker who would eventually become the “most powerful of all local journalists was Harry Chandler.” While a promising student at Dartmouth College, his health suddenly broke and he staked all his hopes on a trip to Los Angeles. He went to work on a ranch, then for the *Los Angeles Times*. Chandler rose rapidly, married the daughter of owner Harrison Gray Otis, and when Otis died in 1917, Chandler became proprietor of what would become southern California’s greatest newspaper (p. 130).

There is a long discussion of Abbot Kenney, who came to live in a community at Sierra Madre by 1882. He wrote on outdoor life and health, and later developed Venice Beach and its canals to help promote it as “the American Italy” (p. 132). Other prominent health seekers to Southern California are also discussed: Thaddeus S.C. Lowe, Helena Modjeska, Walter Q. Gresham, John C. Frémont (Fremont), Joseph Pulitzer, Joseph Medill, Andrew McNally, Philip Danforth Armour (the “world’s greatest butcher”), Eugene Field. These men brought as much talent and human eminence to California as had the earlier gold rush (p. 141-49).

The failed movement to build state-sponsored sanitariums for tuberculosis / consumption / phthisis (first petition was 1869). Address: Los Angeles, California.

4572. De Coti-Marsh, Charles. 1959. Prescription for energy. London: Thorsons. 204 p. Illust. Portrait. *

4573. Encyclopedia Britannica (14th ed.): Vegetarianism. 1959. Chicago, Illinois: William Benton, Pub. See vol. 23, p. 27-28.

• **Summary:** “Vegetarianism, a word which came into use about the year 1847, as applied to the practice of living on foods from which fish, flesh and fowl are excluded...”

“The fact, however, must not be overlooked that while vegetarian societies claim as ‘vegetarians’ all who abstain from flesh foods, there is a large and growing number of people who repudiate the name of ‘vegetarian’ because of its associations, but who none the less, for some of the reasons detailed below, abstain from eating anything that has been killed.”

The main reasons advanced for practicing a vegetarian or fruitarian diet are: 1. Health (animals are affected by infectious diseases such as parasites and tuberculosis; the flesh of artificially-fed animals is full of excretory substances which, along with uric acid or rapid tissue-

destroying disease, may end up in humans, e.g. gout, cancer). 2. Economy (one can obtain more nutrients for less cost from a vegetarian diet). 3. Social economy (an acre of land can produce 2 to 20 times as much food from plants as from cattle or their feed). 4. Racial improvement (every prosperous community should aim to have a large proportion of farmers who labor growing crops; animals require less labor). 5. Character improvement (“On the ground that after the virtues of courage and valour and fearlessness have been taught in the lower stages of evolution, the virtue of gentle humaneness and extended sympathy for all that can suffer should be taught in the higher cycles of the evolutionary spiral. Flesh-eating entailing necessarily an immense volume of pain upon the sentient animal creation should be abstained from by the ‘higher classes’ in the evolutionary scale”).

Vegetarian societies have been organized in many countries, chiefly in the United Kingdom, America, Germany, France, Austria, Holland, and Australia. “In England, the oldest and one of the most important societies is ‘The Vegetarian Society,’ of which the headquarters are at Oxford Street, Manchester. An attempt has been made to organize the various vegetarian societies of the world under the title of ‘The Vegetarian Federal Union.’ The headquarters of the London societies and of the ‘Union’ are at Memorial Hall, Farringdon Street, E.C.

“In the religious world the Seventh-Day Adventists (who are connected with many sanatoria and the manufacture of food specialties) and some Bible Christians, the worshippers of Vishnu and the Swami Narang and Vishnoi sects, amongst others, preach abstinence from flesh food. The Salvation Army, the Tolstoyans and the Doukhobors encourage it. A number of orders in the Roman Catholic church (e.g., the Trappists) and in the Hindu faith (e.g., the Dadupanthi Sadus) are pledged abstainers...”

“In former years the ‘Vegetarian Society’ was the most active in producing literature, but since about 1901 the Order of the Golden Age has come to the front with new and up-to-date books, booklets and leaflets, and the Ideal Publishing Union has reprinted much of the earlier literature. The chief periodicals are the *Vegetarian* (weekly), the *Herald of the Golden Age* (monthly), the *Vegetarian Messenger* (monthly), the *Vegetarian* (American monthly), the *Children’s Garden* (monthly).”

4574. Encyclopedia Britannica: Doukhobors. 1959. Chicago, Illinois: William Benton, Pub. See vol. 7. *

• **Summary:** In 1899, the arrival in Western Canada of over 7,000 vigorous Russian Doukhobor immigrants helped enlarge the vegetarian population of Canada and of the New World. The Doukhobor religion forbade killing, since love is regarded as the exclusive basis of human relationship to all living creatures. The Doukhobors adhered strictly to a lacto-ovo-vegetarian type of diet.

4575. Fernandes Teixeira, Edgar. 1959. Enormes possibilidades para o cultivo da soja [The enormous possibilities for soybean cultivation]. In: 1959. Soja no Rio Grande do Sul. Secretaria da Agricultura (Companha da Produtividade Agrícola): Porto Alegre. 83 p. See p. 3-16. Chap. 1. [Por]

• **Summary:** Discusses: Soybean cultivation in Japan. Soya in India (and the work of Mahatma Gandhi starting in 1932). Soya in the USA. Soya in Soviet Russia (from 1926 to 1943 the area planted to soybeans grew four-fold). Soya in Brazil. Soya in Sao Paulo. Nematodes: An obstacle. Address: Secretaria da Agricultura, Diretoria Geral, Brazil.

4576. Franck, Frederick. 1959. My days with Albert Schweitzer: a Lambaréné landscape. New York, NY: Henry Holt and Company, Inc. 178 p. Illust. by the author. 22 cm.

• **Summary:** In the chapter titled “Animals in the Landscape,” the author concludes that Dr. Schweitzer “loves life, animals, and people equally well.” He gets totally involved whenever he sees a suffering creature. “He will go to great lengths in order not to torture or kill animals unnecessarily, and will put a caterpillar carefully on a leaf instead of crushing it under his foot. But finding a nest of touchingly naked baby rats in a box which ought to contain aspirin, he will have them destroyed, though not without regret.” He will also consent to have dangerous snakes, mosquitoes, and tsetse flies killed “for he realizes that in the combat against disease trillions of microbes have to be sacrificed for human life. His Reverence for Life which, as I see it, has—consciously or unconsciously—its origin in profound nature mysticism, is tempered with good sense. No vegetarianism is practiced at Lambaréné because the limits of reverence for other expressions of life are dictated not by arbitrary evaluations of lower forms of life, such as plants, and the higher life of animals, but by purely practical considerations. No life is valued above any other.”

Note: *The New York Times* described this as “The best book yet written on Schweitzer and his work in the jungle.” The author was born in 1909. Albert Schweitzer lived 1875-1965.

4577. Ogata, Sohaku. 1959. Zen for the West. London: Ryder, for the Buddhist Society. 182 p. Illust. Index. 22 cm. [2 ref]

• **Summary:** In the chapter titled “Life in a Zen monastery, the section on “Food” states that the meals are very simple. Breakfast consists of gruel and pickles. Lunch is rice mixed with barley, miso soup, and pickles. The evening meal is the same as breakfast. On special occasions, an extra dish will be added. Note: The monastery diet is free of animal products (vegan).

Sôhaku Ogata lived 1901-1973. In Japan, he was professor of Zen Buddhism at Hanazono University. During 1956-57 (during President Dwight Eisenhower’s

second term) he was invited by the U.S. government to be a Fulbright exchange professor and to deliver lectures on Zen Buddhism at Washington University (St. Louis, Missouri) and at the University of Michigan (Ann Arbor). Before returning to Japan, he visited England, The Netherlands, Belgium, Switzerland, France, Germany, Italy, and Monaco; he gave lectures on Zen and Japanese culture in many cities and towns. Address: Shokokuji Zen Monastery, Kyoto, Japan.

• **Summary:** Note: This is the earliest English-language document seen (Sept. 2017) that contains the word “macrobiotics” (or “macrobiotic”). This is also the earliest book known to macrobiotic recipes (Sept. 2017).

This bound, cloth cover book was owned by Herman Aihara, and is now (April 2011) in the library of the George Ohsawa Macrobiotic Foundation in Chico, California (President: Carl Ferre). The size is 8½ by 11 inches. The

cloth cover is pea green and on it, near the top, is written (on two lines): “Zen macrobiotics” with the word “Zen” in large bold capital letters. In the middle: “George S. Ohsawa,” the author. And near the bottom (on two lines): “Ohsawa Foundation: New York–Paris–Brussels–Tokyo.”

The book consists of leaves and the text is typewritten. All of the leaves in this edition are edited, some heavily, in two colors of ink: red edits by George Ohsawa, and blue by Lou Oles (According to Herman Aihara). There is no table of contents or copyright page. On the first leaf, near the top, the title is typewritten again on two lines: “Zen Macrobiotics.” Then the book begins:

“Two ways to happiness through health. Happiness is the goal of everyone in the world. But what is happiness, in the West, and specially in the Far West, America? I do not know. In the Orient happiness was defined by sages some thousands of years ago as consisting of five factors, as follows:

“(1) The first fundamental factor of happiness is joyfulness, an amusing, interesting, brilliant and healthy longevity.

“(2) The second, not to be worried about money.

“(3) The third, instinctive capacity to avoid accidents and difficulties that would cause premature death.

“(4) A loving realization of the order of the infinite universe at all levels.

“(5) Not to become the first as you will become the last. But try to become the last so that you will become the first forever.

“All Oriental philosophy is the practical teaching of how to realize such happiness. It is biological, physiological, social, economical, and logical. It is prohibited for the teacher to explain the deep significance of the philosophy of the constitution of the infinite universe...”

“... School education is completely unnecessary, and even detested. All great men are autonomous and self-made...”

Note 1. This section (two leaves) becomes the Forward in the next edition, which was printed in Japan.

The third leaf is a title page: Like the cover, it has text on 3 levels, but is typewritten. Title: “Macrobiotics: The Biological and Physiological Foundation of Zen Buddhism.” Author: George Ohsawa. Publisher: Ohsawa Foundation: New York–Paris–Brussels–Tokyo.

Note 2. The relationship between this title page, the title page of the mimeographed edition, and the cover is unknown.

The next two leaves, are titled “Health to Peace” and numbered “i” and “ii.” Note 3. They become the Preface in the next edition, which was printed in Japan.

Next is “iii” which is the Foreword in this mimeograph edition but becomes Chapter 1 in the next edition, printed in Japan.

Next are leaves “iv” through “xxii” which are the

Introduction in this edition, but become Chapter 1-3 in the next edition printed in Japan. After leave xxii, the leaves are numbered “8” through “86,” and after that is the back cover. The last section of the book is titled “The Case of Mr. E” (leaves 77-86). Note 4. It becomes the first appendix in next edition printed in Japan, which also contains a second appendix titled “The Pro-Forma Death Certificate...”

The mimeograph edition is thus missing pages 3-7. Moreover, all the pages are renumbered by Ohsawa by hand in the upper right corner. In Ohsawa’s numbering there are no pages numbered 1, 2, 5, 6, 7, 8, 10, 33 and 34 (a total of 9) and thus his page is numbered 112.

Because the mimeograph edition is bound, it appears that the pages were rearranged after typing but before publication and distribution.

Page 19: “With the conception of Principal Food and that of secondary food clearly distinguished, people of the Orient could live a happy, free and peaceful life from the beginning up to the importation of the brilliant Occidental civilization, more or less violent, with its industrial and scientific instruments... The Principal Food should occupy at least 60% of your eating.”

This bound, mimeograph book contains many recipes, all of which are numbered. Soy-related recipes include the following: In the section titled “Beans”: 117. Boiled soy beans with miso (the soy beans are first roasted until they pop). 118. Boiled beans (“Boil soy beans until tender. Seasoned with soy sauce and salt. Boil until liquid is gone. Prepare black [soy] beans in the same way.”)

Note 5. Later writings by Ohsawa show that by “black beans” he meant black soy beans, *Kuro mame* in Japanese. This is the earliest macrobiotic document seen (April 2013) that gives a recipe for whole soybeans.

119. Gomoku beans (boiled soy beans with vegetables). 120. Goziru soup (Gôjiru; ground soaked soybeans with vegetables). 121 and 122. “Aduki” [azuki, adzuki] beans. 159. Hiziji [Hijiki] with age (seasoned with “soyu” [sic, shoyu]). 160. Hiziki and soyabean (seasoned with syoyu [shoyu]).

In the section titled “Miso and syoyu preparation”: “Both miso and syoyu should be of traditional make.” 201. Sauce miso (miso-tahini sauce). 202. Miso cream. 203. “Muso” (miso and tahini with minced orange peel). 204. “Miso” soup (5 persons). 205. Carrot and onion au “miso” (15 persons). 206. Vegetable au miso. 207. “Oden” au miso. 208. Buckwheat “dango” au “miso.” 209. “Miso-ae.” 210. “Tekka” no. 1 (miso with minced yang vegetables—lotus root, burdock root, ginger—fried in sesame oil until very dry. Good for all yin diseases).

In the section titled “Syoyu”: Recipes 212-221 are seasoned with “syoyu” (shoyu, traditional fermented soy sauce). “Use the traditional syoyu in all cooking (vegetables and fish). Syoyu diluted with a little water is very good for ‘Sasimi’ [sashimi] and fried oyster, ‘Tempura’, fish

‘Sukiyaki’, ‘Tohu’ ([tofu] vegetable cheese of soya beans), etc.”

803. “‘Tohu’ plaster. Squeeze ‘tohu’ (white soya bean cheese) add 10% of flour; stretch this directly on the front or any part painful with inflammation. All pain or inflammation will go away soon.” Note 6. This book does not use tofu in any recipes, probably because Ohsawa considered it too yin. However Ohsawa was the one person most responsible for introducing the word “tofu” to popular American culture; his later writings and especially his students and admirers spread the word to the four corners of the United States.

Note 7. This is the earliest macrobiotic document seen (April 2013) that mentions tofu.

Note 8. This is the earliest English-language document seen (Oct. 2021) that uses the word “aduki” beans to refer to azuki beans. This spelling was subsequently widely used, but only in macrobiotic publications.

Also discusses: In the section on “Egyptian beans” (p. 30): Pois “chiche” (chickpeas, basic preparation by boiling). “Beignet” pois chiche (deep-fried balls of mashed chickpeas mixed with flour). Pois chiche croquette (chickpea croquettes).

Publication: “Published by Ohsawa Foundation, 331 Riverside Drive, New York City, U.S.A. (Secretary Aihara, 44 W. 96th St., New York City, U.S.A.).” Underneath this is “Printed in Japan.”

Note 9: Concerning the date of publication, we read: “My first two books in English will arrive beginning of November: *Zen Macrobiotics* and *The Philosophy of Oriental Medicine*.” (Source: G.O. [George Ohsawa]. 1960/09. “Letter from the editor.” *Macrobiotic News* (New York, NY). No. 6. Sept. p. [7]). Address: New York, USA.

4588. Ohsawa, George. 1960. *Zen macrobiotics* [Continued, Part II]. New York, NY: Ohsawa Foundation. 103 p. Undated. 28 cm.

• **Summary:** This mimeograph bound book with the pea green cover, the only known copy of which is owned by the George Ohsawa Macrobiotic Foundation in Chico, California, raises many interesting questions about the publication history of this and closely related titles.

Carl Ferré, an expert on this subject, believes: (1) That there were several “printings” of mimeographed edition and that “printings” may vary. (2) There is a strong possibility that the first editions were sold in Jan., Feb., and March of 1960, before there was any editing on them. (3) It is unlikely that any books were sold with only Ohsawa’s red edits on them. (4) It is probable that no books were sold with both Lou Oles’ blue editing and George Ohsawa’s red editing on them.

Was there a printed edition prior to and different from this edition?

Does anyone own such a copy?

How many pages did it contain and how were the pages

arranged? For example, did the original book start with the title page, followed by ages i, ii, iii, etc?

Were the original pages reshuffled to create this bound edition? In this edition, why are there xxi pages of front matter numbered in roman numerals followed by pages 8 through 86 in Arabic numerals.

Why do some pages seem to be missing from this edition. Carl Ferre believes that someone typed the entire book, then Ohsawa decided to move some of the pages around, which they did before they bound and sold the books (for \$0.50 each) at Ohsawa's lectures.

How did they bind the books? Did they bind the books by themselves or send them out to a professional bookbinder? Or did a person (who attended the lectures) who was in the bookbinding business offer to bind the books free of charge so they could be sold for only \$0.50 each. Was it originally hardcover or paperback? Is the pea green book in Chico simply an example of all the books sold in 1960 at Ohsawa's lectures? Or is it unique—one of a kind? When and where did Ohsawa make all this handwritten changes in red? Was someone suggesting the changes to him? If yes, who?

Why is the title on the cover different from the title on the title page.

Why was the original title page numbered "9" in Ohsawa's handwriting.

What do the Japanese characters under the handwritten "9" mean?

Why is there content before the title page?

We are told the original mimeograph edition was duplicated and bound in the Aihara's apartment in New York City; how was it bound?

Carl Ferre reminds us (e-mail of 2 May 2011): Lou Oles took the recipes out of *Zen Macrobiotics* to create a separate book, *Zen Cookery*. "The problem that has always existed is that *Zen Macrobiotics* has numbers in it that refer to numbers in *Zen Cookery* and they have never corresponded. For example *Zen Macrobiotics* says "See *Zen Cookery* No. 103" and you go to *Zen Cookery*, find that number, and its something totally different—or even nonexistent." Address: New York, USA.

4591. Keleny, Eugene. 1960. Vegetarianism in Germany. *British Vegetarian*. July/Aug. p. 182-84.

• **Summary:** An excellent history of vegetarianism in Germany. Pioneers included Siegmund Hahn (lived 1664-1742), his son Dr. Johann Siegmund Hahn (1696-1773), and Dr. Eucharius Oertel. The founders of modern hydrotherapy, Vinzens Priessnitz and Father Sebastian Kniepp (started treatments in 1855 at Woerishofen, Bavaria). Platen (a naturopath), Louis Kuhne (pioneer of natural healing), Adolf Just (founded nature cure clinic at Jungborn in the Harz mountains), Dr. Heinrich Lahmann (naturopath, founded Weisser Hirsch [White Deer] Sanatorium near Dresden), Dr. Max Gerson (his saltless vegetarian diet had miraculous results; being Jewish, he emigrated to New York when Hitler came to power and is still in practice there), Johannes Schroth, Arnold Rickli. Today the center of West Germany's vegetarian movement is in Hannover, where the headquarters of the Vegetarian Union of Germany is located. Address: LL.D.

• **Summary:** This study indicates that there may be a correlation between a diet low in animal products with low blood lipid values, and a small incidence of vascular disease.

Note: Saint Benedict of Nursia (who lived from about 480 to about 547 A.D.) was an Italian and the founder of the Benedictine Order. In the days of Charles the Great (768-814 A.D.) the Rule of St. Benedict required that all monks except the weak and the sick abstain from the flesh of four-footed animals and of birds. Those most faithful to the original rule were the Cistercian monks. The name "Cistercian" originates from the Medieval Latin "Cistercium," the name of the site of the founding of the order at Citeaux, France, in 1098. The Cistercian Rule is an extremely austere adaptation of that of the Benedictines. The word "Trappist" arises from the name of one of the centers of a reformed branch of the order established at La Trappe, Normandy, in 1664. In 1848 the first monastery of the order in the United States Our Lady of Gethsemane, was founded near Louisville, at Trappist, Kentucky. Another Trappist monastery in America is St. Joseph's Abbey in Spencer, Massachusetts. The Trappists' manner of life went far beyond the original rule of St. Benedict and the Cistercian practice. Even today they are faithful vegetarians. Address: Cleveland, Ohio.

4593. Edgell, David P. 1960. Charles Lane at Fruitlands. *New England Quarterly* 33(3):374-77. Sept. [7 footnotes]* Address: Dep. of English, San Jose State College, San Jose, California.

4594. Banerjee, D.K.; Chatterjea, J.B. 1960. Serum vitamin

B-12 in vegetarians. *British Medical Journal* ii(5204):992-94. Oct. 1. [20 ref]

• **Summary:** “The serum vitamin B-12 level was studied in 232 subjects (196 non-vegetarians and 46 vegetarians). The subjects belonged to the following five categories: normal, tropical eosinophilia, nutritional macrocytic anaemia, aplastic anaemia, and chronic myeloid leukaemia.”

“Results of the present investigation indicate that the vegetarians have a serum vitamin B-12 concentration which is significantly lower than that of the non-vegetarians... In nutritional macrocytic anaemia (N.M.A.) a low concentration of serum vitamin B-12 has been found in approximately 50% of cases.” Address: 1. MSc, Research Assistant; 2. F.N.I., Professor of Haematology. Both: Haematological Unit, Indian Council of Medical Research, and the Dep. of Haematology, School of Tropical Medicine, Calcutta, India.

4595. Barrow, J. Gordon; Quinlan, Carroll B.; Edmands, Robert E.; Whitner, Virginia S.; Goodloe, Mary Helen R. 1960. Comparison by gas chromatography of the fatty acid content of adipose tissue with dietary intake of fat in vegetarian and nonvegetarian males (Abstract). *Circulation* 22(4):720-21. Oct.

• **Summary:** “Dietary studies of Trappist vegetarian and Benedictine nonvegetarian monks indicate that they differ significantly in the percentage of calories which they derive from fat (Trappist: 25 per cent, Benedictine: 45 per cent). Biochemical studies comparing the vegetarians with the nonvegetarians reveal that most serum lipids are significantly lower in the former group.

“Adipose biopsy specimens were obtained in 33 members of both groups who were in the same age group and had consumed their respective diets for 3 to 10 years. The fatty acid composition of the adipose tissue was analyzed with gas chromatography. This was compared with dietary fatty acid intake obtained via repetitive diet records on each individual. Comparing the fatty acid composition of the adipose tissue with the fatty acid composition of the dietary intake, there appears to be a moderate correlation between these 2, with the linoleic acid showing the best correlation.” Address: Atlanta, Georgia.

4596. *British Vegetarian*. 1960. Vegetarian foods. Sept/Oct. p. 248-49.

• **Summary:** The main protein foods used by vegetarians are nuts, cheese and pulses. In addition, all Health Food Stores sell a wide variety of tinned nutmeats, including the following:

Granose Foods Ltd. makes: Nuttolene (peanuts and cashew nuts). Sausalene (wheat protein, mixed nuts, etc.). Saviand (Wheat gluten, ground nuts, etc.). Meatless steaks (wheat gluten, etc.). Savoury Pudding (wheat protein, wheatmeal flour, groundnuts, etc.). Nutmeat (wheat gluten, cashew nuts, wheat flour, etc.). Sausalatas

(wheat protein, mixed nuts, etc.). Soya Beans (soya beans, tomato puree, brown sugar, vegetable shortening, onion, yeast extract, wholemeal flour, seasoning). Peanut Butter. Cashew Nut Cream. Granose was founded in 1898 under the name International Health Association Ltd. and is now at Stanborough Park, Watford. Note: This is the earliest document seen (July 2000) concerning the work of Granose Foods Ltd. with soya beans.

Mapleton's Nut Food Co. Ltd. makes: Maplemeat (cashew nuts, wheat risk, etc.). Savormix and Frittermix (incl. groundnuts); these are in packets for making savouries. They also make numerous tinned nutmeats, plus a wide range of nut and soya butters [probably margarines], savoury spreads and pastes, nut creams, fruit and Dundee cakes. Mapleton's was started in 1897 by the two Mapleton brothers who were processing cracked nuts in a large house on Dolphin Street, Manchester. By 1907 Mapleton's had become a public limited company and occupied a mill at Wardle, Lancashire, later moving to Garston, near Liverpool. The company opened a second factory in Hamburg, Germany, which flourished until 1914, when it was confiscated. A fire gutted the their Garston mills in 1932 but in 1933 the factory and offices were rebuilt.

Many tons of organically grown produce are grown in the UK and overseas using compost.

4597. Ohsawa, Georges. 1960. The philosophy of Oriental medicine (The book of judgment). New York, NY: Ohsawa Foundation. 171 p. 19 cm. [7 ref]

• **Summary:** Ohsawa is trying to express a nondualistic worldview, its many forms of practice or application, and its manifestation in the field of time as pairs of opposites.

The Preface begins: “I wrote this book from the beginning of November until the end of November, 1955, in French Equatorial Africa in Dr. Schweitzer's hospital at Lambarene [Gabon], and from January 1 to January 13, 1956, at the Protestant Mission Station at Andende, in that old house where Dr. Schweitzer began his work in the year 1913,...”

“The aims of this book: 1. To point out the dialectical, universal, simple and useful Unique Principle of science and philosophy, of all the great religions and of all Far-Eastern civilization. 2. To show the biological, physiological, medical, educational, sociological and logical application of the Unique Principle. 3. To present especially Far-Eastern medicine in the light of the Unique Principle. 4. To reveal the Unique Principle in all its glory as the principle of infinite freedom and eternal peace.

“The Unique Principle of the Far-East is exceedingly simple and extraordinarily practical... It is the ‘conception-constitution’ of Life and the Universe” (p. 3). It “is a manifestation of universal love, or the supreme judgment, embracing all the antagonisms and transforming them into oneness, and distributing the eternal joy of life to all,

forever” (p. 4).

“Since the publication of my first book in French, *Le Principe Unique de la Science et de la Philosophie l’Extrême-Orient* (at Vrin’s, Paris, 26 years ago [1931]), I have always worked in the same direction—for universal understanding. I left Japan forever about the end of my sixtieth year (October, 1953) to see my friends and the great man [sic] of the world, whom I believed would understand the Unique Principle, and the practical dialectics thereof. Note: The order of words in the title of Ohsawa’s first book in French was actually *Principe Unique de la Philosophie et de la Science d’Extrême-Orient*.

“I hope the Unique Principle will become as well known as the art of flower arrangement, Chinese medicine, ‘Acupuncture,’ Bonsai, Bobkei, Zen Buddhism, and the theory of Judo-Aiki [Aikido], which I imported into Europe thirty-eight years ago and which is now in vogue everywhere in the Occident” (p. 4).

“Until the end of my life I shall always be traveling with my wife, showing how to master this practical dialectics, universal logic, and order of the universe; the very key to the Kingdom of Heaven that will establish infinite freedom, eternal happiness, and absolute justice everywhere.” “I live in Europe, chiefly in France, six months of each year, and the rest of the time I shall visit other countries on this planet” (p. 5).

Contents: Preface. Introduction: The physics and metaphysics of yin and yang. 1. Medicine or faith? 2. The Unique Principle—a practical and dialectical classification: Yin (centrifugal) and Yang (centripetal) are always relative, the form, the weight, the color, about water, the chemical composition, the geographical point of view, the taste, conclusion, Dente, Yin and Yang classification.

3. The Unique Principle of the science and philosophy of the Far East. 4. Man’s origin. 5. Far Eastern medicine. 6. Order of the Universe and man’s constitution. 7. Supreme judging ability. Appendixes.

“In the Far East, thousands of years ago, medicine evolved from perfect symptomatic medicine to prophylactic [preventive] medicine; then from prophylactic to the yogic (or religious) art of health,...” (p. 13). Western medicine is analytical, empirical medicine; it is a modern superstition (p. 19). “I am going to show you the identity of faith (realization of the order of the universe, or Oneness, the absolute—infinite—eternal) and the highest medicine” (p. 20).

Soy paste [miso] is a very Yang “vegetable paste, prepared with a 20 to 30% volume of salt, which will keep for at least three years” (p. 35).

“How can one, having two new-born twin dogs, make one become very vicious, restless, aggressive, and the other easy, friendly, quiet and patient? Answer: I will feed one with a diet including 20 to 30% of meat or fish, and the other a vegetarian diet with 60% or more cereals... If racing together, the non-vegetarian would lead for the first mile or so, but

afterwards, the vegetarian would forge ahead” (p. 36).

“Vegetarian peoples are rather of philosophical and religious mind, inclined to meditation, aesthetics, literature and poetry. The non-vegetarian ones, on the contrary, are strongly inclined to so-called mechanical and industrial progress, and to colonization too. There have been no vegetarian people in world history who colonized other people by force (militarily or economically). From the beginning, the Japanese people were vegetarian until the introduction of Occidental civilization fifty years ago at the time of the Russian-Japanese war” [1904-05]. After that they “became utterly uprooted. The Japanese spirit was lost, as well as the whole of its tradition. To some degree they have allowed themselves to be colonized, spiritually and physiologically” (p. 37).

There are 7 stages of Yin-Yang classification of food. The 7th or highest is “all-embracing supreme judgment. All food products must be free of chemical fertilizer and insecticides (both very Yin), since they destroy not only the natural quality of the food, but also, sooner or later, those who eat it.” The key complementary antagonism between Na [sodium] and K [potassium] was discovered by a Japanese doctor, Sagen Isiduka [Ishizuka], 70 years ago.” He cured hundreds of thousands of incurable people. “When he died his funeral escort was over two miles long” (p. 38-39).

The greatest master of the Unique Principle was Lao-Tse [Laozi]. It is a polarizable monism (p. 41). “Everything is composed of two fundamental forces, Yin and Yang. They are seemingly antagonistic, but actually they are complementary” (p. 43).

“Every year about July or August, for almost twenty years, I have organized a ‘New School’ where the students learn the theory and practice of the method to establish good health following the tenets of the Unique Principle” (p. 44).

“But what is education? Present-day education, so-called, is nothing but phonographic remembrances of the mass production of professionals, technicians, engineers or teachers. In short it is a preparation for slavery” (p. 47). It is really indoctrination. There are two important types of education: pre-natal and post-natal. But a real teacher is able to make men free and happy forever (p. 48-50). Knowledge of the Unique Principle is called *Do* in Japan and *Tao* in China; it is the Great Way, and following it is called *gyo* [spiritual practice] (p. 50-52).

All food is of vegetal origin; it ultimately comes from plants (p. 62). “Cow’s milk is intended for the nourishment of calves... There is no reason for man to live upon the milk of the animal, which is biologically and intellectually inferior to him” (p. 67).

Illness is an alarm, sent by the Infinite to tell us that we are violating the Order of the Universe (p. 77). “The world is dialectical. Quality is influenced by quantity. The world of materiality and relativity is very complex in its expression and phenomena. It appears like an anarchic chaos, but a

dialectical law rules it: the 'Unique Principle' or Yin-Yang law." Man is the masterpiece of creation. He is happy who has made up his mind to live in accordance with the Unique Principle (p. 82).

"About thirty years ago, I brought acupuncture to Europe and was the first practitioner of it there." "I was at the same time, the first importer of the art of flower arrangement and of the theory (or spirit) of Judo (Juzutsu [Jujutsu])." Both have become popular in today's Europe. "But few people are interested in the *Do* [*Tao*] of Judo and Kado, which is their philosophy" or "Unique Principle." The *Do* of Judo has also been forgotten in Japan (p. 88-89).

"The individual soul and the universal soul are one and the same thing, the infinite" (p. 156). On the last 2 pages of the book are important addresses in New York City (Ginza, Azuma) and Japan (Nippon C.I. in Tokyo), and Centers in Europe (France, Belgium). The Lima factory in Belgium produces "all macrobiotic products" (p. 170).

Note 1. This is the 2nd earliest English-language document seen (May 2011) written by Ohsawa, who lived 1893-1966.

Note 2. Carl Ferré states (e-mail of 30 April 2011): It was first announced in the Nov. 1960 issue of *Macrobiotic News* and therefore may well have been first published in English in late 1960. The original French edition was published by Vrin in 1956. There were at least two printings of hardcover editions: (1) blue cover with gold lettering; it probably appeared first; (2) brown cover with thicker paper. Address: 1. Lambarene, French Equatorial Africa [Gabon]; 2. Ohsawa Foundation, 331 Riverside Dr., New York City, New York (Secretary Aihara, 44, W. 96th St., New York City, USA).

4598. Edgell, David P. 1960. Charles Lane at Fruitlands. *New England Quarterly* 33(3):374-77. *

• **Summary:** Publishes two letters (written in early 1843) which Charles Lane wrote to Mrs. Bronson Alcott and sent to her through the community postal service at Fruitlands. The letters reveal something about Lane's character and some of the tensions which contributed to the early downfall of the utopian community.

4599. Hodson, Geoffrey. 1960. Vegetarian foods, their nutrient properties: Plant foods and dairy products as sources of full nutrition. Auckland, New Zealand: New Zealand Vegetarian Society. *

• **Summary:** This brochure lists vegetarian sources of nutrients, and contains practical information on food values, food combinations, acid and alkaline foods, plus accounts of famous vegetarian athletes.

4600. Doresse, Jean. 1960. The secret books of the Egyptian Gnostics: An introduction to the Gnostic Coptic manuscripts discovered at Chenoboskion. [Translation by Philip Mairet]

With an English translation and critical evaluation of the Gospel according to Thomas. London: Hollis & Carter; New York, NY: Viking Press. xvii + 445 p. See p. 288. Illust. Index. 23 cm. *

• **Summary:** The author was born in 1917. "The Gospel according to Thomas... rendered into English from the French by the Rev. Leonard Johnston." Also published in French as *Livres secrets des gnostiques d'Egypte*.

4601. Galdston, Iago. ed. 1960. Human nutrition: Historic and scientific. Monograph III. New York, NY: International Universities Press. xvii + 321 p. No index. 23 cm. Institute of Social and Historic Medicine. [100+* ref]

• **Summary:** A good history of nutrition, with chapters written by various authors. Soybeans are mentioned on page 67; Vegetarianism on pages 66, 67, 69.

"Gandhi recalls that as a boy he was much impressed by the popular argument: 'We are weak because we do not eat meat. The English are able to rule over us because they are the meat eaters' (Autobiography, p. 32). Like his schoolmates, he was fond of quoting a bit of doggerel written by the Gujarati poet, Narmad: 'Behold the mighty Englishman / He rules the Indian small, / Because being a meat-eater / He is five cubits tall (Ibid., p. 33).

"Gandhi tried to eat meat for a year, so that he would be 'strong and daring' in the fight against the colonial rulers. Then, in disgust, he dropped his dietary weapon. But the meat-eating Englishmen relinquished their precious Asian possession anyhow" (p. 70). Address: M.D., Executive Secretary, Committee on Medical Information, The New York Academy of Medicine.

4602. Golikere, R.K. 1960. Vegetarian vs. non-vegetarian. Bombay, India: Popular Book Depot. 80 p. 17 cm. *

• **Summary:** Discusses the various types of animals eaten by humans, the dangers of animal foods, maintaining a balanced vegetarian diet, and the state of vegetarianism in India.

4603. Joya, Mock. 1960. Eating meat in Japan (Document part). In: Mock Joya. 1960. Things Japanese. Tokyo: Tokyo News Service, Ltd. [vi] + 782 + xlv p.

• **Summary:** Pheasants (*kiji*, p. 161): Its "meat has been a table delicacy since the oldest days. At first the meat was broiled and eaten, but later, a soup made of pheasant meat became very popular. Before the popularity of beef and pork, *kiji* meat was one of the most cherished meats in the people's diet."

Buddha's grace (p. 192-93). A priest was living alone in a little temple practicing meditation. When winter came, snow covered the mountain and he had no way to get food. So he prayed to Buddha who, out of compassion for the priest brought a wild boar into the temple. "But he was a priest and could not eat meat, the human instinct was strong and he could not fight the urge of hunger. Finally he cut off

a piece of the leg of the boar, cooked it and ate it. He did not repent that he had broken a Buddhist pledge not to eat meat. The long winter passed and the heavy snow melted. Some villagers came to the temple to inquire how the priest had fared." "The saw that a big piece was cut off from the leg of the wooden Buddha statue in the temple... The priest then realized that Buddha appeared as a boar so that he could satisfy his hunger. Offering thanks to Buddha, he prayed that if Buddha was so merciful, the statue might be restored to its former shape. His prayer was again answered and the statue was restored."

Cooking (p. 280): "The country being surrounded by seas, the Japanese have developed as the greatest fish-eaters in the world. The wide variety of fish and shellfish that are found in the seas, rivers, and lakes of the country has brought out almost unlimited varieties of fish dishes on the Japanese table.

"Some of the original tribes which formed the Japanese race appear to have been meat-eaters, but the lack of animals on the islands and also the influence of Buddhism had subsequently made the people refrain from eating meats. The estheticism that developed with the coming of Buddhism, and the development of the tea cult have also served to make the Japanese cooking simple and plain." All Japanese dishes are taken either with rice or with saké.

Kabayaki (p. 289-90). "Unagi (eel) baked brown is called kabayaki." The people of Japan have been great eaters of unagi, and the common way to eat unagi is to make it into kabayaki. Unagi has been so popular that there have always existed restaurants that specialized in making kabayaki, and they are called unagi-ya or kabayaki-ya. In the latter part of the Tokugawa Period (1600-1867), there developed a special custom of eating unagi on the *Ushi-no-hi* (Ox Day) of the summer *Doyo* season. It is not clearly known how this custom originated,..." Misoshiru (p. 298) or miso soup is one of the most important items in the diet of Japanese people. To the majority a breakfast is never complete without it. Miso was also brought from China. Buddhist priests who did not eat meat welcomed miso, and popularized it among the people. Shoyu and miso were introduced from China and became most important in Japanese cooking."

Katsuo-bushi (p. 292-93) or dried bonito is essential to Japanese cooking. It is used as a key ingredient in most soup stocks. The fish is "cut into four pieces lengthwise after removing the head and bones. It is then left in a room to dry. Every day it is taken out in the sun and dried. The drying process is completed in about one to three weeks." It becomes very hard and can be kept for years. Every Japanese household has a katsuo-bushi shaver, which consists of a planer on top of an oblong box. Katsuo-bushi is pushed over the blade of the planer, and shaved flakes fall into the box below."

Shimofuri beef (p. 310) Beef eating has become popular in Japan only recently, since about 100 years ago, although

beef was eaten by the people in ancient days. Buddhism prohibited meat eating, and it was the coming of foreigners in the late Tokugawa Period that revived the habit. General beef eating is comparatively new, it may be said, but Japanese beef has now become famous."

Snake eaters (p. 313): "Snakes are commonly eaten as a delicacy in any rural districts. All kinds of snakes are eaten, but *mamushi*, a poisonous snake, is regarded as the best."

Soba (p. 314). "Soba or buckwheat noodles is a distinctly Japanese food as no other people eat buckwheat flour in such a form." *Kiri-soba* (cut soba) or noodles are believed to have first appeared 400 years ago. The noodles are eaten cold or in hot soup. Fish, meats, vegetables and other ingredients are mixed in the soup." Tofu (p. 325-26): "Tofu is cooked with various meats, fish or vegetables. Also it is quite often cooked in sukiyaki. Or, in other words, tofu is used with almost everything that is cooked with shoyu and sugar."

Yasai (p. 329-30): "In the art of cooking *yasai* or vegetables, the Japanese are at their best. They have always eaten many and various kinds of vegetables since the very early days, but the introduction of Buddhism which prohibits the eating of meat has greatly developed the art of cooking vegetables.

"*Shojin-ryori* by Buddhist priests made high developments as they became powerful in the country. Priests had improved the art of cooking, and developed such techniques as to produce the most excellent and varied tastes by using only vegetables. Even today, the cooking at various temples is so famous that epicureans go there to be permitted to taste their cooking.

Tachimono (p. 359): "The custom of giving up something one is specially fond of when praying for recovery from illness or for the attainment of some wish, is still practised by old-fashioned people. The abstention is generally from one to three years. They give up salt, sake, tea, fish, meat or other food. It is usually an individual pledge, but in some places, it is done as a community matter, and all villagers give up the same thing for a fixed period of time."

Forty-ninth day (p. 368): It is commonly believed that for the period of forty-nine days following death the spirit remains under the roof of the house where it had lived when alive. Hence on the forty-ninth day, the family gathers again as it bids a final farewell to the earthly world.

"The service held on this day is extremely important, and *Shijuku-nichi* (forty-ninth day service) is observed strictly by all families. This marks the end of the first period of mourning.

"The *Shijuku-nichi* service is held either at home or at a Buddhist temple, before the tablet inscribed with the Buddhistic name of the dead. Candles are lighted, incense is burned and the priests recite sutras. Sincere, long prayers are offered by members of the family, friends and relatives.

"But this service is not one of sorrow; it is held with the joyful realization that the dead has gone to *Gokuraku*. The prayers and offerings made earlier are believed to have influenced the Ten Judges to give a favorable verdict to the departed. To ensure a felicitous future life for the dead, the members of the family and their friends have made sacrifices, abstaining from eating meat and fish, and foregoing their accustomed pleasures." Address: Japan.

4604. LaLanne, Jack. 1960. *The Jack LaLanne way to vibrant good health*. Englewood Cliffs, New Jersey: Prentice Hall, Inc. ix + 224 p. Illust. Index. 23 cm.

• **Summary:** In the section titled "The man who saved my life," LaLanne says that he was a "sickly child" who ate all manner of "treats" such as candy, milkshakes, pies, etc. "In short, I treated my pimples lavishly." One evening he went to hear Paul Bragg speak at a woman's club in Oakland, California. The hall was full when he arrived. "Paul Bragg was the most dynamic man and speaker I had ever heard. He soon convinced me that my condition was not incurable—he'd once been the same way. He spoke of natural laws and natural foods, and how we disobey God's laws by our eating habits. My eyes almost popped when he, a man in his fifties, did handstands across the stage. In that moment I made my decision... 'Dear God, give me fortitude to follow this course.' That night I foreswore the very things I craved most... I began a systematic program of body-building in our back yard.

"This was my conversion... Paul Bragg was a vegetarian and for seven years I followed that regime... I wanted to keep people well. After a time, too, I saw that vegetarianism wasn't the answer. I learned to balance my meals healthfully with meats and fish." He advocates natural foods and an abundance of raw foods (p. 80-83).

Chapter 14, titled "There are no 'miracle' foods," has a full-page, very positive section on "Soy beans" (p. 98-99). "Here is a source of protein higher even than eggs and meat. Soy beans are also a good source of lecithin which, with its ability to fight cholesterol, should be in every diet. You may have to go to Chinese stores to buy your soy beans, but that can be an adventure in shopping. Buy some soy bean sprouts while you're there... I recommend soya bean powder (available at all health food stores) to everyone with an electric blender..."

The section titled "Make the electric blender—Nutrition's miracle tool work for you" (p. 114-15) says that every home should be equipped with "an electric blender or liquifier." In moments you can produce a "health cocktail." "Children should be encouraged to drink the blender beverages." If a sweetener is needed, use honey. For vitamins, add skim milk, wheat germ, brewers yeast, and black strap molasses.

The section on "The fun of Oriental cookery" (p. 121-22) describes shopping for soy beans, bean sprouts, etc. in San Francisco's Chinatown, and visiting Yamato Sukiyaki

House, Trader Vic's, and Don the Beachcomber's. He gets brown rice from George Mardikian, the famous restaurateur. "I never eat the polished white rice." On p. 142 is a recipe for Soy bean bread (with soy bean flour).

Concerning supplements: He takes supplements with every meal, every day. "I take bone meal tablets, multi-mineral-vitamin tablets, Vitamin C and Vitamin E, one teaspoon of wheat germ, one tablespoon of brewer's yeast and two tablespoons of soy powder" (p. 145).

The section titled "Organic foods: Nutrition's next breakthrough" (p. 146-48) includes a long discussion of "One of the great success stories I know... a young man named Jim Baker and his discovery of organic products. I first met Jim during the latter days of World War II when I was stationed at the Navy's rehabilitation center at Sun Valley, Idaho. Jim, a big, handsome, lanky Marine sergeant, was in from the island war zones. He had been injured in an engagement for which he was to be recommended for the Marine Corps' top medal for heroism. But he didn't care to talk of that.

"As I worked with him, helping rebuild his body, we talked of exercise, nutrition and health. We became fast friends there and subsequently, when Jim went home to Ohio, he wrote for photos of my conditioning studio in California. He built a duplicate gym in Cincinnati and used the proceeds to go back to college, where he took advanced degrees in public health.

"The next thing I knew, he was in Hollywood. He had discovered the theory of organic gardening and was sold on it. In Hollywood he opened a restaurant, The Aware Inn, for people who wanted only *health* food, only vegetables grown by organic methods and meat from animals that had been fed the same way. Today Jim's restaurant on the glittering Sunset Strip is never empty. His clientele? People who are aware—who want to eat right. They range from Marlon Brando to Red Buttons to Jack LaLanne and all my friends.

"I foresee a future when millions of Americans will be aware of the need for the best foods that can be grown on God's green earth. On that day, Aware Inns will have sprung up from coast to coast. A healthier nation will be building from the ground up."

In 1956 Paul Bragg introduced LaLanne to the "rubber cord" which he used to develop more than 100 good exercises; he demonstrated some of these on his television show. He called it his "Glamour Stretcher" and sold 200,000 the first year. Today this is widely used in medical physical therapy.

Note: This is the earliest document seen (March 2020) that mentions the "Aware Inn." Address: [California].

4605. Leach, Bernard. 1960. *A potter in Japan, 1952-1954*. London: Faber and Faber Ltd. 246 p. Frontispiece. Illust. Index. 22 cm.

• **Summary:** The author (1887-1979) is as fine a writer as

he is a British potter and artist. Regarded as the “Father of British studio pottery,” he was born in Hong Kong and spent his early years in Japan before returning to England in 1920.

On Feb. 16, 1953, he arrived in Japan at Tokyo Airport, an 18-hour’s flight from Honolulu [Hawaii] (including a hour stop at Wake Island) by Pan American Clipper. He went to Japan to study Japanese pottery-making with traditional masters—not long after the end of World War II. Each entry is dated.

June 15, 1953 (p. 98). Near the great extinct volcano of Daisen on the borders of Tottori Province, the author and friends climbed up the old rough stone-paved pilgrims’ way to the Kongoin temple. “There we were served the best meal I have eaten in Japan, vegetarian priests’ food, over which infinite pains had been taken... strange fungi, mountain potatoes, crisp fried bean curd and some soft curd mixed into a paste with crushed sesame seed.”

June 30, 1954 (p. 104). Met with Robert Blythe at a supper party. “We sat and talked for five hours. Zen, Haiku, crafts, Japan and life. I was delighted to meet an English poet who knows the inside of the East. We just flowed... Blythe lived for years in a Zen temple in Corea and has drunk deep from that source.”

July 1, 1953 (p. 105): “A great feed of Continental sausages and Chinese riceballs stuffed with mincemeat and ‘Funiu.’ The last is a strange and fascinating decoction of fermented bean curd [fermented tofu] something like a smoky Camembert in taste and texture.”

August 19, 1953 (p. 132). In Nagano, Japan, the author and friends visited the very large and famous temple of Zenkoji. They noted “all the commercialized signs of Buddhist decadence, as far from Sakya Muni [Shakyamuni, the Buddha] as Rome from Christ... the vulgarized business of popular religion is equally sickening, East or West.

After that they made their way to a soba shop and the author ordered Soba Gaki which was not on the menu. “This was a kind of porridge no longer in fashion... We ate it first with shoyu sauce and then with sweet adzuki beans.”

Oct. 22, 1953 (p. 166). In Toyama the author and his friends had “lunch at a Buddhist vegetarian restaurant [probably serving *shojin ryōri*] which made me wish once again that I could share the meal and its setting with artist and craftsman friends in the West. The manner of serving surpassed all, it was the service of the heart. There is a saying that the Chinese eat with their stomachs and the Japanese with their eyes. The sheer beauty of each tray or dish of food, the quiet discretion. This represents a peak of culture and its home is in Japan.”

Facing the title page (frontispiece) is a portrait photo of Bernard Leach, whose sketches are scattered throughout the book.

Note: Edmund de Wall wrote a “de-mystifying” biography of Bernard Leach, published in 1998. He says that Leach spoke little or no Japanese. He wrote: “The great myth

of Leach is that Leach is the great interlocutor for Japan and the East, the person who understood the East, who explained it to us all, brought out the mystery of the East. But in fact the people he was spending time with, and talking to, were very few, highly educated, often Western educated Japanese people, who in themselves had no particular contact with rural, unlettered Japan of peasant craftsmen.” Address: Japan.

4606. Seventh-day Adventist Dietetic Assoc. 1960. Diet manual. 1st ed. Main Office: 1720 Brooklyn Ave., Los Angeles 13, California. 106 leaves. 22 cm.

• **Summary:** The title page reads: “Prepared by the Department of Dietary Service, White Memorial Hospital, College of Medical Evangelists, in cooperation with the Seventh-day Adventist Dietetic Association” (SDADA). It was published and distributed by the SDADA. Editions published after 1971 (later listed as 1970, i.e. 1975, 1978, 1982, 1990) were prepared by the SDADA.

A comprehensive loose-leaf handbook for the planning, selection, and coordination of vegetarian diets. Although this book is undated, subsequent editions give the publication date as 1960.

Table VI, titled “Protein, fat, and carbohydrate composition of some meat alternates” (p. 95), lists 27 product names alphabetically. Most (perhaps all; the names of the manufacturers are not given) are made by Seventh-day Adventist food companies, especially Loma Linda Foods and Worthington Foods. These products are: Chic-Ketts, Cho-Pats, Choplets—liquid, Chopletburger, Cutlets—liquid, Cutlets in Gravy, Garbanzos, Nuteena, Nutmeat, Proast, Proteena, Protose, Sandwich Spread, Soyloin Steaks, Soybeans—green, Steaklets—liquid, Vegeburger, Vegechee, Vegecuts, Vegelinks—liquid, Vegelona, Vegemeatburger, Vegemeat Steaks, Vegetable Cheese, New Wieners—liquid, Yum, Zoyburger.

Note: This is the earliest English-language document seen (Nov. 2014) that contains the term “Chopletburger” (or “Chopletburgers”). Address: California.

4607. Seventh-day Adventist Dietetic Assoc. 1960. Diet manual, utilizing a vegetarian diet plan. 1st ed. Loma Linda, California: Seventh-day Adventist Dietetic Assoc. * Address: Main Office, Box 75, Loma Linda, California.

4608. Sonnenberg, Lydia. ed. 1960. Everyday nutrition for your family. Los Angeles, California: Seventh-day Adventist Dietetic Assoc. 147 p. Illust. 4 tables on nutritional intake. 22 cm. [43 ref]

• **Summary:** Discusses the principles of a vegetarian diet for all age groups. Chapter 3, “The Basic Food Groups,” lists five: Fruits, vegetables, bread and cereals, protein foods (including legumes, cottage cheese, eggs, soy cheese [tofu], prepared meat alternates, nuts and nut butters), and the milk

group. A “soy cheese sandwich” is listed as “something hearty” in a month’s suggestions for pack-it lunches. The chapter titled “Proteins on Parade” discusses soy milk as a good source of protein, “complete proteins,” and the supplementary action of proteins (p. 46-47). It has a section titled “Soybeans Important” which praises soy flour and soy cheese [tofu].

Chapter 8, titled “Fats are Concentrated,” has a table (p. 53) listing protein-rich foods of animal origin (with mostly saturated fat) and plant origin (mostly unsaturated): Soybeans, soybean milk, and soybean cheese are mentioned; they have 50-70% of their calories from fat. A “Gluten” type entree is low in fat. Chapter 21 is titled “The Vegetarian Diet.”

Note: This is the earliest document seen (Dec. 1913) that mentions the Seventh-day Adventist Dietetic Association. Address: Director, Dietary Dep., Loma Linda Sanitarium and Hospital and Assoc. Prof., School of Dietetics, College of Medical Evangelists.

4609. *Vegetarian Courier*. 1960-- . Serial/periodical. New York: Vegetarian Society of New York, Inc. *

• **Summary:** *Ulrich’s International Periodicals Directory* 1990-91 notes: Published monthly by VSNY, c/o Murray Mickenberg, 87-12 Clio St., Holliswood, New York 11423. Book reviews. Circulation: 500. Address: Holliswood, New York.

4610. Madison Foods. 1960? Everybody loves Madison Foods: Recipes. Madison, Tennessee. 32 p. Undated. 10 x 15 cm.

• **Summary:** Contents: The story of Madison Foods (a division of the famous Madison College located near Nashville, Tennessee). Tasty, healthful Madison foods (listing and photo). Vegetarian vs. meat diet. Vegetable fats vs. animal fats. Vegetable proteins vs. animal proteins. Nutritional analyses of Madison Foods products. List and description of Madison Foods. Recipes (at least one for each product; a photo accompanies each).

This little (6 by 4 inch) booklet focuses on the various innovative Madison Foods vegetarian products, which are packed in 14 oz, 19 oz, and No. 10 cans. The undated booklet was published after Jan. 1960, since page 6 cites an article from *Nutrition Reviews* published that month.

Madison’s products are: Cheze-O-Soy (tofu), Com-Pro (“Madison Foods’ latest and best.” No ingredients given), Dinner Morsels (all-gluten, resembling chicken), Kreme-O-Soy, Madison Burger, Madison Links, Soy beans in tomato sauce, Not Meat (with peanuts and soybeans), Meatless Nu-Steak (all-gluten), Soyburger, Meatless Stake-Lets (with wheat gluten, whole wheat, and soy flour in a meatlike sauce), Vigorost, Yum, and Zoy-Koff (1 lb bags). Coming soon: Madison Links (hot dogs; photo shown).

Photos on the last two pages show: A student operating a

canning machine. Madison Links on half-buns on a tray. The Madison Food factory. Dr. A. Perry Webber, food consultant, with Madison’s products.

Note 1. This is the earliest English-language document seen (Aug. 2003) that uses the term “Madison Links” to refer to meatless soy hot dogs or sausages.

Note 2. This is the earliest document seen (Jan. 2013) that mentions “Com-Pro” or “Madison Links”—protein foods made by Madison Foods. Address: Madison, Tennessee.

4611. *Madison Survey* (Madison, Tennessee). 1961. Health restaurants and treatment rooms. 43(1):1. Jan.

• **Summary:** “During the Golden Anniversary Convention at Madison in October, last fall [the college celebrated its 50th anniversary in Oct. 1960], Robert Santini, R.N., of Pine Hill Sanitarium, near Birmingham, Alabama, touched off the important question of opening up vegetarian cafeterias and treatment rooms in the larger cities, using the units as country bases. He said he was frequently approached by non-Adventists, asking when a health restaurant would be opening in the Birmingham area.” It was agreed that “it would be even more difficult to find qualified personnel than money.”

“Several spoke of how formerly we had health restaurants and treatment rooms in the large cities of the South, and these should be reopened. Nashville (the Polk Street Settlement), Birmingham, Knoxville, and Memphis were mentioned.

