'High Protein and 'Low Protein': Meat, however, is not the only food element which is high in protein. Eggs are quite as high, and white of egg far higher. The yolk of egg contains a great deal of fat, and is relatively low in protein. Milk, cheese, peas, beans, and peanuts are, like yolks of eggs, only moderately high in protein. Any or all of these 'high-protein' foods may be used with advantage so long as they do not predominate. They should be balanced with a

corresponding amount of 'low-protein' foods, such as fruits, sweets, butter, cream, and fats. Cereals, bread, potatoes, most vegetables, and nuts are intermediate, containing protein in about the normal proportion.

"I can now partly understand why those who adopted vegetarianism a generation or more ago met sometimes with failure and sometimes with success. In a general way, it is extremely probable that those who succeeded, and who became enthusiastic on the subject, like Benjamin Franklin, were those who happened to reduce their protein to the normal level, and that some of those who failed owed their failure to the fact that, dropping out meat and using only low protein foods, they had insufficient protein to nourish their tissues. In consequence, they became anemic, and many of them died. Others failed because their protein, after the exclusion of meat, remained just as high as before, or was even increased, especially by the too free substitution of eggs.

The Poisons in Flesh Food: The second objection to meat-eating found by modern physiology is that meat contains poisons, and increases the production of poisons in the body. It is well known that animal tissue is a 'factory of poisons.' Even the purest foods produce some poison when consumed. The liver and the kidneys, in fact, are organs the chief work of which is to destroy and eliminate poisons. The flesh of an animal must necessarily contain a certain amount of these poisons on their way toward elimination. When, therefore, flesh is used for food, our bodies have to deal not only with the poisons which are manufactured by us in consuming the flesh, but also with the poisons already manufactured by the animal whose flesh we eat.

"Furthermore, it has recently been discovered that meat encourages the growth of bacteria in the large intestine, and that the poisons produced by these bacteria are very likely to be absorbed into the system, producing depression and other disagreeable symptoms—at times, it is believed, causing acute diseases such as rheumatic gout and pernicious anemia. In a recent experiment it was found that without meat the feces of the person experimented upon contained from twenty to fifty million bacteria per gram. The same person, after two days of meat-eating, excreted feces containing no fewer than twenty-five billion bacteria per gram—or five hundred times as many as when abstaining from flesh food.

"The Bacteria in Milk: We are now learning that the virtue of milk is greatly injured by bacteria. As a consequence, we are, by greater care for cleanliness, reducing the bacteria from several million per cubic centimeter to a hundred thousand, or in the best milk to ten thousand, and in some cases even to one thousand. The result is that where the cleaner milk is used, there has been a great decrease in children's diseases.

"In exactly the same way, it is probable that the effort of dietitians in the future will be directed largely to reducing the number of bacteria in the feces. This can be accomplished

in various ways. One, suggested by Metchnikoff, is by using sour milk, buttermilk, or lactic-acid kumiss—not yeast-made kumiss—as a disinfectant for the intestines; another is by reducing the quantity of meat consumed, or, still better, by wholly excluding flesh food.” Address: Prof. of Political Economy, Yale Univ., New Haven, Connecticut.

2688. Baker, Alfred. 1908. *The life of Sir Isaac Pitman* (inventor of phonography). London: Sir Isaac Pitman & Sons, Ltd. xi + 392 p. Illust. Index.

• **Summary:** Sir Isaac Pitman (1813-1897) was an English educator and phonographer, the inventor of the most widely used system of English shorthand, known as Pitman shorthand and a lifelong advocate of spelling reform.

Chronology: 1813 Jan. 4—Pitman is born at Trowbridge, 12 miles southeast of Bath, in the county of Wiltshire. He was one of 11 children born to Samuel Pitman and Maria Davis Pitman. He had little formal schooling, and was largely self-educated.

1833—Starting this year he writes out all of his correspondence in shorthand in a letter book, afterwards transcribing these letters in longhand for despatch to the addressees (p. 30).

1836 early—He opens a private school at Wotton-Under-Edge. One of the subjects taught was shorthand.

1837 (about)—“He knocked the bung out of his beer barrel and poured its contents down the sewer, and for the rest of his life discontinued the use of intoxicating liquor in any form” (p. 28).

1838 (about)—At Wotton “he adopted a vegetarian diet. An unsuccessful attempt to kill a fowl for the cook led to humanitarian reflections, and a resolve to dispense with animal food” (p. 28).

1838—He converted from a Wesleyan (Congregational) to the religion of Emanuel Swedenborg. Before converting he read with delight a work by the Rev. John Clowes (Rector of St. John’s, Manchester) in which some of the doctrines of the Swedish seer were explained (p. 26). 1862 Sept.—In *Weldon’s Register*, a popular periodical of the time, a character sketch of Isaac Pitman appeared, written by Mr. William White (author of a voluminous biography of Swedenborg and his New Church). White was associate with the New Church publishing work. White began by noting that Isaac Pitman was not well known in England, even though he had brought about a great work in his generation. White wrote that Pitman was the most diligent and hard-working man he knew, and this printing office in Bath was a model of good order and cleanliness. Moreover, Pitman delighted in regular walking for many miles as exercise. Like John Wesley, “he is very abstemious; wine, beer, or spirits of any kind never pass his lips: nor fish, flesh, nor fowl. For years he has been a strict vegetarian; and, but for a cold now and then, he has enjoyed perfect health” (p. 158).

1879—A letter he wrote to *The Times* (London), over

the signature of Eizak Pitman from the “Fonetik Institiut, Bath,” and spelled “fonetikali,” led to a facetious story about Pitman, with a humorous illustration, in *Punch* (15 Feb. 1879). “It is mainly a commendation of Vegetarianism and Teetotalism, which he, being now “siksti-feiv yearz of aij,” has practiced for the last 40 years” (p. 218-19).

1887—First International Shorthand Congress held in London.

1894—Pitman is knighted to become Sir Isaac Pitman.

1897 Jan. 12—Pitman dies. Address: England.

2689. Lust, Benedict. 1908. Removal notice. *Naturopath and Herald of Health (The)* (New York City) 9(12):[367]. Dec.

• **Summary:** “It gives me great pleasure to announce, that we have succeeded in finding better and larger quarters for our Naturopathic Sanitarium in New York as well as for our Publishing Department. On or about December 15th, we will move anything and everything, the store included, to the building at No. 465 Lexington Avenue [Manhattan], between Forty-fifth and Forty-sixth Streets, where everything in the future will be transacted. The basement will be fitted up for

the store and for the publishing office and on the first floor will be the parlor, lecture hall, dining room, treatment rooms for the outside patients, and a general office. The other three floors will be used for patients who stay in the house. The top floor is arranged for the American School of Naturopathy.”

“At this building are facilities for 100 guests... The table will be strictly naturopathic-vegetarian,... The location is most excellent, right near the Grand Central Depot,...

2690. Liga Vegetariana de Cataluna [Vegetarian League of Cataluna]. 1908. New vegetarian society. Barcelona, Spain.

• **Summary:** Source: Riera Paula, A. 1963. “Vegetarianism in Barcelona, 1907 to 1963.” *British Vegetarian*. Sept/Oct. p. 178-81. “In 1907 Mr. Santiveri, with doctors José Falp, Joaquín Collet, Raimundo Comet, Fargas, and Salvador Badía, agreed in organising a Vegetarian Society and publishing a magazine to spread the Nature Cure Movement...” “1908.—The first Vegetarian Society was founded in Barcelona under the name of ‘Liga Vegetariana de Cataluña,’ and a magazine was published under the title, *Revista Vegetariana Naturalista*.” Under the year 1919 on the timeline, it says, “Also constituted was the ‘Sociedad Vegetariano-Naturista de Cataluña’ at the building of the Instituto Hispanoamericano.” It is not clear whether this was the *Liga*, reformed and renamed after World War I, or a separate society. This society began publishing a health-related magazine called *Naturismo* in 1920 and a physiatric magazine called *Regeneracio* in 1921. Also in 1921, the “Instituto Naturista Ferrándiz was founded to give instruction in Naturism, Anatomy, Physiology, Biology, Naturotherapy, Massage, Vegetarian Cookery, Natural History, etc.” This institution survived World War II, unlike several other vegetarian and natural living societies of the time. “1931.—The Sociedad Vegetariano-Naturista de Cataluña is dissolved and the Sociedad Naturista de Barcelona was created.” There is no information available for 1932 to 1942, but in 1961 “Professor J. Cervera succeeded in constituting the Asociacion Vegetariana de Barcelona at the Instituto Naturista Ferrándiz’s headquarters.” Again, it is difficult to tell whether this association was a re-formation of pre-war societies or an entirely new establishment.

History of Spanish Vegetarian Societies. 2004. <http://www.ivu.org/history/societies/spain.html>. “We believe that the first vegetarian society in Spain was founded in 1907, probably in Barcelona.” Note: According to Riera (1963, see above) the founders agreed to organize a vegetarian society in Barcelona in 1907, however, it wasn’t actually founded until 1908. The website quotes a passage from the January 1909 issue of the *Vegetarian Messenger* (Manchester, England): “Dr. Danjou has paid a visit to the vegetarian friends in Spain. Both guests and hosts appear to have derived great pleasure and profit from the intercourse. *El Regimen Naturalista*, the organ of the Spanish Vegetarian Society, and *Revista Vegetariana*, which represents the ‘Lliga

[sic] *vegetariana de Catalunya*,’ give long and appreciative accounts of the meetings.” This implies that the Spanish and Cataluña societies were distinct. In 1963 the IVU Congress was held in Barcelona, and the meeting minutes conclude: “Thanks were given to the Spanish Vegetarian Societies for their kind hospitality, and to commemorate the occasion the president of the IVU presented a silver bowl suitably inscribed to the president of the *Asociacion Vegetariana de Barcelona* (Prof. D.M. Cervera Cebola).” Address: Barcelona, Spain.

2691. National Food Reform Association. 1908. Reasons for food reform. London: National Food Reform Association. 40 p. 21 cm.

• **Summary:** The title page states: “An account of a private meeting held at 54 Mount Street, Grosvenor Square, London, February 26th, 1908, to hear proposals for a new departure in the movement towards a more rational and humane diet. Chairman—Eustace Miles, Esq., M.A.” The names of eleven speakers are listed. They generally advocate a vegetarian diet. Address: 40 Chandos Street, Charing Cross, London, England.

2692. [Kiev Vegetarian Society]. 1908. New vegetarian society. Kiev, Russia.

• **Summary:** Source: *History of the Russian Vegetarian Societies*. 2004. <http://www.ivu.org/history/societies/russia.html>. A quotation from the February 1910 issue of *Vegetarian Messenger* (Manchester, England) indicates that a society was formed in Kiev in 1908. All vegetarian societies were shut down following the revolution of 1917, so the Kiev society only lasted until between 1917 and 1929. Address: Kiev, Russia.

2693. Atti del II Congresso Internazionale di Terapia Fisica [Proceedings of the Second International Congress of Physical Therapy]. 1908. Rome, Italy: Tipografia Nazionale de G. Bertero E.C. 938 p. Held 13-16 Oct. 1907 in Rome, Italy. [Fre]

• **Summary:** In Volume I, Part II, Theme II, pages 216-220 is a French-language article by Dr. Rahmiel (of Crajova, Romania) titled “Soya phagie [Soya as food].” It begins: Diet therapy has as its goal the prevention, improvement, or treatment of nearly all maladies. He also discusses vegetarianism. Address: Dr., Crajova (Romania).

2694. Baltzer, Eduard. 1908. Vegetarisches Kochbuch fuer Freunde der natuerlichen Lebensweise. Neu bearbeitet von Karl Lentze. 16. verbesserte und vermehrte Auflage [Vegetarian cookbook for friends of the natural way of living. Newly edited by Karl Lentze. 16th improved and expanded edition]. Leipzig, Germany: K. Lentze. xiii + 206 p. Portrait. [60+ ref. Ger]*

• **Summary:** The author lived 1814-1887. Address: Germany.

2695. Battle Creek Food Co. 1908. *Healthful living: Fundamental facts about food and feeding*. Battle Creek, Michigan. 64 p. *

• **Summary:** On the cover of this booklet is an illustration of a mother serving her family of three (husband, son, and daughter) seated around a dining table.

Several other undated editions were also published. Address: Battle Creek, Michigan.

2696. Black, George. 1908. *A manual of vegetarian cookery*. London: Horace Marshall. [122] p. 22 cm. *

• **Summary:** Near the front of the book, on unnumbered pages, are advertisements for vegetarian boarding houses and restaurant (Taredo, Torquay, Castle's Vegetarian Restaurants), nut foods, health foods, health food stores, food reform supplies, Mapleton's Nut Foods, Marmite, etc.

One half-page ad is for "Seven of 'Pitman' delicious 1001 health food specialties. In place of meat and free from its dangers." (1) Brazose Meat. (2) Vigar Brawn. (3) Tokio Baked Beans. (4) Placeomeat Sandwich Biscuits. (5) Vegetable Soups, in 12 varieties. (6) Nutmarto Potted Paste. (8) Vigar Gravy Essence. "Carriage [post] paid on orders for 5/- [shillings] value. The bottom half of this page has an ad for the "'Pitman' Fireless Cooker." Address: England.

2697. Broadbent, Albert. 1908. *Fruits, nuts & vegetables: Their use as food and medicine*. Manchester, England. 67 p. *

• **Summary:** Advertisements on pages 58, 60, 62, 66.

2698. Carrington, Hereward. 1908. *Vitality, fasting, and nutrition: A physiological study of the curative power of fasting, together with a new theory of the relation of food to human vitality*. London and New York: Rebman Co. xxxix + 648 p. Illust. 24 cm. *

• **Summary:** Carrington is also the author of *Vitality, Fasting and Nutrition, The Coming Science, Death: Its Causes and Phenomena* (jointly), etc.

Another large book on fasting is entitled 'Vitality, Fasting, and Nutrition,' by Hereward Carrington (Rebman Co., New York, 630 p.). Note: Hereward Carrington lived 1880-1959. "A distinguished British psychical researcher, he is the author of many important and popular books on psychic subjects... In 1900, at the age of 19, he joined the Society for Psychical Research" (SPR) and thereafter devoted his life to these studies.

2699. Colcord, Anna L. (Mrs.). 1908. *A friend in the kitchen: or What to cook and how to cook it*. Containing 400 choice recipes carefully tested. 16th ed. Takoma Park Station, Washington, DC: Review and Herald Publishing Association. 112 p. Illust. Portrait. 20 cm.

• **Summary:** One chapter in this vegetarian cookbook, titled

"Substitutes for meats," contains many Biblical quotations opposing meat eating. The recipes are based mostly on nuts, lentils and peas.

Another chapter, titled "Specially prepared health foods: Nuts, oils, etc.," gives recipes including: homemade "Peanut butter" (dry roast briefly in an oven until the skins can be rubbed off easily. "Grind, and cook for several hours in a double boiler with no water added to the nuts." No salt is added). "Peanut cream" ("Mix one tablespoon of nut butter with two or three spoonfuls of water to a smooth cream. Then add one-half cupful of water a little salt and stir well together"). "Peanut milk" ("Make the same as peanut cream, only add more water"). Almond butter. Almond milk and cream. Cocoanut milk and cream. Home-made granola. Nutmeat. Protose steak. Protose cutlets. Nut gravy. Other chapters (p. 98-110) include "Simple dishes for the sick" (with recipes for Gluten gruel, Graham gruel, and Rice gruel), "Food for infants," "Remember the Sabbath Day to keep it holy," "Food combinations," "Time required to digest various foods" (Rice, apples, and granola take the least time, 1 hour; Roasted pork takes the longest, 5 hours and 15 minutes; animal foods generally take longer than foods of plant origin), "How to become a vegetarian," and "Vegetarianism in London."

A photo of the author, a Seventh-day Adventist, and her signature faces, the title page. Note: This is the second earliest U.S. document seen (March 1999) that mentions almond milk. Soy is not mentioned in this book. Address: USA.

2700. *Die Vegetarier: Schwank in 1 Aufzug* [The vegetarian: A farce in one act]. 1908. Heidelberg, Germany: Karl Hochstein. 24 p. Volkstheater. Nr. 6. [Ger]*

• **Summary:** The title uses a play on words. The German word Schwank can mean either "farce" or "slim and slender." Address: Germany.

2701. Earle, Maria Teresa [Mrs. C.W. Earle]; Bryan, Violet [Mrs. Hugh Bryan]. 1908. *Diet difficulties with notes on growing vegetables*. London: Truslove & Hanson, Ltd. 80 p. 16 cm. [14 ref]

• **Summary:** This book about vegetarianism contains a "List of books useful to those who would further study the subject of a fleshless diet" (p. 68). The authors names are listed on the title page as "Mrs. C.W. Earle and Mrs. Hugh Bryan."

On the 2 pages before the title page is an ad for Eustace Miles Proteid Food (and 3 other foods), and for Pitman Health Foods—including Brazose Meat (made from Brazil nuts), Tokio Baked Beans, and Nutmarto Potted Paste ("far superior to meat and fish pastes"). Address: England.

2702. Freshel, Maud Russell Lorraine (Mrs.). 1908. *Six hundred recipes for meatless dishes*. Originated, collected, and arranged by M.R.L. Sharpe. Cambridge, Massachusetts:

The University Press. viii + 323 p. Recipe index. 22 cm.

• **Summary:** On the cover of this important, early vegetarian cookbook is written “The Golden Rule Cook Book.” Later editions were published under the title *The Golden Rule Cook Book* in 1910 and 1926. The author’s full name was Mrs. Maud Russell (Lorraine) Sharpe; thus her maiden name was Maud R. Lorraine. Born in 1867, she sometimes writes her first name “Emmarel” (i.e. for M.R.L.).

Worcestershire sauce is called for in many recipes in this book; see *The Golden Rule Cook Book* (1910). Address: Providence House, Chestnut Hill, Massachusetts.

2703. Gautier, Armand. 1908. *L'alimentation et les régimes chez l'homme sain ou malade*. 3e édition [Diet and dietetics for healthy or for sick people. 3rd ed.]. Paris: Masson & Co. xx + 750 p. See p. 317-18, 617. Illust. 25 cm. [1 ref. Fre]

• **Summary:** Chapter 19, on vegetables, grains, etc., contains a section titled “*Pois ou fèves de Soja*” (Soja peas or beans, p. 317-18). The first half is almost identical to that in the 1904 edition. It continues: Soy flour contains, on average, only 28% starch, compared with 45% in wheat flour. Unfortunately the taste of this legume is not agreeable.* (* Footnote: This may be because we don't have a good recipe for its preparation. Here is the one Gautier used: Combine 250 gm of dry soybeans with 1 liter of water at 40°C and 15 gm sea salt; soak for 12 hours. Pour off the water and replace it with the same quantity of newly salted water. Cook on low flame for 3 hours, without skimming off the foam. When it begins to foam, add 3-4 gm of sodium bicarbonate, 2 leeks and some spinach leaves. Remove from the fire after sufficiently cooked. Remove the leeks and spinach leaves. Eat in sauce or on a salad).

In Japan, soy flour is mixed with cooked rice and allowed to ferment until one obtains [sic] a sort of pap or sauce which takes the place of meat extract and which is mixed with many foods. In China, the soybean (*le Soja*) is fermented with diced meat, to yield a condiment named *Si-zian*, which is very stimulating for the stomach.

The chapter on vegetarianism is similar to that in the 1904 edition.

Note: Émile Julien Armand Gautier lived 1837-1920. Address: Professeur a la Faculte de Médecine de Paris; Membre de l'Institut et de l'Académie de Médecine.

2704. George, Florence A. 1908. *Vegetarian cookery*. London: Edward Arnold. xiv + 222 p. Index. 19 cm.

• **Summary:** Contents: 1. Notes on vegetarian foods and menus. 2. Soups and stocks. 3. Sauces. 4. Pastes, borders, and garnishes. 5. Casseroles, gateaux, patties, pies, puddings and timbales. 6. Curries, stews and scallops. 7. Macaroni and rice. 8. Gelatines. 9. Croquettes. 10. Plain vegetables. 11. Aigrettes and fritters. 12. Egg dishes, omelets and soufflés. 13. Aspics, creams, and salads. 14. Savouries. 15. Sweets. 16. Miscellaneous. Address: Mistress of Cookery at King

Edward VI's High School for Girls, Birmingham, England.

2705. Hazeldine, Norton F.W. 1908. *Therapeutic dietetics*. 2nd ed. Los Angeles, California: Kingsley, Moles & Collins Co. 68 p. Portrait. 18 cm. *

2706. Hazzard, Linda Burfield. 1908. *Fasting for the cure of disease*. Seattle, Washington: Harrison Publishing Co. 180 p. Port. No index. 20 cm. [1 ref]

• **Summary:** A very interesting and powerful book. Dr. Hazzard, a student of Dr. E.H. Dewey, makes a specialty of fasting for the cure of disease.

Chapter 14, “Criticism,” begins (p. 167): “The subject matter presented in this volume is purely the result of experience and observation extending over twelve years of practice and including to the date of writing over 1,100 cases of continuous fasts. And whenever in the text the word ‘fast’ is used, total abstinence from food of all kinds is meant.”

Moreover, she has treated by fasting during two years prior to this book's publication over 600 persons, having lost only six, and in all of these cases an autopsy showed that death was inevitable.

In the chapter on diet, Dr. Hazzard points out that a long fast should generally “be broken on vegetable broths or on ripe fruit juices.” “Meat in any form should never enter the food supply of normal man” (p. 106).

Vegetarian diets are mentioned several times in the original 1908 edition. See, for example, pages 109 and 110.

Note: This book was reprinted many times (1912, 1913, 1915, 1922, etc.), went through various revised and expanded editions (1922, 1927), and was published by several different publishers under different titles (such as *Scientific Fasting: The Ancient and Modern Key to Health*). Address: M.D., Seattle, Washington.

2707. International Vegetarian Union (IVU). 1908. *New vegetarian society*. London, England.

• **Summary:** IVU is a union of vegetarian societies around the world founded in 1908. Its forerunner was the Vegetarian Federal Union, founded in 1888 in London. The first IVU congress was held in 1908 in Dresden, Germany. Its second congress was held in 1909 in Manchester, England, and the 3rd in 1910 in Brussels, Belgium.

By 1914 there was a Vegetarian Society in almost every country of Europe and many more around the world. They had built a strong international network of friendship—and peace. The 1916 Congress would have been in Paris, France. See www.ivu.org/history/ Address: London.

2708. Kellogg Food Co. 1908. *Healthful living: An account of the Battle Creek Diet System*. Battle Creek, Michigan. 72 p.

• **Summary:** The inside front cover, titled “A bit of history about the health food business in Battle Creek,” states:

"Thirty-five years ago Dr. J.H. Kellogg, the Superintendent of the Battle Creek Sanitarium, began the preparation of special food products, intended at that time for the use of the patients of the Sanitarium.

"The knowledge of their value grew. New foods were added from time to time as the idea developed. One of the first was a cereal coffee (1876). Later came the invention of Toasted Wheat Flakes (1895), and Toasted Corn Flakes (1901), then Toasted Rice Flakes and a long list of nut foods and other products.

"Dozens of food companies were organized in Battle Creek to manufacture toasted flakes, cereal coffees, and other foods. Millions were made and lost in exploiting the food ideas developed by Dr. Kellogg and the reputation acquired by Battle Creek as a headquarters for health foods and ideas.

"In order to protect the public against further imposition, a company has been organized and incorporated to manufacture and sell Dr. Kellogg's food products made after original and perfected formulæ, which will be known as The Kellogg Food Company, Battle Creek, Michigan."

The price list, near the back of this booklet, gives the prices for 126 foods—including various sizes. Among these are: Almond butter (1 lb can, \$1.00), almond meal, Bran biscuit, Bromose, Diabetic gluten biscuits, Diabetic gluten meal, 40% gluten flour, Gluten meal, Granola, Meltose, Nut butter (1 lb can, \$0.30), Nuttolene, Nuttose, olive oil, Peanut butter (large jar, \$0.25; small jar, \$0.10), Protose vegetable meat, Salted peanut butter (1 lb can, \$0.25), Savora nut butter, Sterilized wheat bran, Taro gluten biscuit, Toasted corn flakes, Toasted rice flakes, Toasted rye flakes, Toasted wheat flakes, Vegetable gelatin, Wafer—whole wheat, Yogurt cheese, Zwieback.

On page 72 is a description of the company's "Peanut butter.—We were the originators of peanut butter, the use of which has become so widespread, and which is now manufactured by many concerns in different parts of the country. But we long ago abandoned the process of roasting the nuts, as we found this to produce harmful effects by setting free the oil and producing certain chemical changes in it. For years our peanut butter has been prepared by a wholly different process, by which the injurious effects referred to may be avoided. In this respect our Peanut Butter differs from all similar products. Prepared from choicest nuts. Put up in pound tins. Most excellent fat producer. Capital for use in sandwiches, for the preparation of salads and desserts. An excellent substitute for butter. Large glass jars, 25 cents; small glass jars, 10 cents.

"Salted Peanut Butter—Same as the preceding, but containing a certain proportion of salt. Pound tins, 25 cents.

"Nut butter—A combination of various nuts. An exceedingly palatable, toothsome vegetable fat which is readily accepted as a substitute for animal fats of all sorts. Pound, 30 cents."

Note 1. This is the earliest document seen (June 2002)

showing interest by Seventh-day Adventists or Dr. John Harvey Kellogg in dietary fiber, or a high-fiber food product (Bran Biscuit, Sterilized Wheat Bran) sold by an Adventist food company. Dr. Kellogg was the founder and director of Battle Creek Foods.

Note 2. This is the earliest document seen (June 2002) that mentions bran in connection with Dr. John Harvey Kellogg. It is also the first commercial product seen with "Bran" in the product name. Address: Battle Creek, Michigan.

2709. Lahor, Jean; Lucien-Graux, -. 1908. *L'alimentation à bon marché, saine et rationnelle* [Food that is reasonably priced, healthful and rational]. Paris: Félix Acan, Éditeur. iii + 284 p. No index. 18 cm. [10 ref. Fre]

• **Summary:** Chapter 11, titled "Vegetarianism and vegetarian restaurants" (p. 146-66) gives accurate, detailed information for France. The Vegetarian Society of France is located at 13 rue Froisart, Paris. We read on p. 162-63: "The soybean (*Le soja*) of Japan, so rich in nitrogen, should also be favored on our tables, no doubt in the form of soy sauce, just as it is in the Far East."

A table titled "List of vegetarian foods which one can have all year round" (p. 166) includes soybeans and peanuts under "dry legumes."

Appendix IV titled "Fruitarianism" (p. 273-77) notes that fruits includes seeds (such as cereal grains and legumes) as well as nuts.

Note: Jean Lahor is a pseudonym. Address: Dr. Cazalis.

2710. Maurel, Edouard César Emile. 1908. *Traité de l'alimentation et de la nutrition à l'état normal et pathologique. Quatrième et dernier volume* [Treatise on food and nutrition in normal and diseased conditions. Vol. 2]. Paris: O. Doin, Éditeur. xv + 666 p. Index (in vol. 4). 25 cm. [Fre]

• **Summary:** The Preface (p. iii) mentions a lacto-ovo-vegetarian diet. The section titled "Practical composition of the average maintenance diet" (p. 323) also mentions this diet.

The section titled "Amounts of food for the lacto-vegetarian and lacto-ovo-vegetarian diets" (*le régime lacto-végétarien et lacto-ovo-végétarien*; p. 331-34) states: Here are then two diets, for which the methodical and truly scientific dosage of food, is among the easiest. I will... pause a few moments on two others, that gain more and more importance: these are the lacto-vegetarian and the lacto-ovo-vegetarian diet.

Note: This is the earliest English-language document seen (July 2011) in any language that introduces concise terminology for lacto-vegetarian or lacto-ovo vegetarian.

For the first, only vegetables are eaten with milk; and the second includes eggs at the same time. Specific information follows on portions with calorie amounts given, emphasizing

the ease of scientific dosage.

One can even see how easily, thanks to some rapidly acquired familiarity, the diet can be varied from one day to the next. With this constant base, milk, bread, and eggs, one can, taking into account their caloric value, change vegetables and fruits every day, and thus keep monotony out of this diet.

This monotony would be even more easily avoided when milk can be taken other than as a drink, and when it can be used to make soups or even plates of milk puddings, flans, custards, etc. In these cases, the milk for the meal would be replaced by an aromatic vegetable concoction or simply by boiled or mineral water. It's the same for eggs, which can be prepared to the taste of the subject.

Thanks to the directions I just gave, the application of this diet for feeding women presents no difficulty. The same rules are applicable.

These two diets allow the ordinary distribution of meals, including the *goûter* (afternoon snack). The first meal will take place around 7 a.m., the second at noon, snack at 4, and dinner at 7 p.m.. Breakfast and the snack should be composed only of milk, and at most a small quantity of bread, around 50 gm.

These two diets can be easily calibrated. Nevertheless, you can reach a high level of accuracy for practical purposes. But, for them, as for the two previous, I should recall the following facts:

1. For all, excluding milk, mitigated lacteal, lacto- and lacto-ovo-vegetarian, two conditions are first indispensable: the caloric value and the amount of protein.

2. Milk, whose caloric value is raised to 1,000 calories/liter, other than it makes the dosage of an exclusively lacteal diet as easy as possible, from the point of view of calories, also gives a guarantee in what concerns proteins; and also, except perhaps for salt and iron, for all the other minerals, including water.

3. The mitigated diet, regulated as I have indicated, gives the same guarantees on all points, except for the two same exceptions.

4. The same goes for the two lacto- and lacto-ovo-vegetarian diets.

The introduction of fruits and vegetables in food can only raise the quantity of salty materials contained therein. On one hand, in a general manner, vegetables substances are in fact richer than animal in potash, lime, magnesium, phosphorus or sulfur (*phosphore de soufre* [meaning unclear]) and, on the other hand, their preparation tends to the natural addition of salt of which we have feared insufficient in milk and eggs. One can then conclude that these two diets give a complete guarantee in all regards.

In the concluding portions of the book, in the section titled "General observations" (p. 647+) is a subsection (p. 649) comparing a meat diet with a vegetarian one. A child or adolescent should not receive more than 2 gm/kg [of

protein]. That's the maximum; the normal ration should remain 1.75 gm/kg. Nothing, then, would justify quantities attaining 3 gm/kg; and, even less, a protein consumption given without counting, having no other limits than appetite, a deceptive guide if ever there were, or digestive power, even more deceptive. This question seems determined. Here we discuss if these 1.75-2 gm/kg protein should be taken from the animal or vegetable kingdom.

All my observations, confirming those of Bouchard and Le Gendre, lead me to reduce, as much as possible, animal food in this period of life. This rule should be followed with care, especially at puberty and beyond. Meat, I can affirm, is the most powerful excitant of the genital organs. I do not believe that this property comes from its protein content, because vegetable proteins do not have the same influence. It must be then a principal independent of proteins but that is taken with them [in meat].

Although I cannot pinpoint the cause of it, the result is not less certain. For, I do not believe it necessary to insist, in order to make apparent the dangers of a substance that overexcites these organs at a time when hygiene, in harmony with morality, should tend to leave them in repose. It seems that meat exaggerates all secretions, and again those of the genital organs more than all others. Under its influence, erotic dreams appear, nocturnal pollutions [wet dreams] (*pollutions nocturnes*), and in a child the habits that can be a consequence of it.

A vegetarian diet (*régime végétal*, p. 650), to the contrary, calms the senses, or at least leaves them in repose. It is evidently not without reason that most of the cloistered religious orders have made vegetables the base of their food. They have been driven by attentive observation, further facilitated by the avowal of confession. Celibacy and its consequences can only be asked under this condition. I do not believe that a young meat-eater (*mangeur de viande*) could remain chaste, in all senses of the word, even being cloistered, and much less if he lives in the world.

Besides this reason... I must point out the influence that animal food can exert on character.

The exaggeration of meat in rations, even when it replaces other food only from a caloric point of view, renders children willful, angry, and impulsive. They lose all measure and restraint; and their direction becomes more difficult... The same children became much more docile after a few months of an almost vegetarian diet; and under conditions such that it is difficult not to attribute to the change in diet the modification that is produced in their character.

Surveillance of mastication; silence during the meal (p. 650).

This concerns especially children from eight years and above. Up until then, in fact, except for bread, food is taken in its boiled state and does not require much chewing. But from the moment when meat, vegetables, and fruits enter into the diet, it is very important to pay attention to chewing.

This awareness is useful, first because chewing facilitates digestion of these foods that the digestive organs are not used to, and also because it will give children good habits. Certain adults owe their digestive troubles to this sole cause; they swallow food without chewing it; and that's a fault that goes back to their early education. Address: M.D., principal physician for the Naval Reserves, Prof. at the Faculty of Medicine, Toulouse (Médecin principal de réserve de la Marine).

2711. McCabe, Joseph. 1908. The life and letters of George Jacob Holyoake. Vol. I. London: Watts & Co. viii + 336 p. Introduction by Edward Owen Greening. Illust. [30+* ref]
 • **Summary:** "His career was one long conquest of self, in remarkable ways."

Concerning Alcott House / Concordium: "The settlers were imbued with the ideas of the mystic Pierrepont Graves as well as Robert Owen, and lived austere."

"It was from this Spartan home that an offer of teaching employment came to him in 1843. It ran:

"Probably you have heard of a very small community now associating together at Alcott House, Ham Common, Surrey, under the name of Concordium: a sort of industrial college, at this present time, having a printer and printing press, tailors, shoemakers, bakers, gardeners, and other labourers: both sexes associating kindly together as one family, and though not manifesting any great doings as yet, are to be highly commended for their sincere and resolute opposition (in practical habits) to the principles, practices, and manners of the Old Immoral World—reprobating war, slavery, and intemperance, and gluttony, and bigotry, not only in profession by wordy declamation, but by discontinuing and discouraging all habits that tend and lead to the above horrors. The Concordists at Alcott House wish to form a school there, and are desirous to meet with a competent educator, previous to agreeing to receive any more children into the establishment, there being four now there. The diet is exclusively limited to bread-stuffs and farinaceous food and fruits, fresh and dried, of every sort that can be obtained, and all kinds of vegetables, and water is the only drink supplied. Neither milk, butter, cheese, eggs, nor any species of flesh meat, nor animal food: neither tea, coffee, nor any of those artificial stimulants do the Concordists partake of, or supply to others. There are married couples, and parents and children now in the Concordium. The working members receive no wages, but are supplied with lodging, food, clothing, washing, baths, firing, candles, and whatever is needful, for their giving their services to the Concordium. About eight hours daily is the usual average for them to work: eight for sleep: and eight for bathing, recreation, meals, and improvement."

Note: In 1843 the diet served at Alcott House was pure vegetarian [vegan]. Address: Author, England.

2713. Booth, Bramwell. 1908? Why do we recommend vegetarianism. Lahore, India. 10 p. *

• **Summary:** Bramwell Booth lived 1856-1929. Address: Chief of Staff, Salvation Army.

2714. Senn, Charles Herman. 1908? Manual for diabetic diet and cookery. London: The Food and Cookery Publishing Agency. 63 p. Undated. 21 x 10 cm.

• **Summary:** An ad on page 4 shows that Bonthron & Co. on Glasshouse St. and on Regent St. in London makes diabetic foods, including Gluten Bread, Gluten Biscuits, Gluten Cressini, and Gluten Rusks. "In preparing foods for people suffering from Diabetes, the materials used must be such as are practically free from starch and sugar" (p. 5). Pages 8-9 discuss gluten flour, gluten and casein in breads. The author recommends the use of saccharine as a sweetener. Soy is not mentioned.

The author lived 1862-1934. Address: Examiner in sick-room cookery, to the London Hospital, etc.

2715. Sanderson, Mary. 1909. Substantial meals without meat: A vegetarian diet which has proved acceptable to many. *Good Housekeeping* 48:108-09. Jan.; 48:243. Feb.; 48:356. March; 48:513-14. April; 48:629-30. May.

• **Summary:** Page 108: "Our morals, our dispositions, our ability to meet and battle with the problems of life, are dependent upon our 'feelings,' and inasmuch as our feelings are largely the reflection of the conditions of digestion, blood and nerve, what we eat becomes of paramount importance.

"The several tissues of the body demand that there shall be a variety of elements in the food to keep the body properly nourished. A knowledge of these elements and some idea of their proper proportions are essential to successful cookery. Moreover, the needs of the system require that foods shall be suited to it under all circumstances and conditions. Material wholesome in itself may not be appropriate. Season, climate and occupation are factors that need consideration in the selection of foods. In these menus I have avoided the use of flesh foods because I believe them to be nonessential and in many cases injurious. Care in selecting and combining grains, nuts and vegetables will supply abundance of the nitrogenous, or muscle-making element, and in a much more satisfactory and easily assimilable form. They are intended to help the housewife who is interested in the health of her family, but through lack of opportunity has not the knowledge necessary to gain best results; for health demands that the food be made palatable as well as digestible.

"We believe that primitive man was a vegetarian; but time and civilization have materially altered our standards, till flesh meat is considered an essential part of the dietary

of nearly every race. The increase of disease has not been confined to man, but animals have become its prey to an alarming extent. Science and inspection have accomplished much, but there is more impoverished meat on the market than is generally understood..." Address: M.D.

2716. [Lust, Benedict]. 1909. Vegetarianism. *Naturopath and Herald of Health (The) (New York City)* 14(1):4-5. Jan. Whole No. 182.

• **Summary:** "Eat only the luscious, ripe fruit of the orchard, the golden grains of the harvest field, and wholesome vegetables of the garden as God bid you to do.—*Genesis*. 1:29, 2:15, and drink pure water, and obey God's Word.—*Matthew* 4:4. If you truly obey God's commands, He will bless thy bread (not dead flesh, tobacco, ice cream, etc) and bless thy water (not milk, tea, coffee, wine, beer or liquors) and take sickness away. *Exodus* 23:25. Do you enjoy these heaven sent blessings. If not, why disobey? Why not obey God's Word and be blessed with health, peace, and be free from condemnation. Use no salt, pepper, vinegar or any seasoning on your food. Eat your food natural and have a natural appetite. Salt, pepper or seasoning irritates, destroys the food, makes an abnormal appetite, and causes ill-health. Do not make your body, the temple of the spirit, into a den of thieves with dead flesh as Jesus called it, nor into a grave yard to bury dead carcasses or rotten carrion therein. It is impossible to get a mouthful of dead flesh that is not rotten..."

2717. Lust, Louise (Mrs.). 1909. The practical naturopathic vegetarian kitchen—Cooked and uncooked foods. *Naturopath and Herald of Health (The) (New York City)* 14(2):98-99. Feb.

• **Summary:** From her *Naturopathic Cook Book*. "The preparation of food is a science as well as an art. As a practicing naturopath and instructor of dietetics for about eighteen years, I have found the need of a simple instruction in wholesome vegetarian cooking with reference to dietetics in health and disease." This need has been expressed to her by many "who are interested in hygiene." All though there are more than 1,700 books on the subjects of diet and cookery, dyspepsia prevails.

Note 1. Her first name is written "Louise" not "Louisa."

Note 2. Volume 8 of this journal covered all of 1908. It is not clear why the volume number has suddenly increased by five, so that Volume 14 covers all of 1909.

2718. *Theosophist (The) (Theosophical Society, Madras, India)*. 1909. From the editor. 30(5):401. Feb.

• **Summary:** "Dr. Edal Behram's wonderfully successful work for temperance and non-flesh-eating goes to the credit of the T.S. Order of Service, and we trust that many other such Leagues as his may spring up and work equally well."

2719. Battle Creek Foods. 1909. The only original health foods: A complete list of our products (Ad). *Good Health (Battle Creek, Michigan)* 44(3):Unpaginated. March.

• **Summary:** The company sells seven categories of products: 1. Cereals (15 products), incl. Toasted rice flakes, Granose flakes, Granola, Granuto, and Gluten meal (20 per cent, for gruels, mushes, and purees), Sterilized bran (a gentle laxative). 2. Bakery products (12 products), incl. Graham crackers (plain or sweetened), Sanitas wafers, Zwieback, Sanitas cookies. 3. Meat substitutes (10 products), incl. Protose (made of nuts and grains, ½- or 1-lb can), Savory Protose, Potted Protose, Protose roast, L-Protose (no nuts), K-Protose (resembles veal, no nuts), X-Protose (resembles chicken), Nuttose (made from nuts, 1 lb can), Nuttolene ("Made exclusively of choice edible nuts. A vegetable butter for table use").

4. Other nut products (5 products), incl. Peanut butter (1 lb can, unroasted), Salted peanut butter, Almond butter, Almond meal. 5. Condensed soups (4 products). 6. Savory sauces (3 products). 7. Beverages (3 products), incl. Malted nuts (large bottle), Noko (cereal coffee), Caramel cereal ("The original coffee substitute, containing no burnt molasses or artificial flavoring"). Address: Battle Creek, Michigan.

2720. Gulick, Luther H. 1909. Mistake of eating meat. *Ladies' Home Journal* 26(4):36. March.

• **Summary:** Cites a letter from a reader whose headaches and heart trouble were cured in 1 month by a diet devoid of "purins" [purines]; he stopped eating meat, ripe peas and beans, and stopped drinking coffee, tea, and chocolate. The amount of sleep he needed was reduced by 1 hour per night and his working capacity was increased. He has stayed on the diet for 2 years and stiffness and pain in his back and neck have disappeared. "Several times during the year I tried resuming an ordinary diet. Two days of eating meat would result in a severe headache on the third or fourth day, pain in the eyeballs, stiffness in the back of the neck, and a higher heart rate—in short, all the old symptoms."

"It is pretty certain that people who have a large amount of muscular work to do have to eat meat... Meat contains vigorous stimulants..." But it is not good for people who live a sedentary life. We must modify our diet to meet modern conditions. Address: M.D., author of "The Efficient Life".

2721. Friedenwald, Julius; Ruhräh, John. 1909. Diet in health and disease. 3rd ed. Thoroughly revised and enlarged. Philadelphia, Pennsylvania, and London: W.B. Saunders Co. 765 p. April. Illust. Index. 22 cm. [33* ref]

• **Summary:** The section titled "Legumes" (p. 108-10) discusses various kinds of beans and peas, the lentil and the peanut—but not the soy bean. However a large table (p. 109) titled "Composition of fresh and dried legumes compared with that of other foods" (Based on Abel, Farmers' Bulletin

No. 121 [1900, p. 17]) includes soy beans, cow peas, chick-peas, and peanuts.

The section on “Diseases in which diet is a primary factor” begins with a subsection on “diabetes mellitus” in which “various Substitutes for bread” are discussed. “Soya biscuits, or bread are made from the Soya bean, a Japanese product. Soya bread was suggested for diabetics by Dujardin-Beaumetz in 1890. Atfield gives the following composition of Soya flour: Protein 41.24%, fat 13.70%, carbohydrate 30.35%, phosphates 4.81%, other salts 0.52%, moisture 9.38%.

“Dujardin-Beaumetz gives the following as the composition of Soya bread: Water 45.000%, protein 20.168%, fats 9.350%, starch and sugar 2.794%, and phosphoric acid 0.863%.” Aleuronat is a vegetable albumin flour made from wheat. “Peanut flour has also been used with success in making various dishes for the diabetic.”

The section on “Vegetarian diet” (p. 44) states that there are various points of view about its healthfulness, but most have found that animal protein can be entirely replaced by vegetable protein without any appreciable change in the nitrogen balance. The amount of protein required seems to be related to the amount of muscular work performed.

During fasting (p. 44-45), according to Von Noorden, the amount of nitrogen excreted daily in the urine was as follows: For 5 days before fasting: 16.2 gm. During the first 5 days of the fast: 12.9 gm/day average. From the 21st to 25th day: 4.7 gm/day avg. From the 26th to 30th day: 5.3 gm. The experiment lasted 30 days and was conducted by Luciani on the professional faster Succi.

A table (p. 68) shows the “Comparative composition of various kinds of milk” of mammals. Only the milk of the mare contains less total protein (1.3%) than the milk of women (2.3%). Dog’s milk contains the most protein (11.2%). “Milk ferments (p. 69): Milk contains various ferments [enzymes]... The principal ferments are proteolytic ferments, resembling trypsin, but less sensitive to acids; fat splitting ferments, lipase, amylase, amylase, peroxidase, and catalase. Chicory is the most common adulterant of ground coffee (p. 201).

Note: This is the earliest document seen (Nov. 2021) that mentions “peroxidase” (or “peroxidases”) in connection with enzymes in soybeans. It is also the earliest English-language document seen (Nov. 2021) that contains the word “peroxidase” in connection with soybeans.

In the section on “Vegetable foods,” a subsection titled “Vegetarianism” (p. 113-14) begins: “It will not be out of place here to point out the disadvantages of an exclusive vegetable [vegan] diet.” “Persons subsisting on a purely vegetable diet for any great length

of time are apt to lose strength, as well as physical and mental vigor and endurance. Laborers are unable to perform the same amount of work they could on a diet containing animal food... A purely vegetable diet, if persisted in, is also said to lessen the powers of resisting disease” (2 references are given).

The section titled “Artificial food preparations” starts with a subsection on casein preparations, which include Nutrose, Eucasein, Sanos, and Plasmon. Artificial proteins prepared from vegetables include Roborat (made from rice, wheat, and maize), Legumin (from legumes), and Aleuronat.

In the section on “Recipes” under “Beverages” is a recipe for “Almond milk” (unsweetened). There are no soy recipes in this edition.

Julius Friedenwald lived 1866-1941. John Ruräh lived 1872-1925. Address: 1. M.D., Prof. of Gastro-Enterology; 2. Prof. of Diseases of Children. Both: College of Physicians and Surgeons, Baltimore, Maryland.

2722. Beattie, W.R. 1909. Peanuts. *Farmers’ Bulletin* (USDA) No. 356. 44 p. May 1.

• **Summary:** Contents: Introduction. Soil and climatic requirements of the peanut. Preparation of the soil: Time for plowing, depth of plowing, preparation for planting. Fertilizers and preparatory crops: Cropping system and green manures, the use of stable manure, commercial fertilizers, importance of lime in the soil, the peanut as a nitrogen gatherer. The seed and its selection: Importance of planting good seed, improvement by selection, planting shelled or whole seed. Time and methods of planting: Distance to plant, quantity of seed required, depth to cover the seed, tools and methods of planting. General cultivation: Method of cultivation, tools adapted to cultivating peanuts. Harvesting: Proper time for digging the crop, methods employed for lifting the plants, curing process and care of

FIG. 1.—Map of the United States, showing the area adapted to the production of peanuts.

crop after digging. Picking and cleaning: Picking by hand, use of machines for picking, care of peanuts after picking, preparation of peanuts for market, methods of cleaning peanuts in the factory, cleaned vines as stock feed. Varieties of peanuts: Descriptions of varieties, Virginia Bunch, Virginia Runner, North Carolina, Spanish, Tennessee Red, Dixie Giant, varieties for marketing, varieties for stock feeding. The uses of the peanut: Important uses for human food, the uses of peanut by-products as foods for live stock, possibilities in the manufacture of peanut oil. The importance of the peanut as a farm crop: The value of peanut hay for feeding purposes, the value of the entire peanut plant as forage, the use of peanuts for fattening hogs, methods of handling and curing peanuts for forage. Insects injurious to the peanut. Diseases of the peanut. Conclusions.

Illustrations show: 1. Map of the United States, showing the area adapted to the production of peanuts. 2. Disk plow adapted for fitting land. 3. Harrow adapted for smoothing and pulverizing land. 4. Roots of peanut vine, showing the value of this plant as a nitrogen gatherer. 5. Machine for marking land and sowing fertilizer. 6. One-horse peanut planter. 7. One-horse cultivator. 8. Plow type of peanut digger. 9. Machine potato digger in use in digging plants. 10. Machine potato digger adapted for harvesting peanuts. 11. Stakes around which shocks of peanut vines are to be built. 12. Laborer building a shock of peanut vines, showing method used. 13. Peanut shocks placed close together near farmyard. 14. Picking peanuts from the vines by hand. 15. An improved type of peanut-picking machine in operation. 16. Commercial types of peanuts. 17. Virginia Bunch type of peanut. 18. Spanish type of peanut. 19. Peanuts growing in the alleys between rows of corn. 20. Disease appearing upon the leaves of the peanut.

"Introduction: It is not definitely known when and where the peanut was first cultivated. Several allied species of plants are natives of Brazil, and there is every indication that the common peanut originally came from tropical America. Peanuts were introduced into the United States during the earlier days of colonization, but did not become of commercial importance until about 1870. From that time until 1897 the growth of the peanut industry was gradual, but a great increase in the production and use of peanuts has taken place during the last eight or ten years."

"The technical name of the peanut is *Arachis hypogea*, the name indicating the characteristic habit of the plant to mature its fruits underground. The peanut is known under local names of 'goober,' 'goober pea,' 'pindar,' 'ground pea,' and 'groundnut.' The names 'goober' and 'goober pea' are more properly applied to an allied species having no true stem and only one pea in each pod which has been introduced and is frequently found growing wild in the Gulf Coast States. Properly speaking, the peanut is a pea rather than a nut, the term 'nut' having been added on account of its flavor, which is similar to that of many of the true nuts" (p.

7).

Page 31: "The uses of the peanut: To most persons the peanut suggests only the article as it appears for sale whole or shelled and salted, but during recent years the uses of peanuts have become numerous, and include a wide range of utility. The demand for peanuts for use in the manufacture of food preparations is constantly increasing."

"Important uses for human food: Among the more important uses of the peanut for human food are the following: It is eaten from the shell, as salted shelled peas, as blanched peas, in the so-called peanut candies and brittle, in combination with pop corn and puffed rice, in the form of peanut butter, and as an ingredient of peanut and vegetable meats, peanut meal, and salad oils.

"The use of the peanut for eating from the shell when roasted is most important and popular, but the quantity of shelled peas that are first roasted and then salted and sold by the pound is constantly increasing."

"During recent years great quantities of shelled peanuts, especially of the Spanish variety, have been employed for the manufacture of peanut butter. This butter is prepared by the ton in factories, is put up in bottles or tins containing from one-fourth pound to 5 pounds each, and has become very popular as a part of the luncheon menu and for camping and cruising supplies."

"In the preparation of vegetarian meats a portion of the oil is expressed from the ground peanuts, other ingredients, including various vegetable substances, are added, and the whole is crushed and pressed into tins ready for use. In this case the extra oil is either used for thinning peanut butter or sold as a compound for use in further cooking the vegetable meats." (p. 31-33). Address: Asst. Horticulturist, Bureau of Plant Industry.

2723. Clubb, Henry S. 1909. Vegetarian psychology. *Naturopath and Herald of Health (The)* (New York City) 14(5):293-94. May.

• **Summary:** "Psychology, in its broadest sense, is the science of mental and spiritual development... In fact it is the science of man as 'a living soul.'" Man does not have a soul; man is a soul, and a living soul.

"The questions for man in this aspect are: What food will furnish the best material for the construction of my body so as to make it the best possible instrument for my use in the growth and development of my faculties as a living soul? Does killing and eating other animals, my fellow incarnates, contribute to the development of these psychic faculties that are most desirable to me as an immortal being?" Carnivorous food is harmful to man's spiritual development. The ancient Greeks understood this, and it is well expressed in the Bible in Daniel 1:20. Address: Rev.

• **Summary:** Editorial comment on vegetarianism.

2728. Mind. 1909. Foods must be Platonized (Letter to the editor). *New York Times*. June 11. p. A8.

• **Summary:** “Your anti-vegetarian article to-day is far behind the times, if not *The Times*. You insist upon a savage and phlegmatique [phlegmatic] diet, ignoring the race movement toward mental and wireless conditions and powers. Foods must be Platonized to accord with Thought tendencies. Hypathia, Pythagoras, and the over souls ate no bloody steaks and gory carcasses. Oil, honey, olives, nuts, lentils, fruits, and grains are the fitting evolution of foods, the higher alimentation. Try salads with oil, salads with vegetable protein, (like the pulses,) and you will soon feel disgust at your former cannibalism.” Address: New York.

2729. *New York Times*. 1909. Society’s ban on meat: Mrs. Sherman and Mrs. Bryce to advocate it on the North Shore. June 28. p. 5, col. 1.

• **Summary:** Mrs. J. Bryce and Mrs. J.S. Sherman plan vigorous pro-vegetarianism campaign during the summer.

2730. Clubb, Henry S. 1909. Economy in food. *Naturopath and Herald of Health (The) (New York City)* 14(7):446-47. July.

• **Summary:** Shows that a vegetarian diet can also be the least expensive. It also makes the most efficient use of our land. “In the *Logic of Vegetarianism*, by Mr. H.S. Salt, it is shown ‘that the habit of flesh-eating, involving, as it does, the sacrifice of vast tracts of land to the grazing of cattle and

the subsequent starving of agriculture, is far too costly to be justified in the face of an extending civilization...”

It “is from vegetable food that meat is usually produced, and it takes five to seven pounds of grain and other vegetable food in proportion, to produce one pound of meat. Then, if carefully inspected, vast quantities grow for slaughter are condemned as diseased and this immense loss is only lessened by dishonestly putting the condemned cattle into the market in the various forms of preserved meat, which are producing such terrible suffering among the consumers, spreading disease,...” Address: Rev.

2731. Clubb, Henry Stephen. 1909. History of vegetarianism. Chapter 11. *Vegetarian Magazine (The) (Chicago)*. Aug. p. 14-17.

• **Summary:** Contents: St. Matthew a vegetarian. Known as Levi. Continued with the apostles till after the ascension. Wrote his gospel. Fleetwood’s description of St. Matthew’s character and gospel. The “Nazaraei.” The apostolic Christian church largely composed of vegetarians. The first conference. A compromise. St. James the Martyr. The epistle of James. St. James’ remedy for the sick. Address: Rev., Philadelphia.

2732. Drews, George J. 1909. Why some vegetarians fail. *Vegetarian Magazine (The) (Chicago)*. Aug. p. 22-23.

• **Summary:** An oval portrait photo (p. 22) shows George Drews. Address: A.D., Chicago, Illinois.

2733. Howland, John A. 1909. The week's progress: New argument for vegetarians. *Chicago Daily Tribune*. Sept. 5. p. E4.

• **Summary:** "Dr. J.H. Kellogg of Battle Creek, Michigan, declares that the researches of Metchnikoff, Tissier, and others have shown that most chronic diseases may be directly traced to putrefaction processes in the intestines and the absorption into the blood of poisons thus formed, or intestinal autointoxication. He argues that vegetable proteins or tissue building foods less readily undergo putrefactive changes in the intestine, hence are less likely to become a source of poisoning to the body.

"Vegetable protein foods are free from toxins with which flesh foods abound..."

"Vegetable proteins are found in natural foodstuffs, are presented in a properly arranged bill of fare in the right proportions to supply the body needs, whereas proteins in the form of meats are in a highly concentrated form, and hence likely to be taken in great excess, giving rise to the enormous mischief which follows high protein foods as pointed out by Chittenden and Mendel of Yale [New Haven, Connecticut], and others, in recent years." Address: New York.

2735. Clubb, Henry Stephen. 1909. History of vegetarianism. Chapter 12. *Vegetarian Magazine (The)* (Chicago). Sept. p. 10-12.

• **Summary:** Contents: Passages in the Psalms indicating food as a religious subject. Limiting the beneficent operation of providence by eating flesh. Man a free-agent. Not always wise in his freedom. Present gratification man's fall. Flesh a lust feeder. Manna the "Corn of Heaven" and "Angels' Food." How was manna produced? Hoar frost illustrates the method. Science may yet reproduce manna from the atmosphere. The manna of Sinai. The manna of commerce. The manna preserved in the Ark. Would a chemical analysis throw light on its production? Manna as a spiritual emblem. Indulgence of the carnivorous appetite a hinderance to spiritual progress. Same effects now as when the psalmist wrote. Address: Rev., Philadelphia.

2736. *Otago Witness (New Zealand)*. 1909. New Zealand products: Markets in the East. Oct. 6. p. 21.

• **Summary:** "(From our own correspondent). London, Aug. 20. Another hint has been received this week of the genesis of a large market for New Zealand products in the East"—where 400 million people are gradually beginning to adopt European practices.

"The head of the cattle-breeding department of the

Japanese Government (Mr. Hashimoto) is at present visiting this country [Great Britain] to make purchases of stock.

"'Meat-eating,' said Mr. Hashimoto, is on the increase in Japan. Its popularity is increased by the recently advanced theory that an over-consumption of rice is a source of beri-beri. The Japanese peasant does not eat much rice; it is too dear. Barley, vegetables, and fish are his staple foods. The upper and middle classes, however, who have hitherto eaten large quantities of rice, are now slowly beginning to add meat to their dietary. Beef is the favourite dish. It is cut up small, boiled with a native bean sauce [soy sauce] and vegetables, and eaten with the hashi or chopsticks."

About 10-12 years ago Japan began to import European cattle into Japan to improve their native breeds. "'For ploughing purposes, Japanese farmers invariably use cattle. For this purpose the native breeds are good, but for milk and beef they are poor.'"

2737. Clubb, Henry S. 1909. A century of vegetarianism. *Vegetarian Magazine (The)* (Chicago). Oct. p. 8-12.

• **Summary:** "In 1809, just a century ago, there occurred at Salford, Manchester, England, an annual conference of the New Jerusalem Church.

"Among the ministers attending the conference was the Rev. W. Cowherd, in whose church the conference was held. He had been educated for the Episcopal ministry and had served efficiently as assistant rector of St. Johns, Manchester, and while there became a convert to the teachings of

restraint of human conduct, but that it was the divine law in controlling human life, so as to make the greatest possible source of human happiness and enjoyment. As a Swedenborgian he had the example of Swedenborg himself, in confirmation of his conviction, Swedenborg having abstained from eating flesh during the whole period of his remarkable experience.

“Believing that to be consistent followers of Swedenborg they should live as he lived, Mr. Cowherd endeavored to persuade the conference that abstinence from the flesh of animals should be made a part of the discipline of the church. So persuasive and eloquent was Mr. Cowherd that he carried his point with the conference. But although the majority agreed to abstain from flesh, there was a

considerable minority that adhered to the practice of eating flesh, and rather than cause a serious division of the church, Mr. Cowherd and his supporters organized a separate church under the name of “Bible Christian.”

“The effect of Mr. Cowherd’s firmness to the principle was a considerable reduction of his congregation. Many were so much under the influence of custom and appetite that they sacrificed their connection with the church, and Mr. Cowherd was too much a man of principle to sacrifice it to popularity. His church therefore became the first organization for the promotion of that form of temperance which required abstinence from the flesh of animals.

“Mr. Cowherd was equally opposed to the use of intoxicating liquors, so that in point of fact this little Bible Christian church was the first organization for the promotion of temperance on total abstinence principles, and thus became the originator of both the temperance and vegetarian movements.

Emmanuel Swedenborg, and was now preaching in a church erected by himself in Salford. The building was arranged so as to have a front on two parallel streets; one was the front of the church, and the other the front of the dwelling, or parsonage.

“Mr. Cowherd had studied the subject of food from a scriptural point of view and arrived at the conclusion that killing was forbidden in the Decalogue, and that it should not be sustained by the eating of the flesh of other sensitive creatures. He became satisfied that the commandment not to kill was intended not merely as an arbitrary law in

“The exact time when the word ‘vegetarian’ was adopted is not known, and who coined the word is also uncertain. My opinion is that it was formed and adopted by Mr. James Simpson, who was elected the first president at the organization of the Vegetarian Society [in England] in 1847.”

Photos show (1) Rev. Henry S. Clubb. (2) The original Bible Christian Church, under Rev. Cowherd in Salford, England, in which organized vegetarianism and total abstinence were born. (3) Rev. William Metcalfe. (4) Dr. Russell A. Trall. Address: Rev., President of the Vegetarian Society of America, pastor of the Bible Christian Church of Philadelphia, Pennsylvania.

2738. *Good Housekeeping*. 1909. Vegetarian suggestions. 49(4):470-71. Oct. Whole No. 372.

• **Summary:** Begins with a 1-week menu of vegetarian dishes (which include dairy products and eggs) for luncheon and dinner, followed by recipes for several “satisfying dishes” including: Irish moss blancmange. Baked bananas and peanuts. Vegetable oyster soup (made with salsify).

2739. Becker, W. 1909. Zweiter Internationaler Vegetarier-Kongress und 100jaerige Jubilaeums-Feier der Bibelchristen-Gemeinde Salford [Second International Vegetarian Congress and centennial celebration of the Bible Christian Church, Salford]. *Vegetarische Warte* No. 23. p. 258-59. Nov. 13. [1 ref. Ger]

• **Summary:** The Second International Vegetarian Congress met on 16-18 Oct. 1909 in Manchester, England. The 62nd annual meeting of the Vegetarian Society [of the UK] took place at the same time. Countries with vegetarian representatives at this congress were: Netherlands (Dr. A. Meyroos of Rotterdam), Belgium and France (Dr. E. Nyssens of Brussels, Dr. Ajou / Danjou), Sweden and Denmark (Mr. J.L. Saxon of Stockholm and Madame Louise Lombard), Finland (Mr. A. Mahela, Emil Ostermann, Dr. E. Lybeck, and Mrs. M. Poyhoeven—a teacher who received a subsidy from the Finnish government for this trip to study vegetarianism), England (the Vegetarian Society; Prof. John E.B. Mayor of Cambridge, Dr. Axon, Miss Hompes, Mr. Albert Broadbent), Spain (Mr. W. Mann, London). Also: Esperanto through Mrs. Margarete L. Jones; the London Vegetarian Society through Mrs. Nicholson, and the Kellogg Institute through Mr. William M. Scott. From Germany, Dr. Selss was unfortunately unable to appear on the opening day.

The vegetarian movement is making good progress in Sweden and Finland. In Sweden the vegetarian society already has over 1,000 members, and in Finland, the vegetarian society (established only two years ago) has about 200 members.

In the evening at the Whitworth Institute, a very beautiful art institute, a reception and tea sponsored by the Vegetarian Society took place. The cosy [cozy] evening was attended by 600-700 people.

On the morning of Oct. 18 the following papers were presented: The scientific basis of vegetarianism, by Dr. Selss. Swedenborg, by Dr. Axon (who proved that he lived as a vegetarian after his religious illumination). On the ethical side of vegetarianism, by Mr. A. Meyroos (it drew special applause). Vegetarianism as a scientific diet, by Dr. Nyssens (who emphasized that in France and Belgium, vegetarianism is increasingly recognized by the medical faculty. The French vegetarian society counts about 80 physicians among its members).

Contains a good early history of the Bible Christian Church in Salford, including Emanuel Swedenborg (Christian mystic), Rev. William Cowherd, Joseph Brotherton, Rev. William Metcalfe, Rev. James Clarke, William Oldham, James Simpson, Alcott House in Ham Common, Ramsgate, etc. Dr. William E.A. Axon now intends to write a History of the Bible Christian Church, Salford (1809-1909). For details contact the Vegetarian Society, 257 Deansgate, Manchester. Or go to: <https://ivu.org/history/england19a/bible-christian.html> Address: Surbiton [southwestern outskirts of London].

2741. *Good Housekeeping*. 1909. Vegetarian but good. 49(6):738. Dec.

• **Summary:** Gives luncheon and dinner recipes for each day of the week (Monday through Friday) plus Christmas Day dinner and supper. Includes “Mock crab au gratin.” Soy is not mentioned.

2742. *Good Housekeeping*. 1909. Vegetarian suggestions. 49:578-79. Dec.

• **Summary:** Gives luncheon and dinner recipes for each day of the week (Sunday through Saturday). Sunday supper includes brown bread and peanut butter. Thursday luncheon includes Raisin bread and nut butter.

2743. *Vegetarianskoe Obozrenie (Kiev)*. 1909-1914? Serial/periodical. Kiev. [Ukr]*
Address: Kiev [Ukraine].

2744. O Vegetariano [The Vegetarian]. 1909-1935. Serial/periodical. Published from 1911 by the Vegetarian Society of Portugal. Frequency: Monthly. Serial/periodical. Published from 1911 by the Vegetarian Society of Portugal. Frequency: Monthly. [Por]

• **Summary:** Nuno Metello of Portugal, who is writing a book on the history of vegetarianism in Portugal, writes (Dec. 2016):

“In 1909, Manuel Teixeira Leal, Marcos Pinheiro da Fonseca, Eduardo de Lima Lobo and Jerónimo Caetano Ribeiro created the monthly magazine O Vegetariano (The

Vegetarian), the first Portuguese vegetarian periodical.

“Soon after, they invited Dr. Amílcar de Sousa to join them.

“In 1910, a committee in Oporto composed by Dr. Amílcar de Sousa, Eduardo de Lima Lobo, Jerónimo Caetano Ribeiro, Manuel d’Oliveira Borges and Manuel Teixeira Leal announced in *O Vegetariano* that they were about to found the *Associação Vegetariana de Portugal* (Vegetarian Society of Portugal), which was founded the next year (1911). Dr. Amílcar de Sousa became the president.

“*O Vegetariano* was published between 1909 and 1935. Their editions were also sold in Brazil [and Barcelona, Spain] and were extremely popular there. In fact, *O Vegetariano* was not only the magazine of the Vegetarian Society of Portugal but also of the Naturist Brazilian Society. It represented vegetarians in Portugal and in Brazil, and Brazilian vegetarians frequently contributed to the magazine. Many members of the Vegetarian Society of Portugal were Brazilians.”

2745. Herringshaw, Thomas William. ed. 1909. National library of American biography. Chicago, Illinois: American Publishers’ Association. See Vol. 2 for Clubb. *

• **Summary:** See Henry S. Clubb (1827-1921). The following is from the Henry S. Clubb letterbook at the William L. Clements Library, University of Michigan.

“Henry Stephens Clubb (1827-1922) was born to Stephens Clubb, in Colchester, England. Henry was raised Swedenborgian, a sect of Christianity, and later identified as a Bible Christian, also known as a Cowherdite. Clubb worked as a clerk at the Colchester Post Office and moved to England in 1842, where he found work as a secretary to James Simpson, an early leader of England’s vegetarian movement.

“Clubb settled in New York in 1853 and distinguished himself as an abolitionist journalist. After reporting on the Kansas-Nebraska Act, Clubb attempted, unsuccessfully, to establish a small pro-vegetarian, abolitionist, temperance colony in Kansas on banks of the Neosho River. With much of the colony ailing, the settlement disbanded and Clubb moved back to New York to work for the abolitionist Tribune newspaper. During the Civil War, Clubb served as captain and assistant quartermaster in the 17th U.S. Army Corps (1862-1866). He survived a bullet wound at Corinth, Mississippi.

“After the war, Clubb married and moved to Grand Haven, Michigan. He published the Clarion newspaper from 1857-1862, and founded the Grand Haven Herald in 1869. Clubb served as a Michigan state senator of the 29th District in Ottawa County from 1873-1874. Clubb moved to Philadelphia to become the minister of the Bible Christian congregation. He remained active in vegetarian causes and was president of the American Vegetarian Society. Clubb died in 1922 at age 95.”

2746. [Moscow Vegetarian Society]. 1909. New vegetarian society. Moscow, Russia.

• **Summary:** Source: *History of the Russian Vegetarian Societies*. 2004. <http://www.ivu.org/history/societies/russia.html>. “Moscow vegetarian society was founded in 1909. L.N. Tolstoy became its honorary member. The Moscow vegetarian society was a very active one: a dining-hall was set up, lectures were delivered, articles dedicated to vegetarian problems were published, as Society Almanac was issued.”

“In April 1913 in Moscow there took place the 1st All-Russia Vegetarian Congress... The revolution of 1917 stopped the development of vegetarianism in Russia. The Soviet State authorities considered vegetarianism as a pseudoscientific theory that reflected the bourgeois ideology and therefore harmed the Soviet people. In 1929 the last vegetarian society in Moscow was closed.” Address: Moscow, Russia.

2747. Axon, William Edward Armitage. 1909. Was Swedenborg a vegetarian? Manchester, England: The Vegetarian Society. Pages not numbered. 18 cm. *

2748. Axon, William Edward Armitage. 1909. History of the Bible Christian Church in Salford, 1809-1909. Manchester, England. 128 p. 23 cm. *

• **Summary:** The author lived 1846-1913.

2749. Brown, Laura Nettleton. 1909. Scientific living for prolonging term of human life: The new domestic science, cooking to simplify living and retain the life elements in food. 2nd ed. Passaic, New Jersey; New York, NY: The Health-Culture Co.; London: L.N. Fowler & Co. xiv + 284 p. Index. 19 cm. Series: Health-Culture Library No. 19.

• **Summary:** This vegetarian cookbook advises minimal heating of foods. In chapters on “The scientific application of heat” and “The fireless cooker,” she argues that over-cooking destroys the life-giving vitality of foods; the organic elements become inorganic.

The chapter titled “Nuts and nut dishes of meat value” (p. 188-93) begins: “Nuts are not appreciated as a standard food except by those who have discarded meat. They contain a larger amount of proteid than meat, with less danger of the cells being killed by heat, besides being well balanced in other nutrients. As meat tends to produce old age conditions one of the first steps in scientific living should be to cultivate the habit of eating nuts instead of meat.” There follow 12 recipes using nuts (peanuts, walnuts, pecans, cocoanuts, etc.) and “nut butter.”

The next chapter, titled “Meat” (p. 193-203) gives many arguments against the use of meat in the diet and contains no recipes. The people in many countries, such as India, China, and Japan, live almost entirely without meat. “They

are capable of doing an immense amount of physical labor without fatigue, thus proving that meat is not essential as food. The peasants of Russia live without meat. The sturdy Scotch Highlander maintains his strength on oatmeal, vegetables, and buttermilk. The Greek and Roman soldiers, during the years of greatest power of the nations, were kept upon a vegetable diet. Many of the best German soldiers today subsist with a meatless diet. The Greek athletes were trained without meat..." (p. 198). "Pythagoras, Plato, Seneca, Paracelsus, Spinoza, Peter Boyle, and Shelley were vegetarians" (p. 201).

2750. Central Union Church (Honolulu, Hawaii), Ladies' Society. comp. 1909. Hawaiian cook book. 5th ed., revised and enlarged. Honolulu, Hawaii: Hawaiian Gazette Co. 150 p. Recipe index by category. 22 cm. 1st. ed. 1882.

• **Summary:** After the title of each recipe is given the name of the person (mostly women) who submitted it. Worcestershire sauce is used to season some recipes (see, for example, soups, p. 9; fish, p. 18; beef, p. 28). For "vegetarian soups" ("for those who are forbidden meat or whose preferences are in favor of a vegetable diet") see p. 12-15.

Note: The recipes in this book are much more American than Hawaiian. The one main exception is the "Hawaiian feast" or luau (p. 130-31). Otherwise, the major Hawaiian influence is the use of tropical fruits (such as cocoanut, papaia [papaya], pineapple, mango, breadfruit, or Alligator pears), in otherwise American recipes. These recipes also show no Japanese or Chinese influence. For example, soy sauce is not used to season even one recipe in the entire book. Address: Honolulu, Hawaii.

2751. Christian, Eugene; Christian, Mollie Griswold. 1909. Suncooked food: A treatise on how to get the highest form of human energy from food. 6th ed., retitled and rewritten to keep pace with progress. combinations and menus. New York, NY: Christian's School of Applied Food Chemistry. 365 p. Portrait. 20 cm. *

• **Summary:** Eugene Christian lived 1860-1930.

2752. Cornet, Paul. 1909. Le régime alimentaire des malades: Considérations pratiques sur les aliments et les boissons diététiques et sur l'hygiène de l'alimentation [The dietary regimen for the sick: Practical considerations on dietetic foods and drinks and on the hygiene of feeding]. Paris: G. Steinheil, Éditeur. 484 p. No index. 23 cm. [144* ref. Fre]

• **Summary:** In Part III, "Foods drawn from the vegetable kingdom," Chapter 20 titled "Starchy vegetables" discusses various fruits, grains, and legumes. The section on "Soya" (p. 269-70) gives the name of the soybean in Japan (*daizu*), Annam (*dau-nauh*), and China (*théou*), and notes that the seeds can be used to make shoyu, miso, and tofu—which are widely appreciated.

"Dietetic uses: Without having recourse to these exotic preparations, the nutritional value of soybeans is not used enough in our country. Soy bread is only used in anti-diabetic diets*, whereas one could prepare a pap and a drink (*boisson*, [soymilk]) no less precious, as well as extracts [soy sauce] which could be substituted for meat extracts." Footnote:

*Soya is well suited for diabetics, for the seed contains only 3% starch plus 16% oil and 27% protein.

In Part V, "The regimens," Chapter 30 titled "General solid regimens" has two parts: The first, the "Vegetarian regimen" (p. 341-55) has the following contents: Indications for the vegetarian regimen. Application of the vegetarian cure: Absolute [vegan foods plus water], mitigated (lacto-ovo vegetarian), total vegetarian diet (*régime total*) throughout the seasons (incl. dry legumes such as soybeans, peanuts, etc.), culinary preparations. Vegetal calendar (*Calendrier végétal*): soups, main dishes, and desserts for each month of the year. Address: Dr., Professeur at the municipal schools of the infirmaries of the Hospitals of Paris (aux Ecoles municipales d'Infirmières des Hôpitaux de Paris).

2753. Crichton-Browne, James (Sir). 1909. Parcimony in nutrition. London and New York: Funk and Wagnalls Co. vi + 111 p. No index. 19 cm.

• **Summary:** This critical analysis attempts to refute the research of Fletcher and Chittenden on the minimum protein requirement for humans. Advocates high protein and meat intakes for optimal health. He prefers a level closer to the Voit standard (118 gm per day of proteid food for the average man under average conditions doing moderate work) or the Atwater standard (125 gm of proteid).

This is a revision and expansion of an address delivered before the Section of Preventive Medicine at the meeting of the Royal Institute of Public Health at Buxton, England, in July, 1908. The author lived 1840-1938. Address: M.D., LL.D., F.R.S., Lord Chancellor's Visitor in Lunacy, London.

2754. Davis, Nathan Smith, Jr. 1909. Dietotherapy and food in health. Philadelphia, Pennsylvania: P. Blakiston's Son & Co. [ix] + 372 p. Illust. 23 cm. Index.

• **Summary:** This volume is identical in every way to the 1901 edition, line for line, page for page, except for the title page—which presents it as a stand-alone book rather than as Volume 6 in a series. The copyright date of both editions is 1901.

Edited by Solomon Solis Cohen, M.D. (Prof. of Clinical Medicine, Jefferson Medical College, Philadelphia, Pennsylvania). Address: A.M., M.D., Prof. of the Principles and Practice of Medicine, Northwestern Univ. Medical School [Evanston, Illinois].

2755. Drews, George Julius. 1909. Unfired foods and hygienic dietetics for prophylactic (preventative) feeding and therapeutic (remedial) feeding... Chicago, Illinois: Published

by the author. 313 + x p. Illust. 23 cm. Pages 140-165 blank for memoranda. 2nd ed. published in 1912.

• **Summary:** The subtitle continues: "(Treats on food in the cause, prevention, and cure of disease.) Contains 360 recipes for health drinks, uncooked soups, fruit, flower and vegetable salads, unbaked breads and 'brawn-foods,' unfired pies and wedding cakes, directions for curing every common disease, including botanical description and complete analyses of every natural food, and advice for economical city and cottage gardening."

George Drews was born in 1873; a photo (frontispiece), facing the title page, shows his portrait.

Page 23, in large letters, states: "A King Can Eat Nothing Better and a Beggar Nothing Cheaper than Natural Food for it is the Healthiest for the Rich and Cheapest for the Poor and can be served in such artistic and attractive manner as to become the dignity of the most refined and so simple as not to puzzle the most lowly Without detracting from its quality or deliciousness."

The section on "Nuts" (p. 164) states: "The Spanish Peanut is the softest and most useful in the unfired diet, because it can be used in a greater variety of ways than any other nut. To those who have learned to like the peanut, it takes the place of milk, butter, cream, eggs, sugar, salt and

spices."

As a sampler, the section titled "Promiscuous subjects" begins (p. 232): "This department contains further information on hygienic living and feeding, commercial food and other subjects which should be better understood by all."

It has the following contents: Hygienic dietetics. Daily ration. Packed lunches. The average restaurant dinner. Why vegetarians fail. Fletcherization. Soaking. Overeating. Fasting. Variety. The toxic poisons of emotion. Flesh as a stimulant. Eggs. Milk. Food and morality. Therapeutic value of fruits. Fruit acids sterilize. Organic and inorganic water. The taste buds. Condiments. Common salt. Commercial sugar. Vacuum sugar. Wholesome sweets. Health and environment. Laughter. Doctor nature (light, air, water, fruit juices, vegetable juices, exercise, pleasure and recreation, sleep). Drugs. Blood purifiers. Blood and nerve tonics. The value of sunshine. The life of food. Organic molecules. The tooth destroyers. The baby. Wholesome poultices. Domestic harmony. Social dinners and etiquette of feasting. The power of resistance and recuperation. Man as a frugivore and herbivore. The vegetarian sport. The sense of smell. Sunshine and shadow. Nursing, a fine art. The light, air, and labor cure. A few maxims.

Note: This is the earliest English-language document seen (April 2005) that contains the word "unfired" or the term "unfired foods." This term refers to raw- or uncooked foods. Address: "Alimentationis Doctor," 36 Marion Court, Chicago, Illinois.

M. ELIE METCHNIKOFF, OF THE PASTEUR INSTITUTE OF PARIS.
His researches have thrown great light on auto-intoxication. He believes that the normal life should be over 125 years long.

PROF. LAFAYETTE B. MENDEL, PH.D., YALE UNIVERSITY,
Who has carried on researches in conjunction with
Prof. Chittenden.

(16) A group by the fireside at the Battle Creek Sanitarium with Dr. Kellogg.

The Introduction, by Sinclair, begins with this story: About 10 years ago, when he was a college student, he became sick for the first time in 14 years. He visited a doctor and said: "Doctor, it has occurred to me that I would like to have someone who knows about the body examine me thoroughly and tell me how to live."