Note: Madison Survey is now 23 cm tall and 4 pages long. At the top of page 1 is an illustration of the entrance to the college, consisting of two stone pillars. On the left one is written “Madison Sanitarium and Hospital.” On the right one “Madison College 1904.”

4612. Cross, Leslie J. 1961. The Plantmilk Society. *British Vegetarian*. Jan/Feb. p. 37-38.

• **Summary:** The Secretary’s report for 8 Oct. 1960 states that this meeting marks the 4th anniversary of the Plantmilk Society. The first year [Oct. 1957–Oct. 1958] was spent establishing the organization, collecting information, “and in abortive attempts to arrange for the manufacture in this country of an American plantmilk.” As a result of the failure of these attempts, the Society decided three years ago to try to develop a plantmilk from green leaves. This project is now at least three-fourths of the way toward a successful product at the laboratory level. The research is carried out under the direction of Dr. H.B. Franklin in London. He is now Director of Research and a small pilot plant has been established at his premises. Comfrey leaves are now being tested.

This year the society has established a plantmilk company, which (it is hoped) will eventually make and sell the product. Address: General Secretary.

4613. Pakistan Vegetarian Society. 1961. New vegetarian

society. Karachi, Pakistan.

• **Summary:** *The British Vegetarian*. 1967. Sept/Oct. p. 442. "Pakistan." "The Pakistan Vegetarian Society was founded on 27th February, 1961, and has its headquarters at c/o Jamshed Memorial Hall, Bunder Road, Karachi 1, Pakistan, and the Secretary is Mrs. K.J. Medora." The society has just celebrated its fifth anniversary. Address: Karachi, Pakistan.

4614. Scalapino, Robert A.; Yu, George T. 1961. *The Chinese anarchist movement*. Berkeley, California: Center for Chinese Studies, Institute of International Studies, University of California. v + 81 p. Feb. No index. 23 cm. [155 ref. Eng]

• **Summary:** Contents: Author's preface. The origins of Chinese anarchism: The Paris group, influences upon the Paris group, the *New Century* and its message, Sun and the Paris anarchists, the mounting struggle against the government, the Chinese anarchist movement in Tokyo.

Anarchism and the national revolution: Shih-fu and his movement, the Society to Advance Morality and its impact, anarchist Communist themes—the prelude to Marxism-Leninism.

The work-study movement: "Frugal Study" in France, the "Diligent Work-Frugal Study" movement, the decline of the work-study movement.

The rising Communist tide: Communist-anarchist debate—Ch'en Tu-hsiu versus Ou Sheng-pai. A summing up. Notes. Glossary.

Between 1905 and 1920, anarchist thought was considered by Chinese intellectuals and radicals as "the most scientific, most 'progressive,' and most futuristic of all political creeds" (p. 1).

The Paris group: Paris became "the center of the early Chinese anarchist movement. When Sun Pao-ch'i went to France in 1902 as Chinese Minister, over twenty government and private students travelled with him. Included in this group were Li Shih-tseng and Chang Ching-chiang, both young men from prominent families Li was the son of Li Hung-tsao who, for some 25 years prior to his death in 1897, had been a powerful figure in the national administration. Li had come to France as an attaché in the Chinese legation, but he soon gave up this position to study biology and promote anarchism."

In 1902 Chang, who came from a wealthy family, used some of "his money to found the T'ung-yun Company as a Chinese commercial firm in Paris. Between 1902 and 1906, a number of young men from Chang's village came to Paris with assurances of work while they continued their studies... A Chinese restaurant-tea house was established under the auspices of Chang's 'Company' as an additional outlet for private students from China.

In 1906-07 the entrepreneurial activities of the young Chinese in Paris underwent further expansion. "A printing plant (*Imprimerie Chinoise*) was organized in Paris in 1906 by Chang, Li, Ch'u, and Wu Chih-hui." In 1907 they began

publishing a Chinese pictorial *Shih-chieh* (*The World*). But only two issues and one supplement were ever printed.

Also in 1907 "Li, Hsia Chien-chung, and several others organized the Far Eastern Biological Study Association, with a laboratory alongside the printing plant. Two years later [in 1909], after various chemical experiments with [soy] beans, Li established a bean-curd [tofu] factory which produced assorted [soy] bean products in addition to the traditional Chinese bean-curd. The idea of work-study was prominently involved in this experiment. In the evenings and when not on duty, the workers were to practice Chinese and French, as well as studying such subjects as general science. Smoking, drinking, and gambling were strictly forbidden. Initially, five Chinese were employed, but the number eventually reached thirty.

"These ventures had their very practical aspect; they represented attempts to finance the education of as many fellow countrymen as possible. But underlying them also ran a strong current of idealism and the ideological basis of this idealism lay in anarchism as it was currently being propagated in Europe. All the young Chinese associated with the enterprises noted above became ardent converts to the anarchist creed." And to espouse this creed, on 22 June 1907, Li, Chang, Ch'u Wu began the publication of a weekly known as *Hsin Shi-chi* (*The New Century*). "For three years this journal was to champion the causes of anarchism and revolution, reaching Chinese students and intellectuals in all parts of the world."

"Senior in age and experience, Wu Chih-hui became the primary organizer of the Paris Anarchist Group, although Li Shih-tseng was perhaps its driving spirit... Wu was born in 1864 in Kiangsu province. His early education was of the traditional Chinese type. He reached the Chih-shih examinations in Peking, but failed. (Li's father was one of the four examiners)." In 1906 Wu moved to Paris, where he lived with Li Shih-tseng and Ch'u Min-i. Li had first met Wu in Shanghai while en route to France in 1902." With their various enterprises and organizations, "the young conspirators were in a new business—that of turning out revolutionary propaganda.

"Influences upon the Paris group: Li Shih-tseng has given us some later recollections of the varied influences that played upon him and his colleagues during this period. [Note 12: Scalapino interviewed Li Shih-tseng on 16 July 1959 in Taipei, Taiwan]. Perhaps these can be divided into three major categories: the Chinese classical philosophers; Darwin and the Social Darwinists; and the radical libertarians, brought up to date by the anarchism of Proudhon, Bakunin, and Kropotkin. As we shall note, the Paris group were in certain respects fervent anti-traditionalists who decried any attempt to equate Lao Tzu with the modern Anarchists, or the ancient well-field system with modern communism Yet almost without exception, these were young men who had received an excellent classical education. They had been

exposed to a range of political ideas almost as broad as that existing in classical Western philosophy.”

“This was the age of Darwinism. Li now recalls how greatly he was influenced by the writings of Lamarck and Darwin, how these men opened new doors for him in history and philosophy as well as in science. The influence was especially strong upon a young man studying zoology, botany and biology, but Li would have felt the Darwinian impact, no matter what his field” (p. 5).

“And certainly no single work had greater influence upon the young Chinese Anarchists than Kropotkin’s *Mutual Aid*. If their movement had a bible, this was it.

“It is easy to understand how men like Wu, Li, and Chang might make a personal identification with such figures as Bakunin, Kropotkin, and Reclus. Despite the seeming cultural chasm, there were many common bonds. These were aristocrats, by birth as well as by intelligence. They represented the most sensitive and concerned segment of the leisure class. Another bond was that of science. All of these men were committed to science—either as a profession or as a way of life. Kropotkin, for example, was an eminent geologist, Reclus a world-famous geographer, Li a budding biologist. Science, not Esperanto, was the true international language of this age.”

The New Century and its message: The philosophy of this periodical “was Anarchist Communism, with some special Chinese emphases. It can best be set forth in terms of ‘anti’s’ and ‘pro’s.’ The young Chinese anarchists were anti-religion, anti-traditionalist, anti-family, anti-libertine, anti-elitist, anti-government, anti-militarist, and anti-nationalist. They were pro-science, pro-freedom, pro-humanist, pro-violence, pro-revolution, pro-communist, and pro-universalist” (p. 7).

Anti-libertine means that the young Chinese anarchists had a fairly rigorous ethical code. Theirs was a call to hard work and hard study, the protection of one’s body, and in general, a Spartan life. The Anarchists were vigorously opposed to visiting prostitutes, smoking, drinking, and gambling, and as we have noted, these activities were prohibited in Anarchist-run establishments. Some Anarchists like Li Shih-tseng also espoused vegetarianism. Physical exercise was greatly encouraged. The contrast between these rules of personal conduct and those of the orthodox Chinese scholar-gentry class was striking. And in this sense, conversion to Anarchism was similar to religious conversion involving the attempt to follow a whole new way of life.” This “‘conversion’ was an intensely personal act” (p. 9-10).

“The strength of anarchist faith in science can be indicated by the remark of Li Shih-tseng: ‘There is nothing in European civilization that does not have its origin in science.’ To the anarchists, science was truth, knowledge, and progress. It was the only legitimate cornerstone of education, the only proper basis of values. It separated the barbarian from the civilized man” (p. 14). Address:

Center for Chinese Studies, Univ. of California, Berkeley, California.

4615. Lee, K.T.; Kim, K.S.; Kim, D.L. 1961. Chemico-pathologic studies in geographic pathology: Serum lipids compared in three groups of young Koreans including (1) Buddhist priests on “pure” vegetarian diets, (2) soldiers on low-fat Korean army diet, and (3) soldiers on high-fat U.S. army diet (Abstract). *Federation Proceedings (FASEB)* 20(1):95. March.

• **Summary:** The Korean Army diet contains 15% of calories from fat, whereas the U.S. Army diet contains 42% of calories from fat. Those in group (1) had serum lipid levels only slightly lower than those in group (2), but significantly lower than those in group (3). Address: Kyungpook Univ., Korea; Dep. of Pathology, Albany Medical College, Albany, New York.

4616. Salomon, Louis B. 1961. The least-remembered Alcott. *New England Quarterly* 34(1):87-93. March. [22 footnotes]

• **Summary:** A brief biography of the 19th century vegetarian reformer William Andrus Alcott (1798-1859), uncle of the famous American novelist Louisa May Alcott. “A man who has written and published well over one hundred books and pamphlets [on ethics, diet, and hygiene], practised medicine quite successfully, and been elected first president of the American Vegetarian Society might reasonably be remembered in his own right...” Better remembered Alcotts are his cousin, Amos Bronson Alcott (1799-1888), American teacher and educator (“known to most of his contemporaries as a gifted and amiable but highly eccentric ne’er-do-well”), and Bronson Alcott’s daughter, Louisa May Alcott, American author (lived 1832-1888).

Amos and Bronson, born only a year apart in the village of Wolcott, Connecticut, went to school together as boys and grew up together. Both were New England reformers, and both banished meat from their menus at about the same time, though not for quite the same reasons. Bronson wanted to save the world via “the ancient road of humanitarian idealism, following the signposts planted by Pythagoras and Porphyry; William, though no less altruistic and high minded, marched in through the gate marked Practical Results, under the guidance of Sylvester Graham, the whole-wheat and fresh-air man, and the Reverend William Metcalfe, pastor of the vegetarian Bible-Christian Church in Philadelphia, Pennsylvania. Bronson remained throughout his life a proclaimer of the moral imperative, an Emersonian majority of one; William became a medical practitioner in the offhand way of the 1820’s, a tireless writer and lecturer on health and hygiene, a self-appointed inspector of schools, and a phenomenally articulate propagandist for the vegetarian cause.”

After a brief and informal medical training characteristic

of this era (his only formal medical education was a 5-month course of lectures at Yale Medical School in 1825), he passed his examination and received a medical and surgical license. Soon he built up an impressive practice. In an era in which the average doctor prescribed calomel (mercurous chloride, a white tasteless purgative and fungicide) for practically every ailment except broken bones, "his method, developed empirically, was based on common sense, fresh air, good nursing, friendly but authoritative bedside manner, 'unstimulating' food, and as little medication as possible." Soon he simplified his life, renouncing luxuries such as alcoholic beverages and meat, and replacing his featherbed by a Spartan straw mattress. Within a few years he abjured "'all flesh, fish, and other highly stimulating and concentrated aliments,' and confined himself to milk (later, just water) and vegetables."

He was a man of boundless energy, and a seemingly tireless workhorse, writer and lecturer for the public good. His position as president of the American Vegetarian Society (organized in 1850) gave him new authority to advocate his Spartan brand of vegetarianism as the ultimate way to good health. Living his later years in Auburndale, Massachusetts, he died in 1859 (at age 61) of tuberculosis which had plagued him since his youth. His cousin, Bronson, outlived him by nearly 30 years.

4617. *British Vegetarian*. 1961. Soya milk for household use. March/April. p. 93.

• **Summary:** Granose Foods will soon be in a position to supply two varieties of spray-dried soya milk, Soyolac and Soyagen, made by one of their associated companies, Loma Linda Food Company in Arlington, California. Soyolac is specially prepared for infants, whereas Soyagen is for general use. A table compares the nutritional composition of the two products in both powdered and reconstituted forms. Reconstituted, Soyolac contains 2.85% protein and 3.39% fat vs. 2.80% and 2.80% for Soyagen. Sold in 16-oz. tins, Soyolac retails for 10 shillings 6 pence, and Granogen for 9 shillings 6 pence.

Address: Constance (Konstanz), Germany.

4619. *JAMA: J. of the American Medical Association*. 1961. Diet and stress in vascular disease (Editorial). 176(9):806-07. June 3. [6 ref]

• **Summary:** This editorial states: "Sixty-five years ago [in 1896, William] Osler listed heredity, rich diet, alcohol, tobacco and, above all, the 'worry and strain of modern life' as the causes of arteriosclerosis and especially of

heart disease. Within a decade, experiments were under way which showed that diets rich in milk solids and egg yolk were related to disease in rabbits; 20 years later American pathologists confirmed Anichkov's experimental arteriosclerosis following upon cholesterol feeding. In the past two decades, studies on men have confirmed Snapper's thesis that vegetable oils and low animal fat in the diet caused the striking difference in arterial disease and in venous thrombo-embolism observed in Peiping [China] and in Amsterdam. Thomas' comparison [in 1960] of thrombo-embolic disease and coronary disease in Negroes in St. Louis [Missouri] and in Uganda (matched necropsies of those over 40 years old) indicates that a vegetarian diet can prevent 90 per cent of our thrombo-embolic disease and 97 per cent of our coronary occlusions."

4620. Nicholls, Lucius. 1961. *Tropical nutrition and dietetics*. 4th ed. Revised by H.M. Sinclair and D.B. Jelliffe. London: Baillière, Tindall and Cox. xii + 457 p. July. Illust. Index. 24 cm. [100+* ref]

• **Summary:** Preface to the fourth edition: Nutritional science has advanced at an accelerating rate since the last edition. The section on protein malnutrition in infants has had to be rewritten; it is "now the most immediately practical problem of tropical countries." "The advance of nutritional science emphasizes the urgent need to carry it into the field through public health measures and especially health education."

"Now problems of even greater magnitude are created by the growth of population. The world's population of 2,800 million [2.8 billion] is expanding at a rate that will double by the end of the century... The problem of an increasing population in a world where already two-thirds of the population is underfed is the greatest challenge facing mankind today" (Oxford, Jan. 1961).

Contents of Chapter II, "Proteins:" Introduction. Chemical nature of the proteins (hydrolysis of starches and proteins compared, classification of the amino-acids). Building the proteins. The proportion of amino-acids present in various proteins. Nutritive value of proteins: Complete proteins (including glicinin [sic, glycinin] of soya bean), partially incomplete, incomplete proteins (zein of maize and gelatin). Theoretical protein requirements for maintenance and growth (Biological value, Net utilization). Limiting amino-acids giving a relative chemical score. Supplementing. Theoretical protein requirement during pregnancy and lactation. The effect of cooking on proteins. Specific dynamic action of proteins. The amount of protein in diets (high, low, vegetarian, true vegetarianism [avoids all foods of animal origin], lacto-vegetarians).

The contents of the section on "Pulses" (p. 227-43) is very similar to that in the 1951 edition:

A table from FAO (p. 260) shows that six oilseeds supply almost all of the world's vegetable oil: Soya bean 37.0%. Cottonseed 22.3%. Groundnut 20.2%. Rapeseed

9.8%. Sesame 2.7%. Sunflower 2.5%. The next section (p. 260-64) is “Palm nuts and oils.”

Table 53 (p. 396-97) gives the botanical name and composition of cereals and bread. Table 54 (p. 398-99) gives the botanical name and composition of pulses, incl. soya bean, soya bean curd [tofu], soya bean milk, carob bean, Goa bean, tepary bean

Note: The title C.M.G. (Companion of St. Michael and St. George) is an honor conferred upon those for distinguished service in the British colonies or commonwealth. Address: C.M.G., B.A. (Cantab.), M.D., B.C. • **Summary:** The author lived 1877-1954. This primarily anecdotal history contains an abundance of information and serves as a useful reference.

4626. Armytage, Walter H.G. 1961. *Heavens below: Utopian experiments in England, 1560-1960*. London: Routledge and Kegan Paul; Toronto, Ontario, Canada: University of Toronto Press. vii + 458 p. Index. 23 cm. Series: Studies in Social History. Reissued in 2007 by Routledge. [800* footnotes]

• **Summary:** One chapter, “Ham Common and the Transcendentalists” (p. 171-83) includes a discussion of Alcott House: James Pierrepont Greaves (1777-1842) and the Concordium at Ham Common in Surrey (southwest of London) played a significant role in the development of utopian socialism in England in the second quarter of the 19th century. Greaves' own career had taken him via Yverdon in Switzerland where (1817) he had joined Pestalozzi, the Swiss educational reformer; London where (1825) he had become secretary of the London Infant School Society; Randwick in Gloucestershire where (1832) he had engaged in a scheme for the benefit of agricultural labourers; and London again, where the Aesthetic Society, founded by him, met at his house in Burton Crescent. He was a follower of Jacob Boehme and became saturated with German transcendentalism. But it was at Alcott House on Ham Common that his followers congregated and a school was organized to give effect to his educational views. It was, however, not until Greaves' death in March 1842 that Alcott House was reorganized as the First Concordium, a community based on Greaves' transcendental, vegetarian and ascetic principles. ‘The members, to be called Concordists, were to unite for the purposes of submitting to the universal law until they ‘accord or concord with it’. Here in the Concordium, the triune law of goodness, wisdom and power,’ the most lawful, intelligent and efficient conditions for divine progress in humanity’ would be worked out. The

regimen was based on the spartan rules of life enunciated by James Pierrepont Greaves: 'Pure air, simple food, exercise and cold water are much more beneficial to man, than any national doctrinal creeds, or any churches, chapels, or cathedrals'. And a stern regimen it proved to be. Members rose at 5.30 a.m. and after repairing to the bath-house went for their morning run; at 6.15 a bell rang summoning them to their occupation. They breakfasted at 8 a.m. on brown bread, or Scotch oatmeal bread, figs and cold vegetables, returning at 9 a.m. to their occupations. The children lunched at 12 noon, the adults at 1 p.m., and during each meal there would be reading. At two o'clock in the afternoon they would return to work, continuing till half past four. The last meal, signaled by the ringing of a bell, took place at 6 p.m., and after this there was a lecture. The meals were spartan and strict vegetarian [vegan]. The consumption of flesh, butter, cheese, eggs, mustard, vinegar, oil, spices, beer, wine, tea, coffee, and chocolate was banned; and the school (with fees of £5 a quarter) specialized in shoemaking, carpentry and gardening. Friendly visitors were accommodated on Sundays and Mondays at 6d. a meal and 6d. a bed. One of these visitors (on 28 April 1843) was Robert Owen. The dress was equally utilitarian: each member wore a brown holland or cotton blouse, a neat check shirt without neck cloth or any other clumsy wrapper round the neck. Hats and caps were rarely worn on the premises. But, living as they did near the metropolis, concessions had to be made: 'When going out each dresses rather more in accordance with the world without, which to them is more like a foreign country than their native abode.' One of the principal objects of the Concordium was to prepare missionaries for the cause. A new monthly *The New Age*, first published in May 1843 from 'the Concordium Press' stressed the importance of employing the people on the land' (p. 178-90).

Alcott returned to the United States in October. With him went H.G. Wright, Charles Lane, and Lane's son William. After their departure, Alcott House was reorganized around a stern daily schedule and regimen. Fruitlands is discussed.

Page 183: "In 1848 the Concordium came to an end. The *Reasoner* reported it had 'passed into new hands. Its present use is that of an educational asylum for orphans whose parents have died of cholera.' The school was run on vegetarian principles."

Vegetarianism is mentioned throughout this book. See pages 16, p. 33 (Roger Crab was a vegetarian ascetic), p. 37 (George Cheyne was a Falstaffian figure, 30 years old and 31 stones [1 stone = 14 lb, so Cheyne weighed about 434 lb!] until he became a vegetarian), p. 138 (Mrs. Chichester was a vegetarian), 176-83 (Ham Common), p. 198-99 (Goodwyn Barmby of the Hanwell Communitorium), p. 300 (George Stuart and the Totley Experiment), p. 309 (A.P. Sinnett and Anna Kingsford founded the London Lodge. They issued a journal titled *The Vegetarian*), p. 310-12 (In

the chapter titled "Anarchist Colonies." Edward Carpenter and Hugh Mapleton. Mapleton "joined Albert Broadbent, Secretary of the Manchester Vegetarian Society, and began to manufacture vegetarian foods. With Henry Mapleton they set up a factory and a large house was taken over at 3, Dolphin Street, Manchester. These premises were eventually extended to embrace two more houses. In 1907 a Public Limited Company was formed with a capital subscribed by an enthusiastic body of Food Reform pioneers. A larger factory was taken at Wardle, Lancashire, and since the business still continued to develop a larger factory was chosen at Garston. This is now one of the largest vegetarian food manufacturing firms in the country"), p. 350 (Leicester was the last of the Tolstoyan communities to start, in Jan. 1899, with five members. Like Leo Tolstoy, all were vegetarians), p. 374 ("a vegetarian and member of the Theosophical Society,..."), p. 437-38 (today's vegetarian, back-to-the-land communities were influenced by John Robens [sic, John Robins {1650-1652}], Dr. Cheyne, Charles Lane, the Ham Concordists, the Tolstoyans, Tom Mann, Stafford Cripps, and George Bernard Shaw). Address: Prof. of Education, Sheffield Univ., England.

• **Summary:** The back cover states: "From Dr. Graham (inventor of the Graham cracker) to Dr. Jarvis, the best-selling author of 'Folk Medicine', this book tells the astonishing story of a hundred years of health foods and faddists. It names the promoters and the products. It cites the findings of the Food and Drug Administration. It quotes the warnings of the American Medical Association. It completely exposes the hokum and ballyhoo of the health food business—now bilking the public of \$2,000 million ever year—and shows why crackpot food fads are a waste of money at best and a serious danger to the health of those suffering from real illnesses.

"We are facing an organized dissemination of medical and nutritional quackery which takes the concentrated efforts of all of us to combat"—George Larrick, Commissioner Food and Drug Administration."

In fact, this book ridicules the very people whose ideas and lives it purports to discuss; it sarcastically paints them all as "nuts." Its goal is not understanding but a tacit—and not so thinly veiled—endorsement of the contemporary Big Food, meat and medical industries. We wonder if this book was initiated and funded by big businesses who will always

oppose the growing interest in vegetarianism, etc. How could anyone describe Dr. John Harvey Kellogg as a “nut.” Yet some real “health food nuts” are also discussed in this book too.

Contents: 1. Of cabbages and things (a brief history of “health-foodism”; “For example the Greeks Porphyry and Pythagoras maintained that meats are unnatural foods for men, and repugnant, while fruits and vegetables were the natural nutriment). 2. Mr. Graham bakes a cracker (Sylvester Graham, William Cowherd, the Bible Christians, William Metcalfe). 3. Little men, little women, little food (Louisa May Alcott, Amos Bronson Alcott, William A. Alcott, vegetarianism, and the American Vegetarian Society; Fruitlands, Sylvester Graham). 4. Father Kneipp and his watering can (very effective water cure in Germany). 5. Mother White casts her brood upon the waters (Ellen G. White and James Caleb Jackson). 6. Snap! Crackle! Enter Dr. Kellogg! (Dr. John Harvey Kellogg, founder of the Battle Creek Sanitarium). 7. The battle of Battle Creek (Michigan and Seventh-day Adventists). 8. From pillar to Postum (Charles W. Post, Dr. J.H. Kellogg, Ellen G. White, the evils of coffee, Postum Cereal Food Coffee). 9. Kickapoo and Kellogg, too. 10. The Jungle, the sausage, and the law (Upton Sinclair, Harvey W. Wiley, and the formation of the FDA). 11. Chew, chew, baby (Fletcher, Chittenden). 12. Life along the alimentary canal (Metchnikoff, Kellogg, Henry Ford). 13. The bare torso king (Bernarr Macfadden). 14. The bare torso king rampant (Macfadden). 15. I see America starving (Alfred W. McCann) 16. How to stop your cow from drooling (selling nutrition, Colonel Dinshah Pestanji Framji Ghadiali of Bombay, India, and Malaga, New Jersey). 17. A plague on both your Hausers (Gayelord Hauser, Benedict Lust). 18. How to write about health foods (Lelord Kordel, Cathryn Elwood). 19. Mrs. Spratt’s millions (fat and dieting). 20. My mother squeaked (Dan Dale Alexander PhD and arthritis; Dr. D.C. Jarvis, *Folk Medicine*, honey and vinegar). 21. The poisons in your health food (how the public is being duped by health food hucksters; the American Medical Assoc. estimates this racket is now costing 10 million Americans over \$500 million a year). 22. Postscript to a sad tale.

In the Introduction, page 9 notes that many health nuts and food faddists “are of the most respectable sort.” “Among their number are best-selling authors such as Louisa May Alcott, Gayelord Benjamin Hauser, Upton Sinclair, D.C. Jarvis, and Elbert Hubbard. There are such distinguished scientists and innovators as Elie Metchnikoff, Dinshah Ghadiali (developer of Spectro-Chrome Therapy), Amos Bronson Alcott (the Seer of New England), and Dr. John Harvey Kellogg (inventor of cereal flakes, peanut butter, and the mechanical horse). There are famed industrialists, Henry Ford, Bernard Baruch, and John D. Rockefeller. There are entertainers, as Great Garbo and Robert Cummings, and religious leaders, as Sister [Ellen G.] White, founder of

Seventh Day Adventism.”

Colonel Dinshah Pestanji Framji Ghadiali was born in Bombay, India, in 1873, and came to the USA at the age of 38 (i.e. in about 1911). “His title derives from his position during the first world war as commander of the New York Police Reserve Air Service, a little-known organization which served little purpose. It was, however, an honorable civilian patriotic group... In 1920 Ghadiali brought forth one of the scientific wonders of our age—Spectro-Chrome Therapy.” Based on a vegetarian diet (also free of alcohol, tobacco, coffee and tea), the system also made liberal use of colored lights. “By 1924 Ghadiali was so successful that he opened a Spectro-Chrome Institute on 50 acres at Malaga, New Jersey.” In the early days Ghadiali earned more than \$3.5 million from sales of memberships, equipment, and his course. He served a 5-year sentence in a federal penitentiary for a violation of the Mann Act by a book he wrote, “Railroading a Citizen,” in which he accuses jealous doctors of trumping up charges against him. In the 1940s Colonel Ghadiali was prosecuted on the basis of his medical work. He was found guilty and sentenced to 3 years in jail—though his sentence was suspended—and he was fined \$20,000. His work, however, still has devoted followers (p. 151-52).

The author acknowledges the help of the U.S. Food and Drug Administration (FDA), Frederick Stare M.D., and the American Medical Association (AMA). Address: Popular scientific and medical reporter.

4629. Deutsch, Ronald M. 1961. Snap! Crackle! Enter Dr. Kellogg. The battle of Battle Creek. From pillar to postum (Document part). In: R.M. Deutsch. 1961. *The Nuts Among the Berries: An Exposé of America’s Food Fads*. New York, NY: Ballantine Books. 224 p. See p. 43-45.

• **Summary:** This is a largely unsympathetic and satirical treatment of the health reform work of Dr. John Harvey Kellogg. Page 50 notes that “In 1879 he married Ella Eaton, of Alfred Center, New York. Within ten years, from the burgeoning sales of his books and the food products he was developing, he had earned enough money to build Ella a twenty-room Queen Anne mansion close to the [Battle Creek] Sanitarium grounds. It was a lavish residence...” Dr. Kellogg drew no salary from the Sanitarium.

“Ella Kellogg kept busy around the Sanitarium. There was not much for her to do around the house, for two reasons. First there were any number of servants. And second, there were no children; Dr. Kellogg had stated publicly that sex bred evil diseases in young men, and therefore he was determined to live without sex as a demonstration that it could be done. Whatever the real reason, John Harvey Kellogg and Ella occupied separate apartments in their home. They were always good friends, and later they adopted a total of forty-two children...”

“We have seen Dr. Jackson’s water-cure establishment offer the first cereal product in *Granula*, crumbled bits of

baked wheat. Kellogg had come up with much the same thing. He called it *Granola*. He was sued and changed the name to *Granose*.”

Charles W. Post, a Texan, went to Battle Creek to be cured. After 9 months at the San, Post gave up. He turned to studying the power of the mind, of mind over matter, Christian Science, and the like. Before long he got out of his wheelchair, declared that he was well, and went to work. Before he left the San, he offered to join forces with Dr. Kellogg in making breakfast cereals, but was rejected. In 1892 Post established La Vita Inn on 10 acres in Battle Creek; here the curative forces of both diet and mental healing were combined. Although meat was allowed, the other poisons were not.

Post cured people by telling them they were well—and wrote a book about it. He also wrote “The Road to Wellville,” a pamphlet that he gave away. In 1895 Post started to make Postum Cereal Food Coffee—just add water and serve as a hot drink in place of coffee. He first sold it in paper bags from a handcart in Battle Creek. Then he began to advertise the product widely and his sales soared. Eventually his ads focused on the ability of Postum to prevent “coffee nerves.” In 1898 he launched Grape Nuts, which he also sold as a health food. By 1901 Post had net income of a million dollars from his food business. “Imitators flocked to Battle Creek to stake their claims.” Before long, it was a boom town. Address: Popular scientific and medical reporter.

4632. Prakash, Om. 1961. Food and drinks in Ancient India. Delhi, India: Munshiram Manoharlal. *

• **Summary:** This book contains quite a few references to scriptural support for a vegetarian diet. Each chapter

lists foods eaten during different historical periods, and has a section on meat and alcoholic beverages. Often in that section there is a reference to scriptural injunctions against eating meat, and a footnote with the actual quote. Unfortunately the quotes are in Sanskrit. However, the author lists the source book, chapter, and verse in English abbreviations following each quotation. The quotations are mostly from the *Smriti* literature, the lawbooks, of which translations do exist.

Note: Miriam Hospodar who sent this citation (March 1995) notes: “I have done an enormous amount of reading on Indian food history, and this is the first book I have found that actually cites scriptural references to a meatless diet.”

4633. Rodale, J.I. ed. 1961. The complete book of food and nutrition. Emmaus, Pennsylvania: Rodale Books. 1054 p. Index. 23 cm.

• **Summary:** J.I. Rodale recommends the consumption of natural meat and eggs. He discourages humans from consuming or using milk, chemicalized meats, added salt, sugar, chocolate, aluminium utensils, and heated or hydrogenated fats. Throughout this book, he uses scientific sources and cites them carefully.

Chapters 30-40 (p. 116-56) are a critique of cow’s milk. Man has made the cow into a milk machine, with ever larger udders, which can produce 75 times as much milk per year as in Biblical times. For adults, milk may cause lactose intolerance, allergies and excessive tallness, and may contain undesirable antibiotics.

Chapter 40, titled “Nutritive substitutes for milk” (p. 154-55), mentions “soybean milk and Tahini milk which is a milk made from ground sesame seeds. Tahini milk appears to us to be an excellent substitute for milk in the diet because of its extremely high content of calcium” (p. 155).

Dr. Stefansson (p. 69-72) lived for one year in good health on meat alone. The discovery of cereal culture 2,000 years ago was the beginning of civilization and human degeneration. The human digestive tract has not had time to adjust to this change. It took humans 2 million years to adapt to the diet of the primitive human hunter (consisting mainly of proteins and animal fats) from the largely vegetarian diet of the anthropoids. “It is extremely difficult to plan a vegetarian diet in which the essential amino acids will all be represented in their proper proportion.”

Chapter 127, “How to sprout beans” (p. 472-74), discusses mainly how to sprout soybeans, and their nutritional value. A table compares the vitamin and mineral content of soybean sprouts and mung bean sprouts; the former are much more nutritious.

Chapter 153, “Soybeans—The wonder food” (p. 536-41) has the following contents: Introduction. How nutritious are soybeans? (“Soybeans are one of the few non-animal proteins which are complete—that is, contain all of the essential amino acids in good proportion.”) Sprouting

beans for vitamin C. Soybeans are economical (says the best book on soybeans is *Soybeans for Health, Longevity and Economy*, by Philip S. Chen, Ph.D.). Soybean milk for infants. “Soybeans are richer in potassium than any other food except brewer’s yeast which, of course, is eaten in much smaller quantities. They contain more pantothenic acid than any other food except egg yolk, brewer’s yeast, liver, rice bran, and wheat bran. The iron in soybeans is 96 per cent ‘available’—that is, digestible and used by the body.” Chapter 154, “Soya milk and soya curds” (p. 541-42), by Dr. W. Kring, of Dusseldorf discusses: Use of soybeans in East Asia. Fresh soya milk for every household. *Acidophilus* soya milk—Soya curds. Making soya cheese or tofu [at home].

Note 1. This is the earliest English-language document seen (April 2013) that uses the term “soya curds” in connection with tofu.

Note 2. This is the earliest English-language document seen (Sept. 2012) that contains the term “*Acidophilus* soya milk” (or “*Acidophilus* soymilk”) regardless of capitalization, hyphenation, or spaces.

Note 3. This is the earliest document seen (Dec. 2020) that uses the term “lactose intolerance” in connection with soy.

Chapter 178, “Eggs, meat and soybeans” (p. 675-77) gives a nutritional comparison of these three high-protein foods. One section titled “Meat substitutes” begins: “Soybeans should be a part of your diet as a substitute for meat.” It continues: “Even though you include plenty of meat in your diet, make use of soybean protein, too. If your family does not know soybeans, get some and begin to introduce them to a wonder food.”

Chapter 169, “Are chemical fertilizers harming our food” (p. 618-24) is part of a statement made by J.I. Rodale on December 15, 1950, to a Congressional Committee formed to investigate chemical fertilizers. He argues that the organic method is “far superior to the present general practice with respect to fertilizer usage, not only from the human health standpoint but from the point of view of preventing soil erosion and giving higher yields at a lower cost.” Also discusses: History of the organic method. What is the organic method? What is a chemical fertilizer? The health aspect (experiments showing a much higher survival rate in mice fed organically grown food). More vitamins in “organic” food. Physicians praise the organic method. Rejection by our government (and request that agricultural experiment stations test and compare the two methods).

Chapter 173 titled “Investigating Primitive Diet” (p. 642-54) contains a detailed summary of the work of Weston A. Price, D.D.S., as described in his book *Nutrition and Physical Degeneration*. This book is available from the Lee Foundation for Nutritional Research, 2023 W. Wisconsin Ave., Milwaukee, Wisconsin.

Chapter 182, titled “When you use fats and oils” (p. 682-83) discusses margarine, which is made from vegetable

fats which have been hydrogenated. Soybean oil is one of the oils use to make margarine. “As you know, we do not recommend using margarine, mostly because of the many chemical substances used in it, of which the synthetic vitamin A is only one. Artificial coloring, preservatives and so forth are also used. But, in addition, hydrogenating the oils to make them solid destroys most of the essential fatty acids which are the chief reason for eating vegetable oil. So margarine is no better than butter as a spread, in spite of the fact that it is made from substances that do not contain cholesterol.” “Soybean oil is another popular vegetable oil.” Rodale especially recommends “our old friend, sunflower seed oil”—which is rich in vitamin E and linoleic acid.

Chapter 183 titled “Heated fats can cause cancer” (p. 686-90) summarizes several scientific studies and notes that “Hydrogenated fats are everywhere” in our food supply. “Finally, don’t buy hydrogenated shortenings (the solid kind)...”

Chapter 198 titled “Who pays for nutrition research?” (p. 741+) begins: “Dr. Stare’s Nutrition Department (at Harvard University, Massachusetts) received from Food Industries and Foundations representative of their interests between and including the fiscal year 1950 to 1956 gifts totaling approximately \$378,000, half of which was from the Sugar Research Foundation, supported by the sugar interests, and the Nutrition Foundation, supported largely by commercial food processors. A large portion of the other half was from the chemical and drug interests.

“This challenging statement sets the tone for a series of open letters from the Boston Nutrition Society, Incorporated, to Dr. Nathan M. Pusey, President of Harvard University. We think readers will find in these letters the answer to their puzzled query ‘Why?’ Why must we eat doctored up, chemicalized, refined, cheapened food and above all, why must some of our top food scientists, men like Dr. Stare of Harvard, call everyone a faddist and a crackpot who points out that the modern American food is not everything it should be?

“The open letters hit at the very heart of the problem. Much university research on nutrition is being financed by the very folks who profit from selling this worthless food.”

Chapter 199, “A British nutritionist takes stock,” summarizes an article titled “Food and Health,” by Dr. H.M. Sinclair (*British Medical Journal*, 14 Dec. 1957) about the dangers of feeding too much cow’s milk to infants and children. Another article on the same subject by Dr. Milton J.E. Senn, was published in *McCall’s* (Jan. 1958). Chapter 272 is “Kelp for trace minerals” (p. 1005-09) and Chapter 273 is “The value of seaweed nutrition” (p. 1010-12).

Chapter 274 is “Do you need lecithin?” (p. 1013-17; Contents: Introduction. How can you avoid cholesterol deposits? Lecithin and cholesterol in natural foods. Experiments with lecithin prove its healthfulness. Why do we not get enough lecithin? Take lecithin as a food

supplement {it is made chiefly from soybeans}).

Chapter 275 is “Why do you need lecithin?” (p. 1018-1021); Contents: Introduction. The what and how of lecithin. Processing at fault. Where can you get lecithin in your diet? (seeds and cold-pressed oils). Hydrogenation (which destroys all the lecithin, B vitamins, vitamin E, and essential fatty acids).

Chapter 39, “Miscellany on milk” (p. 146-54), documents many problems with cow’s milk. Its contents: Introduction, detergents in milk, antibiotics in milk, some infants can’t take milk at all, is milk the universal antidote?, an all-milk diet is hazardous, ulcer patients beware!, cavities caused by milk, DDT contamination, misuse of calcium, radioactive substances in milk, milk as a cause of goiter, a famous nutritionist speaks (Dr. Norman Jolliffe), milk’s value questioned (by McCance and Widdowson), allergies to milk sugar, dermatologist criticizes both bread and milk, and an old (1926) court decision on raw milk. Chapter 41: “Yogurt” (p. 156+). “Yogurt is probably the most popular of all so-called health foods”. In the 19th century, Metchnikoff was the first to investigate it scientifically.

Chapter 96: “Sesame seed—An ancient and nutritious food” (p. 342-44; Tahini milk makes a good milk substitute). Address: Emmaus, Pennsylvania.

4634. Rodale, J.I. ed. 1961. History of coffee and problems with its consumption. In: J.I. Rodale, ed. 1961. The Complete Book of Food and Nutrition. Emmaus, Pennsylvania: Rodale Books. 1054 p. See p. 5-17.

• **Summary:** Chapter 1 is “History of Coffee” (p. 5-8). Contents: Introduction. Coffee discovered. Processing the coffee bean. What coffee contains. How to make coffee (never boil it; use drip or vacuum pots). Statistics on coffee consumption. The earliest mention of coffee that can be found in the literature was about 99 A.D., when an Arab physician discoursed on it. The berries were first used as food, ground finely and mixed with fat. Coffee was introduced to Europe in about 1650 and to America in 1668. As early as 1746 a learned Italian writer noted that coffee was detrimental to good health. Similar criticisms started in the USA in the 1800s. “Coffee is the American beverage, just as tea is the national beverage of England.” In the USA eight out of ten adults drink coffee daily and one out of four children drink it daily. An estimated 25% of all American coffee drinkers consume 5 or more cups per day.

Note: According to James Trager’s *Food Chronology* (1995, p. 109, 142): In 1600, smugglers broke the Arabian monopoly on coffee growing. They took seven seeds of unroasted coffee beans from the Arabian port of Mocha [also spelled Mokha or Al Mukha, as of 1998 a seaport in southwest Yemen] to the western ghats of southern India. In 1690 Dutch mariners smuggled coffee plants out of the Arab port of Mocha. They planted some in Java, their colony, and sent others to the botanical gardens at Amsterdam.

Chapter 2 is “Abundant evidence against coffee” (p. 9-16). Contents: Introduction. Dr. William Alexander [sic. Andrus] Alcott’s contributions (1844). An established fact—coffee is a poison. Habitual coffee drinking and stomach ulcers. Digestive juices stimulated. Coffee, heart disorders and blood pressure. Does a tired body need stimulation or rest? How effective is the coffee break? Coffee tars and cancer. Should pregnant women and nursing mothers drink coffee? Does coffee affect brain and nerve tissue?

Chapter 3 is “Coffee and blood sugar.” Address: Emmaus, Pennsylvania.

4635. Sakai, Sawako. 1961. Furusato no aji, haha no aji [The taste of my home village food, and of my mother’s food]. Tokyo. 269 p. Illust. 19 cm. [Jap]*

• **Summary:** The Japanese vegetarian cookbook includes recipes for wild plants. The author was born in 1907.

4636. Schweitzer, Albert. 1961. Civilization and ethics. 3rd ed. Translated by C.T. Campion and revised by Mrs. Charles E.B. Russell. London: Unwin Books. Published in association with Adam and Charles Black. 248 p. Index. 19 cm. [50+* ref]

• **Summary:** This is a pocketbook edition of the 1946 revised version. A “Note on translation” (p. 245-46), an expanded version of the one found at the front of the 1946 revision, explains how central German terms (*Auseinandersetzung*, *civilization*, *ethics* / *die Ethik*, *Geist*, *geistig*, *reverence for life*, *Weltanschauung* / *world-view*, *world- and life-affirmation*, *world- and life-negation*) have been translated. Address: D. Theol., D. Phil, D. Med., Strasbourg, Alsace, France.

4637. Simoons, Frederick J. 1961. Eat not this flesh: food avoidances in the Old World. Madison, Wisconsin: University of Wisconsin Press. xiii + 241 p. Illust. Maps. 25 cm.

• **Summary:** The ancient Persians were omnivorous, but according to Porphyry (A.D. 223-304), the magi (plural of magus; members of the hereditary priestly class among the ancient Medes and Persians) abstained from eating flesh.

Note: The early religion of Persia was Zoroastrianism, founded by Zoroaster (in Old Iranian Zarathustra) who lived about 628 to 551 B.C.

There are many sections on avoidance of non-human milk. The index states: “Milk: avoidance of, 9, 48, 52, 82-83, 120, 162; East African concern with cattle for quality of, 59; camel, 89; use with meat forbidden [Kosher], 109; usefulness of, as basis for prohibition of cattle slaughter, 114-15; belief that flesh food is transformed into mother’s milk, 118; in Tibet, given by dzo and yaks, 162.”

4638. Trop, Jack Dunn. 1961. You don’t have to be sick! Nature’s secrets for better health, longer life, and more joyful

living. New York, NY: The Julian Press, Inc. 231 p. No index. 22 cm. [49 ref]

• **Summary:** Written from the natural hygiene viewpoint, this book advocates a vegetarian diet with as little milk, dairy products, and eggs as possible. Page 170 notes that soy beans are one good source of protein.

4639. Waerland, Ebba (Langenskiöld). 1961. Rebuilding health: The Waerland method of natural therapy, with case histories. Translated from the Swedish by Isabella M. Gibbs. New York, NY: Devin-Adair Co. 252 p. Foreword to the American ed. by Royal Lee. 21 cm.

• **Summary:** Ebba Waerland was born Ebba Margaretha Langenskiöld on 15 October 1897 in Stockholm, Sweden, of Finnish ancestry on both sides. In 1922 she married Eduard Hoffman, a German diplomat, and had two children. Her husband died in 1940. In 1946 she married the famous nutritional physiologist, writer, and philosopher, Arne Waerland, who was the founder of the reformed diet and the reformed way of life which bears his name and now extends to the far corners of the earth. Sanatoriums based on his principles are found in Germany, Sweden, Switzerland, Italy, and Iceland, and the Waerland diet is available in hotels and boarding houses in many countries.

Page 13 gives the “Seven golden rules for health,” which include eating lacto-ovo vegetarian diet with uncooked green and root vegetables, sleeping with the windows open and spending as much time as possible in pure, fresh air, and cultivating a positive, cheerful attitude toward life. Arne Waerland said: “We are not concerned with diseases but with mistakes in living. Get rid of the mistakes and the diseases will disappear by themselves.” Chapter 3 is his “Daily program for health.”

Page 208 notes that soya beans can be sprouted in the same way as wheat.

4640. Yang, C.K. 1961. Religion in Chinese society. Berkeley, Los Angeles, London: University of California Press. *

4641. Grand Rapids Press. 1962. ‘Meat’ for vegetarians. He lost his job, but made a success manufacturing. *Wonderland: The West Michigan Magazine*. Jan. 21.

• **Summary:** “Cedar Lake’s Vep Sias faced a dilemma in 1949. The work he had been doing suddenly was discontinued when the Cedar Lake Academy-operated food processing plant closed its doors. He had purchased a new home shortly before; he had a family to support; and he did not want to leave that Montcalm County village. He faced the possibility of losing his new home unless he found other work in the area—a slim prospect.

“Sias made a decision then that he has never regretted. He purchased the food manufacturing rights from the academy, a Seventh Day Adventist high school, and started

a business in the basement of his home that had proved unprofitable to its former owners. His wife, Ruth, whom he had met at the academy when both were students there, worked at his side, and thus was born Cedar Lake Foods, manufacturers of high protein meat substitutes.

“As a small operation, Cedar Lake Foods caught on. There was a sizable demand for meatless chops, meatless burgers and other meat substitute products from persons under doctors’ orders not to use any form of animal proteins, from vegetarians, from some religious groups and from persons who simply wanted to replace meat in their diet without sacrificing the meat flavor they liked.

“By 1959, Sias found he had to expand and so brought his business out of his basement and into a newly-constructed plant. He plans another expansion program this year for more equipment and more storage space.

“Four persons are kept busy putting up frankfurters, chops and burgers without a trace of meat. They are made by combining the proteins of wheat and soya and certain spices into a palatable food simulating meat in flavor and texture. The products are called vegetarian chops, vegeburgers and the like.

“In connection with the manufacturing end, Sias also opened a retail unit in his plant where he stocks on his shelves his products as well as similar competitive products. ‘I try to keep a complete vegetarian line, even including foods of my competitors, because this type of food isn’t available in every store, and there are people who aren’t always satisfied with one product or one man’s work,’ he said. His retail operation is but a small portion of his business. The bulk of his stock goes to distributing houses in the states of Washington and Florida, and Washington, D.C.

You would think that Vep and Ruth Sias, who make nothing but vegetarian foods, and their five children would be strict vegetarians.

“‘No,’ says Sias. ‘We eat a good deal of our vegetable foods, but we like meat, also. However, if the children have a choice they pick vegetarian chops every time over meat. The chops are as tasty as meat but they are not as tough and are easier to chew.’”

Photos show: (1) Vep Sias, his wife Ruth, and their son Bobbie. (2) Vep Sias checks his stock on shelves of the retail unit at his food factory. He handles only vegetarian and health foods, all meatless, and stocks his competitors’ products as well as his own. Address: Michigan.

4642. Chen, Philip S.; Chen, Helen D. 1962. Soybeans for health, longevity, and economy. 2nd ed. South Lancaster, Massachusetts: The Chemical Elements. xii + 242 p. Jan. Illust. Index. 21 cm. 1st ed. 1956. [24 ref]

• **Summary:** This book is identical to the original 1956 edition, third printing (the dedication is to William J. Morse and Harry W. Miller), except that: (1) Table 1, titled “Soybean production in the United States” (p. 2) gives

statistics to 1960, instead of 1958. (2) Appendix B (p. 224-36) has been updated based on the 1961 *Soybean Blue Book*. (3) The dust jacket has been updated. On the rear dust jacket is a portrait photo of Dr. Philip Chen and a biographical sketch. (4) The paper is slightly thicker.

Note: In 1962 Chen wrote *A New Look at God*, published by Chemical Elements (288 p.). Address: 1. Prof. of Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

4643. Lee, Kyu Taik; Kim, D.N.; Han, Y.S.; Goodale, F. 1962. Geographic studies of arteriosclerosis. The effect of a strict vegetarian diet on serum lipid and electrocardiographic patterns. *Archives of Environmental Health* 4(1):4-10. Jan. [14 ref]

• **Summary:** Korean Buddhist monks and nuns following a strict vegetarian [vegan] diet had a lower incidence of arteriosclerosis and considerably lower levels of cholesterol and other serum lipids than lacto-vegetarian Trappist monks in the USA, and markedly lower levels than Benedictine monks and U.S. Army personnel, both of whom consumed large amounts of animal fats. Address: 1-3. Dep. of Medicine, Kyungpook Univ., Taegu, South Korea, and Dep. of Pathology, Washington Univ., St. Louis, Missouri. 4. Dep. of Pathology, Albany Medical College, Albany, New York.

4644. Alsdorf, Ludwig. 1962. Beitarege zur Geschichte von Vegetarismus und Rinderverehrung in Indien [Contributions to the history of vegetarianism and cow-veneration in India]. *Akademie der Wissenschaften und der Literatur—Abhandlungen der Geistes- und Sozialwissenschaftlichen Klasse* No. 6. p. 557-625. Proceedings of a public session held 28 April 1961. (Mainz, Germany). [70+ footnotes. Ger]

• **Summary:** An excellent German-language study of Indian vegetarianism. Discusses Hinduism, vegetarianism, ahimsa, the Mahabharata, Buddhism. Ludwig Alsdorf was born in 1904.

Also published by Akademie der Wissenschaften as a 69-page monograph. In Kommission bei F. Steiner, Wiesbaden. 25 cm. Address: Germany.

4645. *British Vegetarian*. 1962. Dr. Harry Willis Miller. March/April. p. 96.

• **Summary:** Discusses the excellent work of Dr. Harry W. Miller with plantmilks and infant nutrition. Dr. Miller, Emeritus Director of the International Nutrition Research Foundation in Arlington, California, has just been elected an honorary member of the Vegetarian Nutritional Research Council.

“Dr. Miller has recently been visiting different parts of the Far East setting up equipment for the production of liquid plantmilks in under-developed areas...” A large photo shows Dr. Miller.

4646. Smith, A.D.M. 1962. Veganism: A clinical survey with observations on vitamin-B-12 metabolism. *British Medical Journal* i(5293):1655-58. June 16. [20 ref]

• **Summary:** This paper attempts to understand why so many vegans do NOT develop vitamin B-12 deficiency. Twelve vegans were examined clinically; they had lived on a vegan diet for from 4 to 30 years and their serum vitamin B-12 levels, estimated by the *Lactobacillus leichmanii* method with cyanide extraction, ranged from 48 to 220 micro-micrograms per milliliter and averaged $128 \pm 15 \mu\text{g/ml}$. The normal range of B-12 for non-vegetarians from the conventional viewpoint is 140 to 900 $\mu\text{g/ml}$. Of the 12, nine demonstrated complete absence of symptoms of vitamin B-12 deficiency, but electroencephalograms (EEGs) were normal in only two subjects. Of the 3 with symptoms, two were found to have “unequivocal subacute combined degeneration of the [spinal] cord.” The third had complex symptoms which are described in detail and which may have had an “onset due to psychogenic causes.” Address: Leverhulme Research Scholar, Inst. of Clinical Research, Middlesex Hospital Medical School and Central Middlesex Hospital, London.

4647. Hardinge, Mervyn G.; Crooks, Hulda; Stare, Frederick J. 1962. Nutritional studies of vegetarians. IV. Dietary fatty acids and serum cholesterol levels. *American J. of Clinical Nutrition* 10(6):516-24. June. [37 ref]

• **Summary:** The subjects studied were the same as in part I of this study. The study found: (1) A significant negative correlation between serum cholesterol and consumption of unsaturated fatty acids; (2) A positive correlation between consumption of animal fat and serum cholesterol; (3) An inverse relationship between the ratio of polyunsaturated to saturated fatty acids and serum cholesterol; (4) In the younger age groups no significant difference between serum cholesterol levels in vegetarians and non-vegetarians. Address: 1-2. Dep. of Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California; 3. Prof. & Chairman, Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

4648. *Guardian (Manchester)*. 1962. Milk made from vegetables may be on sale soon. Aug. 27. p. 2, col. 3.

• **Summary:** “Milk made from outer cabbage leaves, pea pods, and other greenstuffs may soon be on sale as a result of experiments by scientists working in the Vegetarian Nutritional Research Centre, Garston, Watford.” Dr. Frank Wokes, director of the research center, believes that there will never be enough cow’s milk to supply all the world’s children or to meet all the protein deficiencies. Before the end of this year, the Centre hopes to open a pilot plant for the process; large scale production would start later.

Related experiments have been made since before World

War I, and “a plantmilk, made from cereals and pulses, has been on sale for some years.”

4649. *Times (London)*. 1962. Milk made from plants: Research scientists' experiments. Aug. 27. p. 5, col. 2.

• **Summary:** “Milk made from outer cabbage leaves, pea pods and other greenstuffs may soon be on sale after experiments by scientists working in the Vegetarian Nutritional Research Centre at Garston, Herts. They hope to open a pilot plant for the process before the end of this year... Basically, the raw materials used are the same as the cow eats.

“The scientists have got rid of a greenish colour in the man-made milk and now they hope to get rid of its slight vegetable flavour. Then the product would go on the market as a powder or a liquid, and it is expected to compete in price with cows' milk.”

“Dr. Frank Wokes, director of the research centre, said yesterday: ‘There can never be enough cow's milk for all the world's children or to solve all the protein deficiencies. But there is always plenty of greenstuffs such as we are using... The vitally important vitamin B12 must be added.

“A woman member of the research centre, now in her 80s, has offered to will her fortune for the production of plantmilk provided we are able to put on the market within a year of her death a plantmilk which is certified as satisfactory from a nutritional viewpoint. Another proviso is that its domestic value must be certified by Lady Dowding, wife of Air Chief Marshal Lord Dowding. Lady Dowding has been interested in the project for some years.”

4650. Dowding, Muriel (Lady). 1962. Why I am interested in plantmilk. *British Vegetarian*. July/Aug. p. 188-89.

• **Summary:** This famous woman and vegetarian (head of the Beauty Without Cruelty campaign) is speaking at the [Vegetarian Nutritional Research] Centre located at the Stanborough School, Watford, Herts., England. The school is run by Seventh-day Adventists. She speaks of the cruelty involved when cows are made to give milk and dairy products, and looks forward to the alternate milk that this centre will provide, at the beginning of a new age—the Age of Aquarius.

4651. Bradley, Charles C. 1962. Human water needs and water use in America. *Science* 138(3539):489-91. Oct. 26. [4 ref]

• **Summary:** “A permanent water shortage affecting our standard of living will occur before the year 2000.” Note 1. A vegetarian diet requires a shorter food chain and thus less water. The transpiration ratio for a given plant is the weight of water required to produce 1 unit dry weight of that plant. Wheat has a transpiration ratio of 500; that is, ideally it takes 500 pounds of water circulating through the wheat plant from the soil to the air to bring 1 pound (dry weight)

of wheat plant to maturity. Since wheat represents about half the weight of the wheat plant, it takes about 1,000 pounds of water to make 1 pound of milling wheat or (roughly) 1 pound of bread.

“An adult human has a daily food requirement of about 2½ pounds, dry weight. If he is strictly a vegetarian,” he could live on about 2½ pounds of bread. This would require about 2,500 lb/day of water. One gallon of water weighs 8.33 lb, so 2,500 lb = 300.12 gallons. Thus the theoretical minimum amount of water required to sustain human life is about 300 gallons per person per day. It is estimated that it takes about 300 gallons or 2,500 pounds of water to produce 2.5 pounds of bread, which could theoretically sustain human life for one day. “The introduction of animal protein to a man's diet lengthens the food chain, thereby greatly increasing the water requirement. To produce a simplified but generous American diet of 1 pound of beef and 2 pounds of bread per day requires 2,500 gallons/day, or 8 times as much as if no meat were used. “The water cost of a pound of meat is about 25 times that of a pound of vegetable” [such as bread].

Once the population of America reaches 230 million, our standard of living will start to suffer from lack of water. “There is little doubt that America will have reached that population figure well before the year 2000. The evidence of the moment suggests, then, that young Americans alive today will see a significant deterioration in their standard of living before they are much past middle age. Improved cropping, mulching, and other conservation practices could, of course, extend the grace period by a few years.”

Note 2. This is the earliest document seen (June 2002) concerning vegetarianism and water issues. It is also the earliest document seen (March 2003) concerning global water shortages. Address: Montana State College, Bozeman.

4652. Jadhav, Malati; Webb, J.K.G.; Vaishnava, S.; Baker, S.J. 1962. Vitamin B-12 deficiency in Indian infants—A clinical syndrome. *Lancet* ii(7262):903-04. Nov. 3. [46 ref]

• **Summary:** “Vitamin-B12, deficiency is thought to be rare in children. Megaloblastic anaemia of infancy in the West is commonly associated with folic-acid deficiency (Zuelzer and Rutzky 1953, Ungley 1955, Wintrobe 1961). But vitamin-B12 deficiency in the mother during pregnancy and the puerperium has been shown to cause vitamin-B12 deficiency in the foetus and newborn infant and a reduction in the vitamin-B12 content of breast-milk (Baker et al. 1962). This may lead to frank vitamin-B12 deficiency in breast-fed infants.

“In South India among infants with megaloblastic anaemia a definite clinical syndrome associated with vitamin-B12 deficiency has been encountered. This paper describes the syndrome and the investigations into the cause of the disorder.” Address: Christian Medical College Hospital, Vellore, South India.

4656. Madison Foods. 1962? The story of Madison Foods. Madison, Tennessee. 17 p. Undated. 22 x 10 cm.
 • **Summary:** Contents: The early history of Madison and the story of Madison Foods. Early pioneers (with photo taken in about 1909 including W.C. White, Ellen G. White, Mr. and Mrs. Edson White, P.T. Magan, Mother Druillard, and E.A. Sutherland). Industries. Madison hospital offers you. Tasty, healthful Madison Foods: High in proteins (cans of the following are shown): Cheze-O-Soy, Com-Pro, Dinner Morsels, Kreme-O-Soy, Madison Burger, Madison Links, Not Meat, Soy Beans in Tomato Sauce, Nu-Steaks, Stakelets, Soyburger, Yum, Vigorost, Zoy-Koff.

The home of Madison Foods. Dr. Claxton (former U.S. Commissioner of Education) says. Dr. P.A. Webber. Madison College is vegetarian. Madison meat alternates for all. Kreme-O-Soy (a new double-strength milk-like canned beverage).

J.B. Craw (with photo), manager of Madison Foods, says: “New life has come to Madison Foods! The expansion program is moving forward. In fact, the entire food factory is being remodeled; new equipment is steadily and carefully being installed, and new products manufactured.

“Kreme-O-Soy, double strength liquid, is now on the market. It is an entirely New soy milk, an entirely New

Formula... in a little while we will have a powdered soy milk.

“We are glad to have H. Willis Miller, Jr., the son of H.W. Miller (China Doctor) with us. Willis is doing a wonderful job of engineering in the placing and manufacturing of newly designed equipment to fit our special need for the new products that will be coming out one by

1963).

President Davidson notes: "Madison Foods, an integral part of the college educational program accomplishes a three-fold mission. First, the food factory furnishes remunerative work for students to earn their way in school. Secondly, it provides a laboratory where the student may learn to do useful work with his hands, thus giving him a balance to his educational program.

one. We will soon have a modern plant of which we can be very proud."

Other new products: Madison Links, Com-Pro. A message from the president: Ralph M. Davidson (with photo). Note: He was president of Madison College from 1961 to

Thirdly, the successfully operated food factory will bring in means to subsidize the educational and instructional departments of the college."

Various other school buildings. (3) E.A. Sutherland. (4) Ellen G. White. (5) Students making foods in the food factory. (6) Dr. Perry Webber with many canned Madison Foods. (7) Four close-ups of a can of Kreme-O-Soy. (8) Group photo: Sam Yoshimura (production manager), P.A. Webber (PhD, consultant in chemistry and nutrition), J.B. Craw (manager), Dr. Harry W. Miller (the China Doctor), and Frank Miller (sales dept.). Address: Madison, Tennessee.

4657. Brandemuhl, William. 1963. Soybean history: aspects of Buddhist influence. Anthropology Dept., University of Wisconsin, Madison. 15 p. Jan. Unpublished manuscript. 28 cm. Summarized as "Early Soybeans Were Spread by Buddhists" in *Soybean Digest*, July 1963, p. 21. [52 ref]

• **Summary:** This research paper (which is not a thesis) was prepared for Anthropology 150a, taught by Dr. R.J. (Robert) Miller. Contents: Purpose of study. Method of study. Botanical history: Naming the soybean, the *Glycine ussuriensis* case, other genetic evidence, claim on the origin of the soybean. Initial utilization. Botanical dissemination. Soybean history–non-botanical: Legend, recorded Chinese soybean history, concluding notes on soybean origin and cultivation history. Buddhist influence on the development of the soybean: Soysauce or shōyu, miso, tofu, natto, ancient soybean food products, the soybean grows.

"Another principal concern of this paper is the Buddhist connection to soybean development. The introduction of soybeans, although an approximation at the very best, coincides quite closely with the spread of Buddhism in Japan. As shown later, Buddhism has a very close connection with soybean history and in many product sectors of soybean development, may have created or at least popularized them" (p. 1).

"Contrary to the above statement I submit the following data which I believe can easily be documented: 1. Emperor Shen-nung is a mythical character (letter from Herbert W.

Johnson, Research Agronomist, USDA / ARS [Agricultural Research Service] Crops Research Div., Beltsville, Maryland, 30 Aug. 1962). 2. Emperor Shen-nung was a legendary character who cannot be pinpointed to a date of 2838 B.C. (letter from Jung-pang Lo, Research Asst. Prof., Far Eastern and Russian Inst., Univ. of Washington, 6 Sept. 1962). 3. Shen-nung is a mythical ruler, never living at the date attributed to him or at any other date (letter from Edward H. Schaefer, Professor of Oriental Languages, Univ. of California, Berkeley, 6 Sept. 1962). 4. A work attributed to Shen-nung is called *Shen nung pen Ts'ao Ching* but since it contains many Han Period facts (around the beginning of the Christian era) it is believed to be a Post-Han work. This work is first mentioned by T'ao Hung-ching (who edited it) early in the 6th century A.D. (Jung-pang Lo). 5-6. The *Pen Ts'ao Kang Mu* was written by L. Shih-chen (1518-1593) in A.D. 1596 or 1597 (Jung-pang Lo, Schaefer)... 9. The word 'Shiyu' cannot be found in Chinese dictionaries. The name for the soybean in China being 'Ta-tou,' meaning big bean (Jung-pang Lo)."

"Concluding notes on soybean origin and cultivation history: *The Book of Poetry* (Shih-ching) mentions boiling shu (pulse) and the *Erh-ya* (a Chou period lexicon, authorship attributed to Confucius or his disciples) mentions Jung-shu. Kao yu, the commentator, remarked that the Jung-shu (pulse of the Hu people) which was also known as Ta-tou (the soybean). Jung was a term used by the Chinese in the Chou period for the non-Chinese people of the North and Ju was a term used by the Chinese people of the North and West. This would seem to indicate that the soybean was introduced to China from the non-Chinese people of the North. Also supporting this is the *Chou-shu* by Hsi meng, in which there is a reference to Shan-jung shu (pulse of the Jung people of the mountains). A commentator explains that the Shan-jung were tribes in the Northeast (Manchuria).

"The Kuang-Tzu contains a passage saying that after Duke Huan of Chi (7 B.C.) defeated the Shan-jung the Jung-shu came to be known throughout China. Chia su-hsieh (5 A.D.) in his book *Ch'i-min Yao-shu* (Ts'tung-shu Chi-ch'eng, editor) quoted the *Shen-nung pen Ts'ao* as saying that Ta-tou (the big bean) was the Hu-Tou (Hu peoples' bean) which Chang Ch'ien brought back from his exploration of central Asia in the first century B.C., there being two varieties. In the Han period both Ts'ui shih and Fansheng in their books on farming techniques mention cultivation of the Ta-tou and its use in famine relief. The *Pen Ts'ao Kang Mu* (1596), mentioned earlier, has a long discourse on the medical properties of the Ta-tou (Jung-pang Lo)."

"Buddhist influence on the development of the soybean: Although references to the Buddhist influence on soybean development are particularly sparse I believe Buddhism deserves credit for initiating the spectacular expansion of soybean utilization in Japan which triggered utilization in the rest of the world. The Buddhist connection is certainly true

if oil utilization is excluded. Below lie the reasons for my belief.

“Buddhism was introduced into Japan around 500-600 A.D. (Bush 1959, p. 28-29). Among the priests the traditional hate of flesh was present and agriculture of the field type was encouraged by the government (Tezuka 1936, p. 13). The introduction of soybeans fits well into this historical development. The recent finding of soybean seed in *Shōso In* (Japan) which was established in the Nara era for the storing of legumes of that era that were introduced from China (Nagata 1960, p. 97) proves as does the record of ceremony and taxation system of the Nara era (Nagata, p. 75) that soybeans did exist in Japan at that time.

“Soy sauce or more properly *shōyu*, the now renowned Japanese flavoring, is said to have originated during the Chou dynasty (1134-246 B.C.) (Komiya 1955, p. 14) and was introduced into Japan when Buddhism was being established although not becoming popular until 1300 (Joya 1951, p. 31-33).

“Miso, soybean paste, is a much used breakfast and soup dish in Japan that was introduced to Japan from China or Korea (Horvath 1927, p. 83). It was definitely used by the priests when they first entered Japan, in fact they popularized it among their new vegetarian converts (Joya, p. 21-23).

“An ancient Chinese book states that the Philosopher Hamintze, a prince of the Han dynasty, was the inventor of Tofu or soybean curd (Horvath, p. 6) while another source attributes the tofu innovation to the Chinese Philosopher Whai Nain Tze (Piper & Morse 1923, p. 234). The manufacture of soybean curd (tofu) was started in China in 164 B.C. during Emperor Hwai Wen’s reign by Liu An, duke of Hwai Nan. Liu An was a great friend of the Buddhist monks and it seems quite likely that he made this bean curd to provide a change or delicacy to break the monotony of the monastic ration.” Note: Whai Nain = Huainan. Liu An was the duke (tze) of Huainan. So all of these people are one and the same person.

“Tofu was introduced into Japan from Korea for the first time during the Toyotomi government (Horvath, p. 73) and was undoubtedly introduced into Japan from China by the Buddhists (Piper & Morse, p. 234) being used for their daily food before it was generally used (Horvath, p. 73).

“The true Buddhist monk was carried through the period of childhood growth on a rather heavy diet of bean curd (Horvath, p. 17). Even the naming of soybean curd has its esoteric connotations as the Classical Chinese name for tofu is *Li chi* which probably means morning prayer (Horvath, p. 72).

“Natto, a sort of vegetable cheese prepared from soybeans has long been used by the Buddhists and is now used extensively by the Japanese (Piper & Morse, p. 224).

“Buddhism seems to have been a major reason for the development of Japan for main soybean products. With the existence of these products Japan opened the world

to soybeans.” Address: Univ. of Wisconsin, Madison, Wisconsin.

4658. Schloesser, Lee L.; Schilling, Robert F. 1963. Vitamin B-12 absorption studies in a vegetarian with megaloblastic anemia. *American J. of Clinical Nutrition* 12(1):70-74. Jan. [8 ref]

• **Summary:** Note: This is the earliest English-language document seen (Nov. 2020) that uses the term “megaloblastic anemia” in connection with vitamin B-12. Address: 1. Hematologist, Marshfield Clinic, Marshfield, Wisconsin; 2. Prof. of Medicine, Univ. of Wisconsin.

4659. *British Vegetarian*. 1963. Society reports: Fruitarian discussion group. Jan/Feb. p. 22-23.

• **Summary:** On 5 Nov. 1962 Dr. Franklin spoke on “Plant Milk and Protein.” He first discussed the changes taking place in scientific views on the amount of protein required by a healthy body. Then he said that “the transition from the animal protein of dairy products to the less concentrated plant protein of leaves (plus about 10% soya milk) comprising plant milk, must be made slowly. Samples of the milk were tested and found very pleasantly sweet and smooth to the palate.”

Dr. Franklin said that preparations for large-scale factory production were well in hand. Supplies for Health Food Stores and for export to undernourished peoples were expected in 3 to 4 months.

4660. Cross, Leslie. 1963. The Plantmilk Society: Progress report. *British Vegetarian*. Jan/Feb. p. 7-8.

• **Summary:** Recent samples of the Society’s leaf protein plantmilk “have shown a marked improvement in appearance, flavour, and palatability.” The Society is working to raise money to set up a commercial-scale pilot plant to produce this “Milk of Human Kindness.” The first samples of plantmilk were extracted from an exclusively leaf-protein base, with the protein being coagulated by heat. In later experimental samples, small amounts of soya or other vegetable protein were added. Current work is on extracting some of the protein from the leaves by slow enzymic digestion. The fat content of Plantmilk presently consists of soy oil and maize oil, but in the future some of the fat in the leaf may be used.

4661. Satyanarayana, N.S. 1963. Plasma vitamin B-12 levels in vegetarians. *Indian J. of Medical Research* 51(2):380-85. March. [22 ref]

• **Summary:** Animal proteins in the form of milk meat, or eggs appear rarely, if at all, in the typical Indian diet. Evidence was found of intestinal biosynthesis of vitamin B-12 on a typical vegetarian diet as measured by fecal vitamin B-12 activity. Plasma vitamin B-12 levels of normal subjects consuming vegetarian diets were found to be within

the normal reported range. A reduction in the plasma mean vitamin B-12 level during pregnancy was between the second and third trimesters. However this difference was not significant. Address: Nutrition Research Labs., Indian Council of Medical Research, Hyderabad-7, India.

4662. *British Vegetarian*. 1963. Plant proteins and vegetable milks. March/April. p. 87-89. [1 ref]

• **Summary:** Discusses mostly leaf protein. Nutritionists agree that leaf protein should not form more than half of the total protein intake, and preferably much less. Amino acid deficiencies can be overcome by mixing the leaf protein with an equal amount of soya or groundnut protein and fortifying with vitamin B-12.

4663. *British Vegetarian*. 1963. "Plantmilk"—Progress report: The glowing year. March/April. p. 98. [1 ref]

• **Summary:** "Recently a good deal of serious and detailed work has been carried out with the object of making 1963 the year in which Plantmilk took its baby steps in the world of trade and commerce. This part of the work belongs to Plantmilk Ltd., the company formed by the Plantmilk Society in 1961 to carry the project forward as soon as the Society achieved its first main goal—to produce a satisfactory non-animal alternative to dairy or other animal milk."

Note. This is the earliest English-language document seen (Aug. 2013) that contains the term "Plantmilk Ltd."

4664. James, W.S. 1963. New sources of protein in a hungry world. *British Vegetarian*. March/April. p. 69-77.

• **Summary:** The world population is now doubling roughly every 40 years and by the end of this century it is expected to reach 6,000 million. A new source of protein has been found. Scientists have discovered ways of separating protein from the indigestible cellulose and fibre of waste vegetable matter, including leaves, grass, etc. One of the pioneers in this basic research is N.W. Pirie, F.R.S., head of the Biochemistry Department at Rothamsted Experimental Research Station, Herts. Pirie and his colleagues have developed a small "Village Unit" machine for extracting protein from vegetable matter. The leaf protein from these machines is a dark green cheeselike substance.

A chemical company has recently put up the necessary capital to form a subsidiary company named International Protein Products, Ltd., which has built a factory costing £300,000 at Plymouth, England, for extracting protein from various vegetable sources using I.H. Chayen's "Impulse Process." The protein concentrate now produced at Plymouth has been given the trade name Lypro; it consists of about 65% protein and 35% oil loosely combined. It looks very much like flour, has a very pale cream color, and a faint attractive nutty flavor.

The low biological value of some leaf proteins can be greatly improved by mixing them with equal weights of soya

protein, in the form of commercial food products such as Soyolac (Loma Linda Foods) or Velactin (A. Wander Ltd.). Address: M.Sc.

4665. Mazur, Joseph. 1963. Usage of green soybeans is increasing (in Israel). *Soybean Digest*. May. p. 64.

• **Summary:** The market for soybeans in Israel has been growing steadily and reached 235,000 tons in 1962. On a per-capita basis, among the 2.2 million inhabitants of Israel, this is probably the largest in the world.

"There is now a widespread interest in Israel in fresh soybeans, green soybeans of the edible type among vegetarians, whose number is steadily increasing. Health food stores are opening up and one of their main items, for which they come to the Soybean Council, is edible soybeans.

"Soy flour and grits of various types, and especially lecithinated soy flour, are becoming widely used ingredients by housewives and industry... If this continues, Israel will probably be the first country in the world outside of the Far East where soy proteins will become a substantial part of the diet of population."

Photos show: A portrait of Mr. Mazur. A soybean exhibition at Tel Aviv in March 1963 with J. Mazur and Eliahu Navot (an Israeli soybean pioneer) sampling soy cookies with members of the Russian embassy. Address: Soybean Council Director for Israel.

4666. Goodall, Jane. 1963. My life among wild chimpanzees. *National Geographic* 124(2):272-308. Aug. *

• **Summary:** The author was one of the first to show that chimpanzees were not strictly vegetarians.

4667. Rosenvold, Doris; Rosenvold, Lloyd. 1963. Rx recipes: A guide to healthful food preparation. Montrose, Colorado: Rosenvold Publications. Citadel Agencies, P.O. Box 135, Fairfield, Washington 99012. vii + 186 p. No index. 23 cm. Spiral bound.

• **Summary:** This vegan cookbook contains no foods from animal sources except honey. It was developed primarily to help patients with food allergies and cardio-vascular problems. Soy milk, soy flour, soy grits, and [whole dry] soy beans are used extensively throughout the book.

Chapter 9, "Milk and Cream Substitutes," gives recipes for pecan milk, unsweetened walnut milk, almond cream, coconut milk, homemade soybean milk, Loma Linda Soyagen (powdered), cashew cream, cashew milk, and walnut milk.

Chapter 11, "Entrees," contains recipes for: Creamed soy beans. Green soy beans. Supreme loaf (with Vegeburger plus Yeastex or Savita). Walnut roast (with rich soy milk). Scrambled "eggs" with Smokene (and soy cheese/To-fu). Scrambled "eggs" with chives (with soy cheese [tofu] and soy milk). To-fu with mushrooms. Baked rice and cheese (with to-fu). Scrambled "eggs" plain (with soy cheese

[To-fu] and rich soy milk). Soy beans (boiled). Soy bean croquette (with “2 c. soy bean puree”). Soy bean loaf (with “2 c. mashed cooked soy beans”). Soy bean patties (with “1 c. soy cheese” [tofu]). Baked soy beans.

Chapter 19, “Foreign Dishes,” contains a recipe for “How to make to-fu” (using Loma Linda Soyagen powder, curded with lemon juice), plus two tofu recipes. The companion volume to this book is titled *Nutrition for Life*.

4668. Satoskar, R.S. 1963. Further observations on serum vitamin B-12 and folic acid activity in lactovegetarian and nonvegetarian healthy Indian adults (Abstract). *Indian J. of Medical Sciences* 20(11):876-77. Oct. 5.

• **Summary:** Serum vitamin B-12 and folic acid activity was estimated in 102 healthy Indian medical students. The mean serum vitamin B-12 in lactovegetarians was 121 mcg/ml, much lower than the 366 mcg/ml in the non-vegetarians. Yet the lactovegetarians had no signs or symptoms of vitamin B-12 deficiency. The serum folic acid activity was also lower in the lactovegetarians. Address: Seth G.S. Medical College [India].

4669. Riera Paula, A. 1963. Vegetarianism in Barcelona, 1907 to 1963. *British Vegetarian*. Sept/Oct. p. 178-81.

• **Summary:** A good chronology of vegetarianism in Spain. “There was, in 1860, a group of vegetarians, who also made use of water to treat their ailments, under the guide of a physician, known as ‘the physician of the water.’

“In 1907 Mr. Santiveri, with doctors José Falp, Joaquín Collet, Raimundo Comet, Fargas, and Salvador Badía, agreed in organising a Vegetarian Society and publishing a magazine to spread the Nature Cure Movement, as well as having a vegetarian banquet as a start of its propaganda.”

“1908.—The first Vegetarian Society was founded in Barcelona under the name of ‘Liga Vegetariana de Cataluña,’ and a magazine was published under the title, *Revista Vegetariana Naturalista*.” “1909.—In agreement with Mr. Santiveri, the first Vegetarian Guest House has founded in Barcelona, at Rambla de las Flores number 15.”

In 1911, “Dr. Falp [José Falp, first president of the *Liga* in Barcelona] established in Barcelona the second Health Food Store. The first one was founded in 1893 under the name ‘Farmacia Kneipp,’ established by Don Jaime Santiveri de Pinies.”

“In 1919, there was constituted a ‘Sociedad Vegetariano-Naturista de Cataluña’ at the building of the Instituto Hispanoamericano.” It is not clear whether this was the *Liga*, reformed and renamed after World War I, or a separate society. This society began publishing a health-related magazine called *Naturismo* in 1920 and a physiatric magazine called *Regeneracio* in 1921. Note: “Physiatrics is “a system of medicine based on utilization of the healing powers of nature.”

Also in 1921, the “Instituto Naturista Ferrándiz

was founded to give instruction in Naturism, Anatomy, Physiology, Biology, Naturotherapy, Massage, Vegetarian Cookery, Natural History, etc.” This institution survived World War II, unlike several other vegetarian and natural living societies of the time.

“1931.—The Sociedad Vegetariano-Naturista de Cataluña is dissolved and the Sociedad Naturista de Barcelona was created.” There is no information available for 1932 to 1942, but in 1961 “Professor J. Cervera succeeded in constituting the Asociacion Vegetariana de Barcelona at the Instituto Naturista Ferrándiz’s headquarters.” Again, it is difficult to tell whether this association was a re-formation of pre-war societies or an entirely new establishment.

In 1963 the *Asociacion* organized the 17th World Congress of the International Vegetarian Union in Barcelona.

A note at the end reads: “These notes about the History of Vegetarianism in Barcelona have been written by our friend A. Riera, who, in 1922, was the publisher of *Eugenia* magazine, and who has always been a faithful vegetarian both personally and in the spreading of its propaganda.” Address: Spain.

4670. *New York Times*. 1963. Symon Gould, ran for president on vegetarian ticket in 1960 [obituary]. Nov. 25. p. 19, col. 1.

• **Summary:** “Symon Gould, founder and Presidential candidate of the American Vegetarian party, died of cancer yesterday...” He was 70 years old and resided at 150 West 4th Street in New York City. His active and colorful life is described. In 1922 he founded the American Library Service. In 1926 he produced public debates at Carnegie Hall that drew capacity crowds. In 1930 he started the Film Arts Guild. He founded the Vegetarian party 12 years before he ran for president of the USA. “Mr. Gould considered himself an ‘ethical vegetarian’ who refused to eat meat or take life on moral and philosophical grounds. As editor of *The American Vegetarian*, a California monthly newspaper, he fought various practices of the medical profession.”

4671. Board of Plantmilk Ltd. 1963. Introducing Plantmilk. *British Vegetarian*. Nov/Dec. p. 338-39.

• **Summary:** “Plantmilk is a man-made milk, made from the same basic raw material as that used by the cow—green leaf... Vitamins and fats of vegetable origin are incorporated, while the blending-in of protein from different plant sources [probably including soya] consolidates the amino acid balance.”

“Plantmilk Ltd. is constructing a commercial pilot plant, for the manufacture of Plantmilk in the form of a triple-strength liquid, only requiring dilution with water to bring it down to normal strength. Production is planned to start about the end of this year (1963) or early in 1964.” Address: Tithe Farm, Langley, Bucks. [Buckinghamshire, England].

4672. Hardinge, Mervyn G.; Crooks, Hulda. 1963. Non-

flesh dietaries. I. Historical background. *J. of the American Dietetic Association* 43(6):545-49. Dec. [31 ref]

• **Summary:** Contents: Introduction. Biblical account of the diet of man. Oriental nations. Peoples of the Middle East. The Greeks and Romans. The Christian Era. Britain and the Western world. America. War experience (Dr. Hindhede in Denmark during World War I. Similar experience in Norway during World War II. "The period between World War I and II is frequently alluded to as the Golden Era of Vegetarianism. During this time vegetarianism lost much of its stigma of 'cultism' and advanced to a more scientific basis"). Contemporary vegetarian groups in the U.S. The future. Summary.

This is one of the best, most concise, and most accurate and original well-documented histories of vegetarianism up to this time.

In Britain and the Western world, the vegetarian movement was born in Manchester, England, in 1809, when members of the Bible Christian Church under the leadership of William Cowherd, pledged themselves to abstain from alcoholic drinks and flesh foods. "In 1847, the Bible Christian Church, under the leadership of Joseph Brotherton, established a vegetarian society apart from the church."

"The vegetarian organization begun in England was brought to America by the Reverend William Metcalfe and forty-one members of his church. They landed in Philadelphia, Pennsylvania, in 1817 where their number soon grew. Their regimen was strengthened and expanded through the influence of several prominent men who became convinced of the advantages of a fleshless diet. Among these were Reuben D. Mussey (1780-1866), fourth President of the American Medical Association, and Edward Hitchcock (1793-1864), Professor of Science and then President of Amherst College [Massachusetts], whose 'Lectures on Diet, Regimen, and Employment' were published in 1831.

"In 1829, Sylvester Graham, a young Presbyterian minister who believed he had regained his own health on a vegetarian diet, began actively by pen and voice to advocate moderation in eating. His impressive arguments and fiery zeal gave impetus to the vegetarian movement and caused his contemporaries to regard him as the apostle of temperance. He is best remembered by his advocacy of the use of unbolted 'Graham' flour in bread-making." Address: Dep. of Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California.

4673. Hardinge, Mervyn G.; Crooks, Hulda. 1963. Non-flesh dietaries. II. Scientific literature. *J. of the American Dietetic Association* 43(6):550-58. Dec. [96 ref]

• **Summary:** An excellent review of the English-language literature relating to experimental investigations, group studies, health advantages and disadvantages of a vegetarian diet. Address: Dep. of Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California.

4674. Goodall, Jane. 1963. Feeding behavior of wild chimpanzees: A preliminary report. *Symposia of the Zoological Society of London* 10:39-47. *

• **Summary:** The author was one of the first to show that chimpanzees were not strictly vegetarians.

4675. Chao, Buwei Yang. 1963. How to cook and eat in Chinese. 3rd ed. New York, NY: Random House. xxvi + 249 p. Foreword by Hu Shih. Preface by Pearl S. Buck. Illust. Index. 21 cm.

• **Summary:** This edition is quite similar to the original 1945 edition, except that it has some new front matter (such as introductions to the second [1949] and third revised editions), new pages added here and there plus 16 pages of recipes added between pages 228 and 229, and new cooking techniques. The page layout is basically unchanged, but when new pages were added, they were numbered 160a, etc; thus the contents of page 203 is identical in all editions.

A new table (p. 29) lists widely used Chinese foods and seasonings in four columns: Chinese characters, Mandarin romanization, Cantonese romanization, and English. Soy related ingredients (in English, Mandarin, and Cantonese) are: (4) Oyster sauce: hao-yu, hou-yau. (6) Soy sauce (1): chiang-yu (M). Soy sauce (2): shi-yau (C). Soy sauce (3): ch'au-yau (C). (7) First quality soy sauce: sheng-ch'ou (M), shang-ch'au (C). Note 1. The first character means "fresh" or "live."

Note 2. This is the earliest English-language document seen (April 2012) that uses the term "sheng-ch'ou" (Mandarin) or the term "shang-ch'au" (Cantonese) or the term "ch'ü-yau" to refer to a type or grade of Chinese soy sauce."

(8) Flour jam: t'ienmien-chiang (M), t'inmin-cheung (C). (9) Bean sauce: Yuanshih chiang (M), yünshi-cheung (C). Note 3. The middle character (shih / shi) refers to fermented black soybeans. (10) Hoisin sauce: haihsien chiang (M), hoisin-cheung (C). Note 4. This is the earliest document seen (April 2012) that mentions Hoisin sauce.

However, among the new pages added, there is a nice new chapter 22 titled "Soybean Foods" (p. 228c-228h). Its contents: Introduction and Buddhist mock meats. Homemade tofu: Equipment needed (electric blender, form for setting), ingredients (curded with gypsum), grinding and straining, heating and setting, forming, bean curd recipes. Homemade soybean milk. Using soybean lees (okara; dregs are the leftovers you throw away and lees are those you keep). Frozen bean curd. Soy sauce beans [Soybeans baked in soy sauce]. Preserved soybeans: Homemade fermented black soybeans with salt, ginger, and optional hot chili powder or hot red pepper.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Preserved soybeans" to refer to fermented black soybeans.

The introduction (p. 228c) states: “Under various guises the soybean is used in vegetarian restaurants, often under Buddhist auspices, to produce sumptuous dinners, featuring “sliced chicken breast,” “roast duck,” “baked ham,” that not only fool the eye, but also the tongue, almost, but as always, I want to concentrate on the important, everyday things and de-emphasize the fancy and elaborate. Dishes with bean curd are cheap and easy to prepare. Those who can afford fancy dishes can combine it with meat, etc., but just plain cabbage and bean curd connotes home sweet home.”

Pages 158-59 contain 3 new soy-related recipes: Fried bean curd. Oyster sauce fried bean curd. Sweet-sour fried bean curd.

Recipe 14.27 (p. 155-56), titled “Red-in-snow stirs fava beans” begins: “Horse beans look like lima beans but are not. They are also called Fava beans and frequently sold by Italians. In China they are known as ‘silkworm beans.’” Address: Berkeley, California.

4676. Chaves, Nelson. 1963. *Proteínas vegetais e trópicos* [Vegetarian and tropical proteins]. Recife, Brazil: Imprensa Universitária. 151 + 5 p. Illust. Series: Coleção nordestina, 2. [75+* ref. Por]

• **Summary:** Soyfoods and their nutritional value are discussed on pages 65-67, incl. soymilk (*leite de soja*), tempeh, miso, tofu, shoyu, and natto.

Note: This is the earliest Portuguese-language document seen (Feb. 2022) that mentions tempeh, which it calls “tempeh.” Address: Universidade do Recife, Instituto de Fisiologia e Nutricao.

4677. Harris, R. 1963. *Biology of the children of Hopewood House*, Bowral, Australia, 4. Observations on dental caries experience extending over 5 years (1957-61). *J. of Dental Research* 42:1387-99. *

4678. Lager, Mildred; Jones, Dorothea Van Gundy. 1963. *The soybean cookbook: Adventures in zestful eating*. New York, NY: Devin-Adair Co. xiv + 240 p. Foreword by Ruth Stout. Index. 22 cm.

• **Summary:** The copyright page states: “Note: This is a revised and updated version of a privately printed book, *How to Use the Soybean*, by Mildred Lager which was first printed in 1955 and reprinted in 1959.” This lacto-ovo-vegetarian cookbook contains over 350 recipes, including 72 tofu recipes.

Contents: Preface to 1955 edition. Preface to 1963 edition. Part I: The versatile soybean. History of the soybean. Nutritional value. Abbreviations and special terms. Soup to nuts: Introduction, green soybeans [green vegetable soybeans], dry soybeans, roasted soybeans, sprouted soybeans, the cow of China—soy milk (kinds of soy milk), “the meat without a bone”—tofu or soy cheese, the little giant among protein foods—soy flour, soy grits and bits (puffed

grits), soy oil and soy butter, meat replacement foods, sandwich spreads, malts, coffee substitutes, soy sauce, other soy products (soy albumen, Glidden’s product that contains on a dry basis 96.6% protein [soy protein isolate]).

Part II: Soybean recipes. Green soybeans. Dry soybeans. Roasted or toasted soybeans. Sprouted soybeans. Meat replacement dishes. Soy noodles, macaroni, and spaghetti. Sauces and gravies. Soy soups. Salads. Soy spreads and soy butter [“a butter resembling peanut butter may be made from finely ground soybeans or soy flour... Roasted soy butter is made from the roasted beans that have been ground into a fine flour.”]. Soy milk. Tofu or soy cheese. Soy cereals and breakfast dishes. Soy desserts. Soy candies. Soy flour breads: Full-fat soy flour, low-fat or fat-free soy flour. Pastry. Cookies. Cakes. Extra tips. Appendix. Menus.

The chapter titled “History of the Soybean” (p. 3-7) discusses: W.J. Morse and the U.S. Department of Agriculture, Dr. J.A. LeClerc, the American Soybean Association (which has held a national convention every year since it was founded in 1920), its publication *Soybean Digest*, Henry Ford and his work with both industrial and edible soy products, T.A. Van Gundy, Harry W. Miller, M.D., Dr. Clive McCay of Cornell University (Ithaca, New York), and the Sept. 1961 Conference on Soybean Products for Protein in Human Foods (held at Peoria, Illinois).

Concerning T.A. Van Gundy we read (p. 5): “The father of one of the authors, T.A. Van Gundy, became interested in the nutritional value of soybeans while attending the World’s Fair in San Francisco in 1915, where they were featured in the Oriental exhibits. Upon going home he purchased some soybeans and began experimenting in them. As far as we know he was the first person on the Pacific Coast to develop a line of commercial foods from this wonder bean. By 1927 he had developed a number of palatable products which he manufactured and sold through health food stores. Soybean foods were virtually unknown at this time, and it took courage and perseverance to put them across.”

Recipes for “Soy Ice Cream” (p. 175-76) now include vanilla, maple nut, orange, and strawberry flavors. A recipe for “Granola” (p. 161) calls for 1 cup soy flour. The rest of the ingredients (such as wheat and barley flour) appear to be similar to those found in the earliest granola recipes of the mid-1800s. Address: Southern California.

4679. Rose, Ian F. 1963. *Faith, love and seaweed*. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 221 p. Illust. Index. 24 cm. [30+ ref]

• **Summary:** This book is written by the father of Murray Rose, now age 23, one of the world’s greatest swimmers, and the winner of many Olympic gold medals. It is the true story of how Murray was raised on a vegetarian diet, with emphasis on raw foods, natural foods, natural living, and whole-food principles. By the age of 13, Murray’s prowess was already making news. In 1956, at age 17, he became the

youngest triple Olympic gold medalist in the entire history of sport. In Rome, 4 years later, he made Olympic history again by winning the 400 meter freestyle and thus becoming the first person to win a distance swimming event in two successive Olympics. In college he swam for the University of Southern California (USC).

Mr. Rose advises 10 important dietary habits: 1. Wait until you are hungry before eating. 2. Eat simply, paying attention to food combinations. 3. Eat moderately. 4. Chew food thoroughly. 5. Eat raw foods whenever possible. 6. Never eat when overtired, worried, or emotionally upset. 7. Avoid sauces and condiments. 8. Don't drink with meals. 9. Avoid drinking alcohol and smoking tobacco. 10. Avoid eating meat.

Rose uses 3 main sources of protein: (1) Seeds (especially sesame and sunflower seeds); (2) nuts, and legumes (especially soybeans); cheese and fertile eggs (but not cow's milk). Rose has "four magic foods that guard you against vitamin and mineral deficiencies": seaweed, rose hips (for vitamin C), brewer's yeast (for B vitamins), and any good source of vitamin E (such as wheat germ and wheat germ oil).

In chapter 8, "Our protein pyramid: Seeds, nuts, and dairy products," the section titled "Soybeans give us better protein than steak" (p. 115-17) begins: "The other legume that deserves a permanent place in our store cupboard is the soybean. This is a better source of protein than meat or eggs as is demonstrated by the following table. In every case, soybeans come out ahead." Three tables compare meat, eggs, and soybeans for their content of essential amino acids, minerals, and vitamins. "It is not hard to conclude that soybeans could well be part of everyone's diet, whether or not we include meat. The use of soybean flour is a good idea, too. Merely by substituting as little as five percent in any recipe containing wheat flour, you will be greatly increasing the protein value of the food."

In the section on dairy products, there are subsections titled "The fallacy of cow's milk as a human food" (p. 117) and "The alternatives to cow's milk" (p. 121). "As an alternative to cow's milk we introduced soy milk into Murray's diet with success. Ready prepared soy milk is obtainable today in many health stores but it can be made at home with a blender. One way is as follows:..." Also discusses tahini milk and almond milk.

Page 186 states that cow's milk, if consumed at all, should be consumed raw. It is wise to specify "certified raw milk." "If only pasteurized milk is available it may be best to substitute soy milk or to use a home-made nut milk... Soybeans are one of the few legumes which contain complete protein. They may be purchased ready-cooked or dry."

The section titled "The best kind of fat—and how to select it" (p. 189-91) suggests that unsaturated fatty acids are good for health and animal fats are best omitted from the

diet. "Their place should be taken by soy oil, sunflower oil, sesame oil, safflower oil, and other vegetable oils." The ratio of polyunsaturates to saturates is given for each. "Soy oil, extracted from the soybean,... contains a high percentage of polyunsaturated fatty acids."

The last chapter, "How to plan menus for health," contains recipes. Address: Sydney, Australia.

4680. *Quick Frozen Foods*. 1964. Protein controlled simulated meat concept opens unlimited frozen potential: Food of tomorrow, today. 26(6):79-82. Jan.

• **Summary:** A whole array of new simulated meats are made from edible soy protein, in the form of spun soy protein fibers, as the basic ingredient. Two companies are presently marketing these new foods: Worthington Foods, Inc., Worthington, Ohio, and Brown's Frosted Foods, Inc., Philadelphia, Pennsylvania. A table lists nine "Major advantages of soy protein 'meat.'"

Worthington has registered the trademark "Fibrotein" to identify its edible soy fibers, which are produced thanks to the aid of a "revolutionary, scientific breakthrough which has converted the soy bean into a magic wonder-bean capable of playing a number of profitable roles." Worthington's president James L. Hagle discusses the nutritional and economic advantages of his company's new foods. Allan R. Buller, general manager, describes how Fibrotein is made using a viscous liquid of soy protein that is "extruded under pressure through platinum spinnerettes having holes 1/4000th of an inch in diameter." The resulting fine filaments of protein are "formed into a 'tow' which can be cut, twisted, chopped, or rolled into various forms for use in foods."

Note: This is the earliest English-language document seen (Oct. 2015) that uses the word "spinnerettes" (or "spinnerette") in connection with edible spun soy protein fibers.

Mr. Buller's firm has been successful in using Fibrotein to make frozen vegetarian foods that resemble fried chicken (Fri-Chik, 8 oz carton), white turkey meat (White-Chik, 8 oz carton), roast beef slices (Prime, 8 oz carton), and ham (Wham). Worthington has entered the frozen field with a new line of vegetarian foods it calls "Minute Entrees." Worthington also makes Prosage (like sausage) packed in 1 pound casings.

Worthington is also making seven frozen foods for the institutional market, including chicken style rolls (8 lb roll), chicken sliced or diced white meat (5 lb packages), and fried chicken style (1¼ oz portions). The firm also makes a canned line under the brand "Soyameat."

Photos show: (1) Prime, smoked and chipped, in a 4 oz transparent pouch. (2) A Chicken Style Roll next to a deli slicer. (3) An 8 oz carton of Fri-Chik. (4) An 8 oz carton of Prime. (5) A roll of Prosage.

4681. James, Isabel. 1964. Domestic science bureau. *British*

Vegetarian. Jan/Feb. p. 37-39.

• **Summary:** The article begins with a question from a reader: "Can you please tell me something about the value and use of soya bean and soya flour?" The author gives a Bircher Benner recipe for Soya Pancakes (with soya flour), and notes that Soyolk and Hi-Soy soya flours are sold in Health Food Stores. The latter product is made by The British Arkady Co. Ltd. and is good for use in confectionery.

She then discusses soya milk and tofu. In the UK, Dr. Frank Wokes, of the Nutritional Research Centre, has done a great deal of work on the "preparation of a soya based vegetable "milk" that would be a suitable substitute for cow's milk and acceptable to children who could not take cow's milk. Largely as a result of this work *Velactin* is now available from Health Food Stores, made by Messrs. A. Wander Ltd." She then gives a recipe for home-made Soya Cheese (also known as Soybean Curd or Tofu), made from full-fat soya flour and coagulated with lemon juice.

She also mentions soya sauce and gives details on growing soya beans in England. "If the crop matures some of the green beans may be used in salads or as green vegetables." Address: B.A.

4682. Kotake, Yazo; Ono, Tadayoshi. 1964. Shokubutsu-sei chû no bitamin B-12 ni tsuite [Vitamin B-12 in vegetable foods]. *Shokuhin Eiseigaku Zasshi (J. of the Food Hygienic Society of Japan)* 5(1):39-43. Feb. [32 ref. Jap; eng]

• **Summary:** Small amounts of vitamin B-12 were found in such vegetables grown in the mud such as arrow head (*Sagittaria sagittifolia* L. var. *sinensis* Makino; Jap. *junsai*) and lotus root, and also in bamboo shoots grown in the soil. Briefly discusses the importance of vitamin B-12 in vegan and vegetarian diets. Soy is not mentioned.

Note 1. As of 1975 in Japan *junsai* has the scientific name *Brasemia purpurea* and is also called "water shield." This tiny, delicate wild plant, surrounded by a gelatinous slippery coating or "shield," grows on the surface of ponds. Considered a great delicacy, it is used in soups. Sold in small bottled.

Note 2. Takadiastase is used in this experiment. Address: Osaka Public Health Institute, 1, Morimachiminami, Higashinari-ku, Osaka, Japan.

4683. Walden, Richard T.; Schaefer, L.E.; Lemon, F.R.; Sunshine, A.; Wynder, E.L. 1964. Effect of environment on the serum cholesterol-triglyceride distribution among Seventh-day Adventists. *American J. of Medicine* 36(2):269-76. Feb. [23 ref]

• **Summary:** The authors compared the serum lipid levels of 145 Seventh-day Adventist lacto-ovo-vegetarians (of whom 19 ate meat occasionally) with those of the New York population. Lacto-ovo-vegetarians had lower serum cholesterol and higher triglyceride levels than New York City residents, the differences becoming more pronounced

following manipulation of dietary fat by fat restriction or fat substitution diets. Address: New York, New York.

4684. Edwards, Cecile H.; Ruffin, Minnie R.; Woolcock, Ivy M.; Rice, Arthur W. 1964. Efficiency of vegetarian diets as a source of protein for growth and maintenance. *J. of Home Economics* 56(3):164-68. March. [24 ref]

• **Summary:** "The efficiency to support growth and maintain nitrogen balance of test rations simulating human meals containing vegetables commonly consumed in the southeastern region of the United States and the ability of field peas and peanuts to improve responses to this test ration were evaluated in albino rats.

"Though young animals were unable to grow, maintenance of body weight occurred after a weight plateau was reached. The addition of field peas or peanuts to the basal diet was effective in stimulating nitrogen retention in adult rats. The amino acid pattern in field peas provided a more efficient supplement to that in the basal diet of collard greens, sweet potatoes, corn bread, and fat back.

"Forced feeding to young rats of the ration containing peanuts, in contrast to its ad libitum feeding, resulted in loss of hair from the lateral region of the body, suggesting that this procedure intensified the amino acid imbalance in this ration." Address: 1. Prof. of Nutrition and Research in the Dep. of Home Economics at the Agricultural and Technical College of North Carolina at Greensboro.

4685. *British Vegetarian*. 1964. Disastrous fire at Stanborough Press, Watford. March/April. p. 92-93.

• **Summary:** On Friday, Jan. 3. a terrible fire gutted the buildings at Stanborough Press. Fortunately no one was hurt, but £100,000 damage was incurred in addition to priceless records and an incomparable library of pictures and back issues of printed materials. The Press, established in 1907 by the British Union of the Seventh Day Adventists, prints and publishes books and periodicals dealing with both religion and vegetarianism. Its bi-monthly magazine *Good Health* has a circulation approaching 50,000. Photos show both the burning buildings and the gutted buildings after the fire. Address: B.A.

4686. *British Vegetarian*. 1964. Dugald Semple, 1884-1964. March/April. p. 96.

• **Summary:** A nice obituary to this well-known Scottish vegetarian, including a list of the books he wrote and the date that each was published. Address: B.A.

4687. Doyle, Margaret D.; Morse, Lura M.; Gowan, Jean S.; Parsons, Mary. 1964. Studies on nitrogen balance in young men consuming vegetarian diets (Abstract). *Federation Proceedings (FASEB)* 23(2):396 (Abst. #1771). March/April.

• **Summary:** "Studies were made in 2 consecutive years on N balance in young men fed diets in which protein was

supplied by vegetable sources chosen to give amino acid ratios similar to milk. The effect was compared to that when milk protein replaced 25% of the plant protein. The first year's diet supplied approximately 0.5 gm protein/kg body weight. Second year protein levels were raised to approximately 0.75 gm/kg by adding a toasted soybean product, or a soy-dry skim milk mixture. The studies were similar except that an adjustment period on the basic vegetarian diet (0.5 gm/kg) was increased from 4 to 10 days in the second year, to minimize effects of previous diet. Despite the fact that N balance would be expected on protein intakes of 0.5 gm/kg with presumably adequate total amino acid levels, 5 out of 6 men were in negative N balance during the entire first experiment. On the 0.75 gm/kg intake all subjects were in balance. No apparent benefit to N balance was obtained by replacing plant with milk protein in either study. Markedly increased caloric intakes were required to maintain subjects' weight during the first study. N balance did not appear to be improved by this increase. No such caloric increase was necessary in the second study." Address: School of Home Economics, Univ. of Minnesota, St. Paul, Minnesota.

4688. Lemon, Frank R.; Walden, R.T.; Woods, R.W. 1964. Cancer of the lung and mouth in Seventh-Day Adventists: Preliminary report on a population study. *Cancer* 17(4):486-97. April. [34 ref]

• **Summary:** "Since 1950, at least 28 reported epidemiological studies have yielded findings consistent with the conclusion that prolonged and regular smoking of cigarettes increases the risk of the development of lung cancer by as much as 20 to 60 times. The use of tobacco and alcohol in a variety of forms has also been implicated as an important etiological factor in buccal cancer."

"A complete roster of the California Seventh-Day Adventist membership was not available in 1958. Individual churches had complete membership lists but without pertinent data such as age, race, and occupation." In 1958, Lemon and Walden identified approximately 47,000 Seventh-day Adventists (SDAs) by the use of a brief census questionnaire mailed to households. "The questionnaire provided for basic information: sex, date of birth, length of church membership, race, marital status, place of birth, occupational and residential history, and the present state of health in general terms."

In 1960, with the assistance of Hammond (of the American Cancer Society) they collected a second mailed questionnaire from approximately 27,000 SDAs age 30 or over. Address: Dep. of Preventive Medicine and Public Health, School of Medicine, Loma Linda Univ., Loma Linda, California.

4689. Giorgio, A.J.; Cartwright, G.E.; Wintrobe, M.M. 1964. Pseudo-Kayser-Fleischer rings. *Archives of Internal*

Medicine 113(6):817-18. June. [3 ref]

• **Summary:** This is a case where the initial diagnosis of Wilson's disease was mistaken. This is the case of "counterfeit" corneal rings.

"Although the rings bore a striking superficial resemblance to Kayser-Fleischer rings, they could be differentiated from them on three counts. First, the Kayser-Fleischer ring is golden-brown in color; the pseudo-rings were golden-yellow. Second, the Kayser-Fleischer ring extends to the limbus. The pseudo-rings were separated from the limbus by a clear interval, and the outer borders of the rings were sharply defined, features characteristic of arcus senilis. Third,..." Address: Dep. of Medicine, Univ. of Utah College of Medicine.

4690. Lijinsky, W.; Shubik, P. 1964. Benzo(a)pyrene and other polynuclear hydrocarbons in charcoal-broiled meat. *Science* 145(3627):53-55. July 3. [7 ref]

• **Summary:** Broiling or smoking meat with charcoal creates the carcinogen benzo(a)pyrene. The average amount was 8 micrograms per kg of steak. Address: Div. of Oncology, Chicago Medical School, Chicago, Illinois.

4691. Fredericks, Carlton. 1964. Nutrition, your key to good health. North Hollywood, California: London Press. 271 p. Index. 17 cm.

• **Summary:** This book (in its 12th printing by April 1971) is a revised, enlarged version of the publication *Eat, Live and be Merry*. The author, billed on the cover as "America's Foremost Nutritionist," is a member of Phi Beta Kappa and holds a PhD in Public Health Education from New York University. He has a radio show named "Living Can Be Fun." A quotation by Alexis Carrell facing the title page reads: "The doctor of today will be the dietician of tomorrow."

On pages 141, 145, and 146 the author states that soybeans which have been heated are complete proteins "but the quality of the protein is not quite equivalent to that of dairy products, meat, fish or fowl... soy protein is far superior to that of other vegetables and they are a good food in many ways. Excesses of soy in the diet may interfere with thyroid function."

The author is quite critical of vegetarian diets (see p. 141-42, 174, 220) and favors consumption of meat and dairy products. A major problem in vegetarian diets, he thinks, is the lack of vitamin B-12 in plant foods. B-12 was originally called the "animal protein factor."

A photo on the back cover shows Dr. Carlton Fredericks. Address: California.

4692. Mehta, B.M.; Rege, D.V.; Satoskar, R.S. 1964. Serum vitamin B-12 and folic acid activity in lactovegetarian and nonvegetarian healthy adult Indians. *American J. of Clinical Nutrition* 15(2):77-84. Aug. [33 ref]

• **Summary:** “Serum vitamin B12 and folic acid levels estimated in 102 healthy Indian university students. The mean serum vitamin B12 level in lactovegetarians was 121 µg. per ml. as compared to 366 per ml. in nonvegetarians. The lactovegetarians excreted a lesser amount of vitamin B12 in the urine. The serum vitamin B12 levels could be correlated with the non-vegetarian food intake. Despite considerably low serum vitamin B12 values, the lactovegetarians had no apparent signs or symptoms of vitamin B12 deficiency state, and their response to injections of vitamin B12, as judged by serum and urinary vitamin B12 levels, was similar to that observed in nonvegetarians.

“The serum folic acid activity was also decreased in lactovegetarians as compared to values for nonvegetarians. The importance of these findings is discussed.” Address: 1. Senior Research Asst., Food Technology Section, Dep. of Chemical Technology, Univ. of Bombay; 2. Prof. of Food Technology, Food Technology Section, Dep. of Chemical Technology, Univ. of Bombay; Assoc. Prof. of Pharmacology, Seth G.S. Medical College.

4693. Habib, G.G. 1964. Nutritional vitamin B-12 deficiency among Hindus. *Tropical and Geographical Medicine (Haarlem, Netherlands)* 16(3):206-15. Sept. [73* ref]

• **Summary:** Reports ten cases of megaloblastic anemia occurring among Hindus (all but one of whom were vegetarians) in Trinidad, West Indies. This anemia appeared to be caused by a shortage of vitamin B-12 in the diet. Address: General Hospital, San Fernando, Trinidad.

4694. Vasavada, N.B.; Shah, P.B. 1964. Serum glutamic oxaloacetic transaminase (GO-T) and pyruvic transaminase (GP-T) in healthy Gujaratis. *J. of Postgraduate Medicine (Bombay)* 10(4):161-64. Oct. [20 ref]

• **Summary:** Serum GO-T and GP-T levels were measured in 50 healthy Indian vegetarians. Address: Dep. of Pathology, Civil Hospital, Ahmedabad-16. Present address: Medical College, Baroda.

4695. Federacion Vegetariana Espanola [Spanish Vegetarian Federation]. 1964. New vegetarian society. Spain.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 573. “Vegetarians from an international outlook.” Today the vegetarian way of life is spreading as it never has before. The new *Federacion Vegetariana Espanola* [Spanish Vegetarian Federation] is a typical example.

History of Spanish Vegetarian Societies. 2004. <http://www.ivu.org/history/societies/spain.html>. The minutes of the International Vegetarian Union from November 1964 state: “Federacion Vegetariana Espanola was reported to have been formed during the year and since the last Congress in Barcelona. A letter was read from S del Amo (Secretary).” Address: Spain.

4696. Nichols, Teal. ed. 1964. *Zen cookery*. Chico, California: The Ohsawa Foundation. 83 p. Index. 22 cm. A second edition appeared in 1965.

• **Summary:** This is the earliest known macrobiotic cookbook written by an American, and its influence was profound.

Note 1. The Nov. 1964 edition of *Yin Yang* magazine, published in Chico, California, announced that the book had been published that month (Nov.).