"I can recall his look of perplexity. 'Was there anything the matter with you before this attack?' he asked. 'Nothing that I know of,' I answered; 'but I have often reflected that the way I am living cannot be perfect; and I want to get as much out of my body and mind as I can. I should like to know, for instance, just what are the proper things for me to eat -'"

"'Nonsense,' he interrupted. 'You go right on and live as you have been living, and don't get to thinking about your health.'

"And so I went away and dismissed the idea... All doctors that I had ever heard of were people who cured you when you were sick; to ask one to take you when you were well and to help you to stay well, was to take an unfair advantage of the profession.'" Over the years he visited the

doctor several times, and each time the doctor gave him a another kind of medicine to cover up his symptoms. It was first in Battle Creek, Michigan, that he found a large, modern and entirely new type of hospital with "more than a thousand nurses, physicians, and helpers, all devoting their time to the teaching of the new art of keeping well." Slowly but surely he "found the road to permanent health."

A review in *Nature*: "A new sort of health book, giving in condensed form the theories of Fletcher, Metchnikoff, Kellogg and others. 16 full page illustrations. Price, \$1.35."

• **Summary:** This is a pseudo-vegetarian cookbook. There are no recipes for meat in the main body of the book, but the first 2 appendixes are meat recipes. However the first appendix begins with a long criticism of the nutritional value of meat.

In the Preface, the author states: "Meat, as I believe, should occupy a subordinate place in the rational or scientific dietary. It should be used, if at all, only in certain

conditions and then sparingly. The objections to it are not that it contains so small a percentage of nutrition..., but that at best it contains urea and creatine, and is calculated to fill the tissues with toxins [toxins], all of which favor the development of inflammatory and febrile affections of the body and provoke spasmodic and irritable conditions of the larger nerve centres. The quality of meat is especially liable to suffer from diseases of the animal... Eggs, milk and cheese are preferable to meat; and nuts are an excellent article of food." Address: M.D., 608 Middle Dr., Indianapolis, Indiana.

2768. White, Ellen G. 1909. The ministry of healing. Mountain View, California: Pacific Press Publishing Assoc. 383 p. Index. 18 cm. Paperback edition published 1974. Index. 18 cm.

• **Summary:** The paperback edition contains the full text of the standard edition; only pictures, poems, and other filler materials have been deleted.

2769. Yukawa, Genyô. 1909. Ueber die absolut vegetarische Ernahrung japanischer Bonzen [On the strict vegetarian (vegan) diet of Japanese Buddhist monks]. *Archiv fuer Verdauungskrankheiten* 15:471-524. [5 ref. Ger]

• **Summary:** The author studied a group of 12 strict vegetarian [vegan] Buddhist monks in Japan and found them to be in good health. He estimated that their daily diets, if evaluated for a 150-pound male, supplied 3,575 calories and 113 gm of protein. The older men ate somewhat less. The diet consisted chiefly of rice and barley, with soy products, vegetables, and rape seed oil.

A table (p. 478-79) summarizes the author's research on the protein content of vegetarian meals by previous Japanese researchers. These meals contained various soy products: Miso (*Soybohnennmus*), soy sauce (*Soy*), and tofu. On pages 489-91 are definitions of miso soup, miso, soy sauce (*Soy*), koji, grilled tofu (*Yakidofu*), cooked soybeans (without the hulls removed), azuki bean paste, and mochi, which are served at Nanshuji temple. A table (p. 497-98) gives the nutritional composition of these and other foods. Amounts served at each meal are shown on p. 501, 514, 522, including daikon pickled in miso. The terms "Makrobiotik" and "Makrobier" are used. Address: Aus der Privatklinik fuer Magen- und Darmkrankheiten von Dr. Yukawa in Osaka, Japan.

• **Summary:** An advertisement for *The Vegetarian Magazine*, which "stands for a cleaner body, a healthier mentality, and a higher morality. Advocates disuse of flesh, fish and fowl as food; hygienic living and natural methods of obtaining health. Preaches humanitarianism, purity and temperance in all things." 1 year subscription, \$1.00; 1 month, 10 cents. A large illustration shows the cover. Address: No. 243 Michigan Blvd., Chicago, Illinois.

2776. *Vegetarian Magazine (The)* (Chicago). 1910. "There is rest for the weary." Feb. p. 45-46.

• **Summary:** See next page. A portrait photo shows Upton Sinclair, a vegetarian and author of *The Jungle*, about the Chicago [Illinois] stockyards and meatpacking industry. He is spending the winter in the South with his son; they eat nuts and fruits.

2777. Wiancko, Alfred T.; Cromer, Clinton O. 1910. Results of cooperative tests of varieties of corn, wheat, oats, soy beans and cow peas, 1909. *Indiana (Purdue) Agricultural Experiment Station, Bulletin* No. 139. p. 87-123. Feb.

• **Summary:** The experiments were conducted on over 900 farms in different parts of the state. In 1909 there were 81 tests of four varieties of soy beans. "The number of complete

and satisfactory reports was unusually small." Tables show (22, p. 118) Four-year average yields of soy beans, 1906-1909, for five varieties: (Ito San {used as a check}, Early Brown, Hollybrook, Dwarf Early Yellow, Medium Early Yellow). Yields of both hay and grain are given for northern and southern Indiana. The highest hay yield was 2,728 lb/acre and the highest grain [seed] yield was 20.0 bushels/acre, both from Hollybrook in northern Indiana. (23, p. 119) The name, post office, and county of 12 Indiana farmers in northern Indiana who grew soy beans in 1909, their yields for each of 4 varieties (Ito San, Early Brown, Hollybrook, and Medium Yellow), and the average yields. The farmers are: Fernando Brier, Lafayette, Tippecanoe Co. Arthur P. Carey, Galveston, Cass Co. Geo W. Cramer, Decatur, Adams Co. John T. Cromer, Middletown, Delaware Co. W.H. Derrick, Michigantown, Clinton Co. W.S. Hollingsworth, Lynn, Randolph Co. John A. Miller, New Lisbon, Henry Co. Horace G. Munson, Lincoln, Cass Co. Hemsley Robison, Walkerton, LaPorte Co. Chester Saber, Knox, Starke Co. Perry Seale, Fairmount, Grant Co. James P. Smith, Kokomo, Howard Co." (24, p. 120) Same as the previous table but 13 farmers from southern Indiana: O.E. Bales, Martinsville, Morgan Co. J.E. Collins, Tell City, Perry Co. Chas. H. Freed, Saltillo, Lawrence Co. Leonard Gebert, Harrison, Ohio,

Dearborn Co. Clarence Gossman, Brownstown, Jackson Co. John Heinze, Tell City, Spencer Co. Emmet Hornaday, New Augusta, Marion Co. G.E. Johnson, Lynnville, Warrick Co. Arthur Porter, Indian Springs, Martin Co. Eveline Riedel, Osgood, Ripley Co. T.G. Sturm, Elizabeth, Harrison Co. Raleigh Thompson, Underwood, Clark Co." Address: 1. B.S.A., Agriculturist and head of department; 2. Asst. Agriculturist.

2778. Langworthy, C.F.; Hunt, Caroline L. 1910. Economical use of meat in the home. *Farmers' Bulletin (USDA)* No. 391. 29 p. March 21. Corrected April 5, 1910. Revised Nov. 1922 (Published 1923).

• **Summary:** Note 1. There are two slightly different editions of this 1910 edition. The first has "Issued March 21, 1910" at the top left-hand corner of the title page. The second has "[Corrected April 5, 1910]" in the middle of the title page. There is no indication of what was corrected.

The following statement about meat appears in the "Summary" section of each edition: "It is of course possible to eat meat dishes less frequently, or as noted above, to omit meat from the diet altogether, if one so desires and the diet is so arranged that it remains well balanced."

This summary is on p. 41 of the first edition and on page 29 of the second edition. Address: 1. Ph.D., Expert in Charge of Nutrition Investigations; 2. A.B., Expert in Nutrition. Both: Office of Experiment Stations.

2779. Japan, Bureau of Agriculture (Norinsho, Nomukyoku), Dep. of Agriculture and Commerce. 1910. Outlines of agriculture in Japan. Tokyo: Agricultural Bureau, Department of Agriculture and Commerce. 132 p. March. Illust. No index. 23 cm. [Eng]

• **Summary:** This book was compiled to acquaint foreigners with agriculture in Japan. Company name with diacritics is: Nôrinshô, Nômukyoku. A map near the front shows Japan and its empire (incl. Korea, Formosa, Kwantung, Karafuto, and the Kurile Islands, with an inset pie chart showing the value of Japan's agricultural products). Oval photos show Japan's six top agricultural officials, including Baron K. Oura, Minister of the Dept. of Agriculture and Commerce, C. Shimooka, Director of the Agricultural Bureau, and Dr. Y. Kozai, Director of the Imperial Experiment Station.

A full-page table shows the moneys, measures and weights of Japan with English equivalents.

Contents of the first part of the book: Introduction: Geographical location, area, population, topographical position, climate. 1. General remarks. 2. Condition of farmers. 3. Condition of agricultural land.

The section titled "Upland fields" (p. 18) states: "Upland fields are those portions of land being located in high and dry places which by wanting means of irrigation could not be converted into paddy fields. The utilization of these fields is commonly made by the rotation system and crops are

raised twice a year. The commonest instance is that barely, naked barely, and wheat are raised as the first crop in winter whereas soja beans, sweet potatoes and millets are raised during the summer as the second crop." The profits from upland fields are generally smaller than from lowland / paddy fields. The average yield of soja beans over the past 10 years is given in Japanese units (p. 19).

In Japan only cows and horses are kept as work animals. In 1907 Japan had 1,008,922 cows and 2,204,031 horses. But they were used more for their manure than for plowing.

A table (p. 28) shows the value (in yen) of the principal commercial fertilizers in Japan from 1905 to 1907. "Soja bean cakes" (a key source of nitrogen) is by far the largest, averaging 12.9 million yen for these three years, followed by superphosphate of lime, mixed manure, rape-seed oil cakes, herring cakes, bone dust, and cotton-seed oil cakes. Note 1. This is the earliest English-language document seen (July 2016) that uses the term "cotton-seed oil cakes" (plural or singular) to refer to cotton-seed cakes.

A table (p. 37) gives the cultivated area (in 1,000 *cho*) of major Japanese crops in 1887, 1892, 1897, 1902, and 1907. In 1907 rice had by far the largest area (2,906), followed by naked barley (694), barley (658), soja bean (471), wheat (444), mulberry tree (390), sweet potato (288), Indian millet (202), rape seed (143), small red bean ([azuki], 135). Soja bean area remained almost unchanged between 1887 (466) and 1907 (471).

A table (p. 39) gives average yield (in *koku/tan*) of the same major Japanese crops for the same years shown in the previous table. Yield of soja beans rose from 0.698 in 1887 to 0.777 in 1907. Since 1 *koku* = 4.963 bushels and 1 *tan* = 0.245 acres, the 1907 yield is 15.74 bushels/acre.

A table (p. 40) gives the production (in 10,000 *koku*) of the same major Japanese crops for the same years shown in the previous table. Production of soja beans rose from 325 in 1887 to 366 in 1907. Since 1 *koku* = 4.963 bushels, and 10,000 *koku* = 49,630 bushels, then 366 *koku* is 18.164 million bushels. The next table (p. 42) shows the value (in yen) of each of these agricultural products in 1905-07, and a table (p. 46) compares the cultivated area of each of these crops with rice; soja beans are 16.2% of rice.

In the section on "Food crops" (p. 47+) is a detailed discussion of each. Concerning "Soja bean" (p. 50-51) we read: "The use of this bean is extremely extensive since they are used for the purpose of supplying to the people low priced starchy food by being made into *miso* (pea cheese), soy, *tofu* (bean curd), and other food-stuffs required by the Japanese. The residue obtained from making these food-stuffs from the bean is used for the purpose of feeding cattle or of pressing oil while as manure it is highly valued. Soja bean is easily cultivated requiring less amount of manure and labour. It is therefore cultivated all over the country and occupies the principal position among summer crops of upland fields. Within recent years the demand for it

has considerably increased at home and also the export of various food-stuffs prepared out of bean has shown some increase so that no small amount of bean is imported either from China [Manchuria] or Korea. The amount imported actually reaches 10,000,000 *yen*. Over and above these, the import of bean cakes is approximately figured at 20,000,000 *yen* so that the domestic output has somewhat been affected."

Also discusses: Barley and naked barley. Indian millet, Barnyard millet and sorghum. Small red bean [azuki] ("A large amount of small red bean is used as a material for cakes [confections], Hokkaido being the principal producing district." p. 51). Flax and hemp. Green manure crops, incl. *genge* (*Astragalus sinicus*, *umagoyashi* (*Medicago denticula*)), soja beans, etc.

Note 2. This is the 2nd earliest English-language document seen (Oct. 2021) that uses the term "small red bean" to refer to the azuki bean.

Chapter 4, titled "Animal industry and poultry" (p. 69+) contains many statistics which may be of interest to vegetarians. Japanese traditionally ate fish rather than meat. "Even at present, the amount of meat consumed per capita a year does not exceed 1.7 pounds while that consumed in America is 150 pounds and in England 118 pounds per capita." etc.

Page 70 contains 4 tables with statistics about the number of cattle, horses, swine, sheep and goats, from 1897 to 1907. The number of slaughter houses decreased from 2,163 in 1897 to 938 in 1907. During this same period the number of slaughtered horses increased from 41,049 to 65,655 and the number of slaughtered swine increased from 107,034 to 177,351.

Note: An excellent history of meat eating in Japan, by Zenjiro Watanabe, is available online at http://www.kikkoman.co.jp/kiifc/foodculture/pdf_09/e_002_008.pdf.

In 1906 the government perceived the necessity for developing a poultry industry in Japan so it established a poultry plant as a branch of the Imperial Stock Breeding Farm in the suburbs of Tokyo (p. 75).

A table (p. 85) shows imports of principal agricultural products (quantity and value) each year from 1906 to 1908. Imports of soja beans increased from 286 to 352 (x 10,000 piculs) during this period, while imports of [soja] bean cake increased from 433 to 776. Both were imported mainly from China. However "the output of soy [sauce] and *miso* made of soja bean is exported to the amount of 1,200,000 *yen*, while bean cake forms the principal fertilizer in Japan" (p. 86).

Page 95: The Imperial Agricultural Experiment Station, with its headquarters near Tokyo, under the direct control of the Minister of Agriculture and Commerce, "originated in 1886 and the system was practically completed in 1893." Address: Tokyo.

2780. Brook, Harry Ellington. 1910. Care of the body— Suggestions for preserving health. *Los Angeles Times*. April

10. p. IM476. Sunday magazine.

• **Summary:** The first section, titled “Fasting for the cure of disease,” states: “Fasting for the cure of disease, or the improvement of health, has become quite a fad in this country during the past few years. Many remarkable cures of diseases, declared by medical men to be incurable, have been reported.

“The forty days’ fast of Jesus 2000 years ago, and the twice-repeated forty days fast of Dr. Tanner—now of Long Beach—about 25 years ago, have since then frequently been exceeded. Many have fasted over six weeks [42 days]. A Chicago [Illinois] lawyer, three years ago, went sixty one days without food, and thus cured himself of a chronic stomach trouble.”

“More than any other man in this country, the late Dr. Edward Hooker Dewey introduced and popularized the idea of fasting. His book, ‘The Fasting Cure and the No-Breakfast Plan,’ was reviewed here several years ago.” His books are published by the Fowler & Wells Co., New York.

“‘Fasting for the Cure of Disease’ is the title of a book of 180 pages by Dr. Linda Burfield Hazzard of Seattle (Harrison Publishing Co., Seattle) [Washington]. Dr. Hazzard makes a specialty of fasting for the cure of disease, and has treated by fasting during the past two years over 600 persons, having lost only six, and in all of these cases an autopsy showed that death was inevitable. Dr. Hazzard was a pupil of Dr. Dewey.” The chapter on diet is particularly good.

In his book, ‘The Philosophy of Fasting’ (published by Benedict Lust, No. 124 East 59th street, New York), Edward Earle “Purinton sets forth the virtues of fasting for various purposes—for health, enjoyment, freedom, power, beauty, faith, courage, poise, virtue, spirituality, instinct, inspiration and love. He also gives a ‘personal prologue’ and ‘twenty rules for sane fasting.’

Another large book on fasting is entitled ‘Vitality, Fasting, and Nutrition,’ by Hereward Carrington (Rebman Co., New York, 630 p.).

The section titled “A California health food” states: “Another addition to the long list of health foods has been placed on the market by our friend Otto Carqué. It is composed almost entirely of California products, including dried fruits, nuts, and a little partially-cooked grain. Such a food possesses advantages over the raw cereal foods on the market, which are harmful to the digestive organs, especially of those whose digestion is weak.” Address: Staff writer.

2781. Bugby, William. 1910. A vegetarian’s experiences. No I. *Daily Post (The) (Hobart, Tasmania, Australia)*. April 23. p. 3.

• **Summary:** “A recent cablegram from the United States announcing that the inhabitants of some districts had resolved to abstain from meat for a period of three months, in order to bring down the price of flesh meat, has caused many meat-eaters to ask, ‘How will these people be able to live

during this time’

“It may interest such inquirers to learn how a vegetarian fares, and why he does not consume any food that does not entail [sic, that entails] the direct destruction of conscious animal life, whether that food be fish, flesh, or fowl. Of course, a strict vegetarian does not even use butter, cheese, milk, or eggs, although a large number of people who have adopted what is known as the ‘reformed diet’ [a vegetarian which includes dairy products and eggs] take one or all of these foods, contenting themselves with simple abstinence from all food involving the death of a conscious living animal.

“There can be little doubt that those who abstain altogether from every kind of animal food lead healthier and happier lives than those who have adopted simply the modified or ‘reformed’ diet, in which milk, butter, cheese, and eggs are taken. But, as some would-be vegetarians imagine that they will miss the animal food to which they have so long been accustomed, they will do well with simple abstinence from all foods involving slaughter.

“Some 23 years ago the present writer was an unwilling witness of a scene of great cruelty, occasioned by the attempts of certain brutal drovers to force sheep and cattle into the old slaughter-yards. The animals scented blood at every step, and probably heard the dying groans of other animals within the yards, which were distinctly audible outside. Alas! that scene is constantly being enacted. The writer’s conscience pricked him, for he knew well that meat food (?) was unnecessary and that it was far inferior in nutritive elements to that directly obtainable from the vegetable word. He therefore at once resolved no longer to be a party to the unnecessary cruelty and slaughter involved in a meat dinner. The thought also struck him that the killing of animals was most demoralizing and brutalizing to the slaughtermen and butchers who took part in it. He tried to picture the state of mind of the men who daily perpetrated the murder of defenceless and innocent animals...”

“There are three points, among others, to be considered in regard to a vegetarian or non-flesh diet:

“1. Is it sufficiently nutritious and easily digestible?

“2. Does it conduce to health, strength, and vigor?

“3. What is its moral effect?

“To these might be added—4. Is it palatable? and 5. What is its aesthetic effect?

“Although practical alone will convince an inquirer that a diet taken wholly from the vegetable kingdom is amply sufficient for all his needs, the testimony of science should furnish the final evidence in its favor. It must not be forgotten that the great majority of the civilised nations of the world are practically dependent upon a non-flesh diet for their staple food. To this may be added the fact that those animals noted for their strength, endurance, and docility are all vegetarians. Even dogs thrive best upon a non-flesh diet, and their coats always become rusty when they are fed upon

meat. If it be desired to make a dog save, irritable, morose, and mangey [mangy], a diet of raw meat or liver will quickly accomplish the work.

"The gorilla, orang-outang, chimpanzee, the apes, and the whole tribe of monkeys, which are all noted for their energy (?), agility, strength, endurance, and intelligence, are all vegetarians, and live upon nuts, berries, fruits, and roots. The elephant, also, remarkable for its immense strength, its wonderful intelligence, its docility, its sense of justice, its trustworthiness, and its longevity, is a vegetarian. So are the hippopotamus, rhinoceros, camel, horse, and ox, while on the other hand, the lion, tiger, and other great carnivores, which live upon flesh, speedily tire and take long sleeps after each exertion.

"The anatomy and physiology of man; the structure of his teeth, stomach, and intestines, and, indeed, that of his whole digestive canal, together with his position just above, or at the head of, the anthropoid apes, in the long series of vertebrate animals, alike prove him to be one of that group of animals. The internal organs of his body are practically identical with those of the higher apes, and, indeed, scarcely to be distinguished from them. Therefore, his diet should approximately resemble theirs.

"By the art of cooking, it is true, man has immensely extended the range of his food substance, thereby converting tough and almost indigestible substances into palatable, easily assimilable and nutritious articles of diet, so that he can live in every climate. But, nevertheless, he still thrives best upon a diet of fruit and nuts.

"The question may now be asked: 'But what are the best substitutes for meat?' Before this question is answered, it must be recognised that man, like the apes, requires a mixed diet, i.e., a diet comprising -

"1. Nitrogenous or flesh-forming elements (proteids). These elements promote the growth of the body, replace the wasted tissues of it, and effect repairs in accident and disease.

"2. Carbo-hydrates, or starchy and farinaceous foods. These furnish heat and produce energy, and include also sugar and gum.

"3. Hydro-carbons, or fats and oils, which help to render the body less susceptible to rapid changes of heat and cold (?)...

"4. Minerals..." (?) Note: The rest of the article is illegible. Address: Tasmania.

2782. Brook, Harry Ellington. 1910. Care of the body—Suggestions for preserving health. *Los Angeles Times*. April 24. p. IM540-41.

• **Summary:** The section titled "A husky vegetarian" states: "In a recent number of the Vegetarian magazine a correspondent writing adversely about a non-flesh dietary, criticised the appearance of Otto Carque, the well-known writer on hygiene, as seen in an engraving.

"Well, if you had seen Carque running, like a mountain goat, up the steep side of a brush-covered Southern California foothill, with fifty pounds on his back, while you, with no 'impediments,' puffed and 'blowed' behind him, you would come to the conclusion that Carque was a pretty husky kind of vegetarian." Address: N.D. [Naturopathic Doctor], Staff writer.

2783. Bugby, William. 1910. A vegetarian's experiences. No II. The soy bean. *Daily Post (The) (Hobart, Tasmania, Australia)*. April 30. p. 7.

• **Summary:** "There is a still better substitute for meat, and that is the Soy bean of Japan, which is now being extensively cultivated in New South Wales. The present writer has found nothing to surpass this most useful bean, and especially the improved variety of it grown at Wahroonga, N.S.W., by the Sanitarium Food Reform Co. [Seventh-day Adventist]. It might be introduced into Tasmania with advantage, and in a calcareous soil would prove a source of great profit to the grower. The Wahroonga variety of Soy bean takes less time to cook and is also more tender when cooked than that imported direct from Japan. It is far more digestible than any other kind of bean."

Note 1. In 1910 Wahroonga was a suburb of Sydney; it would have included some small, semi-rural market-gardening areas that provided vegetables for the city dwellers. The word "extensively" above probably means that small plots of soybeans were being grown in market gardens around towns and settlements in NSW. As of 2005 Sanitarium Food Reform Co. has been renamed Sanitarium Health Food Co. and is a thriving maker of health foods, breakfast cereals, meat alternatives, soymilk, etc.

"While the writer feels some satisfaction in the thought that more than 20 years ago [i.e., before April 1890], in the columns of a Melbourne journal, he was the first to call attention to the great merits of this most remarkable bean, and to advocate its introduction into Australia, he feels somewhat depressed at the fact that it has taken so many years to (?) its cultivation on and its adoption and recognition as an article of food. As a rule it may be assumed that it will take a generation to effect any great (?) reform. But we shall reap, if we faint not.

"The Soy bean is, in fact, a perfect and superior substitute for flesh meat, and it contains not only proteids or flesh-formers in abundance but also a large amount of pure and digestible fat. It contains the same food elements, in the same proportion, as a moderately fat mutton chop. Its skin is so thin as to be scarcely perceptible, hence it is the most digestible of the bean family, and can be flavored to suit any palate. It makes a highly nutritious soup. Children and invalids thrive upon it. The following is an analysis of the Soy bean -"

A table compares the "elementary constituents" of two varieties of soy beans, peas, lean beef, and fat mutton. For

each is given the percentage composition of water, protein or nitrogenous matter, fat or hydro-carbon, carbo-hydrates (starches), fibre, and ash. The protein content is as follows: Soy bean #1–37.8%. Soy bean #2–34.0%. Peas 23.0%. Lean beef 19.0%. Fat mutton 12.0%.

“In cooking, the bean absorbs about four or five times its weight of water; this brings it closely up to an equal quantity of fat mutton. A glance at the above table will show that the Soy is superior in every respect to beef, and is only surpassed in starch by peas. Dr. Anna Kingsford, M.D., in her interesting book ‘The Perfect Way in Diet’ [about a vegetarian diet], has shown that the digestive organs of man are not fitted for animal food, and that such food causes irritation and increases the tendency to inflammation, and is also largely responsible for rheumatism, gout, and neuralgia. It also promotes phthisis [pulmonary tuberculosis]. The drowsiness felt by so many persons after a hearty meal of meat, together with an intense craving for stimulants [e.g., alcohol], is wholly unknown to vegetarians, and this is why, in London, the numerous vegetarian restaurants are thronged by bankers and brainy business men at the time of the midday meal.

“It is worthy of notice that the ox gives back in his meat only some of the food derived by him from the grass, retaining the balance to form his teeth, horns, hoofs and hide. So that, at best, man loses some of the best nutriment when he uses meat as food. In addition to this, in the venous blood of the animal are to be found poisonous and effete material, waste tissue, cadaveric alkaloids, and even parasites and disease-germs, wholly absent from vegetables and fruit. It is a rare thing for vegetarians to suffer from anaemia, though it must be supposed that even a diet so rich in all the elements the blood requires will of itself secure immunity from this and other diseases if other hygienic conditions are absent. A vegetarian diet is not a panacea, although those who adopt it suffer far less from all complaints than their meat-eating brothers and sisters. If a vegetarian lady, ‘cumbered with much serving,’ and beset with a multitude of household duties, keeps all day indoors and does not go out enough to exercise in direct sunlight and fresh air—and most women have too little of these—she will very likely become anaemic, like her meat-eating sister, but this is not because of her vegetarian diet, but in spite of it. Still, she will not suffer so badly, or become so ‘run down,’ as that meat-eating sister, and she will, moreover, make a much more rapid recovery from all her ailments.

“It is also quite possible for a vegetarian to eat too much nitrogenous food, and to suffer from consequent indigestion. Still, the diet is not responsible for a man’s gluttony if he will eat to much, and will live to eat rather than live to eat. Temperance in eating is almost as essential as temperance in drinking. Here it may be added that a moderate and well-chosen vegetarian diet is a certain cure for drunkenness, since the craving for intoxicants is mainly induced by the

inflammatory state of the stomach caused by flesh-eating. Vegetable food is so nourishing and sustaining that a vegetarian can better afford to go without a meal than can a meat-eater. Indeed, the experience of the writer has been that for prolonged muscular and mental work there is nothing to compare with a judiciously-selected fruit and vegetable diet. The ancient Spartan and Roman athletes disdained meat. They lived on barley-cakes, olive oil, and black lentil soup. The canny and energetic Scotchman is virtually a vegetarian. The miners of Chili [Chile] are wont to ascend a perpendicular ladder with 2 cwt [1 cwt = hundredweight = 112 pounds] on their backs, and they do this all day long on a meal of beans and vegetables and fruit.

“The writer is of [the] opinion that after the age of three years milk should not be taken by human beings. It clogs his stomach, makes his brain sluggish and stupid, and in the stomach gives rise to lactic acid complications. Hence it should never be forced upon children over three years of age who have come of gouty or rheumatic parents. As a rule, such children have a natural detestation of it and a great aversion to it. Cow’s milk is an abomination that ought never to be taken. It is an unnatural thing for a human being that has cut its teeth, and ought to eat solid food, to drink the milk of a brute! The human stomach resents it!”

The writer then discusses: Suitable foods for vegetarians. The benefits of eating two meals a day. The importance of understanding the “elements of nutrition” contained in each food to maintain one’s proper weight and good health, the ability of a given area of land to support 6 times as many vegetarians as meat-eaters, the need to divide large Tasmanian land holdings into small plots of orchards and kitchen gardens, the sustaining and invigorating power of a non-flesh diet, the overall physical, mental, and moral effects of a vegetarian diet, and the need to abolish abattoirs or slaughter houses.

“It is not sufficiently understood that a vegetarian has far higher motives than the gratification of his palate and the satisfaction of his appetite. He regards all life as sacred, and the taking of innocent animal life as a monstrous crime, both against the animal and its right to live, and against the moral development of society at large. He regards his Creator as the Creator and Father of every living thing. When his last hour comes the vegetarian will be able calmly to meet his Heavenly Father—the Father also of every poor dumb animal—with the happy though humble consciousness that he has neither knowingly caused the infliction of pain or death, nor connived in their infliction by others upon an innocent animal. There is sound sense in the lines: -

“He prayeth best who loveth best
All things both great and small;
For the dear God who loveth us,
He made and loveth all.”

Source of poem: “Rime of the Ancient Mariner,”
by Samuel Taylor Coleridge (1798; Part VII, stanza 23).

Coleridge lived 1772-1834

Note 2. This is the earliest document seen (July 2021) concerning soy beans in connection with (but not yet in) Tasmania.

Note 3. The author may have been a Seventh-day Adventist, since he states that soybeans have been grown in the Sanitarium gardens at Wahroonga, New South Wales. If he was an Adventist, this would be the earliest article seen on soybeans written by a Seventh-day Adventist. Address: Tasmania.

2784. Selss, Gustav. 1910. Deutscher Vegetarier-Bund [German Vegetarian Federation]. *Vegetarische Warte* No. 11. p. 114. May 28. [Ger]

• **Summary:** Announces the International Vegetarian Congress to be held on June 10-12 this year in Brussels, Belgium. Dr. Selss has been asked to represent the German Vegetarian Federation, and perhaps to take a 2nd vegetarian physician with him—Dr. G. Knauf of Ludwigshafen (Bodensee). The writer will report on the history of the German Vegetarian Federation and the status of the German vegetarian movement. Address: M.D., Baden-Baden, Germany.

2785. *Current Literature*. 1910. How the teeth of vegetarians give evidence against them. 48(5):509-10. May. [1 ref]

• **Summary:** Sir Ray Lankester, most distinguished of living zoologists, writing in the *London Telegraph* considers the “arguments in favor of the exclusive use by mankind of a vegetable diet to be based upon misconception and error... But he wishes to guard against the supposition that he is convinced that animal substances form the best possible diet for man, or that an exclusively vegetable diet may not, if properly selected, be advantageous for a large majority of mankind.”

He agrees that “man’s teeth are of the shape and pattern which we find in fruit-eating or in root-eating animals allied to him.” He analyzes the teeth of various animals and notes that “Man did not take to meat-eating until he had acquired the use of fire... Man’s teeth are thoroughly fitted for the trituration of cooked meat... Hence we see that the objection to a meat diet based on the structure of man’s teeth does not apply to the use of cooked meat as diet. The use by man of uncooked meat is not proposed or defended.”

We must also notice that monkeys will eat grubs, small soft animals, and the eggs of birds when they get a chance. Pigs and bears naturally eat a mixed diet (i.e. are omnivorous), as do many birds. The author discounts the argument that meat is toxic, since serious diseases have also been contracted from contaminated fruits and vegetables. Address: USA.

2786. *Vegetarische Warte*. 1910. Der dritte Internationale Vegetarier-Kongress, Bruessel, 9.-12 June 1910 [Report on

the 3rd International Vegetarian Congress, Brussels, 9-12 June 1910]. No. 13. p. 129-30. June 25. [Ger]

• **Summary:** Eight countries sent vegetarian representatives to this congress: Netherlands (Dr. Meyroos of Rotterdam), England (Dr. Axon, Miss Hompes, Mr. Broadbent), Sweden (Mrs. Professor Lombard), Russia (Prof. Woeikoff, *Petersburg Hochschule*), Greece (Mrs. Drakoules), Spain (both Castilian and Catalanian, Dr. Danjou of Nice), France (Mr. Morand of Paris), and Germany. In France and Belgium, much in contrast to Germany, the vegetarian movement is a thing of physicians and university professors. Address: Baden-Baden, Germany.

2787. *Boston Cooking-School Magazine*. 1910. Menus for a week in July without meat. 15(1):36. June/July.

• **Summary:** These menus fill a whole page. Note that none call for the use of meat, but some call for fish (salmon, codfish), eggs, or dairy products (milk, cheese souffle, shortcake with cream, whipped cream).

In small letters, just below the title, we read: “‘The human family are more in need of sound, wholesome advice as to what they should eat and drink than ever before.’—E. G. Fulton.”

One menu item, for Friday supper, is “Hot Peanut Butter Sandwiches.”

2788. *Boston Cooking-School Magazine*. 1910. Dishes for automobile and picnic luncheons. 15(1):58. June/July.

• **Summary:** This selection, which fills a whole page, includes “Peanut Butter-and-Olive Sandwiches.”

2789. *Vegetarische Warte*. 1910. Ansprache zur Eroeffnung des Internationalen Vegetariertkongresses in Bruessel [Speech at the opening of the International Vegetarian Congress in Brussels]. No. 17. p. 167-68. Aug. 20. [Ger]

• **Summary:** The opening speech was presented by Prof. Dr. Huchard of Paris. It is translated here from the June issue of *Réforme Alimentaire* [Food Reform] by Dr. G. Schlager, a school teacher. Address: Baden-Baden, Germany.

2790. Carrington, Hereward. 1910. Proper food for perfect health. *Cosmopolitan* 49(3):326-30. Aug.

• **Summary:** The author describes his weak, sickly childhood, his experiments with a diet of raw nuts and fruits, and the subsequent restoration of his endurance, energy, and health. Mentions prominent vegetarian athletes of the day. Photos show Max Unger (the strongest man in the world and a strict vegetarian), Annette Kellerman (the Australian diver, whom experts declare to be the perfect type of physical womanhood. Her food is exclusively vegetables and fruits), Horace Fletcher (who advocates thorough mastication), and young Hereward Carrington (the apostle of a limited diet, consisting mainly of nuts and fruit). Carrington is also the author of a book titled “Vitality, Fasting and Nutrition.”

2791. *Dundee Evening Telegraph* (Angus, Scotland). 1910. Literary extracts: A diet of fruits and nuts. Sept. 5. p. 6, col. 2.

• **Summary:** “How can one adopt a fruit and nut diet? What is the best way to go about it? Perhaps a description of the way I went about it would be helpful in this connection... This makes a delicious meal, and one that is nourishing and sustaining. If desired a few peanut-butter sandwiches made of whole-wheat or gluten bread may be added now and then... Start in the summer when fruit is plentiful. Drop meat, and make half the meal of cooked vegetables, half of fruits. Then replace the vegetables in the course of a few days with vegetables or nut-butter sandwiches and a more than usually plentiful supply of fruit.” Address: Schoolhill, Aberdeen [Scotland].

2792. *Chicago Daily Tribune*. 1910. Shun meat and outwit age: Chicago Vegetarian Society lauds its universal panacea. “But avoid the craze.” Conservative eating of grown things, says speaker, prolongs life. Sept. 10. p. 2.

• **Summary:** “If you wish to dodge the undertaker, be a vegetarian,
“If you wish to be able to enjoy nature, be a vegetarian,
“If you wish to lead a clean life, be a vegetarian,
“If you wish to get out of the cosmic mists, be a vegetarian,
“And if you wish other things beautiful and good, be a vegetarian.

“The Chicago Vegetarian society met last night in the society room of the Crerar library and it brought to light the above possibilities to the mere man who likes his steak well done or likes it rare...”

“The Rev. Henry S. Clubb of Philadelphia, President of the Vegetarian Society of America, said a man could not eat meat and be religious.”

2793. Lust (Benedict). 1910. The American School of Naturopathy, and Naturopathic sanitarium, recreation and convalescent home (Ad). *Naturopath and Herald of Health* (The) (New York City) 15(9):Unnumbered page. Sept.

• **Summary:** A full page ad. There are three courses of study. (1) “General Course extends over a period of 4 years, divided into 4 terms of 9 months each. Matriculants for this course have to comply with the New York State Board requirements. This course includes all branches of a regular Medical College: Anatomy, Physiology, Chemistry, Pathology, Botany, Bacteriology, Hygiene, Dietetics, Hydrotherapy, Mechano-Therapy, Massage, Osteopathy, Chiropractic, Naprapathy (focuses on the evaluation and treatment of neuro-musculoskeletal conditions. Doctors of Naprapathy are connective tissue specialists), Orthopedic Surgery, Obstetrics, Minor Surgery, etc.” (2) Advanced course of 6 months for medical students and practitioners of

all schools. (3) Postgraduate course in Practical Naturopathy of 4 weeks.

“Mrs. Lust has for 15 years directed the Ladies’ Department with notable success, and also supervised the Naturopathic Dietary Kitchen [vegetarian], whose output has a national reputation for both toothsome and nutritive excellence. Many well people dine with us regularly because they can’t find elsewhere in New York so good a board at our price—or better board at any price.”

“Affiliated with the New York Institute are ‘the Yungborn,’ Butler, New Jersey, and the ‘Quisisana,’ Palm City, near Nuevitas, Cuba.”

Note 1. This is the 2nd earliest document seen (Nov. 2014) in which Lust has changed the spelling from “Jungborn” to “the Yungborn.”

Note 2. This is the earliest document seen (Dec. 2014) that mentions a health resort in Cuba affiliated with Benedict Lust.

Photos show: (1) Benedict Lust. (2) The parent institution of naturopathy in America, established 1896. (3) The “Yungborn” Sanitarium, Butler, New Jersey. Address: Director, 465 Lexington Ave., New York City. Phone: 5796 Murray Hill.

2794. Strickland, Kimberly. 1910. Rhymed receipts for any occasion. *Boston Cooking-School Magazine* 15(2):93. Aug/Sept.

• **Summary:** The first poem, titled “Nut Wafers, begins:

“Here’s a cake for dainty eating.

“Peanut butter, just a cup.

“In the bowl some soda meeting

“(Half a teaspoon, you take up).”

Mix in flour and water to form a dough. Knead, then roll very thin. It ends:

“Let the oven do its duty,

“You’ll discover by and by

“That each wafer is a beauty,

“When it comes out crisp and dry.”

2795. *New York Times*. 1910. Dr. Lee pleads for better foods: Insanity, drunkenness, immorality are some of the results of poor food, he declares. Wants clean, liberal diet. And health, strength, refinement, and other estimable attributes will follow. Nov. 6. p. 10, col. 5.

• **Summary:** Dr. Elmer Lee of this city, an advocate of vegetarianism, writing in *The Medical Times*, makes a plea for better table foods. He declares that insanity, drunkenness and immorality are some results of poor food.

Note: Elmer Lee, M.D. was the editor of *Health Culture Magazine*.

2796. *Daily Post* (The) (Hobart, Tasmania, Australia). 1910. The soya or soy bean. Nov. 24. p. 7.

• **Summary:** “For some time past there has been a growing

demand for a substitute for animal food that should be at once palatable, nutritious, and digestible, as well as easily cooked and moderate in price. Such an article of diet is furnished in the Soya. Soja, or Soy bean of China and Japan. So many inquiries concerning this bean have been made of late that a few particulars will be both interesting and useful, more especially as the bean can be easily grown in Tasmania.

"In *The Daily Post* of September 17 a most interesting account was given of a number of experiments recently conducted in Wales with the view to ascertain the value of Soy bean-cake as compared with linseed cake as a flesh-forming and fattening food for sheep and cattle. These experiments proved that the Soy bean-cake was but slightly inferior to linseed cake, while it was also much cheaper. Other experiments, tried in Victoria and New South Wales have shown that the Soy bean may be easily grown in these States, since it is very hardy, and can survive both drought and late frosts. As a green food for sheep and cattle, the bean is of the greatest value, for every part of the plant can be utilised as fodder. But the Soy bean is of even greater value as an article of human diet. To make known this fact is the object of the present article. The Soy is a very fat bean, hardy and prolific, easily cultivated. It is highly nutritious, easily digested, and is readily assimilated, even in the weakest and most delicate stomach, as it has an almost imperceptible skin, hence it is a perfect food for invalids and children.

"In an article on 'A Vegetarian's Experiences,' in this paper, some months ago, by the present writer, a very brief account of this remarkable bean was given, accompanied by the following table of the analysis of two samples"

A table shows the nutritional composition of two soybean samples, as well as peas, lean beef, and fat mutton

In cooking, the bean absorbs about four times its weight of water; this brings it closely to an equal quantity fat mutton. A glance at the above table will show that the Soy is superior in every respect to beef, and only surpassed in starch by peas.

"The above table shows the relative value of the Soy bean as compared with equal weights of peas, lean beef and fat mutton.

"The scientific or botanical name of this bean is soja hispida [*Soja hispida*], doubtless on account of the rough or hairy appearance of its leaves. For thousands of years it has been cultivated in China and Japan, but it is satisfactory to note that it has greatly improved in quality since its introduction into Australia; the beans produced in the Sanitarium gardens at Wahrenonga, New South Wales, have also thinner skins, and are consequently more easily cooked.

"The present writer does not pretend to be a gardener, but, since his former article appeared, he himself has succeeded in growing the soy bean in Tasmania. Although sown so late as October 24, the beans survived a very sudden and severe frost, just after they had appeared above the ground. The plants are all doing remarkably well, and are

now developing rapidly. They evidently find the Tasmanian climate highly favorable to them. The beans this sown came originally from the Wahrenonga Sanitarium in New South Wales.

"The writer has personally used the soy bean as an article of diet, daily, for over five years. To a vegetarian, naturally, it seems a waste of time and effort to use so valuable a food merely to feed sheep and cattle, in order to ultimately to obtain meat from them, second-hand, so to speak, and of less nutritive value than the bean itself, while the bean itself used directly as our article of human diet, like the pea or haricot bean, is a far more nutritious, more digestible, and more assimilable food.

"Being almost round, like the pea, the Soy bean can be readily sown with the drill when a large crop is required. The crop from one acre of Soy beans would furnish more food for human consumption at one-hundredth part of the cost, than could be obtained from the mutton of 100 fat sheep! The most important points are that the soy bean is perfectly digestible in the weakest stomach, and that, at the same time, it is far more nutritious than the flesh of the sheep, since that flesh contains only those elements of the original bean that after the appropriation, by the animal, of what were needed for its horns, hoof, skin, wool, bones and teeth.

The true economy, therefore—quite apart from the moral advantage of a non-flesh diet—is to use the Soy bean itself direct, as a perfect and superior substitute for flesh meat.

As the writer is frequently asked how the Soy bean should be cooked, the recipe is here given:—Take a large breakfast cupful of soy beans, place them in a basin, over them pour enough boiling water to cover them and leave them to soak for one hour. Then boil gently for two hours. Like other beans they require flavoring with salt, mint, celery seed, mushroom ketchup, tomato sauce, or a slice of onion.

"The writer has persuaded several of his friends to grow the above bean. All report favorably on its growth. Should any interesting development occur, he will communicate the particulars to the paper.

"There can be no question as to the great advantages that would accrue to the Tasmanian farmer, were he to devote a reasonable amount of space and care to the cultivation of the Soy bean. There is a surer fortune to be made out of it than out of the gold mines of the Far West.

"The writer is of the opinion that a superior oil could be easily obtained from the dry beans by crushing them in the usual way, the residual pulp could be utilized as a first rate food for stock. In the near future, the Tasmanian Soy bean and the Tasmanian Soy bean oil will assuredly gain fame as profitable articles of commerce."

2797. Berhalter's Health Food Store and Bakery. 1910.

Would you like to be a successful vegetarian (Ad).

Vegetarian Magazine (The) 14(3):70. Nov.

• **Summary:** "If you would like to progress in physical

health and in spiritual wealth, call or write to: Berhalter's Health Food Store." "Following are a few of our specialties:

"Unfermented whole wheat bread, per loaf-15¢.

"Whole Wheat Fruit Bread, per loaf-20¢

"Combination Whole Rye Bread, per loaf-15¢

"Plain Unfired Whole Wheat Bread, per box-25¢

"Plain Unfired Whole Wheat Fruit Bread-30¢

"Gluten Flour 41 per cent Gluten, per lb 15¢

Unpolished Rice... Pure Italian Olive Oil, Pure peanut oil, Pure vegetable cooking oil.

"We carry in stock such a fine variety of foods that it enables vegetarians to select supplies to carry on a vegetarian life successfully. We can also supply all the knowledge necessary to begin a vegetarian diet successfully.

"No orders less than \$1.00, by mail, accepted. Call or write for price list."

Note: This is the earliest document seen (July 2021) that mentions "Berhalter" in connection with health foods. Address: Opposite New Comedy Theater, 309 North Ave., Chicago.

2798. Carqué, Otto. 1910. Vegetarianism in the light of modern science. *Naturopath and Herald of Health (The) (New York City)* 15(11):664-70. Nov.

• **Summary:** Written for *The Vegetarian Magazine*: "Perhaps no word has met with so many false interpretations as 'Vegetarianism.' This is mainly due to the similarity of the words 'Vegetarian' and 'Vegetables.' To the average, superficial thinker, 'a vegetarian' means a 'vegetable eater' pure and simple; a man who lives on cabbage, if not grass exclusively. The slow progress of vegetarianism in the western world must be ascribed, to a great extent, to the misunderstanding of this word." Address: Author.

2799. *Los Angeles Times*. 1910. Society meetings. Dec. 18. p. IV1.

• **Summary:** "Get Acquainted Society, 717½ East 9th street, has invited a professional phrenologist, an acute astrologer, a practical psychologist, and a cheerful clairvoyant to give talks and test readings before the society Sunday morning, 11 a.m.... Health and Food addresses by... Mr. Otto Carque, food scientist, Sunday eve., 7:45 p.m. Admission free. Socials Tuesday, Friday evenings. Reputable strangers always welcome."

2800. Determann, H. 1910. Der Vegetarismus [Vegetarianism]. *Deutsche Klinik (Die) (Berlin & Vienna)* 13(Ergaenzungsband II):119-50. [Ger]

• **Summary:** In this lecture, the author deals with the following questions: What are the minimum human protein needs. Is the minimal protein need the same as the optimum? Does a protein food offer the same advantages in a vegetarian meal as in a mixed meal? Do the *Nucleine* in meat cause damage to the human body? What is the price (in German marks) of 100 gm of edible protein from various sources? (Beans 0.20, peas 0.21, lentils 0.21, Aleuronat flour 0.21 [aleurone = protein], low-fat cheese 0.34, milk 0.35, dark bread 0.52, white bread 0.66, buckwheat flour 0.72, ox meat 1.35, eggs 1.37, Nutrose 2.49, Somatose 5.72, Valentines Fleischsaft 51.0). How does one, practically, go about obtaining a lacto-vegetarian diet? Key components: Cereal grains, their flours, and bread. Legumes, incl. peas, beans, and lentils (soybeans are not mentioned). Potatoes. Chestnuts. Vegetables and salads.

Note: Concerning the author's location, Sancte Blasien is a village and bailiwick of Baden in the circle of the upper Rhine 20 miles southeast of Freiburg on the Alb River in the valley of the Black Forest. As of 1996 this is Freiburg im Breisgau, in Baden-Wuerttemberg, Germany. Address: Freiburg i. B.-St. Blasien [Freiburg im Breisgau, Germany].

2801. *Revue Jaune (La)*. 1910. La plante à Frégoli [The Frégoli plant]. 1:110-11. [Fre]

• **Summary:** We are talking about a Chinese plant, about Soya specifically. Just like the artist Frégoli, it takes on the most diverse and the most unexpected aspects.

If one should be a vegetarian, here is the menu that can be ordered in a chic restaurant at Pao-Ting-Fou or at Chang-Hai-Kouan:

Waiter, a soup dish please.

Would you care for a cream soup, an oxtail or for turtle soup?

Soya soup, please, garçon.

What would you like to drink, sir?

Soya milk please.

Would you care for a vegetable, sir.

Sure, a plate of soya if you please, waiter.

Do you care for English sauce, sir?

Not English sauce but soya sauce if you please, waiter.
Would you care for anything else, sir?

Cake, a good, solid soya cake if you please, waiter.

I see that you have a good appetite, sir. We still have custard. Would you care for some, sir?

For sure waiter. A custard made with this delicious soy flour.

Would you care for a few fried doughnuts, sir?

Yes, fried in soy oil, waiter. And served very warm if you please.

Would you enjoy a cheese platter, sir?

Soya cheese if you please, waiter.

Would you care for fresh, hard or smoked cheese, sir?

Well, today I shall have the fresh cheese.

Would you prefer French bread or sandwich bread, sir?

Soya bread, waiter. I never have any other bread.

Will you have dessert, sir?

Bring me your little soya fondants, those petite cakes that stay fresh for months and that just melt in your mouth. Ah!

Oh, I almost forgot the jam.

Yes, Soya jam if you please. Please bring that to me waiter and if you please, please refill my glass of soya milk.

Would you like some tea, sir?

Tea with soya cream if you please, waiter. Soya cream, soya cream, soya, soya...

Note 1. This is the earliest document seen (Aug. 2013) that mentions a soy custard.

Note 2. Why is the word *Frégoli* used to refer to the soybean? Hervé Berbille, who found and sent this document to us, says: "I found that Léopoldo Frégoli was at beginning of the 20th century a famous *transformiste*, a kind of artist whose performance consisted in changing appearance; likewise the soybean can be transformed into an infinite variety of foods." For more, see Wikipedia at Leopoldo Fregoli.

2802. Thomas, K. 1910. Protein requirement and a vegetarian diet. *Umschau (Die)* 14:67-70. *

• **Summary:** The author states that a vegetarian diet would suffice for agricultural regions, but that animal foods are preferable for urban populations. He raises questions on the rationality of a vegetarian diet.

2803. Buttner, Jacques Louis. 1910. A fleshless diet: Vegetarianism as a rational dietary. New York, NY: Frederick A. Stokes Co. v + 287 p. 20 cm. *

• **Summary:** Dr. Butter, a physician, discusses anatomical, health, and practical considerations. The author was born in 1876.

2804. Christian, Eugene; Christian, Mollie Griswold. 1910. 250 meatless menus and recipes: To meet the requirements of people under varying conditions of age, climate and work.

New York, NY: Eugene and Mollie Griswold Christian. 184 + 28 p. Portrait of Mollie. 20 cm.

• **Summary:** "Peanut Butter: Owing to the fact that peanuts are one of our most important food products, and that there are so many brands of peanut butter on the general market, and that grade from very inferior to an extremely superior quality, both in taste and nutritive properties, it becomes necessary for the guidance of my readers to name some particular brand or kind of peanut butter, which investigation and chemical analysis have proven to be pure and wholesome, hence worthy of a place in a literary work intended to guide the housewife in selecting only the best. In view of these facts, I have used in the following recipes a brand of peanut butter known as 'Beech-Nut' (p. 102).

In the back of this book is a section of advertisements. Page 14 (unnumbered) contains ads for: (1) The Muncie Sanatorium at 117-119 Macon St. (corner of Marcy Ave.), in Brooklyn Borough, New York City. "All of the Christian health foods will be served at Dr. [Elizabeth Hamilton] Muncie's sanatorium." (2) "Brusson Diabetic Foods for diabetes, rheumatism, obesity, starch indigestion, etc." They sell "Gluten Bread (the most palatable bread in the world), Gluten macaroni, Vermicelli, Noodles, Small pastes, etc. Gustav Muller, 11 West 27th Street, New York City."

Eugene Christian lived 1860-1930. Note: This is the earliest document seen (Dec. 1998) that contains the word "Sanatorium" (spelled in that way). Address: 43 Seventh Ave., Brooklyn, New York.

2805. Freshel, Maud Russell Lorraine (Mrs.). 1910. The golden rule cookbook: Six hundred recipes for meatless dishes. Originated, collected and arranged by M.R.L. Sharpe. New edition. Boston, Massachusetts: Little, Brown and Company. viii + 323 p. Illust. Recipe index. 21 cm.

• **Summary:** This important, early vegetarian cookbook was first published in 1908 (copyright 1907) under the title *Six hundred recipes for meatless dishes*. The author's full name was Mrs. Maud Russell (Lorraine) Sharpe; thus her maiden name was Maud R. Lorraine. Born in 1867, she sometimes writes her first name "Emmarel."

Worcestershire sauce is called for in many recipes: Black bean soup (p. 48-49). Savoury rice (p. 189). Macaroni bianca (p. 190-91). Fried eggs (p. 231; "A little Worcestershire sauce or walnut catsup heated in the pan and poured over fried eggs adds variety"). Egg savoury (p. 275; "sprinkle with Worcestershire sauce, or any good sauce,..."). Egg sandwiches (p. 283; "sprinkle with Worcestershire sauce").

A "fourth printing" (Feb. 1926 edition) was issued by Dodd, Mead and Co. in New York. Part of the title was changed slightly to read: Originated, collected, and arranged by M.R.L. Freshel. Apparently between 1910 and 1926 she had divorced Mr. Sharpe and married Mr. Freshel. Address: Providence House, Chestnut Hill, Massachusetts.

2806. Fulton, Edwin Giles. 1910. Vegetarian cook-book: Substitutes for flesh foods. Mountain View, California, Kansas City, Missouri, and Portland, Oregon: Pacific Press Publishing Association. 419 p. Illust. Semi-index. 20 cm.

• **Summary:** This Seventh-day Adventist cookbook was first published in 1904 under the title *Substitutes for Flesh Foods*. In the long chapter on “Entrees” (p. 35-94), many recipes call for meat alternatives, such as Nuttolene, Protose, and “nut cero”—but with no recipe given for making the latter.

In the chapter on “Sandwiches,” are two recipes (p. 301-02) which could be considered precursors of the veggie burger. The first, “Nut cero sandwiches,” is a lettuce and sliced tomato sandwich, with nut cero serving in place of the burger.

On p. 260 are two recipes with “Granola” in the title. In Granola Porridge, the first ingredient is “Granola or fruit nuts, 1 cup.” The meaning of “fruit nuts” is unclear. The second is Gluten-Granola Mush.

The sub-chapter titled “Nut butter” (p. 309-13) states: “Nut butter is easily made in the home... Peanuts and almonds are the nuts most suitable for making nut butter. The other varieties are difficult to blanch... The best variety of peanuts for making nut butter is the Spanish shelled... There are three ways of cooking them; namely baking or roasting, boiling, and steaming. The baking process is the easiest way, but care should be used not to scorch them...”

“Peanut butter” is mentioned on pages 26, 296, 310, 312, and 342.

Two processes / recipes for homemade peanut butter are given, followed by Almond butter, Peanut meal, Nut cream (alternative to dairy cream made by mixing 2 tablespoons peanut butter with 1 pint hot water and 1 teaspoon salt), Crystallized peanuts, Salted peanuts, and Blanched almonds.

The author was born in 1867; his portrait photo faces the title page, with the inscription “Yours for health,” and his signature. A slightly revised edition with the same number of pages was published later in 1910.

2807. Jardine, Jeanne. 1910. The best vegetarian dishes I know. London: J.M. Dent & Sons Ltd. 107 p. 18 cm.

• **Summary:** Page 6: It “must be borne in mind that fats of various kinds, such as butter—made both from cream and nuts—cream, oil, and cheese, should necessarily take a prominent place in vegetarian fare, and also such complete forms of food as milk and eggs, in order to give it its proper dietetic value. It is frequently asserted that a vegetarian diet is more costly than a meat diet, but those who adopt it will find that the extra cost of butter, milk, and eggs in a month will compare favourably with the butcher’s bill for the same period.”

The contents is simply a list of all the recipes in the book—in page order. Address: England.

2808. Just, Adolf. 1910. The Jungborn dietary, a new vegetarian cookery-book: Choice, composition, preparation and storing of food for the natural cure and natural mode of living, together with all necessary instructions for the kitchen. London: George Routledge & Sons, Ltd.; New York: E.P. Dutton & Co. vi + 133 p. Illust. Index. 19 cm.

• **Summary:** The author is the founder of Jungborn and author of *Return to Nature*. “Jungborn is a Sanatorium for natural life and natural cure near Ilsenburg in the Harz [a mountain group in Germany between the Elbe and Weser rivers], it was founded by me in 1896 and transferred last year to my brother, Rudolf Just, my faithful collaborator during many years.” The sanatorium emphasizes fresh fruits and nuts above all, vegetables and water, simple foods without much cooking.

2809. Kellogg, Ella Ervilla Eaton. 1910. Science in the kitchen: A scientific treatise on food substances and their dietetic properties, together with a practical explanation of the principles of healthful cookery; a thousand choice, palatable, and wholesome recipes. Revised and enlarged edition. Battle Creek, Michigan: The Good Health Publishing Co. 508 p. Illust. Index. 23 cm.

• **Summary:** This is a new printing but not a new edition. It is exactly the same as the 4th edition of 1904. Address: Battle Creek, Michigan.

2810. Labbé, Marcel. 1910. Régimes alimentaires [Dietetic regimens]. Paris: Librairie J.-B. Baillière et Fils. xii + 585 p. Illust. Index. 21 cm. [1 ref. Fre]

• **Summary:** In the section on “Bread,” the subsection titled “breads for diabetics” (p. 104) discusses gluten bread, almond bread, and soy bread. “Soy bread (*le pain de soja*) made with soy flour, contains only 10% carbohydrates. It is also good for treating gout.”

In the section on vegetables, the subsection titled “dry vegetables” (p. 105-06) states: “The soybean, or oil pea of China (*La fève de soja, ou pois oléagineux de Chine*) is very rich in nitrogen and relatively poor in starch; it has also served in a bread for diabetics; unfortunately its taste is not very agreeable.”

The detailed and balanced section on the “vegetarian regimen” (p. 241-53) has the following contents: Introduction. History of vegetarianism. Disadvantages of the vegetarian regimen. Advantages of vegetarianism. Conclusions. Address: Professor agrégé at the Faculty of Medicine, Paris. Doctor at the Hospital of Paris.

2811. Miles, Eustace Hamilton. 1910. Food reformer’s companion, with ninety recipes... London: Mills & Boon, Ltd. xvi + 186 p. 19 cm. Mills & Boon’s Companion Series.

*

• **Summary:** About a vegetarian diet. The author was born in 1868.

2812. Wheldon, Rupert H. 1910. No animal food: And nutrition and diet with vegetable recipes. New York, NY; Passaic, New Jersey: Health Culture Co. 125 p. Plus 18 unnumbered pages of advertisements at end. Undated. No index. 19 cm.

• **Summary:** A comprehensive appeal to vegetarianism, advocating exclusion of all foods of animal origin [i.e., a vegan diet]. Contents: I. No animal food: 1. The urgency of the subject. 2. Physical considerations. 3. Ethical considerations. 4. The aesthetic point of view. 5. Economical considerations. 6. The exclusion of dairy produce. 7. Conclusion. II. Nutrition and diet: 1. Science of nutrition. 2. What to eat. 3. When to eat. 4. What to eat. Food table. Recipes (100 “strictly vegetarian” [vegan] recipes as they appear in the English edition).

The Preface states that “the following pages are in vindication of a dietary consisting wholly of the products of the vegetable kingdom, and which therefore excludes not only flesh, fish, and fowl, but milk and eggs and products manufactured therefrom.” “This work is reprinted from the English edition with changes better adapting it to the American reader.”

Pages 30-31: “As to the testimony of individuals it is interesting to note that some of the greatest philosophers, scientists, poets, moralists, and many men of note, in different walks of life, in past and modern times have, for various reasons, been vegetarians, among whom have been named the following:—Manu, Zoroaster, Pythagoras, Zeno, Buddha, Isaiah, Daniel, Empedocles, Socrates, Plato, Aristotle, Porphyry, John Wesley, Franklin, Goldsmith, Ray, Paley, Isaac Newton, Jean Paul Richter, Schopenhauer, Byron, Gleizes, Hartley, Rousseau, Iamblichus, Hypatia, Diogenes, Quintus Sextus, Ovid, Plutarch, Seneca, Apollonius, The Apostles (Matthew, James, James the Less, Peter), The Christian Fathers (Clement, Tertullian, Origen, Chrysostom, St. Francis d’Assisi), Cornaro, Leonardo da Vinci, Milton, Locke, Spinoza, Voltaire, Pope, Gassendi, Swedenborg, Thackeray, Linnaeus, Shelley, Lamartine, Michelet, William Lambe, Sir Isaac Pitman, Thoreau, Fitzgerald, Herbert Burrows, Garibaldi, Wagner, Edison, Tesla, Marconi, Tolstoy, George Frederick Watts, Maeterlinck, Vivekananda, General [Bramwell] Booth, Mrs. [Annie] Besant, Bernard Shaw, Rev. Prof. John E. B. Mayor, Hon. E. Lyttelton, Rev. R. J. Campbell, Lord Charles Beresford, Gen. Sir Ed. Bulwer, etc., etc., etc.”

The chapter title “What to eat” states (p. 83): “The Mongol procures his supply of protein chiefly from the Soya bean from which he makes different preparations of bean cheese [tofu] and sauce.” “Among the foods rich in protein are the legumes, the cereals, and nuts... Fat is chiefly found in nuts, olives, and certain pulses, particularly the pea-nut.”

Several recipes (p. 116-17) call for: Nut-milk, Vegeton, Nutter or nut butter, Marmite, Carnos, Pitman’s Vigar Gravy

Essence. These can be ordered from stores in England (see p. 111). The last 16 pages contain advertisements for *Health-Culture* magazine (monthly), “health appliances” (such as Dr. Forest’s massage rollers and colon syringes), and many books published by The Health Culture Co., Turner Building, 45 Escension St., Passaic, New Jersey.

2813. Wheldon, Rupert H. 1910. No animal food: Two essays and 100 recipes. London: C.W. Daniel. 141 p. 19 cm.

• **Summary:** An appeal for vegetarianism based on ethics, aesthetics, economics, and physiology. The author advocates exclusion of all foods of animal origin [i.e., a vegan diet]. There are sections on nutrition, dietetics, food values, and recipes.

Note 1. This is the earliest book seen on vegetarianism published by C.W. Daniel Co., which become one of England’s most important publishers of vegetarian literature.

Note 2. Leah Leneman (1999, p. 220-21) believes that this book “must be counted as the first vegan cookery book... The book began with two essays on why eating animal food was not a good idea—emphasizing the physical (i.e. health) aspects. The third part contained a hundred recipes. The book was favorably reviewed by the editor of *The Vegetarian Messenger and Health Review*. The recipes showed that it was ‘not at all impossible to obtain a variety of palatable dishes without recourse to either eggs or milk (1911, p. 142). The book was subsequently forgotten, and, in 1946, F. Kay Henderson’s *Vegan Recipes* was believed to be the first animal-free cookery book (The Vegan, 1988, p. 11).”

2814. Oldfield, Josiah. 1910? The cruelties of the flesh traffic. London: Order of the Golden Age. 48 p. Undated. 18 cm. *

• **Summary:** Reprinted from “The Herald of the Golden Age... the official journal of The Order of the Golden Age.” Josiah Oldfield lived 1863-1953.

Note: This is the earliest English-language document seen (March 2022) that uses the term “flesh traffic” to refer to the buying and selling of meat.

2815. *Vegetarier- und Fortschrittsfreund (Friend of Vegetarianism and Progress)*. 1910?-- . Serial/periodical. Nachrichtenblatt d. Vegetarierverbds. Sachsen e. V. u. seiner Ortsvereine (Newsletter of the Vegetarian Union of Saxony). Published by: Vegetarier-Verbd. Sachsen e. V. Sitz Dresden. Schriftl. (Written by): R[ich.] Bretschneider. [Ger]*

• **Summary:** Vol. 11 (the 11th year of publication of this early German vegetarian periodical) is 1920. There are 6 issues per year. Issues 1 is 4 pages in length. It is published in Dresden (-A 19, Kuegelgenstr. 41). In 1921 it was merged with the *Frauenzeitung*, *Vegetar*, and *Vegetarierbote*. Address: Germany.

2816. *Vegetarier-Vote. Nachrichtenblatt d. Vegetarierverbds.*

Sachsen e. V. u. seiner Ortsvereine. 1910?--.. Serial/periodical. Published by: Vegetarier-Verbd. Sachsen e. V. Sitz Dresden. Responsibility (Verantwortung): R. Bretschneider. [Ger]*

• **Summary:** Vol. 8 (the 8th year of publication of this early German vegetarian periodical) is 1917. There are 12 issues per year. Issues 1-8 are each 38 pages in length. It is published in Dresden (-A 19, Kuegelgenstr. 41). The business is located at the “Vegetarierboten” and “Fortschritt.” Address: Germany.

2817. Labbé, Henri. 1911. Le soja et ses usages [The soybean and its uses]. *Revue Scientifique* 49(1):171-76. Jan. 7. [6 ref. Fre]

• **Summary:** A summary of earlier publications (mostly in French) on soybeans and soyfoods. Discusses: Soy flour (*farine de soja*) for diabetics. Soy bread (*pain de soja*). Soy flour used to make various foods for diabetics as well as for vegetarians. Soymilk (*lait végétal à base de soja*, p. 174). Soy kefir and soy yogurt (Kephir, Yohourt). Soy sauce (*sauce de Soja, soyou, choyou*). Tofu (*Le fromage de Soja ou Tou-Fou*), which was invented by the ancient Chinese philosopher Whai Nain Tzu. Fresh tofu and dry tofu [dried frozen tofu, containing 53.6% protein]. How shoyu is made.

Note: This is the earliest French-language document seen (April 2012) that uses the word *soyou* to refer to soy sauce.

The section on the nutritional value of soy and soy protein (p. 173) ends with this interesting thought: For a long time the Chinese and Japanese, who cared little about the future justification of their habits and customs, have adopted the consumption of soy on a large scale, without realizing that science would perhaps one day come to bestow / confer on them a certificate or testimonial of complete approbation.

The section on soymilk ends as follows: Soya milk, according to trustworthy Chinese persons, is not just a mere curiosity. It is used, in China, for breakfast, being mixed with cow's milk. It is also used for infant formula [literally “artificial breast feeding”] or therapeutically. For this latter purpose, it is the fermented foods, such as Kephir, Yogurt, etc. that appear to be of interest. (“*Le lait de Soja, au dire de Chinois dignes de foi ne serait pas une simple curiosité. On s'en sert, en Chine, pour le déjeuner du matin, et en mélange avec le lait de vache. On l'utilise aussi pour l'allaitement artificiel, ou dans un but thérapeutique. Dans ce dernier but, ce sont plutôt les laits de soja fermentés, genre Kephir, Yohourt, etc. qui paraissent intéressants*”).

The author notes (p. 175, footnote) that a Chinese proverb says: *Le To-Fou est la viande des os* (“Tofu is the meat of the bones”). Note: This makes no sense and appears (Jan. 2019) to be a mistake. Tofu has long been known as “the meat without bones” (Horvath 1927, 1931, 1938, etc.) or “the meat without a bone” (Carque 1933, etc.).

The writer also notes that France is not taking any part

in the development of an industry to produce soy oil (p. 176, footnote). Illustrations (p. 72) show: Soy bean plant, with roots and pods. Close-up of soy bean pod and seed. Address: Doctor of Sciences (*Docteur ès-sciences*), France.

2818. *Lancet*. 1911. Notes from China (From our own correspondent): The soya bean. i(4560):202. Jan. 21. Summarized in *J. of the New Zealand Department of Agriculture*, 15 Feb. 1913, p. 149.

• **Summary:** “Within the past three years the outstanding merits of this pulse have come prominently to the front, and its export from Manchuria, where most of it is raised, has lately assumed very large dimensions. For the past 2000 years it has been used in North China for making bean curd, a thick nutritious jelly eaten daily by all classes of the people. A widely used vegetable oil is also expressed from it, the refuse left over serving for cattle food and manure for sugar plantations.”

“It is a cheap product, each bean when sown multiplying itself, on an average, 450 times. On account of the great nutritive value of the Soy Bean, it is well worth medical attention, more particularly for diabetic cases, because of its low proportion of starch. For making biscuits, soup powder, infant and other foods, it will be widely used in future when its dietetic value becomes better known.” The composition is then given, and it is shown to be rich in albumin [protein, 40%], fats (20%), sugar 8-11%, and minerals 4-6%. “The most abundant salt is sodium phosphate. Advocates of the fleshless diet have to contend with large amounts of indigestible cellulose which occurs in vegetarianism. This cellulose is present in 4 to 11 per cent. of the soya bean, but is easily eliminated from the other products. Bean curd is entirely free from it” as is “a most excellent vegetable milk which resembles animal milk in that it coagulates.” The author then gives some comparative nutritional figures, based on “the work of a French-trained Chinese chemist, Mr. Li Yu Ying.”

2819. *Christian Science Monitor*. 1911. Paris and the soy bean. Jan. 24. p. 16.

• **Summary:** “Western palates may not be easily reconciled to the culinary art of the eastern nations. Oriental cooking has not so far inspired the celebrated chefs of the world centers. For famous recipes, the epicures would hardly look to China. As many bills of fare still make their appeal in the French language, so the kitchens of France retain reputations earned long ago... But Paris, no doubt, is as proud of Alexis Soyer's ‘Culinary Relaxations,’ which the famous cook wrote in 1845, as of some other literary achievements of the period, more popular today, perhaps, but scarcely as interesting to the epicure.

“What, then, shall be said of Li Yu Ying, home address Peking, who has established himself in Paris and believes he has something of value in the cooking line for even the

surfeited Parisians. This, assuredly, is blazing a new trail where it must have required considerable courage to venture. China teaching France how to cook! Here, to say the least, is a gastronomical novelty.

“Son of a former minister of state at Peking, Yi Ying [sic], after studying scientific agriculture in France returned to his native land two years ago. Apparently impressed with what the French had taught him, he nevertheless considered it possible to produce something different from anything they had to show. For this purpose progressive China assisted Li Ying [sic, Li or Li Yu-Ying] in forming a company with a capital of \$400,000. The factory built at Les Vallées, near Paris, is the result.

“This Chinese invasion of French territory, however, need not cause alarm to Parisian restaurateurs. Li Ying and his associates, for the present at least, propose to devote their efforts to concentration of foodstuffs. The French Agricultural Institute at Chesnoy, where Li obtained his training, has done vegetarianism more than one service, and it appears as if China is now the debtor through that which the institute taught one of her sons.”

In the food area, Li is “proceeding along original lines. For instance, since all the machinery came from China, it is an interesting commentary on oriental progress that the far east is so advanced in mechanics that it can supply the equipment for a factory located in the center of European industrial activity. All the raw materials from which the foods are prepared are also imported from the eastern empire. Further than this, one of the most plebian staples in China, the soy bean, is the leading agricultural product from which Li Ying is manufacturing his delicacies.

“Tabloid foodstuffs may not revolutionize ordinary cooking methods, but if the soy bean is capable of tasty preparation, then it is evident from the magnitude of this Chinese enterprise there is a lesson wrapt in the incident. The Occident is no stranger to the value of the soy bean as basis for a piquant sauce. Here, now, is the Orient teaching many novel values for the same insignificant product.

“The western world has hardly had a chance to say what it thinks of this Chinese product. But if the Parisian institution is a success, there is no reason why other countries should not prove responsive to the idea. The civilization of the west owes many things to Asia. And the utilization of the bean is everywhere easy since there is practically no deterioration, no matter how far it is shipped.”

2820. *North-China Herald*. 1911. A Chinese factory in France. 98:265. Feb. 3.

• **Summary:** “The most up-to-date factory in France, and perhaps in Europe, has, states a Paris correspondent, just been established here by a Chinese, and all its employees are young Chinese. The factory aims at nothing less than the production of semi-artificial food, something like the famous nutritive pills of the late Professor Berthelot. The factory

is established on a very solid financial basis, too, with a capital of £80,000, all subscribed by Chinese imbued with modern ideas. All the machinery is of Chinese invention and manufacture, and the raw material for the foodstuffs of the coming millennium is imported from China. Thus the sons of Confucius, when they come to Europe, intend to give us a real awakening.

“The factory has been founded by a young Chinese, Li Yu Ying, thirty years of age, who is an expert chemist, engineer, scientific agriculturist, and a former student at the Pasteur Institute. He is the son of a former Minister of States at Peking and came to France in 1901. After spending some time at the Agricultural Institute at Chesnoy, near Montargis, he entered the Pasteur Institute at Paris. Here he studied alimentary subjects from a vegetarian point of view, and developed a number of formulas for improved and concentrated foodstuffs, for the production of which he conceived the idea of establishing a factory near Paris. Two years ago he went to China to secure the necessary capital, and at once obtained a sum of £80,000, half of which was subscribed by men in Government circles.

“A company was formed according to Chinese laws, with headquarters at Tientsin, and Li Yu-ying then returned to France to purchase the ground and establish the factory at Les Vallées, near Paris. It covers a vast area, and the machinery, as it arrived from China, was rapidly put in place. Special workmen, twenty-four in number, all native Chinese, were brought over, and are now employed at the factory. The products are extracted principally from the famous Soya beans, and the amount of alimentary substances extracted is astounding. We are told that they include milk, cheese, caffeine, oil, jellies, flour, bread, biscuits, cakes, sauces, and a variety of vegetables.”

2821. *Los Angeles Times*. 1911. Reaper takes noted elder: Miles Grant, Adventist, answers summons. Veteran preacher had passed his ninety first year—For a half century he never tasted meat and never ate a meal prepared by any hands but his own. March 25. p. II7.

• **Summary:** “A swing of the reaper’s scythe yesterday gathered in Elder Miles Grant, veteran Adventist clergyman and many years a vegetarian, formerly of Boston” [Massachusetts]. He was born on 13 Dec. 1819 in Farrington, Connecticut. “For the last fifty years he had never tasted meat in any form...” He did use raw eggs and milk, plus “grain foods, cheese, raisins, nuts and fresh fruit. These he ate but twice a day and after adopting this diet he became possessed of almost perfect health, and almost to the last retained his mental and physical vigor.” He died of uremic poisoning.

“The funeral will be held in the Advent Christian Church on North Avenue Twenty-two.”

2822. Bugby, William. 1911. Soy beans as human food.

Vegetarian Messenger and Health Review (Manchester, England). March. p. 83-84 (Series 8, 63d year). Reprinted from the Daily Post (Australia). [2 ref]

• **Summary:** “For some time past there has been a growing demand for a substitute for animal food that should be at once palatable, nutritious, and digestible, as well as easily cooked and moderate in price. Such an article of diet is furnished in the Soya, Soja, or Soy bean of China and Japan...”

“In an article on ‘A Vegetarian’s Experiences,’ in this paper, some months ago, by the present writer, a very brief account of this remarkable bean was given” accompanied by a table showing the nutritional composition of two soy bean samples compared with peas, lean beef, and fat mutton. The soy beans are much higher in protein, containing 34.0 to 38.8%.

The soy bean “has greatly improved in quality and flavor since its introduction to Australia; the beans produced at the [Seventh-day Adventist] Sanitarium gardens at Wahroonga, New South Wales, have also thinner skins, and are consequently much more easily cooked.

“The present writer does not pretend to be a gardener, but since his former article appeared, he himself has succeeded in growing the Soy bean in Tasmania. Although sown as late as October 24th, the beans survived a very sudden and severe frost, just after they had appeared above the ground. The plants are doing remarkably well, and are now developing rapidly. They evidently find the Tasmanian climate highly favorable to them. The beans thus sown came originally from the Wahroonga Sanitarium in New South Wales.

“The true economy, therefore—quite apart from the moral advantage of a non-flesh diet—is to use the Soy bean itself direct, as a perfect and superior substitute for flesh meat.

“As the writer is frequently asked how the Soy bean should be cooked, the recipe is here given:—Take a large breakfast cupful of Soy beans, place them in a basin, over them pour enough boiling water to cover them, and leave them to soak for one hour. Then boil gently for 2 hours. Like other beans they require flavouring with salt, mint, celery seed, mushroom ketchup, tomato sauce, or a slice of onion.”

Note 1. This is the earliest document seen (May 2005) concerning soybeans in Tasmania or the cultivation of soybeans in Tasmania.

Note 2. This is the earliest English-language document seen (April 2008) with the term “human food” in the title, referring to soy beans. Address: Tasmania.

2823. Maude, Aylmer. 1911. *The life of Tolstoy: Later years*. 2nd ed. New York, NY: Dodd, Mead and Co. ix + 712 p. Illust. (frontispiece portrait). Index. 22 cm. 1st ed. published Sept. 1910. [100+* ref]

• **Summary:** In Vol. II, subtitled “Later Years,” Tolstoy’s vegetarianism is mentioned on pages 213, 215-18, 328, 431-

33, 452, 507, 523, 606, 627, 645, 678, 684.

There is also an excellent Chronology of Tolstoy’s life (p. 677-81) and chronological list of Tolstoy’s chief writings since 1877.

Tolstoy became a vegetarian in about Oct. 1885, having first heard about it and been inspired by William Frey (V.K. Heins, a Russian by birth) who visited Tolstoy at Yasnaya. That same year Tolstoy greatly changed his daily life. He wanted to begin a new life, to be a new man, by beginning to live a simpler, more humble life based on manual labor, earning his bread by the sweat of his brow, as advocated in the Bible. He was struggling to become more deeply a true Christian. Frey, who knew vegetarianism well, believed (and told Tolstoy) that a diet of fruits and nuts was the natural diet of man. Tolstoy became a vegetarian largely to sever his complicity / ties with the slaughter of animals. Within a few years, the Countess Mary was a vegetarian, and her elder sister, Countess Tatiana, was almost so. Tolstoy remained a vegetarian for the rest of his life. He also renounced hunting, shooting, and smoking tobacco; it was very difficult for him to completely overcome his craving for tobacco (p. 212-19).

In this 2nd edition, the author has made a few slight alterations in the text and has added an account of Tolstoy’s last illness and death. All but the last 24 pages were written while Tolstoy was still alive.

Note: Aylmer Maude (1858-1938) is a man. He and his wife were English translators of Tolstoy’s works. Aylmer Maude also wrote about the Doukhobors in *A Peculiar People* (1904). Address: Great Baddow, Chelmsford borough of Essex, England.