“Acknowledgements: Our heartfelt gratitude goes to Lima Ohsawa, the foremost authority on Macrobiotic Cookery, without whose patient assistance and teaching this book would not have been possible. Many of the recipes appearing in *Zen Cookery* are from her collection in an earlier edition of *Zen Macrobiotics*. The Editor wishes further to thank the following people for recipes, suggestions, and invaluable comments: Joanne Hirsh, Dorothy Salant, Nina Bauman, Cornelia Aihara, Penny Smith, Shayne Oles, Betty Kennedy, and Jane Andrews.”

“*Zen Cookery* is a collection of recipes gleaned from the files of many people, all of whom have adjusted their salt intake to suit their own needs. Their recipes reflect this.”

Contents: 1. Grains. 2. Noodles. 3. Vegetables. 4. Soups. 5. Sauces. 6. Salads. 7. Inspirations from around the world. 8. Special dishes. 9. Miso soy bean paste. 10. Tamari soy sauce. 11. Breads. 12. Pancakes and crepes. 13. Pie doughs. 14. Desserts. 15. Beverages.

Note 2. This is the earliest English-language document seen (March 2012) that contains the term “tamari soy sauce.” It is also the earliest English-language cook book seen that contains the word “tamari” or the term “tamari soy sauce.”

Each recipe is numbered. Recipes mentioning soy in recipe name (and a few other recipes introducing foods new to the USA): 2. Rice with tamari soy sauce. 3. Rice with aduki beans. 4. Rice & aduki pudding. 7. Sesame rice. 9. Rice with chick peas (garbanzo). 21-28. Buckwheat recipes. 34. Bulghur. 48. Buckwheat noodles in soup (Soba with kombu). 50. Buckwheat noodles with fried bean curds [tofu]. 54. Buckwheat noodles with miso sauce. 55-56. Buckwheat noodles in kuzu sauce. 61. Udon with aduki. 62. Carrot sesame nituke [nitsuke]. 75. Scallion nituke with miso (soybean paste). 76. Carrot and onion nituke with miso. 77. Onion nituke with miso. 78. Vegetable miso stew. 79. Boiled pumpkin with miso. 80. Vegetable sauces with kuzu arrowroot (and tamari soy sauce).

81. Vegetables with tamari soy sauce and tahini. 98. Jinenjo (5 recipes). 101. Miso-vegetable relish. 102. Aduki beans, black [soy] beans, chick peas. 105. Baked chick peas. 106. Buckwheat-aduki pancakes. 107. Udon with aduki beans. 108. Chestnut-aduki gelatine. 109. Chick pea party dip (with tahini and tamari). 110-118. Sea vegetables (kombu, nori, hiziki, wakame, most with tamari). 119. Clear broth (with tamari). 122. Tamari-vegetable broth. or stock. 123. Miso soup (2 types). 124. Creamed miso soup. 125.

Root vegetable soup with miso. 131. Soybean soup. 134. Wakame soup (with miso). 149. Sesame sauce. 150. Miso sauce. 151. Miso salad dressing. 152. Thick tamari soy sauce. 153. Tahini tamari soy sauce. 154. Onion tahini sauce (with tamari). 172. Wakame salad.

189. Clam miso. 190. Scallop miso-lemon. 203 Miso spread [with tahini]. 204. Miso sauce [with tahini and orange rind]. 205. Sauce for vegetables [with black sesame and miso]. 206. Scallion miso. 207. Miso salad dressing. 208. Miso-vegetable relish. 209. Miso soup. 210. Udon with miso sauce. 211. Rice porridge with miso. 212. Deep fried miso balls. 213. Carrots and onions miso. 214. Vegetables miso. 215. Tekka (2 types). 216. Tea with tamari soy sauce. 217. Tamari broth. 218. Stringbeans. 219. Dried radish (daikon). 220. Shredded sea vegetables (hiziki). 221. Thick tamari soy sauce. 222. Tahini-tamari sauce. 223. Vegetables with tahini-tamari soy sauce. 234. Aduki muffins. 238. Miso spread (for sandwiches). 239. Tahini-tamari spread. 246. Buckwheat aduki pancakes. 272. Aduki pudding. 273. Chestnut-aduki gelatine. 274. Kanten jello (with agar).

291. Grain Milk (Kokkoh [Kokoh]; a finely ground combination of roasted rice, glutinous rice, oatmeal, soybeans, and sesame seeds). 294. Tea with tamari soy sauce (syo-ban).

Note 3. This is the earliest document seen (Feb. 2005) that mentions Kokkoh (or Kokoh), a grain milk introduced by macrobiotics.

Note 4. Tofu, amazake, and seitan are not mentioned in this book. 287 is Ohsawa Coffee (Yannoh) and 288 is Dandelion Coffee.

Note 5. This is the earliest document seen (June 2000) that mentions the use of miso in a salad dressing (Nos. 151 and 207).

Note 6. In 1985, when writing a revised edition of this book titled *The First Macrobiotic Cookbook*, Herman Aihara wrote (p. v) that this 1964 edition, published by the Ohsawa Foundation of Chico, California, was first the edition of the various subsequent and very influential books with this title.

Note 7. This is the earliest document seen (March 2011) concerning Herman or Cornelia Aihara and macrobiotics (or soyfoods).

Note 8. Along with soyfoods, this cookbook (and its many successors) also introduced numerous other basic Japanese foods such as aduki [azuki] beans (3-4, 102, 106-08, 234, 272-73), sea vegetables of all types, and soba. Address: Chico, California.

4697. *Foreign Agriculture (USDA Foreign Agricultural Service)*. 1964. Soybean Council takes part in Delhi oils meeting. 2(49):8. Dec. 6.

• **Summary:** The U.S. has just agreed to supply India with its first large shipment of soybean oil under Title I of P.L. 480. The 150 million pounds to be delivered during 1964-65 compare with a 5-year average of only 1.5 million pounds.

More than 200 Indian technicians working directly in the vegetable oil refining and processing industries are expected to attend the meeting, sponsored by the Soybean Council of America, and FAS (USDA's Foreign Agricultural Service) as part of a continuing program to promote use of soybean products in India. Most of the U.S. oil for shipment in 1964-65 will be manufactured into vanaspati, a dietary staple among vegetarian Indians. Vanaspati production has been hampered by shortages and peak prices for Indian peanut and cottonseed oils—customarily used in vanaspati.

4698. Hardinge, Mervyn G.; Crooks, Hulda. 1964. Non-flesh dietaries. III. Adequate and inadequate. *J. of the American Dietetic Association* 45(6):537-42. Dec. [34 ref]

• **Summary:** This is a summary of the findings of a number of investigators worldwide. Contents: Introduction. Adequate non-flesh dietaries: Lacto-ovo-vegetarian type, pure vegetarian type [vegan]. Adequate, near-vegetarian population group diets. Inadequate near-vegetarian population group diets. Inadequate world food supply. Discussion. Summary.

“A reasonably chosen plant diet, supplemented with a fair amount of dairy products, with or without eggs, is apparently adequate for every nutritional requirement of all age groups...

“Vegetarian and near-vegetarian diets that have proved inadequate include: (a) vegan diets which have been reported to produce vitamin B-12 deficiency in some individuals; (b) grossly unbalanced near-vegetarian diets in which as much as 95 per cent of the calories were provided by starchy foods extremely low in protein, such as cassava root; (c) diets dependent too largely on refined cereals, such as cornmeal or white rice, even though small amounts of animal foods were included; and (d) intake of total calories insufficient for maintenance requirements.”

The author concludes that “a reasonably chosen plant diet, supplemented with a fair amount of dairy products, with or without eggs, is apparently adequate for every nutritional requirement of all age groups.” Address: Dep. of Pharmacology, School of Medicine, Loma Linda Univ., Loma Linda, California.

4699. Toomey, Edward G.; White, Paul D. 1964. A brief survey of the health of aged Hunzas. *American Heart Journal* 68(6):841-42. Dec.

• **Summary:** Dr. Paul Dudley White, the famous heart specialist, reports on Hunza health. Address: 264 Beacon St., Boston, Massachusetts.

4701. Ch'en, Kenneth K.S. 1964. *Buddhism in China: A historical survey*. Princeton, New Jersey: Princeton University Press. xii + 560 p. Index. 24 cm. [200+ ref]
• Summary: An excellent history of Buddhism in China. Buddhism was transmitted to China from India during the Han dynasty, at about the start of the Christian era. Bodhidharma brought the Ch'an (Zen) school of Buddhism to China in about A.D. 520-526, or perhaps before. Very little is said about Buddhist vegetarian diets and their influence on the diet of China. In the chapter on "Popular Buddhism," there is a 2-page discussion of "The Vegetarian Feast" (*chai*, p. 283-85). In Buddhist terminology, the character *chai* is "also used to denote the fasting periods observed by the monks, that is to say, periods when the monks were not supposed to eat after the noonday hour. Such fasting periods in China were regular occurrences, known as the three long months of fasting [the first 15 days of the first, fifth, and ninth months] and the six fasting days [the 8th, 14th, 15th, 23rd, 29th, and 30th of each month]. During the Sui and T'ang dynasties such fasting days assumed national importance, for... killing of living animals and execution of criminals were prohibited."

Note: Soy is not mentioned. None of the following terms appear in the Index: Diet, food, meal*, soy*, vegetarian*. Address: Princeton Univ. [New Jersey].

4702. Fliess, Walter; Fliess, Jenny. 1964. *Modern vegetarian cookery*. Harmondsworth, Middlesex, England: Penguin Books. 240 p. Illust. 19 cm. Series: Penguin Handbooks, no. PH104.

• Summary: The frontispiece notes: "Walter and Jenny Fliess were both born in Germany in 1901 and have been living in England for the last thirty years. Before 1933 they owned two restaurants in Cologne and have become well known here as founders of the internationally reputed Vega restaurant. They have now retired from this work having served more than five million meals 'without a casualty'. Their autograph book is packed with the names of famous politicians, writers, actors, sportsmen, and others."

"Jenny Fliess got her training under Dr. O.M. Bircher-Benner at his famous sanatorium in Switzerland. Walter Fliess studied restaurant management in the U.S.A. In 1954 at Hotelympia he won in the vegetarian class the silver challenge trophy and gold medal for culinary art."

"Both have travelled widely, and have gathered recipes for new vegetarian dishes in four continents. This book contains, in compressed form, a good slice of their lives' work."

This is a lacto-ovo vegetarian cookbook. Pages 13-15 gives the authors views on fats and oils ("There are good vegetarian margarines on the market: Tomor, Golden Block, Gala, and others"), milk, cheese, eggs ("If you prefer not to use eggs at all, soya flour is usually the best substitute. Some recipes for this are given in the book..."), flour (wholemeal

bread is best), nuts, etc. Page 131 contains a recipe for Soya pancakes, made with 4 oz. flour and 2 tablespoons soya flour. Address: England.

4703. Highton, Nolan Berry; Highton, Rosemary Beryl. 1964. *The home book of vegetarian cookery*. London: Faber & Faber. New York, NY: Roy Publishers. 325 p. Illust. Index. 21 cm.

• Summary: Contents: Authors' introduction. 1. The kitchen. 2. Cookery terms, processes, and measurements. 3. Beginnings (hors-d'oeuvre, dressings, etc.). 4. Salads. 5. Savouries (including egg dishes). 6. Stuffings. 7. Vegetables. 8. Sauces. 9. Curries. 10. Cakes, batters, icings, fillings, pastry and yeast cookery. 11. Endings (sweets, fruit fools, ice cream, etc.). Address: Guildford, England.

4704. Jones, Dorothea Van Gundy. 1964. *The soybean cookbook: Adventures in zestful eating*. New York, NY: Gramercy Publishing Co., a division of Crown Publishers Inc. Paperback published by Arco Publishing Co. Inc. xii + 240 p. Foreword by Ruth Stout. Index. 21 cm.

• Summary: This lacto-ovo-vegetarian cookbook is identical to the 1963 edition published by Devin-Adair except: (1) Mildred Lager, who died in Aug. 1960, is no longer listed as the author. Note: Mildred's husband, Ed Jones, married Dorothea Van Gundy, the present author. (2) The dust jacket is white, yellow, green and black on a blue background. A face, made of yellow and green soybeans, is wearing a chef's hat. (3) The publisher of the hardcover edition is now Gramercy rather than Devin-Adair. The copyright date (written in hard-to-read Roman numerals) is 1963, the same as the Devin-Adair edition. The date of publication is not given, but it must have been after 1963. We have taken the liberty of giving it as 1964. (4) The title of the second preface has been changed to "Preface to the revised edition" from "Preface to the 1963 edition." Both were written by Dorothea Van Gundy Jones of Arlington, California. Address: Arlington, California.

4705. National Vegetarian Convention. 1964. *Souvenir of the first national vegetarian convention 1964*. Bombay, India. 115 p. Held 7-13 Jan. 1964 at Bombay, India. Editorial board: M.T. Vyas, Chairman. 25 cm.

• Summary: This convention was sponsored by the Indian Vegetarian Congress, Bombay Humanitarian League, All India Animal Welfare Association, and Bombay Vegetarian Society. Many pages are unnumbered. Includes the following: Soya beans (p. 24), full-fat soya flour and Indian Multipurpose Food with low-fat groundnut flour (p. 64), protein food containing soya (p. 64-65). List of vegetarian societies, hotels, and restaurants in countries throughout the world. The Indian Congress-National Headquarters: A Report on its inception and progress (p. v; It was founded after the World Vegetarian Congress held in Bombay in

Nov. 1957). The Bombay Vegetarian Society (p. xv; It was formed on 12 Dec. 1962). The Lankavatara Sutra, chapter 8, translated into English by D.T. Suzuki (p. 5-10; The Buddha states that “the Bodhisattva whose nature is compassion is not to eat any meat”). Address: Bombay, India.

4706. Patten, Marguerite. 1964. 500 recipes for meals without meat. London: Paul Hamlyn. 94 p. 19 cm. *

4707. Schwarz, Richard William. 1964. John Harvey Kellogg: American Health Reformer. PhD thesis in modern history, University of Michigan. vi + 504 p. 23 cm. [234 + 1,308 footnotes]

• **Summary:** This is one of the finest examples of recent Adventist scholarship and the best biography of John Harvey Kellogg seen to date. It is very different from the popular version published in 1960, and its prolific footnotes to sources are very interesting and helpful. Unfortunately the thesis lacks an index, so particular subjects are hard to find.

John Harvey Kellogg was born on 26 Feb. 1852 in rural Tyrone Township, Livingston County, Michigan. His parents were John Preston Kellogg and Ann Stanley, his second wife. His birth was spaced almost midway between those of his seven half- and eight full brothers and sisters. Contents: Preface. 1. The making of a health reformer. 2. “What manner of man” [an excellent character sketch, including that of his wife, Ella Eaton Kellogg, p. 89-95]. 3. Biologic Living: The Kellogg “Gospel of Health” (“In the third and fourth decades of the nineteenth century a whole complex of reform movements played a vital role in the social, intellectual, and political life of the United States”). 4. Kellogg and the Battle Creek Sanitarium. 5. Lecturer, author, publisher. 6. Surgeon and inventor. 7. His brother’s keeper. 8. Kellogg’s break with the Adventist church. 9. Food manufacturer and eugenicist [eugenicist]. 10. Concluding years. Bibliography: Primary sources (Manuscript collections, books by John Harvey Kellogg, articles by John Harvey Kellogg, newspapers and periodicals, official reports and records, interviews, other primary sources, secondary sources).

Concerning the invention of peanut butter: (p. 283-84): “Another important item in the modern American diet first introduced by Dr. Kellogg was peanut butter. Shortly after 1890, John Harvey had a quantity of roasted peanuts ground up into a paste for use by patients who had difficulty in masticating nuts well enough to digest them properly. Later the doctor decided that roasting caused the fat content of the nuts to begin to decompose and that this irritated the digestive organs. From that time forward Sanitarium peanut butter was made from nuts which had been steam-cooked rather than roasted. Kellogg devised a variety of other nut butters which he claimed were ‘sweeter, more palatable, and more digestible’ than regular butter. He directed that these nut butters be used as shortening in the preparation of all

baked goods produced at the Sanitarium. John Harvey made no attempt to control through patents the production of either peanut butter or any of his other nut butters. He announced that he believed that these were products that ‘the world ought to have; let everybody that wants it have it, and make the best use of it.’”

Note: As of March 2018 this thesis is available online from ProQuest. The ProQuest document ID is 302139521. Address: Univ. of Michigan.

4708. Tolstoy, Leo. 1964. Leo Tolstoy: Selected essays. Translated by Aylmer Maude, selected by Ernest J. Simmons. New York, NY: Random House. See p. 232. *

• **Summary:** Contains Tolstoy’s classic essay on vegetarianism titled “The First Step.”

4709. Vollmer, Marion W. 1964. Food: Health and efficiency. Lessons in nutrition and healthful food preparation. Revised ed. Nashville, Tennessee: Southern Publishing Association. 136 p. 23 cm.

• **Summary:** In this Seventh-day Adventist vegetarian cookbook, soy-related recipes include: Farmer soy breakfast hash (with Proteena, p. 34). Granola (with soy flour, p. 34). Bit o’ soy waffles (with soy flour, p. 35). Cashew milk (p. 52). Soy nut milk (with soy milk powder, almonds & cashews, p. 52). Baked soybeans (with cooked whole soybean, p. 62). Gluten—how to prepare and serve it (incl. Gluten stroganoff, gluten cheeseburgers, 64-67). Soy cheese—how to make and serve it (tofu made from full fat soy flour and curded with lemon juice, p. 67-68). Soy cheese loaf (with tofu, p. 69). Soy cheese croquettes (with tofu, p. 69). A note on p. 69 states: “Tofu is fresh soybean curd. Sold in blocks under water in Oriental and some other markets. Canned soy cheese called Vegechee, Cheez-o-Soy, etc., may be substituted.” Note: An earlier edition was published in 1954.

4710. White, Ellen G. 1964. Life at its best. Mountain View, California: Pacific Press Publishing Assoc. 314 p. Illust. Index. 17 cm.

• **Summary:** This book is comprised of major selections from Ellen G. White’s book *The Ministry of Healing*, which was first published in 1905.

4711. Wokes, F.; Ellis, Frey R. 1964. Vitamin B-12 deficiency and serum cholesterol levels in strict vegetarians. In: Proceedings of the Sixth International Congress of Nutrition. Edinburgh and London: E. & S. Livingstone Ltd. xv + 683 p. See p. 508. Held 9-15 Aug. 1963 at Edinburgh, Scotland.

• **Summary:** “A study on about thirty vegetarians who have been living for one to fifteen years on diets free from animal foods showed an average serum B12 level of 234 µg./ml. compared with an average of 121 in thirty-one

vegetarians in previous investigations (Wokes et al., 1955; Wokes and Smith, 1962). Some of the subjects in the present investigation were found to have been consuming vegetarian foods either fortified with B12 (e.g., Velactin vegetable milk, 2 fig. per oz., Barmene yeast and vegetable extract, 1.5 gig. per oz.) or providing it naturally (e.g., laverbread seaweed extract, 0.25µg. per oz.). Prolonged administration of Velactin, which seems to have been most effective, is now being tested on a dozen subjects, including some in whom the serum B12 levels have been consistently low for several years. In the whole group of subjects the haemoglobin and serum globulin levels fell below normal only when the serum B12 level was below 100 µg./ml. (four subjects). The serum albumin levels and leukocyte counts were normal. Serum cholesterol levels ranged from 95 to 325 mg. 100 ml., the average being below 200, and only two subjects had levels above 230." Address: Vegetarian Nutritional Research Centre, Garston, Watford, Herts. [Hertfordshire], England.

4712. Mehra, Krishna Swami. 1965. Vitamin A and serum carotenoid in Indians. *J. of the Indian Medical Association* 44(4):181-82. Feb. 16. [8 ref]

• **Summary:** In India: "Serum carotenoid and vitamin A estimations were carried out in 250 subjects both vegetarians and non-vegetarians, in various age groups.

"In this series, the value of carotenoid was 102 micrograms per cent and that of vitamin A 116 I.U. per 100 ml.

"Vitamin A concentration was found lower in vegetarians in comparison to non-vegetarians. Among vegetarians who consumed more milk, the value of vitamin A was comparatively higher.

"As far as the age factor was concerned, the values were lower in the age group of 3 to 10 years.

"There was no direct relationship between carotenoid and vitamin A concentration in blood serum." Address: College of Medical Sciences, Banaras Hindu Univ., Benares.

4713. *British Vegetarian*. 1965. Salad and cooking oils. Jan/Feb. p. 50.

• **Summary:** The makers of 16 different vegetable oils, and the names of their products are listed. These include Dietade's Soya Oil, and London Health Centre's Soya Oil.

4714. James, W.S. 1965. The Vegetarian Nutritional Research Centre, 1959-1964. *British Vegetarian*. Jan/Feb. p. 29-32.

• **Summary:** Discusses the history and activities of the Centre, Wanderlac and Velactin, Frank Wokes, N.W. Pirie, Cyril Vesey, vitamin B-12, leaf proteins, etc.

The article begins: "Since the Research Centre was inaugurated in Stanborough Park near Watford in 1959, I have, as a member of its scientific sub-committee, been in close contact with its activities of which the following is a

brief summary.

"Scientific investigations must be based on much previous experience. The Research Centre was fortunate in starting in 1959 under the guidance of Dr. Frank Wokes with over thirty years' experience of nutritional research especially on vegetarian foods. In 1958 [sic, 1959] this culminated in the marketing of the first British vegetable milk Wanderlac, now called Velactin (A. Wander Limited). At the inaugural meeting of the Research Centre there were several vegetarian experts whose investigations during the previous ten to fifteen years had done much to help directly or indirectly in the development of Wanderlac. These included Dr. W.W. Payne and Dr. Cyril Pink, who carried out clinic trials on babies at Great Ormond Street Children's Hospital and at the Vegetarian Nursing Home, Blackheath, respectively. Dr. Lester Smith, F.R.S., whose discovery of vitamin B-12 in 1948 gave a clue to the successful use of vegetable protein, was also present. As the Royal Society's adviser to the research project on vitamin B-12 in Stanborough School, in which the Research Centre has played a leading part, Dr. Lester Smith has taken increasing interest in its work.

"In October, 1959, the Research Centre helped to arrange a meeting in Manchester on leaf proteins, addresses being given by the leading expert Mr. N.W. Pirie, F.R.S., and by Dr. Wokes, who had for some years previously been studying these problems with Mr. Pirie."

"When the Research Centre started in 1959 its administrative headquarters were at Stanborough School where the headmaster, Mr. Richard Syme, its chairman until February, 1961, and his colleagues gave great help. Mr. Cyril Vesey, B.Sc., head of the school's science department, first functioned as Secretary and as Treasurer, but towards the end of 1960 handed the latter duties over to Mr. Ted Cox. Mr. Vesey, as well as taking an active part with Dr. Wokes and his son Richard in establishing the research laboratory, remained Secretary until 1964, when his secretarial duties were taken over by Mr. Ronald Luxton, another member of the school science department. Mr. Harry Leonard, B.A., a third member of the school staff, served as Committee Chairman in 1961 and again in 1963-1964.

"Steady increase in the Research Centre's activities showed the need for its own headquarters. In 1961 these were established at Dr. Wokes' residence, on the outskirts of Stanborough Park, close to the research laboratory. They contain the registered office of the Centre, also a library housing its books and records, providing a unique collection of information on vegetarian nutrition." Address: M.Sc., Chairman.

4715. Lang, Virginia M.; North, Barbara B.; Morse, Lura M. 1965. Manganese metabolism in college men consuming vegetarian diets. *J. of Nutrition* 85(2):132-38. Feb. [14 ref]

• **Summary:** "Manganese balance was studied in eight

college men consuming a vegetarian diet low in protein. The diet was supplemented with either a vegetable protein food or the vegetable protein food plus skim milk powder. The values for total mean daily manganese intake, excretion and retention were 7.07, 3.74 and 3.34 mg, respectively. The mean daily intake, excretion and retention for each subject by periods are reported. In addition, the mean daily intakes and retentions are expressed on the basis of body height (cm) and body weight (kg). All subjects were in positive balance throughout the study. Regression analyses of manganese retention on manganese intake indicated that correction of retention for either height or weight explains twice the variation in retention when compared with the uncorrected retention data. Due to the high correlation between height and weight, it was not possible in this study to determine which of the two has more influence on retention.” Address: School of Home Economics, Univ. of Minnesota, St. Paul, Minnesota.

4716. Smaridge, Norah. 1965. Graymoor’s treasury of meatless recipes. Peekskill, NY: Graymoor Press. 72 p. Illust. by C.L. Seaman (some color). 21 cm.

• **Summary:** Many of the recipes in this “meatless” cookbook call for the use of fish or shellfish.

4717. Dumm, M.E.; Rao, B.R.H.; Benjamin, V.; Pereira, S. 1965. Protein needs of children on vegetarian diets (Abstract). *Federation Proceedings (FASEB)* 24(2):173 (Abst. #253). March/April.

• **Summary:** “In developing countries it is frequently impossible to supply recommended intakes of protein to all children. Information on safe lower intakes is therefore needed. Data are reported on growth and health of orphanage children on diets typical of south India. 17 children from 2 to 5 years were observed for 6 months on Diet A (1.65 gm protein, 100 cal/kg) and 29 children for 9 months on Diet B (1.72 gm protein, 93 cal/kg). Both diets consisted of rice and mixed pulses. On Diet A the increase in height was less than in well fed Indian children; an initial small gain in weight was lost by 6 months. Serum albumin below 3 gm% and minimal edema were detected in about half the children (not necessarily the same individuals). The protein of the diet was increased to 2.3 gm/kg with prompt improvement in growth and disappearance of edema. On Diet B gain in weight was similar to that of well fed children and the increase in height less but greater than on Diet A. No edema was detected and no child’s serum albumin was below 3 gm%. Present experience suggests that on a rice-pulse diet children from 2 to 5 years maintain health and grow moderately on 1.72 gm protein/kg/day. (Supported by a grant from PL-480 funds of the NIH.)” Address: Christian Medical College Hospital, Vellore, India.

• **Summary:** In 1964 at the Botanical Congress in Edinburgh, Scotland, an American mycologist, Dr. C.W. Hesseltine, gave a fascinating account of the studies he has made of foods fermented with molds. A full account of his work has just been published in *Mycologia*. 1965. 57(2): March/April. This is a summary of that article, focusing on tempeh, sufu or Chinese cheese, miso, and shoyu or soy sauce. Address: D.Sc.

4725. *Times (London)*. 1965. Delegates taste plantmilk: New liquid food. Sept. 1. p. 6, col. 6.

• **Summary:** “From our correspondent. Derby, Aug. 31.

Drink a pint of milk a day but make it plantmilk, Dr. Alan Stoddard advised delegates at the International Vegetarian Union’s world congress at Swanwick, Derbyshire, today.

“Dr. Stoddard, a medical practitioner, is chairman of Plantmilk Ltd., a society founded to produce liquid food that is a commercial substitute for milk. Delegates were offered drinks for plantmilk: about 10 per cent of those who are vegetarians never drink cow’s milk.”

4726. Buller, Allan R.; Klis, John B. 1965. Spun soy protein foods get supermarket sales test: Duplicating meat fibers, protein value. Improved meat substitutes, recently established in health food stores, win chain-store distribution. *Food Processing (Chicago)* 26(9):115-17, 120. Sept.

• **Summary:** “Health food stores have been the traditional outlets for meat-alternate products, but Worthington Foods, Inc. Worthington, Ohio, has taken the initial steps toward moving these products into general distribution.

“Using spun soy protein fiber as the basic ingredient, Worthington Foods has developed a full line of products that look, taste, and chew like chicken, pork and beef products. Test marketing of two items is being done in three chains in Columbus, Ohio—Alber’s, Big Bear, and Kroger. The two spun soy protein foods, Wham, a ham-like product, and White-Chik, simulated white meat chicken, are both being well received by consumers in these marketing tests... Use of the fibers in foods is subject to a patent owned by Ralston Purina Company. In Columbus, both Wham and White-Chik are priced at \$0.69 for an 8-oz package. New foreign distribution, principally in Norway and Sweden, has already added some volume.”

A large photo bears the caption “Worthington’s line of spun soy protein meat-like products are packed in canned, frozen, and dehydrated forms.” Frozen products in thin paperboard boxes include White-Chik, Fri-Chik, Prime, and Wham. Canned moist products include Veja-Links, Soyameat (many flavors), Saucettes. Meat Loaf Mix is a dry canned product. Prime is in a plastic pouch.

A newspaper ad for frozen Wham stresses the product’s low fat content (“65% less fat than cured ham”), convenience, and the fact that it contains no meat.” A photo shows a rack of meatless Prosage, which resembles a pork sausage made by Worthington, ready for quick freezing. Prosage does not shrink when fried.

“Edible spun soy protein fibers, sold under the trademark Fibrotein, are supplied in fresh frozen and dehydrated forms to the food processing industry by Worthington Foods, Inc., 900 Proprietors Rd., Worthington, Ohio 43085. The company also supplies imitation meats made from Fibrotein in fresh, frozen and dehydrated forms. The imitation meats are available in slices, cubes, chips, granules, round rolls, square logs and in other shapes and sizes.”

Note: This is the earliest English-language document seen (Nov. 2014) that contains the term “imitation meats”

(with any combination of quotation marks). Address: 1. General Manager, Worthington Foods, Inc; 2. Assoc. Editor.

*

• **Summary:** Scientists have long noted that the dental structures of herbivorous (vegetable-eating) animals and carnivorous (meat-eating) animals present a sharp contrast.

"The dental structures of herbivorous animals consist of sharp cutting incisors, while the molars have a flat or nodular surface used for crushing and grinding food. This presupposes that such animals are phylogenetically constructed to live on vegetables, leaves, roots, fruits, nuts and berries. On the other hand, the carnivore has a dental structure designed to provide him with the means of eating raw flesh. The canines are elongated, strong, and sharp-pointed. They are used for grasping and tearing flesh. The molars have a lateral edge which is sharp and in approximating the jaws are used for slicing flesh."

4729. Feeley, Ruth M.; Staton, Annie L.; Moyer, Elsie Z. 1965. Fat metabolism in pre-adolescent children on all-vegetable diets. *J. of the American Dietetic Association* 47(5):396-400. Nov. [26 ref]

• **Summary:** "Fat intake and fecal fat excretion and levels of serum lipids were determined for twelve healthy seven- to nine-year-old girls on controlled low-protein diets composed entirely of foods from plant sources. Fat in the diet provided from 29 to 34 per cent of total calories.

"Girls on diets which provided 22 gm. plant protein and 71 gm. fat daily excreted from 6.9 to 7.7 gm. fat per day. Those on diets providing 40 gm. plant protein and 88 gm. fat daily excreted from 8.5 to 12.4 gm. fat per day. The mean apparent digestibilities of the fat on the two levels of protein intake were 90 and 88 per cent, respectively. The amount of fat excreted correlated with the amount of dietary fat. On the lower protein diets, no significant differences in mean serum cholesterol and phospholipid levels were observed; however, significant increases in mean glyceride levels were observed. On the higher protein diets, no significant differences in mean values were observed for any of the serum lipid components." Address: Human Nutrition Research Div., Agricultural Research Service, USDA, Beltsville, Maryland.

4730. Doyle, Margaret D.; Morse, L.M.; Gowan, J.S.; Parsons, M.R. 1965. Observations on nitrogen and energy

balance in young men consuming vegetarian diets. *American J. of Clinical Nutrition* 17(6):367-76. Dec. [20 ref]

• **Summary:** "Comments: It appears that the basal diet used in these studies was inefficient from the standpoint of both calories and protein. Replacement of 25 per cent of the vegetable protein in the basal diet with animal protein did not appear to be of any great benefit. Although there was some improvement in nitrogen retention on the milk-supplemented diet, the difference was slight and of doubtful significance. When the protein in the diet was increased by 50 per cent, however (from 0.5 to 0.75 gm. per kg. body weight), by the addition of either vegetable protein or an animal-vegetable protein mixture, positive nitrogen balance was achieved and maintained by all subjects..." Address: 1. Assoc. Prof.; 2. Prof. All: Univ. of Minnesota, St. Paul. MN; 3. Present address: Dep. of Home Economics, Univ. of California, Davis; 4. Present address: Research Dietitian, St. Mary's Hospital, Rochester, Minnesota.

4731. Altschul, Aaron M. 1965. Proteins: Their chemistry and politics. New York, NY: Basic Books, Inc. xii + 337 p. Illust. Index. 22 cm. Summarized in Soybean Digest, April 1966, p. 38. [300* ref]

• **Summary:** Contents: Foreword. Preface. Part I: Introduction. 1. Introducing proteins. 2. The protein content of tissues. Part II: Amino acids, proteins, and proteolysis. 3. Amino acids. 4. The primary structure of proteins. 5. The size and shape of protein molecules. 6. Proteolytic enzymes and proteolysis.

Part III: Proteins in food. 7. The protein requirements of *Homo sapiens*: I. 8. The nutritive value of proteins. 9. The role of amino acid composition. 10. The protein requirements of *Homo sapiens*: II. The effect of heat on food proteins. 12. Proteins in food—Some things to think about.

Part IV: Protein food supply. 13. The protein food problem I: A general discussion. 14. The protein food problem II: Some details. 15. Examples of partial solutions to the protein problem. 16. The animal protein deficit. 17. Possibilities of increasing food supplies. 18. Vegetable protein concentrates. 19. Soybeans, cottonseed, and peanuts. 20. A matter of sophistication.

This is an early statement of the "protein gap" and "proteins are limiting" theory—although neither of those terms are mentioned. The author believes it will be impossible to meet the needs of children in needy countries through the traditional means, such as milk supplies. "For this reason, United Nations agencies are assisting programs to provide low-cost processed, protein-enriched foods capable of meeting in an economical manner the nutritional needs of children in low-income urban groups."

Dr. Altschul gives a clear statement of the damaging effects of hunger (p. 11): "Hunger is the beginning of a downward spiral; begotten by it are impaired growth, reduced resistance to infection, and loss of ambition and

ability to work. There is a lowering of the standard of living and a further reduction in the ability to produce food, starting thereby another downward turn of the spiral.” Address: Chief Research Chemist, USDA Seed Pioneering Research Lab., New Orleans, Louisiana.

4732. Baer, Wilma F. de. 1965. *Secretos de la buena mesa* [Secrets of the good table]. Mexico: Ediciones Interamericanas. 200 p. Illust. (part color). 20 cm. No index. [Spa]*

• **Summary:** A vegetarian cookbook from Mexico. The original edition was published in 1956.

4733. Bieler, Henry G. 1965. *Food is your best medicine*. New York, NY: Random House. xv + 236 p. Index. 22 cm. First Ballantine Books ed., 1982.

• **Summary:** Dr. Bieler, who has been a practicing physician for over 50 years believes (p. vii): (1) The primary cause of disease is not germs but “toxemia, which results in cellular impairment and breakdown.” (2) In “almost all cases, the use of drugs in treating patients is harmful.” (3) “Disease can be cured through the proper use of correct foods.”

He also has found that “nature does the real healing, utilizing the natural defenses of the body. Under the proper conditions nature, if given the opportunity, is always the greatest healer. It is the physician’s role to assist in this healing—to co-operate with nature’s forces; to play a supporting role instead of star of the show.” He has “been in disagreement, at time sharp, with organized orthodox medicine” (p. xiv).

Twenty-five hundred years ago on the island of Cos in classical Greece, Hippocrates admonished his “circle of medical students in one of his most pithy and precise aphorisms: ‘Thy food shall be thy remedy’” [medicine]. No one to date has more eloquently given us a way of life.” Yet most physicians who take the Hippocratic Oath do not believe or practice this teaching of Hippocrates (p. 3).

Proteins are body builders and important for good nutrition, but consumed in excess they “can be body killers.” Too much of a good thing is not necessarily good (p. 177-200).

He is frequently asked about the value of a vegetarian diet. He does not advocate it as a way of life—but neither does he understand it, for he says that “many who call themselves ‘vegetarians’ eat cheese, butter, eggs, and also drink milk; they are not true vegetarians but, rather, non-meat eaters. In that way they remain on an excellent diet from the standpoint of nutrition.” Note: Vegetarians do not eat flesh foods—meat, poultry, or fish; they may eat dairy products and eggs.

Also discusses: Explorer Vilhjamur and the importance of raw meat and fish in the diets of healthy Eskimos (p. 190). Francis F. Pottenger, Jr. and his research (over 5 years using 109 cats) showing the very harmful effects of cooked meat or milk in the diet of cats (p. 191-93, 198).

Talk with Chef Akasha Richmond. 2004. Feb. 9. She has read in two places that he was Gloria Swanson’s personal physician. He prescribed “Bieler Broth” [a potassium-rich vegetable broth] for whatever ails ‘ya (see p. 205). In the introduction to her English-language of *The Physiology of Taste*, by Anthelme Brillat-Savarin (lived 1755-1826) M.F.K. Fisher says some remarkably wonderful things about Dr. Bieler. Address: M.D., Capistrano Beach, California.

4734. Boots, Gypsy; Hopkins, Jerry. 1965. *Bare feet and good things to eat*. Los Angeles, California: Virg Nover, Printer. iii + 162 p. Illust. No index. 18 cm. Introduction by Steve Allen.

• **Summary:** This is the autobiography of Gypsy Books (born Robert Bootzin in 1911 in California) as told to Jerry Hopkins. Retail price: \$1.00. His father, Max, came to the USA from Europe without a penny and raised a happy family in San Francisco. They were raised on an organic, natural foods, vegetarian diet. His parents taught him to be happy, to love every person, to live a healthy but simple life, and to laugh a lot. Today he lives with his wife, Lois, and three kids in a small cottage in Los Angeles.

In the 1940s he was one of the roughly 15 “Nature Boys” who lived in Southern California and shared a common desire to “abandon civilization and live a natural, healthy life.” He and Eden Ahbez were friends for two years. Eden wrote the words to “Nature Boy” which begins: “There was a boy / A very strange, enchanted boy; / They say he wandered very far, / Very far over land and sea.” Some 2-3 years later Nat King Cole recorded this song of Eden’s and shortly thereafter Eden became a celebrity, with his photo in *Life* magazine. The song he had written was at the top of the national Hit Parade, and the record sold a million copies. Today Eden lives in one of the canyons north of Los Angeles.

In 1958 Gypsy and his wife opened a “Back to Nature Health Hut” in Hollywood, not far from Beverly Hills (p. 50). A huge sign on top read “Organic Fruit, Produce & Juice.” There he served many fruits, nuts, vegetables and healthy foods. Many celebrities came. Among his biggest boosters were Gloria Swanson, Steve Allen, and Pat Boone. At his first luau he served a Baked soy bean casserole (using whole dried soy beans; recipe on p. 55). Other soy-related recipes: Soya-rice flour coffee cake (with soya flour and brown rice flour, p. 64). Rye bread (with soy oil, p. 65).

There are chapters on fasting (5), health for growing children (13), salads (14), healthy drinks (15; he avoids alcohol and loves carrot juice and herb teas), vital foods (16-20, incl. soy beans, p. 111; and lecithin, p. 140), the Gypsy Boots Corporation (24; one of its products is the Gypsy Boots Energy Bar, p. 153-54; it contains malted milk crunch, vegetable oil, carob powder, brown sugar, skim milk, sunflower seeds, sesame seeds, and lecithin). Joe Weider is one of the people who have influenced him most in life

(p. 157); others are Paul Bragg, Indra Devi (yoga teacher), Prof. [Edmond] Szekely (who lives at Rancho La Puerta in Mexico). The book contains 20 pages of photos, most showing Gypsy Boots with various celebrities, including: (1) Some of California's "nature boys." (2) Charlton Heston. (3) His health hut in Los Angeles. On the cover is a photo of Gypsy and Steve Allen.

Talk with Gypsy Boots. 2000. July 9. Gypsy does not remember exactly when his Energy Bar was first sold commercially, but it was probably in the late 1950s or early 1960s. As far as he knows, it was America's first "Energy Bar," made at first in small quantities by a Hungarian candy maker. For more information, visit his Web site at www.gypsyboots.com. He will be celebrating his 90th birthday on 19 Aug. 2000 at Paramount Studios in Hollywood. He now lives in Camarillo, California, and still has lots of energy.

Note: Talk with Chef Akasha Richmond. 2004. June 14. She was scheduled to meet Gypsy yesterday, on Sunday, June 13, to drive him to a book signing. He never showed up. She was worried, and quickly found out from his caretaker and close personal friend that he had to go to the hospital for surgery. The caretaker then told Akasha that he was not born in 1911, but on 14 Aug. 1916; his caretaker learned this from Gypsy's first wife. Years ago, he started to use the 1911 date to make him look older than he really was when he first appeared on the Steve Allen show. Address: Los Angeles, California.

4735. Harding, Walter Roy. 1965. The days of Henry Thoreau. New York, NY: Alfred A. Knopf. xvi + 472 p. See p. 63. Illust. 22 cm. *

4739. Porphyrius, -. 1965. Porphyry on abstinence from animal food. Translated from the Greek by Thomas Taylor. Edited and introduced by Esmé Wynne-Tyson. London:

Centaur Press; New York: Barnes & Noble. 196 p. 23 cm. [5+ ref]

• **Summary:** Porphyry (also called Porphyrius, lived A.D. 234?–305?) was a Neoplatonist student of Plotinus, the Egyptian-born Roman philosopher who lived A.D. 205–270. He was considered one of the most erudite philosophers in the Western world. A mystic, he advocated the direct experience of the divine Essence. Both Plotinus and his pupil, Porphyry, were vegetarians.

This work, originally titled *De Abstinencia* and divided into four volumes, was written for Porphyry's wayward student and disciple, Firmus Castrius, who had forsaken the vegetarian habits of his master. In Book 1 Porphyry deplores his friend's defection from the truly philosophical practice of a harmless diet. Then, by fairly presenting all the arguments used against this diet by other philosophers and replying to them, he seeks to show how mistaken Firmus Castrius has been. "Porphyry contends that to insert a dead animal in a living man is to introduce into him something of a deplorably 'foreign nature.' Therefore to abstain from flesh is an essential part of the purification of the soul, a belief that was in the human consciousness ages before the priests of Isis imparted it to Pythagoras, and was both preached and practised by the highest order of the Magi in the ancient Persian religion."

In Book 2 he discusses animal sacrifice, arguing that this custom, considered sacred by some, does not justify flesh-eating, although it established the precedent for this cruel habit. Like Isaiah, he argues that no such sacrifice should be offered to the Supreme Being, who asks only the invisible sacrifice of inward purification. The "most excellent offering is a pure intellect and an impassive soul." In Book 3 he reviews the subject from the viewpoint of justice and humanity. And in "Book 4 he proposes to write of the nations that practice abstinence from animal food, and also to give examples of illustrious Greeks and Romans who had adopted a harmless diet. Unfortunately the book ends abruptly before the last part of this plan is brought to execution, and it is probable that at least half the chapter has been lost, or destroyed. What remains, however, is extremely interesting, historically, describing various ancient customs, religions and beliefs obtaining in the civilised world of Porphyry's time."

Porphyry argues that justice is owed to rational beings. Many animals are rational and therefore deserve just treatment. In answer to the critic that humans are more rational than animals, Porphyry emphasizes that there is much variation in the rationality of both humans and animals. Given that justice is owed to all humans (regardless of how rational they may be), to be consistent we must admit that justice is owed to animals—in spite of their different degrees of rationality. A vegetarian diet is considered to be healthier than one which includes flesh foods; whole nations have lived well as vegetarians.

Plotinus' chief work, an attack on Christianity, earned him the reputation of being the Christian religion's greatest enemy; this work was publicly burned, first by Constantine, and finally by Theodosius.

The great French philosopher Voltaire, in *Viande* (Dict. Phil.) later praised *De Abstinence* for its firm position against eating flesh. He writes of Porphyry (p. 8): "One might believe in reading him that this great enemy of the Church is a Father of the Church. He does not speak of metempsychosis, but he regards other animals as our brothers, because they are endowed with life as we are, because they have the same principles of life, the same ideas, memory, industry—as we. (Human) speech alone is wanting to them. If they had it, should we dare to kill and eat them? Should we dare to commit these fratricides? What barbarian is there, who would cause a lamb to be butchered and roasted, if that lamb conjured him, in an affecting appeal, not to be at once assassin and cannibal?"

4740. Richmond, Sonya. 1965. International vegetarian cookery. London and Glasgow: Collins. 192 p. Index. 22 cm. Published in the USA by Arco in 1967.

• **Summary:** This book, dedicated to the author's yoga pupils, arranges recipes (mostly entrees and soups) by country. The only Asian countries included are China and India; Japan is not. The author, who appears to be British, has collected these recipes from other vegetarians during her travels. The only soy-related recipe in the book is "Soya Bean Noodles," listed under China (p. 49). The introduction to the recipe reads: "This is a most useful recipe for the vegetarian because it requires soya bean flour. As I have said before [where?] soya bean is one of the most valuable sources of protein known to man. It is easy to buy soya beans, both whole and cracked, in health-food shops and delicatessens. It is equally easy to obtain soya bean flour which is yellow in colour. Do not attempt to use it like ordinary flour for it contains no starch and therefore is not a thickening agent. It has to be cooked according to its own nature. This Chinese recipe makes excellent use of it, and this recipe is also extensively used in Japan." The only ingredients are: 1 lb. soya bean flour, 2 egg yolks, 1 tsp. salt, and cold water as required. No wheat flour is used.

4741. Robinson, Dores Eugene. 1965. The story of our health message: The origin, character, and development of health education in the Seventh-day Adventist Church. 3rd ed. Nashville, Tennessee: Southern Publishing Assoc. 445 p. No index. 17 cm. First edition was 1943. 2nd ed. 1955. [100* ref]

• **Summary:** This book is perhaps the most useful and carefully documented history of health reform among Seventh-day Adventists. Sadly, however, it has no index. The author (a man) was Ellen White's personal secretary and grandson-in-law. Contents: 1. "The times of this ignorance."

2. Movements toward therapeutic reform. 3. Temperance and diet reforms (The American Temperance Society was organized in Boston, Massachusetts, on 10 Jan. 1826. It was the founders' hope "by light and love to change the habits of the nation, with regard to the use of intoxicating liquors." Several years passed before the goal switched from moderation to abstinence or "teetotalism.") 4. Joseph Bates, a health reformer ("In heart-searching preparation for the expected return of Christ," he resolved in Feb. 1843 to eat no more meat. He was the first Adventist to become a vegetarian.) 5. Health reforms among Seventh-day Adventists (Following Ellen White's vision in the autumn of 1848, the emphasis was on discontinuing use of tobacco, tea and coffee.) 6. The vision at Otsego, Michigan. 7. Early health literature. 8. Launching a campaign for health. 9. The popular dress reform. 10. The quest for moderation. 11. Days of affliction. 12. "Let us arise and build." 13. The ministry as teachers of health. 14. A lesson in institutional finance. 15. Lost confidence restored. 16. Opposing extreme views. 17. Reaching for high standards. 18. On to world leadership. 19. Uniting with the temperance forces. 20. Training for service. 21. Training of physicians. 22. For medical missionary service. 23. Launching a medical college. 24. Variant views arise. 25. Steps toward unity. 26. Final steps in separation. 27. A remarkable coincidence. 28. Rapid moves in southern California. 29. The call for a third sanitarium. 30. Purchase of Loma Linda property. 31. How the payments were met. 32. "An educational center." 33. "We wait for light." 34. A bold venture in faith. 35. Faith further tested. 36. Through "rivers of difficulty." 37. By the providence of God. 38. Retrospective and prospective. Appendix: Guiding principles in dress reform.

4742. Seventh-day Adventist Dietetic Assoc. 1965. Diet manual, utilizing a vegetarian diet plan. Revised edition. Loma Linda, California: Seventh-day Adventist Dietetic Assoc.

• **Summary:** The title page reads: "Prepared by the Department of Dietary Service, White Memorial Medical Center, Los Angeles, California. In cooperation with the Seventh-day Adventist Dietetic Association" (SDADA). Revised Edition, edited by Phyllis Acosta, M.S., Ardis Beckner, M.S., Esther Lee, M.S., Darlene Manullang, M.S., Martha Miller, M.S., and Elizabeth Wenz. It was published and distributed by the SDADA. All subsequent editions (1971 (later listed as 1970), 1975, 1978, 1982, 1990) were prepared by the SDADA.

A comprehensive loose-leaf handbook for the planning, selection, and coordination of vegetarian diets.

Table VI, titled "Protein, fat, and carbohydrate composition of some meat alternates" (p. 104), lists 39 product names alphabetically. Most (perhaps all; the names of the manufacturers are not given) are made by Seventh-day Adventist food companies, especially Loma Linda Foods,

Worthington Foods, and Madison Foods. These products are: Big Pat, Burger, Chic-ketts, Chili, Cho-Pats, Choplets, Com-Pro, Dinner Cuts, Dinner Rounds, Entree, Frozen Fri-chic, Linketts, Little Links, Meatless Nu-steak, Madison Burger Miller's Main Course, Numete, Nuteena, Nut Meat, Prime Vegetable Burger, Proast, Proteena, Protose, Redi-Burger, Sandwich Spread, Soya Meat–Beef Like, Soya Meat–Chicken-like, Vegebites, Vegeburger, Vegechee, Vegecuts, Vegelona, Vegetable Skallops, Vegetable Steaks, Vegetarian Patties, Vegetarian Products, Vega-Links, Vigoroast, Zoyburger.

Note: This is the earliest English-language document seen (Nov. 2014) that uses the term “Soya Meat” to refer to a meatless meatlike product made from soy. Address: Main Office, Box 75, Loma Linda, California.

4743. Singha, Ranadhira. 1965. Jhataka masa [The meat of butchery]. Amritsar, India: Khalsa Brothers. 243 p. 19 cm. [Pan]*

4744. Vegetarian Catering Association–Grasmere. 1965. Recipe book and guide. 2nd ed. Grasmere, England: VCA. 48 p. Illust. 19 cm. *

4745. Wason, Elizabeth (Betty). 1965. The art of vegetarian cookery. Garden City, New York: Doubleday & Company, Inc. 215 p. Index. 22 cm. Drawings by June Lathrop.

• **Summary:** The author's name on the title page is written Betty Wason. She was born in 1912. Chapter 5, titled “Protein-rich Legumes” notes: “It is estimated that soy beans were grown in the Orient as long ago as 3000 B.C.” (p. 90), but no soy recipes are given in this chapter. The chapter on “Health-giving Breads” contains a recipe for Soy Muffins (with soy flour, p. 141-42). It notes that “Soy flour is richer in protein than any other flour.”

4746. Worthington Foods, Inc. 1965? A food plan for fitness (Leaflet). Worthington, Ohio. 2 p. Undated. Front and back. 28 cm.

• **Summary:** This glossy color leaflet contains a “Daily food guide for growth, energy, maintenance and resistance.” It recommends a vegetarian diet containing: 4 or more servings daily of fruits and vegetables. 3 or more servings daily from the milk and cheese group (incl. Soyamel—A Powdered Soy Milk). 2 or more servings daily of protein foods (incl. many canned or frozen Worthington products). 4 or more servings daily of breads and cereals. Limited servings daily of “Plus foods” such as oils and fats, sweets, desserts, etc.

On the back panel is a description of the vitamins and minerals needed in a healthy diet. Color photos show: Prime, White-Chik, Big Pats, Soyameat, Chili, Choplets, Veja-Links, Entrée, Prosage. Address: 900 Proprietors Rd., Worthington, Ohio 43085.

4747. Hardinge, Mervyn G.; Crooks, H.; Stare, F.J. 1966. Nutritional studies of vegetarians. V. Proteins and essential amino acids. *J. of the American Dietetic Association* 48(1):25-28. Jan. [12 ref]

• **Summary:** This study of lacto-ovo-vegetarians, pure vegetarians, and non-vegetarians found that all subjects consumed more than twice their minimum requirements of protein. “Summary and conclusions: The amounts of essential amino acids, as well as of cystine and tyrosine in the diets of vegetarians and non-vegetarians, have been calculated and compared. All groups met and generously exceeded twice their minimum requirement.” Address: 1-2. Dep. of Pharmacology, School of Medicine, Loma Linda Univ., California; 3. Dep. of Nutrition, Harvard School of Public Health, Boston, Massachusetts.

4748. Hartman, Warren E. 1966. Vegetarian protein foods. *Food Technology* 20(1):39-40. Jan.

• **Summary:** “Early Worthington products bore the mark and influence of John Harvey Kellogg and the Seventh-Day Adventists. In 1866 the Adventists established the forerunner of the Battle Creek Sanitarium and the Battle Creek Food Company, in Michigan. Continuous experimentation with materials and methods to provide a wholesome palatable non-flesh diet led to the invention of breakfast cereals, peanut butter, cereal coffee substitutes, and decaffeinated coffee. It is not generally realized that these products, now a regular part of the diet of both meat-eaters and vegetarians, emanated from the vegetarian habits of the early Adventists.”

“Until recently, the majority of the U.S. population was totally unaware of the so-called vegetarian protein food products, and the food industry gave them little more than passing attention. Undoubtedly, the greatest contribution to the present technology and status of vegetarian protein foods was that of Robert A. Boyer and his method of processing edible protein, first by solubilizing and then utilizing textile spinning techniques to orient the molecules in continuous filaments. Convinced of a future for vegetarian protein foods, Worthington obtained a license in 1957 under the Boyer patent...”

“In 1960, Worthington acquired Battle Creek Food Company, pioneer of the vegetarian protein foods industry. And in line with its modernization and diversification policy, Worthington has recently acquired Nutrition International Corporation and its subsidiary, Madison Foods, Tennessee. Prime interest focused on ‘Infra-soy,’ Nutrition International’s highly palatable hypoallergenic liquid soy formula for infants. Another important addition to the Worthington complex is the new Research and Development Center...”

“The first textured soybean protein fiber product marketed in the U.S. is Worthington’s frozen ‘Fri-Chik,’ an extruded formulation simulating a small fried portion of white chicken meat. This same formulation was next canned in a light gravy and called ‘Soyameat–Fried Chicken Style,’

and was also later marketed as frozen and canned 'White-Chik' in large rolls for slicing, dicing, etc. The approximate analysis of these simulated chicken products: protein 20-26%, fat 18-25%, and carbohydrate 2-3%."

Note: This is the earliest English-language document seen (Oct. 2015) that uses the term "soybean protein fiber" to refer to edible spun soy protein fiber. Address: Worthington Foods, Inc., Worthington, Ohio.

4749. Wilson, John B. 1966. Pythagoras crosses the Merrimac (Fruitlands revisited). *Educational Forum* 30(2):209-15. Jan. [35 footnotes]*
Address: Dep. of English, West Texas State Univ. at Canyon, Canyon, Texas.

4750. Chen, Jui-san. 1966. The effect of a long-term vegetable diet on serum lipid and lipo-protein levels in man. *J. of the Formosan Medical Association* 65(2):65-77. *

4751. Myasnikov, S.P.; Pravosudov, V.P. 1966. [Electrocardiographic changes in dogs produced by nitrites and nitrates contained in sausages]. *Gigiena i Sanitariia (Hygiene and Sanitation)* 31(2):38-42. Feb. [2 ref. Rus; eng]
• **Summary:** "The feeding of dogs with sausages containing 1-2 mg of nitrites per kilogram of body weight caused in 1-2 hours the formation of methemoglobin in the blood in a concentration of 7.5-11 per cent, a fall of potassium content in the blood serum by 2.7-6.8 mg% and a rise of the sodium level by 20-40 mg% and that of oxaloacetic transaminase by 20-40 omega E. The hypoxi produced by the feeding of sausages is accompanied by an acceleration of breathing and of the cardiac contraction rhythm, as well as, by pronounced changes in the electrocardiogram: a fall of the amplitude and the appearance of double peak and double phase T waves. Physical strain intensified these changes. Three hours after work the physiological indices did not normalize."

4752. Stoddard, Alan. 1966. The development of plantmilk. *British Vegetarian*. Jan/Feb. p. 34-38.
• **Summary:** The article begins: "In 1847 the Vegetarian Society was founded. In 1944 the Vegan movement was started. In 1956 the Plantmilk Society was inaugurated. These are the historical dates of progressive humanitarian ideas in this country."

A number of nutritious alternatives to cow's milk have been put on the market: Velactin, Wanderlac, Soyallac, and Almondlac. The latest product is called Plantmilk. It is sold as a liquid, concentrated to twice the recommended concentration. "The protein content of plantmilk is higher than human milk and about the same as cow's. It is derived from two sources—leaves and soya. The fat is derived from the soya bean and palm oil, the carbohydrate from cane sugar and soya, the minerals from leaves and soya. Calcium is added to bring the level near to human milk and vitamins A

and D and B-12 are also added." Vitamin B-12 is added at the level of 0.5 microgram per 100 gm of Plantmilk.

About £20,000 has already been spent on the research, development and production of Plantmilk. "Further improvements will be made until a perfect food is evolved.

"Most of the research into the formulation of the milk has been in the extraction of protein from leaves, cabbage, cauliflower, pea pods, etc.," and the greatest difficulty has been to separate the chlorophyll—the green part of the leaf—from the protein. It has finally been accomplished with activated carbon.

"First of all the cleaned cabbage leaves are broken down by an apparatus called a 'food Tec' which has large numbers of sharp blades which divide the cabbage into minute pieces. Water is added to carry the product to the next stage which is that of the separation of the chlorophyll by charcoal from the protein. This gives an almost clear fluid which is then heated to precipitate the protein. The filtrate is then concentrated to form what is now called the 'curd.' This vegetable protein has most of the amino-acids contained therein, but as it is lacking in two essential ones—methionine and cystine, we now have to add soya protein necessary for maintaining life.

"Complete analysis of protein into its component amino-acids is a complex and costly procedure. We have as yet, not had a quantitative analysis of the amino-acid content of Plantmilk but we do know that the sources—viz., the combination of leaf protein and soya protein contain the complete range of known amino-acids, and we are satisfied that Plantmilk alone would sustain healthy life from the protein point of view."

"A small amount of starch comes from the soya protein 'isolate.'" The various ingredients are placed in a mixer and then de-aerated before being fed into a Fryma, which homogenizes them.

Unfortunately reconstituted Plantmilk costs twice as much as cow's milk. And even at this price, the company is operating at a loss. The author urges all vegetarians to buy and use the product. The company's first goal is to make and sell 5,000 cans of Plantmilk a week. By comparison, 50 million pints of cow's milk are consumed each day in Britain. However its present plant and machinery is capable of producing only 2,000 cans/week. So they need bigger machinery and more staff.

Note: This is the earliest English-language document seen (Dec. 2015) that contains the term "soya protein isolate" (or "soya protein isolates"). Address: Chairman, Plantmilk Ltd.

4753. Crusade for the Abolition of Cruelty. 1966. Man called vegetarian at heart! (Ad). *New York Times*. April 23. p. 13, col. 4.

• **Summary:** This large ad, almost one full page in size, consists mostly of an article titled "Man against his nature," by Curtis P. Freshel, which recently appeared in the April

issue of *Town & Country* magazine. It “is reprinted here thanks to Pageen Fitzgerald’s Crusade for the Abolition of Cruelty. The author, Curtis P. Freshel, is well-known in England for his vegetarian writings: he is a New Yorker, however.” The article argues that man was not meant to eat meat, that this is clearly stated in the Bible, and that science has shown meat to be a major cause of human health problems. The section titled “Reverence for Life” explains the teaching of Dr. Albert Schweitzer. It closes with a quote from Tolstoy: “For a good life, a certain order of good actions is indispensable.” “The first from which a virtuous man will abstain will always be the use of animal food.” “Flesh is a habit that men enjoy as they enjoy drunkenness, dope, and crime.”

A clip-out form at the end reads: “Fill out this coupon and mail it today if you want ethical and medical evidence that a vegetarian diet is best Enclose \$1.

“Crusade for the Abolition of Cruelty. Att: Pegeen Fitzgerald. 40 Central Park South (11-D), New York, New York 10019. Mail pamphlets indicated... Please send \$1 for handling & mailing. Diet and The Arts by Henry Bailey Stevens, Man Called Vegetarian at Heart by Pegeen Fitzgerald, Living Graves by G.B. Shaw, What to Eat When You Cut Out Meat by Pegeen Fitzgerald.”

4754. Bean, Louis H. 1966. Closing the world’s nutritional gap—with animal or vegetable protein? *P.A.G. News Bulletin (Protein Advisory Group, WHO / FAO / UNICEF)* No. 6. p. 20-31. April. [4 ref]

• **Summary:** Footnote: This paper was first presented by the author at the: 8th Annual Conference on Science and Technology in Israel and the Middle East, New York, N.Y., 23 Oct. 1965.

“The World’s Food Crisis has been fairly well publicized, and its main features are beginning to stand out clearly. Population practically everywhere is rising. Food production is barely keeping pace. In the most populated areas of the Far East [East Asia], the Near East, Africa and Latin America, increases in population prevent increases in per capita income and in per capita food consumption. In the U.S.A. production is being held in check, so as to keep surplus food production from piling up. In Europe, food production is increasing faster than population, and we are witnessing there an increase in the so-called quality of the diets, that is, an increase in livestock production.”

“The protein shortage is something over 8 million tons, about half derived from animal, half from vegetable sources.”

“I want to dwell on these protein shortages and to use them to make two points. The first is that the separation between animal and vegetable protein seems to me misleading. It leads to placing undue emphasis on livestock production in underdeveloped countries. The second point is that if this fact were more generally recognized, it would

help to speed up expansion in the supply of protein food, for it would shift some of the emphasis from costly, wasteful livestock production in the surplus producing countries as well as in the protein deficit countries to the more immediate potential increases in vegetable protein.”

“Even if by some miracle the poor of India now living on \$50 a year were to earn \$100 or \$150 per capita, the difference in the amount of animal protein in their diet would rise from 2-3 grams per day to 7-8 grams and total protein from about 35 grams to 50 (among urban families).”

“Those who look at the world food crisis in terms of decades, see the dire consequences of a doubling of the world’s population in the next 30-40 years.” Note: The world population in 1965 was 3.29 billion. It doubled in 43 years; it topped 6.6 billion in 2008.

Tables show: (1) World food deficit, 1959-1961 (million metric tons). In calories, protein, and fat. World total, Communist Asia, and all other countries. (2) Available food per 100 persons per day: Developing countries (70% of world’s people). Developed countries (30% of world’s people). USA & Canada (6.6% of world’s people). Includes calories per person: 2150, 3050, 3110. Protein—Total per person 58, 90, 93 gm. Protein—Animal per person: 9, 44, 66 gm. (3) Number of days of protein requirement (by a moderately active man) produced by one acre, yield selected food product: Beef cattle 77 days. Hogs 129. Poultry 185. Milk 236. Corn flakes 354. Oatmeal 392. Corn meal 773. Wheat flour (whole) 877. Beans, dry edible 1,116. Peas, split 1,783. Soybeans, edible 2,224. Conclusion: Animals are inefficient producers of protein; legumes are the most efficient producers.

Bar charts show: (1) Relative cost of protein from selected raw material sources:

Beef (retail) \$4.44.
Chicken (dressed) \$1.50.
Wheat flour \$0.60.
Bulgar wheat [bulgur] \$0.47.
Peanut meal (defatted) \$0.43.
Dry skim milk [nonfat dry milk] \$0.40.
Wheat (whole) \$0.30.
Cottonseed flour \$0.17.
Fish meal (food) \$0.14.
Soy flour (food) \$0.11.

Note: This analysis is very similar to that of *Diet for a Small Planet* (Sept. 1971). Address: Economic Consultant, Arlington, Virginia.

4755. *British Vegetarian*. 1966. Dalai Lama gives up eating meat. March/April. p. 154.

• **Summary:** This is a summary of an article from *The Deccan Chronicle* (25 Oct. 1965). “The Dalai Lama saw a chicken being killed for his meal during his recent tour of Kerala and decided to give up eating meat... The 31-year-old Dalai Lama is the first in his lineage to give up meat, fish and

other non-vegetarian food. His thirteen predecessors in the office, though Buddhists, were non-vegetarians, primarily due to climatic conditions in Tibet.” Address: B.A.

4756. James, Isabel. 1966. The use of whole foods. *British Vegetarian*. March/April. p. 141-48.

• **Summary:** This is the revised text of a lecture given by the author at the 18th International Vegetarian Union Congress at Swanwick in 1965. After defining whole foods she discusses vegetarian protein foods, including nuts, pulses, and yeast. Under Pulses, the main variety discussed is the soya bean. “This is truly a Wonder Bean!” It can be used to make flour, milk, curds and cheese [tofu], and soy sauce. Or the beans themselves can be soaked and cooked for a long time. “The by-products of the bean are also valuable for pasturage, dry fodder and silage. It seems a pity that such a valuable food should also be used for the production of soap, paint and high explosives!” Address: B.A.

4757. Thurston, Claude E. 1966. *Today's Food* passes 10th birthday. *Today's Food (Loma Linda Foods, Riverside, California)* 11(1):3. Spring.

• **Summary:** “As this *Today's Food* goes to press we are beginning our eleventh year of publication. Begun as a two-color paper in the spring of 1956, with a circulation of only a few thousand—mostly in California—*Today's Food* is now printed in full color and is circulated from coast to coast to every member of the Seventh-day Adventist church who wishes to receive it. Many thousands of non-Adventists have also requested that their names be placed on our subscription list because they are interested in our vegetarian program.”

The Associate Editor, Dorothea Van Gundy Jones is “daughter of the late T.A. Van Gundy, pioneer developer of vegetarian protein loaves and soy milk... Upon completion of her Bachelor of Science Degree at the CME [College of Medical Evangelists] School of Dietetics, she served as a dietetic counselor to a Beverly Hills physician for a number of years before accepting a call to La Sierra College as Director of Food Service. For the past eleven years (during which she became Mrs. Edwin Jones) our nutritionist has traveled widely both in this country and abroad while conducting cooking classes, lecturing before civic groups, camp meetings, and professional organizations of physicians and dentists. Mrs. Jones has also made numerous TV appearances from coast to coast.”

Photos show nice portraits of Editor F.W. Edwardy and Associate Editor Dorothea Jones. Address: PhD, Director, Research Lab., Loma Linda Foods.

4758. *Today's Food (Loma Linda Foods, Riverside, California)*. 1966. Celebrating our 60th anniversary [Loma Linda Foods]. 11(1):5 (back cover). Spring.

• **Summary:** Loma Linda Foods has been guided by the wise counsel of Ellen G. White, who began discussing

healthful nutrition in 1863. “Actually, the nutrition work of Seventh-day Adventists, who own and operate Loma Linda Foods, began 100 years ago at Battle Creek Michigan... But the denominational affiliation with the old Battle Creek San breakfast foods ended in 1903 and it was not until 1906 that it was reactivated at the Loma Linda Sanitarium in California. Here stoneground wheat bread and healthful cookies and fruit crackers were made in the sanitarium bakery, and in 1907 demand for the products from residents of the growing community forced the construction of a separate building. Here in a combination bakery and store, the business thrived for 30 years.

“Now known as Loma Linda Foods, the new factory continued making fine bread and cookies but added high protein products perfected to take the place of meat in vegetarian menus; whole grain breakfast foods; Breakfast Cup cereal drink [coffee substitute]; and about 1930, began making the first soy milk.

“Demand for Loma Linda Foods quickly outgrew the small delivery truck service developed within a 125 mile area, and when land for a new plant was offered by what was then La Sierra Junior College, ten miles west of Riverside, the move was made.

“Our present plant and Western Division general offices opened in 1938, and in 1951 the Eastern Division headquarters opened in Mount Vernon, Ohio. Developed for 25 years under the leadership of George T. Chapman from Australia, and now managed by Charles P. Miles, Loma Linda Foods is one of 30 food factories owned and operated by Seventh-day Adventists in Australia, New Zealand, South America, England, France, Denmark, Germany, Switzerland, Africa and Japan.

“Some 300 workers, plus nearly 100 salesmen, are dedicated to the production and distribution of more than three dozen tasty products bearing the Loma Linda Foods label...”

Color photos show: The general offices and main Loma Linda Foods plant at Riverside. Sales representatives and management personnel of the Western Division of Loma Linda Foods.

4759. *Today's Food (Loma Linda Foods, Riverside, California)*. 1966. None of these healthy youngsters was reared on milk. 11(1):1-3. Spring.

• **Summary:** Photos show many healthy infants and children. Commercial soymilk products include:

Soyagen: all-purpose, malt flavored, or carob flavored; in liquid or powdered form.

“Multigen: This new soy milk just now being placed on the market, is specially formulated to supply a total diet for those on a restricted menu. It supplies a higher fat and carbohydrate content and all the nutrition needed for those on a liquid dietary.

High-So-Pro: a high-protein powdered soymilk, low in

fat, salt, and carbohydrates that is especially good for those on weight-reducing programs and ideal for diabetics.

“Instagen: an isolated protein soy milk, fortified to provide the essential vitamins and minerals. Instagen has a little lighter color, a little milder flavor, and is a little lower in price.

Whether or not you have dietary problems, if you wish to lower your cholesterol level, or would like to become a complete vegetarian, Loma Linda soy milks provide the easy answer.

“As to those who in years past complained of a ‘beany’ flavor in soy milk: try it once more—today’s product is vastly improved! And for the diehard who still demands a completely different taste, the new Carob Soyagen with its rich chocolate-like flavor comes not only ready to drink, but may be used in any number of tasty recipes for puddings, ice cream, and other dishes.”

4760. Choudhury, M.S.; Umar Sial, M.; Ali, Safdar; Khan, A.M. 1966. Soybean trials in Hyderabad region. *West Pakistan Journal of Agricultural Research* 4(1-2):80-90. March/June. [12 ref]

• **Summary:** The greatest development of the soybean has taken place in the United States, and this development has stimulated worldwide interest in the crop. Many countries are now making efforts to introduce and develop soybeans as a source of high quality protein and oil. In view of its many and varied uses, the soybean has been called “miracle-bean, vegetarians meat, wonder bean, poor man’s meat and golden bean, etc.”

Pakistan has a shortage of oils and fats. The expansion of the country’s vegetable ghee industry has required the importation of oil from other countries, and large quantities of soybean oil are being imported for this purpose. Therefore, in 1960, a scheme for the introduction of this crop to the Hyderabad Region was sponsored by the Agriculture Research Council of Pakistan., with the goal of selecting suitable varieties and finding optimum cultural practices for these varieties in this region. To date, three varieties—S.B.L. (yellow seed), K-16 (black seed), and K-30 (black seed)—have been selected for their good properties.

Soybean trials were conducted at Tandojam for four years, 1961 to 1964 to test for the best of four sowing dates, three inter-row spacings, and three varieties (those mentioned above). Planting on June 15th gave the best yields for varieties K-30 and S.B.L. Spacings of 1 to 1½ feet between rows gave the best yields—up to 32.21 maunds per acre. Address: Agricultural Research Inst., Tandojam, Pakistan.

4761. *Time*. 1966. Commotion in the bean pit. 88:77-78. July 8.

• **Summary:** The soybean is now “the hottest item in the seething U.S. commodities market. Last week futures for

soybeans, soybean oil and soybean meal set seasonal records after a month of wild trading.” Prices tripled during the month.

“Introduced to the U.S. from Asia in 1804, the soybean did not become a significant agricultural product until World War II cut off normal U.S. imports of fats and oil. From a crop of 193 million bu. in 1945, output rose to 843.7 million bu., worth nearly \$2.5 billion last fall. Soybeans are the U.S.’s most valuable agricultural export, ranking ahead of wheat and corn...

“Worthington Foods Inc. takes edible soybean fiber produced by Ralston Purina, turns it into meatless frankfurters, roast beef and fried chicken, sells them to Seventh-day Adventists and vegetarians. Archer-Daniels-Midland Co. is testing a soy beverage to be sold in powder form, and Central Soya has developed an ice cream-like frozen dessert made of soybeans.

“What interests researchers the most about the soybean is its high protein content (up to 50%), and this month Central Soya will begin mass production of Promine, an isolated soybean protein, at a new Chicago plant. Promine binds and emulsifies pulverized meats, such as sausages, meat loaf and bologna.”

4762. *British Vegetarian*. 1966. Science Council of the International Vegetarian Union: SCIVU Abstract Service. July/Aug. p. 325-27. [9 ref]

• **Summary:** The Science Council has started an international service to collect and summarize scientific information about vegetarian nutrition from journals published around the world. The information is recorded in abstracts. Nine examples follow; three of them are about soya bean milk.

4763. *British Vegetarian*. 1966. The Buddha’s message of non-violence (ahimsa). July/Aug. p. 351. [3 ref]

• **Summary:** In the Jivaka-Sutta [Sutra] the Buddha says that a layman who gives flesh to a genuine monk gains much demerit.

In the Brahmana-Dhammika-Sutta of the Sutta Nipata the Buddha urges his followers to refrain from slaying cattle. “Therefore, O! householders, please refrain from slaying, refrain from causing slaughter, become lifelong vegetarians, and all disease will disappear from the face of the earth!”

4764. Akeson, Walter R.; Stahmann, Mark A. 1966. Leaf protein concentrates: A comparison of protein production per acre with that from seed and animal crops. *Economic Botany* 20(3):244-50. July/Sept. [23 ref]

• **Summary:** The essential amino acid production of ten crops harvested for forage and 15 crops harvested for seed was calculated from the average crop yields in the USA for the 10-year period 1953-1962. The highest yields per acre came from forage crops, which could be processed into leaf protein concentrates; alfalfa was the leader by far (almost

300 lb per acre of essential amino acids). Soybean seed was second (about 185 lb). However soybean meal is still the least expensive source of a pound of protein (See Table 2, wholesale), Extracting the leaf protein concentrates from alfalfa is quite expensive, and some of the protein cannot be recovered.

Note: This is the earliest English-language document seen (Aug. 2013) that uses the term “leaf protein concentrate” in connection with alfalfa, for food use. Address: 1. Research Asst. and Prof. of Biochemistry, Dep. of Biochemistry, Univ. of Wisconsin, Madison WI 53706.

4765. *Jewish Vegetarian (The): Official Journal of the Jewish Vegetarian and Natural Health Society (London)*. 1966-- . Serial/periodical. London, England: JVNHS. Frequency: Quarterly. Vol. 1, No. 1, 1 Sept. 1966. * Address: London, England.

4766. *British Vegetarian*. 1966. “Soya Steaks.” Sept/Oct. p. 411. [1 ref]

• **Summary:** This article is excerpted from *SCATS Sentinel, Journal of the Southern Counties Agriculture Trading Society*, June 1966.

A recent technical report from Trouw & Co., N.V., of Amsterdam, states that products resembling steaks, chickens, and ham are now being made from soya, using spun soy protein fibers. In the USA, General Mills, Ralston Purina Co., and Worthington Foods (Ohio) are working on spinning, and in England Unilever is reported to be interested. Worthington Foods has developed a full line of products that look, taste, and chew like chicken, beef, and pork products. Wham is a ham-like product and White Chic is simulated chicken. A photo shows a label of Worthington Soyameat Salisbury Steak Style.

4767. *British Vegetarian*. 1966. Plantmilk news. Sept/Oct. p. 444.

• **Summary:** “The availability of ‘Plamil’ and other products made by Plantmilk Ltd. is now improved by the recent extension of our distribution service... From 1st October supplies of our lines will be available to Health Food Stores anywhere in England, Scotland, Wales and Northern Ireland.”

Note. This is the earliest English-language document seen (Aug. 2013) that contains the term “Plamil.” Address: England.

4768. Hines, John D. 1966. Megaloblastic anemia in an adult vegan. *American J. of Clinical Nutrition* 19(4):260-68. Oct. [51 ref]

• **Summary:** “Vitamin B-12 deficiency manifested by subnormal serum vitamin B-12 concentrations (less than 130 pg. per ml) is a relatively common finding in vegans” (1-12).

This 41-year-old male, who had become a

lactovegetarian at age 28, and a vegan at age 34, had a severe vitamin B-12 deficiency as well as megaloblastic anemia. Prior to this case, the response of megaloblastic anemia to administration of “physiologically small” doses of vitamin B-12 (1 microgram per day or less) had never been reported in an adult vegan. This man “responded hematologically to 1 microgram of vitamin B-12 per day given parenterally. It was further demonstrated that he possesses a normal capacity for vitamin B-12 absorption prior to therapy.”

Note: The word “parenteral” refers to something introduced otherwise than by way of the intestines—for example, injected. Address: Senior Instructor in Medicine, Western Reserve Univ., and Asst. Physician, Cleveland Metropolitan General Hospital, Cleveland, Ohio.

4769. Huson, Hobart. 1966. *Pythagoras: The Hyperborean Apollo*. 3 vols. Refugio, Texas: Dawgood Library. 1650 leaves. Unpublished typescript (carbon copy) in the Library of Congress. 29 cm.

• **Summary:** A Hyperborean is a member of a people held by the ancient Greeks to live beyond the north wind in a region of perpetual sunshine. This first volume bears the subtitle: “The first volume of a trilogy comprising an exhaustive definitive biography of the first Greek philosopher, sixth century B.C.E. [before the Christian era]. The second volume is scheduled to be titled *Pythagoras: The School on Samos*. And the last *Pythagoras: The School at Crotona*.

The contents of volume 1 is: 1. Ancestry. 2. Childhood and youth. 3. Pherekydes. 4. Thales and Bias. 5. Phoenicia. 6. Egypt. 7. Babylonia. 8. Media and Persia. 9. India. 10. Hyperboreans and Druids. 11. Hyperborean religion. 12. Druids of Britain and Ireland. 13. Stonehenge. 14. Influence of Apollo. Epilogue.

More than simply a wise philosopher, Pythagoras was believed to be a deeply enlightened man. He was also the first person in Europe or Greece to practice and teach vegetarianism. The page after the Foreword contains this poem titled “On Me Behold Pythagoras!” from an ancient ritual: “Centuries before your eyes had opened on the light of day, I had attained the knowledge of all the ages! The arts of ancient Egypt, the science of Arabia and the philosophy of Phoenicia, the lore of the Chaldean sages and the occult mysteries of the Persian magi, are to me an open book!”

The author, H. Hobart, was born in 1893. Address: LL.B., B.O.

4770. West, Eric D.; Ellis, Frey R. 1966. The electroencephalogram in veganism, vegetarianism, vitamin B-12 deficiency, and in controls. *J. of Neurology, Neurosurgery and Psychiatry* 29(5):391-97. Oct. [14 ref]

• **Summary:** The electroencephalograms (E.E.G.s) in 17 vegans were compared with those of 10 vegetarians, 18 healthy meat-eating controls, 11 patients with pernicious anaemia, and 2 with folic acid deficiency. The EEG is

often abnormal in patients with pernicious anaemia, and is reversible with vitamin B-12 therapy. "Diffuse abnormalities were found in the vegans' E.E.G.s of a degree that is between that of the vegetarians and the pernicious anaemia patients, but unlike the abnormalities in the latter, the abnormalities in the vegans' E.E.G.s were not affected by high dosage vitamin B-12 supplements.

"We suggest the following explanations for the diffuse abnormalities in the E.E.G.s in the vegans: that chronically low levels of serum vitamin B-12 have been causative; that a hitherto undefined deficiency factor is responsible, or that the changes represent a cerebral metabolic readjustment to the vegan diet." Address: Dep. of Electroencephalography, Belmont Hospital, Sutton; 2. Haematological Lab., Kingston Hospital. Both: Surrey, England.

4771. Kirkeby, Knut. 1966. Plasma lipids in a moderately low-fat, high-carbohydrate diet, rich in polyunsaturated fatty acids. *Acta Medica Scandinavica* 180(6):767-76. Dec. [24 ref]

• **Summary:** Vegetarians had lower cholesterol and triglyceride levels than controls. No difference was observed in free fatty acids. Address: Inst. for Experimental Medical Research, Univ. of Oslo, and the Medical Dep. VII, Ullevål Hospital, Oslo, Norway.

4772. Sanchez, Albert; Porter, G.G.; Register, U.D. 1966. Effect of entrée on fat and protein quality of diets. *J. of the American Dietetic Association* 49(6):492-96. Dec. [19 ref]

• **Summary:** The nutritive value of various diets was tested by the rat growth method. Two cafeteria diets (each containing soy proteins), a hospital diet, and a selected vegetable diet were evaluated for protein quality. Diets which contained milk resulted in the best growth rates. Address: Dep. of Biochemistry, Loma Linda Univ., Loma Linda, California.

4773. Hartman, Warren E. 1966. Research and development in synthetic foods. *New York State Association of Milk and Food Sanitarians, Annual Report* [19 ref]

• **Summary:** "Research and development in synthetic foods is no longer a skeptical venture. Today it is fast becoming an alarming necessity! Two most basic and major problems face the world today (1) The world population explosion accompanied by (2) The skyrocketing need for food. Synthetic foods are already a part of big business."

"Worthington Foods has been in the vegetarian protein food business for some 25 years. Primarily, the business was concerned with supplying such foods to consumers who had medical, philosophical, or religious reasons for wanting them. Early products were based on wheat proteins or 'gluten.' Worthington had accumulated considerable flavoring 'know-how' by the time soy products such as flakes, toasted grits and isolated protein became available.

One of the first Worthington products based on soy protein was a powdered milk-like product, Soyamel, which was designed primarily as a hypoallergenic formula for infants and children who were allergic to milk... Perhaps one of the first companies to explore the protein spinning technique developed by Robert Boyer (U.S. Pat. # 2,682,466) was Worthington Foods. For the past ten years Worthington has pioneered in the field of vegetarian protein foods; seeking suitable protein isolates for spinning, developing spinning technology, formulating and adapting these spun protein fibers to acceptable consumer end-products."

"The present technology of spinning as practiced by Worthington Foods, uses as a raw material relatively pure soy protein isolate as obtained from Ralston Purina, Central Soya or other suppliers of protein isolates."

A photo shows Hartman, who has been with Worthington Foods since 1947. "His academic training was acquired at Andrews University, Berrien Springs, Michigan; University of Michigan, Ann Arbor; and at Massachusetts Institute of Technology. Dr. Hartman was employed as a biochemist- bacteriologist for four years by the Michigan State Department of Health Laboratories in Lansing, Michigan, and was a consultant-instructor for a year for the U.S. Public Health Service." Address: Director of Research and Development, Worthington Foods, Inc., Worthington, Ohio.

Note: The *Advent Review and Sabbath Herald* of 23 Oct. 1860 states (p. 179, col. 2): “Resolved, that we take the name

of Seventh-day Adventists.” Address: Washington, DC.

4786. Neufeld, Don F.; et al. ed. 1966. Seventh-day Adventist encyclopedia: Granose Foods Limited. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 527-28.

• **Summary:** “A health-food factory situated in Stanborough Park, Watford, Hertfordshire, England, manufacturing several kinds of nut foods and breakfast cereal biscuits, one of the latter being called Granose. In 1962 business volume [sales] totaled £250,000.

“The SDA [Seventh-day Adventist] health food work in Great Britain was begun by a group of laymen who, under the name The London Health Food Company, purchased health foods from Dr. J.H. Kellogg, of Battle Creek, Michigan, and distributed them to the public. After a few years SDA leaders in Great Britain sent J. Heide, a master baker, to Battle Creek to learn how to make the foods. In 1899 a manufacturing company was formed under the name The International Health Association Limited, changed in 1926 to Granose Foods Limited. The company purchased a flour mill in Salford, near Redhill, Surrey, to serve as the factory. Disused plant equipment obtained from Battle Creek, together with machinery purchased in Great Britain, formed the nucleus from which the present business has grown. W.T. Bartlett was the first manager and secretary and A. Rodd was the first factory superintendent.

“Before electricity was available, candles were often used, a practice that led to a fire that burned the factory to the ground in [Aug.] 1900. Health foods were again temporarily imported from America, but gifts and loans from SDA’s re-established the company, in Birmingham.

“In 1907 all SDA institutions in England, including the food factory, were centralized at Stanborough Park, Watford. The factory has grown until in 1963 it had a floor space of approximately 25,000 square feet, and still further extensions were planned.

“Former managers included H. Osborne, J. Rigby, and George Adair. Joint managers in 1963 were George Norris and B. Goulstone.”

Note 1. This is the earliest document seen (June 2009) that mentions the “London Health Food Company” or that explains its work importing health foods from Dr. Kellogg in Battle Creek, Michigan, and “distributing them to the public.” Presumably the foods were sold.

Note 2. Concerning the term “Granose”: Richard W. Schwarz in his book *John Harvey Kellogg, M.D.* (1970) discusses Granose Flakes on pages 119-20, and 209-10. The first flaked breakfast cereals were developed from wheat jointly by Dr. J.H. Kellogg and his brother Will, in about 1894. Dr. Kellogg named their first successful wheat flakes product Granose Flakes, and on 31 May 1894 he applied for a U.S. patent on “Flaked cereal and process for preparing same.” But in 1903 courts declared the doctor’s patent

invalid. Will Kellogg developed the product into a great commercial success, in part by adding sugar to the malt and corn combination from which he made the flakes. “The sugar greatly enhanced the cereal’s taste appeal, and, as a result, the Corn Flakes business was booming by late 1905.” The term “Granose” appears in 1904 in a “Chart of Food Elements” in the magazine *Good Health* (Jan. Insert after p. 48) published by John Harvey Kellogg in Battle Creek Michigan. It appears to be a grain-based breakfast cereal. Address: Washington, DC.

4787. Ohsawa, George. 1966. The book of judgment. The philosophy of Oriental medicine. Vol. II. Los Angeles, California: Ohsawa Foundation, Inc. 169 p. Revised and edited by Lou Oles and Shayne Oles Suehle. No index. 17 cm. First edition was 1960. [2 ref]

• **Summary:** In this book, Ohsawa is at his creative / outrageous best, with many big ideas. The author’s name on the title page and cover is written “georges ohsawa.” There are two slightly different 1966 editions of this book. In one, revised and edited by Lou Oles (which Soyinfo Center owns), a portrait photo shows Ohsawa from the waist up (frontispiece, facing the title page). In the other, revised and edited by Lou Oles and Shane Oles Suehle, a portrait photo shows Ohsawa (head and shoulders) laughing.

Contents: About the author (autobiographical). Preface. Introduction. 1. Medicine or faith? 2. The unique principle, a practical and dialectical classification. 3. The unique principle of the science and philosophy of the Far East. 4. Man’s origin: What is disease?, the origin of nutrition—the vegetal, animal foods, why use milk?, embryological of Far Eastern mothers with emphasis on breast feeding, when milk becomes outlawed, supreme judging ability, the failings of Occidental medicine, sons of the vegetal mother, faith—prayer and fasting, the vegetal mother—yin, the mother of the elements & the birth of energy, genus Homo, a dialectical world & universal compass, man—the masterpiece of creation, magic spectacles—new Aladdin’s lamp—solution of problems, food—living to eat—eating to live—quantity changes quality, economics of food, lack of supreme judging ability in orthodox allopathic medicine, conclusion—recapitulation.

5. Far Eastern medicine. 6. The order of the universe. 7. Supreme judging ability. Appendices: Good and evil, ethics and morality, public and individual salvation, individual and universal soul, Darwin’s hypothesis, non-violence, samsara, the noble road to the eight virtues [Buddha’s eightfold noble path], respect [reverence] for life, the infinite, the absolute, the eternal, the will, entropy, cancer and blood cancer, the narrow gate, freedom, despair, vitamins, insulin, the unique principal.

“Animal foods: If we are compelled to eat animal foods, owing to climactic or economic conditions, we are to use them only in small quantities and also with special caution in order to deanimalize or vegetalize them with proper

culinary preparation and efficient nutritional combinations. Anatomically speaking, according to his teeth and intestines, man is vegetarian. Why then should he depend for food upon the flesh or products of inferior animals? Depending upon adequate sources of food, the vegetable is normal, logical and sure. The opposite or carnivorous way is speculative. Utilizing the inferior and weaker always leads to the speculator’s downfall.

“Why use milk? Why do we drink animal milk? In China and Japan, and even in India, the peoples lived a very happy, peaceful and long life, without drinking animal milk for thousands and thousands of years.

“Cow’s milk is intended to be the nourishment of calves to form their constitution and their fundamental characteristics. There is no reason for man to live upon the milk of the animal, which is biologically and intellectually very inferior to him.”

Page 171: The word “macrobiotic” appears in French in the name *La Cooperation Macrobiotique*. Address: Los Angeles, California.

4788. Shyrock, Richard Harrison. 1966. Sylvester Graham and the popular health movement, 1830-1870. In: *Medicine in America, Historical Essays*. Baltimore, Maryland: Johns Hopkins University Press. See p. 111-25. *

• **Summary:** An excellent treatment of America’s first health reform movement. This is the reprint of an article first published in 1931.

• **Summary:** A vegetarian cookbook.

4791. Zen cookery: The philosophy of Oriental culture. Vol. I. Practical macrobiotics. 1966. Los Angeles, California: Ohsawa Foundation, Inc., The Ignoramus Press. 84 p. Index. 22cm.

• **Summary:** The revolutionary little reddish-orange or yellow book, with a black plastic comb binding, that introduced many to macrobiotic cooking. No author or editor is listed. The Ohsawa Foundation has branches in Los Angeles, New York, Wellesley, Paris, and Tokyo. Contents and format are identical to the 1964 edition edited by Teal Nichols, published by the Ohsawa Foundation of Chico—which see.

Contents: Acknowledgments (“Our heartfelt gratitude goes to Lima Ohsawa whose patient assistance and teaching

have made this book possible. Many of the recipes that follow are from her collection in the original edition of *Zen Macrobiotics*). Preface to the second edition, by the Editor. Menu for a week (winter menu, summer menu). Seasonings. Cutting vegetables. Grains. Noodles. Vegetables. Soups. Sauces. Salads. Inspirations from Around the World. Special Dishes. Miso Soy Bean Paste. Tamari Soy Sauce. Breads. Pancakes and Crepes. Pie Doughs. Desserts. Beverages.

The recipes are numbered from 1 to 296 and all numbers in the index refer to recipe numbers. Address: Ohsawa Foundation, Inc., 1434 N. Curson Ave., Los Angeles, California.

4792. Loma Linda University, School of Health. 1966? Summary of results of Adventist mortality study, 1958-1965. Loma Linda, California: Loma Linda University. 2 p. Undated. 28 x 19 cm. Black on yellow.

• **Summary:** "During the period 1958-65 a study was conducted by Loma Linda University among approximately 50,000 California Seventh-day Adventist (SDA) church members. During this eight year period, all deaths among

Adventists were identified and the cause of death determined. Death rates in Adventists were calculated and compared to the published death rates in all California residents of the same age and sex. These comparisons are shown below for several causes of death. Using lung cancer as an example, for every 100 lung cancer deaths that occur in a group of California residents we would find only 20 lung cancer deaths in an equal size group of Adventists of the same sex and age." Footnote: "The figures on this sheet are for men and women age 35 and over during 1958-65..."

1. Causes of death strongly related to smoking: Lung cancer 20%. Mouth, throat, larynx cancer: 5%.

2. Causes of death strongly related to drinking [alcohol]: Liver cirrhosis 13%. Esophagus cancer 34%. Single vehicle traffic accidents 54%.

3. Other causes of death: Coronary heart disease 55%. Stroke 53%. Diabetes 55%. Peptic ulcer 42%. Suicide 31%. Breast cancer 72%. Leukemia 62%. Uterus cancer 54%.

"Because of the lower death rates in Adventists from many different causes of death the life expectancy is longer among Adventists than among all California residents. Death rates for all causes of death and life expectancy at age 35 are shown below.

"All causes of death life expectancy at age 37:

"California men-71 years.

"Adventist men-77 years.

"California women-77 years.

"Adventist women-80 years.

"Seventh-day Adventists are known to abstain from smoking and drinking alcoholic beverages. It is clear why Adventists seldom die from diseases that are strongly related to smoking or drinking. But it is not yet known why risk of death from other diseases is lower among Adventists. A further study will be conducted during 1974-80 to determine which components of the Adventist lifestyle may account for their lower risk of death from many different diseases.

"Because of a high interest in health among Adventists they tend to follow good health practices in general which likely contributes to their low death rates. Many Adventists have unusual dietary practices such as vegetarianism and frequent use of unrefined foods. Other possible factors that may influence the low death rates are high educational background, good medical care and less stress and anxiety." Address: Adventist Health Study, School of Health, Loma Linda Univ., Loma Linda, California 92354.

4793. Sarala, Narinjana Singha. 1966? *Jhataka prakasha* [Light of butchery]. Amritsar, India: Dafatara Risala 'Santa Sipahi.' 288 p. Undated. 19 cm. [Pan]*

4794. Chatterjea, J.B. 1967. Nutritional megaloblastic anaemia in tropical zones. *J. of the Indian Medical Association* 48(2):51-59. Jan. 16. [77* ref]

• **Summary:** "The various terms-tropical macrocytic

anaemia, nutritional macrocytic anaemia, and nutritional megaloblastic anaemia—referred to in the literature are synonymous. Nutritional megaloblastic anaemia (N.M.A.) represents deficiency of vitamin B-12 and/or folic acid.”

“Summary: N.M.A. in tropical zones represent deficiencies of folic acid and/or vitamin B-12. The variation in clinical, haematological and biochemical expressions of the disorder as reported from various parts of the tropical zones can be explained on the basis of degree, duration and relative deficiency of these two vitamins. N.M.A. in infancy and in pregnancy are variants of the disorder that is seen, in general population, increasing demands of these stressful situations outstripping the available supply of folic acid and/or vitamin B-12. The deficiency appears to originate in main from the consumption of an inadequate diet. Uncorrected dietary deficiency persisting for a long time leads to recognisable structural and functional alterations in the gastrointestinal tract. The so-called malabsorption syndrome that is associated with megaloblastic anaemia is mostly an effect of dietary deficiency. In the aetogenesis of the disorder under discussion, the geographical location and the climatic conditions of the tropical zones do not appear to have any significant contributory role. The decisive factors in the geographic variation are not the latitudes and longitudes but the prevailing socio-economic inadequacy and poor dietary habits of the population. Improvement of the socio-economic and dietary standards is bound to prevent the disorder, with the static geographic parameters remaining unaltered.

“In developing countries, nutritional anaemias constitute an important problem in the field of public health. The need for adopting necessary measures for their immediate control cannot be overemphasised.” Address: Prof. of Haematology and Director, School of Tropical Medicine, Calcutta [India].

4795. *Beitrage zur Vegan-Diatetik*. 1967--.. Serial/periodical. Bonn, West Germany. [Ger]

• **Summary:** The translated title in English is “Contributions to Vegan Dietetics.” This is a monographic serial, i.e. a series of monographs. Number 1 (Feb. 1967) is titled *Milch und Honig als pathogenische Faktoren* [Milk and Honey as Pathogenic Factors], by Eberhard H. Gockel. Address: Bonn, West Germany.

4796. *British Vegetarian*. 1967. Prof. Scott Nearing and Mrs. Helen Nearing. Jan/Feb. p. 74.

• **Summary:** A large photo shows Scott Nearing, 83-year-old American Vice President of the International Union, with his wife, Helen, when they spoke to a group of vegetarians in Wilmslow, on their way from Maine to Moscow to Tokyo!

4797. Deutsch, Ronald M. 1967. The nuts among the berries: An exposé of America’s food fads. New York, NY: Ballantine Books (mass market paperback). 320 p. Foreword

by Frederick Stare, M.D. Index. Feb. 18 cm. Revised in 1977 as *The new nuts among the berries*. Palo Alto, CA: Bull Publ. Co. 359 p.

• **Summary:** The back cover states that “this book tells the astonishing story of a hundred years of health foods and faddists. It names the promoters and the products. It cites the findings of the Food and Drug Administration. It quotes the warnings of the American Medical Association. It completely exposes the hokum and ballyhoo of the health food business—now bilking the public of \$2,000 million ever year—and shows why crackpot food fads are a waste of money at best and a serious danger to the health of those suffering from real illnesses.”

Contents: Foreword. Introduction. 1. Of cabbages and things (a brief history of “health-foodism”). 2. Mr. Graham bakes a cracker (Sylvester Graham). 3. Little men, little women, little food (Amos Bronson Alcott, Louisa May Alcott, and vegetarianism). 4. Father Kneipp and his watering can. 5. Mother White casts her brood upon the waters (Ellen G. White and James Caleb Jackson). 6. Snap! Crackle! Enter Dr. Kellogg! (Dr. John Harvey Kellogg). 7. The battle of Battle Creek (Michigan and Seventh-day Adventists). 8. From pillar to Postum. 9. Kickapoo and Kellogg, too. 10. The Jungle, the sausage, and the law (Upton Sinclair, Harvey W. Wiley, and the formation of the FDA). 11. Chew, chew, baby (Fletcher, Chittenden). 12. Life along the alimentary canal (Metchnikoff and yogurt). 13. The bare torso king (Bernarr Macfadden). 14. The bare torso king rampant (Macfadden). 15. I see America starving. 16. How to keep your cow from drooling (selling nutrition). 17. A plague on both your Hausers (Gayelord Hauser). 18. How to write about health foods (Lelord Kordel, Cathryn Elwood). 19. Mrs. Spratt’s millions (fat and dieting). 20. My mother squeaked (Don Dale Alexander and arthritis). 21. The poisons in your health food (how the public is being duped by health food hucksters). 22. How to be an expert. 23. What the law can do. 24. Taller in the saddle. 25. The unteachables. 26. To market, to market. 27. On learning to be a faddist. Address: Popular scientific and medical reporter.

4798. Banerjee, B.; Saha, N. 1967. Blood uric acid level of Indian and Western adults and its seasonal variation. *J. of the Indian Medical Association* 48(5):207-10. March 1. [4 ref]

• **Summary:** Estimation of blood uric acid is of importance in gout, chronic nephritis and other arthritic diseases. Non-vegetarians were found to have higher blood uric acid levels than a comparable group of vegetarians. Western males had lower levels (2.87) than western females (3.27). Western males had lower levels than comparable Indian males. Western females had higher levels than comparable Indian females. There was no uniform pattern of seasonal variation in any of the groups studied. Address: Dep. of Physiology, Christian Medical College, Ludhiana [Punjab, northwestern India].

4799. Banks, Edward T. 1967. New vegetarian whole food company. *British Vegetarian*. March/April. p. 131-34.

• **Summary:** The new Marigold Foods Co. is to be run and financed entirely by vegetarians. The company will have a strong connection with India.

4800. *British Vegetarian*. 1967. Home-made soya butter. March/April. p. 144.

• **Summary:** Mrs. Elizabeth Martyn of Vernon, BC, Canada, has contributed a recipe for making soya butter at home, using 4 tablespoons soya flour, 1 cup soya oil or sunflower oil, and water. Mix and heat. Puree in a blender, then refrigerate. Use like butter.

4801. Dinshah, H. Jay. 1967. Out of the jungle. American Vegan Society, 501 Old Harding Highway, Malaga, NJ 08328. 48 p. April. 21 cm. *

• **Summary:** For details and contents, see the 1975 edition. Address: Malaga, New Jersey.

4802. Ling, C.A. 1967. More about milk in our diet. *British Vegetarian*. March/April. p. 179-80. [1 ref]

• **Summary:** The author and many Britons believe that "from a humanitarian point of view the consumption of animal milk by human beings is wrong. This conviction follows from a realisation that the slaughterhouse and dairy products are interlinked and inseparable." Address: Plantmilk Ltd., Langley, Bucks., England.

4803. Misra, B.D. 1967. Epiphyseal union of the long bones of upper limb by X-ray in Gujrat. *J. of the Anatomical Society of India* 16(1):35. April.

• **Summary:** "There is glaring discrepancy as regards the ages at which the different epiphyses fuse with the respective diaphyses of long bones. Most of these data have been based on the study of dried bones and on dead subjects. Even these data are based on scanty material. Very few studies have used roentgenographic method specially in our country. Whatever studies have been made, the material was very scanty in number and was not of healthy subjects in which no difference was made regarding caste, diet etc.

"The present study is based on X-rays of 260 healthy boys and girls, who were vegetarian and whose correct ages could be relied on. The results of this study are presented in detail." Address: Dep. of Anatomy, B.J. Medical College, Ahmedabad.

4804. Gorman, Jeanette C.; Moore, Marian E. 1967. Calculated and analyzed fatty acids in vegetarian diets. *J. of the American Dietetic Association* 50(5):372-75. May. [11 ref]

• **Summary:** "Calculated and analyzed values were compared for total fat and fatty acid content of two all-vegetable diets,

each consisting of six menus. The daily means for the total fat and fatty acid content of the diets were in close agreement for analyzed and calculated values. However, the daily mean of the mono-unsaturated fatty acid of one diet was statistically greater for the calculated value than the analyzed value. Generally, the day-to-day variation between the calculated and analyzed values was large for the fat and fatty acids in the foods." Address: Dep. of Human Nutrition and Foods, Virginia Polytechnic Inst., Blacksburg.

4805. *Order of the Universe*. 1967. Serial/periodical. Order of the Universe Publications, Boston, Massachusetts. Editor: Jim Ledbetter. Frequency: Monthly.

• **Summary:** The initial subtitle of this magazine is: "The Way of Life in the Age of Humanity." By vol. 1, no. 6 (about Oct. 1967) it has expanded to: "The Unifying Principle and the Way of Life in the Age of Humanity."

Soyfoods Center owns (gifts of Evan Root in Oct. 2005) complete, original / real issues of the following: May 1967, July 1967, vol. 1, no. 4, vol. 1, no. 6, vol. 1, no. 7 (these latter three are undated). Also color photocopies of the covers of vol. 1, no. 2 (where does it fit?), and June 1967.

A clue as to the date of the first issue is found on the inside back cover of vol. 1, no. 2. Under "Editor's Notes," by Jim Ledbetter we read: The "first issue was printed in May of this year." That year is not given, but was probably 1967.

Talk with Evan Root. 2005. Oct. 29. The first issue of *The Order of the Universe* was published in May 1967, and was dated. It has a plain (uncolored) cover, reflecting the shortage of money. The list of "Useful Names and Addresses" on the last page is shorter than in subsequent issues, again showing that it was the first. Address: Box 203 Prudential Center Station, Boston, Massachusetts 02199.

4806. Nearing, Scott; Nearing, Helen. 1967. Vegetarian travelers. *British Vegetarian*. May/June. p. 224-26.

• **Summary:** On a round-the-world tour, the Nearings describe how they have fared and fed themselves as vegetarians in Denmark, Sweden, the USSR, and India. Address: Maine.

4807. Plantmilk Ltd. 1967. Feeding baby on Plamil plantmilk: Up to 12/15 months. *British Vegetarian*. May/June. p. 245-48.

• **Summary:** The protein in Plamil comes mainly from soya. A table shows a baby feeding guide. Address: England.

4808. Tada, Masakazu. 1967. Some features of Japanese vegetarianism. *British Vegetarian*. May/June. p. 225-28.

• **Summary:** For 1,850 years Japan kept no livestock farms as one sees in Europe. The main source of animal protein was only from fish and shellfish. But modern Japanese, especially those living in big cities, think animal protein is indispensable. One important feature of Japanese

vegetarianism is the development and use of fermented foods, such as miso, shoyu, and natto. Address: Dr., 718 Daisen, P.O. Nirayama, Shizuoka, Japan.

4809. Register, U.D.; Inano, M.; Thurston, C.E.; Vhymeister, I.B.; Dysinger, P.W.; Blankenship, P.W.; Horning, M.C. 1967. Nitrogen-balance studies in human subjects on various diets. *American J. of Clinical Nutrition* 20(7):753-59. July. [26 ref]

• **Summary:** Using nitrogen balance tests on human subjects for 16 days each to evaluate the quality of vegetable protein mixtures as meat substitutes, the authors found no significant difference in the ability of pure vegetarian [vegan], lacto-ovo-vegetarian, and non-vegetarian diets to maintain positive nitrogen balance, and thus to get enough protein. Average nitrogen values were all positive.

Many of the diets contained no meat, but did use vegetable protein mixtures prepared to simulate meat products. Commercial products used in the tests include Dinner Rounds, Rediburger, Soyagen, and Mocha Mix. There is no indication than any of the 16 subjects were Seventh-day Adventists. Address: Loma Linda Univ., Loma Linda, California.

4810. Winawer, S.J.; Streiff, R.R.; Zamcheck, N. 1967. Gastric and hematological abnormalities in a vegan with nutritional vitamin B-12 deficiency: Effect of oral vitamin B-12. *Gastroenterology* 53(1):130-35. July. [23 ref]

• **Summary:** Discusses a case of vitamin B-12 deficiency and megaloblastic anemia in a Seventh-day Adventist Negro female who had been a vegan for almost 50 years, since age 15. Treatment with vitamin B-12 corrected the megaloblastic anemia. Address: Mallory Gastrointestinal Lab., and Thorndike Memorial Lab., Second and Fourth (Harvard) Medical Services, Boston City Hospital; the Dep. of Medicine, Harvard Medical School, and the Dep. of Pathology, Boston Univ. School of Medicine.

4811. Canelas, Horacio M.; de Jorge, Francisco Bastos; Tognola, Waldir A. 1967. Metabolic balances of copper in patients with hepatolenticular degeneration submitted to vegetarian and mixed diets. *J. of Neurology, Neuro-Surgery and Psychiatry* 30(4):371-73. Aug. [12 ref]

• **Summary:** "The copper metabolic balances of two patients with hepatolenticular degeneration submitted to vegetarian and mixed diets were studied. A marked decrease in the positive copper balance was induced by the use of a vegetarian diet. The finding of an increase in the copper concentration in faeces may support the view that copper would be strongly bound to some unabsorbed component of the diet." Address: Depts. of Neurology and Medicine, Univ. of Sao Paulo School of Medicine, Sao Paulo, SP, Brazil.

4812. Lijinsky, W.; Ross, A.E. 1967. Production of

carcinogenic polynuclear hydrocarbons in the cooking of food. *Food and Cosmetics Toxicology* 5(3):343-47. Aug. [2 ref]

• **Summary:** These substances are formed in charcoal-broiled meat. Perhaps as a result of their vegetarian diet, Seventh-day Adventists have a lower intake of benzo(a)pyrene and nitrosamines [pronounced nai-TRO-suh-meens]. Address: Div. of Oncology, Chicago Medical School, Chicago, Illinois.

4813. McCay, Jeanette B. 1967. Re: Biography and obituary of Clive M. McCay-1898-1967. Letter to Ralph for Clive McCay's memorial service at Cornell, Sept. 23. 13 p. Typed, with signature.

• **Summary:** This long, interesting typewritten letter is written to "Ralph," whose surname is unknown. Later it formed the solid foundation of "Clive Maine McCay (1893-1967): A biographical sketch," by J.K. Loosli, published in the prestigious *Journal of Nutrition* (Vol. 103, No. 1, Jan. 1973).

"During his first year in a study on fish blood and its relation to water pollution he wrote: 'The mass of men (fail) to realize that their welfare is closely interwoven with the condition of everything that lives.'"

"Clive was interested in everything that lives and during his more than 40 years of scientific work he made studies of: Cold blooded animals (fish, eels, turtles), farm animals (such as dairy cows, calves, bulls, goat, sheep, pigs), laboratory animals (such as white rats, cotton rats, mice, guinea pigs, hamsters, rabbits, and monkeys), fur bearing animals (chinchillas, mink), insects (such as clothes moths, bean weevils, flour beetles, cockroaches), dogs (Cairn terriers, beagles, danes, dalmations, and old dogs over ten years of age)—and finally man [humans].

Some quotations of his: "A century ago, Sylvester Graham stumped the nation in attempts to impress upon housewives the importance of high-quality bread to their families' health, Today, poor Sylvester would probably roll his lean bones over in his long grave if he realized how little attention the average housewife pays to the nutritive value of the bread she buys."

"In addition to bread, Clive felt that other foods could also be improved. One might find him almost any day entertaining house guests... making chop suey with soy beans that he had sprouted. In the laboratory he developed a large scale bean sprouter [see illustration], and for a while he was taking down bushels of sprouted soy beans to sell at the Co-op."

"Human experience has long shown the value of temperance in the consumption of food. Luigi Cornaro (1464-1655) stressed this in the series of essays written in the late years of his life. Francis Bacon stated: 'It seems to be approved by experience that a spare diet, and almost a pythagorical,—such as is either prescribed by the strict rules

of a monastical life, or practiced by hermits, which have necessity and poverty for this rule,—rendereth a man long-lived.’ Such statements as these comprise the content of many of the works written about diets for the aged.”

1951 in Empire State Jersey Journal: “Every pound of sugar that goes into an American home pushes off the table more than five pounds of wholesome natural foods such as milk, potatoes, and apples.”

In a 1950 hearing on Poisonous Chemicals in Foods before a Congressional Committee he stated: “We have made numerous studies of the effect of these cola beverages upon the teeth of rats, dogs and monkeys... We have published data indicating that the molar teeth of rats are dissolved down to the gum line if the rats are well fed but given nothing to drink except cola beverage for a period of six months.”

In 1953, in the Introduction to a paper on “Diet as a Factor in Aging he wrote: “The object of nutrition research is to discover diets that will preserve the best possible health and the greatest productivity throughout the life of man and his domestic animals. Research upon aging is not concerned with protracting the worthless years at the end of life when a senile body and a deteriorated brain make living nothing but a heavy burden.”