2824. *British Medical Journal*. 1911. A new development of vegetarianism. ii:90. July 8.

• **Summary:** A humorous and slightly sarcastic essay from the medical establishment on the therapeutic action of vegetables as developed recently in France. “In this, as far as we can make out, each vegetable is credited with a specific therapeutic action... Thus if a man is afflicted with a troublesome mother-in-law, the treatment is to send her to Vichy and feed her on carrots.” “... massive doses of potato might perhaps be useful in preventing a politician in a hurry from pushing through a far-reaching measure without adequate discussion.”

2825. *Advertiser (The)* (Adelaide, South Australia). 1911. Views and comments. July 25. p. 8.

• **Summary:** “Vegetarian.”- Nutmeat may be made as follows:—Take one cup of peanut butter, one and a half cups hot water, three heaping tablespoonfuls of gluten, and one level teaspoonful of salt. Mix all well together and cook in a double boiler from four to five hours. A small onion grated fine and a teaspoonful of powdered sage may be added if desired.

2826. Hall, A.D. 1911. Some aspects of vegetarianism. *Harper's Monthly Magazine (New York)* 123(734):208-13. July.

• **Summary:** "It is, perhaps, not unfair to the large and militant community of vegetarians to say that their actions are dictated more by sentiment than by science." The author, apparently an expert in animal nutrition, admits that the science of human nutrition is still in its early days and that "we must concede to vegetarians the claim that flesh is not necessary to the human diet." Yet he feels that an omnivorous diet supplies the body with a more diverse (and therefore safer) choice of proteins, that meat proteins are more concentrated, and requires less energy to digest. Vegetarians argue that their diet makes for quieter and more law-abiding citizens; it is good for ascetics and those "who want to keep out of the danger zone, avoiding meat as they would alcohol, art, love-making, and other heady pursuits. But valuable as these people may be, the community needs even more the full-blooded and the adventurous; the big men, the men who make things, who will not forego emotions and experiences because of the risks of shipwreck they may be running. 'More life and fuller' is their watchword."

Vegetarians argue that their diet is more economical and that it will inevitably be practiced as soon as the world's population grows up to the limit of the land available for cultivation. This may well be true. An acre of land used to grow wheat could keep 10 people alive, whereas the beef grown off that same acre would only support one. A "given acre of land will yield from twelve to twenty times as much vegetable as it will of flesh food, assuming the two to be of equal value for supporting life."

The author concludes: "So we take leave to doubt whether the human race will eventually become vegetarians, nor can we, as lovers of a rich and full-blooded people likely to remain dominant in the press of nations, advocate the spread of vegetarianism, despite its undoubted economy. For men, as for nations vegetarianism is one form of the Polonius creed of playing safety, but playing safety at best only secures an undisturbed existence and may only end in an early and unhonored grave." Address: M.A., F.R.S., Director of the Rothamsted Experimental Station, England.

2827. Betz, I.H. 1911. The V Series: No. 4—Vegetarianism. *Gazette (The) (York, Pennsylvania)*. Aug. 12. p. 5, cols. 1-4.

• **Summary:** An excellent, early history of vegetarianism, worldwide. Here is an extract: "The War of the Revolution now followed and war is not favorable to reformatory movements. In the year 1817 a little band of so-named Bible Christians came from Lancashire, England, who were abstainers from the flesh of animals on religious grounds, believing that the Bible inculcates such abstinence and that man's highest spiritual interests are promoted by it. Rev. William Metcalfe was the leader of this band of pioneers and he was among the first to publicly advocate the principle

of the total abstinence from all intoxicating liquors and the flesh of all animals in this country. Judge Hertell, in 1818, advocated in a tract total abstinence from all drink the following year, probably unaware that the same principle was advocated in Philadelphia by an obscure and little known people [sic]. This church in Philadelphia is still in existence under the ministrations of Rev. Henry S. Clubb.

"Rev. Metcalfe published a tract on 'Abstinence from the Flesh of Animals' in 1821. This was probably the first publication especially or wholly on this subject in America. In 1823 he also published a tract on 'The Duty of Abstinence from all Intoxicating Liquors.'

In 1823 they erected their first church building. In 1837 they replaced their original building with a brick structure. This was replaced by a new stone Gothic church in 1891. No slaughtered animals not intoxicating liquors are allowed on their lot.

"In 1830 Rev. Sylvester Graham came to Philadelphia as a temperance lecturer and made the acquaintance of Rev. Metcalfe and his members. He was formerly a Presbyterian minister but was now earnestly studying physiology in order to fit himself still better as a lecturer. His acquaintance with these people now led him to examine the subject of food more thoroughly and he examined it critically and scientifically. After his departure from Philadelphia a correspondence took place between Graham, Metcalfe, and William A. Alcott, who later became a noted lecturer in this direction. He was a brother of Amos Bronson Alcott, the lecturer and transcendentalist and the father of Louisa M. Alcott, the authoress later of the well known books for girls. In 1850 Alcott became the Moral Reformer, while other journals were started at other places, bearing upon Health and Food Reform.

"Graham wrote industriously for these journals and delivered lectures over the country on the science of Human Life, which he afterwards published in book form. This book being one of the early works in this direction, is very readable even today. He took decided views against the use of animal food and condiments and advocated the use of wheatmeal, since called 'graham flour,' instead of the fine flour in universal use.

"Fowler and Wells, well known as publishers of Phrenological, Water Cure and other reformatory works, were the publishers of Graham's works, which, owing to his personal characteristics associated with his lectures, received a wide reading. Graham boarding houses were established and it was at one of these that Horace Greeley, who like [Benjamin] Franklin was largely devoted to the system, met his future wife. Graham published his lectures in 1839, but continued his labors with increasing perseverance until 1851.

"Contemporary with Graham and Alcott a new advocate appeared from an unexpected quarter, in the person of Prof. R.D. Mussey, professor of anatomy and surgery at Dartmouth college, and of surgery in the Medical College

of Ohio, and a resident of Cincinnati. In 1862 appeared his work, 'Health; Its Friends and Foes.' Dr. Mussey strongly arraigned alcohol and tobacco and advocated general reform in this general direction all around. Coming from the regular profession and a man of ability and standing, he was a strong acquisition to the new cult.

"The formation of a vegetarian society, in England, in 1857, led to the calling of a convention in New York city in 1850, at which Rev. Metcalfe presided, and addresses were delivered by him, Graham, Alcott, Dr. Trall and others. The American Vegetarian society was formed. The *American Vegetarian and Health Journal* was begun by Rev. Metcalfe in November, 1850. This was continued for four years, but was discontinued for lack of support. The Water Cure Journal, established by Fowler and Wells, then became the organ of the society. Graham died in 1851 [at age 57], which had a depressing effect upon the movement. The war of 1861-65 [the U.S. civil war] had a still greater effect. Metcalfe died in 1862. Alcott died in 1859."

2828. Kellogg, John Harvey. 1911. Food product. *U.S. Patent* 1,001,150. Aug. 22. 2 p. Application filed 19 Oct. 1908.

• **Summary:** "The main object of this invention is to provide an improved food product which is very palatable and nourishing and one which is well adapted for use as a meat substitute."

It is made from 3 parts each wet casein and wet wheat gluten, 3 parts vegetable oil (such as corn or nut oil, optional), plus yeast products from waste brewery yeast (either concentrated yeast extract or crude yeast product). After the ingredients are mixed and cooked in cans, the product has a meaty consistency and flavor, making it a "very satisfactory substitute for flesh foods. It is very nourishing and may be used in a great variety of ways." Address: M.D., Battle Creek, Calhoun County, Michigan.

2829. Kellogg, John Harvey. 1911. Vegetable vs. animal protein. *Good Health (Battle Creek, Michigan)* 46(8):680. Aug. [1 ref]

• **Summary:** The editor of *Scientific American*, in an article about producing wheat that contains a larger proportion of protein, notes that vegetable gluten costs less than one-twelfth as much as animal "gluten" (i.e., beef protein). Address: M.D.

2830. Kellogg, John Harvey. 1911. Vegetarian societies in China. *Good Health (Battle Creek, Michigan)* 46(8):679. Aug.

• **Summary:** "Dr. Tucker, of North China, states that there are in existence all through China vegetarian societies known as *tsiali*. These people eat no meat on any occasion. They are quite numerous, perhaps five per cent of the entire population... The people of North China eat very little meat.

As a rule, meat is eaten only on three occasions: weddings, funerals, and Chinese New Year, which occurs in January or February. A pound of meat costs in China as much as a day's wage. The average wage is five cents a day."

"The above statements are true with reference to nine-tenths of the entire population. The other one-tenth, the official class, eat more meat. The principal food of the Chinaman is millet with a little salt, turnip or cabbage. They put no salt in their food but eat the salt in the form of dried salt vegetable. The wealthy class eat peanuts as a relish." Address: M.D.

2831. Dorsey, George. 1911. Skill of the Chinese shown on farms: Few people have grown more food on rocks or developed more plants. Their cookery an art. *Chicago Daily Tribune*. Oct. 29. p. A2.

• **Summary:** "No other dense population has so thoroughly adjusted itself to its physical surroundings, depending throughout the course of its history on its own natural resources and the ingenuity of its brain. We speak of the application of science to agriculture as if science were something quite new... Few countries can show such a record of great inventions as the Chinese."

"China is just enough saturated with Buddhism to make people afraid of eating meat at times... There are societies in China, like our temperance societies, the members of which vow never to eat beef. There is in Chinese a formula to the effect that the ox, as man's most useful helper in plowing and winning his daily bread, shall be inviolable [not available for slaughter to eat].

"In parts of China where Mohammedans are numerous, beef and mutton are largely consumed. The butchers of Peking are all Mohammedans. The Chinese abhor milk. Nor do they prepare cheese. Pork is the favorite meat throughout China."

"Variety of grains:... Chinese grow all kinds of pulse—white, yellow, red, green, and black. Bean curd, prepared from the yellow and black bean, is the principal food article in China and Japan. The beans are macerated in water and milled. The liquid filtered [and boiled], and gypsum added to coagulate the casein. Vermicelli and a kind of jelly are made from [mung] bean flour. From the starch extracted from green beans a meat sauce is made; from fermented beans a condiment known as soya [soy sauce]... Turnips and cucumbers are seasoned with soya." Address: PhD, LLD, Hankow, Hupeh Province, China.

2832. *Pharmazeutische Post (Vienna; later renamed Pharmaceutische Post)*. 1911. Ein Rundgang durch die Internationale Hygiene-Ausstellung in Dresden: IX. Ausland. (Fortsetzung von Seite 913.) 3. Der kaiserlich chinesische Pavillon [A tour of the International Hygiene Exhibition in Dresden: IX. Foreign countries. (Continued from page 913.) 3. The Imperial Chinese Pavilion]. 44(91):951-53. Nov. 14.

[Ger]

• **Summary:** III. The class of “Nutrition” (*Ernährung*) concerns foods and delicacies *Nahrungs- und Genussmittel*, the art of cooking (*Kochkunst*) and cooking devices (*Kochgeräte*).

The Chinese solved the problem of achieving excellent and cheap nutrition by making use of all of the parts of the soybeans (*Soyabohnen*). The great exhibition by the soybean company (Caséo Sojaine Paris, 46 Rue Denis-Papin, Seine) will convince most people of the possibility that with the general increase in prices of today, this food can be spread through the entire world. [The article then goes on to describe the many dried and canned foods that are on display at the Exhibition...] fruit juices such as banana, pear, pineapple, nutmeg, apricot, peach, and orange syrups, as well as tobacco leaves and cigarettes, spices and seasonings such as: salt, soya (*Soya*) [probably soy sauce] (from the company T-Hoa Tinning & Co. in Amoy [today’s Xiamen, China]), refined sugar, sugar candy, honey, bamboo sprouts, morel mushrooms, button mushrooms from Chihli [today’s Hebei Province, China]...

Also being exhibited are works for filtration and water purification, different systems for the treatment and preparation of tea, for the preparation of foods and drinks, and analytical tables on the composition and digestion time of foods, and furthermore the different varieties of soybeans (*Soyabohnensorten*), products from soybeans such as bean milk (*Bohnenmilch*) [soymilk], bean cheese (*Bohnenkäse*) [tofu], curdled bean milk (*geronnene Bohnenmilch*) [probably yuba], mock ham (*falscher Schinken*) [probably made by steaming yuba in a mold], and casein from soybeans, and also biscuits, pastries, jams, cakes, oil (produced from soybean meal (*Soyabohnenmehl*)), and then tables on the nutritional value and price comparisons of one hundred calories (*Wärmestoffe*) between soy (*Soya*) and other foods. It is interesting to learn that the average content of soybeans consists of 33.52% nitrogen, 17.25% fat, 16.15% carbohydrates, and 4.52% mineral salts. With regard to their nutritional value, the soy products are more beneficial than meat and do not contain any toxins. At the same time, they are economical and healthy foods and therefore they are welcome to any person who wants to eat cheaply and yet well, but they are especially to be recommended to vegetarians and to people who are suffering from certain illnesses, such as diabetics and those with stomach problems.

Note: Translated by Philip Isenberg (MM, CT), Long Beach, California.

2833. Berhalter (T.A.). 1911. Berhalter’s health foods: Vegetarian products (Ad). *Naturopath and Herald of Health (The)* (New York City) 16(12):Unnumbered page. Dec.

• **Summary:** A half-page horizontal ad. “If you want health foods of all kinds, send us your order. We ship our goods anywhere. Our foods are strictly in accord with vegetarian

dietetics...

“Our twelve years of experience [i.e., since about 1907] in accordance with vegetarianism has made us authorities of the Health Food Problem.

“These are some of our specialties:

“Uncooked, laxative whole wheat fruit bread, per 2 lb. package—\$0.35.

“Uncooked, laxative whole wheat bread, plain, per 2 lb. package—\$0.25.

“Unfermented whole wheat bread, also act laxative, 2½ lb. loaves—\$0.15.

“Bran Gluten Bread, 1½ loaf—\$0.10.

“Whole wheat flour, ground in our own mill, either coarse or fine, per lb—\$0.05.

“Unpolished rice, per lb—\$0.10.

“Our own brand raw peanut butter, per 1-lb. jar—\$0.30.

“Same in gallon pails—\$2.50.

“Peanut oil, gallon—\$2.00.

“Pure vegetable cooking oil, per gallon—\$1.10.

Pure Italian olive oil, sun-dried ripe olives, sun-dried black figs, Smyrna pulled figs, pure grape juice (per quart).

“Write us for complete list of our foods, books, etc. No orders less than \$1.00 accepted.”

A creative illustration at the top shows bread and other baked wheat products streaming out of the top of a sheaf of wheat over a rising sun.

Note: This is the 2nd earliest document seen (July 2021) that mentions “Berhalter” in connection with health foods. In 1936 Anthony A. Berhalter founded the American Health Food Association in Chicago. It is not clear whether or not T.A. Berhalter (above) and Anthony A. Berhalter are one and the same person. They live in the same city and are active in the same new industry. However the ad in the Sept. 1912 edition of this magazine proves that T.A. Berhalter and Anthony A. Berhalter are one and the same person because his wife and co-worker was Kathleen, and later documents state that they began work in this industry in 1907. Address: 309 North Ave., Chicago, Illinois. Phone: Lincoln 2524.

2834. Li, Yu-ying; Grandvoinnet, L. 1911. Le soja [The soybean]. *Agriculture Pratique des Pays Chauds (Bulletin du Jardin Colonial)* 11(105):459-74. Dec. [18 ref. Fre]

• **Summary:** Contents (continued): 2. The soybean in human nutrition. The soybean in general nutrition: From the

viewpoints of physiology, economy, and gastronomy. The role of soybeans in special diets/regimens: Vegetarianism and vitalism, remineralization, anti-diabetic, others, lactose-free.

Foods made from soybeans (*Produits alimentaires à base de soja*): 1. Soymilk and its derivatives: Soymilk (developed by the Chinese philosopher Whai Nain Tze {Liu An of Huai Nan} well before the Christian era, method of production, Chinese method, modern method used at Li's factory *l'Usine de la Caséo-Sojaïne* at Vallées (Seine)), cleaning the seeds, steps in soymilk preparation (grinding and filtration), the nature of soymilk (physical properties). A graphic illustration (p. 465) shows a comparison of nutritional elements between soybeans, tofu, and beef. A chart in outline form (p. 471) titled "Soy based food products" (*Produits alimentaires à base de soja*) shows the numerous and varied food products that can be derived from the soybean: I. Soymilk and its derivatives: Normal soymilk, concentrated soymilk, powdered soymilk, fermented soymilk (*lait fermenté*), soy cheese (*Caséo-Sojaïne*; *Fromage de soja* [tofu]), soy casein. II. Soy flour and its derivatives: Soy flour, soy bread for diabetics, whole-grain bread (*Pain complet*), cakes, biscuits (*Biscottes*). III. Soy oil and its by-products (cake). IV. The soybean used as a vegetable. V. Condiment products based on fermented soybeans. VI. Confectionery products: Soy confection, soy powder. VII. Soy coffee. Soy-based ferments: Kiu-tsee, lactic ferments based on soymilk. (*Ferments lactiques à base de lait de soja*).

Photos show: Inside view of Li's factory as the equipment is producing soymilk (p. 473). Microscopic view of soymilk, and of soy flour dissolved in water (p. 474). Also contains various tables, charts, and graphs from other sources.

Note: This is the earliest document seen (March 2000) written by Li Yu-ying which contains the term *Caséo-Sojaïne*. On p. 471 he states clearly that he uses it as a synonym for soy cheese (*Fromage de soja*) [tofu], which is made from soy milk—perhaps to avoid disputes over the word *fromage* with manufacturers of dairy cheese. On p. 472-73 he states that *Usine de la Caséo-Sojaïne* is the name of his modern factory at Vallées (Seine) which makes a variety of soy products. Address: 1. Conseiller de 1ere classe au Ministère de l'Agriculture de la Chine; 2. Ingénieur agricole (G.).

2835. Nashville Sanitarium—Food Factory. 1911. High grade health foods (Ad). *Naturopath and Herald of Health* (The) (New York City) 16(12):Unnumbered page. Dec.

• **Summary:** "Made by expert bakers, from best selected materials, in a well-ventilated hygienic factory away out in the country, surrounded by farms and pure fresh air. Made by men who do things from principle.

"Contain no animal fat. Full line of nut foods, cereal foods... More than twenty-five kinds. Nutfoda is the great vegetable meat, pure, wholesome, delicious, a perfect meat

substitute at 10, 15 and 25¢. for ½ lb., 1 lb and 2¼ lb. cans.

"Nutmaks—similar to cheese, 1 lb. can—\$0.15.

"Nashville Malted Nuts, 1 lb. jar—\$0.35...

"Baked Beans, Tomato or Plain, 1½ lb. can—\$0.10.

Note: It is possible, but unlikely, that these baked beans are soybeans.

"Cereal Coffee, Superb, 1 lb. pkg.—\$0.10...

"Dixie Kernel (a Malted Breakfast Food) 1¼ lb. pkg.—\$0.15.

"20 per cent Gluten Meal, Well Cooked, 1 lb. pkg.—\$0.12."

"On sale at Naturopathic Supplies Store, 465 Lexington Ave., New York, N.Y."

Note: This organization is almost certainly the same as that later known as Madison College; Madison was near Nashville, Tennessee. This is the earliest document seen (April 2017) that contains the term "food factory" or that indicates that the Madison food factory is selling its products as far away as New York City. Address: Nashville, Tennessee.

2836. Taylor, Alonzo Englebert. 1911. Is vegetarianism capable of world-wide application? *Popular Science Monthly* 79:587-93. Dec.

• **Summary:** The author, who shows a good understanding of and sympathy for the motivations of vegetarians, believes that the answer to the question posed by the title is "No." There are 4 types of vegetarians. 1. Those who from motives of gustatory taste, particularly in youth and in advanced years, dislike the flavor of flesh. 2. Esthetic vegetarians are find the idea of eating meat revolting. The publication in 1906 of *The Jungle* by Upton Sinclair "made many converts to vegetarianism. The centralization of slaughtering has intensified the natural aversion to the process, since, in addition to the lack of hygienic precautions that once prevailed in the large packing houses, the mass of gore as exemplified in the large establishments multiplies the esthetic revulsion."

3. Vegetarians from motives of physiological opinion believe that consumption of flesh is "harmful to digestion or inimical to nutrition." The modern science of nutrition shows clearly that "a properly selected and prepared vegetarian diet meets completely the highest requirements of a diet." Yet there is no evidence showing that such a diet is superior to one containing reasonable amounts of animal products, such as beef, casein, or egg whites. 4. "Philosophical vegetarianism rests upon the simple ethical proposition that man has no right to preserve his existence, enlarge his comforts or advance his material and spiritual welfare at the expense of the life of animals. Animals of all classes are to the ethical vegetarian, as in the Indian religion, as fully entitled to life as man; the commandment 'Thou shalt not kill' is interpreted to apply generally to all types of animal life, and the slaughter of animals for the service of man is

regarded as an expression of brute force which is inhuman... To be consistent, the philosophical vegetarian must not only abjure the use of flesh in the diet, he must also abstain from the utilization of products of animal bodies, the procurement of which entails the death of the animal."

The author believes that the area of the earth's surface now under cultivation would clearly be inadequate to produce enough albumin [protein] to support the present world population on a vegetarian diet (which includes dairy products and eggs). "At present probably one half of the albumin needs of mankind are met by animal albumin. To meet these needs with plant albumin and dairy products the world's production of grains and legumins would need to be doubled at the least. It is quite certain that this could not... be dependably accomplished at present." The extensive land now used for grazing would become idle. Chemical fertilizers would have to replace animal manures. Abandoning the use of leather and furs as clothing would cause grave hardships for humans. The author concludes: "Man is a beast of prey because thus the preservation of existence is made easy; vegetarianism would make it difficult, and will therefore not be adopted. This carries its personal lesson: I, the vegetarian, must not be vain; because it is the meat-eating of my brother that makes vegetarianism possible to me." Address: Prof., Univ. of Pennsylvania.

2837. Lankester, Edwin Ray. 1911-1913. *Science from an easy chair*. 2nd series. New York, NY: Methuen. See p. 159-69. *

• **Summary:** In a chapter titled "Vegetarians and Their Teeth" (p. 159-69) the author examines the debate over the effect of diet on human teeth.

Page 143: Recipe No. 301, Bahamie mentions “soja” twice.

Page 144: Recipe No. 302, Kiemloh mentions taotjo twice.

Page 144: Recipe No. 303, Tjoan tahoe mentions “soja” twice, taotjo twice, and tahoe 4 times.

Page 144: Recipe No. 304, Laksa tjina mentions “soja” twice.

Page 149: Recipe No. 313, Chineesche pasteitjes mentions “tahoe” twice.

Note 1. Surprisingly, the word “ketjap” (or “kétjap”), meaning Indonesian-style soy sauce, does not appear in this book.

Note 2. According to the title page, the author, a married woman, has written various award-winning books: *Het Volledig Nederlandsch-Indisch Kookboek* [The Complete Dutch-Indian Cookbook], *De Specerijen en ingrediënten der Rijsttafel* [The Spices and Ingredients of the Rice Table], *Ons Huis in Indië* [Our House in the Dutch East Indies]. etc.

She is *Lauréate van het “Institut International d'alimentation, de cuisine et d'hygiène à Paris.”* Address: Author.

2845. Ehret, Arnold. 1911. *Kranke Menschen: Der gemeinsame Grundfaktor im Wesen aller Krankheiten, des Alterns und des Todes* [Sick people: The common fundamental factor in the essence of all illnesses, of aging, and of death]. Munich, Germany: Kuhn. 80 p. [Ger]*

• **Summary:** The author advocates rational fasting, followed by a diet based on fresh fruits and starchless vegetables. He strongly discourages the use of animal products, including meat and dairy products. Arnold Ehret lived 1866-1922.

Note: This is the earliest document seen (June 2015) by or about Arnold Ehret. Born on 29 July 1866 near Freiburg, Germany, Ehret came to California in 1914. He died in an accident in Los Angeles in 1922.

2846. Encyclopaedia Britannica (11th ed.): Vegetarianism.

1911. Cambridge, England, and New York: Encyclopaedia Britannica. See vol. 27, p. 967-68. [7 ref]

• **Summary:** The word “vegetarianism” came into use in about 1847, and refers to “the practice of living upon foods from which fish, flesh and fowl are excluded.” “... while vegetarian societies claim as ‘vegetarians’ all who abstain from flesh foods, there is a large and growing number of people who repudiate the name of ‘vegetarian’ because of its associations, but who none the less... abstain from eating anything that has been killed. The order of the Golden Age, for example, with its headquarters at Barcombe Hall, Paignton, South Devon, adopted the words ‘Fruitarian’ and ‘Fruitarianism’ to denote the dietary of its members. The rule laid down by the Order is abstinence so far as possible from all foods which are obtained by the cruel infliction of pain, and the minimum that is set is complete ‘abstinence from flesh and fowl,’ while net-caught fish may be used by associate members.”

Note: This is the earliest English-language document seen (Feb. 2022) that contains the word “fruitionism.”

The reasons advanced for the practice of vegetarianism are: health, economy, racial improvement (more workers are required to grow crops than to feed animals), and character improvement (encourages gentle humaneness).

“Organizations have been established to advocate this method of living under the name of ‘Vegetarian Societies’ in many countries—chiefly the United Kingdom, America, Germany, France, Austria, Holland and Australia. Propagandism is carried on by lectures, literature, cookery demonstrations and restaurants. In England, the oldest and one of the most important societies is ‘The Vegetarian Society,’ of which the headquarters are at Oxford Street, Manchester. There are also several small London societies, and an active London Association. A few provincial towns, too, have small societies. An attempt has been made to organize the various vegetarian societies of the world under the title of ‘The Vegetarian Federal Union.’ The headquarters of the London societies and of the ‘Union’ are at Memorial Hall, Farringdon Street, E.C....

“The athletic side of the movement has been represented in national and international races by vegetarians winning the Berlin and Dresden walking match (125 m.), the Carwardine Cup (100 m.) and Dibble Shield (6 hours) cycling races (1901 and 1902), the amateur championship of England in racquets and in tennis (held by Mr Eustace Miles for a series of years), the cycling championship of India (3 years), half-mile running championship of Scotland (1896), world’s amateur cycle records for all times from 4 hours to 13 hours (1902), 100 miles championship Yorkshire Road Club (1899, 1901).

“In the religious world the Seventh-Day Adventists (who are connected with many sanatoria and the manufacture of food specialties) and some Bible Christians, the worshippers of Vishnu and the Swami Narang and Vishnoi sects, amongst

others, preach abstinence from flesh food. The Salvation Army, the Tolstoyans and the Doukhobors encourage it [abstinence from flesh food also]. A number of orders in the Roman Catholic church (e.g. the Trappists) and in the Hindu faith (e.g. the Dadupanthi Sadus) are pledged abstainers...

"The literature on the subject is considerable, but the two classics are perhaps *The Ethics of Diet*, by Howard Williams, and *The Perfect Way in Diet*, by Dr. Anna Kingsford. In former years the 'Vegetarian Society' was the most active in producing literature, but since about 1901 the Order of the Golden Age has come to the front with new and up-to-date books, booklets and leaflets, and the Ideal Publishing Union has reprinted much of the earlier literature. The chief periodicals are the *Vegetarian* (weekly), the *Herald of the Golden Age* (monthly), the *Vegetarian Messenger* (monthly), the *Vegetarian* (American monthly), the *Children's Garden* (monthly)."

2847. Farmer, Fannie Merritt. 1911. *The Boston Cooking-School cook book*. Revised. Boston, Massachusetts: Little, Brown and Company. xv + 648 p. + [30] p. of advertisements. Illust. Index. 19 cm. See also the 1918 ed. • **Summary:** Contains 125 new recipes. As in the original 1896 edition, Worcestershire sauce is called for in many recipes in this book (p. 117, 180, 182, 188, 189, 197, 207, 212-13, 223, 227, 231, 273, 333-34, 344, 371, 372, 554, 565).

Catsup is called for much more and in many new forms compared with the 1896 edition: Oyster cocktail (p. 180; "1 tablespoon tomato catsup"). Lobster cocktail (p. 186; "two tablespoons, each, tomato catsup and Sherry wine"). Blanquette of lamb (p. 223-24; one tablespoon Mushroom Catsup, or any other suitable table sauce"). Asparagus salad (p. 329; "serve with French Dressing, to which has been added one-half tablespoon tomato catsup"). Oyster and grape fruit salad (p. 344; "season with six tablespoons tomato catsup,..."). Breast of quail Lucullus (p. 376; "Serve with one and one-half cups rich brown sauce seasoned with tomato catsup..."). Devilled bones (p. 565; "1 tablespoon Walnut Catsup").

Concerning vegetarian diets: In Chapter 1, titled "Food," the section on "Correct proportions of food" states (p. 3): "To keep in health and do the best mental and physical work, authorities agree that a mixed diet [from animal & vegetable sources] is suited for temperate climates, although sound arguments appear from the vegetarian... Brain workers should take their proteid in a form easily digested. In consideration of this fact, fish and eggs form desirable substitutes for meat."

Near the end of the book is an ad (on an unnumbered page) for "Works on cookery." The first of these is *The Golden Rule Cook Book: Six hundred recipes for meatless dishes*, by M.R.L. Sharpe. "A new edition of the best of all books on vegetarian food and cookery." Address: Of Miss

Farmer's School of Cookery.

2848. Hutchison, Robert. 1911. *Food and the principles of dietetics*. 3rd ed. New York, NY: William Wood and Co. viii-xx + 615 p. See p. 234-36, 496. Illust. Index. 22 cm. [100+* ref]

• **Summary:** Contains exactly the same information about soy and related products as the 1906 edition, in the same chapters, except it is on slightly different pages: See p. 234-37, and the section on diabetes, which has a subsection on "Diabetic breads" (p. 496-97). Robert Hutchison was born in 1871. Address: M.D. Edinburgh, F.R.C.P., Physician to the London Hospital [London].

2849. Joteyko, Józefa. 1911. *L'enfance végétarienne; enquête sur 170 enfants végétariens* [Vegetarian infancy: Investigation of 170 vegetarian infants]. Belgium: Misch et Thron. 124 p. Illust. No index. Also published in: *Proceedings of the Third International Vegetarian Congress, Brussels. 1910. Vol. 2.* [29 footnotes. Fre]

• **Summary:** Contents: Part I. Introduction (p. 3-6). The hygienic aspect of vegetarianism (p. 7-15). The moral aspect of vegetarianism (p. 16-33). Introduction to vegetarianism and home economics (p. 34-40) (*L'Initiation végétarienne et l'Enseignement ménager*). Part II. Investigation of 170 vegetarian infants (p. 42-115). Conclusions (p. 116-21).

The author lived 1866-1928 and appears to have been Polish. Address: Chef des travaux au Laboratoire de phyco-physiologie de l'Université de Bruxelles. Lauréate de l'Institut et de l'Académie de Médecine de Paris.

2850. King, F.H. (Franklin Hiram). 1911. *Farmers of forty centuries, or permanent agriculture in China, Korea and Japan*. Madison, Wisconsin: Mrs. F.H. King. ix + 441 p. Preface by Dr. L.H. Bailey. Portrait. Illust. Index. 20 cm. Reprinted in 1927 by Harcourt & Brace (NY, 379 p.). Facsimile reprint by Rodale Press, 1972.

• **Summary:** A superb, classic work which Wendell Berry called "one of the richest sources of information about peasant agriculture... one of the pioneer books of organic farming." Dr. Franklin Hiram King (lived 1848-1911; his portrait photo faces the title page) was former chief of USDA's Division of Soil Management. This is his journal, filled with many fine photos, of a voyage in the early 1900s through coastal China, Korea, and Japan. King was impressed by the productivity and efficiency of Chinese agriculture, and the strength and hardiness of the people.

Page 10: "It was not until 1888, and then after a prolonged war of more than thirty years, generated by the best scientists of all Europe, that it was finally conceded as demonstrated that leguminous plants acting as hosts for lower organisms living on their roots are largely responsible for the maintenance of soil nitrogen, drawing it directly from the air to which it is returned through the processes of decay.

But centuries of practice had taught the Far East farmers that the culture and use of these crops are essential to enduring fertility, and so in each of the three countries the growing of legumes in rotation with other crops very extensively for the express purpose of fertilizing the soil is one of their old, fixed practices.”

In Japan: “How the fields are crowded with crops and all the land is made to do full duty... even the narrow dividing ridges but a foot wide, which retain the water on the rice paddies, are bearing a heavy crop of soy beans” (p. 31, photo p. 33).

In China, in printing blue on white cotton calico cloth, a thick paste of lime and freshly-ground soy bean flour was used. A stencil was placed on top of the cloth. “The paste was then deftly spread with a paddle over the surface and thus upon the cloth beneath wherever exposed through the openings in the stencil... The paste is permitted to dry upon the cloth and then the bolt has been dipped into the blue dye the portions protected by the paste remain white. In this simple manner the printing of calico has been done for centuries” (p. 122-23). A photo (p. 123) shows a stone mill, pulled by a blindfolded donkey, “in common use for grinding beans and various kinds of grain.”

“Sprouted beans and peas of many kinds and the sprouts of other vegetables, such as onions, are very generally seen in the markets of both China and Japan, at least during the late winter and early spring...” (p. 134).

In a section titled “Economy of Vegetable Diet” (p. 134-35) the author notes that these people “are vegetarians to a far higher degree than are most western nations, and the high maintenance efficiency of the agriculture of China, Korea, and Japan is in great measure rendered possible by the adoption of a diet so largely vegetarian.” From every 100 lb of dry substance (feed) eaten by various kinds of livestock, only 4 pounds of flesh is returned for human food from cattle, only 5 lb from sheep and 11 lb from swine. “In view of these relations, only recently established as scientific facts by rigid research, it is remarkable that these very ancient people came long ago to discard cattle as milk and meat producers; to use sheep more for their pelts and wool than for food; while swine are the one kind of the three classes which they did retain in the role of middleman as transformers of coarse substances into human food.”

Pages 145-48 describe how cotton seed is crushed and pressed to make cotton seed oil and cotton seed cake—one of the most common family industries in China. Page 226 notes that small farmers in Shantung province grow wheat, barley, large and small millet, sweet potatoes and soy beans or peanuts. Shelled peanuts are sold in gunny sacks. Pages 256-57 give a similar description for soy beans and peanuts used to make oil and cakes in Shantung, China, with a photo (p. 256) of the large stone mill. The “bean and peanut cakes,” also used for fertilizer in Japan and China, are about 18 inches in diameter and 3-4 inches thick.

The section titled “Rotation of Crops” (p. 309) states of Nara, Japan: “To secure green manure for fertilizing, soy beans are planted each year in the space between the rows of barley, the barley being planted in November. One week after the barley is harvested the soy beans, which produce a yield of 160 kan per tan, or 5,290 pounds per acre, are turned under and fitted for rice.”

The chapter titled “Manchuria and Korea” notes of Lwanchow [Heibei], Manchuria (p. 348-49): “The planting here, as elsewhere, is in rows but not of one kind of grain. Most frequently two rows of maize, kaoliang or millet alternated with the soy beans and usually not more than 28 inches apart, sharp high ridge cultivation being the general practice.” A photo (p. 348) shows carts pulled by donkeys or horses piled high with sacks of soy beans at Lwanchow, Chihli, China, ready for export.

Note: As of 2020, Lwanchow is in Hebei province, in northeastern China.

When King’s train reached Sinminfu [Xinmin in Liaoning province on the Mukden-Tientsin railroad] he saw “the first extensive massing of the huge bean cakes for export, together with enormous quantities of soy beans in sacks piled along the railway and in the freight yards or loaded on cars made up of trains ready to move.” They soon arrived at “another station where the freight yards and all of the space along the tracks were piled high with bean cakes and yet the fields about were reflecting the impoverished condition of the soil through the yellow crops and their uneven growth on the fields.

“Since the Japanese-Russian war [1904-05], the shipments of soy beans and of bean cake from Manchuria have increased enormously. Up to this time there had been exports to the southern provinces of China where the bean cakes were used as fertilizers for the rice fields, but the new extensive markets have so raised the price that in several instances we were informed they could not then afford to use bean cake as fertilizer” (p. 357).

Page 368: King is discussing country life in Korea as seen from the window of his train: “The valley beyond was occupied by fields of wheat where beans [probably soy] were planted between the rows. Thus far none of the fields had been as thoroughly tilled and well cared for as those seen in China, nor were the crops as good.”

In Japan (p. 378-79): “Where bean cake is used as a fertilizer, the applications may be at the rate of 496 pounds per acre, carrying 33.7 pounds of nitrogen, nearly 5 pounds of phosphorus and 7.4 pounds of potassium.” A table shows that typical fertilization for each crop of paddy rice, in pounds per acre, is: Manure compost 5,291. Green manure from soy beans 3,306. Soy bean cake 397. Superphosphate 198. The soy bean cake provides the most nitrogen (27.8 lb/acre). A photo (p. 420) shows peanuts being grown in the Tokyo plain (Chiba prefecture, July 17). “Peanuts, sweet potatoes and millet were the main dry land crops then on

the ground, with paddy rice in the flooded basins" (p. 422). Address: Former Prof. of Agricultural Physics, Univ. of Wisconsin, and Chief of the Div. of Soil Management, USDA, Washington, DC.

2851. Labbé, M. 1911. Le fruits dans l'alimentation [Fruits in the diet]. Paris: Société végétarienne de France. [Fre]* Address: Prof., Dr., France.

2852. Langworthy, C.F. 1911. Cheese and other substitutes for meat in the diet. *Yearbook of the United States Department of Agriculture* p. 359-70. For the year 1910. See p. 363-64.

• **Summary:** Physiologists "admit that meat is not essential to a well-balanced diet, and there are many who, for one reason or another, are interested to know the rational ways of lessening the amount of meat which they consume or of replacing it with other foods." "Meat apparently supplies "a greater abundance than other foods of the substances which stimulate the normal or natural flow of the digestive juices" (p. 359).

The section titled "Dried beans and other legumes" (p. 363-64) states: "In Eastern countries, where conditions differ from those in Europe and America, the lack of abundant supply of food animals has been responsible for the production of a series of food products made from legumes, chiefly the soy bean. By ingenious processes, the nitrogenous material and more or less of the fat which the beans contain are separated and made into a number of special articles of diet, for instance, bean cheese or bean curd, a white material not unlike cottage cheese in appearance, and soy, a thick brown sauce which is the common flavoring material as well as a condiment of millions of people who thus supply nitrogenous material and flavor to a diet of vegetables, rice, and other similar foods."

The section titled "Commercial meat substitutes" notes: "There are on the market numbers of proprietary or patent foods recommended by their makers as meat substitutes. For some it is claimed that they are made from nuts, and judging from their flavor and other characteristics they may be prepared from the peanut or other nuts, in part at least. It has been suggested that some of these special foods contain wheat gluten. Undoubtedly considerable quantities of these foods are used by those who follow some one of the vegetarian systems of diet, but they are not used in any general way as substitutes for meat in the average home." Address: Expert in Charge of Nutriton Investigations, Office of Experiment Stations [USDA].

2853. Marcuse, Julian; Woerner, Bernardine. 1911. Die fleischlose Kueche: Eine theoretische Einleitung und ein praktisches Kochbuch [Vegetarian cookery: A theoretical introduction and a practical cookbook]. Munich, Germany: Ernst Reinhardt. 2 + 552 p. Index. 21 cm. [Ger]

• **Summary:** Dr. Marcuse was born in 1862. The 3-part introduction by Dr. Marcuse discusses: The significance of a flesh-less [*fleischlosen*] diet for human nutrition. The practice of flesh-less cookery. Comparative summary of the main animal and vegetable food products. This is followed by recipes. In the back are some advertisements: (1) Nuxo foods made from nuts by Nuxo-Werke, Rothfritz & Co., Hamburg; (2) Protose, Vegetabilischer Aufschnitt (vegetable cutlet), Nuttolin, Granola, Granoseflocken and Bromose, from the Deutscher Verein für Gesundheitspflege, Friedensau Nr. 60 (Post Grabow, Bez. Magdeburg). This looks like a Seventh-day Adventist company with a health food factory in Germany.

There is a directory of Vegetarian eating houses, restaurants, and boarding houses (Pensionen) in Germany, and other nearby German-speaking countries (mostly Switzerland and Austria). Address: 1. Doctor of medicine.

2860. Sinclair, Upton. 1911. The fasting cure. New York & London: Mitchell Kennerly; London: W. Heinemann. 153 p. Illust. Portraits. No index. 19 cm.

• **Summary:** Contents: Preface. Perfect Health. A Letter to the New York Times Some Notes on Fasting: Fasting and the Doctors. The Humors of Fasting. A Symposium on Fasting: Death during the Fast. Fasting and the Mind. Diet after

the Fast. The Use of Meat. Appendix: Some Letters from Fasters. The Fruit and Nut Diet. The Rader Case. Horace Fletcher's Fast.

Enlarged from two articles first published in the *Cosmopolitan* magazine. Based on his personal experiences, the well-known author, social activist, and muckraker, Upton Beall Sinclair (lived 1878-1968) offers fasting guidelines and benefits, and gives his opinions on the use of meat in the diet.

In one chapter, titled "The Use of Meat," the author tells how he consumes small quantities of beef-steak during long periods of thinking or writing. "I do not for a moment wish to give the impression that meat-eating is necessary to a normally active person, or that humanity will always continue to eat meat." For most active people, he advocates a diet based on fruit, grains, and nuts. Dedication: "To Bernarr Macfadden in cordial appreciation of his personality and teachings."

2861. Stockham, Alice. 1911. *Tokology: A book for every woman*. New York, NY: Fenno and Co. *

• **Summary:** Recommends a vegetarian diet for pregnant women. Includes testimonials from women who have experienced easy childbirths by following her advice.

2862. *The Progress meatless cook book and valuable recipes and suggestions for cleaning clothing, hats, gloves, house furnishing, walls and woodwork and all kinds of help for the household*. 1911. Chicago, Illinois: The Progress Company. 272 p. 20 cm.

• **Summary:** The author was born in 1869. Soy is not mentioned.

2863. Ward, Artemas. 1911. *The grocer's encyclopedia—Encyclopedia of foods and beverages*. New York, NY: Published by the author. 748 p. Illust. (color). 29 cm.

• **Summary:** Soy-related entries: Bean (p. 49-54): "The bean of European history is the Broad or Windsor variety,..." "The principal beans of United States cultivation are the Kidney and Lima, both of them believed to be native to South America.

"The Kidney Bean is the Haricot of the French and in Great Britain is sometimes called the French bean." The many varieties can be classified into "tough podded" and edible podded." "The 'tough podded' class produces the bulk of the dried beans of commerce, variously known as 'Kidney Beans,' 'Navy Beans,' 'Marrow Beans,' 'Black Beans,' 'Turtle Beans,' etc., in many colors, shapes and sizes." "'Flageolets' are cultivated with special regard to the consumption of the fresh seeds or beans." To the "edible podded" class of kidney beans belong Wax or Butter Beans, the Cranberry Bean or Red Speckled Bean, String Beans, Snap Beans, French Beans. "Pea Beans are the Cowpeas of the agriculturist." "Among numerous other 'special' varieties are the Soy Bean (which see), Asparagus Bean, Frijole, Lab-

lab (or Egyptian Kidney), Red Bean [Azuki?], and Scarlet Runner." Asparagus Beans are known as *Tou Kok* by Chinese gardeners in California.

"Catsup, Catchup, Ketchup: a word derived from the name of an East Indian pickle, which was formerly applied specifically to the boiled spiced juice from salted mushrooms, but is now freely attached to various sauces (sold both bottled and in bulk) which consists of the pulp—bottled, strained and seasoned—of various fruits, as tomatoes, green walnuts, etc." Note 1. At "Catchup" and "Ketchup" we are told to see "Catsup."

Locksoy ([Lock Soy], p. 346): "Rice boiled into a paste and drawn into threads, imported from China. It is used to thicken soups."

Nuts (p. 412-13): A table shows the nutritional composition of all major American nuts, including almonds, chincapin [chinquapin] or water chestnut, chufa (earth almond), cocoanut, peanut, and peanut butter. "Many special nut foods, such as malted nuts, meat substitutes, etc., have been devised and extensively advertised by manufacturers for general dietetic use and for the special needs of vegetarians and fruitarians. It is said that some of these products contain soy beans, but apparently the peanut is very important in their composition.

Sauces (p. 552-53): In bottled sauces, vinegar is the most common liquid ingredient. "Commercial sauces of the Worcestershire kind, if of good quality, generally have Soy (which see) as their chief character ingredient. A typical formula of Worcestershire-style includes, in addition to Vinegar and Soy, a considerable percentage of lime juice, onions and tamarinds and small quantities of garlic, fish (as anchovies or pickled herrings), red chilies and spices. The product, after cooking, is strained through fine hair sieves. Leicester Sauce resembles Worcestershire in general characteristics but is less pungent."

Soy (p. 576-577): "A brown sauce, valuable to the commercial sauce market, made from the Soy Bean, a native of Southeastern Asia [sic] and widely grown in China and Japan. The beans are boiled, mixed with ground wheat or other grain, salt, etc., and allowed to ferment for a month or 6 months. The liquid is then strained off and clarified. Molasses is frequently added. In appearance it resembles Worcestershire Sauce, of which it is an important ingredient. It should not be too salt [salty] or too sweet, and although thick and syrupy, should be clear. When shaken in a bottle or glass it should, if it is genuine, leave a bright yellow film on the glass. Being a very desirable article, it is often counterfeited."

Soy bean (p. 577): "Commercial and government circles, both in Europe and this country are devoting increased attention to the cultivation of the Soy Bean as a food product, as it contains a large percentage of protein and a fair amount of fat, thus resembling meat in general nutritive value. The cell-walls of the raw bean are very tough, but

thorough cooking makes it readily digestible. Boiled with bacon and other fatty broths until soft and then seasoned, the result is a vegetable dish very pleasing to the average palate. If the beans are dry, a preliminary soaking to remove the skins is necessary.

“The Soy Bean is largely consumed in Japan, China and other parts of Asia as an adjunct to rice and other foods, taking the place of meat in the popular dietary. It is most popular in these countries in fermented form, the best known types being *Shoyu* or Soy Sauce; *Tofu*, a kind of cheese; *Miso*, Soy Bean ‘Milk’ [sic]; *Yuba*, the evaporated product of ‘Miso’ [sic], and *Matto* [sic, *Natto*], a product obtained by simple fermentation of the boiled beans. The various degrees and styles of fermentation serve the double purpose of rendering the beans more easily digestible and producing new flavors, just as by the fermentation of milk and cream we produce the different flavors of cheese.

Note 2. This is the earliest English-language document seen (Aug. 2013) that uses the term “Soy Bean ‘Milk’” (regardless of capitalization) in to refer to soy bean milk.

“The plant is an annual, growing chiefly in bush form...” The different varieties are classified principally by the color of the beans: “Black, Yellow, White and Brown,... Types of all these four classes are grown to some extent in Germany, Austria, and Switzerland, and the first three also in this country, in North Carolina and other Southern States. Under favorable conditions a single plant may bear a hundred or more pods.

“Because of the fact that the beans contain little if any starch, they have been recommended as a desirable food for diabetics, and Soy Bean Bread and Soy Bean Meal are prepared for that purpose in Paris. The dried beans are also used in Switzerland and elsewhere as a coffee substitute.” An illustration shows the top of a soy bean plant, with leaves, pods, and flowers.

Note 3. This book is full of fascinating information about the food system in the USA in 1911, with entries such as cold storage (first attempted in 1860, it has grown to extraordinary proportions), coloring matter (great improvements, no longer harmful), ice and refrigeration (ice manufacture dates from about 1870; today nearly 200 companies produce ice for general sale, mostly using the compressor and anhydrous ammonia). Dictionary of food names in five languages (English, French, German, Italian, and Swedish, p. 710-724) and a dictionary in English of “Culinary and bill-of-fare terms” (p. 741-45). Note: Soy is not mentioned in either the dictionary or the list of terms.

Note 4. The author, Artemas Ward, lived 1848-1925. His father was Henry Dana Ward (1797-1884), his grandfather was Thomas Walter Ward (1758-1835), and his great-grandfather was Artemas Ward (1727-1800), the first Commander-in-Chief of the colonial troops before the arrival of George Washington (a little-known Virginia planter) on 3 July 1775. Thereafter he served as second in command after

Gen. Washington and was a Major General in the American Revolutionary War. Address: Formerly (from 1874) founder and editor of *The National Grocer*, 30 Union Square, New York.

2864. Weilschaeuser, Emil. 1911. E. Weilschaeuser’s illustriertes vegetarisches Kochbuch. 9. verm. und verb. Aufl. Mit 914 Rezepten sowie zahlreichen Kuechen- und Speisezetteln. Bearb. unter Mithilfe von Bertha Wachsmann von E. Hering [Emil Weilschaeuser’s illustrated vegetarian cookbook. 9th expanded and improved edition. With 914 recipes as well as countless menus and menu plans. Edited by E. Hering, with assistance from Bertha Wachsmann]. Leipzig: Th. Grieben. xxiv + 206 p. 44 illust. and 6 plates (4 in color). 2866. Albert, Jacques. 1911? Rational cookery containing 116 practical recipes for meatless and uric-acid free dishes. Sydney, Australia: Health and Diet Press. 88 p. Undated. Health and Diet Seies, 2. * Address: Australia.

2867. *New York Times*. 1912. Vegetarian and meat eater compete in long walk: The former crosses the continent in better condition but Dr. D.A. Sargent of Harvard, who suggested the experiment, says it doesn’t prove anything. Jan. 7. Part 5, p. 10.

• **Summary:** Describes the Boston to Los Angeles competition between vegetarian W.H. Buffum and his meat-eating brother Jesse H. Buffum and won by vegetarian; Dr. D.A. Sargent of Boston, who suggested experiment, and Dr. A.H. Reynolds of Los Angeles agree that nothing was proved either for or against vegetarianism. Illustrations show the two brothers, each sitting. A portrait photo shows Dr. Dudley A. Sargent of Harvard.

2868. Carque, Otto. 1912. Wanted—Boy with wheel to assist in manufacturing of health foods (Ad). *Los Angeles Times*. Jan. 18. p. I7.

• **Summary:** “Vegetarian preferred. Home Phone 52269. Call early.”

Note 1. This tiny ad (Carque’s first) shows that he is about to start a business, and needs a helper—since he is single. This is the earliest document seen (July 2021) that gives an address for Carque. Address: 943 West 12th st. [Los Angeles, California]. Phone: 52269.

2869. Burdette, Robert J. 1912. Burdette at the bat. *Los Angeles Times*. Jan. 25. p. II4.

• **Summary:** The writer attended a “meeting of the local branch of the National Vegetarian Society, of which I am

an enthusiastic member. I joined the society because I find such lasting pleasure in the literature which it sends out to members, containing many testimonials from people who have been everlastingly benefited by the teachings and practices of the organization.”

2870. *New York Times*. 1912. Says vegetarianism for all will not do: If universal, the world's production of grains and legumes would have to be doubled. This cannot be done now. The dependable intelligence of the working race is insufficient to accomplish it, says Prof. Taylor. Feb. 4. Part 8, p. 5, col. 1.

• **Summary:** Prof. A.E. Taylor article in American Medical Association Journal on his scientific study holds universal vegetarianism not practical.

2871. Meyer, Frank N. 1912. Re: Peanut oil in Meyer's vegetarian diet. In: Letters of Frank N. Meyer. 4 vols. 1902-1918. Compiled by Bureau of Plant Introduction, USDA. 2444 p. See p. 1559, 1571. Letter of 28 Feb. 1912 from St. Petersburg, Russia, to David Fairchild of USDA.

• **Summary:** “This clipping of wonderful oil, etc. contains an allusion to peanut oil. Well, that is very old news to us. In Holland several factories, in Zaandam are producing most excellent peanut oil, which is sold readily as a fine culinary oil. When I lived as a vegetarian, all my food was prepared with it, and after it has been fried with some laurel leaves, it has a very pleasing flavor.”

Location: University of California at Davis, Special Collections SB108 A7M49. Address: USDA Plant Explorer.

2872. *Los Angeles Times*. 1912. Socialistic colony is to be formed at Puente. March 6. p. I14.

• **Summary:** On 5 March 1912 the Fellowship Farm Association purchased 72 acres of land one mile north of Puente, California. “A socialistic colony is to be established immediately thereon. The leader of the movement is George Elmer Littlefield of Boston, [Massachusetts], who has been elected treasurer of the corporation,” which is composed of 80 families, each having contributed \$100 as a first payment. Otto Carque [of Los Angeles] is one of the directors of the association.

Note: La Puente and Puente Hills are about 20 miles east of central Los Angeles.

2873. Allen, T.J. 1912. Diet and health hints: The vegetarian's hungry look. *Washington Post*. March 21. p. 9.

• **Summary:** “I am not a vegetarian though I eat no flesh meat and I think the average vegetarian's diet is not much better than that of the average meat eater, for most vegetarians think they must eat something ‘hearty’ to make up for the exclusion of flesh, and by eating a greater variety than before their diet may be inferior to that of one who lives principally on bread and meat or potatoes and meat.”

“The Rev. Henry Clubb, president of the Vegetarian Society, ‘looks the part’ of a man who has never used flesh meat at all, or did when I saw him a few years ago, hale and hearty, “fair and round,” at 80. I am never ten pounds below the normal myself, and am said by every one to be conspicuously healthy looking, ‘the best risk in town,’ Dr. C.A. Reed says, who was for many years examiner for insurance companies. So don't fear that you will lose anything by entirely excluding flesh from your diet.” Address: Dr., Food Specialist.

2874. Ehret, Arnold. 1912. Sick people. *Naturopath and Herald of Health (The) (New York City)* 17(3):166-70. March.

• **Summary:** Contents: 1. The common fundamental cause in the nature of all diseases [mucus]. The cause of disease lies within the body; it does enter (as germs do) from outside.

Throughout the long history of “medical science” the cause of disease has been seen as something that invades the human body from the outside. Formerly it was an “evil spirit” or a “satanic personage;” today it is bacteria / germs. Even the heredity of disease falls into this category. Ehret believes that “all diseases without exception, even the hereditary, are caused—disregarding a few other unhygienic causes, by biologically wrong, ‘unnatural’ food and by each ounce of over-nourishment, only and exclusively.

“First of all I maintain that in all diseases without exception there exists a tendency for the organism to secrete mucus,...”

To cure any disease: “We need only to give a patient of any kind nothing but ‘mucusless’ food, for instance fruit or even nothing but water or lemonade; we then find that the entire digestive energy, freed from the first time, throws itself upon the mucus-matters, accumulated since childhood and frequently hardened, as well as on ‘pathologic beds’ formed therefrom. And the result? With unconditional certainty this mucus which I mark as the common basic and main cause of all diseases will appear in the urine and in the excrements.”

Note: This is the earliest document seen (May 2015) in which Arnold Ehret uses the word “mucus” (or “mucusless”)—the key to his medical philosophy. Address: [Los Angeles, California].

2875. *New York Times*. 1912. Mayor for good, red meat: Gives woman walker a letter, but doubts her vegetable diet. April 11. p. 8, col. 4.

• **Summary:** Mrs. D. Beach, planning NYC-Chicago walk, gets Mayor Gaynor letter wishing her well but expressing doubt she can do it on her planned diet of nuts and vegetables.

2876. Ehret, Arnold. 1912. Sick people. *Naturopath and Herald of Health (The) (New York City)* 17(4):231-33. April.

• **Summary:** “Almost all fasting attempts fail on account

of the ignorance of the fact that with the beginning of [a] mucusless diet the old mucus is being excreted so much more forcibly until that person is absolutely clean and healthy." Everyone must pass through this stage of cleansing to arrive at a higher level of health.

"This is the great cliff" around which so many "vegetarians have failed to go, discarding the highest truth just like the mass of people is doing. I have proven this here in the *Vegetarische Warte* completely on the basis of experiments and facts."

"The fundamental evil of all non-vegetarian diets consists always in the overeating of meat, as it is the origin of all the other evils, especially the craving for alcohol."

"I absolutely declare war on meat and alcohol; through fruit and moderate eating these great evils are radically diminished." Address: [Los Angeles, California].

2877. Slonaker, James Rollin. 1912. The effect of a strictly vegetable diet on the spontaneous activity, the rate of growth, and the longevity of the albino rat. Stanford, California: Stanford University. 36 p. April. Illust. 26 cm. University Series No. 9. [34 ref]

• **Summary:** Rats fed an omnivorous diet were much more active and voluntarily did much more work during their lifetime than rats fed a vegetable diet free of animal food. The average ratio of efficiency was 7.5 to 1. "The growth of the vegetarian rats was greatly retarded. The ratio of maximum weights was 1.62 in favor of the omnivorous feeders... The vegetarians were frail, weak, and showed extreme lassitude and indifference. The omnivorous were the reverse in all these respects. The average life of the omnivorous was 1,020 days, that of the vegetarian 555 days. This was a ratio of 1.84 to 1... All of the omnivorous rats surpassed the greatest age attained by the oldest vegetarian rats." Address: Asst. Prof. of Physiology, Stanford Univ., California.

2878. *Independent (The) (With Which is Incorporated Harper's Weekly)*. 1912. The automobile has been crowding the horse for some time, and now... 72(3309):972. May 2.

• **Summary:** "... the legumes are said to be trenching decidedly on the functions of the cow. In other words, milk and butter and even cheese [tofu] are being made from the soja bean. This legume, which really is not a bean at all, but a sort of pea, has for some time been of high rank as a fodder plant, and specially valued in the Southern States. It has been found to be nearly as adaptable to the Northern States, and possibly well up into New England. By crushing and grinding and pressing a milk is obtained, which is pronounced to be exceedingly palatable in the fresh state, and like ordinary milk, it can be condensed. The novelty is all the more when we find that this vegetable milk can be used exactly like the cow's milk for making butter and cheese. It has already become very popular in Japan and China, from

which countries we first obtained this remarkable legume. The growing of beans is certainly less troublesome than the care of a dairy of cows, and the experiment is worth a trial among those who believe in vegetarianism."

2879. *Evening Post (Wellington, New Zealand)*. 1912. Sanitarium health food cafe. May 10. p. 8.

• **Summary:** "About six or seven years ago a cafe was opened in Willis-street by the Sanitarium Health Food Company. Later it was shifted to Manners-street, and owing to a fire the cafe is again located in Willis-street, in Shortt's Building. The change made is certainly a very advantageous one—a new building with a bright, cheery outlook, instead of one of the oldest places in Wellington. There are twelve tables in the room with ample seating accommodation for fifty people.

"The cafe is owned by the Sanitarium Health Food Company, whose headquarters are in Sydney [Australia], with a manufactory at Cooranbong, 80 miles from the city, and another manufactory in Christchurch [New Zealand]. The latter is likely to be shifted to Wellington, and placed under the manager of the cafe here. As considerable misunderstanding exists as to what constitutes a cereal-vegetable [vegetarian] diet, it may be stated that there are half-a-dozen classes of biscuits, a dozen kinds of green goods, six varieties of beans and two of lentils, and, generally, all vegetables and fruits in season.

"Olive-oil is imported from Italy, best selected raisins from California, unfermented wine from California and New South Wales, and clover honey is obtained from local apiaries. Amongst the many special foods for invalids are gluten flour and biscuits, and Soya beans for diabetic patients: it is stated that this bean is rich in gluten. Whilst the principal aim of the Sanitarium Health Food Cafe is to cater for those in health, it is claimed that indigestion and many forms of stomach trouble can be eradicated by the adoption of the food served up at the cafe, or by buying the ingredients and cooking them at home. The object is to endeavour to educate the public to live on what is regarded as a higher quality of food for mental or physical work."

Note: This is the earliest English-language document seen (July 2021) that contains the term "Health Food Cafe" (or "Health Food Café"), regardless of capitalization.

2880. *New York Times*. 1912. Woman ends long walk: Mrs. Beach, on trip to Chicago, ate only uncooked food. May 29. p. 1, col. 2.

• **Summary:** Mrs. D. Beach completed her 1,071-mile walking trip from New York City to Chicago in 42½ walking days on a diet of raw fruit and vegetables exclusively. "Mrs. Beach complete the test she began April 10 in her contention that a vegetarian diet is best for those under severe physical strain." She drank no water along the way, only pineapple juice. She entered Chicago "with a fast, springy stride, and

a cheerful smile.” Her husband met her in Chicago. “He finished the walk downtown with her.”

2881. *New York Times*. 1912. Her theory remains fallacious (editorial–Topics of the Times). May 29. p. 10, col. 3.

• **Summary:** Editorial comment on Mrs. D. Beach’s 1,071-mile walking trip.

2882. Ehret, Arnold. 1912. Sick people (continued). *Naturopath and Herald of Health (The) (New York City)* 17(5):314-15. May.

• **Summary:** This part begins: “Now I ask: what appeals more to reason—to wipe out the masses of mucus piled up since childhood and having infected the cellular tissues of the body right there (symptoms of illness), by sweating, baths, artificial cold (Kneipp cures), massage, sport, etc., at the expense of vitality (especially of the heart) and the duration of life... or simply to stop the further supply of mucus?” Address: [Los Angeles, California].

2883. *New York Times*. 1912. Meat made heaviest ducks: French savant thinks his experiments upset vegetarian theory. June 2. Part 3, p. 3, col. 5.

• **Summary:** Dr. E. Perrier claims his experiments prove meat diet is superior to vegetable one.

2884. Toch, Maximilian. 1912. Soya bean oil for paint purposes. *J. of the Society of Chemical Industry (London)* 31(12):572-74. June 29. [2 ref]

• **Summary:** “New York Section. Meeting held at Chemists’ Building on Friday, May 24th, 1912.”

From 1890 to 1910 the price of linseed oil fluctuated between \$0.30 and \$0.50 a gallon, averaging about \$0.40. In late 1909 it rose to \$0.68 and by Sept. 1910 it had reached \$1.01 per gallon.

“In 1909 soya-bean oil as a paint oil was practically unknown.” Since that time many accounts of investigations (a number of which are conflicting) have been published. The author has experimented with 33 varieties of soya beans. He has found that a tungate drier “acts on soya bean oil exactly the same as lead and manganese drier acts on linseed oil. In other words, a fairly hard, resistant and perfectly dry film is obtained by the addition of from 5 to 7 per cent. of this drier within 24 hours.” Soya bean oil which is suitable for paint purposes “is the nearest oil we have to linseed.”

A table shows the average composition of 7 soya bean varieties: Austin, Ito San, Kingston, Mammoth, Guelph, Medium Yellow and Samarow. The average composition varies within fairly narrow limits: Water 7.42 to 8.67%. Protein 32.99 to 37.82%. Fat 18.96 to 22.72%. Nitrogen-free extract 23.65 to 29.36%. Crude fibre 4.00 to 5.15. Ash 5.01 to 6.28%.

Soya bean oil which is suitable for paint purposes has two characteristics: (1) When heated to 500°F for a few

minutes it will bleach and remain bleached; (2) The cold-pressed oil when heated to 500°F and blown with dry air for 5-7 hours thickens exactly the same as linseed oil and attains a [relative] gravity of 0.960 or more. Varnish made from suitable soya-bean oil bakes very hard and retains an abnormal flexibility. But, based on a test of less than 3 years, it does not wear quite as well as linseed oil. “It is too soon to prognosticate the value of soya-bean oil for exterior painting. But for interior use soya-bean oil is the equal in every respect of linseed oil—particularly when treated with a tungate drier.”

When 25% of “soya bean oil is added to a mixed paint, neither the author nor anyone in his laboratory can, in all instances, detect its presence. Blown and thickened soya bean oil is already used by a number of linoleum and table oil cloth manufacturers, and for printing ink purposes it presents some advantages. For the manufacture of enamel paints, heavy bodied soya oil produces most beautiful results, and as perhaps 95 per cent. of all enamel paints are used for interior decorative or protective purposes, in this country [USA] its use should be encouraged.”

“At the time of writing linseed oil is quoted at 75 cents per gallon and soya bean oil at 55 cents per gallon.”

In the discussion that followed Mr. Toch’s presentation, Dr. Baekeland (probably the inventor of Bakelite) said “that soya bean oil would be found one day to be one of the most valuable of edible oils, even superior to olive oil, but in addition the soya bean contained more of an easily assimilable proteid than any other vegetable product. Those who had attempted the study of vegetarian diets had been confronted with the difficulty of finding the necessary amount of proteid without ingesting at the same time a very large amount of solid matter and carbohydrates. The soya bean was remarkable because it contained an amount of nourishment and easily assimilable proteids which had no parallel, and that is why the eastern people, who lived on a vegetarian diet, had been compelled to study soya beans for centuries, and why it had become a staple. In China and Japan there was hardly a meal where there was no soya bean preparation. There was a soya bean cheese which was excellent.”

Mr. Toch added that in “1903 in Berlin [Germany], Dr. Baekeland gave him some very specially prepared soya beans for dessert.” Several speakers note that soya beans, which contain no starch, make excellent foods for use in diabetic diets.

Note 1. The development of synthetic materials is considered one of the most important inventions of the 20th century. Organic synthesis began in 1907 in the Yonkers, New York, garage of a chemist named Leo Baekeland. He invented Bakelite, a liquid resin that hardened into a tough, infinitely moldable solid, which was used to make telephones, radio receivers, lamps, ashtrays, pens, cameras, etc. The next important class of synthetic materials to be developed was plastics.

Note 2. This is the earliest document seen (June 2014) that mentions the use of soya bean oil itself for making printing ink.

Note 3. This is the earliest document seen (Nov. 2001) that mentions the use of soya bean oil in making oil cloth (or oilcloth). Address: [New York City, New York].

2885. *Washington Post*. 1912. A new kind of cow. June 30. p. M1.

• **Summary:** From *The Vegetarian*: “Notwithstanding vegetarians are being scoffed at and dubbed ‘cranks,’ more and more are coming into the field, and the cause is advancing at a rapid rate.

“This is not so much due to the effort of vegetarians as it is the result of sociological conditions.” The human population is increasing so “that the raising of cattle for culinary purposes [meat or dairy products] is each year becoming more of a problem. Each year science gives us some new food element to replace the barbarian piece of roast flesh.

“The latest announcement reveals that milk, butter and cheese can be made out of beans. This milk-producing bean is a special variety, however—the Soja bean, a native of China. A Chinese chemist [Li Yu-ying] has a factory in France working out the problem of milk from beans. He has succeeded in making from this Soja bean milk, a fine quality of butter [made of whole soybeans that have been cooked, pureed, and seasoned], and a highly delectable cheese [tofu].”

2886. *Blackwood's Magazine*. 1912. In quest of a cure, II. A vegetarian sanatorium. 191(1160):820-25. June.

• **Summary:** Describes the author's stay in a vegetarian sanatorium in Devonshire, in the north of England, where he partook of “The Diet” as a cure for rheumatism. Alcohol was also taboo. While meeting many people were cured by this diet, he “got well enough to go for two or three little bicycle rides and to walk more than a mile a day; but this happy state of affairs did not last long. I slowly but surely began to loathe the sight of any portion of ‘The Diet,’ and when after many months of struggle I have it up for good and all, the only articles of food I could be induced to eat were beefsteaks and mutton-chops.” Address: New York.

2887. Ehret, Arnold. 1912. Sick people (continued). II. Remedies for the removal of the common fundamental cause of diseases and the prevention of their re-occurrence. *Naturopath and Herald of Health (The) (New York City)* 17(6):369-71. June.

• **Summary:** This part begins: “After having told my readers the dread and horror of being sick and getting sick, in the previous chapter, it befits me to show them the means and ways, as far as this, commonly speaking, is possible, how to successfully encounter mucus-poisoning, this greatest foe of

health.” Address: [Los Angeles, California].

2888. Hubbell, M.S. 1912. Defends herbivorism: Septuagenarian in Oklahoma tells his experience with meatless diet. *New York Times*. July 19. p. 8, col. 5.

• **Summary:** In this letter to the editor, dated July 16, 1912, the author defends the practice of vegetarianism. Address: Helena, Oklahoma.

2889. *Los Angeles Times*. 1912. No meat but good to eat: First vegetarian dinner is culinary triumph. Near-centenarians talk on diet and longevity. Society launches campaign of education. July 28. p. 17.

• **Summary:** The first public banquet of the newly-formed California Vegetarian Society was held last night in the Gamut Club building. Dr. Tanner, age 83, of fast-cure fame, danced a merry hornpipe and startled the assembled vegetarians by declaring that he intended to get married when he was exactly 100 years old. The doctor “is as young and skittish at 83 as most men are at 50 or 40.” “While Dr. Tanner did not state that he intended looking around for a bride who will be able to literally subsist on nothing [fasting] at all for forty days or more, he impressed his hearers as being earnest.”

“The dinner was an unqualified success...” “Last night's affair was limited to 150 persons and it was found necessary to turn away many.” Bruce Gordon Kingsley, chairman of the meeting and organization, gave a brief speech. He was followed by Dr. J.M. Peebles, “whose snowy white hair and beard are his only indication of age...” He is now past age 90, has been a vegetarian in belief and practice for more than 60 years, and is hearty and robust.

Note: Many articles about Dr. Henry S. Tanner of New York City, “of forty-days' fasting fame,” appeared in the *Los Angeles Times*. In 1880 he fasted for 40 days, subsisting (it is said) on water alone. In 1885 he was living in New Mexico. By 1893 his record had been beaten by a Mr. Succi. Mark Twain has said that his cure for a cold in the head, or catarrh, is to eat nothing for 24 hours. On 31 Dec. 1905 Van R. Wilcox arrived in Santa Monica, having walked all the way from New York City (which he left on April 14) shortly after finishing a 60-day fast. The walk was intended to “prove that going without food for long periods does not impair a man's vitality or weaken his physical condition.” He “plunged into the Pacific Ocean, thus completing one of the longest walking tours ever undertaken.” He covered the 3,687 miles in 167 days, unattended. “At the North Beach Bathhouse [in Santa Monica] he was met by Dr. Tanner, whose fast in New York City a quarter of a century ago created a sensation in the medical world. Tanner and Wilcox may be said to be fast friends.” They are now discussing a fasting contest.

Note: This is the 2nd half of a book that was published under the title "Rational Fasting," by March 1913. Address: [Los Angeles, California].

2891. *Good Health (Battle Creek, Michigan)*. 1912.

Vegetable protein not inferior to animal protein as a nutrient. 47(7):347-49. July.

• **Summary:** "The last resort of those who seek to defend the use of flesh food on scientific grounds has been for some years past, the contention that vegetable protein is not as completely utilized as animal protein. The conclusion was drawn that if vegetable protein is not so completely utilized as animal protein this fact shows that vegetable protein is less fitted to meet the needs of human nutrition than is animal protein.

"The experiments on which this contention has been based have always been regarded by the writer as exceedingly faulty in several respects. One very glaring source of error was in the fact that the animal protein was used in the form of lean meat, which is an almost pure protein and is completely digestible in the stomach, whereas the vegetable protein was taken in combination with cellulose, which is not at all digestible in the stomach, so that the vegetable protein in the form in which it was taken was not readily or completely accessible to the gastric juice.

"Professor Mendel, Director of the Sheffield Scientific School of Yale, for several years recognized the faulty character of the experiments on which the claims of the greater utilization of animal protein have been based, and in connection with M. S. Fine he undertook an exhaustive investigation of the subject, the results of which were published in the *Journal of Biologic Chemistry*. Professor Mendel, in his research, did not compare the digestibility of gluten as found in the wheat, but separated the protein and so demonstrated it in a pure state to be fairly comparable with the proteins of flesh meat. Many experiments upon human beings and dogs showed beyond question that gluten and other vegetable proteins 'are as thoroughly utilized as the nitrogenous components of fresh meat.' Barley protein, like wheat protein, or gluten, was found to be almost completely digested.

"The last argument in favor of flesh-eating for which a scientific basis has been claimed is thus shown to be without foundation. Animal protein possesses not the slightest advantage over vegetable protein as a nutrient, and the observations made by Tissier and his colleagues of the Pasteur Institute, show that animal proteins are twice as putrescible as vegetable proteins, and hence are in one important particular at least greatly inferior to proteins

of vegetable origin. When it is remembered that the great majority of chronic diseases from which human beings suffer are the result of absorption into the blood of poisons which have been produced by putrefaction in the intestine, it becomes clearly evident that vegetable proteins are vastly more wholesome and more conducive to health and longevity than animal proteins." Address: M.D.

2892. *Tennessean (The) (Nashville, Tennessee)*. 1912. In annual camp meeting in town of Sweetwater: Cumberland conference of Seventh Day Adventists in city of tents. Sabbath services: Sermon on the theory and practice of Christianity by Evangelist of Atlanta. Aug. 25. p. 12.

• **Summary:** Sweetwater, Tenn., Aug. 24.-(Special)-Here in a white city of tents the Cumberland Conference of seventh Day Adventists lies encamped in their annual conference and camp meeting, to which delegates have come from different points over the entire state to plan and counsel together concerning the great work which these unique and interesting: people conceive to be the purpose of their existence-that of carrying to the entire earth in one generation what they believe to be the message of the second coming of the Christ and the end of all things earthly. In the carrying out of this purpose they have already stationed in all parts of the earth nearly 5,000 men, all charged with the telling of the soon coming of Jesus and the keeping of the commandments of God.

"Today was the Sabbath of these earnest, Christian people, they being observers of the seventh day of the week, Saturday, in harmony with the fourth commandments of the decalogue, beginning their observance of the day in accordance with the teaching of the Scriptures at sunset Friday night and ending it with the going down of the sun on Saturday night.

"The campers were called from their beds to early morning worship by the ringing of a bell at 3 o'clock this morning. On arising they wended their way from the rows of family tents to the great canvas pavilion which is pitched in the center of the encampment, surrounded on all sides by the tents of the campers, just as the tabernacle of the Israelites was pitched in the center of the encampment in the wilderness. A devotional service was conducted by Elder J.L. Shuler, of Knoxville.

"After breakfasting at the large dining tent, at which strictly vegetarian meals are served on the cafeteria plan, the campers gathered again in the big pavilion tent for a Sabbath school which was under the direction of Elder P.G. Stanley, of Chattanooga, the president of the conference, and Mrs. Mettie Lenker, of Graysville, the secretary of the Sabbath school department of the conference.

"At the Sabbath morning preaching service which followed the Sabbath school, Evangelist Carlyle B. Haynes, of Atlanta, delivered a sermon on 'The Theory and Practice of Christianity.'" Address: Nashville, Tennessee.

2893. Clubb, Henry S. 1912. Agriculture and vegetarianism. *Naturopath and Herald of Health (The)* (New York City) 17(8):520-21. Aug.

• **Summary:** “The adoption of the vegetarian practice will materially change our agricultural pursuits. The food of the future will be fruit, nuts, vegetables and grain, in the production of which a much larger population can be maintained than by the use of the flesh of animals, and agriculture will be relieved if its most disagreeable features—the slaughter of animals and the use of animal fertilizers. Clean culture is required to produce the best flavored fruits, vegetables and grain; mineral and vegetable fertilizers will take the place of the offensive and disgusting putridity which now loads the farming atmosphere and renders agricultural pursuits offensive to refined tastes; detrimental to health and productive of insects so destructive to crops.”

Note: In the standards for organically grown foods, from the 1960s on, the use of animal manure was required, while the use of chemical fertilizers was forbidden.

The author then reprints a long poem titled “Plain Talk in Psalm and Parable: The Shadow on the Farm,” by Ernest H. Crosby. Address: Rev.

2894. *Good Health* (Battle Creek, Michigan). 1912. Rejuvenating effects of a vegetarian diet. 47(8):428-29. Aug.

• **Summary:** Contains six stories of such rejuvenating effects: The first: “Sir Walter Scott tells of a certain Doctor Ferguson, of Edinburgh [Scotland], who became a flesh abstainer at sixty, after he had suffered a number of strokes of paralysis. By abstemious living he recovered entirely from all paralytic symptoms, and after having attained his eightieth year still possessed a considerable degree of strength and vigor. He lived to the advanced age of 93.”

Note 1. This is the earliest document seen (Feb. 2022) concerning a vegetarian diet and relief from cardiovascular disease (stroke, in this case).

Note 2. This is the earliest English-language document seen (Jan. 2004) that uses the term “flesh abstainer” to refer to a vegetarian—one who eats no red meat, poultry, or fish.

2895. Berhalter (T.A.). 1912. Berhalter’s health foods: Vegetarian products (Ad). *Naturopath and Herald of Health (The)* (New York City) 17(9):Unnumbered page. Sept.

• **Summary:** This half-page horizontal ad is similar in content to the one that appeared in the Dec. 1911 issue of this magazine, except that this one has portrait photos of Kath. Berhalter and T.A. Berhalter on each side at the top of the ad. Address: 309 North Ave., Chicago, Illinois. Phone: Lincoln 2524.

2896. Li, Yu-ying; Grandvoinnet, L. 1912. Le soja: Sa culture. Ses usages alimentaires, thérapeutiques, agricoles et industriels [The soybean: Its culture. Its food, therapeutic, agricultural, and industrial uses]. Paris: Augustin Challamel (Rue Jacob 17). 150 p. Illust. Index. 25 cm. Translated into French and expanded from the Chinese edition, published by la Société Biologique d’Extrême-Orient (1910). [151 ref. Fre]

• **Summary:** One of the earliest, most important, influential, creative, interesting, and carefully researched books ever written about soybeans and soyfoods. Its bibliography on soy is larger than any published prior to that time. It was first published as a series of eight articles in *Agriculture Pratique des Pays Chauds* (*Bulletin du Jardin Colonial*) from September 1911 to April 1912. Before being published as a book, it was revised slightly by adding a table of contents at the back, dividing the material into 5 parts with 19 chapters, and adding several photos (p. 16-17), a world map showing the distribution of soybean cultivation (p. 21), and an interesting 2-page table (p. 66-67).

Contents: The soybean: Origin and history. Part I: Soybean culture. 1. Species and varieties of soybeans: Botanical characteristics, species, varieties (Chinese, Japanese, Indian, Indochinese, Hawaiian, USA, European). 2. Needs of the soybean: Climatic, geographical area of the soybean by region worldwide, agrological/soil needs, fertilizers, soil preparation, the place of the soybean in crop rotations. 3. Soybean seeds: Study of seeds (by weight, by germination rate, selection of seeds), time of planting, plant spacing, depth of seeding, rate of seeding per hectare, method of seeding (broadcasting, in rows, in mounds). 4. The soybean during its vegetative stage: Germination, transplanting, types of care (e.g., second dressings), irrigation, flowering and fruiting, enemies of the soybean (e.g., insects). 5. Harvest of soybeans: Time for harvest (forage or grain), methods of harvesting (forage or grain; mechanical mower), threshing (use of machine), yields of soybeans (forage and grain in various countries, ratio of seeds harvested to straw is about 1 to 2, yield of nutrients). 6. Fixation of atmospheric nitrogen by soybeans, and improvement of the soil. 7. The soybean in mixed cultures and alternate rows: With corn, cowpeas, rice, sweet sorghum, or millet.

Part II: Chemical composition of the soybean. 1.

Composition of the plant: Minerals in the leaves and total plant. 2. Study of the seed: Composition, chemical composition, microscopic comparisons, table of analyses by 28 previous researchers, albumins, sugars, starch, dextrin or dextrine, diastase, lipids, ash/minerals.

Part III: The soybean as human food and animal feed.

1. The soybean as feed for animals: Green forage and hay.
2. The soybean in human feeding: From the viewpoints of physiology, economy, and gastronomy. The role of soya in special diets: Vegetarianism, remineralization, diabetic, and lactose intolerant.

Part IV: Food products based on soya. 1. Soymilk and its derivatives: Soymilk (Methods of manufacture, Chinese and modern at l'Usine de la Caséo-Sojaïne, nature and properties [physical and chemical] and composition of the milk, action of ferments and diastases (enzymes) on the milk, uses of the milk, the residue from the soy dairy [okara], condensed soymilk, powdered soymilk, fermented soymilk (kefir, yogurt, etc.)), tofu (called Caséo-Sojaïne, or fromage de soya; methods of production, coagulants, yield of tofu, storing tofu, composition and comparison with various meats, digestibility, culinary preparations made from tofu (smoked tofu, tofu pâté, tofu sausages)), Soy casein (food and industrial uses). 2. Soy flour and its derivatives: Soy flour, soy bread, wholemeal bread, other products based on soy flour (as biscuits and cakes for diabetic diets). 3. Soy oil and its by-products: Soy oil, physical and chemical properties, usage, residue of the oil mill: the cake, price, uses. 4. Use of the soybean as a legume: Whole soybeans (composition and digestibility), soy sprouts (*germes de soja*), green vegetable soybeans (*le soja frais*). 5. Fermented soy condiments: Solid condiments from Japan: Tokyo natto (*Le Tokio-Natto*) and Ping-Ming natto or tao-tche (*Le Ping-ming-Natto*; fermented black soybeans with salt, ginger, orange rind, etc. A similar product is made in China and called tao-tche). Paste condiments: Miso (four types and composition), tao-tjung (Chinese miso). Sauces: Shoyu (its production, varieties, properties, composition), chiang-yu (*tsiang-yeou*), ketjap [kechap, from Java], tuong (from Annam, with rice or corn), tao-yu (widely used in China and Japan, described by Prinsen Geerlig). 6. Confectionery products: Comparison with chestnuts, roasted soy flour to replace chocolate. 7. Soy coffee (with analysis by Kornauth). 8. Special fermented products: Kiu-tsee (a special commercial ferment from Canton described by Thiersant), fermented soymilks.

Part V: Industrial uses of soybeans. Oil based: soap, wax candles (*bougie*), and paint oils. Protein based: sojalithe or soy stone which corresponds to lactite, insulators for electrical apparatus, glue, etc. Conclusion. Addendum (*Complément*) to Part III, Chapter 1: Soybean straw and stems. Composition of various seeds, including soybeans. Soy flour. The cakes from oil mills. Soymilk and the cake from soy dairies (*tourteau de laiterie*, okara).

A very interesting table (p. 66-67, which does not appear

in the original 8 articles) shows earlier nutritional analyses of the composition of soybeans by Steuf (from Hungary, Mongolia and China), Schroeder, Caplan, Pellet (from China, Hungary, Etampes), Muntz, Nikitin (black soybeans from Russia, 2 samples), Lipski [Lipskiy] (yellow, from Russia), Giljaranski (yellow from Russia, China and Japan; black from China and Japan; green), König (*Hispida platycarpa* black, Tumida yellow, brown and black), Prinsen (white from Java and China), Goessmann, Kellner, USDA, Chemiker Zeitung (white from Java and China, 29 Jan. 1896), Scuff (misomame; miso soybeans), Zulkovski (yellow from China, reddish brown from Mongolia), Institut Agr. de Vienne (Austria; yellow from Vienna, reddish brown from Tyrol), Ecole Imp. et Roy d'Ag. Hong (yellow from Mongolia and China, reddish brown from China), Chez M. Olivier Lecq (from Moravia), Lechartier (Etampes and black), Joulie (yellow), Stingl and Morawski, Bloch (yellow, green, and black), Balland, Cavendish Evelyn Liardet (yellow, brown, green, black, and white), Jardin Colonial (Laos, Tonkin, China), Aufray (Tonkin, Yun-nan), Homes Laboratory (black from China, or white). Photos and illustrations are the same as those referenced in individual sections of the book, except for the following: A field of soybeans (p. 16). A soybean plant growing in Europe (p. 17). Color illustrations appear facing pages 12, 22, and 64. Address: Li is from Societe Biologique d'Extreme-Orient (Chine). Grandvoinnet is from Ingenieur Agricole (G.).

2897. Williams, H.S. 1912. Vegetable *versus* meat diet. *Hearst's Magazine, the world today* 22(3):106. Sept. [2 ref]
• **Summary:** "The unprecedentedly high price of meats in recent months gives added interest to the perennial question of the value of a meat diet. There follows a brief summary of a report by James Rollin Slonaker (April 1912) concerning vegetable and meat diets fed to rats. The rats fed meat were much more active than those fed vegetables. At the "end of 25 months the meat-eating female had a speedometer record of 5,477 miles as against the 447 miles of the vegetarian female. Meantime the meat-eating male rat had run 1,447 miles, whereas the vegetarian male had run only 200 miles.

"It is furthermore recorded that the vegetarian rats seemed to age much earlier than their companions and to show greatly retarded growth. The vegetarian rats were not only frail, weak, and without energy, but their average life was not much over half that of the omnivorous rats...

"Indeed, Dr. Slonaker himself refers to numerous recorded observations seeming to indicate that man does more work, both physical and mental, on a mixed diet. But of course we are all aware that there are physiologists—for example, Professor Metchnikoff—who would dissent from this conclusion."

2898. Bowdich, E.W. (Mrs.). 1912. New vegetarian dishes. 8th ed. London: G. Bell & Sons. New York, NY: Macmillan

Co. vii + 120 p. 19 cm. *

2899. Carrington, Hereward. 1912. *The natural food of man: Being an attempt to prove from comparative anatomy, physiology, chemistry and hygiene, that the original, best and natural diet of man is fruit and nuts.* London: C.W. Daniel. 286 p. Index. 23 cm.

• **Summary:** In this vegetarian, natural hygiene book, the author argues that “fruits and nuts in their uncooked, primitive form, are the suitable and proper diet for mankind.” He thinks that the ordinary vegetarian diet cannot begin to compare in excellence with the fruitarian or raw-food diet.

Contents: Preface. 1. The natural food of man. 2. The argument from comparative anatomy. 3. The argument from physiology. 4. The argument from chemistry. 5. The argument from hygiene. 6. The argument from experience: Nations and individuals. 7. Miscellaneous arguments. 8. Dairy products. 9. Vegetables. 10. Cereals, grains, etc. 11. Condiments and spices. 12. The fruitarian diet. 13. Food combinations. 14. Hygienic food and hygienic cookery. 15. The question of quantity. 16. General conclusions. Appendix.

Though this book contains no bibliography or footnotes, it does contain many references to publications in the text. The author was apparently unaware of soybeans, for they are not mentioned, though other beans, peas and lentils are (p. 69, 176). Carrington is also the author of *Vitality, Fasting and Nutrition, The Coming Science, Death: Its Causes and Phenomena* (jointly), etc. Address: USA.

2900. Drews, George Julius. 1912. *Unfired food and trophotherapy (food cure).* Designed for mothers, students and doctors. A complete treatise on the use of unfired food for the cure and prevention of disease. 3rd ed. revised. Chicago, Illinois: George J. Drews. 313 + x + [8] p. Illust. Indexes. 23 cm.

• **Summary:** The author (born in 1873) advocates raw foods and a vegetarian diet for physical and spiritual health. The title page states that this book is five volumes in one. Contents: Dedication. Preface. Introduction: New words coined for the unfired-fooder [glossary]. Apyrotrophy. Man's natural food. Unfired food versus cooked food. Human progress. Human apes. Digestive fluids. Discharge the cook—hire a troph. Human perversity. Warning—Never allow a doctor to suppress an acute disease with drugs. Wrong feeding and its consequences; or how cooked food produces disease. Unfired and fired food compared: Proteids, oils, sugar, starches, chlorophyll, cellulose, saline matter, conclusion. How to begin the unfired diet. Common or informal dinners [menu]. A banquet menu (8 courses). 1. Unfired food combinations—360 recipes [with no dairy products or eggs; however extensive use of honey makes the book non-vegan]: Health drinks, soups (summer and winter), salads (many categories), brawn foods (made from the flour of freshly ground uncooked cereal grains {such as

spelt, wheat, sweet corn, hullless barley, flaked rye, oatmeal or rolled wheat}), usually mixed with an equal weight of grated, chopped, flaked or ground nuts {cocoanut, pignolias, peanuts, or almonds}). Note 1. This basic ingredient, named “Brawn Food or Nut-O-Meal,” is combined with many other foods such as berries, honey, vegetables, nuts, etc. Laxative brawn food. Saline meals (free of table salt). Cakes and bread (unbaked). Cereal flakes. Pie crusts and fillings. Confections. Dressings. Nut butter and nut cheese. Nibblers. Utensils needed.

2. *Materia alimentaria*—The chemistry of food. Potassium and sodium salts compared. Organic iron. Organic sodium. Organic magnesium. Organic calcium. Organic potassium, etc. Tables of food composition by food type (moisture-free basis). Note 2. Four legumes are included (p. 188, 191): Lima beans, navy beans, lentils, and peas.

3. Tropho-therapy—Cause and cure of disease. “The prime cause of the common diseases is unnatural food... Where a perfectly natural life is pursued health will assert itself without any attention of the patient or the doctor.” “The primary causes of nearly all diseases are lowered vitality and accumulation of waste.” “The tongue is a valuable aid in diagnosing...” “Diagnosis of disease from the iris of the eye.”

4. Hygienics—Promiscuous subjects: Hygienic dietetics, the daily ration, packed lunches, the average restaurant dinner, why vegetarians fail, Fletcherization (chewing), soaking, overeating, fasting, variety, the toxic poisons of emotion, flesh a stimulant, eggs (cause “albumen poisoning”), milk from cows or goats (for infants who cannot be supplied with mother's milk), food and morality (science of sarcognomy teaches oneness of body and mind), therapeutic value of fruits, fruit acids sterilize, organic or organic water, the taste buds, condiments, common salt (avoid it), commercial sugar (avoid), vacuum sugar (non-heated would be desirable), wholesome sweets, natural, happy environment is as essential to good health as are natural food, air, and sunshine. Laughter. Natural remedies. Drugs. Blood purifiers (unfired vegetable juice and fruit juice; use an “Enterprise Juicer”—p. 247). Blood and nerve tonics. The value of sunshine. The life of food. Organic molecules. The tooth destroyers. The baby. Wholesome poultices. Domestic harmony (try both fired and unfired as an experiment). Social dinners and etiquette of feasting. The power or resistance and recuperation. Man is a frugivore and herbivore (study his anatomy and ancestors). The vegetarian sport (hunt wild herbs). The sense of smell. Sunshine and shadow. Nursing a fine art. A few maxims.

5. *Alimentary botany*—Source and description of food: Wheat, grains, nuts, legumes (p. 266-67), chufa or earth almond, beans, lima beans, peas (p. 292-95), fruits, etc.

Index to introductory subjects. Index to unfired food recipes. Index to *materia alimentaria*. Index to promiscuous subjects. Index to *alimentary botany*. Authors quoted.

Advertisements: All are available from the author in

Chicago. The Flaker (Dana Food Chopper). Apyrotropher confection bread. Shelled spanish peanuts. The Enterprise Pulverising and Grinding Mill No. 0. Sun dried olives. Raisins. Honey. The shredder. The Apyrotropher Magazine (combined with The Naturopath—Drews is publisher). National School of Chiropractic (Chicago). The American School of Naturopathy (Est. 1896. Incorporated 1905). Benedict Lust, Yungborn and New York City. Return to Nature (the book). The Kneipp Naturopathic Supplies Store (Health foods, fruits and nuts).

“New words coined for the unfired-fooder” (glossary of words coined by Dr. Drews, from the Greek, in the year 1910). Al.B., Al.D., apyrotropher, apyrotrophy, confit, eupos, eutroph, eutropheon, eutropher, eutrophy, meliart, physiotherapy (nature-cure), synede, troph (noun or verb), tropher, trophery, trophology, trophotherapy, trophoprophylaxis, vegetarian.

Page 16-17 state: “The food as prescribed in this book, in combination with sunshine, fresh air, exercise and restful sleep, will promote and maintain physical, mental, moral and spiritual health, with which beauty is concomitant. Natural food will build up and restore youthful vitality, vim, snap, celerity, strength, endurance, courage, willpower and resistance.”

“Unfired food can not produce disease because it contains no inorganic sugar, glucose, soluble starch and partly decomposed protein to saturate the blood, neither inorganic salts to irritate the nerves, nor does it readily ferment or decay in the alimentary canal to produce toxic elements. Unfired foods... have true remedial value for curing nearly all diseases by supplying the proper saline elements in organic form.” Note 3. This is the earliest English-language document seen (July 2021) that contains the word “Eutropheon,” which is defined (p. 13) as: “An unfired fooder’s eating house; a house where only dainty and aesthetic unfired food is served; an apyrotropher eating shop.” This is the only word coined by Drews that was ever used by others, and in that case by only one couple, the Richters, as the name of their two restaurants in Southern California, the first of which opened in 1917.

A “fifth edition” with the same number of pages and size was published in 1921.

Note 4. This is the earliest English-language document seen (July 2021) that contains the word “juicer” or that mentions “vegetable juice.” It is probably hand-turned rather than electric; see illustration of “The Enterprise Pulverizing and Grinding Mill” on an unnumbered page about 4 pages from end of book. On the next page, under “The Shredder,” the author explains why his dislikes the use of juicers. Address: Al.D., 430 E. 42nd St., Chicago, Illinois.

2901. Ehret, Arnold. 1912. Kranke Menschen: Der gemeinsame Grundfaktor im Wesen Krankheiten, des Alterns und des Todes [Sick people: The common fundamental

factor in the essence of all illnesses, of aging, and of death]. Munich, Germany: Published by the author. 96 p. [Ger]*

• **Summary:** This edition, which appeared one year after the 1st ed., was published by the author and contains 16 additional pages. Arnold Ehret lived 1866-1922. Address: Germany.

2902. Kingsford, Anna Bonus; Maitland, Edward. 1912. Addresses and essays on vegetarianism, 1881-1893. Edited by Samuel Hopgood Hart. London: John M. Watkins. vii + 227 p. With a biographical preface. 22 cm. *

• **Summary:** Biographies of Kingsford and Maitland are given on pages 1-60. The authors favorably discuss vegetarianism in relation to economics, health, hygiene, ethics, philanthropy, aesthetics, physiology, social and moral progress, and especially spiritual development. Kingsford, a prolific writer, lived 1846-1888. Maitland lived 1824-1897. Address: Doctor of Medicine of the Faculty of Paris.

2903. Labbé, Marcel. 1912. The modern treatment of gout. *International Clinics: A Quarterly of Clinical Lectures* 3(22):23-26. See p. 26. Illust. Index. 21 cm.

• **Summary:** “The diet should avoid all foods rich in purins, such as meat, game, sweetbread, liver, kidney, brain, and the internal organs in general. Vegetables, with the exception of leguminous ones such as peas, beans, etc., and spinach, on account of its constituent oxalic acid, may be given. Tea, coffee, and chocolate, being rich in uric acid products, are forbidden. On the whole, the diet should be a lacto-ovo-vegetarian one, with the exceptions as already indicated. Alcoholic drinks should, as a rule, be avoided. It is a well-known fact that one glass of champagne or red wine is enough to bring on an attack of gout. A little white wine, diluted with water or Moselle, may, however, be permitted. Beer is very harmful. Cider, on the other hand, may be recommended in many cases. Immediately after an attack the diet should be almost exclusively a milk diet, with an occasional egg and some fresh cheese, such as cottage cheese” (p. 26).

Note: This is the earliest English-language document seen (March 2022) that uses the term “lacto-ovo-vegetarian” to refer to a typical vegetarian diet that includes dairy products and eggs. It is also the earliest document seen (March 2022) that contains the term “lacto-ovo” or the term “lacto-ovo-vegetarian.” Address: M.D., Prof. at the Hôpital de la Charité, Paris, France.

2904. Maurel, Edouard César Emile. 1912. Traité de l'alimentation et de la nutrition à l'état normal et pathologique. Quatrième et dernier volume [Treatise on food and nutrition in normal and diseased conditions. Vol. 4]. Paris: O. Doin, Éditeur. xi + 845 p. Index (in vol. 4). 25 cm. [Fre]

• **Summary:** The section titled “General summary for mental

illnesses” (p. 777) twice recommends a lacto-ovo-vegetarian diet. In the section titled “Dietetic observations on foods given for the principal aliments” (p. 779-79), whole-wheat bread, gluten bread, soy bread (*Pain de soja*), and almond bread are recommended for low-carbohydrate diabetic diets. Edouard Marel was born in 1841. Address: M.D., principal physician for the Naval Reserves, Prof. at the Faculty of Medicine, Toulouse (Médecin principal de réserve de la Marine).

2905. McCay, David. 1912. The protein element in nutrition. London: Edward Arnold; New York: Longmans, Green & Co. xv + 216 p. Illust. Index. 22 cm. Series: International Medical Monographs. [30+* ref]

• **Summary:** Indian legumens [legumes], with their Indian and scientific names, include the following dals (p. 57): Arhar dal (*Cajanus indicus*). Massur dal (*Erbum lens*). Gram dal (*Cicer arietinum*). Mung dal (*Phaseolus mungo*). Mattar dal (*Pisum sativum*). Kalai dal (*Phaseolus radiatus*). Urid dal (*Phaseolus radiatus*). “These dals all resemble the European pea in appearance, but vary considerably in size.” A table (p. 57) gives the protein, carbohydrates, and fat content of each. The soy bean is not included.

In Asia, these legumens play a very important in the dietaries of the people, “and take the place of animal food to a considerable extent. They are extensively used all over India and the tropics, and one member, the soy bean, has been employed for centuries by the Chinese and Japanese in the manufacture of food preparations. Taking the different countries together, they rank next to wheat and maize [corn] in importance among vegetable foods, and as a source of protein are superior to most of the cereals. The chief protein of the pulses is legumin,...” (p. 58).

A married vegetarian couple is mentioned on p. 118.

The author sides with Voit (against Chittenden) in advocating a relatively high protein requirement per kg (or pound) of body weight. David McCay was born in 1873. Address: Major, M.B., B.Ch., B.A.O., M.R.C.P., I.M.S., Prof. of Physiology, Medical College, Calcutta [British India].

2906. Peebles, James Martin. 1912. Death defeated. 5th ed. Los Angeles, California: Peebles Publishing Co. 215 p. Portrait. 24 cm. *

2907. Snyder, Sherwood P. 1912. A treatise on foods: And their effects upon health and the physical and moral life. Also a complete list of recipes and instructions for the hygienic preparation of the common food products with special lists of menus. 5th ed. Revised and enlarged. Dayton, Ohio: Health Publishing Co. 192 p. Portrait. Index. 20 cm.

• **Summary:** The title on the cover: “The practical hygienic preparation of foods.” The author is a vegetarian. His book focuses on the keys to a long and healthy life. Contents: Preface. Prescription for a long life. Wise and healthful

sayings suggest healthful thoughts—So these little messages may cause someone to think (13 quotations, including many by Shaftesbury and one by Snyder: “All sickness and sin originate in disobeying nature’s laws”). Introduction. 1. The preservation of health a sacred duty. 2. The dining-room. 3. Cereals. 4. Bread and bread-stuffs. 5. Soups. 6. Meats. 7. Meat versus vegetarianism. 8. Meat imitations and meat substitutes. 9. Gravies and sauces. 10. Eggs. 11. Fats and oils. 12. Vegetables. 13. Beans, peas and lentils. 14. Rice and macaroni. 15. Salads. 16. Nuts, nut preparations, nut butters & nut cream. 17. Pies. 18. Desserts. 19. Scientific cake baking. 20. Menus. 21. Ice cream and ices. 22. Miscellaneous subjects. 23. Baby’s food and care of children. 24. Foods for the sick. 25. Mastication. 26. The value of steam cooking. 27. Composition of foods. 28. Exercising. Address: Food specialist.

2908. Sousa, Amílcar de. 1912. O naturism: Alimentacao natural, conselhos higienicos, tratamentos racionais, praticas quotidianas [Naturism: Natural food, hygiene advice, rational treatments, everyday practices]. Porto, Portugal: Sociedade Vegetariana. [Por]*

• **Summary:** Nuno Metello of Portugal, who is writing a book on the history of vegetarianism in Portugal, writes (Dec. 2016):

“Dr. Amílcar de Sousa (1876-1940) was very influential in his time, not only in Portugal, but also in Spain, Latin America and some African countries, where he had many disciples. In Portugal his conferences were packed. He had hundreds of admirers in Brazil, who read the magazine *O Vegetariano* and other works published by the Vegetarian Society of Portugal (that were sold in Brazil) and followed his teachings. His articles were also published in Brazilian periodicals.

“He was a fruitarian who didn’t consume meat, fish, eggs, and dairy products. He wrote that honey belongs to the bees.

“He wrote several books, *O Naturismo* (Naturism, first edition: 1912, second edition 1913, fourth edition: 1919) being the most famous. This book was considered the “bible” of Luso-Brazilian vegetarians.” Address: Portugal.

2909. Abramowski, Otto Louis Moritz. 1912? Fruitarian diet and physical rejuvenation. London: Order of the Golden Age. 26 p. Undated. 18 cm. REprinted from “The Herald of the Golden Age.”

• **Summary:** Advocates a vegetarian diet. The Order of the Golden Age, a philanthropic society founded in 1895, “advocates the adoption of a natural and hygienic dietary as a preventive of Disease, a practical remedy for Physical Deterioration, and an efficacious way of lessening human suffering and sub-human pain.

“The Fruitarian system of living makes a hygienic and humane life possible, and tends to promote Health, Strength

and Longevity.”

The Society is located at 153, 155 Brompton Road, London, S.W., England. Address: M.D., Ch.D., M.O.H., Late Senior Physician to the District Hospital, Mildura, Australia.

2910. *Naturopath and Herald of Health (The) (New York City)*. 1913. For sun, tropics and cocoanut: Department of real religion and immortality. Edited by Aug. Engelhardt. 18(1):41+. Jan.

• **Summary:** This journal is “edited by the sun-apostle August Engelhardt, who is leading an idyllic life on the fabulously beautiful island Kabakon in the South Sea, a life harmonious with nature and its demands.”

“The previous numbers treated at length on the only natural food; the fruit of the cocoanut palm.” Address: Kabakon Island, in Duke of York Islands, Papua New Guinea.

2911. *Naturopath and Herald of Health (The) (New York City)*. 1913. Apyrotrophy section. 18(1):[49]. Jan.

• **Summary:** “Devoted to Apyrotrophy—the science, art and practice of living on the moral unfired diet for the perpetuation of perfect health and cure of disease. It is also the organ of the Apyrotropher (Unfired fooder) Society. Editor: George J. Drews, Al. D., 3220 Thomas St., Chicago, Illinois.” Advocates a raw food diet and avoidance of consuming harmful substances such as alcoholic beverages and spicy foods. Address: Chicago, Illinois.

2912. Sherry, Helen (Mrs.). 1913. A plea for an apyrotropher society. *Naturopath and Herald of Health (The) (New York City)* 18(1):50-52. Jan.

• **Summary:** Call for a society of those who eat unfired foods. “The feeding on unfired foods affects a man’s body, his mind, his soul, and his material conditions.” “The old style vegetarianism has, indeed, done some good in its day,” by banishing meat from the diet. Eating raw food “will greatly lessen the cost of living,” and save all the time spent on cooking.

Note: This article is followed by two poems: (1) “A tribute to unfired food,” by A.C.F. Finzel, and “The kitchen versus the trophy,” by Geo. J. Drews. Address: Associate Editor, Alamogordo, New Mexico.

2913. Neuville, A. de. 1913. Les nouveaux aliments artificiels [The new artificial foods]. *Revue (La) (Paris)* 100(3):384-89. Feb. 1. 24th year. 6th Series. For translations see *Literary Digest* (8 March 1913, p. 509-510) and *American Review of Reviews*, April 1913 (p. 500-01). [Fre]

• **Summary:** Contents: Introduction. 1. Soymilk (*Le lait de soya*). 2. Meat alternatives (*La viande*) developed by Belgian chemist M. Effront. 3. Miracle wheat. Note: The soybean is mentioned only in the section on soymilk.

By modifying the albuminoid and protein substances

found in soy (*Soya hispida*, or Chinese pea), and extracting their proteids, we may obtain a milk that is similar to the milks secreted by the mammary glands of mammals. Soy is rich in nitrogen and in fatty matter. Made into flour it serves to make a bread that is prescribed for diabetes. A synthetic milk has been extracted from the beans, by a process that is still kept secret; it has the same nutritive effect as natural milk. “The invention was introduced into Germany and France almost at the same time. The parts of the plant are broken up mechanically, then chemically triturated and reduced to a lactescent substance that is cheaper than the product of the cow and may replace it perfectly.”

A farmer can get six times as much milk from the same piece of land by planting it to soy beans, than by growing grass and letting a milch cow eat the grass. “The economy realized is considerable. A cow requires nearly a acre of pasturage. She turns only 53 per cent. of it into effective nutriment and about 5 per cent. into milk... Two milkings a day give on an average 15 quarts, varying with the breed. Soy grown on a field of one-sixth an acre yields the same quantity of artificial milk. The expense is far less.

“This soy milk presents other advantages over natural milk. It is not exposed to contact with impurities, as so often happens in farm stables and dairies... Besides, cows are not exempt from bacillary infections... Artificial milk is not exposed to these dangers. It is made with apparatus kept so scrupulously clean that there can be no question of microbial infection.”

Soy “is a very nourishing food, but of an oily taste that makes it disagreeable to Europeans. Made into milk the soy has none of these disagreeable qualities. It is digestible, pleasant to the palate, and leaves no taste in the mouth. Being a complete food like natural milk, it is suited to children and invalids and all who are following a diet.” Address: Dr.

2914. *Literary Digest*. 1913. Vegetable milk. 46:509-10. March 8.

• **Summary:** This article begins: “Milk is not a chemical compound, but an emulsion... and it has, in fact, been imitated with more or less success, vegetable products having been mostly used for the purpose.

“The best known of these, ‘soy milk,’ made from a Chinese bean, has long been known. Witness Edward Lear’s limerick about the man ‘who lived on warm brandy and soy.’ Children used to think that ‘soy’ was one of Lear’s nonsense words, like his ‘runcible spoon’; but it is now almost as common a food in Germany as it is in China.” There follows a lengthy translation of an article by Dr. A. de Neuville titled “Artificial Foods” that appeared in *La Revue* (Paris, Feb. 1). “The economy realized is considerable. A cow requires nearly an acre of pasturage. She turns only 53 per cent of it into effective nutriment and about 5 per cent into milk... Two milkings a day give on an average 15 quarts, varying with the breed. Soy grown on a field of one-sixth of an acre yields

the same quantity of artificial milk. The expense is far less...

"This soy milk presents advantages over natural milk. It is not exposed to contact with impurities, as often happens in farm stables and dairies... Besides, cows are not exempt from bacillary affections, and it has been proved that the pathogenic germs of their milk exist in the lacteal glands themselves. Artificial milk is not exposed to these dangers. It is made with apparatus kept so scrupulously clean that there can be no question of microbial infection."

Note. This is the earliest English-language document seen (Aug. 2013) that contains the word "lacteal" or the term "lacteal glands" in connection with soy milk.

"In China and Japan, soy has been abundantly cultivated since the earliest times... Made into milk the soy has none of these disagreeable qualities. It is digestible, pleasant to the palate, and leaves no taste in the mouth. Being a complete food like natural milk, it is suited to children and invalids and to all who are following a diet."

2915. Carqué, Otto. 1913. Simplicity in diet. *Naturopath and Herald of Health (The) (New York City)* 18(3):152-53. March.

• **Summary:** "The human race, like the anthropoid apes, is by nature frugivorous." But "today people take their food from every conceivable source and in every possible artificial preparation to satisfy their perverted and depraved appetites;..." "Simplicity in diet is the foundation of lasting health." "Let us preach the great and universal truth that the restoration and preservation of health is merely a matter of living in harmony with nature. The Supreme Intelligence... certainly knows how to restore health if not hampered in her wise but often misconstrued ways." Address: Los Angeles, California.

2916. Ehret, Arnold. 1913. Rational fasting: Regeneration diet and natural cure for all diseases. Translated from the German by Benedict Lust, N.D. Yungborn, Butler, New Jersey: Nature Cure Publishing Co. 15 p. 24 cm. *

• **Summary:** Contents: I. The common, fundamental cause of diseases. II. Remedies for the removal of the common fundamental cause of disease and the prevention of their recurrence. III. The fundamental cause of growing old and ugly, of the falling out and getting gray of the hair. IV. The death. V. Testimonials and reports of successful cures.

A review in *Naturopath and Herald of Health* (New York City) (May 1913, p. 322) states: "This book cannot be recommended highly enough and ought to be in every family." Address: Prof. [Los Angeles, California].

2917. Lust's (L.) Health Food Bakery. 1913. Lust's Daisy Brand Peanut Butter (Ad). *Naturopath and Herald of Health (The) (New York City)* 18(3):Unnumbered page. March.

• **Summary:** "This is the first peanut butter ever produced on this continent with 13 years' experience behind it." "Sample

jar by mail, 10¢. Guaranteed to keep. Retail prices: ¼ lb. jars—\$0.10... 10 lb. can—\$1.50. 55 lb. cans or 125 lb kegs" also available. "Wholesale prices on application. Vegetarian restaurants, clubs, parties and the jobbing trade is invited to ask for special quotations." Note 1. This bakery is run by Louis Lust, Benedict's brother. This ad appears in many subsequent issues of this magazine (e.g., Nov. 1913, Feb. 1915).

Note 2. This is the earliest document seen (Jan. 2008) that uses the term "Health Food Bakery" in connection with Louis Lust or Benedict Lust, brothers and naturopathic pioneers in New York City. Address: 105th Street and Park Avenue, New York City.

2918. Sinclair, Upton. 1913. Fasting experiments and experiences. *Physical Culture* 29:227-32. March. *

• **Summary:** An article on fasting by the well-known vegetarian author, social activist, and muckraker.

2919. *Scientific American*. 1913. Animals as converters of plant nutriments into human foodstuffs. 75:219. April 5. *

2920. *Los Angeles Times*. 1913. Vegetable milk (Abstract). April 8. p. II3.

• **Summary:** A reprint of an English-language article of the same title published in *Literary Digest*. March 8. p. 509-10.

2921. *Literary Digest*. 1913. Animals as food factories. 46:887. April 19. *

2922. *Naturopath and Herald of Health (The) (New York City)*. 1913. For sun, tropics and cocoanut: Department of real religion and immortality. Edited by Aug. Engelhardt. 18(4):255-57. April.

• **Summary:** Contents: About the one-sidedness of the cocoavorism. And laugh towards the sun. The history of cocoanut butter.

The cocoanut is considered the perfect food. Ideally it should constitute the sole article of diet. "Cocoanut butter was originally made in Germany by Fr. Kollmar, who later on, in 1884, together with Dr. Schlink, added the cocoanut oil as nourishing fat to the regular human food." "Consequently Kollmar gave it up, while Schlink, with the aid of the firm of P. Mueller and Sons, Mannheim, continued in business." "Cocoanut butter was manufactured on a larger scale first in France by Rocca Tassy and de Roux, Marseille; in England by Loders and Nucolin, London; in Austria by Emanuel Kuhner and Son, Vienna. However all these firms began only several years after Kollmar and Schlink." Address: Kabakon Island, in Duke of York Islands, Papua New Guinea.

2923. *Literary Digest*. 1913. Notable vegetarians. 46(21):1196-99. May 24.

• **Summary:** Excerpts from an article in the *New York Sun* which says “the popularity of vegetarianism is rapidly increasing the world over, particularly in England and the United States... The *Sun* mentions some of the most notable vegetarians and tells their reasons: Perhaps the most famous vegetarian in the world today is George Bernard Shaw” who also abstains from tobacco and alcohol. Other European vegetarians discussed are Miss Marie Corelli of British literary fame, The Countess of Warwick, three famous French actresses (Sarah Bernhardt, Rejane, and Cleo de Merode—all lost excess weight), Auguste Rodin (the famous French sculptor), Madame Maeterlinck (Georgette Leblanc), Princess George of Greece (who was Marie Bonaparte of Paris), the Grand Duchess Serge of Russia, Mme. Dieulafoy (the famous archeologist [sic, archaeologist])—the latter 3 women have been converted to “Orientalism.”

In America, vegetarianism has spread among intellectuals “to a surprising degree owing chiefly to the advice given by certain scientific men, including Dr. Chittenden of Yale, and Horace Fletcher.” Other famous U.S. vegetarians include Upton Sinclair, Edwin Markham, Prof. Herschel Parker of Columbia University (who will again attempt the ascent of Mt. McKinley this summer), Senator La Follette, Ella Wheeler Wilcox, Florence Morse Kingslay, Grace MacGowan Cooke, and Mrs. Robert A. Van Wyck (wife of the former mayor of New York).

2924. Besant, Annie. 1913. *Vegetarianism in the light of Theosophy*. 1st ed. Madras, India: Theosophical Publishing House. 28 p. Series: Adyar pamphlets, no. 27.

• **Summary:** This is the text of a lecture given by Annie Besant (lived 1847-1933).

2925. *Naturopath and Herald of Health (The)* (New York City). 1913. Dr. B. Lust enjoys a apyrotropher dinner. 18(6):418-22. June.

• **Summary:** “About a year ago, when Dr. Benedict Lust stopped in Chicago to deliver some lectures on ‘Nature Cure,’ we invited him to our apyrotropher dinner, and the following talks and conversations were taken down by a stenographer.” Those conversing including Dr. George Drews, Miss Graham, Dr. Lust, Miss Denning, Dr. Harris, Mr. Lee.

2926. *Vegetarian Directory and Food Reformers’ Guide (The)*... (London). 1913-- . Serial/periodical. London, England: C.W. Daniel. Compiled by Thomas Macintyre. Vol. 1, No. 1. Aug. 1848. *

Address: London, England.

2927. Yungborn. 1913. The organization and establishment of the “American Yungborn” (Ad). *Naturopath and Herald of Health (The)* (New York City) 18(9):Unnumbered pages. Sept.

• **Summary:** “The American Yungborn is situated at Bellevue in the suburbs of Butler, N.J., in the most beautiful part of the Ramapo Mountains, protected from the Northern winds in the delightful Grace Valley”

“The Yungborn is the first institution where the entire fruit diet has been introduced. To the various kinds of nuts,

which must be deemed principal ingredients of human food, and to the manifold domestic delicious and aromatic fruit, as berries, apples, etc., some imported fruit is added (Oranges, Figs, Dates, Grapes, Cocoanuts, Mangos, Alligator Pears [Avocados], Bananas, etc. are used).

“At the Yungborn the finest fruit is raised and gathered from our own trees.

“To those, that are not yet used to a strict fruit diet, the table offers the following: The richest milk and butter from the cows and goats in our pastures, a new plain and natural and very palatable bread (Yungborn bread), which is already highly in demand; stewed fruit, vegetables, with some potatoes; salads (from cucumbers, cabbage, beans, celery, asparagus, tomatoes, lettuce), soft pot-cheese, which is much liked with fresh berries and stewed fruit; we also serve pure-malt coffee, German Nutritive Salt Cocoa for breakfast.”

Note: A photo taken in 1911 shows main recreation building at the Yungborn in the Ramapo Mountains near Butler, New Jersey. Address: Butler, New Jersey.

2928. Carqué, Otto. 1913. Diet in relation to health and efficiency. *Naturopath and Herald of Health (The)* (New York City) 18(11):719-21. Nov.

• **Summary:** Discusses a sound vegetarian diet and other major factors related to good health. "Plants really are accumulated sunshine." Address: Los Angeles, California.

2929. *Naturopath and Herald of Health (The)* (New York City). 1913. The question box: A new section of the *Naturopath*. 18(11):763. Nov.

• **Summary:** "All letters addressed to the Question Box will receive our careful attention and answers to them will be published in the order in which the letters are received." "We shall be glad to answer not inquiries in regard to individual

cases, but also requests for information on any topic relating to Naturopathy such as: Natural Life,... Health Foods, Natural Life Colonies, Health Cooking, Vegetarian Diet, Raw Food Diet, Fruit and Nut Diet,..."

2930. Cooper, Lenna Frances. 1913. *The new cookery: A book of recipes, most of which are in use at the Battle Creek Sanitarium*. Battle Creek, Michigan: The Good Health Publishing Co. [v] + 298 p. Illust. (10 photos). Index. 20 cm.

• **Summary:** This vegetarian cookbook (with strong Seventh-day Adventist influence), the first book by Lenna F. Cooper, advocates a "low-protein" diet based on the research of Prof. R.H. Chittenden, dean of physiology, Yale University [New Haven, Connecticut]. It uses dairy products and eggs, but no meat, poultry, fish, shellfish or stimulants (such as coffee or tea).

The Foreword states: "Many 'food reformers' and faddists have attempted to prepare wholesome foods but have neglected the almost equally important requirement—palatability. This combination of wholesomely prepared and palatable foods constitutes in a sense a New Cookery... which has for its object, efficiency of body and mind." She thanks "Dr. and Mrs. J.H. Kellogg, who first inspired her with a love for the study of foods and their scientific preparation and who have since been constant sources of help and encouragement." She also thanks Miss Clara B. Lambert and Mrs. Estella F. Ritter.

Recipes call for the use of Minute Brew (p. 10), cereal coffee (p. 10), Kaffir tea (p. 11), Sanitas / Health Koko (p. 11), yogurt buttermilk (p. 11-13), bran (p. 18), Graham flour (p. 20), Good Health Breakfast Food (Brose, p. 20), gluten (p. 20), granola (p. 22), fermented breads (p. 23+), Graham bread (p. 26-28), unfermented breads (p. 33+), bran and Graham biscuit (p. 41), bran gems (p. 43-44), peanut butter sandwiches (p. 49), Protose (p. 49, 71, 77, 79), cream soups made with almonds, lentils, white beans, lima beans, or split peas (p. 63-66), Savora (p. 73-74, 78-79).

Chapter 10, titled "Meat substitutes and entrees," begins (p. 81): "In many homes, meat forms the chief part of the meals,..." but this book calls for a "meatless dietary," which requires a "knowledge of the chemistry of foods." Recipes (p. 81-103): Roast Protose [canned] with dressing. Boiled Protose. Protose fillet. Nut fillet

(with Protose and Nuttolene). Fillet of nut meat. Panned Protose. Nut or Protose cutlets. Braised Protose. Nut and apple pie. Normandy or mock veal loaf. Chipped Protose in cream. Nut and rice croquettes. Protose hash with rice and peas. Nut sausage (p. 87; with ¼ lb Protose, seasoned with “2 tablespoons Japanese soy [sauce] or 4 teaspoons Savora”). Nut and vegetable stew (with Protose). Protose steak with onions. Broiled Nuttolene. Nuttolene with mint sauce. Nuttolene cutlets. Nuttolene a la cream. Baked Nuttolene. Nuttolene fricassee. Nuttolene croquettes. Nut meat pie (with Protose). Pressed vegetable meat (with Protose). Rice a la Carolina (with Protose). Nut meat loaf (with Protose and Nuttolene). Vegetarian ham (with Nuttolene and Savora). Nut patties. Nut chops (with peanut butter). Pine nut roast. Peanut roast (with peanut butter). Walnut roast. Cereal roast (with granola). Chestnut roast. Creamed chestnuts. Chestnuts with tomato sauce. Baked beans (with white beans). Baked lima beans. Lima bean loaf. Bean croquettes. Bean soufflé. Savory roast or mock turkey (with lentils and granola). Peas patties. Baked lentils. Lentil and potato loaf. Hominy croquettes. Corn roast. Apple fritters. Prune fritters. Banana fritters. Rice patties.

Note: This is the earliest English-language document seen (Oct. 2014) concerning meat alternatives that contains the term “Vegetarian ham.” Yet this recipe title (p. 93) is the

CHAPTER X

MEAT SUBSTITUTES AND ENTREES

IN many homes, meat forms the chief part of the meal, hence housewives in planning a meatless dietary exclaim, “What shall we serve in place of meat?”

The answer to this question involves a knowledge of the chemistry of foods.

Lean meat is pre-eminently a protein food. It contains usually from 15% to 19% protein, a small amount of mineral matter and a large amount of water.

Many other foods are also rich in this albuminous food constituent. Nuts contain on an average from 20 to 25% protein; legumes contain about 25% protein. Eggs, milk and cheese are also high in this constituent. The above named foods are the chief sources of protein and hence form the basis of so-called “meat substitutes.” However, nature has not left man to his own resources in finding this important food principle, but has scattered it broadcast. It is found to some extent in almost all natural food products. Science has discovered that we need much less of this constituent than was formerly supposed, so that the housewife need not concern herself particularly to supply sufficient protein.

One meat substitute or highly protein dish is quite sufficient for one meal, and if milk, eggs, cheese or nuts are used in the preparation of one or more dishes, a special meat substitute will not always be required. A higher dish or

81

82

THE NEW COOKERY

entree is often to be preferred for the main dish or *piece de resistance*.

ROAST PROTOSE WITH DRESSING

Remove the contents of a can of Protose, cut it down through the center lengthwise and lay the two halves in a dripping pan with the flat side down. Prepare half of the Brown Sauce recipe and dilute with an equal quantity of water. Pour this over the Protose, place in the oven and bake for an hour to an hour and a half, basting frequently with the sauce surrounding the protose. Serve with the following dressing.

DRESSING FOR ROASTS

1 qt. stale bread crumbs	1½ cups cold water
1½ tablespoons grated onion	1 egg
1½ tablespoons melted butter	½ teaspoon sage
	½ teaspoon salt
	¼ teaspoon celery salt

Moisten the bread crumbs with the cold water (the amount varying with the dryness of the bread), add the grated onion, salt, sage, celery salt and the melted butter. Beat the egg until light and fold into the dressing. Bake in a moderate oven one-half hour or until nicely browned.

BROILED PROTOSE

Remove the end of the can of protose, so the contents will come out whole. Slice the protose in ½-inch slices, the round way. Cut the slices in halves. Place on an oiled dripping pan, broil quickly under the flame. As soon as one side is browned, turn the other side to the flame. Serve plain, or with any desired sauce.

only place the word “vegetarian” appears in the entire book (not including the two index entries for “Ham, Vegetarian” and “Vegetarian Ham”).

Chapter titles: 12 Eggs. 15. Salads and relishes (incl. Neufchatel or yogurt cheese, p. 168, 176. Salad dressings, p. 172+). 17. Fruits and fruit desserts (incl. Baked apples with Meltose dressing, p. 186. Vegetable gelatine desserts, p. 195+). 19. Frozen desserts (incl. Yogurt buttermilk ice cream, p. 215). 20. Pastry and pies (most desserts call for lots of white or granulated sugar). 21. Cakes. 22. Cake fillings and icings [icing, frosting]. 23. Hot puddings. 24. Sauces for puddings. 25. Canning and preserving. 26. Invalid dishes. 27. Balanced menus (breakfast, dinner, supper). Lenna F. Cooper was born in 1875.

After the Index (p. 288-98) are advertisements: Perfection Biscuit Co. The Welch Grape Juice Co. Horlick’s Malted Milk Co. Winorr Canning Co. (Winorr Kerneled Corn). Acme Preserve Co. (White A Condensed Tomatoes). Garis-Cochrane Household Dish-Washing Machine (motorized). Sprague, Warner & Co. (Richlieu Food Products). A.-B. Stove Co. (gas range). Wagner Manufacturing Co. (cast aluminum ware). The Kellogg Food Co. (“Protose: A vegetable meat.” Minute Brew. Colax

{relief from constipation}). McGraw Mfg. Co. (Servette [Lazy Susan]). Battle Creek Sanitarium School of Home Economics. National Onion Salt Co. American Thermos Bottle Co. Seely Fasco Fireless Cooker.

Note 1. This is the 2nd earliest English-language document seen (Nov. 2016) that contains the term “Home Economics.” How interesting (and progressive) that Dr. John H. Kellogg’s Battle Creek Sanitarium had a “School of Home Economics.”

Note 2. This book was advertised in the Dec. 1913 issue of *Good Health* magazine.

Note 3. Lenna Frances. Cooper (1875-1961) “was a leader and innovator in the development of dietetics as a science and profession.

“Originally trained as a nurse, Cooper was a protegee of Dr. John Harvey Kellogg, director of the Seventh Day Adventist sanitarium in Battle Creek, and his wife, Ella. Under their tutelage, Cooper took up the study of nutrition and became a leading proponent of health care through diet.

“In 1908 Kellogg established a School of Home Economics at the ‘San,’ and Cooper was named its first director. A woman of determination and courage, she advanced many theories and tenets of diet and health that were radical for their time, but eventually became the bedrock of sound dietary practices. More than 500 dieticians graduated from the Battle Creek program during her tenure...” (Source: <http://www.michiganwomenshalloffame.org/>). Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium.

2931. *Almanaque vegetariano luso-brasileiro com o catecismo naturista* [Portuguese-Brazilian vegetarian almanac with a naturist catechism]. 1913-1922. Serial/periodical. Published by the Vegetarian Society of Portugal (Sociedade Vegetariana {Porto, Portugal}); Frequency: Yearly. Serial/periodical. Published by the Vegetarian Society of Portugal (Sociedade Vegetariana {Porto, Portugal}); Frequency: Yearly. [Por]

• **Summary:** A catechism is a series of questions, answers, or precepts used for instruction. This periodical was published in Porto, Portugal—a city on the northern coast of Brazil. Also known as Oporto in English, it is the second largest city in Portugal after Lisbon and one of the major urban areas of the Iberian Peninsula. Its historical core was proclaimed a World Heritage Site by UNESCO in 1996. The western part of its urban area extends to the coastline of the Atlantic Ocean.

2932. *Almanaque Vegetariano* [Vegetarian Almanac]. 1913-1922. Serial/Periodical. Published by the Vegetarian Society of Portugal in Porto, Portugal. Frequency: Irregular. Serial/Periodical. Published by the Vegetarian Society of Portugal in Porto, Portugal. Frequency: Irregular. [Por]*

• **Summary:** This almanac consists of a series of books

about vegetarianism and related topics. Nuno Metello writes (Feb. 2017). The “*Almanaque Vegetariano*” was published between 1913 and 1922 (but I will check this to be sure). It was published by the Vegetarian Society of Portugal (the same organization that published *O Vegetariano*, the monthly magazine), in Porto (Oporto), Portugal. It is an illustrated almanac, and it has an index. Contributors include: Amílcar de Sousa, Jaime de Magalhaes Lima, Luís Leitaó, etc. Address: Porto, Portugal.

2933. LeClerc, J.A.; Jacobs, B.R. 1913. Graham flour: a study of the physical and chemical differences between graham flour and imitation graham flours. *USDA Bureau of Chemistry, Bulletin* No. 164. 57 p. *

• **Summary:** Amílcar de Sousa’s books was translated into Spanish: https://es.wikipedia.org/wiki/Am%C3%ADlcar_de_Sousa

“He translated *Vivamos de Frutos*, originally written by Viaud-Bruant (annexed here).” Address: Portugal.

2935. Buttermann, William F. 1913. *The cause of most of our ailments: or, How to attain old age*. Chicago, Illinois: The Home Press. ix + 112 p. 21 cm. *

2936. Fletcher, Horace. 1913. *Fletcherism: What it is, or, How I became young at sixty*. New York, NY: Frederick A. Stokes Company; London: Ewart, Seymour & Co., Ltd. xvi + 224 p. Illust. Portrait. Index. 20 cm. A.B.C. Life Series. [3 ref]

• **Summary:** The author, a food reformer, lived 1849-1919. He advocates both a vegetarian diet and prolonged mastication of one’s food for better health and nutrition.

Contents: Introduction. Author’s preface. 1. How I became a Fletcherite. 2. Scientific tests of Fletcherism [mainly at Yale University]. 3. What I am asked about Fletcherism. 4. Rules of Fletcherism. 5. What is proper mastication? 6. What is head digestion? 7. Chittenden on careful chewing. 8. The three inches of personal responsibility. 9. Question prescription and proscription. 10. What constitutes a Fletcherite. 11. All decent eaters are Fletcherites. 12. Fletcherizing as a temperance expedient. 13. The menace of modern mixed menus. 14. The crux of Fletcherism. 15. Fletcherism and vegetarianism.

In 1906 Isaac F. Marcosson wrote in “The practice of right eating and perfect nutrition”: “The first experiment in a large way of Mr. Fletcher’s plan of living was at Yale University [New Haven, Connecticut] under the direction of Professor Russell H. Chittenden. Three groups of men—a

company of regular United States soldiers, a coterie of professors, and some athletes in training—lived on a simple restricted diet and ate only what their stomachs craved, for six months. During that time their working efficiency was increased from 50 to 200 per cent, and at the end of the experiment they were healthier and stronger than when they began.”

Wikipedia states (July 2015): “The more important eye-opener to doctors and laymen was his series of experiments at Yale University. It was here that he participated, at the age of fifty-eight, in vigorous tests of strength and endurance versus the college athletes. The tests included: ‘deep-knee bending’, holding out arms horizontally for a length of time, and calf raises on an intricate machine. Fletcher claimed to lift ‘three hundred pounds dead weight three hundred and fifty times with his right calf’ (1913, p. 25). The tests [conducted under the direction of Yale Professor Russell H. Chittenden] claim that Fletcher outperformed these Yale athletes in all events and that they were very impressed with his athletic ability at his old age. Fletcher attributed this to following his eating practices, and ultimately these tests, whether true or not, helped further endorse ‘Fletcherism’ publicly” (1913, p. 27-31).

The Introduction (by The Publishers) states: “Fletcherism has become a fact.

“A dozen years ago it was laughed at as the ‘chew-chew’ cult; to-day the most famous men of Science endorse it and teach its principles. Scientific leaders at the world’s foremost Universities—Cambridge, England; Turin, Italy; Berne, Switzerland; La Sorbonne, France; Berlin, Prussia; Brussels, Belgium; St. Petersburg, Russia; as well as Harvard, Yale and Johns Hopkins in America—have shown themselves in complete accord with Mr. Fletcher’s teachings. The intention of the present volume is that it shall stand as a compact statement of the Gospel of Fletcherism, whereas his other volumes treat the subject more at length and are devoted to different phases of Mr. Fletcher’s philosophy. The author here relates briefly the story of his regeneration, of how he rescued himself from the prospect of an early grave, and brought himself to his present splendid physical and mental condition. He tells of the discovery of his principles, which have helped millions of people to live better, happier, and healthier lives. Mr. Fletcher writes with all his well-known literary charm and vivacity, which have won for his works such a wide-spread popular demand. It is safe to say that no intelligent reader will peruse this work without becoming convinced that Mr. Fletcher’s principles as to eating and living are the sanest that have ever been propounded; that Fletcherism demands no heroic sacrifices of the enjoyments that go to make life worth living, but, to the contrary, that the path to Dietetic Righteousness, which Mr. Fletcher would have us tread, must be the pleasantest of all life’s pleasant ways.”

Note: Dr. John Harvey Kellogg (Battle Creek, Michigan)

had a large sign permanently posted in the Sanitarium dining room; it read: “Fletcherize.” Address: M.A., Fellow, American Assoc. for the Advancement of Science.

2937. Friedenwald, Julius; Ruhräh, John. 1913. Diet in health and disease. 4th ed. Thoroughly revised and enlarged. Philadelphia, Pennsylvania: W.B. Saunders Co. 857 p. Illust. 24 cm. [4 soy ref]

• **Summary:** The section titled “The soy bean” (p. 124-26) states: “This bean (*glycine hispida*), sometimes called the soja bean, is an annual leguminous plant extensively used as a food in China and Japan. Until recently it has been regarded as a botanical curiosity in the Occident. It has recently been extensively used in America as a forage crop and to improve the soil if plowed under... There are a large number of different varieties, which vary in size, shape, color, and length of time they take to mature. Some are grown exclusively for the oil they contain, and it is used for culinary, illuminating, and lubricating purposes. The light-colored beans are eaten in soups, and the pods are sometimes picked green, boiled, and served cold with a sprinkling of soy sauce. The green varieties are often pickled in brine and eaten moist or dried with meals as appetizers; the same varieties are often sprouted, scalded, and served with meals in winter as a green vegetable. The bean forms the basis of the so-called soy sauces, used as a condiment all over the world. The Oriental races most frequently eat the bean, in more or less cheesy-like foods, which are prepared from it. The most common of these are natto, tofu, miso, yuba, and shoyu. Natto is a sort of bean cheese made by boiling the beans until they become soft and then placing the resulting mass in a warm cellar where it ferments. Tofu is made by soaking the beans in water, crushing between millstones, and boiling in about three times their bulk of water. The protein is precipitated and the resulting cheese eaten. The white milky liquid of the above has nearly the composition of cows’ milk, and tastes something like malt. It may be used in infant feeding to advantage (see same).

“Americans may eat the beans in numerous ways described under the head of soy bean cookery in the recipes at the end of this book. The bean is of particular value in diabetic diets (see same). It may be used to increase the protein of the diet.

There are variations in the composition of the different varieties.” A table shows the chemical composition of yellow soy beans grown in the USA, both as is and calculated on a water-free basis. “The Cereo Company of Tappan, New York, have made a soy bean flour which is useful.” Its composition is given. “The percentage of protein in this flour is almost one-third greater than the percentage of protein in the whole beans. This is caused by removing the coarse fibrous hulls which contain little protein.

“Vegetable food of such composition certainly is remarkable when compared with round beef, medium”—

whose composition is given.

Soy flour can be used as a gruel, in broths, and in making biscuits. A table (p. 126) shows the "Composition of fresh and dried legumes (incl. soy beans, cow peas, chick-peas, peanuts) with that of other foods" (Based on Abel, Farmers' Bulletin No. 121 [1900, p. 17]).

The section on "vegetarianism" (p. 130-31) is the same as that in the 1909 edition (p. 113-14).

In the chapter on "Infant feeding," the section on "Other food for infants" has a subsection on "The soy bean" (p. 297-98) which begins: "In certain conditions the soy bean... is of great value. In cases when milk is badly borne, in certain forms of intestinal disorders, in diarrhea, and especially in the convalescence after diarrhea, in certain cases of marasmus and in malnutrition, the soy bean flour, properly used, is of great value. Each ounce contains 13 grams protein and 120 calories." A table shows the composition when mixed with various amounts of water. Recipes for making gruels are given.

In the chapter on "Diet in disease," in the section titled "Diseases in which diet is a primary factor," is a subsection on "The soy bean" (p. 592) states: "The bean contains about 8 per cent. of sugar and no starch, and furnishes a large amount of available protein and fat." "A patient on a strict diabetic diet, who is excreting a certain amount of sugar, will excrete less sugar when the soy bean is added to the diet. It seems to be of particular value in severe cases. In addition to this action, it is a very valuable food, both on account of its nutritious properties and owing to the fact that it may be prepared in a number of different ways, and so serves to vary the diet."

In the section on "Diabetic Foods" (p. 601-02) is based on Winton (1906) and contains the same information, including that about The Health Food Company of New York.

In the chapter on "Recipes" is a section on "Bread" (p. 740-41) which includes whole-wheat bread, zwieback, and bran muffins for constipation. The same chapter has a section on "Soy bean cookery" (p. 766-69) with the following recipes: Introduction, gruels, broths, muffins, nut-cakes, soy bean cakes, breakfast food (like oatmeal), pancakes, soy bean cheese ("In Seattle, Washington, and other places in the West we are informed that tofu is made by the Japanese and sold to the Oriental residents").

Goff (1911) offers the following: Grilled soy bean [dry roasted soynuts], [whole] soy beans with butter, soy beans au gras (fried with onions and fat), bread or cakes of soy beans.

On page 822 is a "Short list of books on food and diet." 33 books are cited; some are in German or French.

Note 1. Julius Friedenwald lived 1866-1941. John Ruräh lived 1872-1925.

Note 2. This is the earliest English-language document seen (Dec. 2012) that uses the term "Grilled soy bean" to refer to dry roasted soybeans / soynuts. Address: 1. Prof. of

Gastro-Enterology; 2. Prof. of Diseases of Children. Both: College of Physicians and Surgeons, Baltimore, Maryland.

2938. Gibbon, Stanley. 1913. Unfired food in practice, with many suggestive recipes. London: C.W. Daniel. 79 p. 17 cm. Series: Healthy Life Booklets, Mo. 12. *

• **Summary:** Advertisements, p. 77-79.

2939. Haig, Kenneth George. 1913. Health through diet: A practical guide to the uric-acid-free diet, founded on eighteen years' personal experience. London: Methuen & Co. Ltd. x + 227 p. With the advice and assistance of Alexander Haig. Index. 20 cm.

• **Summary:** Advocates a vegetarian diet, but the uric-acid-free diet does not allow consumption of the following: All meat, fish, fowl and the yolk of eggs; all pulses, e.g. beans, peas, lentils, peanuts, etc.; mushrooms, asparagus, pistachio and cashew nuts, oatmeal, entire wheatmeal and brown bread containing any husk; tea, coffee, cocoa, or chocolate. These foods contain uric acid. The author was born in 1879. Address: 7 Brook St., London, W., England.

2940. Hindhede, M. 1913. Protein and nutrition: An investigation. London: Ewart, Seymour & Co., Ltd. x + 201 p. See p. 56-59. Illust., Index

• **Summary:** Page 56 states: "Jaffa's investigations were undertaken in connection with vegetarians in California." A footnote states: "Jaffa, U.S. Department of Agriculture, Bulletin No. 107, Washington [DC], 1901.

Page 58 states (referring to Jaffa's investigations): "Several interesting little details were brought to light by these experiments on strict fruitarians—natural apes, we might call them. I will only select two for discussion here." These two are "cost" and "Prof. Jaffa's deductions." Concerning the latter Hindhede writes: "The investigator, who evidently is a firm adherent to the 'Normal Standard,' is obviously in a dilemma what to make of the results obtained. It is extremely

diverting to examine the views expressed by him, for which purpose I will reproduce a sample of them. He writes:—"It is a difficult matter to draw any general conclusions from the foregoing dietaries without being unjust to the subjects. It would appear, upon examining the recorded data and comparing the results with commonly accepted standards, that all the subjects were decidedly under-nourished, even making allowances for their light weight. But when we consider that the two adults have lived upon this diet for seven years, and think they are in better health and capable of more work than they ever were before, we hesitate to pronounce judgment. The three children, though below the average in height and weight, had the appearance of health and strength. They ran and jumped, and played all day like ordinary healthy children, and were said to be unusually free from colds and other complaints common to childhood.'

"He concludes as follows:—"The subject gained nitrogen, although on a diet containing much less nitrogen than the tentative standard demands. No extended comments can be made on these results, because, as before stated, there are few, if any, similar experiments at hand for comparison. Further investigation along this line is needed.'

"Prof. Jaffa's astonishment makes itself felt. How much nearer the point it would have been had he concluded: 'The commonly accepted standard is altogether at fault.' But to make such a confession would have been to throw down the gauntlet in the face of the combined scientific forces of England and America; and Prof. Jaffa has neither the courage nor conviction to do that—and the same may be said of some of the other men above mentioned.

"Thus far had I come by August, 1905, when I obtained possession of Prof. Chittenden's work (of that year) on experiments which he had conducted on twenty-six men. Those who read what is written above will understand that the intensely interesting results obtained by him did not surprise me; yet I venture to say that they must have caused a great deal of astonishment on the part of scientific men."

"A biographical notice of Dr. Hindhede (p. ix-x): "Dr. Hindhede was born on February 13th, in the year 1862. His father, who is still living, being now in his seventy-seventh year, was a farmer in West Jutland, Denmark. Devoting himself assiduously to the active management of his property, he succeeded in the course of forty years in redoubling its value many times, and was thus in a position to give his children a first-class education. Nevertheless, Dr. Hindhede, during childhood and early manhood, was accustomed to a most frugal way of life—as narrated by himself in Chapter II of this work; and, as he remarks, it was observation of the wonderful working ability of the West Jutland farmers which first set him in opposition to the claims of the advocates of so-called 'strength-giving' foods.

"Dr. Hindhede became a medical student, and passed his final examination in 1888, gaining distinction by securing the highest honour (*Laudabelis prae ceteris*) which has been

gained at the Copenhagen University since 1847.

"It was the desire of his tutors that he should remain at the University; but Dr. Hindhede had other views. Even while yet a college student, he had begun to conceive doubts concerning the truth of certain teachings. He left Copenhagen and set up in practice for himself among the farmers of Jutland, continuing with them for twenty years.

"But, meanwhile, two years after obtaining his degree, he had been appointed chief physician to the newly opened hospital in the town of Skanderborg. Here he found himself ever more in conflict with established medical treatment, and also, in some measure, with the too frequent, as he felt convinced, surgical use of the knife. It must be understood that he had by no means thrown in his lot with the modern nature-healers, whose fundamental doctrine is the rejection of medicine, operations, inoculation, etc. Dr. Hindhede was one of the first doctors in Denmark to adopt antidiphtheritic serum treatment.

"It was not long before he became interested in the great and important question of nutrition, of both man and animals. Applying himself diligently to research in this field, he came to the conclusion that the value of protein as a food had been much overrated, and that man, as well as animal, could very well live on half the amount of protein prescribed as necessary by accepted scientific authority. He induced many farmers to feed their cattle in accordance with his views, with most satisfactory results from both hygienic and economical standpoints. The consequence of which was that the Committee of Agriculture petitioned the Danish Government to provide Dr. Hindhede with the means to devote himself entirely to scientific research. The Government granted the petition, with the result that Dr. Hindhede resigned his practice, and, since January 1st, 1911, has been installed in a laboratory of his own in Copenhagen. The laboratory, which is exclusively devoted to experiment and research in human nutrition, is remarkable in that it is the first and only one of its kind in Europe to be opened and maintained by State aid. The numerous exhaustive experiments which Dr. Hindhede has thus been able to undertake have confirmed, even more thoroughly than was anticipated, the theories which the doctor had already founded on his previous experience and observations.

"The present book has already appeared in Danish and in German editions, and in both these countries has won marked recognition, especially from medical men. It is certain that never before has this important question of nutrition been so thoroughly and searchingly investigated; but it must be conceded that few men have been so well fitted for the task as the author, who is not only a man of high standing in the medical profession, but one who throughout his life has devoted himself with untiring zeal to the study of the subject. Perusal of the present work will be evidence enough that Dr. Hindhede can have left no stone unturned to get at the truth.

“That this volume will not only prove of the greatest assistance to medical practitioners both in prophylactic and therapeutic treatment, but that its appearance will go far to provoke a general and beneficial reform of our nutrition, is the confident prediction of the publishers.

Note 1. This is the earliest English-language document seen (April 2018) in which Dr. M. Hindhede discusses vegetarian or fruitarian diets, or the question of how much protein a typical person needs.

Note 2. Mikkel Hindhede lived 1862-1945. This is a translation in enlarged form (from the Dutch) of *En Reform af vor Ernaering* (1906). The photograph, taken in 1910, is from Wikipedia. Address: Director of the Hindhede Lab. of Nutrition Research, Established by the Danish [Denmark] Government.

2947. Wilson, Ernest H. 1913. A naturalist in Western China, with vasculum, camera, and gun: Being some account of eleven years of travel, exploration, and observation in the more remote parts of the flowery kingdom. 2 vols. London: Methuen & Co. Ltd. See vol. 2, p. 49, 54-56, 61, 87-88. Introduction by Charles Sprague Sargent, LL.D. Illust. Index. 23 cm.

• **Summary:** In volume 2, chapter VI (p. 48-63) is titled “Agriculture: The principal food-stuff crops.” “The Chinese nation is to a very large extent vegetarian, flesh being eaten only in small quantities except on festival occasions... The Chinese fry most of their vegetables, and for this purpose a vegetable oil is nearly always used. The oils expressed from members of the Cabbage (*Brassica*) family [such as rapeseed], the Soy Bean (*Glycine hispida*), and Sesamé (*Sesamum indicum* [sesame]) being most in request” (p. 49). The seeds of ground-nut (*Arachis hypogaea*, called “Lao-hua-tsen”), opium poppy, sunflower, and cotton seed are also used as oilseeds (p. 61).

Beans are discussed on pages 55-56. “Since the Chinese are to such a large extent a vegetarian people, the various members of the pea and bean family are necessarily most important crops... The soy bean is everywhere a summer crop.” The country’s most important legume, it is “planted everywhere—in fields by itself, around rice and other fields, and as an undercrop to maize and sorghum. It yields seeds in three colours, namely yellow, green, and black. The Chinese distinguish three kinds of the yellow and two kinds each of the green and black. These varieties yield a succession of beans, the black being fully a month later than the others. The ‘Huang-tou’ [yellow soybean] is cooked and eaten as a vegetable, or ground into flour and made into vermicelli; preserved in salt it makes an excellent pickle. It is also extensively used in the manufacture of soy sauce and soy vinegar. A variety with small yellow seeds is largely employed in making bean-curd [tofu]. While in Central and Western China the soy bean is cultivated exclusively as a food-stuff, in Manchuria it is grown almost solely for the oil which is obtained from the seeds by pressure, and for the residual-cakes that remain after the oil has been expressed. From Newchwang, the port of Manchuria, there is an enormous export trade done in ‘Bean-cake,’ which is in great demand as an agricultural fertilizer in all parts of China. The soy bean has recently been exported to Europe in large

quantities and the soy-bean oil is employed in soap making and for culinary purposes.

“Two kinds of Gram, *Phaseolus mungo*, ‘Lu-tou’ and *P. mungo*, var. *radiatus*, ‘Hung-tou,’ are grown as summer crops. The seeds of the ‘Lu-tou’ (green bean [= mung bean]) are especially valued for their sprouts... Of the ‘Hung-tou’ (red bean [azuki bean]) there are two or three varieties. The seeds of these are used as a vegetable or ground into flour and employed for stuffing cakes and sweetmeats.”

“Both sesamum and soy bean are cultivated extensively in Western China, but for local consumption only. The large exports of these products that pass through Hankow [located on the Yangtze River near Wuhan and Wu-ch’ang] are brought down by the Peking-Hankow railway. Szechuan is capable of growing enormous quantities of these valuable plants, but cheaper and better facilities for transport are necessary before the products can become articles of external trade. When the much-discussed Hankow-Szechuan railway is *fait accompli* the raw products of the west will be available as articles of export, and a much-needed stimulus given to the agricultural industries of the regions concerned” (p. 87-88).

Note: *Webster’s Dictionary* defines vasculum (derived from the Latin meaning “small vessel”; the term was first used in 1844) as “a usually metal and commonly cylindrical or flattened covered box used in collecting plants.” Address: V.M.H., England.

Sistema de Luis Kuhne de Ramon Suarez [System of Luis Kuhne of Ramon Suarez (Ad)]. *Naturopath and Herald of Health (The)* (New York City) 19(1):Unnumbered page. Jan. [Spa] • **Summary:** Vegetarian restaurant (“Restaurant Vegetariano”). This institute has existed in the city of Havana for almost 10 years. Executive director: Dr. Francisco Martinez Mesa. Seven years ago the group published a book titled *The New Science (La Nueva Ciencia)*. Address: Inst: Manrique 140 (antiguo). Restaurant: Aguiar 73, entre Obispo y Obrapia. Both: Havana, Cuba. Phone: A-2060 Habana.

2953. Eddington, Jane. 1914. Economical housekeeping: Soy beans. *Chicago Daily Tribune*. Feb. 11, p. 11.

• **Summary:** It is called “the soy or soja bean.” “In an English food magazine of two years back there is an interesting and very suggestive article, ‘About the Soy Bean.’ In the first paragraph it is said that medical men have been experimenting with it and writing about it for a year or so. Then it says:

“The soja (or soy) hispida is the only representative of a genus of leguminosae or the tribe papilionaceæ, and it has been cultivated from time immemorial in Japan and China. It grows freely in tropical countries, and since 1878 it has been grown successfully in the warmer parts of Europe. There are a number of varieties of the soy bean, the difference lying in the size, shape, and color of the seeds. The Japanese is the most highly esteemed and in appearance it is a good deal like the common dwarf kidney or French bean...”

“The bean, which has a most agreeable flavor, is used by the orientals in many ways. The oil is expressed, used as a food, and the residual cake, which contains 40 per cent of flesh forming material, is eaten by the poorer classes [sic]. A paste [miso] and a kind of cheese [probably tofu] are also obtained from the bean, but one of its principal uses—perhaps the best known to us—is for the manufacture of the celebrated soy sauce, the making of which has always been surrounded by a certain amount of mystery.

“It is the chemical composition of the soy bean which has attracted so much attention of late, and it has been found to be worthy of the highest place among pulses. It is rich in albuminoid, or flesh forming constituents, also in fat or oil, and contains but a very small proportion of starch or sugar.

“The bean has been said to favor digestion, and it is a fact that the protein it contains is particularly easy of assimilation. A delicate infant, unable to digest cow’s milk, often will thrive on a gruel made of the soy bean flour and water, and during the little intestinal disturbances of summer, to which children are so liable, it is much to be recommended. Diabetic patients find it an invaluable article of diet on account of the small amount of starch and sugar

which it contains.

“One might well expect that so valuable a food necessarily would be expensive, but when one learns that both bean and flour are sold for about 3d (6 cents) a pound, one feels that it is high time to give it a trial.

“It is in the form of flour that the soy bean is likely to be most popular on this side of the globe, although the beans themselves, when properly cooked, make good soups and form the basis of many of those little dishes beloved of those who prefer a meatless fare [vegetarians]...

“The soy bean thus is a cheap substitute for meat. In the dried state it looks more like a pea than a bean, but when soaked in warm water it expands and assumes its beanlike appearance...”

“The article says that these beans soaked and cooked are excellent mixed with a well flavored tomato or other sauce and made up into cutlets, croquettes, etc., to be used with cheese, etc., because its flavor is not pronounced, for which reason it is more valuable in the kitchen.

“These beans can be obtained at a seed store at just the price one pays for other sorts of beans at a grocery.”

2954. *Evening News (The) (Battle Creek, Michigan)*. 1914. If vegetarian girl weds a meat eater: the question is—should she cook meat for him because he likes it and craves it? The Sanitarium girls smile: think no love-bark was ever wrecked on meat eating. Concede much diplomacy would have to be used, but domestic science class is optimistic. Feb. 18. p. 7, col. 1.

• **Summary:** “... And along with him smile the girls who are studying domestic science at the Sanitarium.

“‘We are not militants,’ declared Miss Lenna Cooper, head dietitian at the Sanitarium, ‘and we don’t believe in wanting people to do things against their will. I do not think the girls would object to cooking meat for their husbands. In fact, they are taught how to cook meat in the second year, because it is not to be expected that they can all find work to do where vegetarianism is practised.’

“The girls themselves were rather divided on the subject, yet all conceded that if it appeared necessary they would bury their scruples and roast, broil or fry meat for their husbands.

“It may be necessary to use diplomacy, they think, because many men begin married life with the firm belief that a meal is nothing but a makeshift unless the menu includes meat. It will be necessary, they think, to get him used to being a vegetarian by degrees, educating him up to the fact that there are many appetizing things to eat that haven’t even a remote relationship to meat.”

“Miss Cooper smiled in amusement at the replies.

“‘We are not trying to cut meat out of the diet entirely,’ she explained, ‘only to show that too much of it is harmful. The girls, you see, in learning to be vegetarians, are also learning not to force their opinions upon others too hastily.

If they are expected to cook meat, they can do it and do it well.”

Note: Here, for the first time, Lenna expresses her views about vegetarianism.

2955. Nashville Sanitarium Food Factory. 1914. Offers a full line of health foods... (Ad). *Naturopath and Herald of Health (The) (New York City)* 19(4):Unnumbered page. April.

• **Summary:** “... such as meat substitutes, whole wheat preparations, nut butters,... baked beans, wholesale or retail.

“Same are for sale also at the Pure Food Store, 112 East 41st St., New York City.” Address: Nashville, Tennessee.

Health food bakeries, Whole wheat bread, etc. Pure Food Bakery, Louis Lust, 100 East 105th St., New York City.

2957. *Naturopath and Herald of Health (The) (New York City)*. 1914. For sun, tropics and cocoanut: Department of real religion and immortality. Edited by Aug. Engelhardt. 19(4):267+. April.

• **Summary:** “To the friends of a paradisiacal life.” This community, which practices nakedness and eating only fruits, began in about 1905. Address: Kabakon Island, in Duke of York Islands, Papua New Guinea.

2958. Vegetarian. 1914. Vegetarian philosophy. *New York Times*. May 1. p. 12, col. 8.

• **Summary:** In this letter to the editor, dated April 20, 1914, the author, a vegetarian, approves of a letter from Evelyn Foster to Dr. Grenfell deploring his plans to establish deer ranches in Labrador. Address: New York, New York.

2959. *Asie Francaise (L’)*. 1914. Le soja: Une légumineuse alimentaire Chinoise [The soybean. A Chinese food legume]. 14(158):196-98. May. [Fre]

• **Summary:** Begins with a good introduction to the soybean (*haricot soja*), including its early history in France and statistics of current trade between Europe and Manchuria. A footnote (p. 196) states that the statistics are from the Chinese maritime customs. The shipments to Europe for first reported in 1908 by the official statistics. The Suez Canal Company (*La Société du canal de Suez*) made it known that for some years when not a single kg of soybeans passed through the canal, but 35,000 passed through it in 1908.

At the Nanking Exposition [Nanjing] of 1910 in China, some 400 varieties of soybeans were on display.

Continues with a long discussion of the work and writings of Li Yu-ying (p. 197-98). “It was soymilk that Li

first introduced to French vegetarians (*végétariens français*). In 1908 he established a laboratory in Paris for the study of tofu (*la caséo-sojaïne*). Then he set up a factory at Vallées, on the outskirts of Paris, where he employed about 30 specialist Chinese workers. The machinery was constructed in France based on designs by Li and his collaborators.

“The creation of this Chinese factory, smack in the middle of France, was not lacking in originality. But it seems that its output could be as wide and varied as its founders had dreamed. In a shop which sells exotic products, we were told that the Parisian clientele scorned (looked down on) the soy preserves / jams (*confitures*), cheeses, condiments, eggs, and other unique soy products, but they remained faithful to flour, rusks / zwieback (*biscottes*, twice baked bread without added sugar), and the housewives appreciate the soy sprouts that are found today in all the markets of Paris and its outskirts.”

2960. *Naturopath and Herald of Health (The)* (New York City). 1914. For sun, tropics and cocoanut: Department of real religion and immortality. Edited by Aug. Engelhardt. 19(5):336-40. May.

• **Summary:** This article is titled “The modern worshippers of the sun.” Address: Kabakon Island, in Duke of York Islands, Papua New Guinea.

2961. Coville, Marion Elizabeth. 1914. An appeal against slaughter: Are you able to hear? 2nd ed. Syracuse, New York: C.W. Bardeen. 161 p. July. Index. 21 cm.

• **Summary:** Ethical and religious quotations are used to argue against the “injustice, cruelty, and degradation” of animal slaughter for food, fashion, or sport.

2962. *Naturopath and Herald of Health (The)* (New York City). 1914. Arnold Ehret. 19(8):541. Aug.

• **Summary:** Arnold Ehret “is to-day the greatest pioneer on diet and fasting cure in the world. A scientist of the first order who spent 17 years on research work and experiments to find out the correct diet for man with which to cure and to prevent disease, also a diet on which to have full health and strength in the highest measure.

Arnold Ehret has written three books: (1) *Sick People and Rational Fasting*. (2) *Healthy People*. (3) *Instructions on How to Fast and How to Diet*. “The first book was translated and published in serial form in this magazine, and is for sale in English and German for 50 cents, postpaid, from the office of The Naturopath. Mr. Ehret is spending the summer at the Yungborn, where he is working on another book, and where he also gives lectures and advises on diet and fasting. He intends to tour the United States, and also stay for some time at the Florida Yungborn in Tangerine. Mr. Ehret speaks English to some extent and is a man of the highest character.”

2963. Blatherwick, N.R. 1914. The specific role of foods in relation to the composition of the urine. *Archives of Internal Medicine* 14(3):409-50. Sept. [32 ref]

• **Summary:** A very early paper on acid-base balance. Scientists now know that the urine of herbivores is alkaline to litmus, while that of carnivores gives an acid reaction. The pioneering studies of Sherman and Gettler (1912) showed that vegetables and fruits, on being burned, leave an ash that preponderates in the basic elements sodium, potassium, calcium and magnesium, whereas the cereals, meat and fish foods give an acidic ash because of the predominance of acid-forming elements—such as sulphur and phosphorus. Yet is important to remember that the ash of plant foods may be either basic or acidic.