“Almost at the beginning of his research life, Clive began the famous series of studies on prolonging the span of life through retardation of growth.” The following are quotations from some of his papers:

1928—In a paper titled “The nutritional requirements and growth rates brook trout”—“The growth of the animal body has occupied the attentions of students of natural science as long as we can have historical records. It remains the outstanding concern of all those engaged in animal industry, whether they be rearing swine or trout.” Yet is life span not as important as growth?

“Although Clive has been a loyal and enthusiastic Unitarian for years, he developed a great interest and respect for the dietary practices and teaching of the Seventh-Day Adventists and Jehovah’s Witnesses. This also carried over to other health groups such as Friends of the Land, Natural Food Associates and those that some of his academic friends called faddists or fringe fanatics. He spent a good deal of time writing and speaking to these groups, and was always ready to welcome them in his home or laboratory.

“In general he felt that their ideas were correct and he admired their sincerity and the tenacity in actually practicing what they believed to be good nutrition. He felt that they stand as a block against the steady erosion and deterioration of natural foods by the tampering of the food industries eager to make dollars without respect to nutritive value.

“He thought that learning about food and its health values was an excellent hobby for older people, and that gardening was a sure way to obtain pure and wholesome diets. ‘... gardens are stable investments for good nutrition and health. On our small home place we even produce our

own meat by raising an occasional calf and keeping a small flock of sheep. We also produce our own apples, cherries, plums, strawberries, gooseberries and currants... plus vegetables.

“There was no sharp division between Clive’s professional life and his recreation and home life. His friends were his fellow workers and other scientists from near and far... He must have hiked hundreds of miles with Dr. Maynard and Dr. Sumner.”

“In the garden, he would include plants in which he happened to be interested at the moment such as soybeans,...”

Reading was Clive’s great delight, and if reading maketh a full man, he was very full indeed. Clive’s happiest hours at Cornell were spent in the libraries. He loved to study old book catalogs and browse in second hand book stores to find treasures for his own library or for the University.”

A long and very interesting section concerns four reasons for studying the history of any science. Plus several paragraphs of additional thoughts on that subject.

“When Clive was 22 years old [ca. 1920] and an instructor in Chemistry at Texas A. and M. College, he filled out an “Individual Analysis Card,” which I just found among his papers. I am amazed to see how well he knew his own characteristics at this age. He checked for himself: Common sense; industry, persistence, moral courage, conscientiousness, self control and self respect—attributes that carried through his whole life.

“Likewise there were the following traits. Regularity in habits, purpose and coordination in work, ability to profit [learn] from experience, breadth of view, given to facts, lives at high tension.

“These are the same traits and characteristics that I would have checked after knowing him these 45 years. Perhaps most revealing of his personality was his answer to the questions of how he reacted to success and adversity. To the first he wrote ‘elation,’ to the second ‘renewed energy.’” Address: 39 Lakeview Lane, Englewood, Florida.

4816. Marsh, Alice G.; Ford, D.L.; Christensen, D.K. 1967. Metabolic response of adolescent girls to a lacto-ovo-vegetarian diet. *J. of the American Dietetic Association*

51(5):441-46. Nov. [17 ref]

• **Summary:** "The metabolic response of sixteen adolescent girls on a controlled lacto-ovo-vegetarian diet was determined for twenty days following a five-day study of their accustomed self-selected diet then five days of transition on the controlled diet. Normal weight was maintained on 2198 calories per day, an amount midway between allowances recommended for the teen-age girl and the woman, with slight adjustment for two subjects. A daily intake of 10.41 gm. nitrogen resulted in positive balance for all subjects except one, who was in nitrogen equilibrium with a mean daily retention of 1.55 gm. Apparent mean digestibility of fat was 96.1 per cent on a daily intake of 94.65 gm.

"Mean daily mineral retentions were: 15 mg. for calcium on an intake of 1037 mg., with five subjects in negative balance; 83 mg. for phosphorus, on an average daily intake of 1017 mg., with two subjects in negative balance; and 6 mg. for magnesium, on a daily intake of 321 mg., with six subjects in negative balance. Intakes of these minerals, equal to recommendations for the teen-age girl fifteen to eighteen years of age rather than those of the adult woman, are indicated if negative balances are to be avoided.

"The content of eight essential amino acids of the lacto-ovo-vegetarian diet exceeded that of the standardized diet as well as the minimal requirements of the Food and Nutrition Board for women. Positive nitrogen balances for all subjects were maintained on a mean daily intake of 1.18 gm. protein per kilogram body weight." Address: Depts. of Home Economics and Chemistry, Andrews Univ., Berrien Springs, Michigan.

4834. *SoyaScan Notes*. 1967. Chronology of Arran Stephens: Early years in preparation for work with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part I (1944–1967). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The focus of Arran's life has been his spiritual practice; his work with food has taken an important supporting role as service to others. He has written his autobiography, published as *Journey to the Luminous: Encounters with Mystical Adepts of our Century* (Seattle, Washington: Elton Wolf Publishing, 1999. 380 p. with 70 black and white photos). An expanded version, titled *Moth & The Flame: Adventures with Spiritual Adepts of Our Time* is now available free of charge on the Web at www.ArranStephens.com.

1944 Jan. 6—Arran Blackburn Stephens is born in Duncan, on southeast Vancouver Island, British Columbia, Canada—at King's Daughter Hospital, about 10 miles from the family farm. He is the youngest of three brothers, the others being John Rutherford Jamieson (Gwen's son from

her first marriage. John was born on 20 Sept. 1931 in New Zealand, the son of William John Jamieson, a New Zealand sheep farmer) and Godfrey (born on 28 Oct. 1939).

Arran's father, Rupert Edward Cripps Stephens, was born on 4 April 1896 in or near Plymouth, UK. Arran's mother, Gwendolyn Minnie Elise Hopkins was born on 4 Nov. 1909 in Kent, King Co., Washington. Arran's parents run Mountain Valley Farm, the family farm of 89 acres of hard living they inherited from Rupert's father; there they grow

field berries. Rupert had been a captain in World War I and saw some brutal action in Belgium and Germany; he would never talk about it. Rupert's father, "Surgeon Commander, Dr. Harold Frederick Dale Stephens," was in the Royal Navy and saw action in the Boer War in South Africa. Arran's paternal grandmother (his father's mother), Agnes Grace Cripps, daughter of Lieut.-General J.M. Cripps and Agnes Grace Cripps, had been born in about 1857 in Peshawar, in India's North-West Frontier (in today's Pakistan). Agnes married Lt. General J.M. Cripps, who had lived in colonial India from 1839 to 1878. General Cripps wrote a book titled *Recollections of My Indian Career*, illustrated with 25 exquisite original watercolors by his wife, Agnes. Aaron later wrote: "In my child's mind's eye, India's mystery beckoned, like a distant voice from a faded dream."

At Mountain Valley Farm, the Stephens family lives in a "hand-hewn log-house, overlooking the Goldstream Valley," surrounded by natural beauty, a waterfall, and wilderness.

1947—When Arran is age 3, the family sells Mountain Valley Farm and moves to Goldstream, about 40 miles south, closer to Victoria, where they wrest Goldstream Berry Paradise farm from the forest. Arran's parents have renounced modern chemicals and mechanization, finding simple, economical methods (such as sawdust mulch and earthworms) to strengthen soil fertility and the health of plants, Rupert's credo is: "Always leave the soil better than you found it." They establish a roadside "berry stand" from which to sell their berries and other produce directly.

1951—Rupert's treatise, *Sawdust is My Slave*, is published extolling the methods he had discovered. When not working the land, Rupert wrote the lyrics for hundreds of songs, poems, and articles.

1955—After attending a Christian Bible camp Arran's interest in God begins to awaken. He feels called to the ministry. His dad takes him to a pristine forest behind their farm and tells him: "Arra-boy, this is our church; this is our cathedral."

1957 Jan.—The family (with Arran age 13) sells the farm (Goldstream Berry Paradise) and moves from Vancouver Island to Southern California. "The songwriter in Rupert's heart was restless for fame and Hollywood." The family settled in a "rented palm-shaded hacienda in the Hollywood Hills." Arran quickly learned to his dismay that violent gangs controlled the schools and streets. This urban concrete jungle was a different world.

1959—At age 15, Arran's "secure, trusting world abruptly ended: mum and dad separated" (temporarily). Brother "Godfrey roared off on his Harley motorcycle for New Orleans [Louisiana] and high adventure;" he later became a renowned artist. Confused and desperate, Arran decided to become an artist and poet. He encountered the Beat generation and the counterculture of the 1960s.

1961—Arran (now 17) has one of his poems published in the *Mendicant Poetry Journal*. He struggles to navigate the

psychedelic 1960s, becomes a spiritual seeker, reads books of many spiritual traditions, meets Eden Ahbez, the first vegetarian he had ever met, "part of a handful of health and fitness devotees from the Hollywood Hills, including well-known Gypsy Boots and Al Jacobson. But every hope, each oasis, turned into an empty mirage." "Often broke, I slept on the beach, drunk or high on cheap wine or high on drugs, sometimes crawling into a cardboard box to mitigate the winter cold. When hungry, I ate discarded food or begged. When I could I painted. Misery was my companion,... a course which took but two years to break mind, body, and spirit." By age 17 he "was a haggard alcoholic and drug-dazed atheist railing against the Author of pain." One day he tried to end it all in the Ocean waves off Venice Beach in California. But after a momentary experience of serenity, he pulled back from the brink.

Then he heard of a monastic retreat named Fountain of the World in the hills above smoggy Los Angeles. One week after his arrival he had an experience that profoundly changed the course of his life. During an evening group Concentration, he experienced brilliant light and "intoxicating waves of Unconditional Love... This was my first taste of a state of Reality—something beyond the senses; something beyond intoxication; perhaps something I had always been blindly hoping and groping for." Similar experiences returned repeatedly but were not encouraged by his fellow monastics. After two months, and increasing pressure to "renounce the world and become a full-fledged monastic brother," he decides to leave.

1963—In San Francisco, Arran experiences how this spiritual light can miraculously save the life of a person about to be run over by a bus. He "never hesitated to investigate any teacher, religion or teaching." "From 1961 to 1964, with one or two exceptions, the springs of Divine Light all but dried up as this prodigal profligate wandered and squandered the spiritual capital we all come into the world with."

1964 April—Arran's parents, now back together, move back to British Columbia from southern California. They now live in Victoria on Vancouver Island.

1964—Arran (now 20) has several one-man shows of paintings under his belt. He leaves San Francisco for lovely Mendocino County, then, en route to Tangiers, he arrives in New York's Greenwich Village—almost broke. He paints and reads spiritual books. After a two-year lapse he starts daily sitting meditation again. Many brief and isolated inner experiences of light and peace lifted him "above an otherwise sordid existence." Craving discipline and order, he joins a group and for 9 months studies Gurdjieff whose "principal teaching was that we are all 'asleep,' and must awaken in a higher sense through various esoteric practices, including self remembering and sacred dance." He earns money at odd jobs, including as a waiter in a macrobiotic restaurant, the Paradox (owned by Richard Lane). Arran

becomes interested in the vegetarian aspect of macrobiotics. He recalls (2006): I “largely ate macrobiotic for years at a stretch, but I also experimented with various diets, such as vegan, mucusless (Arnold Ehret), fruitarian, raw foods, and some fasting.” But increasingly he yearns to meet a living perfect master and experience mystical union with God. After reading about Sri Ramakrishna, he gives up his bad habits and returns to being a vegetarian.

“From 1964 to 1965 my life revolved around art and the inner quest. One day, when shown photos of Hazur Baba Sawan Singh (1858-1948) and his disciple, Kirpal Singh (both great Sikh masters), and given a book by the latter, he is deeply moved. When he learns that Kirpal Singh is alive, he knows has almost found what he has been looking for. Meeting the Master in person became his passion. He writes Kirpal Singh (in India) asking for initiation.

1965 March 28—Arran receives a written reply, with instructions. “I was accepted for initiation... My feet were on the Path at last.” He meditates, keeps a diary, and writes questions to his Master. Written answers return. He returns to Vancouver and opens the East West Gallery, eager to save enough money to go to India.

1967 Jan. 20—He departs for India, welcomed by his Master. He stays at the Master’s Sawan Ashram, in Shakti Nagar, near Delhi, and has many wonderful experiences, beautifully and humbly described in detail. Most important are love, attending satsang, practicing meditation, not creating either bad or good karma, and weeding out personal shortcomings. Part of the practice is to eat a vegetarian diet and avoid all intoxicants. After exactly 7 transforming months in India he returns home. “Before leaving India, the Master authorized me to begin work as his representative in Western Canada.” Continued. Address: Vancouver, BC, Canada.

4835. *SoyaScan Notes*. 1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part II (1967–1971). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1967—Arran begins his first food business when he starts the Golden Lotus restaurant at 2936 West 4th Ave. (at Bayswater), Vancouver. Serving natural, vegetarian and macrobiotic foods, it is the city’s first vegetarian restaurant. Before he left India, his Master had encouraged him to take up this “right livelihood” and promised to extend “all feasible help, both inside and outside.” A place was found and the necessary money appeared as if by magic. Most of the workers were spiritual seekers. All lived upstairs, above the restaurant.

Arran was one of the cooks; he had learned how to cook brown rice, veggies, hijiki, wakame and miso soup while working as a waiter at the Paradox Restaurant in New York City in 1964; he learned the rest by trial and error, including

the use of macrobiotic and vegetarian cookbooks such as *Vegetarian Cookery*, by Pietro Rotondi, and (later) *Ten Talents* by Frank and Rosalie Hurd.

“Amazingly, the rather monastic rules—including regular meditation and celibacy—were accepted and enthusiastically followed. In the communal setting, all worked without pay for the first 9 months. “Before the year was out, bills and loans were entirely repaid and all began receiving hourly wages, benefits, room and board. The numbers attending our weekly satsangs outgrew the upstairs, and the venue shifted downtown to the YMCA.” One photo shows Arran standing in front of the Golden Lotus restaurant in 1968 and another standing inside in 1969.

1968 Oct.—Arran and three others return to India to be with Master Kirpal Singh, having received his written permission. On the way they visit Ram Das (the former Richard Alpert) who was in retreat at his father’s large New Hampshire estate. In India Arran lives close to Kirpal Singh. The Master will not initiate those who beg for food, only those who earn an honest living.

1969 March 4.—Arran, with the Master’s blessing, marries an Indian woman, Rattan Mala Bagga, age 22, in a traditional Sikh marriage. She comes from a good family, has an M.A. degree, and is a lecturer at a girls’ school in Moradabad. The Master, who changes her name to Ratana (“jewel”) encourages family life and the tender bonds of matrimonial love and responsibility.

1969 April—Arran and sari-clad Ratana return to Vancouver, Canada, after nearly 6 months in India. He has changed from ascetic to householder. They settle into a little room above the restaurant, sharing a bathroom with 14 others and working, on average, 12-16 hours a day to get the restaurant firmly established. In May and December, Kirpal Singh writes with wise advice. As a result: “In three months we saved \$1,000 to make a down payment on a little two-bedroom house with a garden. Ratana was already pregnant with our first child, and we had had our fill of communal living.”

“Considerable agitation began among the more left-leaning workers to turn the Golden Lotus into a commune. After a lot of soul-searching, we decided to make a clean break, and sold the restaurant to the group for a paltry \$3,000, wishing them all success.” Soon after the Golden Lotus restaurant became defunct.

1970 Jan.—Arran opens a little store named Jyoti Importers and Natural Foods at West 4th Ave., near Yew Street on the same street as the Golden Lotus, but on top of the hill. He sells “Indian bedspreads, clothing, classical musical instruments, and healthy and organic foods. Food soon edged out the other wares. It became obvious that my destined vocation was connected to organic foods and wholistic living.” After several years of growth, the business moves into a much larger building at 1813-1817 West 4th Ave., a corner location and opens as Lifestream Natural

Foods on 1 Jan. 1971. Then Lifestream expanded to a second store on Broadway at Trafalgar (See: *Shared Vision* 1990, p. 9).

1970 April 4—Arran and Ratana's first child is born at St. Paul's hospital in Vancouver by natural childbirth. Master telegraphed. "You may name the baby Shanti" (the ancient Sanskrit word for "peace"). Note: All the Stephens' children were born at this same hospital. Arran writes: "I was present at the miracle of each birth. On the birth of two of our children, Ratana was blessed with the vision of our Master, and she also experienced great light within."

1970 spring—On an impulse, Arran gives half of his business, Jyoti, to Peter Harwood, his friend and fellow disciple of Kirpal Singh; Peter becomes a working partner.

1970 Aug.—Arran attends the founding meeting of Organic Merchants (OM), held outdoors on the side of Mt. Shasta. Lifestream becomes one of the founding members. OM was the first trade association for natural food retailers on the West Coast and the first organic trade association. Arran also remembers OM meetings at Blake Rankin's, at Lifestream, and at Pajaro Dunes.

1971 (1990 *Shared Vision* article says Lifestream opened 1970 Jan. 1). Jan. 1—Arran opens Lifestream Natural Foods in Vancouver, British Columbia, Canada, just north of the U.S. border, at 1813-1817 West 4th Ave. (at Burrard). It is Canada's first large natural foods retail store. His father suggests the name. "Free fresh carrot juice drew in crowds; an electric powered 20-inch stone-buhr mill, visible through a window from the street, ground tons of fresh whole-grain flour every day; alfalfa sprouts were grown in our nearby warehouse / factory; fresh nut butters were roasted and milled to order; natural candy bars and cookies were extruded and baked; egg-free cakes and muffins popped from the ovens; pies, crunchy granola, bulk foods, and wholesome artisanal breads were baked and sold by the hundreds. These were all firsts in Canada." The inspiration came from many sources, but was not macrobiotic. The Lifestream brand was represented by a woman gathering sheaves of wheat into a basket. "Teachers brought classes of school children on tours to see how wholesome foods were made. The store became so busy that it was often difficult to wade through the crowds of shoppers and hangers-on... Sales doubled every year for seven years, and the business quickly branched out into wholesale distribution."

1971 or 1972—A separate small vegetarian restaurant, named Mother Nature's Inn (MNI) was started as a *separate* business in the rear of the large retail store (on West 4th Ave.) by Victor Yankowich,... But after about a year MNI was purchased from Victor (for a pittance) for Ratana, who showed her business skills by running it very successfully and profitably. The company's best-known products are its line of Essene sprouted grain breads—moist, heavy, and delectable.

1972—Lifestream opens its own Bread of Life bakery

(100% owned by Lifestream) in North Vancouver because of the area's scarcity of organic and natural baked items. The original Lifestream Essene Bread, developed by Arran at that bakery, was one of the Lifestream's first baked products. Essene Bread was always made with organic grain—from the Alvin Scheresky and David Orchard organic grain farms in Saskatchewan province.

A 1971 color photo shows Arran, smiling, holding a loaf of Essene Bread.

1971—At about this time Lifestream Natural Foods Ltd. moves to 724-26 W. 6th Ave., Vancouver 9, BC, Canada. This was a combination headquarters, warehouse, manufacturing and packaging facility. It housed a flour mill, alfalfa sprout operations, nut butter operation, tamari nut roasting and packaging, plus packaging a wide range of organic grains, beans, nuts, seeds, flours, etc. When this facility opened, the only other Lifestream operation was the retail store.

1971—Since there was a scarcity of natural and organic foods, Lifestream began to do wholesale distribution. Frank Ford, founder of Arrowhead Mills in Texas, appointed Lifestream as distributor in Canada for the entire Arrowhead Mills' range of organic grains, beans, flakes, hot cereals, and flours. Hundreds of products were developed and marketed under the Lifestream brand: Breads, other baked goods, fruit & nut-based energy bars, juices, trail mixes, tamari roasted nuts and seeds, preserves, yogurt, granolas, mueslis, sprouts, soyfoods, expeller-pressed oils, and a wide range of imported Japanese macrobiotic products. During the 1970s Lifestream's profits came from a blend of manufacturing, wholesaling, and retailing—but not even the accountants knew what percentage of the total came from each of these activities. Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

4836. *SoyaScan Notes*. 1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part III (1972–1980). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1972—A third partner, Louis Kiraly, joins Lifestream; he, too, is a disciple of Kirpal Singh. Louis contributed part of his outside job wages to help support the business during the first year. The three partners become equal owners of the company, which was incorporated at about this time as Lifestream Natural Foods, Ltd.—a limited corporation.

1972 Nov.—Sant Kirpal Singh visits Vancouver on his third world tour. He visits Arran and Ratana's home, and encourages Arran to build Lifestream into a large, successful business. Doing such service need not interfere with his spiritual practice.

1972-73—Lifestream starts importing products from Muso Shokuin (macrobiotic) in Japan. Blake Rankin

and George Gearhart of Janus Foods in Washington state were good friends of Arran's. Their two companies did not compete. Canada had its own packaging regulations and Lifestream developed a complete line of Japanese products under the Lifestream brand for Canada.

1973 Feb. 1—The Stephens' 2nd child is born; the Master names her Gurdeep (Lamp of the Lord). Oct. Arran and Ratana, with both children, make another pilgrimage to India. One day "Yogi Bhajan, the founder of the 3HO Society, arrived at the ashram with a large retinue of Sikh followers. Yogi Ji was of gigantic stature, with a big black beard, flowing robes, jewelled rings, necklaces, and a commanding personality." The Stephens attend Kirpal Singh's 80th birthday on 6 Feb. 1974 then they return to Vancouver.

1974 Aug. 21—Sant Kirpal Singh returns to the Source, leaves his body (dies). Arran immediately flies to India, and arrives in time to see his Master's body cremated on a funeral pyre at Kirpal Bagh in Old Delhi, a few miles from the Yamuna River. Bereft, he stays for about a month, searching for the Master's successor, then finally returns home—the succession enigma unresolved. He tries to return to being "a successful businessman responsible for more than a hundred employees, a devoted husband and father, etc." But for the next two years he is torn by the pangs of separation.

1974—Arran and Ratana buy 2 acres of land and a ranch house on Panorama Ridge, Surrey, BC, out in the country, about 15 miles southeast of Vancouver. They move there from their little house in Vancouver, work with others to build an ashram for those interested in Kirpal Singh's practice, and they live there for the next 5 years.

1974 Nov.—Lifestream is a member of the Natural Foods Distributors Assoc. (NFDA).

1974—A 4-page menu (black on yellowish-tan paper) from Mother Nature's Inn this year still exists, along with a black-and-white photo of Lisa serving food in the restaurant.

1974 or 1975—Lifestream starts to lease space at 12411 Vulcan Way, Richmond, BC; it was converted from a pet food factory to completely vegetarian use. Here Lifestream operates its bakery and wholesale distribution; this continues until 1981.

1976 Jan.—Lifestream is still distributing products imported from Muso Shokuhin in Japan.

1977 July 23—A third child and daughter, Jyoti, is born in Vancouver.

1977 July—*The Lifestream Cookbook* is published by Lifestream (58 p.).

1978 June—Lifestream is now located in Richmond, BC, Canada V6V 1J7.

1978 Oct.—Arran and his family (wife and 3 children) return to India; he is still torn by the succession question. At first he tentatively but sincerely comes to believe that the "Desert Baba" in western India was Kirpal Singh's true successor; he shares his belief with other Kirpal Singh

initiates. On Nov. 5 and 6 he realizes (to his immense relief and embarrassment) that Darshan Singh, Kirpal's eldest son, is his true successor and mystically one with his father. "The successor will bind you to your Master and not to himself."

1978 Dec.—When Arran returns from India he receives a letter (which he still has) which basically excommunicates him from the community of initiates and from the Ashram in Surrey, BC, which he and Ratana had helped to motivate, build, and finance. One of his partners at Lifestream could not handle the fact that Arran was no longer a follower of the "Desert Baba" any more, and soon that partner left to go see him in India. The advice he received in India was not helpful for his relationship with Arran, and soon he began a program of systematic non-cooperation with Arran in the business. The third partner remained fairly neutral and would not take sides. Yet it is soon clear that the Lifestream partnership has become unworkable. Yet as president, Arran has most of the responsibility. He was the first to arrive at work each day and the last to leave. And there were other inequities. The bank had only Arran as a secured creditor, yet the three partners were paid equally. Lifestream was always profitable, but the rapid growth meant tight cash flow. With no clear leadership at the top of the company, the Lifestream partnership begins to unravel.

1979 early—Arran and family move from their former community in Surrey, BC, in the "country back to the city, drawn to a gracious old house in a quiet neighborhood, surrounded by a high-hedged secluded garden." They live and raise their family in this house for the next 23 years.

1979 April—Arran returns "alone to India for 3 weeks, to fortify and deepen my connection to the Divine working through Darshan, the poet-saint."

1979 Sept.—Fourth printing of *The Lifestream Cookbook*; it eventually sells over 100,000 copies. The company is now at 12411 Vulcan Way.

1979—Lifestream opens a big Lifestream Natural Foods retail store (#2) at 2582 West Broadway in Vancouver. On the 2nd floor above this new store, Woodlands Natural Restaurant (vegetarian) opens. However the restaurant, owned by Ratana and Arran, is kept separate from Lifestream. The original Lifestream retail store at 1813-1817 West 4th Ave. continues to operate at its original location.

A photo shows the Lifestream crew in about 1980.

1980—"Annual sales of Lifestream brand products reach \$9 million, making the line one of Canada's leading natural food brands." Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

4837. *SoyaScan Notes*. 1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part IV (1981-1989). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1981—Annual sales of Lifestream

brand products jump to a record \$12 million, and there are about 100 employees. All the retail sales and sales of Lifestream's distribution company are in Canada. However, the majority of Lifestream's Manna Bread, natural energy bars, and organic baked goods are in the USA. An estimated 25% of Lifestream's total sales were in the USA to wholesale distributors.

1981—Arran refuses to co-sign a bank loan for Lifestream, in an attempt to resolve partnership problems at Lifestream, by trying to force his disaffected partner to either buy his shares at a price for which Arran was willing to sell them, or to let Arran buy his shares at the same price. But the disaffected partner refuses to sell his shares to Arran, and he doesn't have the means to buy Arran's shares. The third partner wouldn't decide one way or the other. Parshan Sahota, an Indian man, owns 8% of the shares; a hardworking, loyal employee, he had \$60,000 to invest, an amount calculated to equal 8% of Lifestream's shares. Parshan is now operating a successful Lifestream distribution operation out of Ontario, is behind Arran all the way (he is not an initiate), however even with his support, Arran does not have the requisite 51% ownership or backing to gain control of the company. Despite the company's success, the only alternative at this point is to sell to an outsider. Arran and Ratana do not want to sell the Lifestream baby, as they felt very much identified with it. This is a painful but valuable lesson for them. A buyer is found.

1981 July or Aug.—Lifestream is reluctantly sold to a holding company controlled by investment bankers Gordon Byrne and David Mindell. They hire Arran to remain as president, but renege on a promise to give him back 10% of the company, so he resigns as president by the end of August. He recalls that they effectively cheated him out of approximately \$200,000 in the technicalities of the sale. Several months later, on the advice of a seasoned attorney, Hyma Altman, Arran decides to seek legal recourse for the recovery of the promised 10%; the defendant settles out of court. Gordon sells his shares to David Mindell and they hire an ex-executive of a large consumer goods firm to run the company. Under the new ownership, Lifestream has difficulties in the marketplace and labor problems at the stores, which they sell or close.

After Arran resigns from the company, he goes back to work at Woodlands Natural Foods (the family restaurant business), and abides by a 3-year non-compete agreement which restricts him from going into retail, wholesale, or manufacturing.

1981 Aug.—Nabob Foods (Canada's #2 brand of coffee) buys (from David Mindell) the much weakened Lifestream manufacturing operation at 9100 Van Horne Way, Richmond, BC. Nabob invests heavily in the Lifestream brand.

1981 Oct. 11—Arjan, the Stephens' fourth child and first son, is born—on Canada's "Remembrance Day." Arran recalls: "From early ages, our kids worked for hourly wages

at our various enterprises, as they wanted spending money. We told them that if they wanted money, they needed to earn it, and learn valuable life skills along the way."

1981 to 1985—During these three years when his non-compete agreement was in effect, Arran helped Ratana at the Woodlands vegetarian restaurant. He recalls: "She was the heart and smarts behind the restaurant operation. I was the builder, the Don Quixote, tilting at Windmills. I did wait on tables, chop vegetables, clean toilets, sweep the parking lot." Using the initial large restaurant at 2582 West Broadway as a central bakery and commissary, they supply the old Mother Nature's Inn—still there in the back of the original Lifestream store (it is a tenant of the store), convert it to a Woodlands, and open and supply two additional Woodlands restaurants and stores in Vancouver (permitted in the non-compete agreement). Arran continues: "But it was very difficult to keep it all organized and profitable, and the world load was excessive. Ratana had the three daughters and now out newborn son to look after, plus she helped out with the main restaurant. She was the real hero that kept it together. The various Woodlands satellites were becoming increasingly difficult to manage properly and cash flow was in a dangerous position. We decided to sell off the two outlets at a loss, and contracted back to the two original, profitable restaurants. But now we did have a nice bakery built in the back of Woodlands on Broadway, and it was out of this little bakery [in 1985] that we began Nature's Path Manna Bread."

1982 July—Lifestream is selling (and perhaps making) Vegi-Patties, which are meatless burgers made with textured soya flour and wheat gluten.

1985 Jan.—Arran Stephens founds Nature's Path, Ltd.—supported by Ratana and her restaurant—and launches the company's first product, Manna Bread, at Natural Products Expo West. As a limited corporation (an "Ltd."), Nature's Path takes in over 20 small investors, but this becomes unwieldy, and the investors have very high expectations. So Arran and Ratana buy back the shares at cost plus interest.

1985 end—Nature's Path soon outgrows the Woodlands and moves to a much larger leased building on Simpson Road in Richmond, BC. Ratana continues to profitably manage Woodlands, while Arran works very hard to establish the Nature's Path bakery. Arran would drive a truck each week, loaded with bakery products, all the way down to Portland, Oregon, making store deliveries. There were difficulties with the fresh bread, however, as most stores wanted guaranteed sales, and the stale bread returns were sometimes unbelievable. Yet Manna Bread was the staple seller. Arran then "shifted emphasis toward more shelf-stable organic bakery products, and introduced a line of sprouted, organic breakfast cereals under the Manna / Nature's Path banner."

1988 Feb.—Arran makes his tenth pilgrimage to India. "Weary of our ups and downs in business, Ratana urges me to ask Master [Sant Darshan Singh] for his advice to help

set my feet firmly on the path to consistent profitability.” Very humbly and graciously Darshan gives three basic principles: (1) “Keep to quality. Quality should never be sacrificed either for quantity or money. Be honest.” (2) “We should expand our business to the extent that we can control it personally.” No more. (3) “We should be progressive, do our best, and make the most of our business, but not be too ambitious. Be very cautious—expansion is very easy; retreating is very difficult. We should be contented with whatever the Master blesses us.” Arran deeply appreciated the wisdom of this extemporaneous and free advice. He later recalled: “Sales began to take off. We then started effectively competing with Health Valley, Lifestream, Arrowhead Mills, Erewhon and others. It was a lot of fun, and the growth was explosive.”

1988—“Multigrain, Multigrain ‘n Raisin, and Millet Rice are the very first Nature’s Path cereals. All are still for sale today.” Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

4838. *SoyaScan Notes*. 1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part V (1990 on). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1989—The Lifestream store at Broadway is sold and becomes Kitsilano Natural Foods. But Arran and Ratana Stephens continue to own the Woodlands vegetarian restaurant upstairs at this location.

1990 Nov.—A nice article (with 3 portrait photos) about Arran and Ratana, Lifestream, Woodlands, and Nature’s Path appears in *Shared Vision* magazine in Vancouver. Nature’s Path is located at 7453 Progress Way, Delta, BC V4G 1E8. Ratana continues to run Woodlands vegetarian restaurant at 2582 West Broadway in Vancouver. Arran discusses the great importance of staying true to one’s vision, spiritual practice, and principles.

1991—Arran now owns a company named Manna Milling, which is a very big purveyor of natural cereals in Canada and the USA; their brand name is Nature’s Path. Lifestream had an eastern branch in Toronto, named Lifestream East, which then became LifeSource, which is now run by Parshan Sahota (see above), who now owns a remnant of what used to be Landstrom.

1992—Ratana leaves Woodlands vegetarian restaurant to help Nature’s Path full time as chief operating officer (COO).

1993—Nabob Foods is purchased by Kraft Foods / Phillip Morris.

1994—Kraft approaches Arran and offers to sell him Lifestream, since Nature’s Path was seriously trouncing Lifestream in every market. Lifestream had shrunk dramatically and was losing near \$2 million per year. Arran offered to pay Kraft the value of Lifestream’s assets, but Kraft rejected this offer with the comment, “This company is

worth three times what you are offering. Six months later the Kraft attorney called again, saying that they were prepared to accept Arran’s offer. Arran replied, “My offer just dropped.”

1995—Arran and Ratana finally purchase back the assets of Lifestream from Kraft—14 years after they were forced to sell it. Their objective was to restore the LifeStream (new spelling) brand and real estate, but not necessarily the manufacturing, as Nature’s Path already had a state of the art cereal processing and baking facility at 7453 Progress Way, in nearby Delta, BC. So Nature’s Path closed the old Lifestream facility (at 9100 Van Horne Way, Richmond, BC), consolidated its usable assets in their Delta plant, then leased out the building on Van Horne Way. It took nine months to reverse Lifestream’s losses.

1995—Nature’s Path opens up a large plant in Blaine, Washington state (USA).

1995—Ratana and Arran sell Woodlands (formerly Mother Nature’s Inn) to Ratana’s sister, in order to be able to devote their full attention to Nature’s Path. Arran: “Woodlands was highly profitable and provided a much-needed service to the community. Sales from the West Broadway restaurant were over \$1,000,000 per year. It was common to experience line-ups at Woodlands for every lunch and dinner. It had a wonderful atmosphere, but with the great growth and potential of Nature’s Path, we couldn’t handle the restaurant as well as Nature’s Path, which led to the decision to sell it.”

1996-2002—Arran serves on the board of the Organic Trade Association (OTA).

2002—Arran and Ratana purchase and move to their current house, named Shalimar, on 2.2 acres of land near the University of British Columbia, overlooking the water, the rain forest, and a canyon. There they developed a reflecting pond, a large and gorgeous organic garden (both foods and ornamentals) and a fully-equipped cabin for guests.

2004—Nature’s Path is now North America’s largest certified-organic cereal company.

2004 May. *Natural Foods Merchandiser* (p. 29), in an article titled “25 who championed a cleaner plate,” one in a series of articles celebrating the magazine’s 25th anniversary, honors Arran as a pioneer—and shows a nice color portrait photo. He has been in the natural foods industry for 37 years. At age 23, he owned Canada’s first vegetarian restaurant, the Golden Lotus. One challenge was transforming himself from a recluse to a professional leader and entrepreneur. He would like his epitaph to read: “Nurturer of people, nature and spirit.”

2006 Feb. 1—Nature’s Path Baking Inc. opens in Mississauga, just east of Toronto, Ontario, Canada. Arjan Stephens (the son) is the overall manager of this leased 36,000 square foot organic toaster pastry plant. A very bright young man, also devoted to the spiritual path, he earned his MBA in 2005 from the Stuart School of Business, Chicago, Illinois. Before he could finish his law degree, Arran asked

him to help with the family business. 2006 July—The great majority of Nature's Path production is from the facility at Blaine, Washington (USA), with this plant and the one in Delta, BC, operating 24 hours a day, 7 days a week (24/7). Arran adds: "Nature's Path currently owns and operates more than 400,000 square feet of buildings and leases the 36,000 square foot plant in Mississauga. We are now looking at a very interesting opportunity in the Midwest for a new plant and distribution center, that will significantly reduce miles traveled. For example, most of our production currently takes place in the Pacific Northwest, but half of our business is east of the Rockies. Much of our grain supply comes from east of the Rockies. By locating an additional plant in the Midwest, in the middle of the Grain Belt, we can more cost effectively produce and deliver for all markets east of the Rockies. The freight savings alone will be in the millions annually. With the soaring costs of the fossil fuel economy, we have to do everything to reduce energy consumption and move as quickly as possible to renewable, greener energy. Our goal as a company is to be zero waste by 2010 and climate neutral by 2020. Of course, this can only happen by creating significant carbon offsets. We already have been doing this to some extent by supporting sustainable, organic agriculture, but we have a long way to go to create the offsets for fuel and energy consumption."

"My diet for decades now has consisted of whole grains, vegetables, fruits, nuts, seeds, beans, and small quantities of organic dairy. I haven't eaten meat, fish, fowl or eggs or anything containing them since 1964, and at 62 am quite healthy and vigorous."

Note: This is the earliest document seen (Feb. 2010) concerning Arran Stephens, Lifestream Natural Foods, or Nature's Path Foods, Inc. (British Columbia, Canada). Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

• **Summary:** A disquieting and keenly observed novel about the engulfing chaos of the 1960s and early 1970s. The hero (Joe Allston) and his wife (both Easterners in their sixties) retire to California in search of peace after the death of their wayward son. Their little paradise in Los Altos Hills (which looks like Eden) "is invaded by various parasites, including a neighbor with a bulldozer bent on 'development.'" Jim Peck, a bearded young cultist, builds a treehouse on their property [across the creek] and starts a University of the Free Mind, complete with yoga, marijuana, and free-wheeling sex. Most damaging of all, it is invaded by Marian Catlin, and attractive young wife and mother, affirming all the hope and love that the Allstons believe in..." (inside front dust jacket).

This book is about: "The cult of youth, the Hippy

[sic] Revolution, and the excruciating conflict between the generations." Joe Allston represents the square older generation and Jim Peck the Hippy; their antagonism is presented in the most irreconcilable terms. If there is an answer, a way of bridging the chasm between them, "it is in Marian Catlin's openness to all experience and her affection for all life" (rear dust jacket).

One very interesting scene (p. 102-20), an evening party at the Catlins with invitations, is set around a barbecue in the California spring. The Allstons are there, as is Jim Peck, who sets forth his philosophy of life and worldview—which he considers sane and virtuous. He is an apostle, not of modernity, but of alienation, with his wild hair, wild beard and wild eyes. Joseph Allston says: "If he can stand me, I can stand him." Jim advocates a healthy vegetarian diet and the philosophy behind it (including a protest against the hypocrisies of eating meat). "All the largest and strongest animals were vegetarian. He himself wanted to be absolutely *harmless*. He believed in ahimsa, nonviolence, harmlessness."

He wanted to keep his mind crystal clear and expand its boundaries, and to expand his consciousness. He was writing a book about himself and his experiments. He did yoga. They asked him about "organically grown vegetables," the use of natural manure, and avoidance of chemical sprays. He smiled. Was "there a health store in town where they sold soybean steaks and blackstrap molasses,..." He didn't know. What hypocrisy to try to make honest soybeans taste like sirloin. Better to hold to simplicity. John opens another beer and Debby has a second soft drink. The men were hesitant to talk with him. All this "self-realization business, a mongrel cross between Socrates on the examined life and the Buddha on contemplation... that would begin in Huxley's *Doors of Perception* and end in Leary's LSD cult. There would be a lot of Zen passivism scrambled with a sanyasi withdrawal..."

John Allston wonders: "Could I stand to see human feelings and noble ideals come half-baked from the oven?" Jim Peck, no doubt "would have a smiling sneer for people who took aspirin and denounced drugs, and for incipient alcoholics who objected to other ways of getting high." But John mostly conjectured; he rarely asked. In fact, much of the above is conjectured by the straight men (as they drink beer), rather than actually said by Peck.

A photo on the inside rear dust jacket shows Wallace Stegner, who is currently "a professor of English at Stanford University and head of the Creative Writing Center there." A brief biography is given. Address: California.

• **Summary:** Advocates a vegetarian diet. Pages 238-40 discuss therapeutic uses of the soybean, including soy flour, soy oil, soy sprouts, and soy milk. Address: Docteur.

4843. Welch, Holmes. 1967. *The practice of Chinese Buddhism*. Cambridge, Massachusetts: Harvard University Press. See p. 112, 365-66, 401-02. *

• **Summary:** The author, an authority on Chinese Buddhism, points out that “Chinese monks who abstained from meat were able to perform rites for the dead with greater effectiveness. If lay people knew that meat was being eaten at a monastery, it was less likely to receive their patronage... This accounts for the complaints of foreign travelers in China that monks would not allow them even to pass the night at their temples because of the fear that meat might be smuggled in and eaten on the premises.”

Dietary abstinence from meat was an ancient Chinese tradition that antedated the arrival of Buddhism. Mahayana monks in China do not beg for food. They were strictly vegetarian in ancient times and remain so today. Many Buddhist lay people in China are also vegetarian. Lay people usually receive a lay ordination, in which they must take for one to five vows. Almost everyone takes the first vow, which is not to take the life of any sentient creature. Usually this is taken to mean or imply vegetarianism.

4845. Boorman, Howard L.; Howard, Richard C. ed. 1967-79. *The biographical dictionary of Republican China: Li Shih-tseng* (Orig. Li Yu-ying). New York City, NY: Columbia University Press. See vol. 2, p. 319-21 + index volume. 28 cm. [Eng]

• **Summary:** Volume 5 of this excellent 5-volume work is a personal name index by Janet Krompart. Li Yü-ying appears under Li Shih-tseng. Original name: Li Yü-ying. The Chinese characters for each name are given. Born in 1881, Li Shih-tseng was leader of the work-study movement in France and became known as one of the “four elder statesmen of the Kuomintang.” Thus, he was a very important political figure in 20th century Chinese history.

Note: The Kuomintang or “National People’s Party” was

formed in 1912 in China. It won the elections of 1913 and ushered in the short-lived Chinese Republic. In 1923-24 Sun Yet-sen reorganized the Kuomintang (KMT), orchestrated its rise to power, and was strongly associated with it until he died unexpectedly in 1925. Thereafter Chiang Kai-shek was its leader. On 8 Dec. 1949 the Kuomintang government, under Chiang Kai-shek, moved to Taiwan, as the Chinese Communist Party under Mao Tse-tung took control of mainland China.

Li Shih-tseng was born in Peking, although his native place was Kaoyang, Chihli (Hopei). His father, Li Hung-tsao, held important offices in the Ch’ing government, such as Grand Councillor and tutor to Tsai-ch’ien, the T’ung-chih emperor. Li Shih-tseng and his elder brother, Li Kun-ying, were exposed to reformist ideas at an early age. When their father died in 1897, the Ch’ing government awarded both of his sons the rank of *lung-chang*, which qualified them to hold posts on the level of a departmental head in a government board.

In 1901 Li Shih-tseng met Chang Jen-chieh, and the two established a life-long friendship. The two young men shared many common interests, the most important of which was the desire to travel overseas. Thus, when Sun Pao-ch’i was appointed minister to France in 1902, they became attachés on his staff. In June of 1902, on his way to France, Li stopped in Shanghai, where he met Wu Chih-hui and Ts’ai Yuan p’ei; they also became his life-long friends. In later years these four men, Li, Chang, Wu, and Ts’ai became known as the “four elder statesmen of the Kuomintang.”

In about 1902, after arriving in Paris, Li Shih-tseng enrolled at the Pasteur Institute to study biology. In 1905 he met Sun Yat-sen and joined the French branch of the T’ung-meng-hui later that year. In late 1905 Wu Chih-hui arrived in Paris and joined with Li Shih-tseng and Chang Jen-chieh in founding the Shih-shie-she (World Society), a cultural and revolutionary publishing house with an affiliated printing company. Chang financed the *Hsin shih-chi* (*New Century*), a magazine which began publication in June 1907 and published 121 issues before ceasing on 21 May 1910 because of heavy financial losses. Li and Wu, both of whom were strongly attracted to anarchism, wrote most of the articles.

In 1907 Li Shih-tseng and Hsia Chien-chung established the Far Eastern Biological Society. Li did extensive research on the soybean at the Pasteur Institute and in 1908 he became a vegetarian. He also decided to found a company to manufacture soybean products, so in 1909, after a trip to China to obtain supplies and workers, he established the Usine Caseo Sojaine [Usine de la Caséo-Sojaïne] at Colombes, near Paris. More than 30 Chinese worked at the factory; they used their wages to pay for their studies in France. They were escorted to France by Ch’i Ju-shan, whose elder brother, Ch’i Chu-shan, managed the factory. Li Shih-tseng later [1912] published the results of his studies on the soybean as a book titled *Le soja: Sa culture. Ses usages*

alimentaires, thérapeutiques, agricoles et industriels.

When news of the Wuchang revolt of October 1911 reached France, Li Shih-tseng and his associates, one of whom was Chang Chi, hurried back to China. Upon arriving in Peking, Li was elected vice president of the Peking-Tientsin branch of the T'ung-meng-hui. In Jan. 1912 he and some fellow anarchists established the Chin-te hui [Society to Advance Morality]. Its basic tenet was that social reform must accompany political change, and its members pledged to refrain from eating meat, drinking alcoholic beverages, visiting prostitutes, taking concubines, gambling, and accepting government office.

In April 1912 Li Shih-tseng and his four close friends (Wu, Chang, Wang, Chang, and Ch'ih) founded the Liu-fa chien-hsueh hui (Society for Frugal Study in France), known in French as *la Société Rationelle des Etudiants Chinois en France*. The five founders created a plan, known as the thrift-study program, that enabled Chinese to study in France for \$600 a year. A preparatory school, run by Ch'i Ju-shan, was established in Peking to teach French for 6 months to aspiring students. In Jan. 1913 the first group of 30 students arrived in France; Li Shih-tseng had arranged for them to be admitted to the Collège de Montargis, south of Paris. More than 100 Chinese studied in France under this program.

In Sept. 1913, when the second so-called second revolution collapsed, most Kuomintang leaders were forced to flee China. Li Shih-tseng, Wang Ching-wei, and Tseng Chung-ming took their families to France. Wang, who lived with Li in Montargis, lectured to the thrift-study students.

In the spring of 1915 Li, Wu, Ts'ai, and Wang met in Toulouse to discuss the establishment of some publications. Later that year, *la Société Franco-Chinoise d'Education* was organized in Paris. Taking advantage of a labor shortage in Europe, the group enabled more than 2,000 students (many from Hunan or Szechwan) to work in French factories and other business to finance their studies.

In 1916, when Ts'ai Yuan-p'ei became chancellor of Peking University, he invited Li Shih-tseng to join its faculty as professor of biology. Wartime conditions [World War I] forced Li's soybean products company to suspend operations. In 1917 Li returned to China. In 1920 Li sponsored the founding of the Sino-French University near Peking, and the Institut Franco-Chinois de Lyon in France. He served as chairman of the board of directors of the Sino-French University.

Li devoted considerable time to securing the return to China of the French portion of the Boxer Indemnity Fund for use in cultural and educational activities. In 1925, after long negotiations, a Sino-French agreement was signed.

4847. Vegetarian handbook. 1968. London: Vegetarian Society (U.K.). 19 cm. *

• **Summary:** Ad (full page) in *The British Vegetarian*. 1969. Nov/Dec. p. 628. "Vegetarian Handbook 1968-1970." New edition January, 1968. Published by The Vegetarian Society (U.K.) Ltd. 53 Marloes Road, Kensington, London, W.8, England. "The most comprehensive publication in the world of useful information required by all vegetarians and food reformers." Address: London, England.

4848. Mattson, Marie. 1968. Visiting a Buddhist monastery at Koyasan. *Chicago Tribune*. Feb. 18. p. H15 or N15.

• **Summary:** Koyasan [Koya-san, "Mt. Koya"], "one of the most unusual communities anywhere on earth," is perched atop Mt. Kôya [Koya], in Wakayama prefecture south of Osaka, where it was founded over 1,000 years ago [in 819] by the Buddhist monk Kûkai (known posthumously as Kobo-Daishi), founder of the Shingon sect.

In the community today there are 120 buildings [many quite old] and a resident population of 9,000—making it one of the world's largest religious communities.

"The food at Koyasan is vegetarian, for strict Buddhists do not believe in killing any living thing. This even eliminates eggs... a vegetarian breakfast includes [miso] soup, rice, *tofu* (bean curd, which is a prime source of protein), fruits, vegetables, and tea."

Everyone goes to bed early in order to be up at 6 a.m. for Buddhist service. Photos show: (1) A pagoda [*Konpon Daitô*, the central point of Mt. Koya]. (2) A wandering Buddhist monk playing his flute. A small map of Japan shows the location of Koyasan.

• **Summary:** Clinical examinations were performed a 34-year-old athletic male who had been a lacto-vegetarian for 6 years prior to 1 Jan. 1965. At that time he became a vegan by omitting milk products from his diet and ceased his previous muscle-building training. During the next 7 months,

his body weight decreased by 16% to 78 kg from 93 kg. Then he went on a 143-day cleansing liquid diet consisting mostly of fruit- and vegetable juices. Following that, he fasted, drinking only fresh well water. Although he lost weight, the concentrations of his different blood constituents were essentially normal. His physical capacity recovered very soon after he returned to his ordinary vegetarian diet. "The observations indicate that a calorie- and protein-deficient diet which is poor in sodium can be tolerated remarkably well by a healthy individual with extensive protein depots in the form of muscle tissue." Address: Depts. of Medicine and Medical Biochemistry, Univ. of Göteborg, Göteborg, Sweden.

The British Vegetarian. 1968. July/Aug. p. 308-310. "Plant Foods for Human Nutrition officially launched." The official launch of this periodical, which has a strong vegetarian orientation, was on 2 May 1968 at the Commonwealth Institute, Kensington, London. Address: Elmsford, New York.

4854. Bolitho, Hector. 1968. A note on Bernard Shaw and H.E. Bates. *Texas Quarterly* 11(1):100-12. Spring.
• Summary: A reprint and account of an article dated 28 July 1942 by the famous Irish-born, British archvegetarian, author, playwright, journalist, philosopher, humorist, and socialist George Bernard Shaw (age 86, lived 1856-1950), urging the Royal Air Force air crews to eat more vegetarian foods and avoid meat. Specifically, for those flying bombing raids, Shaw suggests they take along a packet of thinnish slices of brown bread with red currant jam between each pair of slices; eat one every 2-3 hours, and drink buttermilk. If an airman eats beefsteak and drinks a bottle of Guinness he might fall asleep on the job. Shaw notes that he has never smoked, never drunk intoxicants, and never shaved. "That is as better record than even that of the famous centenarian who was asked to what he attributed his longevity. He replied 'I attribute it to the fact that I never drank, never smoked, nor never had any relations with women until I was fourteen years of age.'" This article was published in the journal with the title "To Tokyo on Buttermilk."

H.E. Bates, a novelist working in the Air Ministry, wrote a reply to Shaw titled "Back to Methuselah on Beefsteak." He ridicules Shaw's vegetarianism. Shaw responds by correcting a story Bates told of Shaw.

4855. Hurd, Frank J.; Hurd, Rosalie. 1968. A good cook—Ten talents. Chisholm, Minnesota: Published by the authors. Printed by The College Press, Collegedale, Tennessee 37315. 354 p. Illust. Color plates. No index. 22 x 15 cm. Spiral bound. [1 ref]

• Summary: A very important, pioneering, indeed classic American vegan cookbook, which uses no animal products (except in one chapter at the end titled "Recipes Using Milk and Eggs," "for those who are in the transitional period. However, we encourage all those who still cling to milk and eggs to become acquainted with the facts concerning their use, and become weaned through this process"). Some recipes also use honey.

Contains more than 750 unique recipes (plus color photos), including many innovative soy recipes, including the first recipe for shakes made with soy milk ice cream.

In the Glossary (p. 11-17) are entries for lecithin (p. 13; "A food extracted from the soybean"), soybeans (p. 15-16), and tofu (p. 16), as well as agar-agar, almonds, carob, cashew nut, coconut, dulse, flaxseed, malted nuts (made from peanuts and cashew nuts with dry malt added), nuts, oils, peanut, sea kelp or dulse, sesame seed, and sesame tahini. A color photo (p. 55) shows soy sprouts. Soy-related recipes include: Homemade soy coffee (p. 66). Soybeans milks (p. 69; No. 1 costs \$0.06/quart homemade. "Soybean pulp [okara] which remains can be made into various dishes. Try Soy Not-Meat," p. 202; No. 2 uses 1 cup plain soya starter). Banana milk shake (with chilled soy milk, p. 70). Banana carob milk shake #1 or #2 (with soy milk, p. 72).

Molasses milk shake (with soy milk, p. 72). Soy-fig milk (p. 72). Milkless milk shakes (with non-dairy ice cream incl. soy milk powder, p. 72-73). Soy yogurt, cultured (p. 73-74; 3 recipes—made from whole soybeans, liquid Soyagen, or soy starter). Soya bread or rolls (p. 80). Vanilla ice cream (with soy milk powder optional, p. 125). Pineapple ice cream (with soy milk powder, p. 127). Banana soya ice cream (with rich soy milk, p. 128; “Whiz in a blender”). Sesame soy cookies (p. 131, with 1½ cups raw sesame seeds). 7 grain granola (with 1 cup soy flour, p. 156). Easy granola (with soy flour, p. 157). Soy-millet patties or loaf (p. 182). Vegetable-nut loaf (with soy milk, p. 186). Green soy beans (p. 187; dry, green-seeded soybeans). Buckwheat, soy or whole wheat spaghetti (p. 192). Soybean curd #1 (homemade tofu using whole soybeans, curded with Epsom salt, p. 195). Soybean

curd #2 (from soy flour, curded with lemon juice, p. 196). The tofu-making process is shown in six black-and-white photos. Ways to serve tofu (p. 196). “Scrambled eggs” (made with tofu, egg-free, p. 196). Tofu loaf (p. 198). Chinese nut loaf (with soymilk, p. 198). Vegetarian chow mein (with soy sprouts, p. 199). Peanut-soymeat (with soy flour, p. 200; steamed for 2-3 hours in greased cans). Soy not-meat (p. 202, with soaked ground soybeans or “the soybean pulp from the soy bean milk. This way the pulp is not wasted” [i.e. okara]). Peanut-soy round (p. 202). Soy meat (p. 203; made with 2 cups homemade gluten, 1 cup toasted ground peanuts, and 1 cup soaked blended soybeans, plus water, seasonings, oil and salt, steamed for 3 hours in greased cans). Soya peanut soufflé (p. 204). Soybean soufflé (p. 204). Tofu & rice croquettes (p. 206).