Table 1 is titled “Ash analysis of Sherman and Gettler: Excess of acid-forming or base-forming elements.” The most acidic foods (in descending order of excess acid per 100 gm) are: Egg yolk 26.69. Chicken meat 17.01. Fish (haddock) 16.07. Beef (lean) 13.91. Veal (13.52). Eggs (chicken) 11.10. Wheat flour 11.61. Entire wheat [whole wheat] 9.66. Rice 8.1. Corn (sweet, dried) 5.95.

The most basic foods (in descending order of excess base per 100 gm) are: Lima beans (dried) 41.65. Prunes 24.40. Raisins 23.68. Beans (dried) 23.87. Almonds 12.38. Carrots 10.82. Oranges 5.61. Apples 3.76. Cow’s milk 2.37.

Table 12 gives basic values for the urine of two subjects (Sanitarium) fed a vegetarian diet.

Table 24 (p. 444) gives basic values / alkalinity for the urine of 30 vegetarians; they range from 5.30 to 7.48—average 6.64.

Summary: The acidic or basic nature of the urine is markedly influenced by the character of the foods consumed. Potatoes, “oranges, raisins, apples, bananas and cantaloupes are very efficient in reducing acid output.” Address: Sheffield Lab. of Physiological Chemistry, Yale Univ., Connecticut.

2964. *Naturopath and Herald of Health (The)* (New York City). 1914. First annual raw food dinner. 19(9):625-26. Sept.

• **Summary:** Held on 8 Oct. 1913 (Wednesday) in Minneapolis, Minnesota, at the West Hotel, under the auspices of the Raw Food Club of Minneapolis. The menu is given, including Eupos (Health Drink), Synede (Health Salad), Unfired Pie and Unbaked Bread. The meal was “concluded with a Physical Culture Exhibition by Prof. S.E. Olmstead, the Sandowian Athlete and Physical Culture Expert (member of the club).” The names of the officers are given. An article titled “Foes of cooks gather at festive banquet board: High priest looks on as disciples banquet on raw food,” by Abe Winters is reprinted from the *Minneapolis Journal*, Oct. 8, 1913. The “high priest” is George J. Drews, D. Al. (Doctor of Alimentation). They use no knives or salt.

The story is followed by a poem titled “Apyrtrophy,” by George J. Drews (p. 626).

2965. Winters, Abe. 1914. Foes of cooks gather at festive banquet board: High priest looks on as disciples banquet on raw food. *Minneapolis Journal*. Oct. 8.

• **Summary:** The “high priest” is George J. Drews, D. Al. (Doctor of Alimentation). They use no knives or salt.

2966. *Good Health (Battle Creek, Michigan)*. 1914. Vegetable diet in colitis. 49(10):512-13. Oct.

• **Summary:** “A person suffering from colitis should use an anti-toxic diet. Let it consist largely of fruits and vegetables. Lettuce is especially good. Even bran and such coarse articles as turnips, cabbage and beets will act as a broom to sweep away the foul matter that is irritating the bowels. It is the rotting, putrefying fecal matter adhering to the wall of the intestine which occasions the irritation, and by means of a rather coarse vegetable diet, these materials may be scrapped off, swept on and carried away, and the habitual rhythm restored, and the intestines given a chance to heal. This is no new idea.”

Prof. von Noorden of Vienna holds similar views on dietary treatment of colitis; they are described in detail.

2967. Lust, Louise. 1914. *Good dinner cook book*. Butler, New Jersey: Nature Cure Publishing Co. *

• **Summary:** A vegetarian cookbook. Contents: 1. Cooked and uncooked foods. 2. Substitutes for animal foods. 3. Egg plants, potato croquettes, etc. 4. Rice and farina fritters, rice with tomatoes, etc. 5. Mushroom pie, cabbage pie, spinach and eggs, stuffed peppers. 6. Soups and gruels. 7. Vegetables and what may be done with them. 8. Sauces and their importance to a good dinner. Sixteen sections with tables of food values from reliable authorities.

An ad *Naturopath and Herald of Health* (Oct. 1914, p. 697) states: “The secret is out. A treat for the epicure. A triumph of the culinary art.” A large portrait shows Louisa Lust, N.D. “The Naturopathic Resort ‘Yungborn’ at Butler, New Jersey, and the Florida Yungborn ‘Quisisana’ at Tangerine have long been famous for the originality and excellence of their vegetarian diet. Visitors have described the meals as ‘masterpieces of the culinary art.’”

Note: This is the earliest document seen (Nov. 2014) that contains the word “Quisisana” in connection with Benedict Lust or with the Florida Yungborn.

2968. Cooper, Lenna F. 1914. That Christmas dinner. *Good Health (Battle Creek, Michigan)* 49(12):645-47. Dec.

• **Summary:** “A meatless menu.

“Grape Fruit and Celery Salad
“Tomato Bisque
“Celery Radishes
“Ripe Olives
“Peanut Roast
“Browned Sweet Potato

“Buttered Cauliflower

“Macedoine Salad

“Celery

“Nut Buns Bread

“Date Cream Pie Nut Cake

“Oranges Almonds

“Cereal Coffee

“How to Cook It.” A recipe for each menu item is given. Address: Battle Creek, Michigan.

2969. *Deutscher Vegetarier-Kalender* [German vegetarian calendar]. 1914. Raumburg, Germany: W. Hotz and Alwin Kaemmerer. 67 p. [Ger]*

Address: Raumburg, Germany.

2970. Arnbrecht, Jacob. comp. 1914. *Hygienic cook book: A collection of choice recipes carefully tested*. College View, Nebraska: International Publishing Assoc. 318 p. 20 cm.

• **Summary:** The title page states that this vegetarian cookbook offers “Plain directions on healthful cookery; Nutritive value and digestibility of foods; Proper food combinations; Food for the sick; Weights and measures for the kitchen, etc.”

In the section on Proteids, page 8 discusses gluten and how to make it at home. In the chapter on Entrees (p. 60-90) is a long section titled “Substitutes for flesh meats.” Many of these recipes are based on Protose or Nuttolene, with granola and nut butter also used, indicating that Mr. Arnbrecht may well have been a Seventh-day Adventist.

2971. Cooper, Lenna Frances. 1914. *The new cookery: A book of recipes, most of which are in use at the Battle Creek Sanitarium*. 2nd ed., revised. Battle Creek, Michigan: The Good Health Publishing Co. [10] + 301 p. Illust. (10 photos). 20 cm.

• **Summary:** Soy is mentioned only once in this vegetarian cookbook, in the recipe titled “Nut sausage” (p. 89); this exact same recipe was on page 87 of the 1913 1st ed.

Note: This book contains a few more pages than the 1913 edition; 5 more pages of unnumbered front matter and 3 more pages of text. The title page is identical except that the words “Second edition–Revised” have been added. The index starts on p. 291, is more than 1 page longer, and ends near the bottom of p. 301. The ads at the rear are generally on different pages; some have been added and others deleted. Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium.

2972. Earle, Maria Teresa [Mrs. C.W. Earle]; Case, Ethyl. 1914. *Pot-pourri mixed by two*. New York, NY: E.P. Dutton & Co. xiii + 456 p. 22 cm. [10+ ref]*

• **Summary:** About gardening and English vegetarian cookery. The first author’s name is listed on the title page as

"Mrs. C.W. Earle." She lived 1836-1925.

2973. Fulton, Edwin Giles. 1914. *Vegetarian cook-book: Substitutes for flesh foods*. Revised ed. Mountain View, California, Kansas City, Missouri, etc.: Pacific Press Publishing Assoc. 271 p. Illust. 20 cm.

• **Summary:** This book was first published in 1904 under the title *Vegetarian cook book: Substitutes for Flesh Foods*. The author was born in 1867.

Peanut butter is mentioned on pages 208, 213, and 214. Soy is not mentioned.

2974. Gillmore, Maria McIlvaine. comp. 1914. *Meatless cookery: With special reference to diet for heart disease, blood pressure and autointoxication*. New York, NY: E.P. Dutton & Company. viii + 352 p. Introduction by Louis Faugeres Bishop. Illust. Index. 21 cm.

• **Summary:** The author's Preface begins: "Since auto-intoxication is now held to be the cause of many of the most serious diseases of humanity, too much stress cannot be laid upon the immediate necessity of looking into the question of diet and removing those foods which are responsible for the cause of ill health."

"In the case of heart trouble and high blood pressure, with the accompanying deterioration of other organs, Dr. Bishop has found from prolonged observation that the offending substance most often appears in meat, eggs, fish and meat stock soups, but is not the same in all cases."

"In a double sense, the way to a man's heart is by the food he is given, and the more elaborate the food, the more quickly does his heart succumb to the strain put upon it. So it falls upon the women to meet this condition, and without delay."

The author thanks: (1) The patients of Dr. Bishop (see below), who have been kind enough to share the result of their successful experience. (2) Dr. C.W. Langworthy, expert in charge of Nutrition Investigation at the United States Department of Agriculture. (3) Miss Lenna Frances Cooper, Head Dietitian of the Battle Creek Sanitarium [Michigan], for recipes published in *The New Cookery*.

In the Introduction, Dr. Louis F. Bishop, M.D. (Prof. of Heart and Circulatory Diseases, Fordham Univ. School of Medicine, New York) begins by describing how difficult it is to bridge the gap between those of technical education and those who have not been so trained. After years of research he has found that, "under certain circumstances, the cells of the body become sensitive to the protein element of certain kinds of foods, and from that time on, as long as this sensitiveness lasts, that kind of food acts as a poison to the cells of the body. The only way to limit the damage is to exclude the offending article of food from the diet." Even small amounts of this kind of food can be as harmful as large amounts. Moreover, food damage can be entirely independent of any discomfort. "Food poisoning has

generally existed for five or ten years before the heart is sufficiently damaged to cause distress on exertion... My own experience is that heart disease and hardening of the arteries have usually existed about five years at the time the sufferer comes under observation."

"The things that do damage are usually found in the group including eggs, fish, meat and stock soups, but there is no definite way of determining which of these things is at fault. This has to be accomplished by the study of each individual person, by means of the absolute withdrawal of all those things until there is an improvement in the action of the heart and blood vessels. Now one article of food, and then another is added to the diet, and it is discovered by experiment which one the person can use without a return of the disorder."

"In the beginning, it may be only eggs, or fish, or meat, that is a source of irritation to the cells of the body. In persons very seriously ill with hardening of the arteries, all of these things are a source of irritation."

There is a long chapter titled "Meat substitutes" (p. 81-127). The following recipes are of interest: Cereal coffee (p. 1). Almond milk (p. 2). Rice milk (p. 3). Peanut butter sandwiches (p. 209). Two charts near the back of the book give the nutritional composition of peanut butter, and peanuts.

Note 1. is the earliest document seen (June 2002) which states that diet (and specifically a meatless or vegetarian diet) can reduce the risk of coronary heart disease in humans.

Note 2. This is the earliest English-language document seen (Oct. 2021) that mentions rice milk, or that contains the term "rice milk," which it uses to refer to a recipe.

Note 2. This is the earliest English-language document seen (Nov. 2020) that contains the word "autointoxication" (or "auto-intoxication").

Note 3. This is not a Seventh-day Adventist cookbook and no commercial products made by SDA companies are called for in the recipes. Soy is not mentioned. Maria Gillmore was born in 1871. Address: Clinical Prof. of Heart and Circulatory Diseases, Fordham Univ., Bronx, New York.

2977. Hindhede, Mikkel. 1914. *What to eat and why: Including the famous Hindhede cookery recipes. A complete*

change to a healthy, simple, and cheap mode of living. English adaptation by C.A. Bang. London: Ewart, Seymour & Co., Ltd. viii + 113 p. No index. 22 cm. [1 ref]

• **Summary:** Contents: Introduction, by C.A. Bang. Part I: The theory of nutrition. Part II: Practical instruction. Part III: Diet in uric acid disorders.

This book, by the eminent Danish physician, is dedicated to the “the economical housewife.” It is not a vegetarian cookbook, however only small amounts of inexpensive meats and fish are used in relatively few recipes. The author lays special stress on a “vegetable diet” or “vegetarian diet” repeatedly. In the section on “Pulses—Peas, beans, and lentils” (p. 11) he states: “This group forms in great measure the basis of vegetarian cookery. Here one can get enough protein without the help of meat.” The next section, titled “Peanuts, nuts, and almonds” (p. 11), begins: “These are held in still greater esteem than the preceding group by vegetarians, as besides much protein, they contain, above all, a great deal of fat.” In the section titled “Meat” (p. 13) he states: “Meat has always been looked upon as the best food. But I put it in last place... I go so far as to say that meat cannot only be dispensed with, but that, taken in large quantities, it is directly injurious, because it weakens the muscles, and may open the door to many diseases.”

Margarine is used in many recipes in place of more expensive butter.

On the first unnumbered page at the rear, titled “A Reformation,” are two food pyramids. The top one, with the tip pointing upward, is labeled “The 19th century. Albumen!” The word “meat” appears in large bold letters on the top line, followed by milk and egg in smaller letters on the second line, then peas, groats and vegetables on the third line, and sugar, butter, fruit and tubers on the fourth line. The lower pyramid, with the base at the top and the tip pointing down, is labeled “The 20th century. Calories! Economy!” The words “groats, butter, fruit, tubers” appear in large bold letters on the top line, followed by milk, egg vegetables in smaller letters on the second line, then peas and sugar on the third line, and meat (alone) on the fourth line.

Note 1. Hindhede was an early figure in nutrition education.

Note 2. This is the earliest document seen (Sept. 2020) that arranges foods into various groups for the purpose of nutrition education. Soy is not mentioned in the pyramids or in the book.

On the next unnumbered page is a full-page ad for Plantall Nut Margarine made by Otto Monsted, Ltd. from “pure nuts, milk, and butter” with “animal fat.”

On the third unnumbered page is an advertisement for a book titled *Protein and Nutrition*, by Dr. Hindhede, in which he “disproves the deductions of many of the leading dietetic authorities” and shows “that the value of Protein as a food has been much overrated...”

On the fourth unnumbered page is an ad for gluten bread

biscuits made by Brusson Jeune (Therapeutic Foods Co.) in London.

The frontispiece, facing the title page, is a full-page photograph of Dr. Hindhede, sporting a large moustache. Address: M.D., Director, Lab. of Nutrition Research, Copenhagen, Denmark.

2980. Maddocks, Mildred; Wiley, Harvey Washington. 1914. The pure food cook book: The Good Housekeeping recipes. Just how to buy—Just how to cook. New York, NY: Hearst’s International Library Co. vii + [2] + 417 p. Illust. 20 cm. Reprinted in 1915.

• **Summary:** Edited by Mildred Maddocks, with an introduction and notes on food and food values by Harvey W. Wiley, M.D. Contains over 70 black and white photos. In his introduction, Wiley praises the cooking of French peasants, bemoans the fact the young American women spend years learning how to play the piano instead of the principles of nutrition and how to cook simple, nutritious dishes. He advocates Graham flour or “entire wheat flour.”

Worcestershire sauce is called for as an ingredient in the following recipes: Crab rabbit (p. 162). English cottage pie (p. 218). Liver with bechamel sauce (p. 228-29). Jellied chicken and egg salad (p. 267). Mock beef a la mode (p. 331; made mostly with squash, onions, and carrots).

Concerning vegetarianism: A recipe for “Vegetarian rice” is given (p. 101-02).

In the chapter titled “Meat,” by Harvey W. Wiley, M.D., we read (p. 185): The number of animals in the U.S. is not keeping pace with population growth. “The natural result of this, aside from manipulation on the markets, is an increasing demand and a decreasing supply. This has worked out at the present time into a condition in which the price of meats is higher to the consumer than ever before. This, however, does not affect in any way the value of meat as a food. With all due deference to our vegetarian friends, whose opinions I respect, I am fully convinced that man is an omnivorous animal. He makes a mistake when he confines his diet to any one particular form of food. Man can thrive quite well, however, on a vegetable diet. Perhaps this should be modified by saying on what is generally called ‘a vegetable

diet' because the vegetarian as a rule eats eggs, drinks milk, and uses butter, all of which are animal products. The lean or muscular part of meat is essentially a tissue builder, while the fat is a heat and energy former."

Surprisingly the recipes for dried beans are in the chapter titled "How to cook vegetables," which is mostly about fresh vegetables but includes recipes for Baked lentils, Lentil and mushroom cutlets, Baked lentils and cheese, Red kidney beans with cheese in chafing dish, Roast nut and barley loaf (p. 316-23), Black bean soup, Mock beef a la mode (featuring Hubbard squash), and Mock pork (featuring white summer squash) (p. 330-33). Soy is not mentioned. "In general, vegetables need long, slow cooking" (p. 317). Address: 1. Assoc. Editor of *Good Housekeeping Magazine*. Editor of the *Family Cook Book*, *Every Day Dishes*, *Brosia Meal Cook Book*; (2) M.D.

2981. Markham, Russel C. 1914. A message of health. Philadelphia, Pennsylvania: Boericke & Tafel. 123 p.

• **Summary:** Chapter 7, "Pugilist extraordinary," begins: "It is not often possible that we may draw a valuable lesson from a professional pugilist. But Freddie Welsh is 'pugilist extraordinary,' not because he is at this present time the light weight champion of England, but because he never eats meat when in training for his battles. Here is what he says of his system:

"I am a strict vegetarian when training because I have found I am stronger, swifter and more enduring when I am on a non-meat diet. Also I have found that I can control my weight better. When I gained my decision over Abe Attell I had trained on a strict diet of fruits and nuts, at the same time "Fletcherizing" (thoroughly masticating) my food. Usually, however, besides nuts and fruits I eat eggs, salads, macaroni, beans, peas, cheese, a great deal of olive oil, honey and whole wheat bread. I believe in an abundance of fresh air. I do not use tobacco, liquor, tea or coffee. I eat only two meals a day. The only way to keep fit is to lead a natural life. That is what my system amounts to."

Chapter 10, "The two sides of life," contains a beautiful and inspiring summary of the Christian teachings of Jesus and St. Paul. Address: M.D.

2982. Roberts, W.K. 1914. Health from natural foods: An argument for the fruitarian diet. Sunnyvale, California. 2 + 90 p. No index. 18 cm. Self Culture Series.

2985. Sherman, Henry Clapp. 1914. Food products. New York, NY: The Macmillan Co. viii + 594 p. Illust. Index. 19 cm.

• **Summary:** Written shortly before World War I by one of America's leading nutritionists, this an important basic text. Chapter 9, titled "Vegetables, fruits, and nuts" also contains extensive information about legumes. The section on "Digestibility" of legumes (p. 312-14) cites two experiments concerning the soy bean. In the first, Oshima (1905, *USDA Office of Experiment Stations, Bulletin* No. 159) found that a preparation consisting mainly of soy bean protein had a digestibility of 96%. In the second, Mendel and Fine (1911, *J. of Biological Chemistry*, vol. 10, p. 435-38) fed a man with a simple mixed diet in which 90% of the protein was in the form of a "commercial soy-bean meal [probably flour], which betrayed no cellular structure under the microscope." The coefficient of digestibility of the protein was 85.3 compared with 87.9 and 88.0 for mixed diets in which the protein came primarily from eat and eggs.

In the same chapter, in the section titled "Place of nuts in the diet" (p. 345), a footnote states: "To speak of nuts as 'meat substitute' is natural under present conditions and reflects the prominence which has been given to meat and the casual way in which nuts have been regarded for some generations. Looking at the matter in evolutionary perspective it might be more logical to speak of meats as 'nut substitute' instead."

A major theme of this book and this chapter is the "balance of acids and bases" or of "acid-forming and base-forming elements." In this chapter, in the section titled "The place of fruits and vegetables in the diet" he discusses (p. 355) the importance of this concept. "The balance of acids and bases per 100-Calorie portion of all common food articles is shown in a table at the back of this book [p. 561-75]... In the writer's opinion it is distinctly preferable that the balance fall on the basic side. If an excess of acid-forming elements be permitted, it would seem that the excess should not exceed 25 units (the equivalent of 25 cc. of normal acid) per man per day... Since meat and eggs show a distinct excess of acid-forming elements, while in vegetables and fruits the base-forming elements predominate, it follows that the greater the amount of meat, fish, and eggs eaten the more important it is that fruits and vegetables be used liberally." In the 15-page table referred to above, the last column shows the "balance of acid-forming and base-forming elements contained in the 100-calorie portion." This subject is also

discussed on pages 20, 139, and 204. Soy is not mentioned.

In the long chapter on edible fats and oils (p. 366-96), soybean oil is not mentioned. However oils from peanut, sesame seed, poppyseed, coconut, rapeseed, sunflower, and maize are among the “other edible oils” discussed.

Another long chapter titled “Food adjuncts” (p. 448-77; the German word is *Genussmittel*) includes: Salt, spices, flavoring extracts, tea, coffee, and cocoa, alcoholic beverages, and vinegar.

Also discusses: Almonds (p. 334, 338, 562). Lard substitutes (p. 387-88). Oleomargarine (p. 378-82). Peanuts, peanut butter, and peanut oil (p. 221, 329, 340, 345, 571). Sesame oil (p. 11, 386, 590). Vegetable fats as butter substitutes (p. 382-83). Vitamines [vitamins] (p. 22, 75, 199, 267, 356). Address: Prof. of Food Chemistry, Columbia Univ. [New York City].

2986. Terry, Thomas Philip. 1914. *Terry's Japanese empire: Including Korea and Formosa, with chapters on Manchuria...* A guidebook for travelers. Boston and New York: Houghton Mifflin Co.; London: Constable & Co., Ltd.; Tokyo: Kyo-Bun-Kwan, Ginza, Shichome. cclxxxiii + 799 p. See p. 515. Maps. Index. 16 cm. [75 ref]

• **Summary:** This guidebook, after its 283-page introduction, is organized geographically into: 1. Central Japan. 2. Northern Japan. 3. Yezo, the Kuriles, and Saghalien. 4. Western Japan. 5. Kyushu and the Loochoo and Goto islands. 6. Korea, Manchuria, and the Trans-Siberian Railway. 7. Formosa (Taiwan) and the Pescadores. Abbreviations (p. ix). List of maps (13).

In the Introduction: Japanese inns (p. xxxvi, xxxix-xl): The best food is not always to be had in the most pretentious places. In certain modest inns, where the rooms are as bare as a monk's cell, and the general appearance of austerity might argue a strict economy, there will often come, as an agreeable surprise, dainty food served in dishes that delight the lover of beautiful porcelain or lacquer. Later the traveler may learn that the place enjoys fame for some savory specialty—eels boiled in soy, broiled crayfish, stewed octopus, buckwheat-macaroni, or the like.”

“Food is served in the guest's room on a lacquered tray... One of the soups may be made of... lobster, or seaweed, in which case it is amazingly thin and unpalatable; the other of beans [miso], bean curd or something of that nature. Salt is not provided unless asked for. Many of the dishes are cooked in soy; a tiny dish of which is supplied for dipping bits into before eating them.”

Japanese food (p. xliii-xlvii): “Rice is a luxury with thousands of the peasants; it takes the place of bread with the well-conditioned; and wherever it is eaten to the exclusion of other foods it produces (because the thin phosphorous skin is polished off it) the prevalent beriberi. The proportion of animal food is small. Beans eaten in a variety of ways occupy a conspicuous place in the food of all classes and

they supply the nitrogenous matter essential to those who rarely eat meat and who do not get the casein obtained by cheese-eating peoples. The soy-bean (*daizu*; *omame*) ranks first in extent, variety of use, and value among the pulse of Japan, and in point of nutriment is quite near to meat. It contains nearly two fifths of its weight in legumin, nearly one sixth in fat, and is rich in nitrogen. It is to the Nipponese what frijoles are to Mexicans and garbanzos (chick-peas) to Spaniards. Of the numerous varieties some are made into curd [tofu], and into the widely celebrated bean-sauce (the Worcestershire of Asia) called shoyu (sho, soy; yu, oil), and which is almost as indispensable as rice. It forms the daily relish of the rich man and the beggar, and is in as general use as tea and tobacco.”

Fish (sakana)... Teriyaki: Fish in a sauce of soy, mirin, and sugar... Sashimi: raw fish cut in thin slices and eaten after being dipped in shoyu.—Kabayaki: fish which is first steamed then dipped into soy and roasted (or eels cut open on the dorsal line, covered with soy mixed with sugar, and roasted). The latter dish, usually called Unagi-no-kabayaki, is a favorite with the Japanese,....”

“Rice:... Azuki-meshi: rice and red pea-beans mixed (boiled).—Mochi: small dough-cakes made of rice and sold throughout Japan.—Sushi: a general name for food of boiled rice and fish, eggs, vegetables, etc., seasoned with vinegar and soy...—Inari-zushi: fried tofu stuffed with chirashi-zushi.

Note: This is the earliest English-language document seen (April 2013) that contains the term *Inari-zushi*.

- Maki-zushi: boiled rice and other vegetables rolled and wrapped in a sheet of the sea weed called Asakusa-nori...—Kombu-zushi: fish seasoned with vinegar and wrapped in a piece of the edible seaweed known as *Laminaria japonica*. A differentiation of this popular food is the Kombumaki: baked or roasted fish wrapped in kombu, then tied, and boiled in sugar and soy.

Various:... Tsukudani: small fish boiled in soy and used as a relish or condiment (named for Tsukudajima, a place in Tokyo famous for its preparation).—Oden: a stew (greatly enjoyed by the proletariat) of fried bean-curd, lotus-roots, potatoes, etc.” Ame and midzu ame.

“Soup (shiru): Tōfu-jiru: bean-curd soup.—Miso-shiru: bean-soup with vegetables.”

Railways—Dining cars (p. lxxxiv): Discusses “The unique and not unpalatable bento,—a sort of national sandwich,—put up (usually cold) in thin, flat, twin boxes (bento-bako) of dainty white wood (1 in. high, 5-7 in. long), along with a paper napkin (kuchifuki) and a pair of chopsticks (hashi), and sold at many stations, is distinctively Japanese and widely popular... Besides the full box of plain boiled rice, the ordinary (15 sen) bento contains usually... a few boiled black beans (nimame)... seaweed (kobu)...” Rice cakes (mochi) with the kernel of yokan, or sweet [azuki] bean paste, which usually forms their center.

Buddhism (cxc): Again the rice-flour cake [mochi] is

offered at the domestic altar. It now takes the form of a lotus-petal with capsule of [azuki] bean-paste.” (an).

Yokohama (p. 13): “The return gifts from the emperor and princes included...jars of soy [sauce]; coral and silver ornaments;...”

Tokyo (p. 199): “The hill beyond the intersecting roadway is called Suribachi-yama because of the similarity in shape to a suribachi—an earthenware vessel in which bean-soup [miso soup] is prepared.”

Nikko—Shops: “... the kuri-yokan (so-called from the chestnuts mixed with the sweetened bean-paste [azuki]) is good and cheap (10 sen).”

Kyoto—The Shinto Shrine of Inari. There are many local festivals, the most important of which is the Inari-matsuri which usually falls on June 5. There are trick riders on horseback and decorated sacred cars [carts] are “placed in the procession, and the day is devoted to general jollity—and pocket-picking. On this occasion the people eat Inari-zushi, or fried tofu stuffed with boiled rice, since tofu [fried, as aburage] is the favorite food of the fox popularly believed to be the messenger of Inari (and by extension, the God of Rice).”

Kyoto—Miidera (p. 504-05): Travelers visit Benkei’s Iron Pot (*Benkei-no-shiru nabe*), a very old, rusted, and broken contraption (about 5 ft. wide and 3 deep) resembling a soap-boiler, and from which Yoshitsune’s devoted servitor (and popular hero) is supposed to have eaten his bean-soup [miso soup]—which may well be doubted.”

Kyôto to Kôya-San (p. 515): For the Western traveler there is “a tiny kitchen, a blessed refuge wherein, if he is making a prolonged stay, he may cook his un-Christian food without the vegetarian priests knowing (or caring) that such a sacrilege is being committed! Meals are served in one’s apartment; the food is purely vegetable, and after the second day distressfully unpalatable. Fish, flesh, fowl, butter, cheese, eggs, milk, bread, coffee, and other necessities of life are absent, and are replaced by seaweed, greens, bamboo-shoots, cabbage, daikon in various unappetizing forms, and other garden-truck which one eats as a novelty the first meal and rejects with an involuntary tightening of the throat when it is offered at the second and third. In addition there are flabby mushrooms boiled in very thin water without seasoning; the omnipresent boiled rice without sugar, milk, or salt; a bean-curd (*tofu*) for which one acquires a liking only after much patient effort; a yellow substance (known as *yuba*) made of the skin of bean-curd, and looking and tasting like thin sheet rubber;...”

Kobe excursion—The Tansan Hotel (p. 630): The strawberries and other ground fruits and vegetables, which grow nearly all the time in this favored spot, are enriched with [soy] bean-cake only [no human excrement is used] (as a precaution against typhoid).”

Korea (p. 725): “Among the dishes dear to the native heart are pounded capsicum, bean curd [tofu], various

sauses of abominable odors, a species of sour kraut (kimshi [kimchi]), seaweed, salt fish, and salted seaweed fried in batter.”

Manchuria and the Trans-Siberian Railway (p. 756): “Considerable [soy] bean-cake and furs, and vast quantities of lumber, etc., come down the river from upper Manchuria and Siberia.”

Also discusses edible seaweed (p. xliv, 330): Japanese food: “Seaweed in almost endless variety enters largely into foodstuffs. Not only are the giants of the marine flora taken up and utilized in various ways, but also the more delicate red and green sorts—the use of which has been adopted by other nations. Most of the edible green and red algae bear the generic term *nori*, while the words *umi-kusa*, or *kai-so* (which also means *bêche-de-mer*), are used for algae in general. Many of the weeds are eaten fresh, others in soup. Some are dried or pickled and eaten in vinegar. They usually appear in commerce in the form of little packages, to the sale of which special stores are dedicated. Certain varieties are converted into jelly.”

Yezo—fisheries: “Certain of the many varieties of edible seaweed which flourish along the Japanese coast are found in Yezo, particularly the circumpolar tangle (*Laminaria*) and seawracks (*Fucus* species), which prefer cold water and a heavy surf. For this reason sea-algae add considerably to the value of the Yezo exports.”

Note: The author resided for almost 12 years in Japan and made repeated journeys on foot (and otherwise) from one end of the country to the other. Address: F.R.G.S. [Fellow of the Royal Geographical Society, England].

2987. Semple, Dugald. 1914?. Simple life recipes, with hints on diet. London: C.W. Daniel, Ltd. 22 p. Undated. 19 cm.

• **Summary:** A vegetarian cookbook, with recipes compiled by Cathie Semple. On the back cover is a full-page ad for vegetarian products made by Mapleton’s Nut Food Co. Ltd., Garston, Liverpool.

2988. *Literary Digest*. 1915. Does meat injure athletes? 50(7):312-13. Feb. 13. [1 ref]

• **Summary:** “Doctors disagree on this point, it appears.” Several issues of *The Harvard Alumni Bulletin* (Cambridge, Massachusetts) have discussed the possible relationship between the prevalence of appendicitis among football players and the large amount of meat in their diets. Dr. Harvey Wiley, founder of the FDA, writes an interesting letter in the December 16 issue of the *Bulletin*: “I have long been of the opinion that a diet in which meat predominated is not the best for athletes nor for hard physical work of any kind. The foods that supply heat and energy, and those are the kinds the athlete needs, are fats and carbohydrates. These are well represented in cereals with which butter or rich milk is served. The emergency ration of the marching soldier contains quantities of crystallized lump sugar...”

“An ideal diet for an athlete is plenty of bread or cereal made of whole wheat-flour, whole Indian corn, whole rye, or whole oats... The meat part of the diet should be cut down to a very small percentage. I would not advocate eliminating it altogether. Coffee and tea should not be used; tobacco should be abandoned; no alcohol should be allowed.” Address: New York.

2989. *Good Health (Battle Creek, Michigan)*. 1915. Vegetable protein not inferior to animal protein. 50(2):92-93 + 10a of advertising section. Feb.

• **Summary:** “For many years a stock argument against the non-flesh dietary has been the claim that animal protein is much more readily and completely assimilated than vegetable protein. At best this argument would be only a matter of economy and would amount to nothing, since the cost of vegetable protein is not more than one-fifth to one-tenth the cost of animal protein, so that one could easily afford to lose five to ten per cent of the raw material while making a saving of three hundred to four hundred per cent in cost.

“But a review of the supposed experiments of comparative indigestibility of protein has shown that there is no real foundation for the claim that vegetable proteins are less digestible than animal proteins. In the earlier experiments it was observed that when a large amount of protein of the diet was derived from peas or beans, only three-fourths to four-fifths of the protein was assimilated, whereas in the case of animal proteins in the form of eggs or meat eighty-eight to ninety per cent was assimilated.

“Experiments made by an eminent Japanese physiologist with the pure protein of the soy bean have shown it to be digestible to the extent of ninety-six per cent, a degree of digestibility fully equal to that of any animal protein. It appears that the only reason why animal proteins have seemed to be more digestible than vegetable protein has been the fact that vegetable proteins are combined with various substances, especially cellulose, which is indigestible, so that digestion is hindered.

“These experiments have been repeated in this country by Doctor Mendel of the Yale University laboratory [Connecticut] and with practically identical results. Doctor Mendel does not hesitate to state that vegetable proteins are equally as digestible as animal proteins.”

2990. Benedict, Francis G.; Roth, Paul. 1915. The metabolism of vegetarians as compared with the metabolism of non-vegetarians of like weight and height (Open Access). *J. of Biological Chemistry* 20(3):231-41. March. [2 ref]

• **Summary:** “Perhaps no special dietetic regime is more successful in attracting adherents and holding them than is that of vegetarianism. While the modern conception of the word ‘vegetarianism’ is by no means as strictly applied to the exclusive use of vegetables as was formerly the case, and we

have at the present time the lacto-vegetarians and the ovo-vegetarians, nevertheless there are a considerable number of individuals who regularly confine themselves to a strictly vegetarian diet.”

“This adherence to a vegetarian diet may be due to any one of several causes. First, to environment, heredity, training, or the habit of the household and parents; second, to a religious belief, in which the use of flesh for food is proscribed; third, as the result of some dietetic alteration incidental to the treatment of disease and a subsequent adherence to the vegetarian diet; or finally, for physiologic or biologic reasons, in the belief that a non-flesh dietary is the natural or physiologic diet for human beings as well as other primates.

“In the discussion of the supposed benefits of vegetarianism, considerable stress has been laid upon the remarkable endurance (see Fisher 1907; Iotekyo and Kipiani 1906) apparently shown by vegetarians over flesh eaters, the statements being made that the vegetarians live upon a distinctly lower metabolic plane, are not so highly stimulated as the flesh eaters, have a lower blood pressure, and, in general, that the metabolic activities are on a lower level.”

It is not difficult “to measure the metabolic plane by studying the respiratory exchange. Thanks to the kindness and interest of Dr. J.H. Kellogg of the Battle Creek Sanitarium, Michigan, we are enabled to make a series of observations on both men and women vegetarian subjects, all of whom may be definitely classified as normal individuals. The greater number of these subjects were members of the staff of the Sanitarium. These individuals [11 men and 11 women] had been meat abstainers for varying lengths of time, the periods stated in the list given below.”

This experiment showed that there appears to be little, if any, difference between the basal-metabolic rates of vegetarians and non-vegetarians.

Note 1. This is the earliest English-language document seen (March 2022) that uses the term “lacto-vegetarians” (or “lacto-vegetarian”) to refer to vegetarians whose diet includes milk and dairy products, but does not include eggs.

Note 2. This is the earliest English-language document seen (March 2022) that uses the term “ovo-vegetarians” (or “ovo-vegetarian”) to refer to vegetarians whose diet includes eggs, but does not include milk or dairy products. Address: From the Nutrition Lab. of the Carnegie Institution of Washington [DC], Boston, and the Battle Creek Sanitarium, Battle Creek, Michigan.

2991. Cooper, Lenna F. 1915. The cost of foods in non-meat dietaries. *J. of Home Economics* 7(3):137-41. March.

• **Summary:** “The fact that meat is one of the most expensive articles of diet is illustrated by a comparison of the costs of a mixed diet and of a non-meat diet. The cost of foods given here are from the non-meat dietary in use at the Battle Creek Sanitarium.” The cost of foods in the guests’ dining room for

the year 1912 amounted to 67.8 cents per capita per day. A copy of one day's menu is shown in order to give an idea of the variety of food in the guests' dining hall. Breakfast foods include: Scotch bran borse. Gluten gruel. Boiled protose. Scrambled eggs. Whole wheat bread. Entire graham bread. Toasted rice biscuit. Toasted granose (wheat) biscuit. Bran biscuit. Nut butter. Palm butter. Malt honey. Malt sugar. Yogurt buttermilk. Sanitas cocoa. Hot malted nuts [peanut milk]. Minute brew [coffee substitute] with sugar and cream. Kaffir tea. Dinner (afternoon meal) entrées include: Nut fillets. Nuttolene with piquant sauce. Supper (evening meal) includes many of the same foods served for breakfast.

In 1914 the total number of guest days at the Sanitarium was 115,590. The cost of vegetarian food for this same period was \$67,866. Address: Head Dietitian, Battle Creek Sanitarium, Michigan.

2992. *Scientific American*. 1915. An investigation of vegetarianism. 112(17):384. April 24.

• **Summary:** A brief account of two experiments comparing vegetarians and meat-eaters. No significant difference was found in the metabolism or endurance between the two groups. Address: USA.

2993. Schieber, W. 1915. Die Sojabohne und deren volkswirtschaftliche Bedeutung als Nahrungsmittel [The soybean and its economic significance as a food]. *Seifensieder-Zeitung* 42(22):471-72. June 2. (Chem. Abst. 10:1558). [Ger]

• **Summary:** Descriptions and nutritional analyses are given of a number of different food products prepared from the unfermented and the fermented soy bean. Unfermented: soya milk, tofu (*Sojakäse*), soy flour ("because of its composition it can be recommended as a first class food for diabetics and vegetarians"), soya bread, soya confections (resembling marzipan), soya chocolate, soya coffee, soy grits, whole dry soybeans, and soy sprouts ([*Soja*] *Schoten, Bohnen, und Keime*). Fermented: Solid seasonings such as Japanese natto, pastes such as Japanese miso, sauces (in Japan each year 10,000 factories make 700 million liters of soy sauce), a new German fermented soyfood product is made by a secret process; it contains 45% protein, 6% nutritional salts, and about 2% lecithin.

Note. This is the earliest German-language document seen (Jan. 2013) that uses the term [*Soja*] *Keime* to refer to soy sprouts. Address: Dr.

2994. Eddington, Jane. 1915. The Tribune Cook Book: Reviewing cook books. *Chicago Daily Tribune*. July 5. p. 14. • **Summary:** "Several requests have recently been made for the names of books of vegetarian recipes."

"I give first place to 'The New Cookery.' by Lenna Frances Cooper, because Miss Cooper has not only had a more thorough training but also a far wider practical

experience than any others who have made vegetarian cook books, in all probability, and has done a great deal of work in connection with the school of which she is head."

2995. *American Food Journal*. 1915. Some favorite foods of Japan. 10(8):346-47. Aug.

• **Summary:** "Rice is the staple food of the Japanese, and it holds as important a place in the meal as bread does in western countries."

"Soy, a sauce made from soya beans, has an important place in Japanese meals. This sauce is exported to England in large quantities and is used there as the basis for the well-known Worcestershire sauce. Soy sauce, which is somewhat similar to the Worcestershire sauce, is an invariable side dish at every meal and nearly every article eaten is first dipped into the small bowl of soy placed on every meal tray."

"'Miso' soup forms an important dish at breakfast. This consists of strips of radishes, seaweed, eggplant, or other vegetables cooked with bean curd [tofu] and water. The cooking is not continued for a long period and so few vegetables are used that the soup partakes only slightly of the flavor of the ingredients."

"The usual Japanese breakfast consists of rice, miso soup, pickles, and occasionally fish. Tea is always served with meals and is drunk clear without sugar or cream. The Japanese pride themselves upon their quickness at meals, there being a Japanese proverb that places quickness at meals as an accomplishment equal to fleetness of foot."

"The midday meal consists of a vegetable or fish soup, some boiled vegetables, and generally fish, either dried or cured, such as herring, sardines, or mackerel. However, where fish can be obtained fresh and there are not many points in Japan where this is not the case, it is served raw in slices, which are dipped into the soy sauce before being eaten and are greatly relished by the Japanese. Rice, pickles, and tea, of course, are served at this meal, as they are at all meals. The evening meal does not differ greatly from the midday meal except in the variety of fish or vegetables."

"Seaweeds are also in great demand and when dried are eaten like wafers or dipped, in soy sauce." "The larger prawns, called "ebi," are roasted or fried and dipped in soy." "Such game as the crane, swan (*hakucho* = white + bird), heron, wild goose, duck, pheasant, quail, pigeon, woodcock, snipe, lark, water rail, and even the sparrow are occasionally eaten, although the old Buddhist objection to taking a life still persists in some sections of the country."

2996. Berdsley's (J.W.) Sons. 1915. Vegex (Vegetable extract) (Ad). *Naturopath and Herald of Health (The)* (New York City) 20(10):Unnumbered page. Oct.

• **Summary:** "Vegex is an entirely vegetable product without any artificial coloring or preservatives, yet it will keep indefinitely. Vegex is sold in paste form in convenient screw-top jars, as follows:" It comes in 4 sizes, from 1 oz to 8 oz.

Eastern prices are lower than southern or western prices.
Address: 690-94 Frelinghuysen Ave., Newark, New Jersey.

2997. Cooper, Lenna F. 1915. Better than turkey. *Good Health (Battle Creek, Michigan)* 50(11):506-08. Nov.

• **Summary:** "Can you think of any reason why people should cling to the turkey dinner if a better dinner can be prepared without fowl and its fixings? We look for better ways of doing many other things, and we can well afford to experiment a little with a meatless meal—indeed, it is not an experiment, for it is being done in thousands of American homes, and always with success. Each dish on the following menu, for example, has been tried and tested very thoroughly, and has been found to be nutritious and also tasteful. Try it this Thanksgiving, and write me if it was not pronounced a success by those who sat at your board:

"Menu: Tomato Bisque. Celery. Mock Turkey. Radishes. Baked Potato. Cranberry Sherbet. Mashed Hubbard Squash. Beet Salad. Graham Bread. Cottage Cheese Sandwiches. Pumpkin Pie. Sanitarium Mince Pie. Apple Juice. Nuts."

A recipe is then given for each dish. Address: Head Dietitian, Battle Creek Sanitarium, [Battle Creek, Michigan].

2998. Cooper, Lenna F. 1915. The new dietetics. *Good Health (Battle Creek, Michigan)* 50(12):535-36. Dec.

• **Summary:** "It is both interesting and encouraging to look back over a half century's progress in cookery and dietetics. One of the most striking features is the taking away from the home, and commercializing, much of the cooking. The market is flooded with breakfast foods, excellently well cooked, which save the housewife hours of early rising to properly prepare the breakfast cereal. Most of the bread and crackers, and to some extent cakes and pastry, now come from the bake-shop. Much of our winter's supply of fruits and vegetables comes from the canning factory.

"The present-day commercial methods of preparing these foodstuffs are usually equal to, or even excel, the home methods, because of better facilities and specialized processes, which are usually the result of years of study and experimentation.

"Another indication of progress are the improved methods of preservation and transportation of foods. Fifty years ago, almost the only methods of preserving were drying, salting, or preservation by the use of large quantities of sugar, the latter method being less commonly used on account of the high price of sugar.

"Now, cold storage makes possible the utilization of many foodstuffs weeks and sometimes months after they would have perished otherwise.

"The canning industry has come to be one of the chief means by which food is preserved. Foods were first thus preserved for the French navy, but it was many years before the method was in common use, because of the fact that glass was the only container used and glass at that time was

prohibitive in price. In 1823, the tin container was invented. Since then the method has grown in popularity.

"The tin container undoubtedly is not the ideal container, though much of the prejudice against it is unwarranted. Very little, if any, tin salts are found in the more common vegetables—peas, beans, corn and tomatoes—when preserved in tin containers, but some of the less commonly used vegetables, such as pumpkin and squash, sometimes contain objectionable amounts. We are again reverting to the use of the glass jar, however, since its lowered price permits of its use.

"As the canning industry increased and competition became strong, the temptation to add preservatives that diminished work and losses from spoiling, and coloring matter to improve appearance, became too strong to resist until public opinion crystallized into laws which now forbid their use. The fight against adulterated foods has been one of the triumphs in the field of dietetics.

"A half century ago it was almost impossible to obtain fresh fruits (except apples) or green vegetables during the winter months. Now, thanks to improved facilities for rapid transportation, we have oranges, grapefruit, lemons, and bananas through the winter months, with pineapples and grapes of various kinds for a considerable portion of the winter, to say nothing of the rarer tropical and semi-tropical fruits which infrequently appear upon our markets.

"Hothouses now supply us with lettuce, radishes, cucumbers, spinach and other green vegetables. The demand for these fresh foods has undoubtedly come about as a result of a natural craving, not only for important mineral constituents but also for other essential compounds which we now know as 'vitamines,' and which are especially abundant in this class of foods.

"Still another indication of progress is the better care of foodstuffs. Since the germ theory has come to be more fully comprehended, we realize that dirt and filth are almost synonymous with germs, and we are demanding that the places where foodstuffs are prepared, stored, or dispensed shall be as free from them as possible. Hence our food stores, bake shops, markets, etc., are being inspected, and the result is cleaner methods of handling such commodities. The sealed package, the enclosed show case, the removal of bakeries from basements to well-ventilated and well-lighted apartments, are results of the war waged against germs. Certified and pasteurized milk, which have been the means of reducing the death rate of infants by thousands, are also results of the campaign against germs and dirt.

"Almost from time immemorial there have been sages who have advocated a simple diet, but it is only within comparatively recent-years that people generally have come to realize that the choice of foods is one of the great factors in producing health or ill health, efficiency or inefficiency. The great advances made in physiology, chemistry and bacteriology are chiefly responsible for the change in public

opinion.

“Sylvester Graham, who gave his name to unbolted or graham flour, was probably the first man in America to create any public sentiment in favor of proper food selection. He not only believed that wheat, when ground into flour, should be used entire, but also advocated a meatless dietary. He wrote numerous articles and books, and gained many followers among whom were a goodly number at Brook Farm. His ideas appealed to many thinking people, but it is only within recent years that scientific evidence has come to verify his belief.

“Professor Sherman, of Columbia University, has shown that graham flour is much preferable to fine white flour, as is also all whole cereal preparations over those in which the bran is excluded.

“Chittenden’s experiments, conducted at Yale University [in Connecticut] for a long period of time and on a number of men, demonstrated conclusively for the first time, that less meat—or no meat—is much more conducive to health and efficiency than the ordinary ‘high protein’ diet in which meat plays an important part. Since these experiments, many others have also been made which also throw light upon the ‘low protein’ idea.

“Indeed, the trend of science and public opinion is toward simple, natural, well-selected foodstuffs, clean and unadulterated. And this constitutes the New Dietetics.”

On the cover we read in large letters: “With this number *Good Health* completes its fiftieth year.” Address: Director, School of Home Economics [Battle Creek Sanitarium, Battle Creek, Michigan].

2999. Anderson, Hans Steele. 1915. Food and cookery: Hand book for teachers and pupils for use in cooking classes and demonstrations. 3rd revised ed. Loma Linda, California: The College Press. 127 p. 18 cm. *

• **Summary:** The author was born in 1877.

3000. Arnold Ehret saves the life of invalid Fred S. Hirsch in Los Angeles (Important event). 1915.

• **Summary:** The following story is told by Gordon Kennedy (www.arnoldehret.org) based on an interview he conducted with Mr. Hirsch in the spring of 1977 at the Ehret Publishing Co., Beaumont, California.

“In 1915 Fred was 27-years-old and selling fire trucks in San Francisco. He made good money, but had severe health problems. The doctors told him he had a necrosis of the achilles, caused by a serious bone infection affecting both heels. Three different bone specialists claimed his condition was terminal, and they recommended amputation of both feet to prolong his life for a few years.

“A local woman within the German community in San Francisco gave Fred an article from a German newspaper which told about a professor Ehret and his success as a “natural healer.” Fred knew immediately that this was the

man he needed to see. He bought a ticket for Europe, but then someone told him Ehret was living and lecturing in Los Angeles. So off Fred went to L.A.

“When Hirsch reached L.A. he learned through the health grapevine that professor Ehret would be speaking at the ‘Fay Building’ the next night.

“Fred’s brother helped him get to Ehret’s lecture, crutches and all, and they ended up with a front row seat. Not surprisingly, the subject of the lecture was ‘The Mucusless Diet Healing System.’ And Fred was all ears. Professor Ehret’s message was pretty straightforward. He believed nature alone is the primary healer, and that ‘the sugar of fruits was the essential material of human food.’ He believed it gave the body the highest efficiency and endurance, and at the same time was the best eliminator of debris and the most efficient healing agent known for the human body.

“‘The baby’s craving is sweet, and proves that fruit sugar is the essence of all dietetics,’ wrote Ehret.

“Ehret felt that ‘What medical science calls normal health is in fact a pathological condition.’

“Ehret’s method of diagnosis, other than observation and smell, was simple: put a person on a two or three days fast and this would help to indicate what and where the trouble is.

“One of Ehret’s most keen observations was that any medicine or drugs a person had ever ingested were never eliminated, but, instead, were stored within the body’s cells for decades. He noted: ‘I saw patients eliminate drugs they had taken 40 years before...’

“So Arnold Ehret was a most unique blend of scientist, bohemian, flower child, punk, artist, gardener, prophet, writer, speaker, explorer, and philosopher. He definitely leaned toward the messianic.

“Hirsch Throws Away His Crutches: Ehret was finishing up his lecture, and had trouble with a few words, while Fred Hirsch, who knew some German helped him by speaking them out loud.

“When the lecture concluded, Hirsch hopped over to Ehret on his crutches and immediately described his troubles. Ehret looked straight into Fred’s eyes and vowed to help him.

“Fred’s mother and family tried to assist. They would never have let Ehret in the door if the fasting treatment had been disclosed. Each day Fred’s mother prepared three hot cooked meals, which the nurse carried up to Fred. And three times a day every morsel of these meals went into the toilet.

So Hirsch went on “a 30 day fast, supervised by Ehret. Naturally, 30 days later, Fred Hirsch was healed, had no more pain, and no more crutches.

“Thus began Fred’s new life. He became Ehret’s business manager, and their office at 6th and Ceres St. was the headquarters for Ehret’s classes.”

• **Summary:** Prehistoric man in the Eocene period had not yet acquired an appetite for flesh meats, but gathered his staple foodstuffs from the hazel bushes, walnut trees, and various other nut and fruit bushes which covered the river banks and spread far and wide along the valleys and up the mountainsides in that far away, peaceful age when, "there was not any carnivorous creature... or one which might have been a serious enemy."

Note: According to the *Webster's Dictionary* table on "Geologic Time and Formations," the most recent geologic era is the Cenozoic. It is divided into two periods and systems: the Quaternary (the most recent), and the Tertiary (earlier). The Tertiary (which began about 70 million years ago) is divided into five epochs and series. From the most recent to the earliest these are: Pliocene, Miocene, Oligocene, Eocene, and Paleocene. Mankind is thought to have emerged at the end of the Tertiary. Thus humans did not exist in the Eocene. Address: Prof., Oxford Univ., England.

3006. Law of God. An appeal. By a vegetarian. 1915. London: Richard J. James. 102 p. 19 cm. * Address: England.

3007. Lindlahr, Anna; Lindlahr, Henry. 1915. *The nature cure cook book and A B C of natural dietetics*. 1st ed. Chicago, Illinois: The Nature Cure Publishing Co. xii + 469 p. No index. 21 cm. On cover: Nature Cure Series, Vol. II.

• **Summary:** This book is divided into two parts. Part I "Nature Cure Cook Book," is a vegetarian cookbook. Part II is "A B C of natural dietetics." Contents: Part I. Key to our system of recipe marking. Examples of Combination salad, Our health bread, Milk. What constitutes a natural diet. Diet prescriptions made easy for the doctor. A timely warning. Uncooked food vs. cooked food. Cause and cure of beri-beri. Vitamines. Dangers of extreme raw food diet. Raw foods and their medicinal properties. Medicinal vegetables. Simple vegetable salads and dressings. Soups. Salads. Croquettes (baking or roasting is better than frying). Vegetables (the recipe for "Chop Suey (2)," p. 209, calls for 1 can protose. "Add Chinese sauce (Soy) if desired"). Desserts (many recipes use 1 cup sugar). Cereal foods (incl. Graham flour, whole wheat flour, Protose). Dr. Lindlahr's health bread (p. 277-78). Leguminous foods (dangerous because they contain an abundance of "the negative, acid-forming proteid and starchy elements," p. 284). Rice, macaroni, spaghetti. Dairy products ("There is something in animal food which, we cannot secure from purely vegetable food,—and that is the animal (magnetic) life element, or, as we usually call it, the animal magnetism." Dairy products are good, but meat is bad). Eggs (use in moderation; best eaten raw, soft boiled, or poached. "Prolonged boiling or frying coagulates the albumin, making it hard and tough and therefore less digestible"). Sandwiches (incl. "Peanut butter sandwiches"). Beverages. Sample menus.

Part II, titled "A B C of Natural Dietetics," with 13 chapters, is about the benefits of a vegetarian diet and lifestyle. Chapters include: 1. Two sides to every question: Why we favor a vegetarian diet. Why we sometimes deviate from a strictly vegetarian diet. What are the indications of meat requirement? Why vegetarianism will triumph in the future. 2. Is it worth while to pay attention to diet? What is natural food? 3. For what do we eat and drink? Is vital force derived from food, medicines and tonics? "Vital force" active after death in spiritual body. 9. The magnetic properties of foods. 10. Polarity of foods and medicines. 11. Classification of foods according to the electro-magnetic qualities (animal foods are positive, legumes are very negative).

"This cookbook is based on the system of dietetics originated by the German School of Nature Cure. Drs. Lahmann, Hensel and others found a solution to the problem of scientific food selection which stands every test of theoretical inquiry and of practical application." "We have divided all food materials into the following five groups: Group I (St.) Starches. Group II (S.) Sugars, dextrine. Group III (F.) Fats, oils. Group IV (P.) Proteins, albumin, gluten, myosin, hemoglobin, etc. Group V (M.) Positive mineral elements: Potassium, sodium, iron, lime, magnesium,

manganese, lithium, etc.” (p. 5)

“Every recipe in this cook book, underneath its title, will be marked in such a way as to show the various food elements which it contains, in the order of their amount and importance.”

A natural diet “must conform in its component elements to the chemical composition of milk or red (arterial) blood.” Thus half of the food materials must be of Group V (Mineral Elements) and half from groups I through IV (p. 6).

“A timely warning:... Do not become finical or hypochondriacal over this matter of food selection and combination” (p. 9). The authors generally recommend uncooked or raw food—but not exclusively. “Nature did not create man with a cookstove by his side. Man existed on this planet for ages before he knew how to start a fire...” (p. 11).

“A mixed cooked and raw food diet, with liberal allowances of the dairy products, seems to agree best with the majority of our friends” [patients]. “We recommend, and serve in our Sanitarium regimen, one meal daily consisting of raw foods only. All the juicy fruits and vegetables that can be relished and digested in the natural state are not only excellent foods, but the best medicines for the human body” (p. 16-17).

Gluten flour and Protose are discussed on p. 272-733.

The red blood [in the arteries] carries into the body the various nutrients, and comes back laden with poisonous gases, broken down cell material, and devitalized food products (wastes). This debris is carried in the venous blood to the various organs of depuration and excreted in the form of feces, urine, mucus, perspiration, etc... The meat-eater, therefore, has to eliminate, in addition to his own morbid waste products those of the animal carcass” (p. 339). “The American suffers from uric acid and phosphoric acid poisoning...” (p. 347).

“What is natural food? We have endeavored to define this term as follows: “Natural” for animal and man is that food which appeals to the senses of sight, taste and smell in the natural condition, as it comes from Nature’s hands.’ Any food which needs disguising by cooking, spicing, pickling, etc. is not ‘natural’” (p. 359).

On the last pages of this book are five ads: (1) Nature cure by mail, from The Lindlahr Nature Cure Institutes, Inc., Chicago. (2) Lindlahr College of Nature Cure and Osteopathy (3 year course; also Nurses’ training course, six months’ condensed course, and quiz courses for State Board Health Exams), same address. (3) The Lindlahr Nature Cure Institutes, Inc.—one in Chicago and one in the country—the beautiful Elmhurst Health Resort, a 40-minute ride by Electric car from Chicago’s center. Two full page photos (on unnumbered pages near rear of book) show the sanitarium in Chicago and the resort at Elmhurst. “Some of our healing factors: Pure food diet, water cure treatment, open-air, light and air baths, massage, osteopathic and magnetic treatments, mud baths for rheumatism, corrective

gymnastics and breathing exercises, mental therapeutics and normal suggestion (on a common-sense, scientific basis), scientific relaxation, homeopathic and simple non-poisonous herb remedies, diagnosis from the eye [iridology]. (4) Carqué Pure Food Co., Inc., 1603 So. Magnolia Ave., Los Angeles, California. “From California’s sunkissed orchards direct to your table... Black mission figs, Unsulphured white figs, Unsulphured calimyrna figs, Large prunes, Muscatel cluster raisins, Unsulphured apricots, Assorted dried fruits.” 10 pounds for \$1.50 to \$2.00 postpaid. Also nuts, olive oils, honey, unfermented grape juice, and books on hygiene and dietetics. (5) *Iridology: The diagnosis from the [iris of the] eye*, a book by Henry Lindlahr. 156 pages, 70 illustrations.

Henry Lindlahr was a physician (M.D.) who lived 1862-1924. The eleventh edition of this book was published in 1918 in Chicago by the same publisher. The 15th edition, published in 1922 in Chicago by the Lindlahr Publishing Co., was titled *The Lindlahr Vegetarian Cook Book and A B C of Natural Dietetics*. The 18th edition (535 pages) was published in 1926 with the same title and publisher. Address: 1. Mrs.; 2. M.D. Both: The Lindlahr Nature Cure Institutes, Inc., 525-29 Ashland Blvd., Chicago, Illinois.

• **Summary:** Benedict Lust’s School of Diets. Kneipp-Naturopathic Health Resort “Yungborn” and American School of Naturopathy.

3009. Lust, Benedict; Lust, Louise. 1915. Everything is attainable through training of thought. Butler, New Jersey: Benedict Lust. N.D., M.D. 16 p. 16 cm. Naturopathic Pamphlet Series No. 24. *

• **Summary:** Benedict Lust’s School of Diets. Kneipp-Naturopathic Health Resort “Yungborn” and American School of Naturopathy.

3010. Peel, Henry N. 1915. Symbioses: Science of natural food. Minneapolis? 32 p. 22 cm. *

3011. Roper, Dora Cathrine Cristine (Liebel) (Mrs.). 1915. Vegetarian supplement to Scientific Feeding. Oakland, California: Buckner Printing Co., printers. 158 p. Index. 19 cm.

• **Summary:** The Introduction begins: “This book has been prepared to meet the needs of a constantly increasing number who for various reasons have adopted a vegetarian or near vegetarian diet.” Discusses hygienic food preparations and combinations, stressing exercise and raw foods. Contains menus and recipes. Note: *Scientific Feeding* is another book by the same author, with editions published in 1914 and 1915 in Oakland, California. The author was born in 1873. Address: D.O.

3012. Sears, Clara Endicott. ed. 1915. Bronson Alcott's Fruitlands with "Transcendental Wild Oats" by Louisa May Alcott. Boston, New York: Houghton Mifflin Company. xvii + 185 p. Illust. 20 cm. First edition 1915. *

• **Summary:** Sears was born in 1863.

3013. Senn, Charles Herman. 1915. Meals without meat; or, Meatless fare cookery. London: Food & Cookery Publishing Co. 138 p. 19 cm. *

• **Summary:** A vegetarian cookbook. The author lived 1862-1934.

3014. Strittmatter, R.E. 1915. Vegetarismo o carnivorismo? [Vegetarianism or carnivorousness?]. Spain: Figueras. 216 p. Portrait. Index. 21 cm. [55 ref. Spa]

• **Summary:** Contents: Part I. Vegetarianism as the foundation of a new life in relationship with the natural, anatomical, historical, biblical, economical, dietetic, hygienic and therapeutic sciences and with the physical and sports culture, and with the ethical, intellectual, moral and religious aspirations.

Part II. Fundamental notions of the principle elements of nutrition. Critique of foods.—Appendix: Three tables of nutritive values of all the foods used currently. Various complete meal plans of mixed and vegetarian regimens. Critical and comparative analysis of the mixed regimen. Bibliography (p. 211-213). Strittmatter is listed as both the author and editor. A photo (frontispiece) facing the title page shows Lionel Strongford, "vegetarian athlete." Address: Figueras, Spain.

3015. White, Alma (Bridwell) (Mrs.). 1915. Why I do not eat meat. Zarephath, New Jersey: The Pentecostal Union (Pillar of Fire). 213 + x p. Portrait. 20 cm.

• **Summary:** Biblical interpretation and personal testimony in support of vegetarian diets. The author, whose full name was Mrs. Mollie Alma (Bridwell) White, was born in 1862. Her Zarephath Academy, a school for both sexes, is located on 233 acres in New Jersey.

3016. Wiley, Harvey Washington. 1915. Not by bread alone: The principles of human nutrition. New York, NY: Hearst's International Library Co. viii + 374 p. Frontispiece (portrait). Index. 21 cm.

• **Summary:** The frontispiece, a portrait photo, shows Harvey Washington Wiley, M.D., lived 1844-1930. The Foreword begins: "In the following pages, an effort has been made to present the principles of man feeding in plain and simple language for the of the non-scientific reader... Simplicity and variety are the keynote the keynotes of this treatise—with a strong tendency to keep our foods as near to Nature as possible." The end of the Foreword is dated Jan. 1916.

Although the author discusses legumes and their many varieties in many places (p. 41, 53-54) the soybean is not mentioned.

The writer prefers "whole ground wheat, especially that ground on an old-fashioned millstone, which reduces the bran to fine particles." He believes this "whole-wheat flour" is preferred for both wholesomeness and nutritive purposes (p. 49, 297). He calls corn "Indian corn" (p. 49). "Unpolished rice, which is the only kind that ought to be eaten,... (p. 52). "Leguminous vegetables, which include green peas, dry peas, fresh string-beans, dry beans, lentils, lima beans, are an excellent source of protein, as are nuts (incl. peanuts, almonds, p. 53-55).

Lesson 12, titled "Fads in nutrition," includes vegetarianism (p. 171, 178). In the subsection titled "Vagaries of food faddists," he notes that they advocate well-known theories such as vegetarianism. "Vegetarianism may have and does have at times broad-minded and deeply learned advocates who are able to present a well-nigh impregnable argument. It has an additional vogue because of the general over-indulgence in meat in many homes (p. 170-71). The writer believes "in the omnivorous nature of man," but asserts repeatedly that Americans eat much too much meat (p. 171, 179) and advocates "little or no meat for children" (p. 179). He also seems to believe (incorrectly) that vegetarians eat on only vegetable products (p. 178).

Most "of the poisonous products formed in the body from the food consumed are derived from the protein of the diet... Many authorities attribute old age and its infirmities to the retention of these poisonous products of protein metabolism, either in the blood or in the alimentary canal" (p. 181). They are sometimes called autotoxins (p. 182). Address: M.D., Director, Bureau of Foods, Sanitation and Health, *Good Housekeeping Magazine*.

3017. Willis, Frederick L.H. 1915. *Alcott memoirs*. Boston, Massachusetts: Richard G. Badger. 108 p. 23 cm. *

• **Summary:** About Bronson Alcott.

3018. Broadbent, Albert. 1915? *Forty vegetarian dinners: 160 recipes. With recipes for seven dinners by the Hon. Mrs. F.J. Bruce*. Manchester, England: Vegetarian Society. 36 p. Undated. 19 cm. *

3019. Carqué, Otto. 1915? *The folly of meat-eating: How to conserve our food supply. A plea for saner living*. Los Angeles, California: Published by the author. 17 p. Illust. 22 cm. Undated. Facsimile edition reprinted in 1970 by Provoker Press. *

• **Summary:** This booklet, originally written in the 1910s, presents economic, ecological, and nutritional arguments for vegetarianism. It is bound together with *Food Preservation and Fruitarianism: The Social and Economic Aspects of the Meatless Diet* by Henry E. Lahn. Address: Los Angeles.

3020. Miles, Eustace Hamilton; Collings, C.H. 1915? *The uric acid fetish (Exposure of a popular theory)*. London: Eustace Miles. 266 p. Undated. Illust. Index. 20 cm.

• **Summary:** This, in Miles' opinion, is the first detailed exposure of the many weaknesses in the uric acid theory set forth by Dr. A. Haig. That theory is now at the peak of its popularity and vogue. Part I is by Eustace Miles. Part II is by C.H. Collings. The 4 appendices include two which discuss purins in foods. Address: M.A., 40 Chandos St., W.C., London, England.

3021. *Herald of Health and Naturopath (New York City)*. 1916-1922/-. Serial/periodical. Published in New York City by Benedict Lust, M.D., of the American Naturopathic Association. This new title starts with Vol. 21, No. 1 (Whole No. 267). Jan. 1916.

• **Summary:** Preceded by *Naturopath and Herald of Health*. The "Herald of Health and Naturopath" and the "Naturopath and Herald of Health" seemed to have been appear cut from the same cloth. These two titles were flip-flopped a few times throughout their history. Here is what the National College of Natural Medicine Library (NCNM, Portland, Oregon), which has the full set, has in their collection:

Naturopath and Herald of Health—1902-1915.

Herald of Health and Naturopath—1916-1922.

Naturopath—1923-1927 (appears to be same publisher as above)

Naturopath and Herald of Health—1935-1944.

Herald of Health and Naturopath—1947-1957.

Kirchfeld & Boyle. 1994. p. 208, 313. This was the official publication of the American Naturopathic Association.

OCLC says: This periodical was published from 1916 to 1922 by Benedict Lust of the American Naturopathic

Association. It started in Jan. 1916, with Vol. 21, No. 1, whole no. 267-. Preceding title: *Naturopath*. Address: New York.

3022. Drew, Mary. 1916. Why need we be poisoned? *Contemporary Review* 109(604):452-61. April. [7 ref]

• **Summary:** The author, an arthritic, attends a lecture (which is reproduced) by Mr. William Aird on the benefits of a raw-food, dairyless vegetarian diet. He describes how our unlucky bodies are the daily receptacles of excessive amounts of poisonous matter, and how cooking robs our food of its natural life. Dr. Josiah Oldfield, "the king of fruitarians" and a surgeon at hospitals in Kent [incl. the Lady Margaret Hospital at Bromley], states that "In two thousand operations treated on the fruitarian principles, he only lost one case in the last ten years. In reply to my question 'How do the fruitarians prosper in your hospital?'—with an incredulous glance at me—'Why, no fruitarian, barring accidents, ever comes into my hospital; all who come are; without exception, meat eaters.'"

After talking with others who derived great health benefits from this fruitarian [vegan] diet, she also discusses its many other benefits, as on the national economy and eliminating the need for most doctors, especially during the present European war.

3023. *Harrisburg Telegraph (Harrisburg, Pennsylvania)*. 1916. Japan honors the great Indian poet. June 29. p. 11.

• **Summary:** "The arrival of the Indian poet, Sir Rabindranath Tagore, in Japan, where he was expected at the end of May, was much looked forward to. A reporter of the Tokio Asahi interviewed him at Singapore on his journey thither. Tagore wore a white robe and looked very dignified with his gray beard, reminding one of an ancient saint. On reaching Japan, his program will begin with calling on friends and acquaintances, Japanese and Indian, including Taikan Yokoyama, the noted painter, who once lived with him in Calcutta, after which he hopes to spend a few quiet days in Kyoto or Nara. Tagore prefers vegetable [vegetarian] diet to meat. On board the *Tosa Maru*, he usually ordered Japanese dishes; miso soup and tofu, he took with rice a la japonnaise."

3024. Kellogg, John Harvey. 1916. Diet as a means of combating acidosis. *American Medicine* 22(6):457-61. June. (Vol. 11 in New Series).

• **Summary:** "The pathological condition known as acidosis has long been known and been the subject of exhaustive researches by physiologists and clinicians, but the great importance of this disorder of metabolism as a factor in a great variety of medical and surgical cases is only just beginning to receive recognition. Many laboratory and clinical studies have demonstrated that the normal functioning of the body cells requires the maintenance of the

reaction balance. The arterial blood must be kept neutral or slightly alkaline.”

“We now know that acidosis plays a dominant role in many conditions in which its presence was formerly not even suspected. The discovery of accurate tests for acidosis... has greatly contributed to the collections of clinical data and the extension of our knowledge.”

Acidosis “results from perverted metabolism. The direct cause of acidosis is the abnormal production in the liver of diacetic and beta-oxybutyric acids as a result of imperfect metabolism of fats and protein.” Discusses the findings of Zellner, M.H. Fischer, Palmer and Henderson, and Lewis and Barkman indicating the a high protein diet is a cause of acidosis. “It is evident, then, that in the treatment of these conditions the protein ration should be reduced to a minimum and carbohydrates provided in abundance. “Malt sugar” is better tolerated than cane sugar.

Concerning fasting: “When deprived of food, an obese person of course finds his chief source of energy in the oxidation of fat. In such a case the situation is practically the same as when a normal person is fed exclusively on fat. The few ounces of glycogen [carbohydrate] stored up in the liver and muscles is soon consumed, so after the first day or so of fasting the obese patient is living almost exclusively on fat and the natural result is a high degree of acidosis. The clinical evidence of acidosis is to be seen in the languor, weakness, lassitude, often headache and sometimes nausea of which these patients often complain when fasting.” If a small amount of carbohydrate, about 50 grams/day, “is given to a patient who is taking a fasting cure for obesity acidosis will disappear.” “The patient will loose flesh less rapidly but will avoid the disagreeable symptoms which tend to discourage him and lead him to abandon the effort. A still more satisfactory plan is to allow the obese patient to eat freely of” green vegetables “and of such fruits as apples, strawberries, oranges, cantaloupe, and watermelons. Such a diet will not only satisfy the craving for food but will also furnish a liberal supply of basic elements to neutralize the acids resulting from the oxidation of fats.”

“In the practical management of the diet of several hundred cases of diabetes the writer and his colleagues have found great advantage in very largely replacing animal proteins by vegetable proteins. It is very surprising how quickly both acidosis and glycosuria disappear on a properly regulated diet in which the protein is reduced to a minimum and animal proteins mostly excluded.”

“Bunge many years ago called attention to the fact that the ordinary diet among civilized nations tends to produce a preponderance of acids in the body. He especially called attention to the fact that flesh foods contain an excess of acids that are not oxidizable in the body... and that a considerable excess of these acids is also found in cereals.

“Sherman of Columbia University, who has made extended studies of this subject in recent years, has

confirmed the observations of Bunge.”

“The injury resulting from this excessive intake of protein is greatly increased by the sedentary habits of a large proportion of the population and especially from a diet deficient in bulk because of the use of fine flour bread and other concentrated foods from which cellulose, an essential intestinal stimulant, is almost wholly lacking.

“Humans are primates and as such are low protein feeders... The alimentary canal is long—ten times that of the length of the body, measuring from the end of the nose to the end of the backbone. The liver is small, one one-fourth as large in proportion to the body weight as in the dog and other carnivorous animals.”

“Modern scientific research is showing more and more clearly that in these departures from primitive conditions of life is to be found the foundation of most of the chronic ills which afflict us.”

Note: This is the earliest English-language document seen (July 2005) that contains the term “acidosis.” Address: AM., M.D., Battle Creek, Michigan.

3025. Allen, Thomas J. 1916. Dietology Department: Is flesh part of man’s natural diet? *Herald of Health and Naturopath (New York City)* 21(7):380-83. July.

• **Summary:** Answer: No. Address: Dr., Eureka Springs, Arkansas.

3026. McCollum, E.V.; Simmonds, N.; Pitz, W. 1916. The vegetarian diet in the light of our present knowledge of nutrition. *American J. of Physiology* 41(3):333-60. Sept. 1. [20 ref]

• **Summary:** The article begins: “The prevalence of pellagra in the United States during recent years, and the accumulation of evidence that it is induced by a faulty diet, chiefly of plant origin, has aroused an interest never before equalled in the question of the adequacy of the strictly vegetarian diet. In the present paper we desire to discuss the vegetarian diet in the light of an extensive experience in feeding restricted diets to several species of animals [especially rats and pigeons].

“Testimony as to the favorable results of human experience with what are purported to be strictly or practically vegetarian diets are so untrustworthy as to merit little confidence, because of the frequent consumption of foods prepared with milk, eggs, and butter, and the use of soups, gravies, etc., which include extracts of foods of animal origin. Practical experience furnishes abundant evidence that cattle, sheep, and other grazing animals grow from a comparatively early age entirely upon food derived from plants.”

Conclusion: “The conscientious adherence to a vegetarian diet by one who has no adequate technical knowledge regarding the subject of diet appears to be fraught with danger since among the foods of vegetable origin,

ordinarily consumed by human beings, several dietary factors are as a rule of an unsatisfactory chemical character. It is certain that all of the components of a successful diet are present in foods of plant origin." Address: Lab. of Agricultural Chemistry, Univ. of Wisconsin [Madison].

3027. American Naturopathic Association. 1916. Universal Naturopathic Directory and Buyers' Guide (Ad). *Herald of Health and Naturopath* (New York City) 21(10-11):Unnumbered page. Oct/Nov.

• **Summary:** This is Vol. 1, for 1917. "Nature cure. Chiropractic. Mechanotherapy. Heliotherapy. Year Book of Drugless Therapy... Price: Paper cover, \$8.00. Cloth bound \$10.00. Copyrighted 1916." Address: Dr. Benedict Lust, 110 East 41st St., New York City.

3028. Keith, M. Helen. 1916. Is vegetarianism based on sound science? Theories and results briefly reviewed. *Scientific American* 82(Supplement 2135):358-59. Dec. 2. Reprinted and condensed in *Literary Digest*. 1917. 54:66-67.

Jan. 13.

• **Summary:** Reviewing animal studies, the author states: "The general conclusion to be drawn from the scientific evidence is, therefore, that the meat-free diet is not as safe as the diet containing meat."

Note: This is the earliest English-language document seen (Nov. 2014) that contains the term "meat-free" (or "meat free").

Address: Asst. in Animal Nutrition, Univ. of Illinois, Illinois.

3029. Piper, C.V.; Morse, W.J. 1916. The soy bean, with special reference to its utilization for oil, cake, and other products. *U.S. Department of Agriculture Bulletin* No. 439. 20 p. Dec. 22. [9 ref]

• **Summary:** Contents: Introduction. Soy beans in Manchuria. Soy beans in Japan. Soy beans in Europe. Soy beans in the United States. Methods of oil extraction. Soy-bean meal as human food. Soy-bean meal as stock feed. Soy-bean meal as fertilizer. Uses of soy-bean oil. Analysis of important varieties of soy beans. Possibility of developing a manufacturing industry with American-grown soy beans.

"Analyses of important varieties of soy beans (p. 16-17):... In determining the range in the oil and protein contents of over 500 varieties grown in the variety tests at Arlington Farm, Virginia, the percentage of oil was found to range from 11.8 to 22.5 [Tokyo had 20.7% and Biloxi had 20.3% oil] and of protein from 31 to 46.9 [Chiquita had 46.9% protein]... At the present time the Mammoth Yellow variety is the most generally grown throughout the South and is the one used in the production of oil. The yellow-seeded varieties, which are most suitable for the production of oil and meal, contain the highest percentage of oil.

"Environment has been found to be a potent factor in the percentage of oil in

the same variety. Considerable differences occur in oil content when soybeans are grown in different localities. The Haberlandt variety grown in Mississippi, North Carolina, Missouri, Virginia, and Ohio gave the following percentages of oil, respectively: 25.4, 22.8, 19.8, 18.3, 17.5; while the Mammoth Yellow variety grown in Alabama, South Carolina, Tennessee, North Carolina, and Virginia gave, respectively, 21.2, 19.6, 19.5, 18.4, and 18.8. Variety tests conducted in various parts of the country indicate a higher percentage of oil with the same variety for southern-grown seed. Similar results have been obtained in Manchuria, the North Manchurian beans showing an oil content of 15 to 17 percent and the South Manchurian beans from 18 to 20 percent."

Photos (both by Frank N. Meyer) show: (1) A fleet of junks carrying soy beans to Newchwang, Manchuria.

(2) Coolies at Newchwang, carrying loads of soy beans from junks to big stacks.

An outline map of the USA (p. 8) shows the area to which the soy bean is especially adapted for growing for oil production. The area of double hatching shows that it is especially well suited to the Deep South. The northern boundary of the area where it is "less certain of profitable production" includes the southern one-third of Ohio, Indiana, and Illinois, and most of Missouri. On the west, the "less certain" area includes the eastern one-third of Nebraska, Oklahoma, and Texas.

Tables show: (1) "Exports of soy beans, bean cake, and bean oil from the principal ports of South Manchuria (Antung, Dairen, Newchwang), 1909 to 1913, inclusive." (2) "Quantity and value of exports of soy beans and soy-bean oil from Japan to foreign countries, 1913 and 1914." The countries are: China, United Kingdom, France, Germany, Belgium, United States, Hawaii, British America, Australia, other countries. (3) "Quantity of imports of soy beans, soy-bean cake, and soy-bean oil from Dairen, Manchuria, into Japan, 1911 to 1914, inclusive. The greatest imports were of soy-bean cake, followed by soy beans, with only small amounts of oil.

(4) "Quantity and value of imports of soy beans, bean cake, and bean oil by European countries, 1912 to 1914, inclusive." The countries are: Austria, Belgium, France, Germany, Italy, Netherlands, Russia, Sweden, United Kingdom. In 1912, the UK imported the most soy beans, while Netherlands imported the most cake and oil. (5) "Quantity and value of imports of soy beans, soy-bean cake (Footnote: Includes bean cake [perhaps fermented tofu or canned regular tofu], or bean stick [probably dried yuba sticks], miso, or similar products, with duty, 40 per cent) and soy-bean oil into the United States, 1910 to 1915, inclusive." The quantity of soy bean imports was greatest in 1915 with 3.837 million lb. The quantity of soy-bean cake imports was greatest in 1913 with 7.005 million lb. The quantity of soy-bean oil imports was greatest in 1911 with 41.106 million lb.

"Prior to 1914 soy beans were not classified separately in the customs returns" (p. 9). (6) "Composition of soy-bean flour in comparison with wheat flour, corn meal, rye flour, Graham flour, and whole-wheat flour."

(7) "Value of a short ton of soy-bean cake and other oil cakes in the principal European countries" (Incl. cottonseed, linseed, peanut {Rufisque}). Countries: Germany, United Kingdom, Netherlands, Denmark, Sweden. (8) "Analyses [nutritional composition] of soy-bean meal and other important oil meals." (Incl. Cottonseed, linseed (old and new processes), peanut (decorticated), sunflower seed). (9) "Fertilizing constituents [nitrogen, ammonia, phosphoric acid, potash] of soy beans, soy-bean meal, and cottonseed meal."

(10) Analyses for protein and oil of important varieties of soy beans grown at Arlington Farm (Virginia), Newark (Delaware), and Agricultural College (Mississippi). The varieties are: Mammoth, Hollybrook, Manchu, Haberlandt, Medium Yellow, Ito San, Chiquita, Tokyo, Lexington, Guelph, Black Eyebrow, Shanghai, Peking, Wilson, Biloxi, Barchet, Virginia. Note 1. "At the present time, the Mammoth Yellow variety is most generally grown throughout the South and is the one used in the production of oil" (p. 16). (11) "Acreage, production, and value per ton of cottonseed in the boll-weevil states." "Since the boll weevil first entered Texas in 1892," it has steadily decreased production of cottonseed. The soy beans offers a good replacement. (12) "Comparative prices per ton of cottonseed and soy beans on the European market, 1911 to 1914, inclusive." Soy beans are usually slightly more expensive.

Note 2. This is the earliest published document seen that contains soy-related photos by Frank. N. Meyer.

Note 3. This is the earliest document seen in which William Morse describes soy milk, or mentions natto, or correctly mentions tofu.

Note 4. This is the earliest document seen (March 2021) that mentions the soybean variety Lexington. Address: 1. Agrostologist in Charge; 2. Scientific Asst. Forage-Crop Investigations, USDA, Washington, DC.

3030. *Good Health (Battle Creek, Michigan)*. 1916. Vegetarian restaurants in Russia. 51(12):670. Dec.

• **Summary:** According to a journal from Stockholm, Sweden, the rise in food prices in Petrograd, Russia [one year before the 1917 revolution] has given great encouragement to vegetarian restaurants. Hundreds of vegetable kitchens have been opened, supplying thousands of meals daily. "Although the prices of the dishes are not remarkably low, long lines of waiting guests throng the larger halls."

3031. Morgan, Sampson. 1916. Fruits for health, strength, and longevity. *Fortnightly Review (The)* (London & New York) 106:145-56. July/Dec.

• **Summary:** Discusses the nutritive advantages of fruits and nuts over meats. The author believes that consumption of fruits (and a fruitarian diet, which includes cereal grains) tends to prolong life, produce electric rather than sluggish action, and retard or cure cancer. A chemical/nutritional analysis of various fresh fruits is given. Also discusses fruit solvents and brain troubles, the coming banana boom, dried fruit analysis, science of nut-eating (they must be chewed thoroughly for good digestion), starch and condensed nutrients ("The use of inflammatory condensed nitrogenous foods like meat must and does produce inflammatory surfeits in men..."), details for the daily diet, fruit industries and the War.

• **Summary:** This is a vegetarian cookbook with a strong Seventh-day Adventist influence. Dedication: "To my mother."

Poem facing the table of contents:

"No flocks that roam the valley free,

"To slaughter I condemn;

"Taught by that Power that pities me,

"I learn to pity them;

"But from the mountain's grassy side,

"A guiltless feast I bring;

"A scrip [small bag] with herbs and fruits supplied,

"And water from the spring!"

- Oliver Goldsmith [1728-1774, Ireland]

Contents: 1. Food values. 2. The art of preparing foods. 3. Beverages. 4. Cereals. 5. Fermented breads. 6. Unfermented breads. 7. Sandwiches. 8. Dairy products. 9. Cream soups. 10. Plain soups. 11. Meat substitutes and entrees. 12. Macaroni and Italian pastes. 13. Eggs. 14. Gravies and sauces. 15. Vegetables. 16. Salads and relishes. 17. Toasts. 18. Fruit desserts. 19. Custards and cold desserts. 20. Frozen desserts. 21. Pastry and pies. 22. Cakes. 23. Cake fillings and frostings. 24. Hot puddings. 25. Sauces for puddings. 26. Canning and preserving. 27. Special dishes for invalids. 28. Balanced menus."

In the Foreword, the author states: "We are indebted to Professor Ivan Pawlow [Pavlov], of Russia, for demonstrating the relation between appetite and digestion." "Many food reformers and faddists have attempted to prepare wholesome foods but have neglected the almost equally important requirement—palatability." "The author wishes to express her indebtedness to Dr. and Mrs. John Harvey Kellogg, of the Battle Creek Sanitarium, who first inspired her with a love for the study of foods and their scientific preparation and who have since been constant sources of help and encouragement. She would also acknowledge her indebtedness to Miss Clara B. Lambert, who for several years was associated with the author and has contributed to this volume both by helpful suggestions and by numerous recipes."

Soy is not mentioned in this Seventh-day Adventist vegetarian cookbook. The following commercial products are mentioned: Minute Brew (cereal coffee [coffee substitute], p. 32). Cereal coffee (p. 33). Kaffir Tea (p. 33). Sanitas Health Koko (p. 33). Yogurt buttermilk (p. 33-34). Sterilized bran (p. 44). Gluten mush (p. 47). Graham bread (p. 54). Bran bread (p. 62). Bran gems (p. 76). Protose (p.

129-35). Gluten flour (p. 136). Nuttolene (p. 138-41). Peanut butter (p. 144-145). Nut chops (p. 144, with peanut butter). Savora (p. 145). Granola (p. 147). Mock turkey (p. 152). Salted almonds (p. 300). Strawberry gelee (p. 306, with Vegetable Gelatin and egg whites). Yogurt ice cream (p. 307). Meltose dressing (p. 361). Hot Malted Nuts (p. 386. Pour 3/4 cup boiling water into ¼ cup dry Malted Nuts, stirring while so doing. Add salt if desired. It is ready to serve at once. Calories in the recipe: 34 from protein, 88 from fat, 61 from carbohydrate. Total 183. Note: Malted Nuts was a dry powder or meal. The resulting beverage was almost certainly a mixture of peanut milk and almond milk). Almond ice (p. 389, with “almond butter”). Gluten bread (p. 390). Gluten puffs (p. 391).

Note 2. This is the first edition of this cookbook with a summary of the number of calories in each recipe (a unique feature), and the relative percentage of protein, fat and carbohydrates contained. There is also a new chapter on food values.

Note 2. This cookbook calls for abundant use of dairy products (milk, cream, butter), eggs, and sugar (up to 2 cups in some recipes).

Note 3. Consider the poem expression compassion by Oliver Goldsmith at the front of this book. This is the first edition of this vegetarian cookbook in which it appears. If Lenna Cooper put it there of her own free will and volition, it seems likely that she was deeply committed to vegetarianism at this time. Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium [Battle Creek, Michigan].

3039. Davis, Herbert Valentine. 1916. The food problem (domestic and national) during and after the war. Manchester, England: The Vegetarian Society. 12 p. Illust. Portrait. 25 cm. *

• **Summary:** Focuses on a vegetarian diet as the solution to the major British food supply problem. “The C.P. Newcombe memorial prize essay competition, read at the annual meeting, October 16th, 1916, at Manchester. Reprinted from the *Vegetarian Messenger and Health Review*, Dec. 1916. vol. 13, no. 12.” The author was born in 1881.

3040. Emerson, John; Loos, Anita. 1916. His picture in the papers (Motion picture). *

• **Summary:** This is a very early black-and-white U.S. silent film starring Douglas Fairbanks, who plays “a vegetarian health-food tycoon.” It was written by John Emerson and Anita Loos, directed by John Emerson, and produced by Fine Arts Film Corp.

According to the AFI (American Film Institute) Catalog of Silent films (www.aifi.com): “Meat-eating Pete Prindle has always been an embarrassment to his wealthy vegetarian father, Proteus Prindle. As a result, when railroad baron Christopher Cadwalader insists that in order to marry his

daughter Christine, Pete must have a half-interest in Proteus’ health food empire, Pete’s bachelorhood seems assured. Proteus gives in somewhat, however, and, after admiring the testimonial given to vegetarianism by his daughters Pansy and Pearl in the *Vegetarian Gazette*, he tells Pete that he can have the half-interest if he manages to get his picture in the papers. Pete then swims to shore from a steamer, wrecks his car and beats up a champion boxer, but he can never get the publicity he wants. Then, when he prevents a train from being derailed by a gang of thugs, the media make him a national hero. As a result, he gets his picture in the papers, he gets his half interest, and he gets married.”

3041. Hall, George W. 1916. Food in war time—Recipes for 100 inexpensive dishes. And helpful suggestions for providing two-course dinners for 6 people for one shilling. London: G. Bell and Sons, Ltd. 42 p. 12mo. *

3042. Kellogg, John Harvey. 1916. Battle Creek Sanitarium diet list. Battle Creek, Michigan: Modern Medicine Publishing Co. Ltd. 71 p. *

• **Summary:** The author was born in 1852. Address: M.D., Battle Creek, Michigan.

3043. Kellogg, John Harvey. 1916. Colon hygiene: Comprising new and important facts concerning the physiology of the colon and an account of practical and successful methods of combating intestinal inactivity and toxemia. Battle Creek, Michigan: Good Health Publishing Co. 370 p. 19 cm.

• **Summary:** Contents: The colon. The physiology of the colon. The ileocecal valve and its function. Normal bowel action. The feces. Influences which excite movements of the colon. Influences which lessen intestinal movements. The causes of constipation. Habits which give rise to constipation. Disorders of the digestive tube. Alimentary toxemia, or intestinal auto-intoxication. Important discussion of alimentary toxemia before the Royal Society. Forms of constipation. The treatment of constipation. Diet in constipation. Baths and other home treatments for constipation. Exercises which combat constipation. Efficient electrical methods. Special treatment of different types of constipation. Treatment of disorders which result from constipation. Bowel habits of uncivilized man.

The section titled “Cellulose-containing foods” (p. 228) states: “All vegetable foods contain more or less cellulose, but the amount differs very greatly. This element, as has already been mentioned, is highly necessary as a means of securing normal bowel action. Indeed, bulk, not simply in the food itself, but in the residues left behind after the absorption of the nutritive portions of the food, is of first importance.”

In the chapter titled “Diet in constipation” (p. 218-40): A bar chart (facing p. 229) shows the number of grams per ounce of cellulose in some common cereal foods. The

leaders: Bran 200, oatmeal 44, barley 20, rye 15, wheat 10, Graham flour granola 10, Graham bread 6. A table (p. 229-30) gives similar information. A section on "Recipes for the use of bran" (p. 237-40) contains 6 recipes: Bran brose (like mush), Sterilized bran, Bran and granola mush, Graham bread (made with "whole wheat flour"), Bran Graham biscuit, Bran gems (like muffins). Address: M.D., LL.D., Superintendent of the Battle Creek Sanitarium.

• **Summary:** Nuno Metello of Portugal, who is writing a book on the history of vegetarianism in Portugal, writes (Dec. 2016):

"Dr. Amílcar de Sousa (1876-1940) was very influential

in his time, not only in Portugal, but also in Spain, Latin America and some African countries, where he had many disciples. In Portugal his conferences were packed. He had hundreds of admirers in Brazil, who read the magazine *O Vegetariano* and other works published by the Vegetarian Society of Portugal (that were sold in Brazil) and followed his teachings. His articles were also published in Brazilian periodicals.

"He was a fruitarian who didn't consume meat, fish, eggs, and dairy products. He wrote that honey belongs to the bees.

"He wrote several books, *O Naturismo* (Naturism, first edition: 1912, second edition 1913, third edition 1916, fourth edition: 1919) being the most famous. This book was considered the "bible" of Luso-Brazilian vegetarians." Address: Portugal.

3054. Hall, George W. 1916? Food in war time. Revised and enlarged. London: G. Bell & Sons, Ltd. 48 p. Undated. 19 cm.

• **Summary:** A vegetarian cookbook containing 110 inexpensive recipes. 55,000 copies already been printed. On page 47 the author notes that his favorite vegetarian cookbooks are: Penlee Recipes, by Mrs. Barnett; Vegetarian Cookery, by Mrs. Pownall (for high-class cooking); The Healthy Life Cookbook, by Mrs. Daniels; Healthful Hints for Health and Happiness, by Mrs. C.W. Earle; and Forty Dinners, by Albert Broadbent. All can be ordered from the London Vegetarian Society, 8 John St., London, W.C.

Address: Vegetarian, England.

3055. Kaminetzky, Eleazar. 1916? Back to nature. n.p. 16 p. Undated.

• **Summary:** Nuno Metello of Portugal, who is writing a book on the history of vegetarianism in Portugal, writes (Dec. 2016): The author's name was spelled in various ways: Eliezer Kamenesky or Kaminetsky. This pamphlet has no date or publisher. It is in the Kamenesky collection of the Portuguese National Library.

A photo from Ellis Island shows that he arrived in the United States on 23 (or 25) June 1914 on the *SS Hamburg*. He was age 26, a "Russian Hebrew," and a vegetarian.

Concerning the date of this pamphlet Nuno writes: The "Back to Nature" pamphlet is undated, but was certainly published before he settled in Portugal in the 1920's. Based on the Ellis Island portrait, dated 1914 (<http://thediscerningbrute.com/tag/eleazar-kaminetzky/>) we know he was in the United States at the time. This was also before he went to Brazil (he wrote from Rio de Janeiro to the "Almanaque Vegetariano" in 1916, and we know from "O Vegetariano" that he was there at the time). So, the pamphlet was certainly published between 1914 and 1916 (c. 1914/1916). That exact pamphlet was published in the *Almanaque Vegetariano* in 1916 under the title "Escutai-me!!" (Listen to me!!). See attachment titled "eliezer_

kamenesky".

How did he learn to write such excellent English and while still at about age 26? Probably with the help of a vegetarian friend in America.

The 16-page pamphlet begins: "Fellow-men! I want to prove to you that we do not really live but merely exist. From the standpoint of life, let us now define what life is in relation to us, and discuss those things without which we cannot live. There are the elements necessary to life well known to everybody: in the first place there is the air, without which we cannot live, even a few minutes. Secondly sunlight, thirdly food, fourthly water and finally sleep. Then, owing to the climatic conditions and the change of seasons, we have to use clothes in order to protect ourselves from cold. Also we must have fire to warm and light our dwellings, as well as to cook our food.

"Do we use all these elements in their perfect fullness? No! Modern civilized man fears the slightest stir of the wind, and in winter awkwardly wraps himself from the top of his nose, with layers of clothing laid one on top of the other causing the greatest inconvenience while walking. Such enwrapping absolutely isolates the surface of the human body from contact with the air, thus depriving us of the wholesome effects of the air upon our skin: consequently making us extremely sensitive to the slightest change in temperature. It is not difficult at all to prove that it is he who has been made delicate by too much clothes that is must subject to all kinds of colds and rheumatic ailments, as well as internal inflammations.

"Would it not be more rational to harden the skin than to make it more delicate? The face does not fear cold, nor do the hands, because they have been hardened by exposure. And why should it not be possible to harden the other parts of our body as well.

"To attain this, cold water and air-baths will be found most beneficial... It is necessary to walk barefooted for a few minutes in the garden or on a wet floor, and also to ventilate our dwellings frequently. This must be done both by day and night. It is also necessary to warm ourselves by walking [exercise], not by constantly sitting by the fireplace. He who observes these hygienic measures need not fear that bugaboo of modern man, a cold."

Page 6: "Now I will say something of our food: On men! Owing to your use of meat you are the victims and slaves of your insatiable abdomen. The primitive savage may be excused if he lives on meat, for the conditions of his life force him to do so. But for us, civilized men and women of the twentieth century there is no excuse. We know how to cultivate the land and obtain the nourishing cereals, vegetables and fruits which nature herself destined as food for us, and which best corresponds to the anatomical structure of our bodies. If man were a carnivorous animal by nature, he would have found no objection to raw meat, as do the carnivora, the dog, the wolf etc. But what do we see?

Most human beings are not only unable to eat raw meat, but the very sight or smell of it are repulsive to them. And to eliminate the repulsive smell of meat we resort to cooking, frying and all kinds of spices that give the meat a different smell and a different taste. The really carnivorous prefer raw meat, for the former contains more nutritious elements and more blood. But we must deceive our sense of taste by means of salt, pepper, mustard, onions, garlick, horse-radish, all kinds of salads and so on. Apart from being harmful in themselves, most of these things make us absorb much more quantities of food than is necessary, and that is why gluttony is the inseparable companion of a meat-diet. Over-feeding is much more injurious to health than under-feeding. Besides, I deny the necessity of cooked food on the ground of man being a fructivorous animal exclusively and because of cooked food not being a natural nourishment.

“Modern cooked and fried food with its difficult and complicated preparation in a smoky kitchen is injurious to the health of the woman. This enslaving occupation is considered as being below the dignity of woman. This occupation furthermore prevents her from pursuing her natural womanly and certainly more dignified vocation—that of a mother and educator of her children.

“It is an indubitable fact that a diet of wholemeal bread, and of nuts, and of fruits generally, would reduce the quantity of our food to a third part of what it is now. Each organ of our body must fulfill its natural function. Our teeth are doomed to decay, because our food, not being natural, does not allow the teeth to exercise their natural function and that is chewing. Our present food we have to swallow without chewing; it is mostly soft and liquid.

“Let us turn again to meat. Humanity finds justification for its use of meat in the belief that a meat diet gives health and physical strength. This is a great error and absolutely baseless. A good proof against it is the rural population that because of their economic conditions feed on vegetables, except on the holidays, during which meat is also eaten. Thanks to the vegetarian diet, because the rural population is much stronger, and much more enduring than meat-eating people. The peasants are able to work a whole day in the field or do some other hard work without getting tired, a thing which cannot be said of town dwellers. It is not difficult to find other examples. We can cite the example of those populations that are forbidden by their creeds to eat living beings. Such is the Buddha religion in India. I was there and had the opportunity of personally witnessing the great endurance of the Indian coolies, which endurance is a result of their food, which consists of rice, vegetables and fruits. They work hard in the fields and are able to walk from fifteen to twenty miles daily without getting tired. The chief food of the fighters and athletes of ancient Greece consisted of grapes, nuts, maize-bread etc. and this simple but nourishing food was considered as most fit to develop physical strength and endurance with. The Roman gladiators

ate barley cakes and yet their strength and ability were wondered at by all the world. The tunnel of St. Gothard owes its existence to the endurance of the Italian workers who fed on maize. In the United States the railroad that runs along the Pacific coast was constructed by Chinese coolies whose chief food is rice.

“This we see that people not feeding on meat are stronger and more enduring than those that do.

“But reader! Do not think that the constant use of meat has no injurious effect on you. The meat that we are using is far from being healthy, to say nothing of the decomposed and rotten meat which is evidently dangerous to our system. Meat that is apparently absolutely healthy may still contain some pathogenic germs which if allowed to penetrate into our stomachs, provoke various local and general diseases. The most ordinary and frequent disease of this kind is the disease of the hook worm which is brought about by pig-meat which contains the germs of this worm. These germs are present not only in the meat of pigs, but of beeves and calves as well; in the cattle, they are only much smaller making them much more difficult to detect. Having penetrated into the stomach along with the meat, the germs transform themselves into worms of enormous length and provoke a serious ailments.

“Another frequent disease caused by meat is trichinosis germinated by the trichinae which inhabit the swine more frequently than other animals. This disease is far from being rare, especially where the sanitary inspection is deficient.”
Address: United States.

3056. Blatch, Margaret. 1917. One hundred and one practical non-flesh recipes. 2nd ed. London: Longmans, Green & Co. 80 p. 17 cm. *

• **Summary:** An expanded 92-page second edition was also published in 1917.

3057. Drew, Mary. 1917. Why need we be poisoned? II. *Contemporary Review* 111(613):76-86. Jan. [6 ref]

• **Summary:** In this second installment, the author reviews and expands on the arguments for a simple, natural diet and way of life, living on “the kindly fruits of the earth” and avoiding the use of dead animals as food. “Man is the only animal that lives on cooked food, yet man seems to be the only animal that suffers from persistent disease. Lawyers and doctors live on dissension and disease.” She then describes many individual cases of return to good health, by medical doctors and others, following adoption of a fruitarian [vegan] diet. She then describes her own recovery on a raw food diet. After several weeks she experienced a marked decrease in the pain from her arthritis, but then she experienced problems with depression, debility, and loss of weight. Dr. Hooker allowed her an occasional egg or cream until the difficult period was successfully negotiated. Finally “The sympathetic pains (which had been most trying for

some years) in the limbs unaffected by arthritis, entirely passed away and, most important of all, sleep returned. So long as the chief poisons are eliminated—stimulants, drugs, and flesh-food, that lay up such an infinity of mischief—we may indulge in the ordinary vegetarian dishes, and even occasionally eat egg, or bird, or fish, if only we are careful to accompany them with plenty of fresh salads and fruits. These should predominate at every meal.” Address: England.

3058. *Herald of Health and Naturopath (New York City)*. 1917. Report of the 20th Annual Convention of the American Naturopathic Association at Hotel Sherman, Chicago, Illinois, Sept. 28 to 30, 1916. 22(1):[560-69]. Jan/Feb.

• **Summary:** The first annual convention was held in 1897. Summarizes the various speeches and lists the apyrotropher (raw-food vegetarian) menu. The meeting of the Ohio State Convention of the A.N.A. in December is also discussed in detail. A full page photo (p. 568) shows the many people (60-70) who attend the annual banquet dinner.

3059. Allaway, Gertrude E. 1917. How it strikes a vegetarian. *Spectator (The)* 118:334. March 17.

• **Summary:** This letter to the editor begins: “Amid all the agitation over food economy and war diets caused by the shortage and increased prices there is one class of people who may claim to remain comparatively calm, and that is the vegetarians... Our modest diet of vegetables, cereals, and pulse gives us a decided advantage in the matter of price over the meat-eater.” The author discusses the economic advantages of a vegetarian diet during war-time with respect to food shortages and rationing. The meat-eater is afraid of “nervous debility,” concerned that by giving up meat, “he is risking, if not life, at any rate health.” Vegetarians have no anxieties on the score of health, for without it they are “strong, alert, vigorous, and full of the zest of life... We have learnt by experience what the flesh-eater has not yet realized, that many things which are supposed to be matters of health are only matters of appetite.”

3060. *Tennessean (The) (Nashville, Tennessee)*. 1917. Classified ad: Just opened. Vegetarian Cafeteria and Health Food Store... April 24. p. 7.

• **Summary:** “... at 137 Sixth Ave., N. Main 4193.”

Note: This vegetarian cafeteria is run by the Nashville Agricultural Normal Institute (NANI)—known as Madison College after 1937. Address: Nashville, Tennessee.

3061. Lust, Benedict. 1917. Vegetarianism and plastic art. *Herald of Health and Naturopath (New York City)* 22(2):73-76. March/April.

• **Summary:** This is a lecture presented at the Florida Yungborn, “Quisisana,” Tangerine, Florida. The plastic art is sculpture and painting. The citizens of ancient Greece had beautiful bodies, but such a body is hard to find today due to

our “enormous alienation from Nature.”

Note: This is the last document seen in a naturopathic periodical that mentions the word “Quisisana” in connection with the Florida Yungborn. Address: Dr., Florida Yungborn, “Quisisana,” Tangerine, Florida.

3062. *New York Times Magazine*. 1917. Woman off to China as government agent to study soy bean: Dr. Kin will make report for United States on the most useful food of her native land. June 10. p. 9. (New York Times section 6).

• **Summary:** The *New York Times Magazine* is part of the Sunday *New York Times* and may be simply cited as such.

Dr. Yamei Kin is “the only Chinese woman with a physician’s diploma from an American college,” the Woman’s Medical College of New York. “She left New York a few days ago for the orient to gather data on that humble but nutritious food [the soy bean] for the Department of Agriculture at Washington.” During World War I, new demands are being placed on America to feed its citizens and allies. “The appointment of Dr. Kin marks the first time the United States Government has given so much authority to a Chinese. That it is a woman in whom such extraordinary confidence is now reposed detracts nothing from the interest of the story.”

China was the first country to invent paper, printing, gunpowder, porcelain, chess, playing cards, and silk. “And now Dr. Kin is going to see if her native land can teach the United States how to develop a taste for the soy bean in its numerous disguises...”

“‘The world is in need of tissue-building foods,’ said Dr. Kin, ‘and cannot very well afford to wait to grow animals in order to obtain the necessary percentage of protein. Waiting for an animal to become big enough to eat is a long proposition. First you feed grain to a cow, and, finally, you get a return in protein from milk and meat. A terribly high percentage of the energy is lost in transit from grain to cow to a human being.’”

“‘The statement is frequently made that the Orientals live almost exclusively upon rice, eating little meat. It is not generally known, perhaps, that deficiency in protein is made up by the consumption of large quantities of products of the soy bean, which take the place in our dietary of meat and other costly nitrogenous foods. They are eaten in some form by rich and poor at almost every meal. Instead of taking the long and expensive method of feeding grain to an animal until the animal is ready to be killed and eaten, in China we take a short cut by eating the soy bean, which is protein, meat, and milk in itself. We do not eat the plain bean in China at all. It is never eaten there as a vegetable, but in the complex food products—natto, tofu, miso, yuba, shoyu, and similar dishes.

“‘The chief reason why people can live so cheaply in China and yet produce for that nation a man power so tremendous that this country must pass an Exclusion act

against them is that they eat beans instead of meat.”

“But human nature is about the same everywhere, and Chinese don’t care for a monotonous diet any more than other people. So they have taken this soy bean and managed to invent a great many kinds of products. The bean curd is a food made from pulverizing the beans into a flour and then boiling this milklike concoction, letting the curd rise to the top as your grandmothers in this country made cottage cheese. I spoke of tofu—this is it. Nothing is wasted, nothing lost in China. Most of these soy bean products, popular from ancient times, are fermented. The cell walls and the carbohydrate materials are broken down the cell contents rendered more easily digestible, and peculiar and pleasant flavors developed.

“Soup noodles are made out of bean curd. Entrées made of bean curd are served with cream mushroom sauce or a hot Spanish tomato sauce. A salad of bean sprouts, accompanied by cheese—the cheese [fermented tofu] a cross between Camembert and Roquefort, and made from the soy bean—is very nutritious and palatable. Americans do not know how to use the soy bean. It must be made attractive or they will not take to it. It must taste good. That can be done. We make from it a delightful chocolate pudding. A black soy bean sauce we use as a foundation for sweetmeats in China.”

Note 1. This black soy bean sauce is more like a paste than a sauce, and black soybeans are used in place of the much more common red beans (azuki beans). This sauce / paste is rarely mentioned in Chinese cookbooks or books (or articles) about Chinese foods or confections. A good example of an award-winning Chinese author that does mention it clearly is Eileen Yin-Fei Lo. In *From the Earth: Chinese Vegetarian Cooking* (Macmillan 1995) she says (p. 4): At Chinese weddings, “small, round, flat cakes of dough, filled with either sweetened lotus seed paste, black bean paste, or red bean paste, were presented by the groom’s family to that of the bride. These cakes are called *lo paw*, which translates as ‘wife’s cakes’...” “Small steamed buns filled with sweet black bean paste and shaped like peaches are given to people observing their 65th birthdays.”

Note 2. This is the earliest English-language document seen (April 2014) that uses the term “black soy bean sauce” to refer to a kind of sauce made from soybeans.

“The soy bean contains practically no starch, which means that it is a most desirable food for diabetics, and also, of course, for vegetarians. Buddhists kill no animals—they thrive by making a specialty of the soy bean, which, by the way, is already being used in the French Army. They find there that soy bean mixed with flour makes a good cracker, more nourishing than any other cracker.”

“The Chinese do not know what worn-out soil is. Some places are so fertile and are cultivated with so much care and skill that three or four crops a year are regularly gathered... it is very common to see two crops in the same field at the same time... The Chinese have a passion for fertilizing the

soil...”

“Dr. Kin is a graduate of the Woman’s Medical College of New York, and her great interests have always been domestic sanitation, civic hygiene, the conservation of life, and questions of nutrition. She is the head of the Imperial Peiyang Woman’s Medical School and Hospital, near Peking, which sends out district nurses to Chinese slums to teach the people right living and ways of keeping well. The Imperial Infant Asylum in Tien-tsin, the Widows’ Home, and the Girls’ Refuge all come under her supervision as head of the woman’s hospital work of Northern China. She will return to this country in October, bringing to our Government the detailed results of her study of the uses of the soy bean as a foodstuff needed by this country and by the world in the campaign of food raising and conservation.”

An illustration (line drawing) shows a portrait of Dr. Yamei Kin. The caption below the illustration states: “Dr. Yamei Kin, the only [sic] Chinese woman with a physician’s diploma from an American college.”

Note 3. Actually, Yamei Kin was the *first* Chinese woman with a physician’s diploma from an American college.”

Note 4. Frank N. Meyer wrote letters about Dr. Yamei Kin in 1911 and 1916.

Note 5. This is the earliest document seen (Aug. 2013) that mentions a soy pudding (a “delightful chocolate pudding” made from bean curd).

3063. Thomas, Julian P. 1917. Advantages of a raw food diet. Butler, New Jersey: The Nature Cure Publishing Co. 63 p. Portrait. *

• **Summary:** Reproduction of an address delivered before the society of which he is president. Address: M.D. President, Physical Culture Assoc. of America.

3064. *Hartford Courant (Connecticut)*. 1917. The case of the soy bean. July 21. p. 10.

• **Summary:** That the soy bean “will become forthwith an article of food for New England folk is very unlikely even though the National Emergency Food Garden Commission is now urging the public to can the beans.

“The strange campaign for the introduction of this new article of diet has moved W.P. Brooks of the Massachusetts Agricultural Experiment Station to publish a fairly conclusive statement upon the matter. He says the advocates of the soy bean say something like this about it: -

“The soy bean is a very rich food; it can be successfully grown in Massachusetts and will give a large yield; it is palatable prepared and served in similar ways to those employed in the cooking of ordinary field and garden beans. The last statement is, I believe, absolutely incorrect, and the others require qualification. The fact that I have had unusual opportunities of observation and experience with this crop leads me to ask space for this article since I hope it may be

the means of preventing discouragement and disappointment. I lived for twelve years in Japan. In that country the soy bean has for many hundreds of years been an important crop. The Japanese made practically no use of it as a vegetable prepared by ordinary methods of cooking. They are very largely vegetarians, and if it were adapted to such use there can be no doubt they would so employ it.'

"Then Mr. Brooks goes on to say that since coming to this country he has tried baking the soy bean and the members of his family were a unit in agreeing that it was nowhere near as desirable as the native varieties. He had roasted and ground the bean and used it as a substitute for coffee and found it a trifle less worse than when baked.

"He says that the bean is rich in protein and fat but he adds that it is much too rich to be palatable. While the Japanese do not use it as a cooked food they contrive to make a cheese [tofu] of it, but this they do not prepare in the family but buy it of manufacturers. They also use the bean in preparing a sauce [soy sauce] and make extensive use of it as a food for cattle. Finally he says that while he does not wish to discourage experiments he does not think it will be regarded as useful as an article of food.

"The most productive varieties, he says, are not likely to mature in Massachusetts but several varieties will generally produce a crop. They need, he says, a season a little longer than the larger sorts of field corn and they will produce from twenty to twenty-five bushels to the acre. Do Connecticut people care to raise soy beans with this outlook, especially when it is considered desirable to inoculate the soil with a certain bacteria before attempting to get a crop?"

3065. Cooper, Lenna Frances. 1917. *How to cut food costs*. Battle Creek, Michigan: The Good Health Publishing Co. 128 p. Illust. 20 cm,

• **Summary:** This is a vegetarian cookbook. Chapter 6 titled "meats" explains that they are too expensive and are not health-giving foods. No recipes calling for meat, fish or poultry appear in this book. Likewise, the words "vegetarian," "meatless," and "flesh" do not appear.

Contents: Foreword. 1. Selection of Foods. 2. Cereals and Breadstuffs. 3. Vegetables. 4. Fruits. 5. Meat Substitutes. 6. Meats. 7. Miscellaneous Foods. 8. What One Cent Will Buy. 9. Economical Menus for Ten Days. 10. Low Cost Recipes. 11. The Increased Cost of Food. 12. Factors in Food Costs.

The Foreword states (p. 4): "The author's qualifications for addressing the public on these subjects are her long connection with the Dietetic Department of The Battle Creek Sanitarium, where food values and food in its relation to health has been a subject of scientific investigation for fifty years; also her many years' principalship of the Battle Creek Sanitarium School of Home Economics, that she is a graduate of Teachers' College, Columbia University, and finally that her whole heart and sympathy are in the work of

spreading far and wide the messages contained in this little volume, namely, lower cost of living with better health and less work and worry."

Chapter 1 explains that foods can be classified into 3 groups: Body builders (muscle formers {protein}, bone formers, blood formers), fuels (fats, starches, and sugars), and body regulators (bulk / cellulose). "At *least one* from each of these outline groups should appear on each menu." "As a bone former, milk stands at the head of the list. For those who digest it well, it should enter quite largely into the dietary, particularly into the preparation of recipes. Where there are children in the family, it is all the more important that milk should be supplied abundantly."

Soy is mentioned 10 times in this book. Page 26: "The housewife who is accustomed to buying soup bones for flavoring will find a very economical substitute in the Japanese or Chinese soy, which may be obtained at most grocers or at any chop suey restaurant. A tablespoonful of it will season a quart of liquid in most recipes. Added to the liquid in which peas, beans or vegetables are cooked, it makes a very nice soup. It may be used in the same way in which a meat extract is used."

Pages 28-29: Chapter 5 is titled "Meat Substitutes," indicating that the book is vegetarian. Since we have learned that the majority of people eat altogether too much meat, it is not necessary to supply as large an amount of meat substitutes as was formerly thought necessary. The class of food-stuffs which may be used as meat substitutes are the legumes, nuts, cheese, milk and eggs." "The soy bean is one of the newest additions to American food-stuffs. When cooked until tender the beans make a very palatable dish, but they require long soaking and long cooking to make them edible. This is most easily accomplished by a steam pressure cooker. At present prices the soy bean can be obtained for about half the price of the other legumes. It is easily digested and is much milder in flavor than any of the other varieties."

Page 52: The dinner [lunch] menu is "Cream of Soy Beans. Escalloped Corn. Buttered Beets. Chocolate Pudding."

Page 53: A dinner [lunch] menu includes "Noodle Soup. Soy Bean Loaf with White Sauce. Sauer Kraut or Cold Slaw. Canada War Cake."

Page 54-55: "The following supplies were used in the above ten day dietary at the following costs:" Includes: Rice 10 oz. 10 cents. Soy beans 1 7/8 lb. 15 cents. Lima beans 1/2 lb. 8 cents. Milk 17 quarts \$1.53. Peanut butter 1 lb. 17 cents. Japanese Soy [as needed] 4 cents.

Page 56: The recipe for Turkish Pilaf calls for a Brown Stock which includes "1 1/2 teaspoon Soy" [sauce].

Page 66: A recipe for Noodle Soup calls for 2 eggs, 3 tablespoons Soy, etc.

Page 125: In the Bibliography, #32 is "Soy Beans as Food. *Weekly News Letter*, U.S. Dept. of Agr., April 11, 1917."

Note 1. Price of the book: 75 cents; by mail 80 cents.

Note 2. This is the earliest document seen (Jan. 2019) that mentions “chop suey” and the earliest document seen (Jan. 2019) that mentions Chinese restaurants in the USA or outside China.

Note 3. Wheat gluten is not mentioned in this book; perhaps it is too expensive. Address: B.S., Director of the Battle Creek Sanitarium School of Home Economics, formerly Head Dietitian of the Battle Creek Sanitarium.

3066. Hamman, Louis. 1917. Hypertension: Its clinical aspects. *Medical Clinics of North America* 1:155-76. July.
• Summary: An interest in the possible blood pressure lowering effect of a vegetarian diet dates from this paper. “I cannot stop to analyze the data upon which rest our impression that protein, and meat in particular, is harmful to patients with hypertension. I can only say that a general impression of its harmfulness is firmly established, and in accordance with this view it is customary to devise a diet low in protein, with meat completely eliminated or nearly so.” Address: M.D., Johns Hopkins Hospital, Baltimore, Maryland.

3067. Armsby, Henry Prentiss. 1917. The cost of roast pig. *Science* 46(1181):160-62. Aug. 17. [1 ref]

• Summary: In the midst of World War I, Armsby cited figures on the relative efficiency of the various classes of farm animals in converting grain into animal products for human food. “... while a proposal to restrict rather than to promote meat production in the present crisis may appear both irrational and unpatriotic it may nevertheless be in the interest of true food economy.” Not only must the meat or milk producing animals be fed, but “the conversion of feed into animal products is a process of relatively low efficiency.”

“It may roughly be estimated that about 24% of the energy of grain is recovered for human consumption in pork, about 18% in milk and only about 3.5% in beef and mutton. In other words, the farmer who feeds bread grains to his stock... is burning up 75 to 97% of them in order to produce for us a small residue of roast pig, and so is diminishing the total stock of human food.

“The task of the stock feeder must be to utilize through his skill and knowledge the inedible products of the farm and factory such as hay, corn stalks, straw, bran, brewers’ and distillers’ grains, gluten feed, and the like, and to make at least a fraction of them available for man’s use.” The hog is the great competitor of man for the higher grades of food. “Cattle and sheep, on the other hand, although less efficient as converters, can utilize products which man can not use and save some of their potential value as human food.

“At any rate, it is clear that at the present time enthusiastic but ill considered ‘booming’ of live stock production may do more harm than good. If it is desirable

to restrict or prohibit the production of alcohol from grain or potatoes on the ground that it involves a waste of food value, the same reason calls for restriction of the burning-up of these materials to produce roast pig. This means, of course, a limited meat supply. To some of us this may seem a hardship. Meat, however is by no means the essential that we have been wont to suppose and partial deprivation of it is not inconsistent with high bodily efficiency. Certainly no patriotic citizen would wish to insist on his customary allowance of roast pig at the cost of the food supply of his brothers in the trenches.”

Note: This is the earliest document seen (June 2002) that gives statistics concerning the efficiency of plants as being much greater than animals in producing food from a given input of energy, land, or water. Address: State College, Pennsylvania.

3068. Halliburton, W.D.; Drummond, J.C. 1917. The nutritive value of margarines and butter substitutes with reference to their content of the fat-soluble accessory growth substance. *J. of Physiology (London)* 51(4-5):235-51. Sept. 12. [31 ref]

• Summary: A growth promoting, fat soluble, accessory substance, found in certain naturally occurring fats, was first reported in 1913 by McCollum and Davis, and by Osborne and Mendel. It is present in butter, butter fat, butter oil, egg yolk, cod liver oil, and the lower melting point fractions beef fat, kidney fat, and heart fat. However it appears to be absent from the majority of oils of vegetable origin such as olive oil, almond oil, corn oil, sunflower seed oil, bleached cottonseed oil, and linseed oil. “The only animal fat yet found to be entirely deficient in the substance is lard.”

“For the purposes of this investigation we have roughly divided the butter substitutes into three classes. 1. Animal fat margarines. These are the higher priced margarines. 2. Vegetable oil margarines. These constitute the cheaper forms of margarine. 3. Nut butter. This class of product constitutes a comparatively insignificant fraction of the butter substitutes consumed in this country. It is prepared exclusively for the use of vegetarians and consequently has a limited sale.”

Vegetable oil margarines use some suitable vegetable oil as their bases instead of “oleo-oil.” Great use is made of the cheap coconut oil expressed from copra. “Arachis or peanut oil is also somewhat extensively used and to a less degree the following oils: maize oil, sesame oil, cottonseed oil, cottonseed stearin and shea oil.

“Recent advances have been made in the technology or oils and fats by the introduction on a commercial scale of the catalytic reduction or so-called hydrogenation of oils.”

“Conclusions. 1. The fat-soluble accessory growth substance [later named vitamin A] is present in beef-fat and ‘oleo-oil’ and is present in margarines prepared upon such a basis. Such margarines are nutritively the equivalent of butter. 2. Coconut oil, cottonseed oil, arachis oil and

hydrogenated vegetable oils contain little or none of this accessory substance, hence margarine prepared with a basis of these fats have not an equal nutritive value to that of butter... Lard substitutes prepared from vegetable oils are equal to lard in their nutritive value, both alike being destitute of the fat-soluble accessory substance.” Note: Soybean oil is not mentioned. Address: Biochemical Lab., Cancer Hospital Research Inst. and the Physiological Lab., King’s College, London [England].

3069. Blatch, Margaret. 1917. One hundred and one practical non-flesh recipes: With additional recipes for dishes and cakes made of maize, oats, barley and rice. 3rd ed. London & New York: Longmans, Green & Co. 92 + 3 p. Recipe index. 17 cm.

• **Summary:** Third editions were published in both 1917 and 1918. Address: M.C.A.

3070. Cooper, Morton O.; Spillman, W.J. 1917. Human food from an acre of staple farm products. *Farmers’ Bulletin (USDA)* No. 877. 11 p. Oct. See p. 4, 7.

• **Summary:** Table 1 (p. 4) is “A comparison of the food produced annually by an acre of land when utilized in the production of various food crops and live-stock products.” For each crop or product is given: Yield per acre, calories per pound, pounds of protein per acre (digestible), and calories per acre.

Food crops produce much more protein and calories per acre than dairy products or meat. One acre of soy beans (yielding only 16 bushels!) produces 294.7 pounds of digestible protein (almost twice as much protein as any other crop or product; common beans are #2 with 157.9 lb and corn produces 147.0 lb), and 1,534,000 calories (only about 50% as much as corn, the top calorie producer with 3,124,240). By comparison, one acre can produce from beef (meat) only 18.5 lb of digestible protein and 130,000 calories. From pork, one acre can produce 22.7 lb of protein and 672,945 calories. Of the various animal products, milk makes the most efficient use of the land. One acre can produce 72.3 pounds of protein and 711,750 calories in the form of milk.

In the section titled “Food value of crops” is a subsection for each crop. The soy bean (p. 7-8) “leads all other crops in the production of digestible protein, exceeding corn in this respect by almost exactly 100 per cent. This crop deserves more attention in this country than it has yet received. There is no reasonable possibility of overplanting it. Soy-bean meal, the residue after the oil is expressed, can be mixed with wheat flour to the extent of 30 per cent without detriment to the palatability of the product, though the effect of such bread on the digestive tract is not yet known. Dry soy beans now are being used in considerable quantity as a substitute for navy beans in canneries with excellent results. In addition, the soy bean is an excellent

forage crop for cattle and hogs. Its use for this purpose greatly reduces the necessity for the use of grain and mill products in feeding these animals. The soy bean is a legume recently introduced to this country. It requires inoculation when grown on land new to it. Many farmers have failed in their first attempts to grow this crop because they have overlooked this point... Soy beans, by using suitable varieties for seed, can be grown from southern Michigan to the Gulf coast. The Department of Agriculture will furnish free on application full instructions concerning the culture and management of soy beans. (Farmers’ Bulletin No. 372.)”

This section also discusses the peanut, oats, the navy bean, cowpeas, and buckwheat.

3071. Ehret, Arnold. 1917. My diet of healing. *Herald of Health and Naturopath (New York City)* 22(5):[257]-60. Sept/Oct.

• **Summary:** Note 1. This is the earliest document seen (May 2015) stating that Arnold Ehret lives in Alhambra, a suburb of Los Angeles, about 8 miles northeast of central Los Angeles and about 3 miles southeast of South Pasadena.

Note 2. This is the earliest document seen (May 2015) in which Arnold Ehret uses the title “Dietist” before his name. How, when, and where did and when he become a Dietist? Address: Dietist and author, W. Alhambra, California.

3072. Christian, Eugene. 1917. Meatless and wheatless menus. New York, NY: Alfred A. Knopf. 144 p. Dec. 20 cm.

• **Summary:** Written during World War I, this book joined the effort in America to conserve wheat and meat so that they could be shared with American allies in Europe. The preface begins: “Twenty one years ago I abandoned the use of meat. All of my best and most useful work has been accomplished since then. Meat is not only an unnecessary article of food, but in many cases is actually harmful.” There is one chapter of menus for each of the four seasons. The last chapter is titled “Good and bad combinations of food.” Address: Food scientist.

3073. Cooper, Lenna F. 1917. For meatless days—and wheatless days. *Good Health (Battle Creek, Michigan)* 52(12):644-47. Dec.

• **Summary:** “The phrase, ‘meatless days,’ is likely to frighten the housewife who has not been used to preparing a non-meat menu. It sounds hard and mysterious, when as a matter of fact, a meatless day is just what the phrase implies—a day when meat foods are dropped from the regular bill-of-fare.

“That is about all there is to it. Elaborate substitutes are not necessary. The only care necessary is to serve at each meal a dish—one is enough—of a food in which protein plays the leading part. An egg or a side dish of beans (any kind), dried peas, or lentils, will answer the purpose. Also a serving of cheese is good, a glass of milk, or a dish of nuts.

“Plan Simple Menus: By all means, the housewife for her meatless days—and why should not every day be a meatless day—should seek to avoid complicated menus. Have each bill-of-fare as simple as possible—a precaution that is especially valuable in these days when we need to be economical of all kinds of foodstuffs.

“- and Wheatless Days.

“American people should not regard the war as an unmixed evil if it makes them acquainted with corn meal, rice, rye, oats, and barley.

“Bread is the staff of life, but this does not mean bread made out of finely milled flours. When it refers to wheat bread, it refers to bread from the whole grain, with the bran,

to promote intestinal action and the mineral salts to build up vital structures of the body.”

Recipes are given for: Bread from acorns. Rye gems. More rye gems. Rye and corn gems. Rye bread. Corn puffs. Hoe cake. Corn cake. Corn pones. Rye bread. Rolled-oats bread. Oaten cakes. Rice muffins. Address: B.S.

3074. Sociedade Vegetariana Brasileira (Brazilian Vegetarian Society) 1917. New vegetarian society. Rio de Janeiro, Brasil.

• **Summary:** The IVU webpage titled “A History of Vegetarian Societies in Latin America & the Caribbean” states in the first paragraph: “1917—A Sociedade Vegetariana Brasileira (Brazilian Vegetarian Society) was founded in Rio de Janeiro, in January 26 1917, In 1921—we find a speaker, Dr. Juan Dulin, from the ‘Naturist Society—Buenos Aires, Argentina.’—presumably the Asociacion Naturista de Buenos Aires, Argentina—which still exists and is a member of IVU today.”

Note: This is the earliest known vegetarian society in Latin America. Address: Rio de Janeiro, Brasil..

3075. Anderson, Hans Steele. 1917. Food and cookery. Revised fourth ed. Mountain View, California, and Kansas City, Missouri: Pacific Press Publishing Assoc. 163 p. Index. 18 cm.

• **Summary:** This is a book about vegetarianism. Soy is mentioned on pages 45 (see Lesson 11, Soy bean-rice loaf; Soy bean-rice patties), 84, 85.

Soy-related recipes: Stewed soy beans (with whole soybeans, p. 84). Rice and soy bean loaf (with “1½ cups soy bean purée” and “3 tablespoons soy bean broth” plus “1 cup steamed natural rice,” p. 85). Rice and soy bean patties (using the “soy-bean-rice mixture described in the preceding recipe,” p. 85).

The author was born in 1877. Address: Food expert, Loma Linda Sanitarium, California.

3076. Carqué, Otto. 1917. The folly of meat-eating: How to conserve our food supply. A plea for saner living. Chicago, Illinois: Kosmos Publishing Co. 18 p. Illust. 21 cm. 25th Thousand.

• **Summary:** The first 16 pages of this interesting book are as described by the author and title above. Copyright 1904 by Otto Carqué, this booklet is quite similar to the booklet titled *An appeal to common-sense: The folly of meat-eating* (1904, 1906). *A reply to an editorial of the New York and Chicago Evening American and San Francisco Examiner*. 3rd ed., by the same author, except for the following: (1) The first and last parts of the title have been omitted. (2) All the ads on the inside front cover are different (see below). (3) All the text on page 3 and the first 2 paragraphs on page 4 are different. Thereafter, all the text to the end of page 16 is different.

Page 17 is titled “Food preservation and fruitarianism:

The social and economic aspects of the meatless diet,” by Henry E. Lahn, M.D.

The top two-thirds of page 18 contains many circle charts showing the value (in dollars), supply and consumption of fruits, imported food, vegetables, meat foods [animal products] (incl. dairy products, honey, fish, oysters) and grain foods (incl. peas and beans). The bottom one-third contains two graphs: (1) Meat supply: 1850-1900. Animals per 100 persons. All have decreased—hogs from 118 to 43, sheep from 94 to 50, and cattle from 25 to 20. (2) Vegetable foods: 1850-1900. Bushels per 100 persons. All have increased—wheat from 430 to 600, potatoes from 283 to 356, corn from 252 to 333, and oats from 90 to 362. In short, just what a vegetarian would have hoped for.

The last three pages are titled “Books on natural life and rational cure.” Book categories: Diagnosis. Diseases. The medical question. Fasting. Mental therapeutics and new thought. Naturopathy. Miscellaneous. Sexology. German-language publications (by F. Anlicker, Bilz, Bunge, A. Ehret, A. Erz, Dr. J. Heininger, Elbert Hubbard, Dr. K. Kabisch, A. Just, E. Koehler, Father Seb. Kneipp, Dr. Henry E. Lahn, Dr. B. Lust, R. Richter, Dr. F. Schoenberger and W. Siegert, D. Spohr, and A. Uhlig). All are available from The Nature Cure Publishing Co., Butler, New Jersey, Benedict Lust, N.D., M.D., Proprietor. Branches in New York City and Orange County, Florida.

The back cover is a full-page advertisement for Carque’s Pure Food Co., 1605-1607 South Magnolia Ave., Los Angeles, California. They specialize in sun-dried black mission figs, and have a complete line of selected California dried fruits, nuts, nut butters, fruit juices, olive oil, olives, honey, natural whole rice, etc. These foods “have been selected and prepared with especial care... to which Mr. Carqué has given years of study and research.”

On the inside front cover are four more ads: (1) J.H. Heisser, Minneapolis, Minnesota. Dealer in natural products, such as: “Natural brown rice.” Natural brown rice polish. “Stone ground w.w. [whole wheat] flour. Stone ground corn meal. Unsulphured black figs, prunes, peaches, raisins, etc. Minnesota wild rice. Alfalfa products. Malt and banana coffee. Banana products... Nut oils. Grinding mills. Fruit presses. Shredders. Honey. Fruit driers. Bottle cappers. Water stills. Books on diet, health, salt, sugar. Vegetarian cook books, etc.” (2) The book *Unfired Food and Trophotherapy*, by George L. Drews. (3) Hercules Hygienic Supply House, Chicago, Illinois. “General clearing house for health foods, books, appliances and apparatus.” (4) Carqué Pure Food Co. (Inc.) “Carque’s pure natural food products” (1605-1607 South Magnolia Ave., Los Angeles). The company sells unsulphured fruits, black mission figs, white figs, calimyrna figs, almonds, nut butters, olive oil, honey, fruit juices, natural whole rice, whole wheat flour, nut and grain mills, literature on dietetics and hygiene. Otto Carqué lived 1867-1935.

Note 1. This is the earliest document seen (July 2021) that gives the address of Carque’s Pure Food Co. as 1605-1607 South Magnolia Ave. in Los Angeles.

Note 2. This is the earliest document seen (Feb. 2020) that discusses vegetarianism and ecology or the environment.

Note 3. This is the earliest document seen (July 2015) that mentions a food product or products (“Alfalfa products”) made from alfalfa. Unfortunately no details are given. Address: Los Angeles, California.

3077. Chmelar, Frrantisek. 1917. Pestovani soje a jeji pouziti pro lidovou a vegetarianskou vyzivu a dietetiku [Growing soybeans and its usage in vegetarian nourishment and dietetics]. Prague: Zemed. knihkup. [Cze]*

• **Summary:** Hromadko (1926) cites this as “Dr. Ing. Chmelare: Pestovani soje. Zemed. knihkup. Praha 1917.” Address: Dr., Czechoslovakia [by 1918].

3078. Fisher, Irving; Fisk, Eugene Lyman. 1917. How to live: rules for healthful living based on modern science. 12th ed. New York and London: Funk & Wagnalls Company. xi + 345 p. Illust. (portraits). Index. [152* ref]

• **Summary:** This book was first published in Oct. 1915. References are at the end of several chapter.

Contents: Foreword by William Howard Taft (New Haven, Connecticut, June 12, 1915). Taft wrote: “Many years ago, Disraeli, keenly alive to influences affecting national prosperity, stated: ‘Public Health is the foundation on which reposes the happiness of the people and the power of a country. The care of the public health is the first duty of a statesman.’ It may well be claimed that the care of individual and family health is the first and most patriotic duty of a citizen.”

Introduction. Chapter I. Air. Housing, Clothing. Outdoor sleeping. Deep breathing.

II. Food: Quantity of food. Protein foods. Hard, bulky and uncooked foods. Thorough mastication [chewing].

III. Poisons: Constipation. Posture. Poisons from without. Teeth and gums.

IV. Activity: Work, Play, Rest and Sleep. Serenity and Poise.

V. Hygiene in General: 1. The Fifteen Rules of Hygiene. 2. The Unity of Hygiene. 3. The Obstacles to Hygiene. 4. The Possibilities of Hygiene. 5. Hygiene and Civilization: 6. The Fields of Hygiene.

Supplementary Notes on Special Subjects. 1. Notes on Food. 2. Notes on Overweight and Underweight. 3. Notes on Posture. 4. Notes on Alcohol. 5. Notes on Tobacco. 6. Avoiding Colds. 7. Signs of Increase of the Degenerative Diseases. 8. Comparison of Degenerative Tendencies among Nations. 9. Eugenics.

Wikipedia says (Sept. 2019):

“In 1898, Fisher was diagnosed with tuberculosis, the same disease that had killed his father. He spent three years

in sanatoria, finally making a full recovery. That experience sparked in him a vocation as a health campaigner. He was one of the founders of the Life Extension Institute, under whose auspices he co-authored the bestselling book *How to Live: Rules for Healthful Living Based on Modern Science*, published in 1915. He advocated regular exercise and the avoidance of red meat, tobacco, and alcohol. In 1924, Fisher wrote an anti-smoking article for the Reader's Digest, which argued that "tobacco lowers the whole tone of the body and decreases its vital power and resistance... [it] acts like a narcotic poison, like opium and like alcohol, though usually in a less degree [28]."

"Fisher supported the legal prohibition of alcohol and wrote three booklets defending prohibition in the United States on grounds of public health and economic productivity [29]. He also defended eugenics, serving in the scientific advisory board of the Eugenics Record Office and as first president of the American Eugenics Society [30]."

The word "alcohol" appears in this book 152 times (it is a habit-forming drug, like "caffeine" and "nicotine"), "milk" 44 times (it is a fat-forming food), meat 44 times (it is discouraged, but not banned), "fish" (44 times; discouraged). Animal proteins (which are acidic by nature) are discouraged in favor of vegetable proteins (alkaline). Vegetarian is mentioned only 4 times, as one of the many healthy changes one should make. "Flesh food" is mentioned 15 times.

"Preface: The purpose of this book is to spread knowledge of *Individual Hygiene* and thus to promote the aims of the Life Extension Institute. These may be summarized briefly as: (1) to provide the individual and the physician with the latest and best conclusions on individual hygiene; (2) to ascertain the exact and special needs of the individual through periodic health examinations; (3) to induce all persons who are found to be in need of medical attention to visit their physicians.

"A sad commentary on the low health-ideals which now exist is that to most people the expression 'to keep well' means no more than to keep out of a sick-bed. Hitherto, the subject-matter of hygiene has been considered in its relation to disease rather than to health. In this manual, on the other hand, it is treated in its relation to (1) the preservation of health; (2) the improvement in the physical condition of the individual, and (3) the increase of his vitality. In short, the objects of the manual are positive rather than negative. It aims to include every practical procedure that, according to the present state of our knowledge, an athlete needs in order to make himself superbly 'fit,' or that a mental worker needs in order to keep his wits sharpened to a razor-edge. For this reason some suggestions, which might otherwise be regarded as of minor importance, have been included and emphasized. While it is true that a moderate infraction of some of the minor rules of health is not inconsistent with maintaining good health in the sense of keeping out of a sick-bed, such infraction, be it ever so moderate, is utterly inconsistent with

good health in the sense of attaining the highest physical and mental efficiency and power.

"Future advances of knowledge will doubtless occasion additions to, or modifications of, the conclusions stated herein, and these will form the subject of subsequent publications by the Institute.

"In order that the Institute may have at its disposal the latest and most authoritative results of scientific investigations, its Hygiene Reference Board was created. The present book is the first general statement of the conclusions of this Board after a year of careful consideration. These conclusions are the joint product of the members of the Board, with the active co-operation of the Director of Hygiene of the Institute. They may fairly be said to constitute the most authoritative epitome thus far available in the great, but hitherto neglected, realm of individual hygiene.

"The Chairman of the Board has exercised the function of editor, and is responsible for the order and arrangement of the material. Friends of the Institute may help its work by spreading the ideas given in the following pages and by increasing the number of its readers. Such profits as may be received by the Institute from the sale of this book will be devoted to further philanthropic effort by the Institute." Irving Fisher, Eugene L. Fisk.

Some quotations: "As age advances, the consumption of meat and all flesh foods should be decreased and that of fruit and vegetables, especially those of bulky character and low food value... should be increased."

"To the door of the hurry habit may also be laid the excessive use of flesh foods. Carnivorous animals bolt their food. Frugivorous animals, to which class the human race properly belongs, eat slowly. But when, through the perversions of civilized life, frugivorous man is forced to eat as fast as the carnivores, he instinctively adopts a similar diet. As someone has expressed it 'when we eat as fast as a dog, we naturally crave the food of a dog.' Our apelike progenitors had few, if any, flesh foods and only those which they could catch with the hand and eat raw. Our eliminating organs, the liver and the kidneys, have been framed to meet the demands of man's natural diet, but not adapted to handle the diet of civilized men in the excessive use of flesh foods and the use of alcohol." Address: Prof. of Political Economy, Yale Univ., Connecticut.

3079. Forward, Charles Walter. 1917. The cost of a beef-steak: A plea for the ox. London: Humanitarian League. 37 p. Illust. 16°. *

• **Summary:** Using both illustrations and text, this book shows what goes on behind the scenes in the meat trade.

3080. Hall, George W. 1917. Food in war time (65th thousand, revised and enlarged). London: G. Bell & Sons. 48 p. 8°. *

Address: Vegetarian.

3081. Kellogg, John Harvey. 1917. *The new method in diabetes: The practical treatment of diabetes as conducted at the Battle Creek Sanitarium, adapted to home use, based upon the treatment of more than eleven hundred cases.* Battle Creek, Michigan: Good Health Publishing Co. 177 p. See p. 64-65.

• **Summary:** In the chapter titled “The feeding of diabetics,” the section on “Legumes” (p. 64-65) states: “The soy bean is a remarkable legume which is two-fifths fat and one-third protein, giving a food content closely resembling fat meat with the addition of a small amount of carbohydrate—about one-fourth the total food value. The soy bean is a highly valuable food for diabetics.”

A table titled the “Food value of legumes” compares the nutritional composition of “peas, beans, lentils, and soy bean.” The latter contains 38% “protein calories” (32% of total calories come from protein), 48.0 fats calories (40%), 34.0 carbohydrate calories (28%), and 120.0 calories per oz. A table titled “Foods containing a moderate amount of carbohydrates” (p. 81-82) includes soy bean, peanuts, nuts of all sorts, Protose, and Nuttolene. A table titled “Caloric value of diabetic foods” (p. 164) includes “Beans, Soja,” and “Gluten mush.”

Note: This is the earliest document seen (March 2018) in which Dr. John Harvey Kellogg writes in some detail about soybeans; he praises them. He also thanks Miss Lenna F. Cooper (Director of the Battle Creek Sanitarium School of Home Economics) and Miss Corinne King (Head Dietitian of the Sanitarium) for their excellent recipes and standard bills-of-faire. Under each recipe is given per-serving nutritional information: Weight of one serving, and calories from protein, fats, carbohydrate, and total.

The book contains many recipes which use wheat gluten: Gluten egg toast (p. 129-30), Gluten bran bread (p. 143), Gluten griddle cakes (p. 143-44), 40% gluten puffs, Gluten bread, 80% gluten puffs (p. 144-45), 40% gluten mush, Cream gluten mush (p. 158).

Also discusses: Agar-agar (p. 107), Cream of almond soup (with almond butter, p. 119), almonds (p. 63, 145), chronic intestinal toxemia as a cause of diabetes (p. 17, 27, 106-07), constipation (p. 106-07), essential features of the new method (p. 19-27, 165-67), peanuts (p. 63), bran (p. 56, 106-07, 144), fasting (p. 24-26), lentils (p. 65), nut butter (p. 121-22), vegetable proteins (p. 61-63), vegetarian diet (p. 61, 166). Address: M.D., LL.D., Chief Medical Director, Battle Creek Sanitarium, Battle Creek, Michigan.

3082. Kellogg, J.H. 1917. *Colon hygiene: comprising new and important facts concerning the physiology of the colon and an account of practical and successful methods of combatting intestinal inactivity and toxaemia.* Battle Creek, Michigan: Good Health Publishing Co. 417 p. Index. 19 cm. “28th thousand.”

• **Summary:** The Preface begins: “That most despised and neglected portion of the body, the colon, has in recent years been made the subject of much scientific study and research, with the result that a lively controversy has been stirred up over the question as to whether this organ should be permitted to remain a part of the “human form divine,” or whether it should be cast out as worse than useless and unworthy of a place in the anatomy of the modern *genus homo*.”

The Preface continues (p. 11-12): “Forty years’ experience and observation in dealing with chronic invalids, and careful study of the results of the modern X-ray investigations of the colon, together with observations made at the operating table in many hundreds of cases, has convinced the writer -

“(1) That constipation with its consequences is the result of the unnatural habits in relation to diet and colon hygiene which prevail among civilized people.”

Note: Dr. Kellogg observed this clearly about 30-40 years before Dr. Denis Burkitt, founder of the “fiber hypothesis.”

“(3) That practically every case of constipation is curable, and in all but exceptional cases without the aid of surgery. It must be added, however, that by cure is not meant the working of such a miracle that the colon will perform its function normally without attention to diet or other means which encourage colon activity, but rather that by observing certain rules and the faithful and continuous use of safe and simple means, the colon may be made to perform its functions in a regular and efficient manner, without the use of irritating laxative drugs.”

One or two rounded tablespoons of sterilized bran should be taken at each meal, the amount depending upon the character of other foods taken.

The section titled “Meat eating” (p. 91-92) states: “Carnivorous animals have a short alimentary canal and a smooth colon. The movement of food stuffs along this short, smooth passage is rapid. This is necessary for the preservation of the life of the animal, as undigested remnants of meat long retained in the body necessarily undergo putrefactive changes with the production of ptomaines and poisons of a dangerous character. The digestion of meat leaves little residue, hence an animal that lives chiefly on meat has but little bulk to stimulate the bowels to activity, a condition which favors the putrefaction of undigested remnants, and this by creating an alkaline condition of the intestines soon develops constipation.

“A diet of fine-flour [white] bread and meat, with the usual concomitants of the ordinary bill of fare, would be an excellent prescription for the production of constipation. Within the last century there has been an enormous increase in the use of flesh foods in all civilized countries; and the use of modern milling processes has become almost universal. Fine flour bread and meat form a combination

that is productive of prodigious harm, not only in causing constipation, but also in depriving the bones of the lime salts [calcium] which are essential for their development and maintenance. From the lack of lime salts comes decay of the teeth, and loss of the teeth leads to imperfect mastication of food. The increased consumption of flesh, and the substitution of fine-flour bread for the wheatmeal of our ancestors, are two calamities, the evil results of which upon the health of the men and women of the present generation are incalculably great.”

The chapter on the “Bowel habits of uncivilized man” states (p. 377):

“In this country the percentage of patients in whom constipation is present is just the reverse of that in Uganda. Whereas in Uganda there are less than two per cent who are constipated, in civilized countries among sick people there is scarcely one in a hundred who is not constipated.

“The rather coarse diet, largely grains and vegetables, has a favorable influence on the bowel movements. The stools are usually very large and fairly soft.”—A.H. Norton, M.D., Haiju, Korea.”

Note: The word “laxative” appears on 58 pages in this book (Dr. Kellogg strongly disapproves of the use of “laxative drugs”), the word “bran” on 35 pages, the word “bulk” on 33 pages, the word “cellulose” on 25 pages, the word “constipation” on 14 pages, the term “sterilized bran” on 10 pages, and the word “laxatives” on 10 pages.

The following words do not appear in this book: “fiber” or “roughage.” Address: M.D., LL.D, Superintendent of the Battle Creek Sanitarium.

3083. Kuhne, Louis. 1917. *Neo-naturopathy: New science of healing, or the doctrine of the unity of diseases*. Butler, New Jersey: Benedict Lust. 291 p. Illust. (incl. front portrait). 25 cm. Special authorized American ed. [Eng]*

• **Summary:** In German: *Die Neue Heilwissenschaft*. This book enjoyed worldwide success, eventually appearing in 24 languages. Louis Kuhne, born in 1853, was the first nature-cure doctor to practice outside the villages in Germany. He advocated a vegetarian diet. Address: Germany.

3084. Lyman, Benjamin Smith. 1917. *Vegetarian diet and dishes*. Philadelphia, Pennsylvania: Ferris & Leach. 416 p. See p. 155-58. Index. Portrait. 21 cm. [3 ref]

• **Summary:** Discusses the physiological, economical, and ethical advantages of a vegetarian diet, with recipes and principles of preparation. The author, who wrote mostly about geology, lived 1835-1920.

A large table titled “Composition of foods” (p. 44-47) gives the percentage of protein, fat, carbohydrates, and ash (on a dry basis) for many foods, including natto, fresh tofu, soy bean—dried, Swiss miso, soy [shoyu] No. 1 and 2, and white miso (all figures from Abel 1900), plus peanuts—dried.

In the chapter titled “Foods of vegetable origin” (p.

141-267), the section on “Pulse” (p. 152-78) contains a subsection titled “Soy bean” (p. 155-58), which begins: “The soy bean of China and Japan is perhaps the most important food plant there, next to rice. The bean is eaten to a small extent boiled like other beans; but is generally elaborated into a variety of products remarkably rich in protein and fat and therefore going well with rice so deficient in those constituents.” The following soy-related subjects are discussed, based largely on the writings of others: Soy sauce (Abel), natto (Abel), miso (R. Takahashi), tofu (Abel), *aburage*, *koritofu*, substitutes for milk and cheese, and nutritional comparison with eggs, milk and cheese (Abel, Atwater).

The section titled “Substitutes for milk and cheese” states: “The Chinese in Paris [probably Li Yu-ying] have been urging the culture of the soy bean. The seeds, when boiled, mashed, and pressed, yield both milk and cheese; if thinned with water, a very good substitute for animal milk; and if coagulated with mineral salt, a cheese that is usually eaten fresh, though it may be preserved by salting or smoking, after being cooked. Three varieties of the cheese are common in the oriental markets; a fermented kind [fermented tofu], white, yellow, or gray in color, with a piquant taste, like roquefort; a salty and white kind, like goats’ milk cheese; and a third kind, smoky and resembling Gruyère. The soy cheese costs about a fiftieth as much as animal cheese; and in nutritive value, like the vegetable milk, compares very favorably with the ordinary products of the cow. (‘Phila. Ledger,’ Sept. 27, 1906).”

Note 1. No such article in the *Philadelphia Ledger* or the *Public Ledger* (Philadelphia, Pennsylvania), of this date, can be found.

Note 2. The idea of “Three varieties of cheese” came from Li Yu-ying (1905-1912) and in this case, where they are common in oriental markets, almost certainly refers to fermented tofu, and not to a Western-style cheese made from fermented tofu.

Note 3. This is the earliest U.S. document seen (Dec. 2008) that mentions smoked tofu.

The section on peanuts (p. 158-62) includes roasted peanuts, peanut butter, peanut taffy, and “Terralac or peanut-milk (here first published).” Details on how to make peanut-milk at home are given, followed by many recipes for its use—each preceded by the word “Terralac.” Thus: Terralac custards, Terralac punch. Terralac cream, salad dressing, sauce, cream sauce, creams, blanc-mange [blancmange], cream pie, Bavarian cheese, Terralac in soup, “Ice-Terralac, or peanut ice-cream,” peanut soup, salted peanuts.

There are also sections on the cowpea (p. 163+), almonds (p. 263-65; incl. salted almonds, marchpane, macaroons, nougat or almond cake, almond milk, orgeat syrup, burnt almonds, replacing almonds), vegetable-gelatine (p. 384-87, incl. carrageen or carrageen [carrageenan], Irish moss, and kanten), sesame oil or gingelly oil (p. 388), peanut

oil or groundnut oil (p. 388), almond oil (p. 389), and sago and sago recipes (p. 390-91, incl. three sago puddings).

Note 3. *Merriam-Webster's Collegiate Dictionary* (1998) defines orgeat (a word first used in 1754) as "a sweet almond-flavored nonalcoholic syrup used as a cocktail ingredient or food flavoring."

3085. Miles, Hallie Eustace (Killick). 1917. *Health without meat... Revised and enlarged. 4th edition* (of "Economy in War Time"). London: Methuen & Co. x + 134 p. 19 cm. *

• **Summary:** The British Library Catalogue lists the author's name as "Killick, afterwards Miles (Hallie)."

3086. Peel, Dorothy Constance S. (Bayliff). 1917. *The eat-less-meat book (War ration housekeeping)*, by Mrs. C.S. Peel. London and New York: John Lane. 207 p. 30 cm.

• **Summary:** The author's name on the title page is written "Mrs. C.S. Peel." She states at the start of chapter 1: "I do not write this book from the point of view of the food reformer (though I think the diet of both rich and poor needs reforming), neither do I write as a vegetarian (though I sympathize with many of their views); but I do write it hoping that I might thereby help those people who wish to do their duty to their country, to utilize every atom of food as intelligently as possible." He first recommendation is that people should eat less meat—which is rationed at the rate of 2¼ lb per person per week. Bread, flour, and sugar are also rationed.

A revised 2nd edition, with the same number of pages, was also published in 1917 in London and New York.

3087. Streatfeild, Fanny K. 1917. *A key to the food problem: With many tested recipes for the dressing of vegetable meat-equivalents*. Upper Norwood, England: Imperial Press. 43 p. 20 cm. *

• **Summary:** This book retails for only one penny. Page 41: Ad by the "The International Health Association, Ltd., Stanborough Park, Watford, Herts." They make Granose, Protose, Avenola, Nuttolene, Health Coffee (made entirely from cereals), I.H.A. Biscuits. "Everybody who studies his health should become acquainted with our Health Foods, for they are manufactured in the interests of health and not merely for profit. For sale at all Health Food Stores and leading Grocers."

"I.H.A. foods are the very basis of food reform. They were the pioneers of the movement in this country and still stand unrivalled."

3089. Oldfield, Josiah. 1917? *The penny guide to fruitarian diet and cookery*. London: The Fruitarian Society. 48 p.

Undated. 19 cm. [1 ref]

• **Summary:** The title page lists the author as "Dr. Josiah Oldfield." At head of title: "Hundred and twentieth thousand," apparently meaning 120,000 copies sold or printed. This vegetarian cookbook uses eggs and milk extensively, so apparently these are considered part of a fruitarian diet. Advertising matter interspersed. The author lived 1863-1953. The Fruitarian Society is currently located at 155 Brompton Road, London, S.W. A list of 16 books and booklets by Dr. Oldfield is given on page 44. Address: D.C.L., M.A., M.C.R.S., L.R.C.P., Senior Physician to the Lady Margaret Hospital, Bromley [England].

3090. Senn, Charles Herman. 1917? *Meals without meat; or, Meatless fare cookery*. 2nd ed. London: Food & Cookery Publishing Co. 138 p. Undated. 16°. *

• **Summary:** The author lived 1862-1934.

3091. *Hartford Courant (Connecticut)*. 1918. Soy beans quoted for meatless days: New method makes them very palatable. Jan. 12. p. 18.

• **Summary:** "The following wholesale and retail prices on thirty-one staple foods are published under the auspices of the United States Food Administration as suggested prices for guidance of the purchasing public."

"Beans are being used extensively on meatless days and the boys in the army are growing fat on them. Soy beans are being included this week, the very reasonable retail price being 11 to 12 cents a pound. Under a new process and with plenty of soaking and cooking, soy beans are being used as a cheap article of food. They have been used as food in China for hundreds of years and are now grown in Ohio and other western states.

"Beans generally are a splendid vegetable substitute for meats. In this respect the value of the soy bean should not be overlooked... Its value is only beginning to be appreciated in this country."

A 3-column table titled "Staple groceries" includes "Soy beans. Retailer pays \$0.09 per lb. Consumer should pay: \$0.11-12 per lb."

3092. Kuhne, Louis. 1918. *The new science of healing. Herald of Health and Naturopath (New York City)* 23(1):42-60. Jan.

• **Summary:** Excerpts from this classic book. What shall we eat? What shall we drink? The digestive process. Indigestibility of denatured food. Man a frugivorous animal. Proof of the beneficial value of vegetable diet. Directions for preparing good wholemeal bread. Directions for preparing wholemeal gruel. Hints for the proper selection of a natural diet. Some simple recipes.

3093. Lindlahr, Henry. 1918. *How I became acquainted with nature cure. Herald of Health and Naturopath (New York*

City) 23(1):21-29. Jan.

• **Summary:** A good autobiography. A large portrait photo shows Henry Lindlahr. To be continued. Address: M.D., N.D., Chicago, Illinois.

3094. *Good Health (Battle Creek, Michigan)*. 1918. Meat for meatless days. 53(2):61-62. Feb.

• **Summary:** "Meat doubtless owes its great reputation as a food to the fact that its proteins are complete proteins and so furnish all the elements needed for building animal tissues.

"This is also true of the proteins of milk and eggs.

"The proteins of most vegetables are not complete. They need to be supplemented by foods which are especially rich in complete proteins."

"Nuts of all sorts and those remarkable legumes, the peanut, and the soy bean which closely resemble nuts in many respects, are then an essential part of a purely vegetable dietary, and the more freely they are used, the less meat, eggs and milk will be required to render a rational dietary fully efficient.

"Practical experience wholly agrees with these scientific observations, and the facts, now well established, should lead to notable changes in our eating habits. The peanut is a generous producer. Its culture enriches the soil as do other legumes, instead of impoverishing it. The soy bean does the same. The culture of these two splendid food products should be encouraged, and the public should be taught to make use of them.

"No one need suffer then. On meatless days, nuts of all sorts, peanuts (which are not nuts botanically but legumes) and soy beans may be served in a variety of attractive ways and are capable of more than filling the place not only of meats, but of eggs as well, and in emergency even taking the place of milk. Excellent nut milks have been for years prepared from almonds and peanuts, and the Chinese prepare a wholesome milk from the soy bean."

3095. Lindlahr, Henry. 1918. How I became acquainted with nature cure (Concluded). *Herald of Health and Naturopath (New York City)* 23(2):122-30. Feb.

• **Summary:** Contents: The law of periodicity. Treatment of acute disease. The unity of disease and cure. The natural treatment of wounds and open sores. The treatment of chronic diseases. Photos show: (1) Dr. Lindlahr's Nature Cure College and Sanitarium, Chicago, Illinois; (2) Dr. Lindlahr's Health Resort, Elmhurst, Illinois. Address: M.D., N.D., Chicago, Illinois.

3096. Lindlahr, Henry. 1918. How I became acquainted with nature cure. Chicago, Illinois: Nature Cure Publishing Co. 64 p. *

• **Summary:** An excellent, concise autobiography. Address: M.D., N.D., Chicago, Illinois.

3097. Shaw, George Bernard. 1918. Life without meat. *Daily Chronicle (London, England)*. March 1. p. 2. No. 17,483.

• **Summary:** Written during World War I, this article presents Shaw's witty thoughts on the health and military benefits of a vegetarian diet. It begins: "It is my patriotic boast that from the day the war began until the present hour, I have abstained rigidly from consuming flesh, fish, fowl, alcohol and tobacco." This "entitles me to speak with some authority on the subject of meatless days." In Britain the soldier is now given a much larger meat ration than the civilian.

"Although I can say nothing about the text-book estimates of how much food we need except that they are all wrong, I affirm with confidence that the civilian who attempts to live on his meat ration will presently find himself an invalid, whilst the more sensible person who boldly gives up meat altogether, and makes it his business to get his fill of unrationed or less stinted food may be none the worse and possibly a good deal better...

"It will, therefore, pay you to eschew the meat ration. By abstaining from it you can combine an air of patriotic self-sacrifice with as much repletion as is good for you. No cheaper and pleasanter way of getting on with the war can be suggested."

Margarine "began as a contemptible imposture produced by torturing animal fat into an imitation of butter. It still has the evil reputation it gained in those days. But to-day it is made from nuts and vegetable oils; and it is probable that after the war butter will be sold as inferior margarine."