The chapter titled “Nuts, seeds, olives” (p. 209-20) includes: Glossary of nuts, raw nuts for your enzymes, nut notes, almond butter (king of the nuts), raw nut butters, cashew nut butter, cashew Brazil-nut butter, peanut butter, nut butter clusters, peanuts—oven blanched, dry roasting—soya nuts, malted nuts, browned sesame seeds, seed cereal topping (sunflower seeds, sesame seeds, flax seed), peanut butter-seed spread (tahini, sunflower seeds), peanut butter balls, simple sesame squares, sprouted sunflower clusters, olives, tree chestnuts, roasted chestnuts, roasted chick peas.

Note 1. This is the earliest document seen (Dec. 2013) that uses the term “dry roasting” to describe how soybeans are roasted, or that contains the term “Dry Roasting—Soya Nuts” (p. 217).

Green soy bean salad (p. 234; probably dry, green-seeded soybeans). Soybean sprouts salad (p. 234). Tofu cheese salads (p. 235). Tofu sun faces (p. 236). Pineapple tofu salad (p. 245). Pineapple tofu cottage cheese (p. 246). Lo-fat salad dressing (with soy yogurt, p. 251). Soy mayonnaise—eggless (4 types, p. 252-53). Soy butter (made with soybean flour, lightly

dextrinized, p. 262). Soya starter (made with soy flour, p. 262). Soya yeast sandwich spread (p. 263). Super sandwich spread (with soybean pulp [probably okara, see p. 69], p. 264). Pimento-soy chee spread (p. 265). Sour cream—soy (p. 270). Soy whipped cream (p. 271; whirl in a blender ½ cup each soybean milk and soy oil, plus 1 tablespoon honey, ¼ teaspoon vanilla, and a pinch of salt). Tartar sauce, cheese (with soy mayonnaise and tofu, p. 273). Sprouts (p. 291-95). Fresh cucumbers with soy sour cream (p. 304). Celery and green soya (p. 312; “2 cups green soy beans, frozen, canned, or fresh.” Probably means green vegetable soybeans). Soya starter (base, made with soy flour, p. 326; keep a jar ready for quick use in making tasty spreads, milk and cream, mayonnaise, a binder when nut butter is not available.

Dextrinizing the soy flour gives this Soya Starter a nutlike flavor).

Talk with Rosalie Hurd. 1991. June 3. *Ten Talents* is now going into its 44th printing. More than 250,000 copies have been sold. The latest was published by College Press in 1985. The first edition was published in May 1968. Frank, originally a chiropractor, is now a medical doctor. The Hurds now live most of the year in Fountain City, Wisconsin, where they run Alpine Springs, a live-in lifestyle program and center on 585 acres of land offering treatment and education in natural health.

Note 2. This is the earliest cookbook seen (Oct. 2013) that contains a recipe for soy sour cream. For the basic recipe: Pour 3/4 cup soy bean milk into a blender. Gradually add 3/4 cup soy oil until desired thickness is reached. Stir in 1-2 tablespoons lemon juice and 1/4 teaspoon salt. Chill. "Delicious on fresh cubed cucumbers with a dash of dill." An alternative recipe calls for the use of: 1/2 cup soy starter (not dextrinized, see p. 69, 262), 1/4 cup water, and 1/2 teaspoon honey.

Note 3. This is the earliest English-language document seen (Nov. 2014) that contains the word "Soy meat" (p. 200), or the term "Soy Not-Meat," or the term "Soy Meat" (p. 203) as a recipe name.

Note 4. This is the earliest dated English-language document or book seen (Sept. 2012) that contains the modern term "Soy yogurt."

Note 5. This is the earliest document seen (Jan. 2017) containing a recipe for homemade soy ice cream (p. 128).

Talk with Rosalie and Dr. Frank Hurd. 2005. Feb. 9. Both have moved to Oregon to warmer weather. They have a daughter there. *Ten Talents* is now in its 48th printing. They are working on a revision. He was born in March 1936 and she in April 1937.

Talk with Rosalie Hurd. 2009. Jan. 19. Frank is still working as a doctor and she as his helper. They are both in good health. The greatly enlarged 40th anniversary edition of *Ten Talents* has been published and is now available.

The term "Ten Talents" comes from the teachings of Ellen G. White: "The one who understands the art of properly preparing food, and who uses this knowledge, is worthy of higher commendation than those engaged in any other line of work. This talent should be regarded as equal in value to ten talents; for its right use has much to do with keeping the human organism in health. Because so inseparably connected with life and health, it is the most valuable of all gifts" (Ellen G. White, *Counsels on Diet and Foods*, p. 251). Address: 1. D.C. [Doctor of Chiropractic]; 2. B.S. Both: Box 86A—Route 1, Chisholm, Minnesota 55719.

4856. Wokes, F. 1968. Proteins. *Plant Foods for Human Nutrition* 1(1):23-42. May. [19 ref]

• **Summary:** Almost half of the plant proteins consumed by humans come from cereal grains. Address: The Vegetarian

Nutritional Research Centre, Watford, Herts. [Hertfordshire], England.

4857. Wokes, Frank. 1968. Our aims [in starting publication of the journal *Plant Foods for Human Nutrition*]. *Plant Foods for Human Nutrition* 1(1):3-6. May. [5 ref]

• **Summary:** "During the Second World War our national food policy was largely based on the pre-war findings of Orr and Lubbock that many British people in the lowest income brackets were living on diets deficient in protein, minerals and vitamins. In order to obtain a satisfactory national war-time diet the production and consumption of plant foods was greatly increased, and that of animal foods diminished; rationing being introduced to ensure equal distribution, regardless of income, of essential nutrients throughout the nation.

"It was my privilege, when writing a popular book on war-time food rationing in the U.K., to have the valuable advice of Sir John Boyd Orr in my attempts to explain the urgency of cutting down the consumption of animal food that needed more shipping space, if imported, and more land, if home-produced. Dr. R.A. McCance and his colleagues in Cambridge University carried out an interesting feeding experiment on themselves which showed that mental and physical activity could be satisfactorily maintained whilst they were living on diets much lower in animal protein than my book had suggested, thus justifying Sir John's advice.

"A quarter of a century later, when my colleagues and I are helping our friends in Pergamon Press to launch this new Journal, which we hope will assist in solving the much greater problem of feeding the world, it is a great inspiration to us to have received a goodwill message from Lord Boyd Orr which emphasizes the importance of producing more plant foods.

"These foods are the basis of all life. They require much less land and effort for their production than the animal foods that play only a minor part in the diet of most of the world's population. This is clearly shown by the data from FAO and other authorities that are summarized in the three following papers. They show that for energy, protein, essential minerals and vitamins the world depends mainly on plant food, and must do so to an increasing degree as the mounting number of human mouths to feed causes less and less land to be available for feeding both man and animals, and will inevitably result in the exhaustion of the available land resources. The elimination of inefficient methods of food production will thus become an economic necessity.

"In East Asia, containing over half the world's population, plant foods have for many centuries been the staple diet, in which the protein is derived mainly from cereals and pulses. Since the Second World War, Dr. H.A.B. Parpia, director of the Central Food Technological Research Institute (CeFTRI) in Mysore, and his colleagues there and in other Indian research centres, have been developing

methods for the large scale production and testing (mainly by clinical trials) of processed plant protein foods. We are in close touch with this important work, and propose to publish regular reports on the findings, together with those on other processed plant protein foods being made in different parts of the world. Dr. Parpia's collaboration in keeping us in touch with Asian developments and his help on the Editorial Board will be greatly appreciated.

"We also aim to cover the extensive investigations on plant foods being carried out in America. Dr. Harry Miller, a medical missionary who first went to China over 40 years ago utilized the opportunity to develop vegetable milks based on soya which have given excellent results in clinical trials there and in the U.S.A., where they are now being manufactured on a large scale. We have been in touch with Dr. Miller, who is a long-standing Honorary Member of our Research Centre, and we will be glad to publish summaries of his findings.

"In Central America the protein supplementary food INCAPARINA, based on a mixture of plant proteins, has proved successful in clinical trials in which Prof. Nevin Scrimshaw played a leading part. Prof. Scrimshaw has kindly arranged for his colleague Mr Richard Shaw (Economic-Industrial Adviser, Institute of Nutrition of Central America and Panama) to provide us with information about INCAPARINA.

"Prof. A.M. Altschul of the U.S. Dept. of Agriculture, a leading authority on the role of plant foods in solving the world food problem, has since the Second World War organized much research, especially on cottonseed protein, a major ingredient in INCAPARINA. His recent book *Proteins—their Chemistry and Politics* expresses forthright views backed by impressive scientific evidence, much of which was published in his numerous articles and in the earlier book he edited on *Processed Plant Protein Foodstuffs*. We look forward to his help on the Editorial Board.

"In this country large-scale investigations on vegetable milks did not start until the end of the second world war, although before that some small clinical trials of the American vegetable milk ALMONDLAC, based on almonds, were made by Drs. Pink and White at the Vegetarian Nursing Home, Blackheath. Dr. Pink later tested clinically several batches of vegetable milks, based on soya and malted cereals, which had been made at the Ovaltine Research Laboratories under my supervision. One of these batches went to Germany for use in large-scale clinical trials by Dr. R.F.A. Dean, who in 1953 published his findings in the monograph *Plant Proteins in Child Feeding*, which contained a comprehensive survey of all the work done in this field up to 1950.

"The last few years of Prof. Dean's life were devoted to clinical and biochemical studies in Kampala, Uganda on African children suffering from the protein deficiency disease kwashiorkor. The book on kwashiorkor published by

Trowell, Davies and Dean in 1954 described their findings together with those of many other leading workers. Much more has since been written about this disease which has caused many thousands of deaths. We hope with the help of experts to give this highly important subject due attention.

"The Medical Research Council, in their preface to Dean's 1953 report, emphasize the great practical value of vegetable milks for child feeding in many parts of the world where cows' milk is scarce and supplies of other animal proteins are limited. This means the Group I poorer countries which, as FAO figures show, contain about five-sevenths of the world's population. In the Group II richer countries (e.g. West Europe, North America and Australia) vegetable milks have been successfully used during the last two or three decades for the treatment of infants and children born with allergies to cows' milk protein. More recently they have proved effective in treating babies born with congenital galactosaemia. This disease inflicts an intolerance of galactose (even to that present in the mothers milk) due to an enzyme deficiency in the galactose metabolic pathway. Such babies die within a few weeks of birth or survive in a pitiable condition, in which blindness and mental disorders are prominent. Although the total number of babies concerned is very small, this use of vegetable milks merits attention because of the interesting biochemical problems involved.

"Apart from animal milks, meat forms the main source of animal protein in diets in the Group I countries. Whilst many of the domestically prepared dishes provide considerable amounts of plant protein, especially if they contain enough of the native pulses, diets too low in protein are often encountered and need improving by addition of protein-rich supplements. These may be made from different plant foods, including nuts, defatted oil seeds or other pulses, about which more information is urgently needed. Protein may also be extracted from leaves, using the methods devised by Mr. N.W. Pine and his colleagues at Rothamsted. After removal of unwanted constituents affecting acceptability, and perhaps also being made more digestible by treatment with papain, the leaf protein can be successfully used to improve diets of infants, children or adults. Leaf protein yields/acre may be considerably higher than yields of seed proteins under the same conditions. Details of these findings must take a prominent place in our reports..." Address: The Vegetarian Nutritional Research Centre, Watford, Herts [Hertfordshire], England; Editor of the new journal.

4858. Astrand, Per-Olof. 1968. Something old and something new... very new. *Nutrition Today* 3(2):9-11. June.

• **Summary:** A high-carbohydrate, low-protein diet can increase the stamina of bicycling athletes by 300%. "In 1866 two German scientists, Petenkofer and Voit, showed that combustion of protein was no higher during heavy exercise than during rest." These findings have been frequently

confirmed. Describes the proper 2-part diet for an endurance even exceeding 30 to 60 minutes. In part 1, the diet should be almost exclusively fat and protein for about 3 days. This keeps the glycogen content of the muscles low. As the day of competition nears, the athlete should add large quantities of carbohydrate to the diet; the intake of fats and protein should be continued. Address: M.D., Director of Fysiologiska Institutionen, Gymnastik-och Idrottshogskolan, Stockholm [Sweden].

4859. *British Vegetarian*. 1968. The Macrobiotic Restaurant. May/June. p. 239.

• **Summary:** This new restaurant has “just opened at 136a Westbourne Terrace, W.2, a few minutes walk from Paddington Station, where Westbourne Terrace crosses Bishop’s Bridge Road (the entrance is on Bishop’s Bridge Road). “Mr. Gregory Sams, who runs it, is a vegetarian and makes a specialty of vegetarian and vegan meals. The recipes are based on organically grown foods, with rice, soya, and sesame the features in a varied menu with an Asian influence; they offer a luxuriously gingery Japanese drink called ume-syo-kuzu [with umeboshi, shoyu, and kuzu]. The menu is a la carte. Phone: 01-723-7367. See also an almost identical article in the July/Aug. issue of this magazine on page 338. “The Macrobiotic Restaurant” is referred to again by this name in the Nov/Dec. 1968 issue of this periodical (p. 529); it is no longer serving lunches. And again in the May/June 1969 issue (p. 290). The name and address are unchanged. 1969

Note: The name of this restaurant was apparently changed to “Seed” shortly after this article was written.

Not in the article is a “Seed” restaurant card and menu from late 1969 or early 1970 sent to Soyfoods Center by Gregory Sams, founder.

• **Summary:** Sir Mark Palmer has no need to work. He decries the fact that farmers spray poisons on food in the countryside, so that everything people buy in shops has got some chemical on it. “We don’t eat it. We’re macrobiotic vegetarians when we can get the proper food for our diet, and when we can’t, we fast.” In Snowdonia they plan to grow their food unsprayed.

4864. West, Raymond O.; Hayes, Olive B. 1968. Diet and serum cholesterol levels: A comparison between vegetarians and nonvegetarians in a Seventh-day Adventist group. *American J. of Clinical Nutrition* 21(8):853-62. Aug. [13 ref]

• **Summary:** “The serum cholesterol levels and the dietary habits of a voluntary study group of 466 Seventh-day Adventists in a Washington, DC suburban area were compared to determine the influence of diet on serum cholesterol levels in an adult population whose only environmental differences related to dietary practices—adherence to vegetarianism. This study matched vegetarians with nonvegetarians from the same base population according to several physical and demographic variables—place of residence, age, sex, marital status, height, weight, and occupation—and examined the effects of various levels of meat, fish, and fowl consumption (degrees of nonvegetarianism) on serum cholesterol levels. With the exception of those under 25 years of age, the results showed

MACROBIOTIC MENUMEALS

#1 rice
tahini or bechamel sauce
mixed vegetables

3/6

All our bread and cake is made with organically grown grains.

It is a good idea to eat more grains than vegetables.

#2 soup
rice (tahini or bechamel)
mixed vegetables
bread and spread

6/8

If you have bronchial troubles (cold, congestion, sore throat) we may be able with a special drink. We can also help with headaches.

#3 Special meal of the day
See the board
With fish on weekends

that the nonvegetarians had higher serum cholesterol levels than the vegetarians.” As the degree of nonvegetarianism increased, serum cholesterol levels also increased.

4865. *British Vegetarian*. 1968. History of vegetarianism in North America. Sept/Oct. p. 396-98.

• **Summary:** Canada: In 1911 a small organization named the Food Reform League was formed in Toronto. Meetings were held at the home of Miss E.M. Budd. When World War I began, meetings were discontinued in favor of war work.

In July 1945 Professor Arthur Stevenson initiated discussions of the formation of a vegetarian society. Later in 1945 the Toronto Vegetarian Association was established. Membership, which cost \$2.00 a year, included a subscription to *The American Vegetarian*. The three presidents from 1945 to 1952 were Mr. F. Mathews, Mr. Don Scott, and Mr. Lee Pritzker. The Association's first newsletter began publication in 1954, edited by Mr. C. Pratt. An official charter was taken out in about 1955 in the name of the Toronto Vegetarian Association. In 1949 a Vegetarian Convention was held at Lake Geneva, New York, USA, and attended by several Canadians. After this the Canadian Vegetarian Union was formed. The membership began at 140 and gradually rose to about 600. The High Park Sanitarium was opened from 1907 to 1922. One Unit was founded in Calgary and another in Ottawa.

United States: Following the formation of the Vegetarian Society in Manchester, England, in 1847, the Rev. William Metcalfe was inspired to travel to America to start a similar society. He had emigrated to Philadelphia in 1817 with 41 fellow members of the Bible Christian Church, which had been founded in England by the Rev. W. Cowherd and Mr. Joseph Brotherton, M.P.; among its conditions of membership was abstinence from flesh foods and alcohol. Rev. Metcalfe held an exploratory meeting in New York in 1850.

Among the early advocates and practitioners of vegetarianism in America were Sylvester Graham, Dr. James C. Jackson, Horace Greeley, R.T. Trall, and Dr. John H. Kellogg.

One of the oldest societies still in operation is the Washington Vegetarian Society, which was organized in 1927. “The American movement is not large, but it is well served by its devoted members.

National organizations are: (1) The American Vegetarian Union, Inc., Duncannon, Pennsylvania. President: Dr. Jesse Mercer Gehman. Periodical: *American Vegetarian-Hygienists*, (2) American Natural Hygiene Society, Los Angeles, California. (3) Vegetarian Society, Inc., Hollywood, California. President: Dr. Pietro Rotondi. (4) Vegetarian Youth Movement, Los Angeles, California. c/o Dr. William A. Harris. (5) American Vegan Society, Malaga, New Jersey. Mr. H. Jay. Dinshah.

The addresses of the following local societies are given:

Boyes Hot Springs, California. Chicago, Illinois. Erie, New York. Los Angeles, California (Mr. A. Abramowitz). Dearborn, Michigan. St. Paul, Minnesota. New York City, New York. San Francisco, California (Mr. D. Murphy). Washington, DC.

4866. *British Vegetarian*. 1968. The Vegetarian Society's new headquarters. Sept/Oct. p. 399-400.

• **Summary:** “The Society has been very fortunate in acquiring *Parkdale*, Dunham Road, Altrincham, a gracious Cheshire residence in three and a half acres of delightful private parkland.” It is located midway between London and Edinburgh, Scotland. The buildings are worth an estimated £23,000 and the land about £9,000 an acre.

• **Summary:** On page 23 is a half-page, very positive introduction to soybeans. It contains the interesting word "Sojaspeisen" meaning "Soyfoods," and also notes that soybeans are valuable in both vegetarian and diabetic diets. Soy-related recipes include: Noodles with soy flour (*Spätzle mit Sojamehl*) (p. 135). Omelettes with soy flour (p. 135).

4877. Hahn, Emily. 1968. The cooking of China. New York, NY: Time-Life Books. 206 p. Illust. (many color photos). Index. 28 cm. Series: Foods of the World.

• **Summary:** Another superb work in this superlative series from the editors of Time-Life Books. This book is about cooking in China, where the author lived (in Shanghai), before the 1949 Communist revolution.

Contents: Introduction: The cooking of the world's oldest civilization. 1. An ancient and honorable art. 2. "Chinese cooking" in your own kitchen. 3. Secrets of savor and spice. A reverence for good food. 5. Oriental staff of life. 6. Gentle teas and strong spirits. 7. Feasts for festivals. 8. A cuisine for all continents.

China, the world's oldest existing civilization, has the world's most ancient cuisine—as well as one that is both great and profound (p. 6). When the Red Guards of China's Cultural Revolution appeared in the 1960s, they "attacked every symbol of what they regarded as bourgeois culture. Among the targets in Peking were the city's fine restaurants." In the process they destroyed much of China's culinary heritage—but only inside of China (p. 7). An article by Peggy Durdin in the *New York Times* was titled "Mao's great crime against cuisine" (p. 184). Chinese food is, of course, about life, but it is also about health, and it can resonate on numerous symbolic levels (p. 7).

The southern provinces of China, Fukien, Kwantung, Yunnan, and Kwangsi, enjoy tropical temperatures year round and more than 80 inches of rain. Here rice is the main crop. Yet China is a mountainous country, with 60% of its land at elevation 6,500 feet or higher; only 11% of its land can be cultivated (compared with 80% in the USA) (p. 10). Fukien, a coastal province to the south, makes the best soy sauce in China, and stewing is called "red cooking" because

of the color imparted by the soy sauce (p. 16, 42).

Vegetable oil is very important in China because the Chinese rarely use butter (p. 29). “For protein the Chinese depend heavily on the soybean, which has for this reason been called the cow of the East.” Soybean oil is used for cooking. Soybean milk is a good substitute for cow’s milk. And “doctors, even Western doctors—prescribe it for babies who cannot get mothers milk and are allergic to cow’s milk” [sic]. From soymilk one can make “bean curd, an exceptionally high-protein food known in China as ‘the meat without bones.’” Bean curd is made by curdling soybean milk with gypsum, then pressing the curds into pieces about 3 inches square by ½ inch thick. “The thickened curd skin [sic, yuba] is a food by itself, with a more concentrated flavor. Fermented bean curd [fermented tofu] tastes much like cheese.” Both soy and mung-bean sprouts are used in China, “In one form or another the soybean can be found in dishes eaten at every meal” (p. 29).

A two-page color photo spread and legend (p. 61-63) shows (numbered) basic Chinese ingredients, incl. “13. Fresh bean curd. 14. Dried bean-curd skin” [yuba]. Buddhist monks and nuns in China are strict vegetarians; special foods that simulate meat have been developed for them. The main ingredients in these dishes are bean curd and gluten. These include vegetarian “duck made from crisp bean-curd skin, colored and shaped to look like the bird’s flesh” and “chicken roll in *hoisin* sauce, the ‘chicken’ made of soft soybean curd” (p. 64, 67, 70).

Note 1. This is the earliest English-language document seen (Oct. 2012) that uses the term “beancurd skin,” apparently to refer to yuba.

Note 2. This is the earliest document seen (Jan. 2014) that describes the use of yuba, or of tofu, to make meat alternatives.

A full-page color photo and legend (p. 74-75) shows (numbered) Chinese sauces and condiments, incl. “1. *Hoisin* sauce. 3. Soy sauce. 8. Yellow-bean paste, or thick bean sauce. 11. Fermented black beans. 14. Red bean [azuki] paste.” “Among the best known of Chinese seasonings is soy sauce, which was mentioned in several Confucian classics as early as the Fifth Century B.C.” [sic]. Other condiments made from soybeans are bean paste (for preserving and flavoring meat) and *hoisin* sauce (widely served with Peking duck). “It is said that the best grades of soy sauce can take as much as six to seven years of aging to reach perfection, and that the making of superb soy sauce requires ‘as much art in its preparation as good French wines’” (p. 74-75, 77).

The controversy over M.S.G. is discussed. “A really god Chinese chef considers it a questionable shortcut for giving taste to second-rate foodstuffs, but most Chinese cooks admit that its use in certain dishes is perfectly valid” (p. 77-78).

The emperor Chien Lung (1735-1796), 4th ruler in the Manchu [Qing] dynasty, wrote an *Ode to Tea* (p. 91). In China there is an intimate association between eating and

health (p. 91).

Recipes: “Steamed bass with fermented black beans *Tou-shih cheng hsien yu* (with “2 teaspoons fermented black beans,” soy sauce, Chinese rice wine, and shredded fresh ginger root, p. 104).

Most festivals (each with a feast) in China are based on events of agricultural importance; the two most important are New Years and the Moon Festival (p. 155, 162, 164-65). A Peking duck is “brought to the exact degree of plumpness and tenderness through force-feeding,” then roasted slowly, suspended by hooks, in a mud-lined oven “until the thick, fat skin becomes golden in color. This crackled skin is the choice part of the dish.” The skin, a piece of the meat, a spring onion, and thick, sweet *hoisin* sauce are served enfolded in a thin wheat-flour “pancake” (p. 158, 15).

The history of chop suey (unknown in China) and chow mein (had an honorable origin in China) are discussed (p. 178-79).

The first wave of Chinese to America came with the gold rush and transcontinental railway. Most were laborers from southern China. The first Chinatown in the USA was established in San Francisco (1850s), followed by New York City (Manhattan, 1870s). Most early American Chinese restaurants reflected their social status, serving inexpensive foods. In the early 20th century, as China’s Republican revolution was gaining momentum, a second wave arrived to study. These young people, also mostly from southern China, came from far more prosperous backgrounds than those in the 1st wave and they wanted better food. Restaurants were started or upgraded to suit their tastes. Thus, it “was the southern school of cookery that first spread over the world outside China” (p. 179).

China has three great regional cuisines: Cantonese (southern), northern, and Szechuan (p. 179). Six photos show “The Americanization of the fortune cookie: Assembly line at a factory in New York City’s Chinatown.” A two-page spread shows many of the “fortunes” found in fortune cookies (p. 195-97).

“A guide to ingredients in Chinese cooking” (p. 198-99) includes: Bean curd, fresh: Square. Bean-curd skin [yuba] (“Thin stiff sheets of dried bean curd. Sold by weight... {5 to 6 sheets weigh about 1 ounce}”). Bean sprouts (“Young sprouts of the mung bean”). Black beans, fermented (“Strongly flavored, preserved black soybeans.” Sold in cans or plastic bags). Brown bean sauce (“Thick sauce made from fermented yellow beans [huang dou = yellow soybeans], flour and salt. Sold in cans of 1 pound or more”). *Hoisin* sauce (“Sweet, brownish-red sauce made from soybeans, flour, sugar, water, spices, garlic and chili for use in cooking. Sold in 1-pound cans and up”). Oyster sauce (“Thick brown sauce with a rich flavor, made from oysters, soy sauce and brine”). Red bean paste (“Thick, sweet paste made from red soybeans” [sic, azuki beans]). Salted eggs and thousand-year eggs. Sesame seeds and sesame seed oil. Soy

sauce (“Pungent, salty, brown liquid made from fermented soybeans, wheat, yeast [sic, mold] and salt”). Vegetable steak (“A vegetarian food that looks like a small beefsteak but is made from wheat gluten. Sold in cans”). Address: Author, lives in England with her husband.

4878. Hillenius, D. 1968. *Tegen het vegetarisme* [Against vegetarianism]. Amsterdam, Netherlands: G.A. van Oorschot. 218 p. 20 cm. [Dut]

• **Summary:** The author was born in 1927.

4879. Hon, Hazel. comp. 1968. *Three week vegetarian menu*. Sydney, Australia: Published by the author. 88 p. 24 cm.

• **Summary:** This Seventh-day Adventist vegetarian cookbook uses lots of canned Adventist food products, gluten, and whole soybeans. The Four Basic Food Groups (p. 7) are fruits and vegetables, cereal and bread, protein (including legumes, cottage cheese, eggs, soy cheese, nuts, peanut butter, and various manufactured nuts, soybean and gluten products), and milk groups (“use milk or a suitable alternative such as soybean milk”).

A table titled “Seasonings” (p. 8) divides them into (1) Not irritating. (2) Slightly irritating. (3) Strongly irritating: Cloves, ginger, paprika (Hungarian). (4) Irritating, stimulating, harmful: Cayenne pepper, chili pepper, horseradish, mustard, pepper (black or white). (5) Seasoning herbs: Oregano, tarragon, chervil, sage, basil or sweet basil, bouquet garni, marjoram, rosemary.

A table (p. 9) lists “Goods obtainable at all Sanitarium health food shops” including gluten flour, soya flour, Soyagen (liquid or powder). Sanitarium canned foods: Nutmeat, Nutolene, Soya Beans, Vegetarian Sausages, Lima Beans. Worthington Foods: Soya Meat in tins. Chicken Style sliced. Chicken Style diced. Beef Style sliced. Beef Style diced. Loma Linda: Vegelona, and Linkettes.

Three weeks of menus and recipes are given. Soy-related recipes include: Soya nut loaf (p. 30). Soybean omelette (p. 65). Soya vegetable loaf (p. 70). Soya mayonnaise (p. 71). Soya oven croquettes (p. 82).

Note: This is the earliest document seen (Oct. 2004) concerning the work of Sanitarium Foods in Australia with soy. Address: 54 Castle Howard Road, Cheltenham, N.S.W., Australia.

4880. Jones, Dorothea Van Gundy. 1968. *The soybean cookbook: Adventures in zestful eating*. New York, NY: Arc Books, Inc. ix + 240 p. Foreword by Ruth Stout. Index. 21 cm.

• **Summary:** This lacto-ovo-vegetarian cookbook is identical to the original 1963 paperback edition by the same title except that this is a hardcover edition and the publisher is listed as Arc Books rather than Arco Publishing. The publisher’s address is the same. Address: Arlington, California.

4881. Kuriyama, Kiichi. 1968. *Shizen shoku no kôryoku* [The efficacy of natural foods]. Tokyo: Tokuma Shoten. 235 p. 18 cm. [Jap]*

• **Summary:** Discusses a natural foods, vegetarian diet. The author was born in 1889.

4882. Library of Congress. 1968. *Bibliographic records (books) from the Library of Congress catalog (PREM) on vegetarianism*. Washington, DC. 109 p. 28 cm. [350 ref]

• **Summary:** This is a printout in which the records are arranged roughly in reverse chronological order—with the most recent first, from 1968 to the 1890s. PREM stand for “pre-MARC” where “MARC” is the machine readable (computerized) catalog. For each entry is included most of the following: (1) The basic bibliographic record. (2) The Library of Congress (LC) call number and holding library within the LC (e.g. Orien Hind or Orien Japan). (3) Subject headings, e.g. Vegetarianism; Cookery, Ceylonese. (4) Added entries, such as joint authors. (5) Notes, such as “Romanized.” (6) LCCN (Library of Congress Cataloging No.). Address: Washington, DC.

4883. Mangold, Frieda. 1968. *Epicure: Livre de cuisine française végétarienne* [Epicure: The book of French vegetarian cuisine]. Paris: Aryana. 109 p. Illust. 23 cm. Revised and expanded by Pierre and Anne Martin. [Fre]

• **Summary:** Also discusses vegetarian cuisine according to Dr. Otoman Zar-Adusht Hanish. On the title page are two quotes: “Purity, the highest good” (Zend-Avesta). “Let your food be your medicine, and your medicine your food” (Paracelsus, ca. 1493-1541).

4884. Merrheim, Arthur. 1968. *La méthode d'alimentation mono*, par le Professeur Mono. 4eme edition [The mono-diet, by Prof. Mono. 4th ed.]. 92 Puteaux, France: Éditions des Trois Cyprès. 352 p. Portrait. 22 cm. [Fre]

• **Summary:** Advocates a simple vegan diet. The author lived 1867-1944.

4885. Nissenbaum, Stephen W. 1968. *Careful love: Sylvester Graham and the emergence of Victorian sexual theory in America, 1830-1840*. PhD thesis, University of Wisconsin at Madison. 296 leaves. 28 cm. *

• **Summary:** Pages 35-58 of this thesis give a good history of vegetarianism to 1830.

4886. Parker, Alfred J. 1968. *Our cook book for a happy and healthy life*. Vancouver, BC, Canada: Kabalarian Fraternal Organization. 233 p. Recipe index. Portrait. 22 cm.

• **Summary:** First copyrighted in 1967, this pseudo-vegetarian cookbook uses fish and shellfish in many recipes. Soy-related recipes include: Soya noodle & tuna casserole (with soya noodles, p. 103). Soya bean casserole (p. 123).

Soya beans (cooking hints, including use of baking soda, p. 171). Soya loaf (with soya flakes, p. 189). Soya bean casserole (p. 196-97). Address: Kabalarian Fraternal Organization, 1160 West 10th Ave., Vancouver 9, B.C., Canada.

4887. Plutarch, -. 1968. *Plutarch's Moralia* in fifteen volumes with an English translation by Harold Cherniss and William C. Helmbold. Cambridge, Massachusetts: Harvard University Press. See vol. 12, p. 492-533, 537-579. Also published in 1976 by Heinmann (London). *

• **Summary:** Plutarch, a Greek biographer and moralist, lived circa AD 46?–AD 120? Vol. 12 contains 3 essays relating to vegetarianism and animal rights. (1) “Whether land or sea animals are cleverer” (p. 309-479) discusses the reasoning powers and intelligence of animals, followed by a debate. Argues that animals’ sense experience would be meaningless unless they have the ability to remember, anticipate, plan, fear, and desire. Animals vary in intelligence and in sense of fellowship. They should be treated with justice, and humans must not harm them or be cruel to them. Dolphins are the most intelligent animal.

(2) “Beasts are rational” (p. 487-533) concerns Gryllus, once a Greek, who was turned into a pig by Circe. Odysseus tries to release various men who have been turned into animals by this spell but is spurned by the pig. Gryllus, who can still speak Greek, is questioned in dialogue: Which mode of existence would be chosen by one who has experienced both pig life and human life? Gryllus argues that animals’ virtues (courage, temperance, intelligence) are natural and genuine, whereas human virtues are products of convention and self-interest. Animals are better able to regulate their desires than men, do not enslave one another, and place the female in an equal position with the men. “I do not believe there is such difference between beast and beast in reason and understanding and memory, as between man and man.”

(3) “On the eating of flesh” (p. 535-79) explores the origins of meat eating, concluding that it arose not from necessity but from debauchery and insolence. Instead of asking why vegetarians (such as Pythagoras) abstain from flesh, we should ask why other humans do eat animals. Argues that flesh eating is unnatural and unnecessary for humans, and that it leads to spiritual coarseness, a disregard for life, and lack of compassion for other humans. For the sake of a little flesh, humans deprive animals “of sun, of light, of the duration of life to which they are entitled by birth.”

• **Summary:** In this Danish vegetarian cookbook, soy-related recipes include: Sojagroed (with soy flour, p. 15-16). Sojapostej (with soy flour, p. 29). Veg. postej (p. 29). Sojamayonnaise uden aeg (with Sojagen [Soyagen] soymilk powder). Sojaboennesalat (Soybean salad, with cooked soybeans, p. 37). Sojaboennesuppe (Soybean soup, p. 65). Sojaboenneretter (p. 88). Sojasteg (p. 88). Sojafrikadeller (p. 89). Sojaboenner naturel. Glutenretter: Fremstillig af gluten (p. 89-90). Sojaost (with Sojagen soymilk powder, p. 118). Sojamælk (with Sojagem soymilk powder, p. 201). Address: Denmark.

4892. Tolstoy, Lev Nikolayevich (Count). 1968. The first step: An essay on the morals of diet. In: The Complete Works of Count Tolstoy, translated by L. Wiener. New York: AMS Press. See vol. 19, p. 365-409. *

• **Summary:** In this essay, Tolstoy characterizes vegetarianism as the first step toward moral perfection. It was first published in 1893 in Russian as the introduction to the Russian edition of Howard Williams’ *The Ethics of Diet*.

4893. Verband schweizerischer Kneippvereine. 1968. Gsundi Choscht: Wegweiser zu naturnaher Ernaehrung [Healthy food: Guide to food that is close to nature]. Winterthur, Switzerland: Verband schweizerischer Kneippvereine. 84 p. 25 cm. Auslieferung: Frl. A. Thalmann, Dussnang. [Ger]

• **Summary:** A book of vegetarian menus.

4894. Vithaldas, Yogi; Roberts, Susan. 1968. The yogi cook book. New York, NY: Crown Publishers, Inc. (Pyramid Books). 137 p. Illust. 22 cm.

• **Summary:** A vegetarian cookbook. The recipe for almond milk (p. 125) notes: "As champagne is to the Frenchman, so almond milk is to the Indian."

4895. Wahi, P.N. 1968. The epidemiology of oral and oropharyngeal cancer: A report of the study in Manipuri District, Uttar Pradesh, India. *Bulletin of the World Health Organization* 38(4):495-521. [Eng; fre]

• **Summary:** "Records of the Sarojini Naidu Medical College Hospital, Agra, India, suggested that there was a much higher endemicity of oral and oropharyngeal cancer in Mainpuri district, a rural area about 75 miles (120 km) from Agra City, than there was in Agra district itself. It was decided in 1963 to set up a complete cancer registry in Mainpuri district, based on the Sarojini Naidu Medical College and in association with the WHO International Reference Centre for the Histopathological Nomenclature and Classification of Oropharyngeal Tumours, which would, among other duties, undertake a study of the epidemiology by means of an intensive field-programme in the area. The epidemiological survey was carried out between March 1964 and September 1966. All factors considered to have any relevance to the disease were surveyed and particularly strong correlations were discovered between the prevalence of oral cancer and the use of local tobaccos (adulterated to a greater or lesser extent with various other materials), especially for chewing but also for smoking. There was also some correlation between prevalence of oral cancer and the use of certain alcoholic drinks. A number of other factors, most probably influencing or modifying the use of tobacco and alcohol, were found to be significant also." Address: Prof. of Pathology, Sarojini Naidu Medical College, Agra, India.

4896. Worthington Foods, Inc. 1968? Tomorrow's Foods Today. Worthington, Ohio. 19 p. Undated. 28 cm. [3 ref]

• **Summary:** Contents: Message from management. Tomorrow's Foods Today (the company slogan). Research and development department, W.E. Hartman, director. Production department, Sam Brown, manager. Sales department, W. Kenneth Case, manager. The Worthington line. Engineering department, B.J. Knecht, chief engineer, B.L. Knecht, assistant engineer. Data processing department, John Dalton, manager. Credit and traffic, Al Foster, manager. Advertising department, Michael A. Jones, manager, James Converse, art director. Purchasing and office management, Luther Lyle, manager. Personnel department, Kenneth Innocent, manager. Accounting department, Richard Waters, manager. The future. The wonderful Choplet. Board of directors: James L. Hagle (chairman), Warren E. Hartman, Allan R. Buller, George T. Harding, III, M.D., Warren G. Harding, M.D., George E. McKay, Harrison Evans, M.D.

A color photo shows each of the products in the Worthington line. All are canned, except those followed by an asterisk: Cutlets, Fry Sticks, Vegetable Skallops,

Sandwich Spread, Chili, Vegetarian Luncheon Slices*, Kaffir Tea, Soyameat, Vegetarian Dinner: Salisbury Steak Style*, Soyameat: Diced Chicken Style, Choplets, Vegetarian Pie: Chicken Style*, Vegetarian Dinner: Chicken Style*, Holiday Roast*, Prosage: Breakfast Treat*, Vegetarian Luncheon Slices: Smoked Beef Style*, Vegetable Steaks, Numete, Vegetarian Luncheon Slices: Use Like Corned Beef*, Soyameat: Diced Beef Style, Breeding Meal: Fry and Loaf Mix, Vegetarian Dinner: Ham Style*, Soyameat: Beef Style Slices with Gravy, Soyameat: Sliced Chicken Style, Meat Loaf Mix*, Veja-Links, Soyamel: All Purpose, Saucettes, Infa-Soy, Soyamel: Banana Beverage, Fortified Soyamel: A Powdered Soy Milk. The section titled "The future" is prophetic. "Since 1962 Worthington Foods has been growing in sales by nearly 20 percent a year. This is significant but modest in comparison to what is coming. For in our opinion the growth of the vegetable protein industry very shortly will be astronomical. The reasons are fairly simple.

"First, these new foods not only taste good. They are nutritionally sound.

"Second, vegetable protein foods offer significant economies over traditional meats. When grazed, an acre of land offers approximately 43 pounds of protein. Plant that same acre to soybeans and the yield is about 450 pounds of protein. The economic advantages of vegetable proteins are widening rapidly today. They will continue to widen.

"Third, vegetable protein foods are more convenient, and convenience foods will soon dominate the food business. No long hours of marinating, basting, of baking are necessary with these new foods. No skin to peel or bones or fat to cut out. With vegetable protein foods, taste and tenderness are controlled. The housewife or chef need only heat and serve.

"A fourth reason why the growth of this industry is going to be enormous shortly is because of the protein shortage in the world. The U.S. Department of Agriculture recently pointed out that even in the United States, 'Future protein needs must be met by chemically nurtured and protected plant materials. They certainly cannot be met by animal protein.'"

Note 1. This brochure contains an original illustration of each of the men mentioned above. Note 2. All three dated footnotes at the end of this brochure are from the year 1967, and the latest is Dec. 1967. Address: Worthington, Ohio.

4897. Mehrotra, B.K.; Tandon, G.S.; Shukla, R.C. 1969. Study of gastric secretion with reference to pregnancy in Indian women. *Indian J. of Physiology and Pharmacology* 13(1):65-72. Jan. *

4898. Binding, George J. 1969. The soya bean—a vegetable full of body-building protein. *British Vegetarian*. March/April. p. 155-57.

• **Summary:** The "soya bean has the highest protein content

of any vegetable. As such it is God's gift to man and is a must for vegetarians. In the Far East it is known as 'the meat of the soil.'" The author spent many years in East Asia, where he studied the foods of the region. Soya beans can be used to make a wide variety of foods; the author briefly describes the following: Bean shoots [soy sprouts], soya bean milk, bean curd or vegetable cheese [tofu], yuba, natto, miso, soy sauce, and boiled whole soybeans.

Since World War II, America has become the largest producer of soya beans. Before that war, England was one of the largest importers of soya beans in the world. "All vegetarians should make certain of a sufficient daily intake of protein. There's no more effective and satisfying way of doing so than eating soya beans." Address: M.B.E.

4899. Breth, Fred E. 1969. Ersatz-foods: The danger ahead. *British Vegetarian*. March/April. p. 141-45.

• **Summary:** Writing in a critical tone, the author discusses the various products resembling meat and dairy products now available to American shoppers. "Turkey meat that has never held a feather and milk that has never been near a cow... These foods are making progress in markets around the world. Like the prospect or not, it is obvious we shall have to live with laboratory-bred proteins in the not-too-distant future." For more than a decade, food companies have been developing imitation animal proteins, based largely on soya bean proteins. Soya bean derivatives are being used to "stretch" low-cost meats.

"The American dairy industry has yet to find an answer to soya-protein based coffee whiteners, whipped cake toppings, cream-type and frozen desserts. The consuming public has fully accepted them some time ago—and likes them. Are synthetics a real threat to animal products? Expert opinion on this question is deeply divided." Mr. J.L. Hagle, president of Worthington Foods Inc. ("at present the major producer of 'synthetic foods'") believes that "Granted enough time, the relative efficiency of man-made foods will work in their favour."

"Professor C.O. Chichester, University of California, put it even more bluntly: '... the isolation of plant proteins and their processing into textured products may very well result in a major change in the eating habits of the world.'"

"'Meatless' meats, also called 'synthetic meats,' 'analogue meats' and 'textured meats' are made from isolated soya-protein (90 per cent. protein), which is a tasteless, odorless powder."

"Worthington Foods Inc. is already marketing about 30 different 'meat' items, including fried chicken, dried beef, meat loaf casserole, croquettes, chicken show mein, 'soymeat' sandwiches, sandwich spread, bacon bits and so on."

Experts predict plenty of competition in the field of "high-protein drinks" (H.P.D.s). Large companies like Monsanto (a chemical company), Pillsbury (a flour mill), and

Swift (a meat packer) have already entered this market. They are all aware of the success story of "Vita-Soy" [Vitasoy], "a straight, three per cent. protein soya-bean milk drink," which sells 60 million bottles a year and has captured 25% of the Hong Kong soft drink market; it sells for as little as 5 pence per bottle. And they are aware of a similar powdered soy protein drink [Saridele] which contains 18% protein and is being marketed successfully in Djakarta, Indonesia and was introduced in 1957; 300 tons/year are now being produced.

The author concludes that these new foods are a necessity from the viewpoint of global nutrition. Three other publications also used this term later in 1969.

4901. Oliver, Cyril H. 1969. Some highlights in the history of the Vegetarian Cycling and Athletic Club. *British Vegetarian*. March/April. p. 152-53.

• **Summary:** Founded in 1888, this club has quite a history in the athletic world. The club won its first national record in 1895, and has captured 28 national and local competition records. Members of the club have been chosen many times—by *non-vegetarian selectors*—to represent the United Kingdom in the Olympic Games. Great member athletes include E.R. Voigt, Dave Keeler, Sid Ferris and many others.

4902. Róiz, José. 1969. Experiência com a 'Dieta Ideal.' [Experience with an 'Ideal Diet']. *Revista Brasileira de Medicina* 26(4):223-30. April. [Por]*

4903. Aries, Vivienne; Crowther, J.S.; Drasar, B.S.; Hill, M.J.; Williams, R.E. 1969. Bacteria and the aetiology of cancer of the large bowel. *Gut* 10(5):334-35. May. [14 ref]

• **Summary:** "In a study designed to discover whether the frequency of large bowel cancer could be related to the bacterial flora of the bowel, the faeces of healthy English and Ugandan adults were compared bacteriologically. The faeces from the English subjects contained significantly more bacteroides and bifidobacteria but fewer streptococci and lactobacilli than those from the Ugandans. Bacteroides are very active in the degradation of bile salts and it is suggested that they might produce carcinogens." Address: Bacteriology Dep., Wright-Fleming Inst., St. Mary's Hospital Medical School, London [England].

4904. Gentry, Robert E.; Connolly, Eleanor M. 1969. Fabricated foods. *Stanford Research Institute, Report* No. 374. 16 p. May. (Menlo Park, California, and Zurich, Switzerland).

• **Summary:** This is subtitled "A research report by the Long Range Planning Service." Contents: Executive summary. Scope and definitions. Present status and outlook: Changes in product mix, changing technology. Impact on

food processing industry: Markets, marketing strategies, processing, research and development. Impact on food service industry. Impact on food wholesalers and retailers. Impact on flavor technology. Impact on packaging materials. Impact on agriculture: Meat and poultry, dairy products, oilseeds, grains. Impact on petroleum, natural gas, and coal. Boxes: New protein sources. Approval by the Food and Drug Administration (FDA). Representative groups of companies developing new sources and forms of food. Examples of fabricated foods—1980.

This report predicts that sales of fabricated foods in the USA will increase from about \$1,500 million in 1969 to approximately \$7,000 in 1980, but will still account for only 5% of total sales of the food processing industry. The primary impact during the 1970s will be on convenience, snack, and other specialty foods.

“Sales of meat, seafood, and poultry analogs amounted to only about \$2.5 million in 1966. Worthington Foods and Loma Linda Foods were the major suppliers to a primarily religious and vegetarian market. In the past few years, several major food companies have entered the market and sales have risen to an estimated level of \$10 million. As flavor and texture improve, 1980 sales will soar to \$1,500 million to \$2,000 million.” The foodservice industry will be a prime outlet for the new products.

The most important food analog in America today is margarine. Among dairy foods, margarine accounts of about 66% by volume of the butter market, nondairy whipped toppings have about 60% of the whipped cream market, and coffee whiteners have about 35% of the cream market. In terms of sales: In 1968 sales of margarine are \$475 million out of \$1,150 million (41%) for the total butter and margarine market. By 1980 this is predicted to increase to \$750 million out of a total \$1,250 million (analogs will have 60% of the total market). Sales of coffee whitener are \$30-35 million out of \$85-100 million (35%) for the total coffee cream and coffee whitener market. By 1980 this is predicted to increase to \$100 million out of a total \$130-150 million (71%). Sales of nondairy whipped topping are \$25 million out of \$40-50 million (55.5%) for the total whipped cream and nondairy whipped topping market. By 1980 this is predicted to increase to \$50-60 million out of a total \$80-100 million (61%). Sales of filled and imitation milks are \$3-4 million out of \$3100-3200 million (0.11%) for the total milk and imitation milk market. By 1980 this is predicted to increase to \$600 million out of a total \$3800-4000 million (15%, the biggest percentage increase). Sales of mellorine and other “frozen desserts” are \$45 million out of \$1200-1300 million (3.6%) for the total frozen dessert market. By 1980 this is predicted to increase to \$80-90 million out of a total \$1500-1700 million (5.3%).

A table (p. 5) titled “Soy Protein Products” discusses soy flour and grits, soy protein concentrate, and soy protein isolate, describing briefly the protein content, processing,

price per pound, 1967 U.S. consumption, and applications. In 1967 soy flour and grits sold for \$0.075/pound and 105-110 million pounds were consumed. Soy protein concentrate sold for \$0.18/pound and 17-30 million pounds were consumed. Soy protein isolate sold for \$0.37/pound and 22-35 million pounds were consumed.

Page 10 lists representative companies developing new sources and forms of food. For each, the company name, city, state, and product name or names are given. Companies selling soy protein products include Archer-Daniels-Midland (Minneapolis, Minnesota), Bryan Bros. Packing Co. (Subsidiary of Consolidated Foods Corp, Chicago, Illinois), Central Soya Co., General Mills Inc. (Minneapolis), Griffith Laboratories, Inc. (Chicago), Loma Linda Foods (Riverside, California), Ralston Purina Co., Swift & Co. (Chicago), H.B. Taylor Co. (Chicago), USDA (“Developing edible forms of soybean protein”), and Worthington Foods, Inc. (Worthington, Ohio).

Note: This is the earliest document seen (Aug. 2002) containing statistics on the meat alternatives industry or market—by geographical region. Address: 1. Senior economist; 2. Industrial economist, Stanford Research Inst., Menlo Park, California 94025. Phone: 415-326-6200.

4905. *Tomorrow's Foods for Today's Homemaker*. 1969-1977. Serial/periodical. Worthington, Ohio: Worthington Foods, Inc. Vol. 1. May/June 1969. Frequency: Bi-monthly. *
• **Summary:** Continues: *Tomorrow's Foods Today*. Continued by: *Tomorrow's Foods* (which existed in summer 1986), then by *The Healthy Appetite*, which started in Feb. 1992. Talk with Worthington Foods. 1992. April 8. The company has kept only scattered issues of this bi-monthly publication. Address: Worthington, Ohio.

4906. Fernando, W.S. 1969. Ahimsa Week 45th year (Letter to the editor). *British Vegetarian*. May/June. p. 216, 218.
• **Summary:** Points out that the Ahimsa Movement was organized by the author and co-workers on a small scale on 1 May 1925. Since then it has made gradual progress and spread to 42 countries. Its main objectives are to propagate observance of Ahimsa Week and to banish the slaughter of cattle in Ceylon. Three precepts have to be observed during Ahimsa Week: 1. To refrain from killing. 2. To take only vegetarian diet. 3. To give rest to animals from 11:30 a.m. to 1 p.m. and to refrain from traveling in vehicles drawn by animals during that time. In addition, please plant as many fruit trees as possible on the morning of May 1. Address: Ph.D., Principal, Universal College, Panadura, Ceylon.

4907. Storm, Mike. 1969. The new-generation vegetarians. *British Vegetarian*. July/Aug. p. 366-67.
• **Summary:** “With hardly more sound than the rustle of an opening lettuce leaf, a quiet transformation seems to be taking place in vegetarianism—the whole image of the

movement is changing dynamically. Although there is a general swing towards food reform, the most heartening sign is the large proportion of young people setting their elders an example."

The young people seem to have an almost instinctual affinity for vegetarianism. Many also abstain from smoking and from drinking alcohol. Many are also deeply concerned with ethical issues. The author then describes a young cabaret artiste named Iris Chapple as an example of the new-generation vegetarians.

It is easier to be a vegetarian in America than in England. "They're organised for food reform out there." "As so often seems the case, spiritual awakening seems to come with vegetarianism."

Note: This article describes a crucial, defining moment when a new wave of vegetarianism is beginning among young people in the Western world, and being discovered by older members of the last wave.

4908. Wynne-Tyson, Esmé. 1969. "Fruitlands." *British Vegetarian*. July/Aug. p. 373-75. [3 ref]

• **Summary:** A description and history of the short-lived American vegetarian (actually vegan) and spiritual/transcendentalist community started by Amos Bronson Alcott in 1843 in New England on a farm donated by Charles Lane. A tragic failure, it lasted only 6 months. No animal substance—neither flesh, fish, butter, cheese, eggs, nor milk—was allowed to be used at Fruitlands. Amos Bronson Alcott was the father of the famous American novelist, Louisa May Alcott (lived 1832-1888), author of *Little Women* (1868), *Little Men*, and other books for and about children. "His life may be said to have been an outstanding case of seeking first the Kingdom of God and having all other, temporal, things added. An idealist and visionary, he remained true to his very exalted vision in spite of opposition, criticism, penury and ridicule, and in his later years the "other things" were added to him, chiefly through the payment of all his bills by his famous daughter, Louisa, who admitted herself that he and her family had provided the copy for her renowned best-seller by *living* the story she afterwards told." He performed what he regarded as his God-sent mission without fear of the consequences.

Note: In 1960 Esmé Wynne-Tyson lived in Selsey, Sussex, England. Address: England.

4909. Khanduja, P.C.; Agarwal, K.N.; Taneja, P.N. 1969. Haematological values of school children in different socio-economic groups. *Indian Pediatrics* 6(9):577-87. Sept. *

4910. Linnell, J.C.; MacKenzie, Heather M.; Wilson, J.; Matthews, D.M. 1969. Patterns of plasma cobalamins in control subjects and in cases of vitamin B-12 deficiency. *J. of Clinical Pathology* 22(5):545-550. Sept. [17 ref]

• **Summary:** Note: This is the earliest English-language

document seen (Nov. 2020) that uses the word "cobalamins" (or "cobalamin") in connection with vitamin B-12. Address: Dep. of Clinical Pathology, Westminster Medical School, London, and the Medical Research Council Clinical Genetics Research Unit, Inst. of Neurology, London.

4911. Maini, N.S.; Ramanamurthy, G.V. 1969. Soybean will augment vegetable oil resources. *Indian Farming* 19(6):14-15, 17. Sept. Series 2.

• **Summary:** Peanut oil is India's main industrial oil. In the USA, 80% of soybean oil is used for edible purposes and 20% for industrial purposes. The latter uses include manufacture of paints, varnishes, soaps, polyamide resins, etc.

Cultivation in India: Soybean is not a new crop to India. It has been cultivated in northern hill regions for several decades, though primarily as a pulse crop. Farmers of south Madhya Pradesh and adjoining areas of Maharashtra have also been growing soybean on a small scale. An ad-hoc estimate made in 1958 puts the area under soybeans as 17,500 hectares with a production of about 6,000 tonnes. The lack of progress in the cultivation of soybean appears to be due to the low yield potential of the varieties available in India, coupled with their long growing season, lack of a steady market, and absence of processing facilities. But recently, this situation has begun to change. As a result of experiments conducted at various research centres in the country, especially at the Uttar Pradesh Agricultural University at Pantnagar, and the Jawaharlal Nehru Krishi Vishwa Vidyalaya Jabalpur, several varieties imported from the USA have been found to have high yield potential, and some of them also have a short growing season. Under the All-India Co-ordinated Research Project on Soybeans, trials are being conducted with imported soybean varieties at 10 different centers in the country, with promising results. A steady demand for soybean meal has developed for use in antibiotics and in the high protein food industries, while the oil could be used by the vanaspati industry. India is one of the largest producers of oilseeds in the world. On average, soybean gives the highest yield of oil per unit area per day. Growing soybean would save valuable foreign exchange stimulate industrial use of soybean oil and meal, and spread out the demand for different oil, avoiding undue pressure on any particular crop. Why, then, has soybean oil not yet caught on? One reason is the peculiar flavor that develops in soybean oil on aging. Address: 1. Director, Regional Office, Oilseeds Development, Hyderabad, India; 2. Deputy Director.