"Think of the fierce energy concentrated in an acorn! You bury it in the ground and it explodes into a giant oak. Bury a sheep, and nothing happens but decay. If the Government, instead of leaving the English people to bury sheep in their insides, compels them to bury beans, I will not answer for the consequences. The vegetarian of to-day may be the Bolshevik of to-morrow. The bull is a vegetarian; and if the John Bull takes to the same diet, it may tax all the resources of the Government to put a ring through his nose." Address: England.

3098. Slonaker, J.R.; Card, T.A. 1918. The effect of omnivorous and vegetarian diets on reproduction in the albino rat. *Science* 47(1209):223-24. March 1.

• **Summary:** A vegetarian diet is definitely not suited to rats. "The difference in appearance of the two groups is very marked. The vegetarians are smaller, have less vigor, are less active, have rougher hair and a tendency to sore eyes, while the omnivorous are the reverse in these respects." Address: Dep. of Physiology, Stanford Univ., California.

3099. *J. of the American Medical Association*. 1918. Peanuts as food. 70(12):850-51. March 23. [2 ref]

• **Summary:** This editorial notes that the peanut is a "food which has steadily grown in popularity so that it seems about to be transferred from the category of a delicacy to that of

a more staple item in the diet. The peanut enters into the preparation of most of the vegetable 'meat substitutes' long warmly advocated by the vegetarians and now made more conspicuous by the governmental admonition to 'eat less meat'; and peanut 'butters' or 'pastes' are widely used. Today the value of the peanut crop, which is divided between the production of the valuable peanut oil, peanut cake for animal fodder, and roasted peanuts for human food, has begun to total many millions of dollars."

It "seems appropriate to expect that the peanut, when rightly supplemented, will form a staple article of the human dietary. Like the soy bean, which has lately come into new prominence in American homes, the peanut needs only to have added suitable inorganic salts and the fat-soluble accessory [later named vitamin A] to make it a complete food."

3100. Lyttelton, E. 1918. Food and common sense. *Fortnightly Review (London & New York)* 109:398-407. March. *

3101. Shaw, George Bernard. 1918. Bernard Shaw whacks doctors; Says nature does the job, healers pass the hat. *Herald of Health and Naturopath (New York City)* 23(3):271-74. March.

• **Summary:** From the Hearst newspapers, Sunday, Jan. 27. "People send for the registered doctor because they do not consider it decent to be ill without one... But they go to an unregistered practitioner solely in the hope of being cured. Unless they get well in his hands, they drop him, and his practice collapses." Address: [England].

3102. Wessling, Hannah L. 1918. Use of wheat flour substitutes in baking. *Farmers' Bulletin (USDA)* No. 955. 22 p. March. See p. 12, 14-17, 19.

• **Summary:** This Bulletin was produced in cooperation with the Office of Home Economics, USDA. After the United States entered World War I in mid-1917, increased efforts were made to conserve wheat. "Common foods which can be used to replace wheat in cooking and in meal planning include corn, barley, rice, rye, Kafir, milo, feterita, beans, soy beans, peanuts, potato, sweet potato, dasheen, banana, pumpkin, squash, etc." (p. 3).

In the section on "Yeast breads," there is a recipe for "Soy-bean bread," which includes "1 cup soy-bean meal or flour." Note use of "whole wheat or Graham flour." Among the "Quick or hot breads" soy-related recipes include: Corn-meal, peanut, and wheat biscuits (p. 14; soy-bean meal may be used instead of 1 cup peanut meal). Corn, wheat, soy-bean gems (p. 15, with 1 cup soy-bean meal). Brown bread—Boston style (p. 16, with 1 cup soy bean meal). Soy bean, rice, oatmeal, corn meal, or dasheen muffins (p. 17; 1½ cups soy bean meal may be used in the previous recipe for Potato muffins to replace 1½ cups cooked sweet potato). Fifty per

cent soy-bean wafers (p. 19, with 1½ cups soy bean meal). Address: Specialist in Home Demonstration Work, Office of Extension Work South [USDA].

3103. *Literary Digest*. 1918. Peanuts as food. 56(15):22. April 13. Whole Number 1460. [1 ref]

• **Summary:** "Nuts may be used instead of meat in the diet, and they are being so used more and more... Like the soy-bean, which has lately come into prominence in American homes, the peanut needs only to have added suitable inorganic salts and the fat-soluble accessory [later named vitamin A] to make it a complete food."

3104. Brandt, Charles. 1918. War and vegetarianism. *Herald of Health and Naturopath (New York City)* 23(4):339-41. April.

• **Summary:** "If any advantage may have resulted from this [present European] war, it is that it has shown the importance of vegetarianism." Note: This article was reprinted in the Jan. 1923 issue of this magazine (p. 69-71).

3105. Carque, Otto. 1918. The building stones of the body. *Herald of Health and Naturopath (New York City)* 23(4):332-35. April.

• **Summary:** Includes a discussion of organic salts. Address: [Southern California].

3106. Lust, Benedict. 1918. The principles, aim and program of the nature cure system. *Herald of Health and Naturopath (New York City)* 23(5):423-29. May.

• **Summary:** "The naturopathic program of cure: (1) Elimination of evil habits, or the weeds of life, such as over-eating, alcoholic drinks, drugs, the use of tea, coffee and cocoa that contain poisons, meat eating, improper hours of living, waste of vital forces, lowered vitality, sexual and social aberrations, worry, etc.

"(2) Corrective habits: Correct breathing, correct exercise, right mental attitude. Moderation in the pursuit of health and wealth.

"(3) New principles of living: Proper fasting, selection of food, hydrotherapy, light and air baths, mud baths, osteopathy, chiropractic and other forms of mechano-therapy, heliopathy, steam or Turkish baths, sitz baths, etc."

"Natural healing is the most desirable factor in the regeneration of the race. It is a return to nature in methods of living and treatment... The diet of civilized man is devitalized, is poor in organic salts. The fact that foods are cooked in so many ways and are salted, spiced, sweetened and otherwise made attractive to the palate, induces people to over-eat, and over-eating does more harm than under feeding. High proteid food and lazy habits are the cause of cancer, Bright's disease, rheumatism and the poisons of auto-intoxication.

"There is really but one healing force in existence and

that is Nature herself, which means the inherent power of the organism to overcome disease." Photos show: (1) Adolph Just, famous author of 'Return to Nature' and founder of the original 'Jungborn' in Germany. (2) Dr. Carl Strueh, one of the first Medical men [M.D.] in this country who gave up medicine and operation for Natural Healing. Established in 1897 the first Drugless Institute in Chicago, and in 1906 the now famous Youngborn [Yungborn] and Nature Cure Institution at McHenry, Illinois. "For five years the annual convention of the American Naturopathic Association (ANA) took place at this beautiful and ideal spot for Natural Life." Address: Dr.

3107. *Good Health (Battle Creek, Michigan)*. 1918. The wonderful soy bean. 53(6):352, last page in issue. June.

• **Summary:** "There is perhaps no single food product which is at the present time receiving more attention from chemists, physiologists, and others interested in human nutrition than the soy bean.

"This bean which, like the peanut, has the form of a legume but the composition of a nut, has long been known in the far East, where it is raised in enormous quantities. The soy bean is very rich in protein and fat, but contains very little starch.

"According to Street and Bailey, soy bean meal contains 4.5 per cent of sugar, 0.5 per cent starch, 3.1 per cent dextrin, 4.9 per cent pentosan, 4.9 per cent galactan, and 3.3 per cent cellulose.

"With a total carbohydrate content of 8%, the soy bean becomes very useful as a food for diabetics.

"Recent experiments by Osborne and Mendel, also by Amy I. Daniels and L.B. Nichols, of the University of Wisconsin, have shown that the soy bean is one of the most remarkable of all seeds which have been investigated.

"This bean not only contains a large amount of protein, more than is found in the same weight of beef, namely, about 25%, but its protein is of a particularly fine quality.

"Heretofore, the casein of milk has enjoyed a unique reputation as a protein of finest quality, and now, according to Daniels and Nichols, 'the protein of the soy bean appears to be as valuable as the casein of milk.'

"In view of the present threatened shortage of milk, and the probability that this important food staple will in the future command a much higher price than in the past, even after the present unusual conditions no longer exist, it is gratifying to know that a protein as been discovered equally valuable as casein, and one which may be produced in

unlimited quantities.

"It is true that nuts, including the peanut, have been shown to furnish 'complete' proteins, but as yet these products are grown in too small quantities to constitute any considerable feature in the national bill of fare.

"The peanut industry is, however, developing quite rapidly under the stimulus of the growing popular demand of peanut butter and peanut oil for use in place of butter.

"It must not be forgotten, however, that for the promotion of growth, it is not only necessary for the food to contain 'complete' protein in proper amount, but that it should also contain a sufficiency of the two substances known as vitamins, sometimes designated as fat-soluble A and water-soluble B.

"Osborne and Mendel have recently published in the Journal of Biological Chemistry a paper in which they have demonstrated that the soy bean contains an adequate supply of both fat-soluble and of 'water-soluble vitamins,' in which respect it is superior to all seeds heretofore examined, with the possible exception of flaxseed and millet.

"The soy bean is destined to become one of the great food staples, not only in this country but of the world. It is capable not only of supplying the essentials for growth and maintenance, but may also act as a complement to other imperfect foods, such as corn, for example, in combination with which it has shown most excellent results in animal experiments.

"Mendel and Osborne have shown that for the best results in animal experiments, the soy bean must be cooked. It is evident, however, that the cooking must not be overdone, since it has long been known that super-heating under pressure of fifteen pounds, impairs the nutritive properties of food by destroying the invaluable vitamins."

3108. Kellogg, John Harvey. 1918. Method for changing and reforming the intestinal flora. *American Medicine* 24(6):432-40. June. (Vol. 13 in New Series). [2 ref]

• **Summary:** Contents: Introduction (buttermilk, Metchnikoff). 1. The low-protein diet. Results of recent experiments. 2. Increased intestinal activity (intestinal stasis vs. frequent bowel movements; need to supply the proper amount of bulk and lubrication). Lubrication necessary. 3. The displacement of harmful, putrefactive bacteria by harmless acid-forming bacteria (*B. bifidus* discovered by Tissier). Other anti-toxic ferments.

Dr. Kellogg advocates consumption of a meatless diet that is low in protein, high in carbohydrates, and high in bulk (cellulose, later called "fiber"), supplemented with *Bacillus bulgaricus* (found in buttermilk).

The article begins: "When Poehl, of St. Petersburg [Russia], more than thirty years ago, announced that the putrid stools of infants suffering from diarrhea could be made quickly to disappear by a buttermilk diet, the profession was incredulous; but within a few years the

feeding of buttermilk to sick babies became almost a fad in Paris [France]. This led to a bacteriologic study of buttermilk.” Grigoroff in Geneva [Switzerland] “discovered a vigorous growing acid-forming bacillus to which was later given the name *B. bulgaricus*. Tissier, then first assistant to Metchnikoff, in studying this new organism found that it possessed to a remarkable degree the property of suppressing the growth of putrefactive organisms, a property which he showed to be common to all acid-forming organisms.

“Metchnikoff soon announced this important discovery to the world, and the new bacillus was hailed as a panacea for nearly all human ills. Buttermilk germs in tablets or vials were soon being dispensed by druggists and later by milk venders [vendors] thruout the civilized world, but the results were disappointing... To change the intestinal flora is not an easy matter.”

Several measures must be employed in conjunction successfully to change the intestinal flora. These are: 1. A diet that will produce in the intestine a media unfavorable for the growth of putrefactive and pathogenic organisms. 2. Increased activity of the colon. 3. The introduction into the intestine and especially the colon of large quantities of acid-forming or protective bacteria.”

1. The low protein diet.—It is a matter of common observation that carbohydrates (starches and sugars) ferment, while proteins putrefy.” In this respect there is a marked difference in the character of the stools of a vegetable-eating animal, like the sheep, and a carnivorous animal, like the dog. “How to get the required amount of carbohydrates into the colon is the problem.” “Since the epoch-making experiments of Chittenden [at Yale in Connecticut], supplemented by those of Folin at Harvard [in Massachusetts], Hindhede of Copenhagen [Denmark] and other investigators, the sufficiency of a low-protein diet to support life and health can no longer be questioned.” Folin shows that fruits, grains, and vegetables contain enough protein; flesh foods and even eggs may be excluded. At the Battle Creek Sanitarium, “for more than forty years, a low protein dietary has been employed as a prominent feature in the general therapeutic program employed in the treatment of more than one hundred thousand patients...”

2. Increased intestinal activity. To prevent the development of putrefactive bacteria, “acceleration of the food materials along the intestinal tract” is important. There is a clear relationship between intestinal stasis and resulting toxemia. Increased frequency of bowel movements is desirable, and a sign of good health and vitality. Primitive people typically have three bowel movements a day, one after every meal. “The chimpanzees and other big apes in zoological gardens move their bowels four to six times a day.”

“It is usually quite easy by the methodical use of simple means to acquire the habit of three bowel movements daily and the results of this practice have always been found to

be beneficial and in no way harmful. The method is quite simple. It is only necessary to supply the proper amount of bulk and lubrication required in each individual case. For giving the diet a proper amount of bulk, Nature has provided only a single food substance. This is cellulose... Cellulose is found in larger or smaller quantities in practically all vegetable foods... In fruits and fresh vegetables cellulose is found in a newly formed state in which it is very easily broken up, and it is on this account less valuable as bulk-producing material. It is easily acted upon by bacteria and broken up into gases resembling illuminating gas. The bran of cereals represents an older form of cellulose in which it has been transformed into wood and which is resistant to bacteria. Agar-agar represents a peculiar form of cellulose known as ‘hemi-cellulose,’ which is soluble in boiling water. This is also indigestible. All forms of cellulose are useful in giving bulk to the intestinal contents; but bran and agar-agar, known also as ‘Japanese isinglass,’ are most valuable.

“For efficient stimulation of the intestine it is necessary to take with the food daily from two-thirds of an ounce to one or two ounces of cellulose. This indigestible material or roughage should not be taken at a single dose but should be taken at each meal in such a way that it will be thoroly mixed with the various other food substances so that it will be equally distributed along the intestine. Care must be taken that requisite amount of cellulose is taken at every meal without exception. The omission to supply the necessary bulk for one single meal may give rise to stasis, the ill effects of which may last for several days.”

Note 1. This is the earliest article seen (Sept. 2009) by Dr. John Harvey Kellogg advocating the importance of dietary fiber—which he refers to as bulk, cellulose, bran, and hemi-cellulose. He was one of the first American physicians to recognize the importance of dietary fiber and he emphasized its importance throughout his many years of teaching.

Note 2. This is the earliest document seen (Sept. 2009) by Dr. Kellogg that contains the phrase “changing the intestinal flora,” or that advocates doing this.

Note 3. This is the earliest document seen (Sept. 2009) by Dr. Kellogg that mentions the *bifidus* bacterium or *B. bifidus*. *Bifidobacterium* is a genus of Gram-positive, anaerobic bacteria inhabiting the Gastrointestinal tract. Bifidobacteria are one of the major genera of bacteria that make up the gut flora, the bacteria that reside in the colon. Bifidobacteria aid in digestion, are associated with lower incidence of some allergies, and prevent some forms of tumor growth. Some bifidobacteria are used as “probiotics.” Before about the 1960s, *Bifidobacterium* species were collectively referred to as “*Lactobacillus bifidus*”. Address: M.D., Battle Creek, Michigan.

3109. *Chicago Daily Tribune*. 1918. Wartime recipes. July 7. p. A8F.

• **Summary:** Below each recipe is given the name, city, and state of the person who developed and submitted it. Soy related recipe include: Soy bean muffins (with 1 cup “soy bean meal”). Soy bean muffins with dates and nuts (with ½ cup “soy bean meal”). There is also a non-soy recipe for Vegetarian shortcake.

3110. Tunison, Edward. 1918. Healthful eating. *Herald of Health and Naturopath (New York City)* 23(7):652-53. July.

• **Summary:** Gives 16 rules for healthful eating: (1) Eat only when you are hungry. (2) Eat preferably natural foods. Natural foods include whole cereal grains, vegetables, legumes, fruits, and dairy products (eggs, milk, cheese, butter). “Unnatural foods are: Meats, game, poultry and fish.” (3) Chew your food thoroughly; never bolt it... (16) Do not mix starchy foods: Discusses food combining, food combinations, and inharmonious mixtures. Address: Dietitian.

3111. *J. of the American Medical Association*. 1918.

Editorial: The daily press and the “Futilities of contemporary science.” 71(13):1060. Sept. 28. [2 ref]

• **Summary:** “Under the caption ‘Futilities of Contemporary Science,’ a newspaper of no less dignity than the *New York Times* (June 29, 1918) attempts to exploit in semijocular vein the press dispatches regarding investigations of Hindhede of Copenhagen on restricted diets. This student of nutrition, who has long advocated economy in diet and particularly in the use of animal protein, has lately shown that adults could live without apparent detriment for a period of more than one and one-half years on a ration of bread, potato, vegetables and fruits without added fats. Such experiments, among many others that might be cited, help to rob the vision of meatless days and beefless weeks of the terror which it inspires in the breasts of the uninitiated. Man’s health and strength are not dependent on the assumed superior virtues of animal flesh as a dietary constituent.”

3112. Jordan, Sam. 1918. Soy beans from soup to nuts: A new crop with many uses both on farms and in factories. *Country Gentleman* 83(39):7, 34. Sept. 28.

• **Summary:** Begins by discussing: The possibilities of soy beans “as a substitute for meat.” The rising demand for “soy oil” which started a few years ago when the flax crop was little better than a total failure. “Industrial uses” of soy oil in soap, paint, and varnish. “Several packing houses were experimenting with the oil as a possibility in oleomargarine manufacture.” “Soys fix soils for cotton.” “Varieties of soy beans have been matured as far north as Quebec” [Canada]. The “development of the soy in the cotton sections will no doubt be swifter from an industrial standpoint because of the already existing facilities for oil extraction.”

Concerning food uses, the author believes that “the soy bean as human food is destined to play a leading part in the

way of a substitute for meat. From studies made of soy beans as food, the use of flour seems to be one form in which their use will suit the American taste and palate best.”

“I have heard that the soy-bean milkman comes around before breakfast each morning in the Orient and leaves soy-bean milk.” A Chinese student recently verified this story and said that in his family’s household “it was customary to drink a glass of the milk upon arising.” The student added that fried bean curd was often served for breakfast, and with soy sauce for dinner. “This soy sauce is something more or less familiar to Americans, the acquaintance being contingent upon the frequency with which our Chinese restaurants are patronized. It is the dark-brown liquid usually on the tables in the vinegar bottles. It is also the base of our Worcestershire sauces.

“For supper a favorite dish is sprouted beans in salad form, mixed with small pieces of meat or egg. They usually have also some form of bean cheese or fermented boiled beans. Next to baked and boiled beans, the preparation of soy-bean milk is a thing which should be more widely known.”

“The author gives a brief description of how this milk is made, noting that it can be used in “cream sauces, puddings, custards, and even ice cream when some high flavoring is added to kill the beany taste. Much of the strong taste can be eliminated by boiling the milk slowly and stirring to prevent scalding.

“The residue [okara] obtained by straining the milk makes an excellent base for muffins and even bread, when it is used in the proportion of one part to three or four parts of wheat flour.”

“In regard to fresh bean curd or ‘tofu,’ as the Chinese call it, it is hardly probable that we shall use it generally at an early date. The process of making it will no doubt come through the activities of our increasing number of women home-demonstration agents and, also, it is being made commercially by several Chinese firms in this country. When it does become more widely known, however, it is destined to be used extensively. It has very little taste of its own, and takes the flavor of everything with which it is used, generally as a base. It is also highly nutritious.

“Soy sauce is likewise destined for greater use, but the process of its manufacture is too complicated for domestic preparation. It can be purchased at Chinese groceries in this country, and probably from the majority of Chinese restaurants.

“Another dish which tastes as good as it looks or sounds is soy-bean sprouts. The smaller beans, of some yellow or green variety, are usually used.” They are excellent because of “their use in the winter, acting as a green vegetable, and the fact that the vegetable can be had whenever wanted.”

“And here is one for vegetarians—a ‘vegetarian roast.’ This is made by using equal parts of soy beans and peanuts, with the peanuts roasted and the beans boiled until soft

before both are mixed and treated as an ordinary meat loaf. Such a roast as this is now being prepared by several food-manufacturing firms in the South, where both peanuts and soy beans are plentiful. It is being placed on the market in one and two pound containers.”

“The beans served as a green vegetable are treated after hulling in much the same manner as Lima beans or peas. To hull, however, they should be boiled in the pods for about five minutes, then dipped into cold water, after which they shell easily. They can also be canned in this way, treating them after hulling the same as Lima beans. It is often desirable to serve them with rice or potatoes.”

“So here we have a small glimpse of what their [soy beans’] future really is. A crop with a great industrial importance, a crop with known forage and manurial possibilities, and a crop holding forth a beneficent promise as an essential food, soy beans will soon be giving corn and wheat a close race for the more prominent places on our agricultural map.”

Photos show: (1) Soy beans after being soaked but before boiling. (2) Piles of hay, used for forage. (3) Side view of a soy-bean harvester (with a man on top, pulled by two horses) used in the South, showing the bags filled. (4) A rear view of the same separating and bagging soy-bean harvester. Note: This is actually an early harvester-thresher, also called a “combine.”

Note 1. This is the earliest document seen (March 1912) that uses the term “from soup to nuts” in connection with soybeans.

Note 2. This is the earliest English-language document seen (Jan. 1913) that uses the term “soy-bean sprouts” to refer to these sprouts. Address: Columbia, Missouri.

3113. MacDougall, Sarah. 1918. Introducing to America an entirely new food—The soy bean: Dr. Yamei Kin. *Bean-Bag (The)* (St. Louis, Missouri) 1(5):17-19. Oct.

• **Summary:** From St. Louis Post-Dispatch Sunday Magazine: “Soy beans! Once I tried to cook them. After that I never wanted to hear any more about them. But that was before I was invited to a soy bean luncheon in a Greenwich Village apartment. Whenever anyone said ‘soy beans,’ I would recall that bowl of pebbles and then an unspeakably unpalatable mass of stuff that had to be thrown away. But now! As long as I live soy beans will seem like a symbol of pleasant sensations inside and out. I must tell you about that luncheon.

“I went the other day to see Dr. Yamei Kin, a charming Chinese woman, who is giving her time and talents to the Government to help solve the food problem. Her specialty is Oriental food, especially soy beans, and she has been spending the summer showing how that food can be adapted to Occidental appetites. I found her in a blue silk kimono and a big white apron, hustling about the kitchen of the United States Department of Agriculture Laboratory in New York.

“The place looked as if somebody had just milked the cows and brought in the milk pails. On the floor near the stove were two 12-quart pails filled with warm milk. Dr. Kin was starting to make curds and whey. I watched her put a couple of spoonfuls of fluid into each pail and saw the milk curdle in the good old way. Then the Chinese boy helper strained the stuff through an aluminum strainer and cheesecloth. They were going to make cheese.

“The Chinese lad had just finished milking the soy beans before I came in. That may sound queer to a mind that doesn’t orientate toward those beans. But it’s all very simple. If we knew as much as we ought to know about soy beans there wouldn’t need to be any cattle or grazing lands or winter fodder. Because soy beans are ready to supply meat and milk and butter and cheese and all the rest of it. Dr. Kin says so. And there are rows of jars and bottles on shelves and tables in that kitchen to prove it. Besides, there was a soy bean luncheon.

“The beans from which the milk had been extracted were soaked the night before. In the morning the Chinese lad put them through the mill, which is part of the kitchen equipment. It looks primitive, being made of two huge pieces of granite, imported from China. In its homeland this mill is worked by coolies, in New York by electricity. When the grist comes out of the mill it is strained. That was the stuff that filled those two pails. Dr. Kin told me that in China people eat the curds and cheese in their natural state. Here, however, she is making that cheese a base for a series of camouflage experiments.

“‘We made ours into fish for dinner last night,’ said a man from a nearby laboratory, who comes in every day to find out whatever happens to be new about soy beans.

“‘How was it?’ asked Dr. Kin.

“‘Great,’ said the man. ‘My wife fried a couple of fish and then fried some soy bean cheese in the gravy, and, honest to goodness, I couldn’t tell which was which. It has a way of absorbing the flavor of whatever it’s cooked with,’ he explained to me.

“‘We had ours with chops,’ remarked another laboratory expert who joined us. His name was Mr. Gleason. He declared that if he didn’t know the difference he might have thought he was eating an extra chop. Everybody in the place was ready to root for soy beans.

“Dr. Kin explained that the reason the soy bean has been misunderstood in America was because people didn’t take the trouble to investigate and analyze it, and to find out what are its food properties with reference to the nutrition we get from meat and vegetable.

“‘Don’t try to think about soy beans in a scientific way,’ she advised me. ‘This thing I am working with is in reality a vegetable cheese. It takes the place of meat. We’ve been using soy beans in China for over 2,000 years, and they are really very delicious and nutritious,’ this in an offhand way, as if an experiment of 20 centuries or so ought to pave the

way for the American appetite. She didn't want me to get my mind cluttered with such terms as carbohydrates and proteins.

"I wouldn't waste a minute experimenting with food that was merely nutritious,' she told me. 'This whole movement about finding out the possibilities of food is part of the cultural development of the American people. The older a civilization becomes, the more people like to be surrounded by beautiful things. Chinese art, you know, is the most highly developed art in the world. All this bother about beans is not a question of science or of what is good for us, but it is a question of what is dainty, what is nice, what appeals to the taste. Making a study of eating is a part of the fine art of living.

"American women, you must admit, are lacking in artistic sense. That is because the country is so young. When the process of refinement is farther advanced they will not regard household work, and especially cooking, as drudgery. It is really art. The older nations, being more cultured, make a deeper study of things. Chinese, for instance. But the Americans are very susceptible, very open-minded and frank and eager to acquire new ideas.

"The trouble with vegetarians was that they expected us to eat such awful things. I'm not a vegetarian, but I must admit that I find great satisfaction in being able to sit down to most of my meals without facing the fact that I am eating slices of what was once a palpitating little animal, filled with the joy of life. I shouldn't be surprised if the soy bean will save the lives of many American animals.'

"On a long table was a row of glass jars filled with what looked like slices of white cheese [fermented tofu]. It was soy bean cheese. A jar was filled with a brownish paste [probably a type of Chinese jiang]. It was soy beans. There were bottles filled with the condiment we get with chop suey. That, too, was made from soy beans. Talk about dual personalities! The soy bean has so many aliases that if you couldn't like it in one form you would be pretty sure to like it in another.

"Dr. Kin has been trying any number of experiments with a view to boosting the bean to a bigger place commercially. In due time the results of all these experiments will be catalogued at Washington [DC]. Perhaps some day there will be a Bureau of Beans, from which may be obtained for the asking recipes on a thousand ways to prepare soy beans.

"Because she is working for the Government Dr. Kin doesn't disclose many details about the things she is doing. All that is worth while will be public information in due time, she says. Canning curds and cheese so they can be kept an indefinite length of time and then utilized in various forms is something she is trying to perfect.

"I might talk to you until doomsday about the manifold uses of soy beans, but you wouldn't understand,' she told me candidly. Then she invited me to have luncheon in

her apartment, promising me a practical and palatable demonstration that would make an impression in the way food ought to interest us. Of course, I was charmed with the idea. The only hitch was that I had to have luncheon without my hostess. Dr. Kin was going out of town early in the afternoon.

"While the Chinese lad was getting his instructions about piloting me to the apartment and serving luncheon, Dr. Kin turned to me and asked what kind of cheese I liked best.

"Roquefort,' said I.

"That's good,' said she, and then she told the boy something else in Chinese, told me she hoped I'd enjoy the luncheon and invited me to spend all afternoon at the flat if I cared to read any of her books or look at her pictures.

"Before we turned in at 56 West Eleventh street, I discovered that Wei, my amiable escort, was somewhat limited as to English vocabulary. He had been here only six months. When he entered the apartment he ushered me into a cool-looking parlor, indicated a comfortable big chair beside an open window, and disappeared with a smile that seemed to say: 'I'll rustle along the luncheon if you just sit there and fan yourself.'

"In a corner over near a window there was a big mahogany desk that looked like business. On it was the photograph of a Chinese-American youth, a strapping tall fellow who looked every bit a soldier. He is Dr. Kin's soldier son, Alexander, 21 years old, who left college to enlist as a private, and is now with Pershing's Eighty-second Division.

"A book and a magazine lay side by side on that desk. The book was Rabindranath Tagore's 'Nationalism.' The magazine was 'The Bean Bag.' I took up the magazine. Here are a few things I learned:

"Three million acres have been cultivated to soy beans in the South, principally in North Carolina; man could come nearer living well on soy beans alone than on any other food: it is the nearest substitute to meat there is; containing starch, sugar, fat, cellulose, albuminoids, mineral salts; a new harvester has been invented that threshes the beans on the vines, over 100 American manufacturers are using soy bean oil for soap, paint, varnish, enamel, salad oil; soy beans are listed in the food market of the District of Columbia; the soy, or soja, is the first and oldest of the 150 branches of the bean family; Manchuria claims the honor of its nativity; the Manchurian railroad recently opened a branch and an improvement station for distribution of the Ssuningkai special." Continued.

3114. McCollum, Elmer V. 1918. The newer knowledge of nutrition: The use of food for the preservation of vitality and health. New York, NY: The Macmillan Co. ix + 199 p. Oct. Index. [82 ref]

• **Summary:** A nutrition classic, first published during World War I. Chapter II, titled "Experimental scurvy and the dietary properties of vegetables," the subsection on "Similarity of

the seeds from the dietary standpoint” states (p. 38): “The list of seeds examined included wheat, corn, rice, rolled, oats, rye, barley, kaffir corn, millet seed, flaxseed, pea and both the navy and the soy bean. These all contain proteins which are distinctly lower biological value for growth than are the proteins of milk; they all are too poor in the three inorganic elements, calcium, sodium and chlorine. All are, with the exception of the millet seed, below the optimum in their content of the dietary factor, fat-soluble A.” (Note: Endnote no. 9, p. 192, states that the data on soy bean was recorded by McCollum, Simmonds, and Parsons, but is unpublished).

In Chapter 7, “Practical considerations which should guide in the planning of the diet” (p. 130+) the soy bean is mentioned several times. Page 141: “It is not possible to compare the cost of any of these [grains and legumes] with milk or the leafy vegetables such as cabbage, cauliflower, Swiss chard, collards, Brussels sprouts, onions, lettuce, celery tops, spinach, turnip tops and other leaves employed as greens. Milk and the leafy vegetables are to be regarded as *protective foods*. In some degree eggs are to be considered in the same class. Milk and the leafy vegetables should be taken in liberal amounts. The leaves should not be regarded as foods of low value because their content of protein, fat and carbohydrate is low, and the content of water high.”

Pages 142-43: “Owing to the present shortage of certain foodstuffs, there has been a tendency to consider the introduction of certain new products hitherto not generally employed in a large way as human foods, and to extend their use by extolling their virtues. Conspicuous among these are the peanut press cake, which remains after the oil is extracted by pressure, the soy bean and cottonseed flour... These movements directed toward the utilization of all our food resources are laudable, but the information which is disseminated concerning these products by their enthusiastic promoters is not in all cases accurate and sufficiently complete to serve as a safe guide to the user. They are extolled in the time-honored fashion as foods rich in protein and energy, but their exact place in the dietary is not sufficiently emphasized. There can be no doubt that the peanut is a wholesome food, and can be used to advantage in the diet of man in moderate amounts. It is likewise a good source of protein of fairly good quality. The same can be said of the soy bean. The protein of neither of these have extraordinary values... The point to be emphasized in this connection, is that *these are seed products, and have in a general way the peculiar dietary properties common to seeds*. Their place in the diet is therefore clear. They may be employed in moderate amounts along with other seeds and seed products, provided that they are supplemented with sufficient amounts of the *protective foods*, milk and the leafy vegetables.”

Page 144: “The paramount importance of maintaining and of increasing the production of milk makes it necessary to utilize a large amount of protein-rich foods in the dairy

industry. The wisest plan is to extend the use of peanut, soy bean and cottonseed products for milk production.”

Page 145: “Experimental data seems to have established that the proteins of the peanut and the soy bean are of better quality than those of the pea or the navy bean. From the author’s studies of the soy bean it appears that its proteins have about the same quality as those of the cereal grains, but it contains three times as much protein as the latter. Its content of fat-soluble A is such that a mixture of soy bean and starch which has the same protein content as the wheat kernel, probably has about the same dietary properties as has wheat with respect to these two dietary factors. There is no reason why the peanut and soy bean should not be employed to a greater extent as human foods, but it should be kept in mind that good use is already being made of these products in the feeding of dairy cows, and that if they are withdrawn from this application for use as human foods directly, it will not be easy to find something to take their place in the dairy industry.”

In the section titled “Legends to the charts,” which shows the weight gain and reproduction of rats when fed milk vs. various seeds, soy is mentioned on p. 172-75. The author concludes: “We have not been able to find any two seeds whose proteins, when fed together, even approximate the value of the proteins in milk” (p. 173).

In Chapter III, titled “The vegetarian diet,” the author expresses his general dislike of such a diet and his fondness for dairy milk.

Many subsequent editions of this book were published, in 1919, 1920, 1922, 1923, 1925, etc.

Note: The author, Elmer Verner McCollum, was born in 1879, a Kansas farm boy. He was a pioneer in research on vitamins. In 1912 Dr. McCollum and Marguerite Davis discovered a substance in cow’s milk, butter fat, and egg yolk that seemed to be essential to growth in animals in laboratories. Their discovery was later called vitamin A, the first vitamin to be discovered. Additional vitamins were discovered and elimination of deficiency diseases now became possible through the consumption of vitamin rich foods. McCollum was the first to assign letters of the alphabet to the various vitamins.

McCollum coined the term “protective foods” for any foods containing vitamin A—namely whole milk, butter, green leafy vegetables, and eggs. With the promotion of these foods, the dairy industry boomed.

Note: This is the earliest English-language document seen (Nov. 2020) that contains the term “biological value” used as a measure of protein quality. Address: School of Hygiene and Public Health, John Hopkins Univ.

3116. Allinson, Thomas Richard. 1918. *Wholesome cookery: Being recipes for vegetarian dishes in special relation to health*. London. 8°. *

• **Summary:** Biography: Thomas Richard Allinson was born at Grange-Over-Sands, in central western England, just north of Lancaster, on Morecambe Bay. At age 15 he became a chemist's assistant. In 1881 he qualified as a doctor from Edinburgh University. Dr. Allinson believed that diet influenced people's health and encouraged his patients to eat wholemeal bread as part of a vegetarian diet. He explained his theories on the importance of diet and exercise in his book *A System of Hygienic Medicine* (1886). He also wrote *The advantages of Wholemeal Bread* and books on stomach diseases, rheumatism, and vegetarian cookery.

In 1892 Dr. Allinson decided to establish his own Natural Food Company, with the slogan "Health without Medicine." He also acquired a mill in Bethnal Green (in London), where he began producing his own wholemeal flour and selling it to his patients. He also sold it to bakers and gradually wholemeal bread became available in shops throughout Britain. It wasn't long before Dr. Allinson's milling company diversified into baking its own wholemeal bread, a tradition kept alive to this day. (Source: www.spartacus.schoolnet.co.uk. www.allinsonbread.com).

3117. Allinson, Thomas Richard. 1918. *A system of hygienic medicine: or The only rational way of treating disease*. 13th ed. London. 8°. *

• **Summary:** The author explains his ideas on the importance of diet and exercise. Address: England.

3118. Armsby, Henry Prentiss. 1918. *The conservation of food energy*. Philadelphia and London: W.B. Saunders Co. 65 p. Index. 19 cm. [1 ref]

• **Summary:** Contents: Introductory: Crude products inedible, two methods of utilization, their relative efficiency. 1. The measure of food values: What food supplies, food energy, availability, other factors. 2. Energy in human foods: How determined, energy values. 3. The efficiency of the animal: Recovery of energy, net energy values, value of forage. 4. Food value of increase by animal: Not all edible, cattle, sheep, pigs, dairy cows. 5. The overhead feed cost: Maintenance, maintenance by forage crops, forage crops for production. 6. Wheat: Feeding directly, milling, whole wheat flour. 7. Corn. 8. Barley. 9. Rye. 10. Oats. Rice. Buckwheat. 11. Cottonseed: Feeding directly, oil extraction (edible oil, cottonseed meal), cottonseed flour. 12. Peanuts. 13. Milk. 14. Summary: Loss in feeding, comparison of animals, inedible products saved, milling vs. feeding, vegetable oils, brewing and distilling.

Compares briefly the efficiency of the various methods by which some of the more important farm products can be made to contribute to the food supply. The comparisons are based solely on the proportion of the total energy of the

products which can be recovered for human use. Among the points emphasized are the great loss of energy involved in the feeding of live stock and the wastefulness of diversion to stock feeding of any material edible by humans; the percentage recovery of energy in pigs and dairy cows as compared with beef cattle and sheep; and the importance of utilization in animal feeding of by-products of manufacturing inedible by humans. Address: PhD, LL.D., Director of the Inst. of Animal Nutrition, Pennsylvania State College; Expert in Animal Nutrition, USDA.

• **Summary:** About vegetarianism.

3124. Lusk, Graham. 1918. *Food in war time*. Philadelphia, Pennsylvania, and London: W.B. Saunders Co. 46 p. Index.

• **Summary:** Dr. Graham Lusk is a descendant of Sylvester Graham, the famous American diet reformer who popularized the use of Graham bread. Lusk states: "Of

course, vegetarianism is no new thing. Its principal exponent was Sylvester Graham. It so happens that he was the brother of my great grandmother and of him my father wrote in 1861, 'long, lanky, Sylvester Graham, leanest of men.' Graham in 1829 began the advocacy of moderation in the use of a diet consisting of vegetables, Graham bread, fruits, nuts, salts and pure water, and excluding meat, sauces, salads, tea, coffee, alcohol, pepper, and mustard. The first effect of this diet, which largely eliminated the flavors, was to reduce the weight through lowering the intake of food, but the health of many followers of the diet appears to have been benefited. The 'Graham System' of dieting suffered from withering criticism at the time. He published in 1837 a little book entitled, *Bread and Bread Making*, bearing on its cover the scriptural quotation 'Bread strengtheneth man's heart.' He says in this volume:

"But while the people of our country are entirely given up as they are at present, to gross and promiscuous feeding on the dead carcasses of animals and to the untiring pursuit of wealth, it is perhaps wholly vain for a single individual to raise his voice on a subject of this kind.

"The well-known work of Chittenden has shown that when the protein intake is reduced by one half or less of that which the average American appetite suggests, professional men, soldiers and athletes may be maintained in the best physical condition. One of Yale's [New Haven, Connecticut] champion intercollegiate athletes won all the events of the year in which he was entered while living on a reduced protein or Chittenden diet. Upon such a diet, or less than that, the people of Germany are now living to-day. The principle involves eating meat very sparingly, taking half a piece where one would have formerly been taken, and using it only for its flavor. The wing of a chicken has little meat on it and yet if eaten together with vegetables it gives the meal a different quality than it would have had without it, and to this extent its use is warranted. The muscles are active when hard labor is done, but the muscles do not need meat for the performance of their work. A fasting man may have considerable power. The popular idea of the necessity of meat for a laboring man may be epitomized in the statement: a strong man can eat more meat than a weak one, hence meat makes a man strong. The proposition is evidently absurd.

"Not only is the taking of meat without beneficial relation to the capacity for muscular work, but, in fact, an exclusive meat diet results in the sensation that work is being accomplished with difficulty. When meat is metabolized it stimulates the body to a higher heat production, as great an increase as 55 per cent. having been observed in a resting man. No other food-stuff will accomplish so great an increase. It is especially worthy of note that this increase in the heat production, due to the specific dynamic action of protein, as it is called, cannot be utilized in the execution of mechanical work. When the organism of a laborer at work in a hot environment is called upon to eliminate extra heat,

due to the work he is performing, he must also eliminate the quota of heat which is derived from any large ingestion of meat. Hence, the American farmer in the hot weather can eat little meat.

"So far as is known, taking meat even in large excess is not harmful, but it represents luxury and waste. According to an oral statement by A. E. Taylor, the results of many thousand urinary analyses in Germany during the second year of the war showed about 7 grams of nitrogen excreted, which would correspond to a dietary containing about 45 grams of protein. As a matter of fact, this is the equivalent of the reduced protein dietary of Chittenden, and it is reported that no ill effects can be attributed to it. The flavor of meat is such that it lends itself to the easy preparation of a palatable meal, but this flavor could undoubtedly be as well obtained if the present consumption of meat were cut in two. It is a question of habit, but with the present reduced supply of meat, one must adopt new habits. It would be highly desirable if the grain now fed to fatten beef were given to maintain herds of milch cows" (p. 16-18). Address: Prof. of Physiology, Cornell Univ. Medical College in New York City.

3125. Lust, Benedict; Purington, Edward Earle. eds. 1918. Universal naturopathic encyclopedia, directory and buyers' guide: year book of drugless therapy for 1918-19: containing E.E. 3126. Montagné, Prosper. 1918. La bonne chère pas chère sans viande [Good food is not expensive without meat]. Paris: Editions Pierre Lafitte. 2 + iii + 126 p. 19 cm. [Fre] • **Summary:** This is a French vegetarian cookbook published during the period of food shortages at the end of and shortly after World War I. The author (lived 1865-1948) may also be the author of the famed French food encyclopedia *Larousse Gastronomique*.

In Chapter 6, "Complementary Recipes," page 104 discusses soy sauce: "Formula 324.—Soya extract (*Extrait de Soja*). This extract, which is found read-made in commerce, considerably enhances the taste of dishes prepared without meat. It is made from the soybean (*le soja; soja hispida*)..." The composition of soy sauce is given. "Soya extract is used in very small quantities. A few drops will be enough to give a good taste to a large bowl of water-based soup (*potage à l'eau*). You can also add it at the end of the cooking process to most recipes that call for either broth or gravy.

Formula 366 (p. 116-17) is titled "Soya or Essence of Mushrooms," but soy does not seem to be mentioned in the formula for this condiment. The recipe enables you use

locally grown mushrooms to make a product resembling soy sauce during wartime scarcity when real soy sauce is not available. Address: France.

3127. Partridge, Pauline Dunwell; Conklin, Hester Martha. 1918. *Wheatless and meatless days*. New York, NY, and London: D. Appleton and Company. viii + 224 p. 20 cm.

• **Summary:** This American vegetarian cookbook, dedicated to America's soldiers and sailors (during World War I) also discusses food conservation and the elimination of waste as part of the wartime effort. The book is divided into two parts: (1) Wheatless recipes, and (2) meatless recipes—including meat substitutes; soya is not mentioned. Address: 2. Instructor, Home Economics Dep., San Diego High School, San Diego, California.

3131. Palen, L.S. 1919. The romance of the soya bean. *Asia: The American Magazine on the Orient (Asia and the Americas)* 19(1):68-74. Jan. Illust.

• **Summary:** The author, who begins by acknowledging his indebtedness to Dr. Yamei Kin, Dr. John Harvey Kellogg, and Mr. W.J. Morse for much of the material in this article, gives an overview of the soya bean worldwide. The article contains excellent photos (many by Adachi): (1) Stacks of soya bean cake in open storage on Dairen wharves, South Manchuria. (2) Horses plowing soybean fields in North Manchuria. (3) Modern machinery [a huge steam-powered tractor] used in bean cultivation in remote parts of Manchuria where foreign interests are involved. A Western man and woman ride horses nearby. Caption: "To the Manchurian farmer, with his laborious methods of hand cutting and hand winnowing, the introduction of modern Western farming methods would spell many-fold prosperity."

Note: This is the earliest document seen (June 2020) that shows a photo of a tractor in connection with soybeans. (4) Stacks of soybeans piled high in sacks in Manchuria as far as the eye can see. (5) Soybeans stored in huge cylindrical, 20-foot-high osier bins, each covered with a conical top.

Soy oil is purified and flavored with an admixture of olive oil for use as a salad oil. It also forms the basis of some of our butter and lard substitutes. "What Mr. Li Yu-ying accomplished in Paris in the establishment of a Laboratory of Research and of a factory for the production of all the products derived from the soya has been the forerunner of activity on the part of certain independent Chinese companies in America and of government and private investigations."

"In general the use of whole soya beans has not been attended with much success because of the ever present flavor of the oil content and because, with the ordinary method of cooking, they remain hard and unpalatable; but it has been found that cooking at a temperature somewhat above the boiling point, say from 220 to 230 degrees, breaks up the cellulose structure and develops a richness of flavor that is not obtainable with the lower temperature."

"By far the most extensive use of the soya is in the products manufactured from it. And it is here that Dr. Yamei Kin, the talented Chinese physician, is making her chief studies under the direction of the Pure Foods Division of the Department of Agriculture, with the purpose of spreading a knowledge of the soya among Americans. For convenience of consideration the products studied may be divided into sauces, curds, cheeses and milk.

"Of the sauces the liquid form is already familiar, although unrecognized, perhaps, by a large percentage of Occidentals through the work of early English traders in bringing back the base of the now famous Lea and Perrins Worcestershire Sauce. This original Chinese *shi-yu* was highly spiced and became a well recognized adjunct to many an English meal. Following the example of Lea and Perrins, others have put out sauces with the same base without, however, attaining the same success, because the makers did not understand that there are many kinds of soya

sauce. While they are all made by the same ferments and in the same general way, they differ very greatly in quality according to the locality and to the manufacturer, just as wine, though made from the identical kind of grape and by the same process of fermentation, may be a very different article from different hands. It takes several months to make this liquid form of sauce, while the best kind requires a year or more to attain the finest flavor and mellowness. The hot condiment added by Lea and Perrins is not favored by the Chinese, since according to their taste it detracts from a wide use of the soya sauce.”

To-fu (tofu) is discussed in detail. “There are records to show that it has been used since at least nine hundred years B.C. *To-fu* making is a staple industry in every little community. Usually it is done at night so that the fresh curd will be ready for the morning demand in the market, or for peddling around the streets. It provides, for the fraction of a cent, the indispensable equivalent of meat and affords very often the explanation of how the Chinese laborer does so much work on what is purely vegetable diet, popularly supposed not to contain much protein. *To-fu* is made in many different forms and the bean stalls occupy quite as large and prominent places in the city market as the fish and meat stalls...

“Cheeses are also made from the growth of cheese-making moulds on *tofu*. The Chinese resident in America regularly import a certain highly flavored red bean cheese for their own use...

“Perhaps the greatest contribution of the soya to the life of the Occident will be in its form of milk. Back in the golden era of peace there had been established in London a soya bean milk factory which was prepared to place its product regularly on the market, and there were said to be plans consummated for the erection of two others at Manchester and Liverpool; but of what the development has been we have no definite information. In Shanghai, Peking and Dalny Chinese companies are supplying hospitals and individuals with an 8 or 10 ounce bottle of concentrated milk per day at a cost of \$1.00 Mex per month.

“In its competition with the cow the legume has in its favor the following facts: Soya milk can be produced with less contamination; it is tuberculosis-free; its caseins break down much more readily than the caseins of cows’ milk and do not form curds in the stomach in the same degree...

“By those who advocate and urge a vegetarian diet, a very strong bill can be drawn in favor of this oriental substitute. In these days when war has thrown new light on many of our life problems, it will be easier to secure acceptance for their contention that the world must for both economic and physiological reasons adopt the biological diet. It has been calculated that, roughly speaking, it takes 100 pounds of foodstuffs to produce 3 pounds of beef and that a given acreage of land can support five times the population if the necessary protein can be derived

directly from vegetable sources rather than going through the roundabout way of an animal form, imposing upon the body the burdens incident to taking in the toxins [toxins] resultant from the catabolism of the cells of the animal, and from possible putrefaction. In China the Buddhist priests and people who enter the various temperance societies all depend on varieties of *to-fu*.”

3132. *Madison Survey (The)* (*Madison, Tennessee*). 1919/26. Serial/periodical. Madison, Tennessee: The Nashville Agricultural Normal Institute (later renamed Madison College). Vol. 1, No. 1. 26 Feb. 1919. Frequency: Weekly.

• **Summary:** See next page. This periodical, printed by the Madison College Printing Department, documents the college’s pioneering work with soyfoods, soybeans, vegetarianism, and wheat gluten—as well as with a totally new kind of education. The school, founded in 1904 by seven Seventh-day Adventist friends, was located about 10 miles north of Nashville on the Cumberland River. It was known initially as the Nashville Agricultural Normal Institute (NANI). It did not take the name “Madison College” until 1937.

A 1936 article in *The Madison Survey* (July 15, p. 116) states: “Long before the Printing Department assumed its present proportions, it began printing and circulating the little sheet which for nineteen years has been making its weekly visits to the homes of thousands. The circulation has varied from seven thousand to ten thousand copies each issue. It literally goes to the ends of the earth... The message of the Survey has been constant through the years. It is a message to lay church members to train for more efficient service to the Master. It has been the advocate of rural life, rural education, rural health centers. It speaks for the school and all its activities at Madison.

By April 1939 *The Madison Survey*, which was published twice a month, had a mailing list of 14,500. It was mailed to every U.S. state and to 44 foreign countries.

Concerning the title and subtitle of the newsletter on page 1, before 19 April 1939 the subtitle read: “Published by Nashville Agricultural Normal Institute, Madison College, Tennessee.” By 19 April 1939 it read: “Published by Madison College [Nashville Agricultural Normal Institute].” The words “Madison College, Tennessee” now appeared on the same line as the volume and issue number, and the date.

3133. *Madison Survey* (*Madison, Tennessee*). 1919. Seven reasons for not eating meat. 1(2):4. March 5.

• **Summary:** “People discarding the use of flesh foods, and physicians prescribing a non-flesh dietary are often asked to give their reasons.

“1. Muscular strength does not depend on the use of flesh food. This fact is attested by millions who know only a non-flesh diet. Had meat been essential, it would have been a part of man’s prescribed diet in the beginning.

The Madison Survey

MARCH 5, 1919

No. 2

The New School

THE War emphasized the importance of a change in educational methods. Intensive training, as demonstrated in the preparation of soldiers, has laid bare the faults of pre-war methods in many institutions.

Practical subjects are coming to the front, and all unnecessary matter is being weeded out. "A genuine change of thoughts and methods of teaching" was called for a number of years ago, and as our younger schools were started these were told "that in our educational work we are not to follow the methods that have been adopted in our older established schools. There is among us, too much clinging to old customs, and because of this we are far behind where we should be."

We have "laid yokes on the shoulders of our students." These yokes are prolonged courses of instruction, packed and crowded to the limit with a large amount of subject matter that the student cannot, and never should use in after life. "If we had a thousand years before us, such a depth of knowledge would be uncalled for."

STUDENTS are baited on by degrees and diplomas to spend year after year in study when they should have a "speedy preparation" and hasten out into the world to do their God-appointed tasks.

"I hope that no one will receive the impression from any words I have written that the standard of the school is to be in any way lowered. There should be most dili-

gent and thorough education in our schools." We are not to cheapen education, but we are to sift out the chaff and lay greater emphasis upon essentials.

ATTENTION has been called especially to the need of strengthening the courses of instruction and improving the methods. *The New York Independent* of January 28, 1919, contains an article concerning the opening of an educational institution in New York City, called "a novel departure from traditional methods." The qualifications for entrance are not "so many units of language, mathematics, and science, dutifully acquired." Nobody is debarred "for lack of a college or high school diploma."

Describing the methods of this "novel departure," *The Independent* says, "It will try to get rid of the perfunctory reading, the mere listening to lectures, and the mechanical examinations of the ordinary university. The teaching will be personal and informal, and 'field work' is to be a special feature."

THAT it is Madison's effort to keep abreast of the times in the development of practical education and intensive training is shown by recent agitation. The school has been studying better methods of work in its manual departments, and endeavoring to determine how to place all manual work on a stronger educational basis.

Manual work should be an expression of

"Showing that, biologically, man is not a carnivorous animal, Cuvier, the great naturalist, says that the natural food of man, judging from his structure, appears to consist of fruits, roots, and the succulent parts of vegetables. And this is

corroborated by the Scripture (Genesis 1: 28) that originally man's diet was fruit, grains, and nuts.

"2. The meat eater runs a heavy risk of overloading his system with protein. Chittenden and others have proved that

the proteid requirements of the human body are so small that it is difficult to add animal flesh to other ordinary foods without going beyond the prescribed limit. Graham Lusk tells us that the stimulating effect of flesh foods, due to the poisons and toxins they contain, tempt one to over-eat as he is not tempted by vegetable proteins.

“3. Meat-eating shortens the life by introducing toxins and poisons. Over-loading the system with protein in any form is a frequent cause of disease, but that the protein of meat brings added burdens to the eliminative organs is the testimony of Doctor Bishop, recognized authority on arteriosclerosis,—premature old age,—who says, ‘Vegetable protein foods are free from toxins with which flesh foods abound.’ Doctor Bishop insists that a diet free from animal proteins is the most essential part of his treatment for hardening of the blood vessels.

“4. Meat eating is an active cause of tuberculosis and cancer. ‘People are continually eating flesh that is filled with tuberculous and cancerous germs. Tuberculosis, cancer, and other fatal diseases are thus communicated.’

“The American Medical Journal is authority for the statement that, in view of the diseased condition of animals, practically all meat on the market contains more or less disease.

“Bulkley, an authority on cancer, boldly announces that flesh foods are the most important cause of cancer, and his treatment consists ‘in an absolutely vegetarian diet.’

“5. Meat eaters are more susceptible to fatigue than non-meat eaters. So says Buttner. The reason is apparent, for the meat eater has added to the usual work of his eliminative organs that accumulation of animal poisons that was on its way to excretion when the animal was slaughtered.

“6. A diet of grains, fruits, nuts, and vegetables contains all the nutritive properties necessary to make good blood. A flesh diet is stimulating, and creates an appetite for condiments, tobacco, and strong drink.

“7. A meat diet is anything but economical. That it requires over thirty pounds of corn to produce one pound of beefsteak, has been determined by Professor Henry of the University of Wisconsin.”

3134. *Los Angeles Times*. 1919. Cookless food city’s latest: “Restauraw” serves unbaked bread and unfired pie. Wilson and Debs vis-a-vis in mural decorations. Delicate appeal to all of “unperverted taste.” April 7. p. II3.

• **Summary:** “The genuine ‘restauraw’ has been discovered. Just what there may be in common between raw food and revolution it would probably require a logician of the first order to determine. Nevertheless the two seem to have gone into partnership at a raw-food dining room on South Olive street. At this unique cafe, at which coffee is never served, the patron is provided with uncooked soup, fruit and flower salads, unbaked brawn bread and unfired pie.”

On one wall is a large photograph of President Woodrow

Wilson. On the opposite is a picture of Eugene V. Debs. On a third wall is a leaflet entitled “The Truth About Russia.”

3135. Ehret, Arnold. 1919. Superior diet for health and economy. *Herald of Health and Naturopath (New York City)* 24(4):182-83. April.

• **Summary:** This is the “first of a series of lectures on Food Conservation, delivered November, 1917.” We eat too much. If we ate less, we would be healthier. The “frugivorian [sic, frugivorous] diet, as described in Genesis, is the higher and superior form of diet for the human race.” A “handful of fruit contains more nourishing nutriment than an entire modern dinner, consisting of half a dozen courses. The value of the ideal palatable food and all forms of nourishment must be demonstrated by fruitarians.

“But where are the strict fruitarians? They exist only in theory in civilized life.”

Note: This is the earliest document seen (June 2015) in which Arnold Ehret uses the title “Prof.” [Professor] before his name. How, when, and where did he become a professor? Address: Prof., Alhambra, California.

3136. Kellogg, John H. 1919. The peanut a great food producer. *Good Health (Battle Creek, Michigan)* 54(4):197. April.

• **Summary:** “The peanut is making great progress these days as a food resource, and deservedly so.” “But the superior character of the peanut as a food producer becomes still more apparent when compared with meat production. To produce a fat steer requires two acres of pasture land and two years, or the equivalent of four acres, to produce 75 lb of protein and two hundred and forty lb of fat, or 18.75 lb of protein and 60 lb of fat for one acre.

“In other words, the peanut produces ten times as much protein and five times as much fat to the acre as can be obtained from one acre of pasture in the form of beef, and this not taking into account the corn and other concentrates fed to complete the fattening for market.”

“Sometimes the farmer turns his pigs into the peanut field instead of harvesting the nuts. He imagines that he is in so doing achieving a wonderful economy, whereas he is wasting at least nine-tenths of the food which he has toiled to produce. It will take from ten to twenty lb to make a pound of pork; and the value of the pork as a foodstuff when produced, will be less than that of an equal weight of peanuts.”

3137. *Literary Digest*. 1919. Flesh-eating and ferocity. 61(8):25. May 24. [1 ref]

• **Summary:** Discusses the relationship between diet and aggression, hunting, and cruelty in humans and other animals. “The war just ended has certainly demonstrated that there is still in man much of the wild beast. Dr. Harry Campbell, a London physician, who believes both in

fighting and in flesh-eating, seeks, in an article in *The Lancet* (London), to find an explanation for human savagery and ferocity in man's acquired carnivorous habits." Campbell notes that "Among the fiercest fighters of the forest are animals which are not flesh-eaters," such as the American buffalo, the bison of India, the rhinoceros, and the gorilla. "The idea that man had to eat his enemy after killing him, to acquire a hankering for flesh and a thirst for blood in order to be a good fighter, is preposterous. The only mental quality man has acquired through the appetite for flesh is the disposition to slay in cold blood and not in self-defense or the heat of rage, to take life merely for pleasure, for sport—to take delight in cruelty." Address: USA.

3138. *Madison Survey* (Madison, Tennessee). 1919. The city problem. 1(14):1-3. May 28.

• **Summary:** "Come out of the cities has been Madison's slogan. By precept and example this call has been given for the past fifteen years." Ellen G. White, leader of the Seventh-day Adventist movement, has said: "In many cities it is advisable for a restaurant to be connected with treatment rooms. The two can co-operate in upholding right principles."

Madison has established a vegetarian cafeteria in nearby Nashville, Tennessee. "Miss Mabel Robinson gave a number of interesting features of the cafeteria work. She told also of the training course for cafeteria workers, and of the need of help in the form of good bakers, efficient cooks, and people capable of presenting the diet question to enquirers."

3139. Ehret, Arnold. 1919. My mucusless diet and naturopathy. *Herald of Health and Naturopath* (New York City) 24(5):233-35. May.

• **Summary:** "When I first brought out my 'Mucus-forming diet; as the fundamental cause of all disease, and my 'Mucusless diet' as its only cure, it created great discussion, even in the ranks of Naturopathy." Ehret says he has treated some hundreds of patients by fasting and diet. No animal on earth is so full of undigested, fermented, and decayed foodstuffs from overeating and unnatural food as so-called civilized man." The mucusless diet contains no meat or dairy products.

"When preparing or 'training' for my 49-day fast, under strict observation, I lived on a strictly mucusless diet for over two years and took short fasts meanwhile."

A filler photo shows the 4-story administration building of "Yungborn" Health Resort, Butler, New Jersey.

Note: This is the earliest document seen (Nov. 2009) that uses the word "mucusless" or the term "mucusless diet" in connection with Arnold Diet. Address: Prof., Alhambra, California.

3140. Wilmans, Helen. 1919. Home course in Mental Science: The power above the throne. Lesson XI. *Herald of*

Health and Naturopath (New York City) 24(5):239-40. May.

• **Summary:** "No doubt the subjective mind of which I speak may be called the roots of his [the student's] being." "Swedenborg speaks of the angels who were suddenly lifted from their own heaven—the heaven adapted to their own capacities—into one very much higher, and he goes on to tell how the effect of the unnameable grandeur for which their state of progression had not prepared them" overwhelmed them.

3141. *Madison Survey* (Madison, Tennessee). 1919. Instead of meat. 1(15):3. June 4.

• **Summary:** "That it is not necessary to take nourishment in the form of flesh meats is demonstrated all about us. The government is spending thousands of dollars to place before people the food value of different vegetables and other products of the soil. Nothing illustrates this better than the agitation of the soy bean question. Here is an edible seed, that until a few years ago, was practically unknown to our country. The Orient was feeding its multitudes before we were awake to the value of a large class of legumes."

"Miss McKay has returned to Madison after several months at Carthage, Missouri, and she tells of the desire she met from people of all classes to learn how to prepare health foods. In response to urgent requests, she held classes and gave demonstrations. When people wanted to know where to buy foods that will take the place of meat, she told them of the Madison food factory, and of its vegetarian meat and various soy bean products."

3142. *Good Health* (Battle Creek, Michigan). 1919. Vegetarian Orientals. 54(6):307. June.

• **Summary:** "Confucius, the great Chinese philosopher, said: 'I have never known the taste of meat.' And through all the centuries the Chinaman has known from this fact that meat is not essential for the development of mind or body, and so has eaten little meat. Millions of Chinese are consistent Buddhists and refuse to eat flesh of any sort."

A Chinese poem, titled "The Cow's Lament," reads: "When I'm a man and you a cow.

"Then I'll treat you as you treat me now."

"The Chinese and the Japanese, as well as our own learned chemists and physiologists, have demonstrated the competency of the soy bean to take the place of meat."

3143. Lust, Benedict. 1919. In favor of non-flesh diet. *Herald of Health and Naturopath* (New York City) 24(6):288. June.

• **Summary:** Describes how and why Dr. Alexander Haig, physician of the Metropolitan Hospital of London, became a vegetarian—excerpted from his book "Uric Acid a Factor in the Causation of Disease." He had been a sufferer from migraine headaches all his life. In the autumn of 1882 he decided to see if a change of diet would help him. He

stopped eating “butcher’s meat.” It helped—dramatically. Address: N.D., M.D.

3144. *Madison Survey (Madison, Tennessee)*. 1919. The Atlanta cafeteria. 1(21):3. July 16.

• **Summary:** Brother and Sister Book, Seventh-day Adventists, have recently opened a small vegetarian cafeteria in Atlanta, Georgia. It “gives opportunity to reach people who are anxious for a scientific vegetarian diet.”

3145. *Good Health (Battle Creek, Michigan)*. 1919. Are vegetarian races inferior? 54(7):372-74. July.

• **Summary:** “In the light of recent scientific discoveries, chiefly the result of the labors of such men as Osborne and Mendel of Yale [Univ. in Connecticut] and McCollum of Johns Hopkins University, it is no longer possible on scientific grounds to claim any mysterious virtue for flesh as an article of human diet.

“Here are the simple facts now universally accepted by scientific men. Protein is protein, whether found in the animal kingdom or in the vegetable kingdom. Vegetable protein may be as easily digested and assimilated as animal protein, but there are two classes of protein, both animal and vegetable; namely, complete and incomplete proteins. A complete protein is one which contains everything necessary for building up the living structures of the body, or at least everything that protein can supply for this purpose. An incomplete protein is one which is lacking in one or more essential elements. Animal proteins as found in flesh are, for the most part, complete. The proteins of vegetables, which exist in very great variety, are often incomplete;...”

“There are, however, vegetables which contain complete proteins, such as the peanut, the almond, other varieties of nuts, and the soy bean; and besides these, milk and eggs furnish an abundance of animal proteins both complete and easily assimilable.

“It is now universally conceded that meat is not essential as an article of diet. It is only necessary to have a sufficient supply of complete protein, and this may be obtained from certain vegetables as well as from meat.

“It may further be said also that milk and eggs are greatly superior to meat in the fact that they furnish vitamins and food lime [calcium], both of which are highly essential to the growth and development as well as the maintenance of the body. These are practically altogether lacking in meat, and Professor McCollum seems to be quite justified in asserting that to cows’ milk and not to meat should be attributed any superiority claimed for meat feeders, for meat-eating nations are also milk feeders.”

Note: This is the earliest document seen (Dec. 2020) that uses the term “incomplete proteins” (or “incomplete protein”). The author states that soy bean is NOT an incomplete protein.

3146. Eddington, Jane. 1919. Tribune Cook Book: Vegetarian chop suey. *Chicago Daily Tribune*. Aug. 15. p. 20.
• **Summary:** “When served over a nice mound of boiled rice a vegetarian chop suey... makes a satisfactory one piece meal, served with soy sauce or without it.” A recipe is given.

3147. *Madison Survey (Madison, Tennessee)*. 1919. City and rural work co-ordinated. 1(27):4. Aug. 27.

• **Summary:** Nashville is within easy reach of the school and the vegetarian cafeteria there is operated by its Seventh-day Adventist students. “It is nearly two years since the effort began. The misses Robinson and Stout were the pioneers, assisted in the beginning by Brother Guy Jenkins. Later Miss McKay united with the young women, and Mrs. Gotzian, for years a friend of Southern self-supporting enterprises, and others assisted financially in equipping new quarters for the cafeteria.” Some 120 to 150 people are fed daily.

“The cafeteria is an educational institution quietly yet surely training the appetites of its patrons. For instance, it stresses the use of whole wheat or graham bread, and at present only two or three patrons even ask for white bread. Serving no meat, no tea, no coffee, selecting the combination of foods for those who are not well, it is a real factor in the proclamation of the truth of healthful living, called ‘the right arm of the message.’”

The treatment rooms in Nashville also serve a meatless diet.

3148. *Good Health (Battle Creek, Michigan)*. 1919. Why flesh abstainers sometimes backslide. 54(8):442-55. Aug.

• **Summary:** “Benjamin Franklin tells us in his autobiography of marvelous benefits derived from a non-flesh dietary, which he was led to adopt by reading an old author on the subject, and confesses that his abandonment of the biologic regimen was purely an act of self-indulgence. In later years he suffered much from gout as a result of his errors in this direction, and by returning to abstemiousness became younger by several years.

“Now that the principles of nutrition are better understood, there will probably be less backsliding than formerly.

“With these facts in mind, it seems quite clear that meat-eating may be simply an acquired habit which is perpetrated by example and custom rather than the result of a great biologic need. It must not be forgotten that the high caste Brahmins of India have been flesh abstainers for a score or more of centuries, and they are today by far the finest people in India. They are intellectually and physically equal, if not superior, to the average European.”

“A pint of milk included in an ordinary ration supplying the proper amount of energy, will suffice to supply the necessary amino-acids to meet all bodily needs. The same would be true if two or three eggs were eaten instead of the pint of milk. The peanut, the almond, and the soy bean

supply rich sources of protein, which possesses the good qualities of milk protein. This is probably also true of other nuts.”

3149. *Madison Survey (Madison, Tennessee)*. 1919. Asheville Cafeteria. 1(33):3. Oct. 8.

• **Summary:** “When one walks into the Asheville Vegetarian Cafeteria [in North Carolina], he finds himself glancing about the walls and reading the striking notices and signs posted in conspicuous places. The cafeteria is conducted by I.E. Seibert and wife, formerly of California, and once Madison students. The room is centrally located, and is easily pointed out because it is opposite the post office.”

One of the posters reads: “I have eaten the cow that ate the bran, And I felt like a cannibal man. I chewed up corpses, fresh and stale, And washed the down with a bottle of ale...”

3150. *New York Times*. 1919. Thirteen-year-old Russian poetess: Zlata Pushkin composes verses of quality after her day’s work on an Everglades farm in Florida. Oct. 12. p. 71.

• **Summary:** During the day she “hoes soy beans on a little farm reclaimed from the Florida Everglades.” “Her father, a disciple of Leo Tolstoy, came to this country partly because he wanted to work in the soil,...” Two photos by Robinson-Matlack show Zlata outdoors.

3151. Child, B.W. 1919. Nature cure pioneers: Prof. Arnold Ehret, of Alhambra, California. *Herald of Health and Naturopath (New York City)* 24(10):493-96. Oct.

• **Summary:** Prof. Child has known Ehret for many years. “I knew him first as an author, later as a sanitarium proprietor and lecturer, and now esteem him highly as a friend and pioneer of the most complete natural and scientific system or cult for the Cure and Prevention of Disease known. I have no hesitancy in stating that he has evolved and developed what now seems to be the ‘last word’ in regard to health and longevity.

“He was born near Freiburg, in Baden, Germany; is 53 years of age, and was endowed by his father with a natural bent or extraordinary desire for delving into the causes and reasons for occurrences and results.” His father died of consumption [tuberculosis] at age 53. “His education was obtained at a college where the long walk added to the work on the farm, on almost an ordinary vegetarian diet, brought on a severe attack of bronchial catarrh, but in spite of this, graduated with honor. His greatest interest being for physics, chemistry, drawing and painting, he took a special academy course and graduated as professor of drawing for high schools and colleges, at 21 years of age. He taught at college until drafted for military service, but was released after nine months’ service because of ‘neurasthenic heart trouble,’ resuming his vocation as a teacher. At 31 years of age he was quite fleshy and looked well, as others said, but was suffering from kidney trouble, Bright’s disease, with consumptive

tendency.” “Five times he took vacations to recuperate, but finally was pronounced ‘incurable,’ and resigned.” For the next five years he suffered much at the hands of 24 different physicians, and part of his suffering was to pay the bills of about \$6,000, but he was still pronounced incurable. Next he tried “naturopathy and was treated at the Kneipp sanitarium three different times, getting some relief and desire to live, but not cured. Finally he decided to try to cure himself. He had learned from past experience “that wrong eating was the cause and right eating might be the cure. There was vegetarianism, fruit and nut diet, numerous food ‘cures’ and a few hints that fasting would help. I went to Berlin to study vegetarianism, as there were over twenty vegetarian restaurants there at the time. My first observation was that vegetarians were no much more healthy than meat eaters, for many looked sickly and pale.” he went to Nice, France, then back home, returning to his old ways of eating. the next winter he went to Algiers, in northern Africa. The mild climate and wonderful fruits improved his feelings. He tried short fasts and for the first time felt he was on the right track, with a revelation from nature.

“An indescribable feeling, never known before of better health, more vital energy, better efficiency, and more endurance and strength came to me and gave me great joy and happiness just to be alive.” “I took a bicycle trip of about 800 miles from Algiers to Tunis.” He returned home and, under the influence of friends, gradually slipped back into his old ways. Yet he knew he had found the “Master Key” to mental and spiritual unfoldment. He then tells of his experiments with fasting in northern Italy and Capri. A friend cured himself of stuttering.

A large oval portrait photo shows Prof. Arnold Ehret. Address: Prof., Alhambra, California.

3152. *Madison Survey (Madison, Tennessee)*. 1919. City work. 1(38):6. Nov. 12.

• **Summary:** “The Nashville Cafeteria reports having the largest patronage in the history of its work, serving something over two-hundred [vegetarian] dinners on Tuesday. Thursday evening Misses Stout and Robinson of the cafeteria force assisted in a food demonstration at the tent on North Nashville, and there has come to us a neat folder containing sample menus, recipes, and suggestive food combinations given to the public at this demonstration.”

3153. *Madison Survey (Madison, Tennessee)*. 1919. Medical missionary volunteer activities. 1(43):1-3. Dec. 17.

• **Summary:** “A group of workers, including Miss McKay, formerly a member of the Madison faculty, has opened a cafeteria in Birmingham, Alabama. Their card reads: Vegetarian Cafeteria—Number 3. Health Foods. Home Cooking. 117 1-2 N 21st St., Birmingham, Ala. This group has purchased a farm as a rural base for city work.”

3154. *Good Health (Battle Creek, Michigan)*. 1919. Biologic living. 54(12):681. Dec.

• **Summary:** An outline of the main tenets of Biologic living on the front page of this issue. It begins: “Biologic living is simple, sane, scientific, successful and satisfactory.”

3155. Friedenwald, Julius; Ruhrah, John. 1919. *Diet in health and disease*. 5th ed. Reser. Philadelphia, Pennsylvania, and London: W.B. Saunders Co. 7-919 p. Illust. 25 cm. [4 soy ref]

• **Summary:** Most of the passages cited are similar to the 1913 ed., except for the following: The section titled “The soy bean” is now on p. 135-36. A table (p. 137) shows the “Composition of fresh and dried legumes (incl. soy beans, cow peas, chick-peas, peanuts) with that of other foods.” At the top of page 137 are 4 references to soy by Ruhrah (3) and Friedenwald and Ruhrah.

The section on “vegetarianism” (p. 141-42) begins: “Theoretically vegetarians are supposed to subsist on an exclusive diet obtained from the vegetable kingdom, including vegetables, cereals, fruits, nuts, etc. [sic], but as a matter of fact many add milk, butter, eggs, gravies and animal fats. The disadvantages of a strictly vegetable [vegan] diet are too obvious to require comment.”

In the chapter on “Infant feeding,” the section on “Other food for infants” has a subsection on “The soy bean,” which is now on p. 302-03.

In the chapter on “Diseases in which diet is a primary factor” is a section on “Substitutes for bread” (p. 596-97) which includes gluten bread and bran bread. Table 1, “Analysis of diabetic foods,” shows (p. 602) that the “Ralston Health Food Co.” makes “Gluten flour” which was first analyzed in 1895, then later in 1902-03. The same chapter has a long table titled “Analysis of diabetic foods” (p. 610-13). A 7-day vegetarian diet with a minimum of protein menu is recommended for treatment of cancer by Bulkley at the New York Skin and Cancer Hospital (p. 673-73).

In the chapter on “Recipes” is a section on “Bread” (p. 773-74) which includes whole-wheat bread, zwieback, and bran muffins for constipation. A recipe for Camplin’s bran cakes (p. 792) is given. The same chapter has a section on “Soy bean cookery” (p. 798-810) with the same recipes as in the 1913 edition. Address: 1. Prof. of Gastro-Enterology; 2. Prof. of Diseases of Children. Both: Univ. of Maryland School of Medicine and College of Physicians and Surgeons, Baltimore.

3156. Kellogg, John Harvey. 1919. *The new method in diabetes: The practical treatment of diabetes as conducted at the Battle Creek Sanitarium, adapted to home use, based upon the treatment of more than eleven hundred cases*. Battle Creek, Michigan: The Modern Medicine Publishing Co. 195 p. See p. 64-65, 124-26, 166. Illust. Index. 19 cm.

• **Summary:** Although not indicated on title page, this is a revision of the 1917 edition. The information on the soya bean in the chapter titled “The feeding of diabetics” is identical to that found in the 1917 edition of this book. But the chapter titled “Recipes for foods suitable for diabetics” (p. 119-84) contains the earliest soyfoods recipes seen published by any Seventh-day Adventist. In this chapter are recipes for “Cream of soy bean soup” and “Soy bean and tomato soup” (p. 124-25; each with “soy bean purée” [cooked ground soybeans]), and “Soy bean salad” (with “½ cup cooked soy beans,” p. 166).

Note 1. This is the earliest book seen (Oct. 2004) written by a Seventh-day Adventist that contains one or more recipes using soybeans or soy ingredients.

Note 2. This is the earliest English-language document seen (June 2013) that uses the term “cooked soy beans” (or “cooked soy-beans”) to refer to whole soybeans that have been cooked and ground.

The book contains many recipes which use wheat gluten: Gluten egg toast (p. 152), Gluten bread, Gluten bran bread (p. 156), Gluten bran puffs, Gluten griddle cakes, 40% gluten puffs (p. 157-58), 80% gluten puffs, Gluten wafers (p. 158), Cream of gluten gruel, and Gluten mush (p. 170).

Also discusses: Almonds, peanuts (p. 63), bran (p. 56, 170), lentils (p. 174), vegetarian diet (p. 61). Address: Chief Medical Director of the Battle Creek Sanitarium, Battle Creek, Michigan.

3157. Lefèvre, Jules. 1919. *Examen scientifique du végétarisme*. 2. éd. [A scientific examination of vegetarianism. 2nd ed.]. Paris: Société Végétarienne de France. 183 p. Illust. 21 cm. No index. [5+ ref. Fre]

• **Summary:** An English-language translation of this book was published in 1923. The author was born in 1863. Address: Professeur au Lycée Pasteur, Lauréat de l’Institut et de la Société de Biologie.

3158. McCann, Alfred Watterson. 1919. *The science of eating: how to insure stamina, endurance, vigor, strength and health in infancy, youth and age*. Garden City, New York: Garden City Publishing Co., Inc. xiv + 15-408 p. No index. 22 cm. [40+* ref]

• **Summary:** This is an amazing book, full of very interesting revelations related to food, diet and health. For example (p. v-vi): “Following his graduation from the food industry, Mr. McCann received the support of a New York newspaper, *The Globe*, which equipped him with a laboratory and set him free to report the results of his discoveries without regard to their influence upon the Advertising Department. Subsequently forty-one other newspapers in as many cities of the United States took up his work, but so heavy was the pressure applied by advertising agencies that the publishers of all these papers, with one exception, the *Chicago Daily News*, found themselves compelled to discontinue

his exposures. In this respect the photographs of original documents showing how truth is suppressed in daily journals, weekly periodicals and monthly magazines are in Mr. McCann's possession, a fitting justification in these days of 'regeneration' and 'reconstruction' for a Congressional inquiry into the nature of the silent influences at work to muzzle the press.

"During Mr. McCann's service on the *New York Globe* he has been made a deputy health commissioner by five municipalities, has been employed by as many mayors and police commissioners to make surveys of the food conditions obtaining in the communities represented by them. He has led squads of plain clothes men and trained field agents, including attorneys and physicians, upon raids that have resulted in scores of indictments, trials and convictions in municipal, state and federal district courts."

"He has initiated two hundred and six successful prosecutions of food adulterators and has never lost a case."

Page 57: In 1918 in the United States draft for World War I: "Of the 1,366,142 men available between the ages of 32 and 45 nearly 450,000 (435,378) are grouped as 'physical rejects,' leaving 601,236 men fit for service.

"Of the 2,568,012 men available between the ages of 18

and 22 nearly 800,000 (770,403) are grouped as 'physical rejects,' leaving 1,797,609 men fit for service."

Basic themes: Companies that process foods adulterate those foods and deceive consumers. Refined foods are a major cause of disease. Contains many case studies.

In 1919 this book was published by four different publishers—all in New York: (1) Eugenics Pub. Co. (2) Truth Pub. Co. (3) Garden City Publ. (4) George H. Duran Co. But the copyright pages states: "Copyright, 1918, 1919, by George H. Doran Company."