4912. Prestbo, John A. 1969. Meatless 'meats': Several firms develop soybean-based copies of beef, pork, chicken. Some now on market mixed with real thing; low cost, high-protein food is aim. Questions about taste, labels. food aim. *Wall Street Journal*. Oct. 2. p. 1, col. 1 and p. 21, col. 4.

• **Summary:** Discusses soy-based “pork, beef, and nuts” made by 6 U.S. companies including ADM, General Mills, Swift & Co., Worthington Foods, and Ralston Purina Co. Americans are eating more of these meat analogs than they may realize. “Soup mixes, canned stews and chili, frozen ravioli and prepared, frozen hamburger patties are among a growing number of grocery store staples that now contain relatively small amounts of flavored, textured soybean ‘meats’ along with real meat. In many instances, the only mention of the analogs on the labels of these convenience foods is in the fine-print list of ingredients. Analogs also are being tested in restaurants, factory cafeterias and institutions.”

“Since last year, the New York State Department of Mental Hygiene has been adding General Mills Inc.’s meatless crumbled ‘beef’ and diced ‘ham’ and ‘chicken’ to meals for its 90,275 patients in 49 institutions.”

Sales of soy-based analogs this year are estimated at \$10 million and growing fast, up from about \$3 million 5 years ago. “One study conducted by a West Coast research firm forecasts sales of \$1.5-\$2 thousand million for the products by 1980, which would equal 5-6% of the meat and poultry market now projected for that year.”

“One of the first products to use analogs, Skippy Peanut Butter with Smoky Crisps (simulated ‘bacon’ bits), was dropped last year after little more than a year in test markets.”

“Last year a cattlemen’s convention innocently devoured a banquet entree of ‘meat loaf,’ only to be jolted later by a speaker who told them they had eaten soybeans, not beef.”

“Right now, most meat analogs retail for as much or more than the real meat they imitate. But eventually analogs’ biggest attraction is expected to be low cost—roughly half that of trimmed, boned and cooked real meat.”

Extruded soy “meats” wholesale for an average of \$0.35/lb., while those made from spun soy protein fibers range from \$0.45 to \$0.80/lb. General Mills is building its first meat analog plant at Cedar Rapids, Iowa. Worthington Foods makes a bacon analog named Stripples, which sells for \$0.79 per half pound package. “Worthington is also developing meatless breakfast sausages with similar characteristics which it plans to call Sizzles.

“Other food makers are trying different approaches to using analogs. Nalley’s Fine Foods division of W.R. Grace & Co. is test-marketing Meat Mate, a package containing dehydrated, textured soy particles. When mixed with a pound or more of ground meat and some water, the particles expand, extending the meat weight by up to 50%. Different types of Meat Mate contain various spices.” Other products include Wham, Bac-Os, and Bac’n.

4913. *British Vegetarian*. 1969. Transfer to the new Society. Sept/Oct. p. 447. [3 ref]

• **Summary:** The UK’s two national vegetarian societies,

The Vegetarian Society, and the London Vegetarian Society (formed in 1888), have merged into a single organization named “The Vegetarian Society of the United Kingdom Ltd.” Mr. N. John le Grice (whose photo is shown) is Chairman of the Council. Note: The merger apparently was finalized on 1 October 1969, though a document shown here is dated 1 September 1969.

4914. *British Vegetarian*. 1969. Plantmilk. Sept/Oct. p. 461-63.

• **Summary:** In 1956 when the Plantmilk Society was formed, one of its main objectives was to try to find a humane alternative to cow’s milk, so that vegetarians could be “released from association with the slaughter and unpublicised suffering caused by dairy farming... Put the bull to the cow, and when the calf comes, kill it—so we can have the milk.” After years of research, with the guidance of nutritional experts, Plantmilk Ltd. was formed to make this milk, and in 1965 it made and sold its first cans of Plantmilk. Now, four years later, what is the status of the company and its products?

First, distribution of plantmilk has been extended throughout the UK and a start has been made on exports. Second, the taste and acceptance of the product have been improved by stages. Third, the medical value of using plantmilk to treat children or adults with allergies to cow’s milk is becoming more widely recognized. However it is the ethical question which must most appeal to the convinced vegetarian—especially in this age of factory farming. A “meat-milk complex” has developed.

“Plantmilk Ltd. is a tiny, embryonic organisation which needs the help of every vegetarian if it is to survive.” Three television documentaries have featured plantmilk, and it has been the focus of articles in newspapers and magazines worldwide. “What is missing so far is sufficient support from a sufficient number of users.” Sales during the fiscal year just ended are up 30% over the previous year. This growth rate must be maintained and increased.

Photos: Inside the plantmilk factory, where a gleaming pile of cans is ready for the next batch of milk. Mr. William Stark, Production Manager, examines the color of the milk while Mr. John Cross watches the “mechanical cow.” Mr. Leslie Cross, Managing Director of Plantmilk Ltd., and William Stark drink a toast, each holding high a glass of plantmilk.

4915. *British Vegetarian*. 1969. First president: Dr. Gordon Latto. Sept/Oct. p. 493.

• **Summary:** A large photo shows Dr. Latto who was elected as the first President of The Vegetarian Society of the United Kingdom. He is the eldest member of a large family group of doctors and surgeons. He was President of The Vegetarian Society (Manchester) from 1960, when he succeeded Mr. W.A. Sibly.

4916. Oliver, Cyril H.; Keeler, Philip; Lee, Sam. 1969. Fastest: Our athletes set the pace. *British Vegetarian*. Sept/Oct. p. 466-69.

• **Summary:** About the accomplishments and records of British vegetarian athletes. A photo shows the first two. Shelagh Ratcliffe is a woman who has won numerous gold medals set many European records in the 440 yard individual medley and 220 yard freestyle.

Bill Pickering, age 48, is a famous Channel swimmer. After conquering the English Channel (from England to France) in record time, he set a new record in crossing the Bristol Channel, from Penarth (Glamorgan) to Weston-Super-Mare. It was the first crossing by any swimmer in 40 years, and he beat the previous record by 15 minutes.

Ron Franklin, in the 40-50 age group, is a long-distance runner from Wales. He won the Welsh Marathon Championship five times in a row from 1960 to 1964. He also won the Welsh 6 mile track title 4 times and his record still stands.

4917. Arnold, Martin. 1969. Thanksgiving, 1969: Frolic, worship; Feast and fast. *New York Times*. Nov. 28. p. 32.

• **Summary:** Yesterday was Thanksgiving across America, but people celebrated it in many different ways. The section titled "Opposition to exploitation," begins: "The Vegetarian Society of New York held its 38th annual [i.e., since about 1931] Thanksgiving dinner, with 108 persons in attendance, at the Pinetree Restaurant, 104 West 38th Street. The menu consisted of a vegetable roast, steamed potatoes, baked potatoes and a whole-wheat apple and pumpkin pie. 'We don't believe that people should exploit animals,' said Murray Mickenberg, the society's treasurer. 'Were opposed to fur coats, hunting, fishing and war.'"

4918. *Soybean Digest*. 1969. The soy foods companies: Worthington Foods (Document part). Nov. p. 44.

• **Summary:** "Worthington Foods at Worthington, Ohio, is a foremost producer of some 55 vegetable protein foods, including vegetarian entrees, meatless meats, and milks. Many simulate meat, fish, fowl, or nuts. They have been on the scene only since 1962.

"Worthington's vegetable protein foods are marketed frozen, dehydrated, or canned, or as an ingredient in other foods. Since 1966, Worthington Foods has manufactured its own spun protein, which it formerly purchased from Ralston Purina Co., for its meatless meats."

4919. Eastwood, Martin. 1969. Dietary fibre and serum-lipids. *Lancet* ii(7632):1222-24. Dec. 6. [4 ref]

• **Summary:** In a community of 28 Cistercian trappist monks, all of whom were lacto-ovo vegetarians, the author studied the effect of changing the fiber content of the diet on the serum triglycerides and total cholesterol levels. The monks

lived south of Edinburgh, Scotland. Raising the cereal-fiber content of the diet had no effect on serum cholesterol. In the control group, whose dietary fiber came only from non-cereal vegetables, the serum cholesterol level dropped initially, then began to increase after 8 weeks. Men who reduced their fiber intake complained of constipation and lost weight. Address: Present address: Wolfson Labs., Gastro-Intestinal Unit, Western General Hospital, Edinburgh EH4 2XU [Scotland].

4920. Crawford, Michael. 1969. Dietary prevention of atherosclerosis (Letter to the editor). *Lancet* ii(635):1419-20. Dec. 27. [1 ref]

• **Summary:** The carcass of a domesticated animal contains about 25% fat compared with only 5% fat in free-living animals. Address: Nuffield Inst. of Comparative Medicine, Zoological Society of London, London N.W. 1.

4921. American Vegetarian Union. 1969. New vegetarian society. USA.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From American Vegetarian Union (Dr. Jesse Mercer Gehman, President). Address: USA.

4922. Association Vegetarienne de France [Vegetarian Association of France]. 1969. New vegetarian society. France.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From Association Vegetarienne de France (Vegetarian Association of France, Mr. Louis Pemmerolle, general secretary). Address: France.

4923. Banks, Edward T. 1969. A vegetarian mecca. *British Vegetarian*. Nov/Dec. p. 578-79.

• **Summary:** The author describes his visit to the Lima Organic Farm at Latem, St. Martin, near Ghent. Almost everyone there is a "vegetarian wholefooder." Lima is a company with great integrity and experience in the field of whole foods and health foods. Lima is run by Mr. Pierre Gevaert, whose wife is Annette. The Lima business developed from the organic farm of M. Edgar Gevaert, a distinguished and prolific Belgian painter who died a few years ago. Edgar's gentle widow, Mlle. Gevaert-Minne, and one of their daughters, Celine, still live in the ancient Gevaert home.

4924. Bombay Vegetarian Society (The, India). 1969. New vegetarian society. Bombay, India.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From The Bombay Vegetarian Society (India, Mr. M.L. Somani, President). Address: Bombay, India.

4925. British Vegetarian Youth Movement. 1969. New vegetarian society. England.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From British Vegetarian Youth Movement (Miss Avril Kennard, Secretary). Address: England.

4926. Ceylon Vegetarian Society. 1969. New vegetarian society. Ceylon.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From Ceylon Vegetarian Society. Address: Ceylon.

4927. Deutsche Vegetarier Union [German Vegetarian Union]. 1969. New vegetarian society. Germany.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From Deutsche Vegetarier Union (German Vegetarian Union, Mr. Helmut Rall, General Secretariat). Address: Germany.

4928. Gregor, O.; Toman, R.; Prusova, F. 1969. Gastrointestinal cancer and nutrition. *Gut* 10(12):1031-34. Dec. [25 ref]

• **Summary:** This paper was the first to postulate a causative relationship between the intake of animal protein and the frequency of bowel carcinogens. Address: First Medical Dep., University Hospital, and the Research Inst. of Trade, Prague, Czechoslovakia.

4929. Kahler de St. Innocent, Woodland. 1969. Vegetarians from an international outlook. *British Vegetarian*. Nov/Dec. p. 572-74.

• **Summary:** In 1969, near the end of May, the first *Semana de Vegetarianismo* [Week of Vegetarianism] was held in Barcelona, Spain. The author was invited to speak at the opening and he spoke against the military-industrial complex and in favor of greater respect for life along the non-violent lines of vegetarianism.

Today the vegetarian way of life is spreading as it never has before. The new Federacion Vegetariana Espanola [Spanish Vegetarian Federation] is a typical example. Address: President, International Vegetarian Union.

4930. Lampkin, Beatrice C.; Saunders, E.F. 1969. Nutritional vitamin B-12 deficiency in an infant. *J. of Pediatrics* 75(6):1053-55. Dec. [6 ref]

• **Summary:** Describes a case of megaloblastic anemia, caused by vitamin B-12 deficiency, in the 10-month-old infant being breast-fed by its strict vegetarian mother. The mother had received a supplement of vitamin B-12 during pregnancy but not thereafter. Address: Dep. of Pediatrics, Univ. of Cincinnati, The Children's Hospital, Cincinnati, Ohio.

4931. Lightowler, Ronald M. 1969. Return to unity. *British Vegetarian*. Nov/Dec. p. 547-56.

• **Summary:** Britain's national vegetarian movement divided in 1888 with the formation of the London Vegetarian Society. This year, on 1 Oct. 1969, the breach was effectively healed with the establishment of The Vegetarian Society of the United Kingdom [VSUK]. The amalgamation celebration, a dinner and dance, was held at the Piccadilly Hotel, Manchester, on Saturday Oct. 4, which is as St. Francis' Day and World Day for Animals. The final annual meeting of The Vegetarian Society was held in the same hotel earlier in the day. 160 people sat down at the dinner, which was presided over by Dr. Gordon Latto, first President of the new Society. Other speakers included Mr. Cyril H. Oliver, Deputy President, and Mr. John N. le Grice.

Greetings and best wishes were sent (and published) from Vegetarian Societies and famous people from around the world, including De Nederlandse Vegetariërsbond (The Dutch Vegetarian Society, Mrs. W. Eikeboom), The Vegetarian Society of South Australia (Mrs. Fearnside), Toronto Vegetarian Association (Miss Ruth Playle), American Vegetarian Union (Dr. Jesse Mercer Gehman, President), Vegetarier-Union Deutschland (Vegetarian Union of Germany, Mr. Geo. Hiller), Deutsche Vegetarier Union (German Vegetarian Union, Mr. Helmut Rall), Das Vegetarisches Universum (a large reform newspaper), Societe Vegetarienne de Geneve (Vegetarian Society of Geneva, Switzerland, Mr. Henri J. Langner, President), Societa Vegetariana Italiana Perugia (Italian Vegetarian Society of Umbria, Rag. Erminio Fioriti, Secretary. Note: Perugia is the capital of Umbria, an autonomous region in central Italy), Association Vegetarienne de France (Vegetarian Association of France, Mr. Louis Pemmerolle, general secretary), Mandalay Vegetarian Society-Burma (U Kyaw-Hla, Secretary), Vegetarian Society of Durban (East Natal, South Africa, Mr. A.D. Evens, Vice-Chairman), The Scottish Vegetarian Society (Mrs. E. Trivett, Secretary), Ulster Vegetarian Society (North Ireland, Mr. Joseph Edgar, Secretary), Svenska Vegetariska Foreningen-Stockholm (Swedish Vegetarian Society-Stockholm, Anders Kocken, President), The Bombay Vegetarian Society (India, Mr. M.L. Somani, President), British Vegetarian Youth Movement (Miss Avril Kennard, Secretary), West African Vegetarian Society (Mr. E.K. Borty, Secretary, Ghana), Vegetarian Missionary Services-British Guiana (W.R. Puddicombe, Director), Ceylon Vegetarian Society.

Photos show: Mr. Ronald Lightowler retiring secretary of the London Vegetarian Society, and Mr. Geoffrey Rudd previously Secretary of The Vegetarian Society now General Secretary of the Vegetarian Society of the United Kingdom. Mr. John le Grice, first Chairman of the VSUK, with Council Members Miss Hilda Nixon, and Mr. Jack Lucas. Mrs. Isabel James, first Vice-Chairman of the VSUK. Mr. Brindley and Mrs. Vera Flower. Mr. and Mrs. Molinari. Address: Retiring

Secretary of the London Vegetarian Society, London, England.

4932. Mandalay Vegetarian Society–Burma. 1969. New vegetarian society. Burma.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. “Return to Unity. Greetings & best wishes.” From Mandalay Vegetarian Society–Burma (U Kyaw-Hla, Secretary). Address: Burma.

4933. Shurtleff, William. 1969. The Tassajara food trip. Tassajara, California: Published by the author. 63 p. Dec. 28 cm. [8 ref]

• **Summary:** Each of the 167 recipes is numbered, all show a strong natural foods influence, and many show a macrobiotic influence. Soy-related recipes include: 60. Fresh daikon nitsuke with miso. 74. Squash in miso-tahini sauce. 76. Nori with tamari.

77. Basic soybean preparation. “Put 2 cups soybeans in a quart container and fill the container with water. Let soak overnight. Pour into a pressure cooker and cook at 15 lb. for 40-50 minutes. Allow pressure to go down naturally. If water remains, continue to simmer beans in open pot until it is gone. Add tamari [soy sauce] to taste 10 minutes before finishing. Note: It is very important that soybeans be well cooked. They should be boiled until they are very soft and easily crushed between the thumb and ring finger, otherwise they will cause digestive problems (to put it nicely!).” We enjoyed boiled whole soybeans for breakfast almost daily as an important source of protein in our vegetarian diet.

Note: Pressure cooking soybeans can be dangerous! The skins can come off, foam up, and clog the pressure regulator.

78. Soybeans with hijiki. 79. Soybeans with hijiki and tahini (with miso). 80. Soybeans sauteed in miso. 81. Soybeans with lentils and buckwheat flour. 82. Soybeans with carrots and lentil sprouts. 83. Soybeans with dried daikon. 84. Soybean stew. 85. Broiled soyburgers. 86. Roasted soybeans. 87. Tofu sauteed. 96. Miso soup with tofu, carrots, burdock and mushrooms. 97. Miso soup with wakame. 98. Wakame soup with tofu. 99. Soy sauce & lemon soup. 101. Thick lentil soup with miso. 102. Thick lentil soup with miso & vegetables sauteed. 103. Lentil soup with miso and parsley garnish. 105. Aduki/azuki bean soup with miso. 107. Thick split pea soup with miso & vegetables. 110. Navy bean soup with miso. 115. Mushroom soup with dried tofu.

119. Misozuke pickles. 120. Kombu pickled in miso. 122. Bancha with tamari. 123. Kuzu cream with tamari. 125. Ume-syo-kuzu (with umeboshi, tamari and kuzu). 131. Basic soybean spread. 133. Lentil miso spread. 135. Garbanzo and miso spread. 138. Muso (miso-tahini) spread. 139. Peanut butter & tamari spread. 142. Peanut butter, miso, apples, carrot and parsley spread. 161. Sesame tofu (no soy). 163. Nut and seed loaf with miso.

San Francisco’s largest natural foods store is New Age Natural Foods, 1326 Ninth Ave. run by Fred Rohe [Rohé]. Also recommended are The Food Mill, 3033 MacArthur, Oakland [founded in 1933 by John Denis, Sr.]; and Chico-San, P.O. Box 1004, Chico, California. Selling Spiral Foods miso and tamari in bulk; The General Store, 5th and Junipero in Carmel.

Note 1. This is the 2nd earliest document seen (Nov. 2010) concerning the work of William Shurtleff with soyfoods. He wrote the book on a typewriter while practicing at Tassajara Zen Mountain Center, made about 30 photocopies, and sent them to friends as Christmas presents. He did not meet Akiko Aoyagi until 25 Dec. 1971 in Tokyo, Japan.

Note 2. This is the earliest document seen (Jan. 2014) in the SoyaScan database concerning or under the subject heading “Soyfoods Movement.”

Note 3. “The Tassajara Zen Mountain Center in the Ventana Wilderness area of the Los Padres National Forest, southeast of Carmel-by-the-Sea, California, is the oldest Japanese Buddhist Soto Zen monastery in the United States. The Center is very isolated, more than 16 miles (26 km) from the nearest paved road, and only accessible via a narrow, steep, one-lane dirt road. During the winter months, practitioners live alone on site. During the summer months, the Center is opened to day and overnight guests. The hot springs have been developed into Japanese-style baths. It is the first Zen monastery established outside Asia” (Source: Wikipedia). To get food especially perishables, for 40-60 students, we sent a truck on a “town trip” to Carmel and Monterey once a week. Among the foods we bought there were tofu (unpacked, in cans filled with water) and miso.

Note 4. This is the earliest document seen (March 2020) that mentions “New Age Natural Foods” run by Fred Rohe in San Francisco. Address: Zen Mountain Center, Carmel Valley, California.

4934. Societa Vegetariana Italiana Perugia [Vegetarian Society of Perugia/Umbria]. 1969. New vegetarian society. Perugia, Italy.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. “Return to Unity. Greetings & best wishes.” From Societa Vegetariana Italiana Perugia (Italian Vegetarian Society of Perugia/Umbria, Rag. Erminio Fioriti, Secretary). Note: Perugia is the capital of Umbria, an autonomous region in central Italy. Address: Italy.

4935. Societe Vegetarienne de Geneve [Vegetarian Society of Geneva, Switzerland]. 1969. New vegetarian society. Geneva, Switzerland.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. “Return to Unity. Greetings & best wishes.” From Société Vegetarienne de Geneve (Vegetarian Society of Geneva, Switzerland, Mr. Henri J. Langner, President). Address:

Geneva, Switzerland.

4936. Ulster Vegetarian Society (North Ireland). 1969. New vegetarian society. Ulster, North Ireland, UK.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From Ulster Vegetarian Society (North Ireland, Mr. Joseph Edgar, Secretary). Address: Ulster, North Ireland, UK.

4937. Vegetarian Missionary Services–British Guiana. 1969. New vegetarian society. British Guiana.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From Vegetarian Missionary Services–British Guiana (W.R. Puddicombe, Director).

Note: This is the 2nd earliest known vegetarian society in Latin America. Address: British Guiana.

4938. Vegetarian Society of Durban. 1969. New vegetarian society. Durban, East Natal, South Africa.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. "Return to Unity. Greetings & best wishes." From Vegetarian Society of Durban (East Natal, South Africa, Mr. A.D. Evens, Vice-Chairman).

Note: This is the earliest record seen (Feb. 2022) of a vegetarian society in southern Africa of the Middle East. Address: Durban, East Natal, South Africa.

4939. Vegetarian Society of South Australia (The). 1969. New vegetarian society. Australia.

4941. Walters, David. 1969. Vegetarians in Bulgaria. *British Vegetarian*. Nov/Dec. p. 568-72.

• **Summary:** Bulgaria's first experiment in communal living, based on the principles of Tolstoy, was initiated in Bulgaria in 1906 by Stefan Andreychin. Its members preached and practiced pacifism, but being located too close to the Turkish border, it was closed by military authorities after 6 years.

In 1927 the experiment was renewed at Proslav, a few miles from the important city of Plovdiv. When eastern Europe came under Communist influence, the community was renamed the "Vegetarian Collective Farm." This was dissolved toward the end of 1959 and the structure was

changed. Six villages now make up the "Georgi Dimitrov Collective Farm," including about 30 vegetarian families who have succeeded, despite all obstacles, in staying fairly closely together.

4945. Alcott, Amos Bronson; Herrnsstadt, Richard L. 1969. The letters of A. Bronson Alcott. Ames, Iowa: Iowa State University Press. xxxvii + 846 p. Illust. Index. 26 cm.

• **Summary:** A massive, fascinating book with two detailed

indexes. A digital version is available on HathiTrust.

Amos Bronson Alcott lived 1799-1888, mainly in Concord, Massachusetts. Richard L. Herrnstadt (editor) was born in 1926. Note: The letters are chiefly from the Alcott-Pratt collection of the Harvard University Library. Contains a genealogy (actually a pedigree chart) of the Alcott family (p. viii-ix).

"The Alcott letters take one back to a graceful and enviable time that is a valued part of our American heritage, the New England period of Alcott, Emerson, and Thoreau. The parental guidance and encouragement, the gracious manners, and the lively intellectual achievement are here delineated in this collection of all available extant letters written by the father of Louisa May Alcott.

"The value of Alcott's correspondence as a resource collection lies in his generous descriptions of nineteenth-century New England life, with emphasis on the transcendentalist intellectual community. Enthusiastically engaged in many activities, Alcott was involved in the movements of the time and came into contact with many prominent individuals. His letters describe such subjects as the life of a Yankee peddler; passenger life aboard ship to England; England in the early 1840's; the widespread nineteenth-century interest in communal living; health movements; the struggle for women's rights; the Concord School of Philosophy; and philosophical trends in America. His acquaintances and correspondents include such figures as Emerson, Thoreau, Agassiz, Julia Ward Howe, Carlyle, Whitman, and Horace Greeley.

"The letters illustrate the kinds of incidents and ideas and the sources of satisfaction that were influential in Alcott's life. While past impressions of Alcott often have emphasized the failures occurring early in his career, the letters reveal the comparative success he enjoyed in his later years. Taken together, they reveal the flavor of much of Alcott's life in a direct, intimate, and complete way—confirming part of the present estimate of the man, while providing some new impressions and correcting some of the existing distortions. They tell a story that is not one of failures, but rather of an original thinker whose ideas gained a significant degree of acceptance in the later years of his life" (from the dust jacket).

The word "vegetarian" (or "vegetarianism") appears on numerous pages:

Pages xxx-xxxix: Alcott "was a strict vegetarian. In a letter (79-86) written when he was eighty years old he stated with real certainty that his perfect health was the result of his having foresworn animal food some fifty years earlier (and at one time that had included milk and eggs). Fruits, he asserted, were the best of all foods; then in descending order... grains, green vegetables, roots. He would drink water and cocoa; tea, coffee, and alcoholic beverages but seldom. The result of such a regimen was, he claimed, a heightening of the ideal and spiritual nature of man."

Page xvii: "Among other things, the letters describe, in varying degrees of completeness,... health movements, particularly water cures and vegetarianism;..."

Page 71, footnote: Charles Lane (1800-1870) was an editor of commercial periodicals, reformer, and vegetarian.

Page 77 (footnote near top): Dr. [Sylvester] Graham was a vegetarian.

Page 135 (footnote near top): Dr. Sylvester Graham was a vegetarian. Alcott had known him for some years. Page 203 (17 Oct. 1856): "At Dr. [Russell] Trall's the other evening I met a young Englishman from Baltimore where he is connected with the public press—a vegetarian, and fond of good things..."

Page 208: "Dr. Trall has a 'Water Cure Establishment' at Meriden, near Wolcott [New York]. He wishes to rent the premises to someone who shall conduct the Cure on Vegetarian principles, and will himself take some part in the concern. I am talking with him about it, and shall find out whether it offers any thing for us or not, and will write you in due time."

Page 718: James Eddy, in his letter, had asked Alcott to bowl on Saturday evening, "if a vegetarian diet has left any strength in you."

Page 789-90 (22 Dec. 1879). Reproduced separately elsewhere at that date. Address: 1. Concord, Massachusetts; 2. Prof. of English, Iowa State Univ.

• **Summary:** This study of 27 Seventh-day Adventist boarding schools that serve vegetarian diets concludes that well-planned vegetarian diets can be adequate in all nutrients. Address: Alabama.

4947. Cahill, Tilda. 1969. A South African vegetarian cook book. Cape Town, South Africa: Haum [Hollandsch Afrikaansche Uitgevers Maatschappij]. 80 p. Color illust. 25 cm. *

• **Summary:** Pages 14-15 describe how to make gluten and its broth at home, and give recipes for: Gluten and walnut meat. Gluten rissoles. Gluten steak. Gluten casserole. Available in the USA from Richard Abel & Co. Reprinted, apparently without changes, in 1974.

The section titled "Dried Legumes—Beans, Peas, Lentils" states: "Soya beans or Soy beans are perhaps the most nutritious staple diet known to mankind. They contain all the essential amino-acid constituents found in meat or dairy products. Soy bean flour can be added in the cooking to dishes of all kinds... A spoonful of Soya flour added to sauces, soups, casseroles, nut loaves and rissoles will provide extra nourishment. Soya beans are extremely rich in protein." Soya beans are best pressure cooked, as they take a long time to soften. Recipes are given for: Soya bean roast. Soya bean

croquettes.

4948. Day, Harvey. 1969. About yoga diet. London: Thorsons Publishers Ltd. 64 p. 19 cm. The "About" Series, no. 37.

• **Summary:** The yoga diet is a vegetarian diet. Chapter 3 titled "Vegetarians Need Protein," notes that soya beans contain 34% protein, and that the Chinese, "who live mainly on the soya bean," are among the toughest and hardiest of nations, noted for their stamina. The same chapter has a long section titled "Mahatma Gandhi—Food Reformer" (p. 20-28) which notes (p. 27) that Gandhi experiments with using soya beans as an article of diet.

Page 47 notes that London restaurants such as Cranks and The Vega serve delicious vegetarian food. Pages 47-48 have a section about the soya bean (p. 47-48) which states: "Major-General Sir Robert McCarrison said that if only Indians could be induced to make the soya bean their national food all their nutritional problems would vanish; and Dr. McCollum of Johns Hopkins University maintained that if Americans tempered their diet with soya beans there would be a drop of at least 20 per cent in their mortality rate." Pages 48-49 has a section on "Bean Curd" [tofu] which describes incorrectly how it is made (by adding gelatine from seaweed).

4959. Minney, Rubeigh James. 1969. Recollections of George Bernard Shaw. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. vii + 211 p. Portriat. 24 cm. *

• **Summary:** Shaw, a famous vegetarian, lived 1856-1950.

4960. Narayana Rao, M.; Swaminathan, M. 1969. Plant proteins in the amelioration of protein deficient states. *World Review of Nutrition and Dietetics* 11:106-41. [135* ref]

• **Summary:** Contents: World food maps and distribution of proteins. Economics of production of animal versus

vegetable proteins. Vegetable proteins—Their amino acid composition and nutritive value. Nutritive value of vegetable proteins at higher levels of protein intake. Factors affecting the nutritive value of vegetable proteins: Rate of release of amino acids and simultaneous availability of essential amino acids, toxic factors, processing conditions. Improvements in the nutritive value of vegetable proteins: Mutual supplementation, fortification with amino acids. Vegetable proteins and regeneration of serum proteins. Absorption and utilization of vegetable protein foods. Conclusion.

The authors conclude that recent developments in nutrition have “provided the physiological and biochemical basis for the use of vegetable protein foods in the effective treatment of protein deficiency states. Since it will be entirely impossible the World population with adequate amounts of animal protein, at any rate for quite some time to come, the answer to the World problem of protein needs should be found in the development and utilisation of plant protein foods.”

Soya beans are discussed on pages 111-113, 118-19, 121-25, 129, 133. The quality of soya bean protein can be easily and inexpensively improved by combining it with other plant proteins. Hemagglutinins are sometimes referred to as phytoagglutinins. “Soya beans offer the most striking example of a material whose protein value is improved by appropriate heat processing and this has been attributed to the destruction of the potent tryptic inhibitor, hemagglutinin and goitrogenic factors.” Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

4961. Ohsawa, Georges (Nyoiti Sakurazawa). 1969. *Le Zen macrobiotique; ou, l'art du rajeunissement et de la longévité* [Zen macrobiotics, or the art of rejuvenation and longevity]. Paris: Librairie Philosophique J. Vrin. 212 p. Index. 19 cm. Preface by Cauvet-Duhamel. [Fre]

• **Summary:** Contents: Preface, by Cauvet-Duhamel. Foreword, by G. Ohsawa. 1. Macrobiotics and the medicine of the Orient. My therapeutics. 3. The seven conditions of health and happiness. 4. With faith, nothing is impossible. 5. Yin and yang. 6. My macrobiotic cuisine and the ten ways of eating properly. 7 Principal foods (*Les aliments principaux*). 8. Secondary foods. 9. Special dishes. 10. Suggestions for some illnesses / maladies. 11. Healing regimens. 12. Food for infants. 13. Some ideas.

Appendixes: A cure in 10 hours. Pro-forma death certificate for the world empire of the American gold dynasty. My talks in the United States (starting in Nov. 1959, in New York, Los Angeles, and San Francisco). The despair of American doctors according to the *Times* of 7 March 1960 (listing of the number of people with 17 incurable diseases). How much does the death of a civilization cost? The real cause of sickness, unhappiness, and war. Professional education and religion. Medicine's last cry of despair. The medical revolution in the China of Mao Tse-tung. Medicine:

God alone understands it. My prophecy.

The following foods are discussed: Rice, buckwheat, millet and other cereals (p. 67-77). Azuki beans (p. 98). Sesame tofu (p. 98). Sea vegetables (konbu, hijiki, p. 101-05). Miso and miso recipes (p. 105-08, incl. Tekka). Shoyu and shoyu recipes (p. 108-10). Ohsawa coffee (Yannoh, with azuki, p. 111-12). Syo-ban (Natural green tea with shoyu, p. 113-14). Kuzu (p. 114). Umeboshi juice (p. 116-17). Ume-syo-ban (umeboshi and tamari shoyu, p. 117). Ume syo-kuzu (with umeboshi, shoyu, and kuzu, p. 117). Miso fried in sesame oil (p. 118).

Note 2. The author, born in 1893, lists his name on the title page as “Georges Ohsawa (Nyoiti Sakurazawa).”

Note 3. This is the earliest French-language document seen (April 2012) that uses the term *tamari* to refer to soy sauce.

4962. Soer, Hans J. 1969. *Fra råkost til grill* [Raw food]. Copenhagen, Denmark: Borgen. 224 p. 18. Series: Borgens Billigboeger, 93. [Dan]*

4963. Soypro International Inc. 1969. A study of business prospects in the food industry of India. Cedar Falls, Iowa. iv + 87 p. Summarized as “Soybeans have good future in India” in *Soybean Digest*. 1969. Dec. p. 28. 28 cm. [20 ref]

• **Summary:** As part of The Canadian Food Advisory Team. For Malwa Economic Development Society (MEDS), Indore (which has expressed an interest in entering some aspect of the food industry in India). Sponsored by United Church of Canada.

Contents: Objectives and guidelines. Part I: Food resources and malnutrition. Food grains and pulses. Calories. Proteins: Legumes, oilseeds, milk, fish, poultry, meat. Fats and oils. Areas of food needs: Under-nourishment protein malnutrition. Summary and conclusions.

Part II: Food marketing. The non-market. Primary factors of the real market. Guidelines for product selection and production. Selling the product.

Part III: What is being done. Food ingredients: Grain processing, oilseeds for human nutrition. Consumer products: Protein foods for infants and children, foods for general consumption.

Part IV: Prospects for soybean production and soya food processing. Production: Yields, crop input, returns in relation to other crops. Market outlets and prices: Domestic markets for soy products, estimated prices. Soybean processing: Processing plants, storage, transportation, plant investment costs (new plants, converting existing plants to soybean processing). Low fiber meal and soy flour: Investment cost for production, marketing. Full-fat soy flour. Soy protein isolates. Specialty soy foods: Soy milk and related products, soy-based snack foods, cereals, dal. Conclusions.

Part V: Potential projects. Storage. Rice milling. Pulse milling. Soybean processing for soy flour, soy protein

isolates. Sesame processing. Bread. Baby foods. High protein mixes. Synthetic milk or base for toned milk-related dairy products. Extruded high protein snacks / cereals. Low-cost quick-cooking dal. Food marketing and distribution.

List of references. Appendixes. Population of India. Recent production trends and current yields of key crops in India. Rough calculations of gross protein availability from local production in India.

This practical, business-oriented report focuses on low-cost high-protein foods designed to help private business meet India's problems of protein malnutrition, especially among infants and children. "Similarly, with fast rising interest in soybean production and utilization, considerable early attention had been given to this particular field..." In 1965-66, and in 1966-67 India had two devastating drought years. Prior to this, India has experienced four major droughts accompanied by famines since 1900: 1907-08, 1918-19 (the worst, with a 32.3% drop in agricultural output), 1920-21 (the second worst; 24.0% drop), and 1923-24 (16.6% drop).

Pulses, mostly in the form of dal ("the poor man's meat") have for many years been second only to food grains as a source of protein in Indian diets. Most pulses are dehulled by hand-powered stone mills at home before cooking, with a wastage of about 10%. However pulses are not keeping pace with the food grains in India's Green Revolution. Average yields are relatively low and response to fertilizer is low. Per capita consumption is static, or declining. India's main oilseeds in 1967-68 were (in descending order of output in million metric tons): groundnuts in the shell (5.83), cottonseed (2.00), rapeseed and mustard (1.48), sesame (0.42), and niger seed (0.10). Only groundnut, sesame, and niger also provide significant amounts of protein for humans. Yet after the oil is removed, most of the protein-rich oilseed cakes are used in livestock feeds or fertilizer, or exported; only about 10% of the available protein is used directly in human diets. There is now much interest in using more groundnut protein (as flour or isolate) in human foods; it has been used in toned milk. India's major source of animal protein is milk (both from water buffaloes and cows), with per capita daily consumption being 123 gm (4.4 oz).

Relatively little red meat is consumed in India; many states prohibit slaughter of cows. Goats and water buffaloes are the major sources of meat. According to CFTRI, 39% of Indians are deficient in proteins, and a high proportion of these are infants and children. Per capita availability of oils is 9.3 lb/year. 70 to 75% of all food produced stays on the farm and is consumed directly by the producers. Wheat is the main grain in north India, and rice in south India. About 25% of Indians are vegetarian by conviction, and "75% are now willing to eat animal products, with the latter percentage increasing every year. In practice, diets are still largely vegetarian because of the scarcity and cost of animal

products." Prestige is the single most important marketing factor in part because India is still a highly class-conscious society. The market is highly segmented. Products need to be targeted separately at the top 3 or 4 of the 5 class segments. The high class line should be introduced first. Cheap food or "food for the poor" has little chance of succeeding in commercial channels. Except as food for children, it is very hard to sell food on the basis of its nutritional or health-giving benefits. Sampling is the most effective promotional technique.

Several companies produce dried baby foods from milk and sell them in tin cans. In 1968 the biggest seller was Amul (3,500 to 3,800 tons), made by Kaira Dairy Coop. The pioneer commercial weaning food in India was Farex, made by Glaxo and sold in tins at Rs. 13 per kg. Kaira Dairy Coop launched Bal-Amul at Rs. 11 per kg and now produces 1,000 tons/year, expected to grow to 5,000 tons by 1974. Bal-Amul contains about 25% full-fat soy flour, 25% rice and wheat flour, 20% gram flour, 11% sugar, 10% nonfat dried milk, and 6-8% moisture. Processing equipment was donated by UNICEF. Soy flour and milk powder were donated by USAID. It will soon be offered in plastic bags at Rs. 7 to 8 per kg to reach a broader market. CSM contains 25% defatted or low-fat soy flour. Bal-Ahar contains 65% bulgur wheat, 25% groundnut flour, 10% Bengal gram [chickpea] flour plus vitamin/mineral pre-mix. Requiring 10-15 minutes cooking in water, it does not contain any soy. Use of CSM and Bal-Ahar is limited to food relief programs; they are not sold commercially.

MPF (Multi-Purpose Food, formulated under sponsorship of the Meals for Millions Foundation in the U.S.) consists of 75% groundnut flour, 25% Bengal gram flour, plus a vitamin/mineral pre-mix. Containing 45% protein, it sells for only Rs. 3.5/kg and is thus the cheapest protein source on the market and one of the best. However it has not met with any real success. 7 plants have been authorized to produce MPF in India. None are operating at capacity and most are not operating at all. Total output, currently 600 tons/year, is purchased largely by OXFAM for the Meals for Millions Foundation.

UNICEF is supplying an X-25 Wenger Cooker-extruder to CFTRI to experiment with extruded high-protein snacks. Note: The Wenger X-25 is a low-cost extrusion cooker / extruder. This is the earliest document seen (Oct. 2020) that mentions Wenger's X-25 or the use of a low-cost extrusion cooker—although the phrase "low-cost extr*" does not appear.

The population of India has grown from 314.8 million in 1941 to about 533.3 million in 1969. Each year the population is growing by about 13 million people. Roughly 80% lives in rural areas. In terms of gross protein availability, the main sources produced in India (in million metric tons of protein) are: rice 3.03, pulses 2.69, wheat 2.49, groundnuts 1.12, milk 1.05, and jowar (sorghum) 0.91. Soy

is not listed. Address: Cedar Falls, Iowa.

4964. Steiner, Rudolf. 1969. Problems of nutrition (in light of the Arts/Humanities). New York, NY: Anthroposophic Press. 22 p. Translation of his 1909 lecture in Munich titled "Ernaehrungsfragen im Lichte der Geisteswissenschaft."

Address: West Germany.

4965. Thurmon, Jimmie Joan. comp. 1969. Adventures in vegetarian cooking: Over 200 meatless main dish recipes. Nashville, Tennessee: Southern Publishing Assoc. 128 p. 23 cm.

• **Summary:** The author of this Seventh-day Adventist vegetarian cookbook is a woman. Interesting recipes include: Nut Cheese (no. 1 & 2, with peanuts or peanut butter and gluten flour, p. 11). Tomato Nuttose (with nut butter, p. 11). Homemade Nuttose (with nut butter, p. 12). Homemade Protose (with peanut butter and mashed beans (p. 12). Homemade Nutmeat (dark) (with gluten flour, peanut butter, and Vegex, p. 12-13). Homemade Nutmeat (light) (with raw nut/peanut butter and flour, wheat meal, or soybean meal, p. 13). Nuttolene (with peanut butter and eggs, p. 13). Homemade gluten (with Vegex or soy sauce, p. 14). Granola. Preparing and cooking dry soybeans (p. 15). This page describes how to make "soybean pulp," an ingredient is subsequent recipes. "Press cooked soybeans through a coarse sieve or grind in a food grinder. Use in making soups, croquettes, loaf, or soufflé. Cold, the pulp makes a nutritious and flavorful filling for sandwiches when mixed with chopped onion and enough salad dressing or milk to make it easy to spread. May be used like pumpkin or squash with milk, eggs, and spices as a filling for pie. May be used in place of burger in chili."

Soybean loaf (p. 19). Soybean cheese loaf (with 1 can (14 oz.) soy cheese [tofu] and Savita, p. 21). Gluten roast no. 1 (with gluten burger, p. 21). Soybean loaf, p. 27). Soybean-rice loaf (p. 28). Gluten roast no. 1 & 2 (p. 29). Baked soybean croquettes (with soybean pulp, p. 36-37). Soyameat patties (p. 37). Cheese-nut burgers (with VegeChee [tofu, made by Loma Linda Foods], p. 37). Soyameat tetrazzini (p. 52). Soybean casserole (with Wham, p. 52-53). Soybean souffle (with soybean pulp, p. 53). Tofu with mushroom sauce (p. 90; Tofu is "A fresh soybean milk curd obtainable at Oriental markets, or canned under the trade name VegeChee" [by Loma Linda Foods]). Puree of soybean soup (with soybean pulp, p. 110).

Pages 121-22 list "Vegetable protein brand names." All products are made by Seventh-day Adventist food manufacturers. Brand name codes: B = Battle Creek. C = Collegedale. L = Loma Linda. M = Madison. S = Sunnysdale. W = Worthington. 1. Nut meats (canned): Not-Meat (M). Numete (W). Nuteena, Proteena, and Vegelona (L). Protose (B).

2. Gluten burgers: Choplet Burger (W). Collegedale Burger (C). Madison Burger, and Zoyburger (M). Prime Vegetable Burger (B). Redi-Burger, and VegeBurger (L). 2. Gluten steaks: Big Pat, and Fry Sticks (W). Chic-Ketts (S). Collegedale Chops (C). Dinner Cuts, Dinner Rounds, Vege Cuts, and Vegetables 'n Gravy (L). Vegetable Skallops, and Vegetable Steaks (B).

Note 1. This is the earliest English-language document seen (Nov. 2014) that contains the term "Gluten burgers" (or "Gluten burger").

4. Wieners and sausages: Big Franks, and Linketts (L). Saucettes (B). Veja-Links (W). 5. Frozen foods: Chipped Prime, Prosage, Vegetarian Luncheon Slices (Chicken and Beef Style), Wham (W). Note 2. Worthington was the first Adventist company to make frozen meatlike products.

6. Soy meats: Soyameat (Diced Chicken Style, or Diced Beef Style) (W). VegeChee [Tofu] (L).

Frequently used seasonings in vegetarian entrées. (p. 122). Accent. Bac-O-Chips (General Mills). Bakon Yeast. Gravy Quik (L). G. Washington Broth. McKay's Chicken Style Seasoning. Savita. Savorex, and Smokeene (L). Sovex. Tartex. Tastex. Vegex.

Update. 1995. Oct. 25. Jimmie Joan Thurmon, a Seventh-day Adventist, is retired and lives with her husband at 128 Mountain Ridge Dr., S.E., Cartersville, Georgia 30120-6951. Phone: 770-974-9218. She learned how to make wheat gluten from Seventh-day Adventist women, who had been making it for years. In addition Loma Linda Foods in California and Sanitarium Food Co. in Australia had many products containing wheat gluten on the market by the 1960s. Address: Nashville, Tennessee.

4966. Wason, Elizabeth (Betty). 1969. The art of vegetarian cookery. London: George Allen & Unwin. 165 p. 23 cm.

• **Summary:** The author's name on the title page is written Betty Wason. She was born in 1912. First published in the USA in 1965 by Doubleday. Later published in the USA in 1970 by Ace (paperback).

Book Review in *The British Vegetarian*. 1969. Nov/Dec. p. 618. "Not very long ago there was some justification for the complaint from the outsider that vegetarian meals were lacking in variety and tended to be monotonous. During the last five years however there has been such a spate of vegetarian recipe books published, and most of them by experts in this field, that there is no excuse whatever now for vegetarians, or others interested in this kind of food, to put up with a lack of variety."

Soy beans are mentioned on page 70, and soy flour is used in a recipe for Soy Muffins (p. 111).

Cooper, Lenna Frances (1875-1961), Pioneer Dietitian at Battle Creek, Michigan. Author. Co-Founder of American Dietetic Association 1917 2571, 2930, 2936, 2954, 2968, 2971, 2974, 2991, 2994, 2997, 2998, 3038, 3065, 3073, 3081, 3268, 3361, 3556, 3653, 3745, 3996

Cooperative Enterprises, Ventures, Research, or Experiments, and Cooperatives / Co-ops, Worldwide. See also: Soybean Crushers (USA)—Cooperative Crushers 1628, 1629, 1659, 1723, 1811, 1825, 1946, 2306, 2777, 3672, 4088, 4252, 4274

Corn / Maize (*Zea mays* L. subsp. *mays*)—Including Corn Oil, Corn Germ Oil, Meal, Starch, and Corn Gluten 67, 258, 393, 440, 514, 760, 763, 863, 878, 884, 1097, 1136, 1137, 1162, 1241, 1309, 1379, 1584, 1692, 1793, 1879, 1980, 2093, 2139, 2149, 2708, 2722, 2777, 2828, 2900, 2930, 2988, 3016, 3064, 3067, 3069, 3070, 3076, 3102, 3112, 3114, 3118, 3136, 3171, 3227, 3376, 3401, 3492, 3619, 3749, 3794, 3891, 3934, 3968, 3981, 3998, 4000, 4058, 4304, 4305, 4435, 4451, 4475, 4495, 4509, 4519, 4539, 4698, 4722, 4761

Cornell University (Ithaca, New York), and New York State Agric. Experiment Station (Geneva, NY)—Soyfoods Research & Development 4015, 4097, 4396, 4459, 4487, 4488, 4642, 4678, 4867, 4868

Cottage cheese, non-dairy. See Dairylike Non-dairy Soy-based Products, Other

Cotton Cloth, Fabric, Textile, Yarn, Fibers or Raw Cotton in Bales, All from the Boll of the Cotton Plant (*Gossypium* sp. L.) 809, 2850

Cottonseed Flour. Previously Spelled Cotton-Seed Flour 3968, 4396

Cottonseed Meal and Cake (Defatted). Previously Spelled Cotton-Seed Cake 2779, 2850, 3029, 3118, 4537

Cottonseed Oil. Previously Spelled Cotton-Seed Oil or Cotton Oil

1584, 1805, 1881, 1882, 2157, 2779, 2850, 3068, 3686, 3717, 3968, 4179, 4697

Cottonseeds / Cotton Seeds—Etymology of These Terms and Their Cognates/Relatives in English 2779

Cottonseeds / Cottonseed. Previously Spelled Cotton Seeds / Seed 2947, 3118, 3992, 4432

Cowherd, William (Rev.) (1763-1816). Vegetarian Pioneer in England 126, 128, 351, 823, 837, 1029, 1030, 1031, 1183, 1244, 1353, 1445, 1475, 1691, 1884, 1885, 1921, 2069, 2071, 2324, 2435, 2646, 2665, 2670, 2737, 2739, 3263, 4509, 4628, 4672, 4865

Cowpea or Black-Eyed Pea. *Vigna unguiculata* (L.) Walp. Formerly spelled Cow Pea. Also called Blackeye Pea, Cowpeas, Pea Bean, Yardlong Cowpea. Chinese: Jiangdou. Previous scientific names: *Vigna sinensis* (L.) (1890s-1970s), *Vigna catjang* (1898-1920), *Vigna Katiang* (1889) 1136, 2267, 2721, 2777, 2863, 2896, 2937, 3070, 3084, 3155

Cows / Cattle for Dairy Milk and Butter Fed Soybeans, Soybean Forage, or Soybean Cake or Meal as Feed 2913, 3642

Crayons. See Candles, Crayons, and Soybean Wax

Cream Cheese. See Soy Cream Cheese

Cream, sour, alternative. See Sour Cream Alternatives

Cream, soymilk. See Soymilk Cream

Creamer or soy cream for coffee. See Coffee Creamer / Whitener

Crop Rotation Using Soybean Plants for Soil Improvement 2850, 3640, 4058

Cropping Systems: Intercropping, Interplanting, Mixed Cropping or Mixed Planting (Often Planted in Alternating Rows with Some Other Crop) 2722, 2850, 2896

Cruets (English Glass Bottles for Serving Soy Sauce—or Oil or Vinegar—at the Table) and Cruet Frames and Stands (of Plated Metal). Also spelled Crewets, Crewits, Creuits, Cruetts, Cruits 3336

Crushing, soybean—equipment manufacturers. See Anderson International Corp.

CSY Agri-Processing, Inc. See Central Soya Co. (Fort Wayne, Indiana)

Cubbison, Sophie (1890-1982), and the Cubbison Cracker Co. of Los Angeles, California 3200, 3383, 3492, 3677, 3723, 3913

Cultural Practices, Cultivation & Agronomy (Including Crop Management, Erosion, Planting, Seedbed Preparation, Water Management / Irrigation) 1684, 2850, 2896, 3790, 3833, 3834, 3835, 3893, 3979, 3995, 4487, 4651

Culture Media / Medium (for Growing Microorganisms)—Industrial

Uses of Soybeans, as in Antibiotic / Antibiotics Industry 4911

Cultures of nitrogen fixing bacteria for soybeans. *See* Nitrogen Fixing Cultures

Curds Made from Soymilk (Soft, Unpressed Tofu) as an End Product or Food Ingredient. In Japanese: Oboro. In Chinese: Daufu-fa, Doufu-hua, Doufu-hwa, Douhua, Toufu-hwa, Tow-foo-fah ("Bean Curd Flowers") or Doufu-nao, Fu-nao ("Bean Curd Brains"). In Filipino: Taho (Often Served as a Dessert with a Sugary Syrup) 3833

Cutlets, meatless. *See* Meat Alternatives–Meatless Cutlets

Cyperus esculentus. *See* Chufa. Also Called Earth Almond, Tiger Nuts, etc.

Dairy alternatives (soy based). *See* Coffee Creamer / Whitener or Cream Alternative, Sour Cream Alternatives, Soy Cheese–Fermented, Soy Cheesecake or Cream Pie, Soy Cream Cheese, Soy Pudding, Custard, Parfait, or Mousse, Soy Yogurt, Soymilk, Soymilk, Fermented, Soymilk, Fermented–Soy Kefir, Tofu (Soy Cheese), Whip Topping

Dairylike Non-dairy Soy-based Products, Other (Cottage Cheese, and Icing). *See* also Non-dairy Whip Topping, Soy Ice Cream, Soy Yogurt, Soy Cheese, Cream Cheese or Cheesecakes, Coffee Creamer / Whitener or Cream, and Sour Cream 2209, 2470, 3891, 3981, 4519, 4855

Davis, Adelle (1904-1974). Author and Health Foods Advocate 3968, 4432

Death certificates. *See* Obituaries, Eulogies, Death Certificates, and Wills

Deceptive or misleading labeling or products. *See* Unfair Practices–Including Possible Deceptive / Misleading Labeling, Advertising, etc. *See* also: Adulteration

Depression. *See* Mental Health

Detection of soy oil as an adulterant. *See* Adulteration of Foods and its Detection–Soy Oil

Detergents or soaps made from soy oil. *See* Soaps or Detergents

DE-VAU-GE Gesundheitswerk GmbH (Lueneburg, Germany) 3890, 4785

Diabetes and Diabetic Diets 1162, 1322, 1446, 1509, 1514, 1637, 1712, 1739, 1805, 1845, 1875, 1879, 1882, 1980, 2029, 2139, 2194, 2247, 2267, 2360, 2363, 2508, 2547, 2559, 2586, 2636, 2678, 2708, 2714, 2721, 2752, 2804, 2810, 2817, 2818, 2834, 2848, 2863, 2879, 2896, 2904, 2913, 2937, 2953, 2993, 3002, 3029, 3062, 3081, 3155, 3156, 3192, 3195, 3227, 3228, 3257, 3286, 3319, 3320, 3323, 3466, 3478, 3550, 3616, 3646, 3653, 3685, 3733, 3734, 3735, 3745, 3753, 3754, 3776, 3790, 3803, 3833, 3835, 3881, 3883, 3913, 3923, 3973, 3979, 4033, 4058, 4535, 4538, 4759, 4787, 4876

Diesel Fuel, SoyDiesel, Biodiesel, or Artificial Petroleum (Made from Methyl Esters of Soybean Oil) 3741, 3967

Diet and Cancer (Vegetarian Diet Is Not Mentioned; Soy May Not Be Mentioned) 2573, 3108, 3269, 3629, 4634, 4688, 4690, 4787, 4812

Dietitians. *See* Cooper, Lenna Frances (1875-1961), Battle Creek, Michigan

Diets of primitive humans. *See* Primitive Human Diets

Digestibility of Human Foods 2182

Directories–Soybean Processors (Including Soyfoods Manufacturers), Researchers, Conference Attendees, and Other Names and Addresses Related to Soyfoods, Vegetarianism, Macrobiotics, etc. *See* also Directories–Japanese American in USA 1040, 1460, 1849, 1881, 2248, 2328, 2376, 2424, 2465, 2484, 2597, 2853, 2926, 2956, 3027, 3686, 3723, 3800, 3963, 3964, 4052, 4210, 4251, 4404, 4461, 4705

Diseases of Soybeans (Bacterial, Fungal, and Viral / Virus). *See* also: Nematode Disease Control 3790, 3833, 3835, 4058