Alfred Watterson McCann lived 1879-1931. In 1931, at age 52, he died of a heart attack. Address: [New York City, New York].

• **Summary:**

Contents: Prologue. Preface. Prologue to the 1st edition. Natural food (He believes a fruitarian diet is the most appropriate). The natural life. Natural hygiene in hot climates. Individual hygiene. How is food defined? How should one eat? The supremacy of fruits. The fasting diet. What should one eat? The modern Eden. The normal man. The man and the gorilla. The grape cure. The pure diet. Vegetarianism. The meat broth. Why do our teeth fall out? The mouth and the teeth. Salt and vinegar. The worship of water. Physical exercise. How one can obtain health! Intestinal hygiene. Arthritis. Sleep hygiene. Hygiene of waking. The emancipation of women. Should we have a family? Education of the will. The hygienic house. Portugal, a health resort. The whip of air. Where to spend the holidays. Alcohol. The dangers of tobacco. The tea of 5. A sound mind in a sound body. Degeneration. A cure by nature. The “Just” system. The Kuhne system. The Kneipp system. The Fletcher system. The Müller system. The Lahman system. The Rikli system. The simple life. Outdoors. The cure of tuberculosis. The cure of cancer. How does one prolong life? The struggle for existence. Life and death. The problem of longevity. How to deter death. Maternity hygiene. Naturism in maternity. The art of using money. Serene death. The art of living. Fruit trees. The art of good health. The Ten Commandments of the century. Rules of life. The triumph of frugivorism. On the way to a new life. The practice of naturism [in this chapter: Natural frugivorous natural remedies]. Normal life regimen. Naturist thesis. Chemical and centesimal composition of natural foods.

A bibliography appears on pages 353-358; it contains 224 references to books and pamphlets and 18 references to magazines / periodicals. The references to books and pamphlets give only the title in the native language and the author. The year of publication, name of the publisher, and number of pages are omitted. The references to magazines give the title in the native language and the place of publication—for example “The Vegetarian Messenger, Manchester” or “La Nueva Ciencia, Habana.”

• **Summary:** A good, early partial autobiography of Arnold Ehret. Apparently Ehret is speaking here, although his statements are not in quotation marks: “From my long experience in curing myself by fasting and mucusless diet, and in conducting fasts for many hundreds in my sanitarium in Switzerland, during the period of over 10 years, I can state with certainty of its wonderful potency and benefits when rightly conducted. My first experiences brought such beneficial results that I desired to perfect and verify the methods employed, so I continued my observations and investigations of and into all phases of life.

After many experiments and feeling fully restored, he and his young friend “started on a long trip. First thru southern Italy, walking and living on an almost exclusive grape diet; then by boat to Egypt, Palestine, Turkey, Rumania and Austria, then home. On this trip we learned much of the diet, habits, mentality and health of the different peoples, and especially in the Orient, and with the result that my belief in the superiority of European civilization received a severe shock, and my belief strengthened that I was on the right track for a knowledge of a much superior health with a better mental development, and a more active and longer life.”

“In Egypt we saw a race of people of extraordinary strength and endurance, living on a scanty vegetarian diet mostly, but with two supposedly bad habits—cigarette smoking and drinking strong coffee; yet we saw not a single nervous or toxemic person. To see how few kinds of food

and how little food they ate, and to learn that they ate about the same kinds of food that their ancestors did, gives one a reason for the superior qualities of old Egyptian civilization.”

“In Palestine we stayed several months, studying local customs, records, and history of past conditions, with the result that my conception of the real meaning of the New Testament gospels was changed very much. I learned that Christ’s life and teachings were in strict accord with now well known natural laws, which brought him superior intelligence and superior health, but that when written up from current hearsay some 150 years after, was colored by oriental forms of expression and metaphors, and their incomplete knowledge of natural phenomena. What was marvelous was thought miraculous. His ‘forerunners,’ his fasting, his diet, and manner of living, and that of his associates, all reveal the natural living which brought him superior health with no need of any divine assistance. He verified this by stating that future generations would ‘do greater works than he did,’ as they would get a better knowledge of natural—God’s—‘unchangeable’ laws and methods.”

After visiting other countries, his interest in “natural health principles” grew “with more confidence and enthusiasm than ever before the perfection of my own health by fasting experiments and an improved diet. I instinctively felt and soon proved that certain natural foods prepared in the right way, had a superior energy providing power, and also a superior cleansing power, when rightly used, and in connection with an intelligent abstinence from any food, for the prevention as well as the curing of diseases of all kinds. That when used in accordance with the individual’s encumbrance with disease debris—not germs—and his age, occupation, climate, season of the year, etc. that even the then co-called incurable diseases were helped in a uniform and orderly manner, and a cure certain, if not too much encumbered by habits and age.”

“I fasted for 24 days with such marvelously pleasing results, not only to my physical condition, but to my mental and my aspirations spiritually, that my enthusiasm increased to tell my friends and others of my discoveries, experiences and conclusive results. I could not describe my feelings, but told them they must experience them for themselves, which some took up at once.

“I commenced my educational work by public fasts and lectures, fasting twice in large German cities, and twice in Switzerland. I was sealed in a room by Notaries of State, and strictly watched and controlled by physicians, and with no outside interference or communications. One fast of 21 days, one of 24, one of 32, one of 49 days, all within a period of 14 months. Between these fasts and after, my work was lecturing, giving tests of physical and mental efficiency, proving the value of what I had learned and experienced, and these forced me teaching and advising others, writing articles, and starting a Sanitarium in Switzerland, and

advising by correspondence.

“My first written article was after my 49 day fast in Cologne, and published in a Vegetarian Magazine, stating quite a new experience from fasting, diet and healing of disease, in fact, of life itself, and its enjoyment and prolongation. It had a sensational and revolutionizing effect. It brought me letters of inquiry from all parts of the world, and in Europe particularly, health seekers, reformers and medical men were soon divided into opposers and enthusiastic followers. These writings brought on a scientific controversy or fight over the new principles I had brought to light, that in Europe the two opposing combinations [groups] were known as ‘Ehretists’ and ‘Non-Ehretists.’”

“I came to this country [USA] just before the war to visit the Panama Exposition [1915, held in San Francisco] and to examine the fruits raised here, and particularly in California, and my enforced remaining here by the war has seemed providential in finding those who had similar advances, discoveries and experiences” as by Dr. Thomas Powell.

Note 1. This is the earliest document seen (Sept. 2007) stating that Ehret started a Sanitarium in Switzerland and advised hundreds of people who fasted there over a period of ten years. What was the name of this Sanitarium? When and where in Switzerland was established?

Note 2. This is the earliest document seen (Sept. 2007) stating approximately when and why Ehret first came to the USA and to California. What is the source of all this early information about Ehret’s life? Address: Manager of the Health Science Co., Alhambra, California.

3167. *Good Health (Battle Creek, Michigan)*. 1920. Vegetarian meat extract. 55(1):58. Jan.

• **Summary:** Yeast is used in the manufacture of beer and other fermented liquors; it converts the starch of grain into alcohol. So much yeast is used by the industry that it has become a major waste product. However, yeast is rich in proteins and in flavors practically identical with those found in meat.

A recent article in *Scientific American* (1919 Aug. 23, p. 191) discusses the process of utilizing yeast. “The enzyme, endo-tryptase, breaks down the complex protein molecule into simpler compounds—albumoses, peptones, amido [amino] acids, and ammonia in consecutive order. If the process is stopped by sterilizing at 70°C, thus destroying the enzymes at a point at which peptones and amido acids predominate, the product becomes a splendid food... When well made, it has the same taste as beef extract and is easily digested. The sale as ‘vegetable extract’ has been large in England.”

3168. Hindhede, M. 1920. The effect of food restriction during war on mortality in Copenhagen. *J. of the American Medical Association* 74(6):381-82. Feb. 7. [11 ref]

• **Summary:** Summarizes the health benefits of a simple,

largely meatless diet in Denmark during World War I, starting in March 1917 and becoming severe from Oct. 1917 to Oct. 1918. The Allied blockade during this period cut off imports into Denmark. The government, fearing acute food shortages, sought aid from its vegetarian society and appointed Dr. Mikkel Hindhede, an ardent advocate of simple living, to lead its rationing program. The adequacy of a diet containing little or no meat was put to the test. Grain-eating meat animals were slaughtered and the grain, with all its bran, used for human consumption. On a diet largely of whole grain and bran bread, barley porridge, potatoes, greens, and dairy products, the Danish people survived the war with improved health and lowered mortality rates. The death rate dropped to 10.4 per thousand from a previous low of 12.5 per thousand in 1913 and 1914. Moreover the death rate from disease for men ages 25 to 65 fell 34% to its lowest level of this century.

Hindhede reflected: "This result was not a surprising one to me. Since 1895, when I began my experiments with a low protein diet (mostly vegetarian), I have been convinced that better physical conditions resulted from this standard of living. It may be said that a vegetarian diet is a more healthful diet than the ordinary diet. As the result of extensive studies in this field I am convinced that overnutrition, the result of palatable meat dishes, is one of the most common causes of disease." He then cites a long passage from McCollum's *The Newer Knowledge of Nutrition* (p. 52, 81) to support his point. "The people of Denmark have no cause to regret that during the war their diet consisted mostly of milk, vegetables and bran. If Central Europe had adopted a similar diet, I doubt that any one would have starved." Address: Lab. for Nutrition Research, Copenhagen V, Denmark.

3169. Kellogg, John Harvey. 1920. Vegetarianism: The kindly fruits of the earth. *Arbitrator (The)* 2(9):3-6. Feb. • **Summary:** Presents various arguments in favor of a biologic or non-flesh [later called "vegetarian"] diet. "Within the last fifty years there has been a veritable revolution in matters pertaining to diet. Seventy-five years ago, when Sylvester Graham was making his famous campaign for dietetic righteousness, he was not only made the butt of ridicule by the laity, but was vigorously combated by scientific men of all classes.

"It was true that Cuvier, Bell, Gassendi, and scores of other naturalists had testified to the fact that a man was near relative of the higher apes, with whom he constitutes the family of primates, and that his diet must, consequently, be essentially the same as that of his forest cousins. But this great biologic fact seemed to make no impression upon the writers of books on dietetics other than the few heretics who were regarded as quite outside the pale of authority.

"When the writer first became interested in the biologic diet by reading the works of Graham, now more than 50

years ago, not a single medical authority could be found who recommended a non-flesh dietary. On the contrary, it was unanimously maintained that flesh food was essential for the maintenance of sound health and vigor, notwithstanding the fact that men and women were to be found in India and other countries who had never tasted flesh food and whose ancestors for many centuries had abjured the flesh of animals from religious scruples.

"But a new day has dawned. Within the last twenty years, a number of physiologists have admitted the adequacy of a fleshless diet, and at the present time not a single authority of standing on the subject of diet maintains the necessity of using flesh. Nearly all, in fact, readily admit that flesh food may be wholly dispensed with and that, without injury."

Discusses the writings of Dr. Graham Lusk, Hindhede, Professor Elliott, Ovid, the Hebrew scriptures, Professor Price (Univ. of Chicago), Lord Byron, the diet of Indian Brahmins (who are "vegetarians"), the diet of chimpanzees, orang-utans, gorillas and the big apes, and the benefits of eating "vegetable proteins."

"According to the Hebrew scriptures, after God created man, he gave him his bill of fare, as recorded in the twentieth verse of the first chapter of Genesis: "'And God said, Behold, I have given you every herb bearing seed, which is upon the face of all the earth, and every tree, in the which is the fruit of a tree yielding seed, to you it shall be for meat.'

"Professor Price, of the University of Chicago, tells us that the Sumarians [Sumerians], people who lived 2,000 years before the time of Abraham, never took the life of animals or partook of flesh foods except in connection with a religious ceremony."

"The protein of eggs, milk and of nuts and soy beans, according to the world's most eminent authorities, may replace the proteins of meat; and this fact is so clearly established that the Inter-Allied Scientific Food Commission considered it unnecessary to fix any minimum meat ration, since meat may be wholly eliminated from the dietary without injury.

"It may be positively stated, in fact, that any one may at once drop all meats of every description from his dietary without suffering any loss whatever, provided he will take care to include in his daily bill of fare two or three glasses of milk."

Note: This is the earliest document seen by Dr. John H. Kellogg (Dec. 2013) that mentions "vegetarians" or "vegetarianism." Yet he referred to the diet he advocated as "the biologic diet" and his broader system as "biologic living." Address: M.D., LL.D., Fellow American Medical Assoc., Fellow of the Royal Society of Medicine.

3170. Brook, Harry Ellington. 1920. Care of the body. *Los Angeles Times*. May 2. p. X18. Sunday magazine.

• **Summary:** In the section titled "Surplus food causes

disease” is a long quotation (8 paragraphs; the source is not given) by Arnold Ehret. He discusses: Overfeeding charges the body with poisonous matter, which manifests itself by various secretions, especially mucus. A drunkard can reach a high age but not a glutton. The poorest countries produce the greatest number of centenarians. “Where everything else has failed, one may gain results by eating less and eating less often. This is slower but more convenient than fasting.” “Of course, an absolute fast, graded in severity according to the powers of reaction in a given individual, is the most potent and rapid method of restoring the digestive functions to their normal condition...” Address: N.D. [Naturopathic Doctor].

3171. Brook, Harry Ellington. 1920. Care of the body. *Los Angeles Times*. May 9. p. X18. Sunday magazine.

• **Summary:** The section titled “Land and food” notes that Malthus, “whose theory is now generally discredited, taught that it was necessary artificially to repress the increase of the human race, by ‘birth control,’ or the race would be in danger of starvation.” Malthus “made the great mistake of not distinguishing between our present method of devoting the land to the raising of cattle, and a natural diet of fruit, nuts and grain, which many believe to be the natural diet of man.” A table (from *The Foundation of All Reform*, by Otto Carque) shows the number of pounds of various plant foods that can be produced per acre compared with the weight of beef from range cattle. Bananas 120,000. Apples 25,000. Potatoes 10,000. Peaches 10,000. Corn 1,500. Legumes and peanuts 1,200. Wheat 900. Range cattle 30.

The section on “Unsulphured dried fruits” contains extracts from a letter from Prof. Harvey Wiley, former Chief Chemist, USDA: “The use of sulphured fruits,... is, in my opinion, highly deleterious, and should be prohibited by law.”

“For years a Los Angeles man [Otto Carque] has been doing missionary work, in giving the people a chance to eat unsulphured black California figs. Of late he has produced and marketed on a small scale unsulphured apples, pears and peaches and apricots.” Address: N.D. [Naturopathic Doctor].

3172. Brook, Harry Ellington. 1920. Care of the body. *Los Angeles Times*. May 30. p. X18. Sunday magazine.

• **Summary:** The section titled “Where fruit is cheap” contains an extract of a “letter from Emil Bischoff to Otto Carque of Los Angeles, for whom he previously worked. Mr. Bischoff is a vegetarian—or rather a fruitarian. The letter is dated from Cuyutlan, State of Colima:” [on the Pacific coast]. He describes the many fine fruits and related business opportunities “What a formula for an enterprising gringo nature temptingly provides here. There would be millions in it.” Address: N.D. [Naturopathic Doctor].

3173. Weinger, J. 1920. The Benedict Lust surprise banquet. *Herald of Health and Naturopath (New York City)* 25(5):196.

May.

• **Summary:** “On Dr. Lust’s return [to New York City] from Florida, where he stayed for two months, a surprise banquet was held by the faculty and students of the American School of Naturopathy and their friends, on Friday, April 23, 1920, at Schildkraut’s Vegetarian Restaurant, at 4 West 28th St.” The menu and prominent people present are given. Address: D.C.

3174. Raw Food Dining Room (The). 1920. Live food. Live people (Ad). *Los Angeles Times*. June 27. p. IX20.

• **Summary:** “The only restaurant serving no salt, sugar, or vinegar. Health drinks—uncooked soup—fruit, flower and vegetable salads—unbaked breads and brawn foods—unfired pies and cakes. All very delicious to the unperverted taste.

“Try our Raisinnut Pemikent. a wholesome unfired cereal food ready to eat. 30¢ per lb. package. Mail orders filled.

Note: This is clearly the same restaurant, previously on South Olive street, described in an article titled “Cookless food city’s latest” in this newspaper on 7 April 1919, p. II3. Address: 326 West Second St. [Los Angeles].

3175. *Madison Survey (Madison, Tennessee)*. 1920. Outside activities. 2(28):2. July 14.

• **Summary:** “Cafeteria [vegetarian] and treatment rooms in Nashville [Tennessee] are prospering. Similar centers are conducted in Birmingham [Alabama], Louisville [Kentucky], and Asheville [North Carolina].”

3176. Grohens, Albert P. 1920. Peanut butter: History and development of the peanut butter industry—Just one of the products made from peanuts. *Peanut Promoter (The) (Suffolk, Virginia)* 3(8):65, 67, 69, 71, 78. July.

• **Summary:** The text of this article is the same as one published one month earlier by the same author in *The Spice Mill* (June 1920, p. 976-980).

Original, high quality illustrations (line drawings) show: (1-3) Lambert’s original hand-turned roaster, blancher, and mill. (4) A large “Eureka Roaster.” (5) First peanut butter machine operated by power. (6) Motor driven blanching machine.

A portrait photo (p. 78) shows A.P. Grohens. Address: President and General Manager, Lambert Machine Co., Marshall, Michigan.

3177. Kellogg, John Harvey. 1920. The almond. *Good Health (Battle Creek, Michigan)* 55(8):466-70. Aug.

• **Summary:** Contents: Introduction. Composition. Rich in food lime [calcium]. Rich in iron. An extraordinary food. Science prizes the high value of the almond [digestibility experiments]. Why nuts sometimes disagree [they are concentrated and should be used as a staple food which is well masticated, not as a dessert]. The origin of nut butters.

Nut proteins equal to meat proteins [proteins are broken up into about 18 amino acids]. Meat eating involves enormous economic waste. The great food commission declared meat not necessary. Almonds are pure and safe which meat is not. A ready-to-eat food.

“The origin of nut butters: To overcome the objection that some people are unable to masticate nuts properly on account of defective teeth and to insure the proper assimilation even if not properly chewed, the writer about thirty years ago [i.e., in about 1890] conceived the idea of converting the nuts by crushing and grinding, into a paste—in other words, chewing the nuts by machinery. The peanut was first utilized in this way and rapidly won its way to public favor. Now, many scores of carloads of that nut are eaten under the name of peanut butter.

“Almonds were next used, and were found to make a delicious nut paste, or butter, which by the addition of water and a little salt, became a most delicious cream. In the form of almond cream or milk, nothing could be conceived in the way of nourishment which the body can more easily appropriate and more fully utilize” (p. 469-70).

“The Almond Grower’s Association of California, with the co-operation of the U.S. Agriculture Department, in encouraging the growth of the almond is doing a work which will entitle it to an honored place in the economic history of this country; for the time is certainly coming, and it cannot be far in the future, when the animal industry will languish for lack of space for pasturage, and flesh foods for this as well as other reasons will fill a less conspicuous place in the dietary of the average man than at present” (p. 470).

“The great food commission... The Inter-Allied Scientific Food Commission which met during the war was without doubt the most authoritative body on the subject of food and nutrition that was ever brought together.” The names of the members of the commission, each a distinguished specialist on human nutrition, are given. There were generally two members from each of the following countries: France, Italy, Great Britain, United States (Profs. Lusk and Chittenden), and Belgium. “The question of a minimum meat ration was discussed by the commission, but it was decided to be unnecessary to fix a minimum meat ration ‘in view of the fact that no absolute physiological need exists for meat, since the proteins of meat can be replaced by other proteins, such as those contained in milk, cheese and eggs, as well as those of vegetable origin’ (beans, nuts, and especially almonds).

“Quite in line with this official action was a recent editorial in the *Journal of the American Medical Association*, perhaps the highest medical authority in the world, which states that ‘man’s health and strength are not dependent on the assumed superior virtues of animal flesh as a dietary constituent.’

“Within the year 1918 there were slaughtered in the United States a hundred million beeves, sheep, pigs and

goats, one whole beast for every man, woman and child in the United States. Of this vast multitude of animals, the Federal inspectors examined nearly two-thirds (60,000,000) and found one and a half per cent so badly diseased that the whole or part of the carcass was condemned. In other words, nearly a million (900,000) carcasses were found seriously diseased” (p. 471).

“Almond butter with the addition of a little water is converted into a delicious cream, which, with the addition of more water, becomes a delicately flavored milk closely resembling the milk of the cow in appearance, and with the addition of sugar the resemblance to milk, especially mother’s milk, becomes still more complete. Such a preparation is in fact almost a perfect substitute for milk.

“The almond is thus not only capable of taking the place of meat in the dietary but may also serve as a substitute for milk.” Address: M.D.

3178. Health Science Co. 1920. Mucusless Diet (Ad). *Los Angeles Times*. Sept. 26. p. IX21.

• **Summary:** “Has the best Vitamine foods, Mineral Salts, ‘Fat and Water Solubles,’ and many important elements for Pep and Curing. Learn about them. Send 25¢ for ‘The Truth about Human Nourishment’; 30¢ for ‘Regeneration Diet and Rational Fasting’; 50¢ for ‘Neo-Diet,’ describing the ‘enormous success’ of Prof. Ehret’s Mucusless Diet. These and two more Theses sent for \$1.25.” Address: Dep. 87, Alhambra, California.

3179. *Good Health (Battle Creek, Michigan)*. 1920. A vegetarian orphan’s home. 55(9):559. Sept.

• **Summary:** “It is reported that the home of Tolstoy, ‘Jasnaja Polijana’ [Yasnaya Polyana, located 14 km southwest of Tula, Russian SSR], under the direction of his youngest daughter, is now utilized as an Orphans’ Home. Eight hundred orphans are already there, and the number is constantly increasing.

“The Home is to be conducted on the plan of the Junior Republic. Children will be taught agriculture and various trades under the direction of experts. They will be reared in accordance with the principles of the simple life as expounded by Tolstoy in his works. Meats of all sorts are to be excluded from the dietary.”

3180. *Madison Survey (Madison, Tennessee)*. 1920. The Thirteenth Annual Conference of Rural School Workers. 2(41):1, 5. Oct. 13.

• **Summary:** This two-day conference was held at Madison, Tennessee. I.E. Siebert and Mrs. Sutherland discussed “Rural Centers Solving the Food Problem.” “Elder McElhany told of experiences in the San Diego [California, vegetarian] cafeteria, and of the calls for class instruction in dietetics and cooking...”

3181. Brook, Harry Ellington. 1920. Care of the body. *Los Angeles Times*. Oct. 24. p. X18. Sunday magazine.

• **Summary:** The section titled "Flesh food" contains a letter from Otto Carque discussing the meat diet eaten by Eskimos. "Anatomically and physiologically the use of flesh food by man is unnatural, a remnant of a by-gone age, and cannot be defended in the light of modern science." Address: N.D. [Naturopathic Doctor].

3182. *Madison Survey (Madison, Tennessee)*. 1920. The value of whole grain breads. 2(44):2-3. Nov. 3.

• **Summary:** "It has been abundantly proved that for use in bread making, the superfine white flour is not the best. Its use is neither healthful nor economical... Modern grain milling methods are of comparatively recent origin, having been introduced since the year 1846. And wholesale commercial production of superfine or white flour dates from about 1870... The original idea in milling white flour was to get a product which would keep indefinitely in large quantities, and which, when baked into the staff of life, would present, what was supposed to be, a more refined appearance than whole-ground meal."

"Whole wheat bread, or freshly ground whole wheat flour with recipes for making the bread from this and other grains, may be obtained from: The Nashville Vegetarian Cafeteria, 610-6th Ave. N., Nashville, Tennessee. Ask also for information concerning grinding mills."

3183. *Madison Survey (Madison, Tennessee)*. 1920. Home made bread from home ground flour. 2(46):3. Nov. 17.

• **Summary:** "The Medical Missionary Volunteers have begun the publication of a series of leaflets on health subjects, to meet the demand for instruction on the part of patrons of the vegetarians cafeterias."

The five vegetarian cafeterias [run by Seventh-day Adventists from Madison College] are located at: (1) 610 6th. Ave., N. Nashville, Tennessee; (2) 85 Patton Ave., Asheville, North Carolina; (3) 117 1-2 North 21st St., Birmingham, Alabama; (4) 509 South 3rd St., Louisville, Kentucky; (5) 516 Gay St., Knoxville, Tennessee.

3184. *Madison Survey (Madison, Tennessee)*. 1920. The Louisville treatment rooms and cafeteria. 2(48):2-3. Dec. 1.

• **Summary:** Describes the opening of treatment rooms and a vegetarian cafeteria in Louisville, Kentucky. The cafeteria opened on the ninth [probably Nov. 9], serving its first meal to fifty people. Brother F.E. Worrell temporarily supplied the money for the venture.

3185. Ehret, Arnold. 1920. The mucusless diet healing system. *Herald of Health and Naturopath (New York City)* 25(11-12):480-83. Nov/Dec.

• **Summary:** "Lecture delivered to the 24th Annual Convention of the American Naturopathic Association,

September 23-25, 1920, at the Hotel Commodore, N.Y. [New York City].

"It is an 'open secret' that diet is the weak point of drugless physicians, because the science of drugless healing lacks a dietetic system that is based upon scientific and fundamental principles and facts and complete enough to be used in every diseased condition." Address: Of the Health Science Co., Alhambra, California.

3186. Howe, James. 1920-1929. The ethics of diet (Leaflet). London: London Vegetarian Society. 1 p. folded. *

3187. *Food Reformer's Year Book and Health Seeker's Guide*. 1920-1951. Serial/periodical. London: London Vegetarian Society. Frequency: Annual. *

• **Summary:** Not published in 1929, 1932, 1933, 1938-1950. A 10-page supplement to the 1951 Year Book was published in 1952. Continued by: *Vegetarian Handbook*, starting in 1953. Address: London, England.

3188. Armsby, Henry Prentiss. 1920. The modern science of food values. *Yale Review* 9:330. New Series. *

• **Summary:** Discusses in detail the place of a livestock industry as part of a country's food system, and of various classes of animals in particular, with reference to the most effective utilization of our food resources. His opening sentence is revealing: "The experiences of the great war have forced us to realize as never before that the maintenance of the food supply is the basal problem of civilization." He called attention to the large losses which occur in the conversion of wheat into meat as compared with its direct consumption.

3189. Bell, Ernest. 1920. In a nutshell: Cons and pros of the meatless diet. London: G. Bell & Sons. vii + 45 p. 19 cm. *

• **Summary:** The author (born 1851) also wrote many books about animal welfare and against vivisection from about 1893 to 1928. Address: M.A., of Trinity College, Cambridge, England.

3190. Briggs, Frederick Mead. 1920. Meat substitutes. Brooklyn, New York: Chat Publishing Co. 16 p. 11 x 15 cm.

• **Summary:** Identical to the 1916 edition, except that the publisher is different.

3191. Haig, Kenneth George. 1920. Health through diet... With the assistance of A. Haig. 5th edition, revised. London: Methuen & Co. Ltd. x + 227 p. 8°. *

3192. Kellogg, John Harvey. 1920. The health question box, or a thousand and one health questions answered. 2nd ed. Battle Creek, Michigan: Modern Medicine Publishing Co. 907 p. Illust. Index. 21 cm. 1st ed. was 1917.

• **Summary:** "Foreword: For more than forty years, the

writer of this volume has each week stood before an audience of invalids at the Battle Creek Sanitarium to open a popular question box. During a longer period the writer has supplied each month to the monthly journal *Good Health* several columns of answers to correspondents." More than a thousand of these have been selected, with their answers, for this volume.

The following questions concern the soy bean (p. 350-53, 886; also 125, 200, 347, 349): In what respect is the soy bean superior to the navy bean and other varieties? What is soy bean curd or cheese (to-fu), and how is it made? What is the food value of the soy bean? What is the composition of the soy bean, especially in relation to the amount of carbohydrate it contains?

Concerning peanuts (p. 348-49): Is the protein of the peanut equal to that of meat or eggs? Which is the more digestible, roasted or raw peanuts? Why is it necessary to cook peanuts to prepare them for digestion?

"In North China and various other countries where the peanut flourishes, it has long held a prominent place in the national dietary; but in this country its great value has been so little appreciated that it has been scarcely recognized as a food, having been eaten as a dainty or luxury.

"Although, since the writer—some twenty-five years ago [i.e., ca. 1895]—introduced the crushed nuts, or peanut butter, into the bill of fare of the Battle-Creek Sanitarium, the use of peanuts in this form has rapidly extended and it has found its way to many thousands of tables."

One discovery has "placed the peanut upon a high pedestal among foodstuffs... It is the fact that the protein of the peanut belongs to a special class very rare among the products of the vegetable kingdom, known to the chemist as 'complete protein.' The complete protein is one which contains all the elements needed for making any of the many different kinds of tissue found in the human body. Very naturally these proteins are found in eggs, milk and meat, but they are not found in cereals or vegetables." The almond and soy bean also contain complete proteins.

Concerning the natural diet of man (p. 96-109, 124-25): What was the diet of prehistoric man? Ans: Fruits and nuts. What is the natural diet of man? Ans: Fruits, soft grains, nuts, tender shoots and juicy roots. Man is not carnivorous. What was the Brook Farm experiment? What is the simple life? What is biologic living? Ans: Living in accord with the "great biologic laws... which rule our physical being." What is Fletcherism? Ans: Thorough mastication. When eggs and meat are discarded what vegetable foods should take their place? Ans: No substitutes are needed. "Protose, Nuttolene and other vegetable meats are rich in protein. The newly introduced soy bean is more than a substitute for meat. It is rich in lime and vitamins which meat lacks. Its protein is 'complete.'" Have human beings a natural appetite for flesh? Do scientific authorities admit that animal flesh is a necessary part of the human dietary? Ans: "All modern

physiologists admit that flesh food is not an essential part..." Is a meatless diet capable of maintaining the body in a state of vigorous health? Is there any authority for the elimination of flesh foods from the dietary? Does a flesh diet injure the kidneys? Is it not true that laborers universally require a large amount of meat.

Concerning roughage, bran, and constipation (p. 197-99). Diabetic foods (p. 199-201, incl. soy bean and soy bean curd). Dietary oils and butter (p. 338-41, incl. nut oils, peanut oil, olive oil, malted nuts). Concerning tree nuts (p. 341-47, 354-59): What is the food value of nuts? Ans: The "most highly concentrated of all natural foods." Tropical fats—Where do the natives of the tropics get their fat? Nuts for nursing mothers—Is there any food which will increase the flow of her milk? Ans: Nut milks, Malted Nuts. How did the Jordan almond get its name? Ans: This choicest of all almonds came originally from Malaga in southern Spain. Almond milk—Is it possible to prepare a substitute for milk from vegetables? Ans: Yes. "The writer has made large use of almond milk for thirty years [i.e., since about 1890]. It is more easily prepared from almond butter." "Almost equally good milk preparations may be made from the soy bean and the peanut." Are nuts good food? Yes, incl. peanut butter. Nuts make good "meat substitutes."

On the last page is a list of 18 health books by Dr. Kellogg, all published by the Modern Medicine Publishing Co. Address: M.D., Battle Creek, Michigan.

3193. Lofting, Hugh. 1920. The story of Dr. Dolittle. England: F.A. Stokes. Philadelphia and New York: J.B. Lippincott Co. xvi + 172 p. 20 cm.

• **Summary:** This is the first in a very popular series of children's books, suited as read-alouds for children as young as age 4-5. Dr. Dolittle is a British physician and vegetarian who lives in a little town called Puddleby-on-the-Marsh. He is very fond of animals, with whom he has wonderful relationships—and he owns so many that people no longer want to visit him. But he likes animals better than the best people. The author lived 1886-1947. Address: England.

3194. Monteath, Kenneth McLaurin. 1920. Philosophy in diet: A précis of the moral ground occupied by vegetarians and fruitarians. York, England: K. Monteath. 16 p. 16°. *

3195. Noorden, Carl von; Salomon, Hugo. 1920. Handbuch der Ernährungslehre. Erster Band. Allgemeine Diätetik [Handbook of nutritional education. Vol. I. General dietetics]. Berlin: Verlag von Julius Springer. xxxiii+ 1237 p. [100+* ref. Ger]

• **Summary:** The section titled "Vegetable Milk and Cream" (p. 311-14) notes that the authors have had extended experience with soybean milk and soy flour made by Frankfurter Soyama-Werken in various forms. For each product the percentage protein, fat, carbohydrates, ash,

and calories per 100 gm is given, based on analyses of Dr. G. Popp in Frankfurt: Soyama Flour (*Soyamamehl*; 42% protein, 18% fat), Soyama Milk (*Trink-Soyamamilch* [normal], 3.77%, 3.36%), Soyama Milk for Diabetics [low in carbohydrates] (*Trink-Soyamamilch [fuer Diabetiker]*, 3.77%, 3.40%), Soyama Milk for Baking (3.29%, 4.40%), Soyama Cream (*Soyamarahm* [normal], 2.93%, 11.50%), Soyama Cream for Diabetic (*Soyamarahm [fuer Diabetiker]*, 2.95%, 11.50%), Soyama Cream [extra rich in fat, especially for diabetics] (*Soyamarahm*, 2.50%, 30.0%). The soybean is of special importance in diabetic diets because of its low carbohydrate content, which can be reduced even more by a special process.

When Soyama Cream is mixed with coffee, tea, or chocolate, one can scarcely tell whether or not one is using cow's milk. Pages 312-13 summarize the findings of Fischer on the ease with which plant- or vegetable milks are digested.

The section on variety breads (p. 427) notes that soybean flour is now warmly recommended in such recipes.

A section titled "Soybeans" (p. 542-43) notes that edible soy products are made by Aguma-Werken F. Thörl in Harburg, Vaterland brand soy flour is made by E. Friedrichsen in Berlin, and an excellent soy flour is made by Soyama-Werken in Frankfurt am Main. In Japan and China countless preparations made from soybeans are on the market. Especially prized is the cheese named tofu (To-fu). Soy sauce is also known worldwide. Soy coffee (p. 694) is of much less economic importance than imitation coffees made from cereal grains or malt. Page 714 mentions tests using soybean flour to make cocoa or chocolate. Page 800 discusses soya seasonings such as shoyu fermented with koji, and miso.

Pages 887-903 discuss vegetarian cures for diseases, and ten specific diseases for which they are well suited. Some groups of German vegetarians are endeavoring to return to a more "natural way of life," and some of these eat a raw-food diet. Pages 898-99 give the protein content and calories per 100 gm of soy flour and soymilk, plus a discussion of soymilk. Page 979 gives the composition of two brands of soymilk and one of soy cream. Also contains early information on using baking soda for cooking whole soybeans. Noorden lived 1858-1944. Address: 1. Geheimer Medizinalrat und Prof., Frankfurt-am-Main, Germany; 2. Prof., Vienna, Austria.

3196. Pearl, R. 1920. The nation's food. W.B. Saunders and Co. *

• **Summary:** The author classified foods derived from vegetable crops and aquatic animals as primary, and those derived from domestic animals as secondary, making the distinction that the secondary products involve large losses of potential food in their production. During 7 years from 1911 to 1918 in the USA, primary foods supplied 51% of the

protein, only 17% of the fat, 94% of the carbohydrates, and 59% of the calories in the American diet; secondary foods supplied the rest. The fact that secondary foods furnished 41% of the total calories consumed in the USA, indicates that the nation's nutrition was on a wasteful economic basis.

3197. Baltzer, Eduard. 1920? Vegetarisches Kochbuch fuer freunde der natuerlichen Lebensweise. Neu bearbeitet von Karl Lentze, Dr. K.L. Kuhne. 22. vermehrte Auflage [Vegetarian cookbook for friends of the natural way of living. Newly edited by Karl Lentze and Dr. K.L. Kuhne. 22nd expanded edition]. Leipzig, Germany: Verlag von Louis Kuhne. 168 p. Undated. No index. 20 cm. [Ger]

• **Summary:** Dr. Kurt Louis Kuhne was born in 1897. Address: Germany.

3198. Ehret, Arnold. 1920? Mucusless diet, a series of articles on superior diet for health and economy. New York, NY: Nature Cure Publishing Co. 26 p. 24 cm. *

• **Summary:** Arnold Ehret lived 1866-1922.

3199. St. Helena Sanitarium (California) (Color postcard). 1920? Sanitarium, California. 1 p. Front and back. Undated. 9 x 14 cm.

• **Summary:** Of the 4 color photos on the front, three show the main sanitarium building. In the upper left corner: "The largest and best equipped institution west of the Rocky Mountains. Following the Battle Creek Sanitarium system."

On the back left. "A true health resort. Located 65 miles from San Francisco, on an elevation overlooking the beautiful Napa Valley..." Postage was 1¢ in the USA, possessions, Canada, or Mexico. Foreign: 2¢. Address: Sanitarium, California.

3200. Cubbison's Bakery. 1921. Cubbison's Bran Crackers (Ad). *Los Angeles Times*. Jan. 2. p. VIII-20.

• **Summary:** "Whole wheat flaxseed and Unsweetened Graham crackers. A food and laxative. Try them, sample postpaid 25¢. Cubbison's genuine whole wheat health bread, very nourishing. Cubbison's products for sale at Walter's Bakery, Summit Grocery, Pasadena, Young's Markets, Albert Cohns, Van Houtens, etc."

This ad also appeared in the 10 July 1921 issue (p. VIII-20) of this newspaper. Note: This is the earliest document seen (April, 2004) that gives Cubbison's Bakery address as "3417 Pasadena Ave., Los Angeles." Address: 3417 Pasadena Ave., Los Angeles [California]. Phone: Lincoln 2969.

3201. *Madison Survey* (*Madison, Tennessee*). 1921. Vegetarian cafeterias. 3(3):2. Jan. 19.

• **Summary:** "Birmingham [Alabama] cafeteria was started about one year ago by Miss McKay, Mrs. Holst, and others... Chalkville farm, an 87-acre tract about fourteen miles from the cafeteria has been purchased as a country base... Mr.

Zilke is the maker of whole wheat bread which the trade is appreciating..."

"The Knoxville [Tennessee] cafeteria is less than a month old." The whole wheat bread sells like hot cakes. "Practically no one asks for white bread."

3202. Carver, George W. 1921. Re: Statement on uses for peanuts and sweet potatoes, and thoughts on the future of meat substitutes. *Tariff Information. Hearings before the Committee on Ways and Means, House of Representatives on Schedule G, Agricultural Products and Provisions*. Jan. 21. p. 1543-51.

• **Summary:** Carver has developed 107 products from sweet potatoes. He has just begun similar work on peanuts, and he expects to create even more products from them. He shows a high quality pomade or face cream made from peanuts, a fine ink made with peanut oil, peanut flakes than can be easily dissolved in hot water to make peanut milk, and some peanut relish.

Next he discusses meat substitutes: "And then here is a bottle of mock oysters. The peanut curds can be made into mock meat dishes so thoroughly that it is impossible to tell them from meat, and it is going to be very satisfactory in that direction. We are going to use less and less meat just as soon as science touches these various vegetable products, and teaches us how to use them. I remember years and years ago when the automobile first was being introduced how the people laughed and how they jeered and how they talked of the horses, about the impossibility of running them off the streets. I have been here two days, and I have not seen a single horse on your streets. They are automobiles. And now the same thing is true, or much the same thing is true about our vegetable products with reference to the meat business." Address: United Peanut Assoc. of America, Tuskegee, Alabama.

3203. Carqué, Otto. 1921. Vegetarianism in the light of modern science. *Herald of Health and Naturopath (New York City)* 26(2):79-84. Feb.

• **Summary:** "Having lived as a vegetarian for over a quarter of a century [i.e., since 1896 or before], and having made a study of foods and dietetics a part of my life-work, I fell qualified to say something to those who are ready to abandon the conventional ways of living. I shall deal with the question of diet from a historic, hygienic, ethical and economic point of view." Address: [California].

3204. *Apyrtropher Magazine (The)*. 1921--.. Serial/periodical. Chicago, Illinois: Apyrtropher Society. Edited by George Julius Drews. *

• **Summary:** The subtitle reads: "Devoted to the art and practice of living on the natural, aesthetic and moral unfired diet for the perpetuation of health and cure of disease." Address: Chicago, Illinois.

3205. *Herald of Health and Naturopath (New York City)*. 1921. Book reviews: Spectro-Chrome Therapy. 26(4):200-01. April.

• **Summary:** "The most unique and complete exposition of Spectro-Chrome Therapy that has been our pleasure to read is contained in a book recently written and published by Col. Dinshah P. Ghadiali, M.D." His pupils call him Dinshah. The book sells for \$2 and can be obtained from the author at 24 East 42nd St., New York City.

Note 1. Dinshah P. Ghadiali lived 1873 to 1966. This book is not listed at OCLC (Sept. 2007).

3206. *Herald of Health and Naturopath (New York City)*. 1921. Book reviews: Vegetarian magazine. 26(4):200-01. April.

• **Summary:** "Vegetarians will be interested in the fact that a new magazine has entered the field. It is called The Vegetarian News, published at 8, John street, Adelphi, London, W.C.Z. and is the official organ of the London Vegetarian Society. Through reading English health magazines, one gets the impression that the Vegetarian and Natural Life Societies are better organized there than in America. In London are numerous first-class restaurants that serve vegetarian dishes exclusively. Here one finds vegetarianism in its best urban setting, where carefully prepared food is daintily served amid pleasant, restful, and often luxurious surroundings." Americans who start vegetarian restaurants should heed this example.

3207. Hansen, I.A. 1921. What is true health reform and how shall we present it? *Advent Review and Sabbath Herald* 98(19):2, 4. May 12.

• **Summary:** Health reform must be in harmony with natural law. "We should maintain a proper balance of proportions... It is true that if there is one thing more important than another, it may be wholewheat bread, or brown rice, leafy vegetables, bulky food, yogurt, vitamins, the caloric system, thorough chewing, vegetarianism, free water drinking, deep breathing, outdoor exercise, the sleeping porch, low-heeled shoes, loose clothing, linen-mesh underwear, the morning tonic bath, nonsmoking, proper eyeglasses, eugenics, nose breathing,..." Address: Secretary General Conference Medical, Takoma Park, Maryland.

3208. Kellogg, John Harvey. 1921. In memoriam: Ella Eaton Kellogg. Battle Creek, Michigan. 41 p.

• **Summary:** Begins with a portrait photo of Ella (the wife of Dr. John Harvey Kellogg) in her later years. Born: April 7, 1854. Died: June 14, 1920.

On the next page is this poem:

"Death reaches not a spirit such as thine,

"It can but steal the robe that hid thy wings;

"Though thy warm breathing presence we resign,

"Still in our hearts its loving semblance clings."
 "—Oliver Wendell Holmes."

Below a full-page photo showing the Kellogg home is written: "Where she is missed." On page 30 is a photo of Ella Kellogg writing at her desk in her later years. Another photo (p. 38) shows four squirrels playing at the base of a large conifer.

The first half of this brochure, titled "Mrs. Ella Eaton Kellogg, by H.M.S. [Henry M. Stegman, editor of *Good Health* magazine], first appeared in the July 1920 issue of that magazine (which see).

It is followed (starting on p. 23) by a special tribute to her by her husband, titled "My Helpmeet," which tells how and when they met and many anecdotes. This section begins:

"I first met my wife, then Miss Ella Eaton, in the late fall of 1876, forty-four years ago. The circumstances of my meeting her I always regarded as Providential. We were having an epidemic of typhoid fever in the West End, chiefly among the students of the Battle Creek College, which at that time had a large attendance. So many people were sick it was exceedingly difficult to find persons to care for them. We had no trained nurses, and I had but one physician, Dr. Lindsay, to assist me in caring for some sixty cases in the town, besides the regular patients at the Sanitarium. In consultation with Dr. Lindsay one morning concerning the cases she was looking after, she remarked: 'I have two patients who are very sick. One of them I feel sure would die but for the fact that she has such a remarkable nurse. She is getting such intelligent and faithful care that I believe she will recover in spite of the dreadful hemorrhages she has had and her very high temperature.'

"It occurred to me that I should see that young woman and endeavor to enlist her in our work, which was already beginning to show signs of development. So I was glad to

improve the opportunity afforded by a consultation to meet the wonderful nurse, and was as much impressed as my assistant had been. I learned from Dr. Lindsay that Miss Eaton had been spending a few weeks visiting friends in Battle Creek, and learning of the great need of persons to care for the sick, had volunteered her services.

"When the young lady had recovered, I had an interview with Miss Eaton and told her of a 'School of Hygiene' which I purposed to start the following fall, and was glad to find her willing to enroll as a charter member of the school. I was still more pleased to find that the possession of a university degree qualified her to assist in the course of instruction in certain branches.

"She returned to the school the following fall, and took so deep an interest in the work that she was soon a most efficient assistant in caring for the multitude of sick people who were then demanding attention.

"I was struggling with the multitudinous duties devolving upon me as superintendent, physician, surgeon, business manager, lecturer in the school of health—almost the entire faculty, in fact—and editor of *Good Health*, in addition to the task of planning the first large main building, supervising the construction and raising the money to pay the large weekly bills. A fine essay read before the School of Hygiene showed me that Miss Eaton possessed unusual literary ability. Another circumstance later acquainted me with another trait of her character—absolute reliability and responsibility for any trust reposed in her hands and unswerving devotion to duty. The lack of trained nurses—this was before the days of schools of nursing—compelled us to press into service everybody available or to call for volunteers to care for the grave cases constantly applying for help. A poor woman suffering from cancer of the stomach arrived one day in a condition of such great feebleness that she could not be sent back to her home. In a few days everyone who undertook to care for her was worn out. A new nurse was needed. Miss Eaton volunteered to accept the charge. She remained with the patient day and night without relief for an entire week, and the patient finally expired in her arms, suffering the most terrible agony. The last forty-eight hours the attendant had not a moment's sleep, and by a strange oversight the man who carried trays of food to the room (in a cottage) neglected to call, so she was also without food; but she remained heroically at her post to the last, as the patient was liable to die any moment from gastric hemorrhage. The great mental and nervous strain necessitated a few days' rest. A less vigorous personality would have collapsed completely.

"Greatly needing help in my literary work for *Good Health*, I invited Miss Eaton to assist me, and she took up a task which she never laid down until her failing health, a few months before her death, compelled her to relinquish the work.

"Miss Eaton's aid in the editorial work of *Good Health*

soon became indispensable, and I considered myself the most fortunate of mortals when she consented to become my life partner in a work which I loved better than my life, and in which, during all the years since, more than forty, she was a constant inspiration, as well as a most efficient and congenial helper and companion. For long periods when I was buried in the development of new features of our expanding work, she carried the principal burden of the magazine, and almost to the last moment of her life gave to it the benefit of her long experience and broad research.

"When the writer became superintendent of the Battle Creek Sanitarium, October 1, 1876, one of the first problems which presented itself was the creation of a new and more satisfactory dietary. The bill of fare in those days consisted of what was left after meats of all sorts, butter, cane sugar, all condiments except salt, pies, cakes, gravies and most other likable and tasty things were excluded. The result was a rather uninviting residue. New arrivals were usually very much dissatisfied, especially for the first few days, and in many cases symptoms of indigestion appeared which had not existed before, much to the discouragement of the patient and to the perplexity of the doctor. 'Sour stomach,' or acid dyspepsia, was the almost universal complaint of the new arrival after the first week or two, and was an exceedingly common trouble with 'helpers.' The cause for this embarrassing situation we could not fathom. It was evident, however, that the diet lacked flavor and gustatory appeal. The problem was to create a dietary which would be appetizing and satisfying, as well as wholesome. I struggled with the difficulty five or six years, and then, just after our return from a trip to Europe in the spring of 1883, I laid the problem before Mrs. Kellogg, and earnestly besought her to take up the subject of food and feeding and try to find a solution of our difficulties. She hesitated, saying that her training had been in different lines and she feared she might not succeed, but finally entered into the matter with the usual energy and enthusiasm which always characterized her work. She first of all visited the best Eastern schools of cookery, taking courses under the best teachers. The next step was the equipment of an experimental kitchen in which was begun a research in methods of preparing food with reference to wholesomeness and digestibility, which was carried on almost continually for nearly twenty years. During all this time Mrs. Kellogg was busy devising new methods of food preparation, new dietetic combinations, recipes, etc., for the creation and perfection of the new dietary which we recognized as the most pressing need for the advancement of the cause of diet reform and the welfare of the patients of the Sanitarium. We took our dinner daily at about 5:00 P.M. at the experimental kitchen and discussed the results of the day's work" (Continued).

3209. Kellogg, John Harvey. 1921. In memoriam: Ella Eaton Kellogg (Continued—Document part II). Battle Creek, Michigan. 41 p.

• **Summary:** (Continued): Around his time, in 1885 Alfred College, her alma mater, bestowed a Master of Arts degree on Ella Kellogg.

"Whenever I had a suggestion to make, it was given a thorough trial and subjected to the most rigorous tests. Out of many thousands of experiments a few dozen good ideas would be developed, and thus a new regimen was gradually built up.

"To this work of Mrs. Kellogg's, more than to anything else, the Sanitarium and the world are indebted for the advancement in dietetics which, started in those early days, has in later years been carried on by other capable persons who received their first inspiration and instruction from Mrs. Kellogg.

"Without the help derived from this fertile incubator of ideas, the great food industries of Battle Creek would never have existed. They are all direct or indirect outgrowths of Mrs. Kellogg's experimental kitchen, established in the fall of 1883.

"Another outgrowth of the little kitchen, in a cottage across the road from West Hall, is the Battle Creek Sanitarium School of Home Economics, which is a lineal successor to Mrs. Kellogg's Cooking School, an early addition to the experimental kitchen.

"Both Mrs. Kellogg and myself began teaching school when young, and were much interested in children and child culture. We felt that it would be a privilege to share our home with others and to open opportunities to those who might thereby be prepared to enter fields of usefulness in their later lives. As children came into our home, one by one, in Providential ways, Mrs. Kellogg entered most heartily into the work of mothering, training and educating the little ones in harmony with the highest and most progressive educational ideals. Margaret Fuller, Froebel, Jean Paul, Herbert Spencer, Rousseau and other pioneers in educational reform were authorities in our home. A home school was established; first a kindergarten, then sloyd and manual training. Competent teachers were employed to carry out our plans, and the whole home and home life became a training-school. No domestics were employed. The entire work of the home was divided up into small tasks, each of which was allowed to a child, who was made responsible for it.

"In all this work, Mrs. Kellogg was the directing head. She read and studied everything of value written on the subject of child culture, from the revolutionary teachings of Rousseau and his followers to the latest results of biologic and physiologic studies of childhood and adolescence. With a master hand she planned, directed, and supervised every detail of the home life and the activities of each child. When all [page 31 bottom] the little ones were asleep at night, we discussed principles, theories and plans, often till a late hour, and whatever decision was reached, was promptly put into execution. In the midst of all the busy hours of household and school activities, she carried on her department in *Good*

Health, directed the Sanitarium School of Cookery and lectured to patients and helpers, besides carrying on for years an extended correspondence in the direction of field work in the Health and Social Purity Departments of the National W.C.T.U., in close association with Miss Frances Willard, whose intimate friendship she enjoyed.

"During all this time, and for more than twenty years, she prepared the bills of fare for breakfast, dinner and supper for the tables of both patients and helpers at the Sanitarium,—a family aggregating from a thousand to fifteen hundred persons,—six separate menus every day in the year, besides doing the same for her own family and directing the culinary department which served as a training-school of cookery for the girls of the home as fast as they became old enough to take turns in carrying the larger responsibilities of the home.

"Those days were busy and troublesome times at the Sanitarium. The great improvements made had all been paid for with borrowed money, which was obtained in small sums from many different persons, and the financial problems were pressing and perplexing. The attempt to build up a great, self-supporting, philanthropic enterprise without endowment was a new and an untried experiment, and many expected the effort to fail.

"But financial troubles were by no means the chief of our problems. The Battle Creek Sanitarium Method was not a well-rounded and developed system, as now, with able experts in charge of every department. It was a new, and, in the early days, a more or less crude attempt to systematize and co-ordinate a large group of therapeutic agents known as natural or physiologic measures. There was much prejudice to be overcome, as well as scientific problems to be solved.

"And there were other and far more subtle and difficult problems growing out of the sectarian affiliations of the work, to say nothing of the ordinary routine work of caring for several hundred sick people and supervising to some degree the activities of some hundreds of helpers. Mrs. Kellogg was in close touch with all this medley of work and worry, and lent a sympathetic and judicious mind and dexterous hand to the task of solving the perplexities which every day presented themselves for settlement.

"How she did it all is indeed more than a wonder; it was truly a miracle of efficiency and endurance. And it is not surprising that by the time the first group of little ones began to reach years of maturity and responsibility she broke under the strain which was too much for human nature to bear. This breakdown occurred twenty-three years before her death. Complete rest for a year or two secured improvement, but not complete recovery, and during the last twenty years of her life, her labors, though versatile and wonderfully efficient, were handicapped by continuous invalidism. Indeed, during all these years the seeds of the malady which finally ended her life were slowly developing. Not one day during all these long years was she wholly free from

suffering. Not a day passed without some hours devoted to treatment, by the aid of which alone was she able to enjoy even partial comfort. But she still carried as much as possible of her old responsibilities and did much literary work" (Continued).

3210. Kellogg, John Harvey. 1921. In memoriam: Ella Eaton Kellogg (Continued—Document part III). Battle Creek, Michigan. 41 p.

• **Summary:** (Continued): "The loss of hearing, which began with an attack of scarlet fever in early life and was later increased by diseased tonsils, and finally aggravated and rendered incurable by injudicious treatment by a renowned specialist, was a trial hard for her to bear; for she greatly enjoyed vocal and instrumental music, and especially the singing of the birds and the chatter of a wonderful gray parrot from West Africa which was for many years her special pet. The final, almost total, loss of hearing was also a handicap in dealing with the children, although by no means to the degree which would be naturally expected. Without special study and with no instruction, she very quickly acquired the art of lip reading. People who enunciated clearly she could usually understand without difficulty, although not hearing a word uttered. Every new invention to aid hearing was tried, but found valueless because of the unusual nature of her difficulty, which wholly baffled the best specialists in this country and Europe. Although for many years she had been unable to hear her own voice, she retained to the last to a remarkable degree the ability to modulate her voice so well that anyone not familiar with the fact of her deafness would not suspect it from her ordinary speech. Her readiness in the acquisition of the art of lip reading affords an illustration of the remarkable intellectual acumen and keenness, which was a very marked characteristic.

"Mrs. Kellogg was a great lover of Nature and a great reader of books, and possessed a remarkable memory of places, things and events. In traveling she was always on the alert and observed everything of interest. Apparently nothing escaped her. Before going upon a journey, she posted herself as thoroughly as possible about the new things and places to be visited. I always carried with me so much work that I was often glad to come home to get a rest, and so I was glad to be able to get travel information second-hand, as she called my attention to matters of interest in passing which otherwise I should never have seen, for my absences from home have been work vacations rather than recreation periods.

"Mrs. Kellogg was passionately fond of flowers and showed consummate taste and skill in arranging flowers for color effect. She knew most of the wild flowers which grow in this region, and was fond of transplanting them from the woods to our grove, where many species are growing and spreading beneath the trees.

"A notable trait of character familiar to everyone acquainted with Mrs. Kellogg was her great solicitude for

the welfare of everyone within her circle. Every animal about the place, as well as each one of the children and other members of the family, even the wild birds and the squirrels, were the objects of her motherly care. Supplies of food and water for each and every one were never forgotten. Every birthday of every child and grandchild and remoter kin was always suitably recognized. Always she was planning for the comfort, instruction or pleasure, not of a few favorites, but of all who could have the slightest claim upon her solicitude.

"Profoundly religious from her childhood, Mrs. Kellogg carefully trained her household in the fear and admonition of the Lord. Nothing she knew to be her duty was left undone. She spared no effort to accomplish all expected of her and chose the tasks which were likely to be left undone by others.

"Until the last few months of her life, Mrs. Kellogg continued her contributions to her department in *Good Health*, which she had conducted for forty years. She was a great lover of books, and during the last months of her life occupied nearly all her waking moments in reading.

"She had a keen sense of the beautiful in nature and art. Her skill in the arrangement of flowers was unequalled. She gave much thought and attention to the planting and grouping of flowers and shrubs about the home grounds, as well as to the comfort and pleasure of the wild creatures that made themselves at home in the grove. Almost to the very last she was able to enjoy the view of trees and grounds from the broad, open windows of her sick-room, and was entertained by the visits of her loved birds and squirrels, which often entered and played about the sick-room. Even a few moments before her death she partook of strawberries from the garden with some relish.

"A little more than a year before her death, Mrs. Kellogg recognized some aggravation of a lifelong ailment, and on this account returned home from Florida, where she was then with her husband, and became a patient at the Sanitarium, where she received every possible expert attention. She apparently made marked improvement, but soon after Dr. Kellogg returned, late in May, he noted symptoms of a grave condition, no indication of which had previously existed. Nothing but a surgical operation could save her life. The operation was performed by the eminent Dr. Wm. J. Mayo, of Rochester, Minnesota. The operation gave relief from suffering and undoubtedly prolonged her life, but could not eradicate the disease, for the reason that it involved structures which could not be removed, being located in a part of the body where its insidious development gave no sign of its presence until far advanced.

"Under careful nursing, receiving the benefit of every resource known to medical science, she lingered for a year, during most of which time she was fairly comfortable; then, after many years of patient suffering, she at last entered into rest, leaving behind a record of fidelity to principle, devotion to truth, and willingness to give freely of her best service to others that will ever remain an inspiring example to all who

knew her.

"In these brief paragraphs I have presented but a very feeble and incomplete picture of the great part my wife played and the essential assistance she rendered in all the activities of my life, and of the great contribution she made, especially in the earlier years, to the work of the Battle Creek Sanitarium and its allied enterprises."

She died 14 June 1920 at home ("The Residence") in Battle Creek, Michigan.

On the last page is this poem, "Submission"

"(Written by Mrs. Kellogg shortly after she became convinced that her deafness was incurable.)

"How changed seems life! How drear the days,

"Since I no longer hear

"The songs of birds, the voice of friends,

"And sounds I held so dear.

"Full-well I know God's plans for us

"Like lily buds unfold,

"And in His own good time we'll see

"Their calyxes of gold.'

"I know another eye than mine

"Can guide my steps aright;

"I know behind the darkest cloud

"The sun still sheds its light.

"I'll humbly bow to His sweet will

"And trust Him for the rest;

"I'll patiently my burden bear;

"I know His way is best."

3211. Brook, Harry Ellington. 1921. Care of the body. *Los Angeles Times*. May 29. p. VIII18.

• **Summary:** The first section, titled "Milk substitutes," argues that cow's milk is not suited for human infants (who should use mother's milk) or adults (for many reasons, including tuberculosis germs). "Recognizing the limitations of milk as a food, many have endeavored to introduce some form of synthetic or artificial milk. In France, for many years, the soya bean has been used for this purpose, in feeding infants. It is not well adapted thereto, because, like the peanut, it contains starch, and infants cannot digest starch."

Dr. Elmer Lee of New York, recently developed a new synthetic milk made from oats and peanut meal. However these foods also have a high starch content. The best milk substitutes would be made from nuts, which contain no starch. The peanut is not a true nut. "The almond is the best nut to use for this purpose, blanched, ground into cream, but not heated, and mixed with distilled water." An infant deprived of its mother's milk will thrive much better on this nut milk, mixed with a little raw fruit juice, than on the milk of a cow, "while for adults it is greatly superior to milk."

The section titled "Removal" states: "The Carque Pure Food Company has moved from Magnolia avenue to 2618 West Seventh street, two blocks west of Westlake Park."

Address: N.D. [Los Angeles, California].

3212. Lust, Louise. 1921. Some thoughts on the value of vegetarianism and raw foods in health and disease. *Herald of Health and Naturopath (New York City)* 26(7):323-24. July.

• **Summary:** A natural, unfired diet is best during the summer. "Cooking, when not properly done, destroys the vital or life principle of the food." "Eating raw food compels slow mastication and this aids digestion... Yet the dyspeptic fears raw food and must have everything doubly cooked..." Address: D.P., N.D.

3213. Brook, Harry Ellington. 1921. Care of the body. *Los Angeles Times*. Oct. 2. p. VIII-18. Sunday magazine.

• **Summary:** The section titled "Vegetarian hotels" states: "At The Hague, in Holland, is the Pomona, a vegetarian hotel, first class in every respect, with 150 rooms. Another, with the same name, is being built at Utrecht.

"There are many vegetarians in the United States. A few vegetarian hotels, in the leading cities, should be profitable. Also more vegetarian restaurants." Address: N.D. [Naturopathic Doctor].

3214. Gandhi, Mohandas Karamchand. 1921. Abstemiousness? *Young India*. Oct. 6. *

• **Summary:** "Abstemiousness from intoxicating drinks and drugs, and from all kinds of food, especially meat, is undoubtedly a great aid to the evolution of the spirit, but it is by no means an end in itself. Many a man eating meat and with everybody but living in the fear of God is nearer his freedom than a man religiously abstaining from meat and many other things, but blaspheming God in every one of his acts." Address: Bombay.

3215. Chittenden, Russell H. 1921. Re: Suitability of a vegetarian diet in a hospital (Letter to the editor). *Modern Hospital (The)* 17(5):431. Nov.

• **Summary:** Louis J. Frank, in his article titled "The Meatless Diet," reprints letters from some of America's most prominent biochemists, metabolists, and physiologists (all professors), including one "From Russell H. Chittenden, Sheffield Scientific School of Yale University:

"In reply to your letter of June ninth, I beg to state that in my opinion it is quite possible, and indeed a desirable thing, for many reasons, to establish a lacto-vegetarian dietary in the wards of your hospital. There is no question in my mind that such a diet can be made nutritious and healthful I suppose you can supplement it by eggs if necessary. Further, the addition of fish gives you a wide range. But with vegetables of all kinds, with milk, bread and butter, you have at your command all the necessary resources of a nutritious diet." Address: Prof., Sheffield Scientific School of Yale Univ. [Connecticut].

3216. Frank, Louis J. 1921. The meatless diet (Letter to the editor). *Modern Hospital (The)* 17(5):429-32. Nov.

• **Summary:** Contents: Introduction. Meat not necessary scientifically. Advantages of meatless diet: Religious, hygienic, administrative, educational, economical. Disadvantages refuted. Lacto-vegetarian diet. Letters in support of meatless (lacto-vegetarian) diet in this hospital from some of America's most prominent biochemists, metabolists, and physiologists (all professors): F.G. Benedict, Russell H. Chittenden, W.J. Gies, Graham Lusk, Lafayette B. Mendel, E.V. McCollum, and Victor C. Vaughan. Note: Most of these letters are cited separately. Resolutions of committee of medical staff of Beth Israel Hospital.

In this hospital "strict adherence to the Mosaic dietary regulations is enforced." Fish and fish products, not including shell fish, are allowed in the diet, as are milk, dairy products, and eggs. "Those who are acquainted with the Mosaic Law are aware that it is prescribed in the Jewish ritual not to mix meat and milk and their derivatives. The origin of this custom is based upon the bidding of Moses not to seethe the kid in its mother's milk. Upon this ruling the biblical commentators, the gaonim and the rabbis, etc. have based the whole system of dietetic ritual. Meat may not be eaten with butter. Chicken flesh may not be cooked with milk, or butter, or cream, or cheese. Nor may any utensil that is used for 'milk' foods be allowed to serve as a 'flesh' container. That is, for example, a knife used for the spreading of butter may not be used for cutting meat. A pot in which meat or chicken has been cooked... may not serve for cooking milk or holding cream, etc.

"The Beth Israel Hospital, however, was created so that the orthodox Jew may have a haven in times of illness..." Two committees were appointed to investigate (a) the scientific aspect, and (b) the economic aspect of the question. Each issued a report favorable to a meatless diet, and therefore this diet was adopted by the hospital. Address: Superintendent, Beth Israel Hospital, New York City.

3217. Lusk, Graham. 1921. Re: Suitability of a vegetarian diet in a hospital. *Modern Hospital (The)* 17(5):431. Nov.

• **Summary:** Louis J. Frank, in his article titled "The Meatless Diet," reprints letters from some of America's most prominent biochemists, metabolists, and physiologists (all professors), including one "From Graham Lusk, Cornell University Medical College, Department of Psychology, New York:

"I believe that the lacto-vegetarian diet could be established in any hospital without detriment to the health of the patients. It would be well to provide green vegetables or spinach so that iron could be taken in this form. Of course, as you know, a milk diet was long the only support of typhoid patients." Address: Prof., Cornell Univ. Medical College, Dep. of Psychology, New York.

3218. Lust, Louise. 1921. Food in illness. *Herald of Health and Naturopath (New York City)* 26(11):533-34. Nov.

• **Summary:** "Light, easily digested food is of the first importance in illness. Whole-wheat zwieback made with gruel, soup-gruel made of unpolished rice, oat meal cooked well and then strained or oatmeal soaked in buttermilk and then cooked moderately makes an excellent dish." Note: All these foods are cooked and based on whole cereal grains.

"Temperance in diet is absolutely necessary; therefore if you wish to be healthy, avoid stimulating foods, and restrict the use of flesh foods especially."

"The normal appetite which results from the use of simple foods must be experiences to be appreciated."

By unsuitable foods we meant not so much food that is bad in itself, but rather that which is not suited to the temperament, age or work of the eater, or to the climate and circumstances in which he finds himself.

"A man of excitable or irritable temperament will need a different diet from one of a slow or quiet nature. The food which will only stimulate the latter will over-excite the former, and may even make him quite ill." Address: N.D.

3219. McCollum, Elmer V. 1921. Re: Suitability of a vegetarian diet in a hospital (Letter to the editor). *Modern Hospital (The)* 17(5):431. Nov.

• **Summary:** Louis J. Frank, in his article titled "The Meatless Diet," reprints letters from some of America's most prominent biochemists, metabolists, and physiologists (all professors), including one "From E.V. McCollum, the Johns Hopkins University School of Hygiene and Public Health, Baltimore, Maryland:

'I have not the slightest hesitation in saying that vegetarian diet, supplemented with fairly liberal amounts of milk, is the most satisfactory type of diet that man can take. I do not advise the elimination of meat from the diet because of its palatability, but that it is necessary for optimum well-being I do not believe. The use of fish and fish products can be utilized to accomplish the end of increasing the attractiveness and palatability of the foods almost as well as meats. I feel that you would be entirely safe in adopting this kind of diet and that you would be doing much better by your patients than is now being done in many of the best hospitals in the land, where patients are attempting to recover from wasting diseases or from surgical operations on diets of the cereal, tuber, and muscle meat type. Palatable and attractive as they may be, I feel confident that they are not very satisfactory as human foods when adhered to over appreciable periods.

"In case you adopt this new plan I shall be greatly interested to follow its development and to learn whether you meet with any esthetic problems in connection with the feeding of your patients.'" Address: Director, School of Hygiene and Public Health, Johns Hopkins Univ., Baltimore, Maryland.

3220. Mendel, Lafayette B. 1921. Re: Suitability of a vegetarian diet in a hospital (Letter to the editor). *Modern Hospital (The)* 17(5):431. Nov.

• **Summary:** Louis J. Frank, in his article titled "The Meatless Diet," reprints letters from some of America's most prominent biochemists, metabolists, and physiologists (all professors), including one "From Lafayette B. Mendell, Sheffield Laboratory of Physiological Chemistry, Yale University: 'I have given some thought to the advisability of introducing a meatless dietary into your hospital régime, and reached the conclusion that there will be no objection to this upon physiological grounds. Inasmuch as I myself lived upon a diet devoid of meat, fowl, and fish for nearly a year, for purely experimental purposes, and remained in excellent health and vigor during that period, I have no fears regarding the wholesomeness of such a procedure.

"If we consider the various aspects of the meat-free régime, the foremost criticisms will probably be as follows: (a) The ration tends to be low in calories. It is true that on a vegetarian diet the food intake is likely to be reduced for a variety of reasons, because the ration tends to be less palatable than in cookery with meat products. However, with fish, milk, and eggs permitted, as I assume they will be in the meatless dietary, the palatability can be greatly enhanced. As a substitute for meat stock or extract of beef in preparing soups, gravies, etc.,—all of which are so highly prized in a well flavored diet such as your patients are allowed,—I see no reason why the now commercially available extracts of yeast should not be used. In England 'Marmite' is sold for this purpose, and the same product is available in this country under the name of 'Vegex.' These commercial names happen to be familiar to me, but there are doubtless others, and it is not difficult to prepare a well flavored extract of yeast. Incidentally, it is rich in water soluble vitamine.

"(b) It may be said that the quality of the protein in the vegetable diet is poor. This can scarcely apply where fish, eggs, milk, and its numerous products (cheese, etc.) are surely available, as they can be without violation of the Mosaic dietary regulations. As you well know, even small quantities of 'animal proteins' serve to supplement well the proteins of the cereals, etc.

"(c) There will be no lack of suitable vitamin A, B, C, where milk and cream, green vegetables, fruits, and eggs are used in abundance. Surely meat has no virtues as a source of vitamins except in so far as the beef drippings ('oleo oils') may furnish a small amount of fat-soluble vitamine, such as the egg yolk yields in far greater abundance. Incidentally, inorganic salts will be assured quite as well on the meatless dietary, and there will be no lack of suitable 'roughage.'

"If you have ever visited the Battle Creek Sanitarium [in Battle Creek, Michigan] you will have noted that life is possible and good health is maintained without the use of meat. I regard the diet there as too bland for your clientele,

but I am sure the menus could be greatly improved by additions of further foods such as you are not interdicted from employing. Under separate cover I am sending a few reprints which are intended to support some of the comments which I have made.”

Note: This is the earliest document seen (Feb. 2022) concerning vitamins and vegetarian diets. Address: Prof., Sheffield Lab. of Physiological Chemistry, Yale Univ. [Connecticut].

3221. Ehret, Arnold. 1921. Sample Lesson No. 5: From the practitioner's course of the mucusless diet healing system. *Herald of Health and Naturopath (New York City)* 26(12):584-87. Dec.

3222. Lust, Benedict. 1921. The science of health: What should we eat. *Herald of Health and Naturopath (New York City)* 26(12):588-91. Dec.

• **Summary:** Luxurious living and eating too much are the first cause of maladies. Gives many detailed reasons why it is important to avoid eating meat (and drinking alcoholic beverages). Continued in the Jan. 1922 issue (p. 8-10). Address: N.D.

3223. *Vegetarian News (London)*. 1921-1958. Serial/periodical. London, England: London Vegetarian Society. 1(1921)-37(1958, winter). Nos. 1-302. *

• **Summary:** In 1958 this periodical merged with *The Vegetarian* to form *The British Vegetarian*.

In 1950 Ronald M. Lightowler was appointed Secretary of the London Vegetarian Society and Editor of the *Vegetarian News*. The first issue under his editorship was published in Jan. 1951, with “Live and Let Live” being its editorial theme. He continued as editor until the merger in 1958. Address: 8 John St., Adelphi, London, England.

3224. Anderson, Hans Steele. 1921. Science of food and cookery. 5th ed. Mountain View, California: Pacific Press Publishing Assoc. 282 p. Illust. Index. 23 cm. [5 ref]

• **Summary:** This book, by a Seventh-day Adventist, advocates a vegetarian diet as “the natural diet of the human race.” The first one-third (p. 1-97) is a scientific discussion of the nutritional basis for such a diet; the last two-thirds (p. 98-268) is vegetarian recipes.

Chapter 4, titled “The natural food of man” (p. 37-52) has sections on: True food satisfies hunger. Vegetarian diet and longevity. Vegetable and flesh foods contrasted. Vegetarian diet and endurance. Flesh eating a cause of disease. Ethics of flesh eating. Cruelty of flesh eating. The section titled “Vegetarian diet and longevity” (p. 39-42) notes that in the Bible, before the fall, Adam was told to eat grains and nuts. After the fall herbs of the field were added

to his diet. After the flood, when all vegetation had been destroyed by water, God permitted man to eat flesh. In the 9 generations before the flood, the average man lived to the age of 912 years, but in the 10 generations after the flood this was reduced to 317 years.

The section on “Vegetarian diet and endurance” (p. 45-48) contends that “the vegetarian diet is capable of developing the highest level of strength and endurance.” Soy-related recipes include: Stewed soy beans (p. 156). Rice and soy bean loaf (with soy bean purée, p. 156). Rice and soy bean patties (p. 156). Favorite soy bean coffee (p. 265).

A 6th edition was published in 1932, and a 7th edition in 1938.

Note 1. This is the earliest Seventh-day Adventist cookbook seen (Oct. 2004) that contains a recipe using soybeans or soy ingredients.

Note 2. This is the earliest document seen (Oct. 2004) concerning the Loma Linda Sanitarium (or Hospital) and its work with vegetarianism or soyfoods. Address: Dietitian, Medical Missionary College and Sanitarium, Loma Linda, California.

3227. Kellogg, John Harvey. 1921. The new dietetics: What to eat and how. A guide to scientific feeding in health and disease. Battle Creek, Michigan: The Modern Medicine Publishing Co. 933 p. Illust. Index. 24 cm.

• **Summary:** This is the first edition of this important book; subsequent editions were published in 1923 and 1927. Contents: Foods: Food Principles. The digestive process: The liver, mastication, hunger. Metabolism: The energy of food—the calory [calorie]. The physiology of eating: The protein ration, fats, carbohydrates—starches and sugars, food salts, vitamins, cellulose, the acids of foods. Wholesome foods: Cereals (incl. wheat bran), vegetables, green vegetables, root vegetables, vegetable or garden fruits (incl. tomato, cucumber, eggplant, watermelon, muskmelon, squash, vegetable marrow, pumpkin, chayote), legumes (incl. the adsuki [azuki] bean, the Hahto bean, the soy bean, composition of the soy bean, soy bean milk, to fu [tofu], soy sauce, soy bean sprouts), fruits, nuts (incl. the ground nut, the peanut, peanut butter, flour from the peanut, peanut milk, malted nuts). Animal foods. Condiments. Tea and coffee (They are poisonous drugs, in 1921 the U.S. per capita consumption increased to 12 lb/year, chronic caffeine [caffeine] poisoning, coffee raises blood pressure, tea, coffee and uric acid, coffee cripples the liver, other coffee poisons, some poisonous effects of tea and coffee, soda

fountain drinks containing caffeine, coffee substitutes {most consist of cereals plus molasses, roasted until part of the starch and sugar are caramelized; the roasting process makes them unwholesome}}, tobacco. Ptomaines—Poisoned foods. Water drinking. Medical dietetics: Introduction, scientific tests of the nutritive functions, regimens and dietaries, diet in disorders of the digestive organs, diet in disorders of nutrition, diet in joint diseases (rheumatism, arthritis, gout), diet in disease of the heart and blood vessels—Cardio-vascular-renal diseases, diet in disorders of the nervous system, diet in disorders of the urinary organs, diet in diseases of women, diet in management of fevers, diet in chronic infectious diseases, diet in diseases of the skin, diet in surgical cases, diet in diseases of the eye, ear, nose, and throat, infant feeding, the rice regimen. The world's foods: Making the bill of fare.

A table (p. 138) titled "Vegetable fats" lists "The principal sources of edible vegetable fats..." including: Cocoanut meats 36%, corn 5%, hemp seed 32%, palm nut 72%, peanut 52%, sesame seed 51%, soy bean 20%

A table (p. 166-67) lists the 7 main food salts [minerals] found in various foods, including soy beans, gluten (pure, 40%, or 20%), and peanuts.

Table XII (p. 170-71) lists foods rich in iron. Columns (a) shows the grains of iron in one ounce, and column (b) shows the number of ounces required to supply one day's ration of iron. Includes (in descending order of iron content): Savora (yeast extract), Gluten—pure, gluten—40%, egg yolk, dried lentils, wheat bran, soy beans, Protose, Brose (oatmeal, corn meal, bran), Nuttolene, Graham Flour, tenderloin meat, Graham bread, Zante currants.

Table XIV (p. 182) lists foods rich in lime [calcium] in descending order of lime content, with the same two columns as table XII. Includes: Cheese, yogurt cheese, mustard greens, linseed meal, turnip tops, soy beans.

Page 183 discusses "The acids and bases of foods—The reaction balance. As pointed out by Bunge many years ago, and as further shown by an extensive research conducted by Sherman of Columbia University, foodstuffs differ in relation to their acid and basic contents... The waste products of the body are predominantly acid, consequently it is desirable that the foodstuffs should be predominantly basic... The predominance of acids gives rise to a condition known as acidosis (p. 719), and care must be taken to protect the body from injuries which result from this condition... Meats of all sorts, especially the lean meats, tend to acidify the tissue fluids to a marked degree. Eggs tend in the same direction, though less strongly than do meats."

In the chapter titled "Diet in disorders of the digestive organs," pages 654-55 discuss soy flour, yeast extract (Savita, Marmite—which is a very useful source of iron and vitamins), Malted Nuts, 20% gluten meal, and the "Gluten-feeding method."

In the section on diabetes, page 703 gives a recipe for

gluten bread. Gluten is also mentioned on p. 718. The section titled "Diet for acidosis" (p. 719) begins: "The blood and tissue fluids are slightly alkaline in reaction. This slight degree of alkalinity is essential to the maintenance of health. When, through disordered metabolism, the body becomes charged with an excess of acids, so that the alkalinity of the blood and tissues is diminished, the result is a condition known as acidosis. Among the symptoms due to acidosis may be mentioned nervousness, mental depression, mental confusion, drowsiness, convulsions, and coma. Air hunger with shortness of breath is one of the early symptoms of acidosis. This condition is most pronounced in advanced cases of diabetes and is encouraged by a meat diet, particularly by the use of an excess of fats. Fasting persons always show a condition of acidosis after fasting for a day or two. Professor Fischer believes that this preponderance of acids, or chronic acidosis, is the exciting cause of Bright's disease."

The section on diet and heart disease notes (p. 738-39): The "great frequency with which arteriosclerosis is encountered in modern times is the result of the increase in flesh eating which in recent years has been very marked in all civilized countries." It "has become the universal custom among practical physicians to exclude meats, meat extracts, and broths of all sorts from the diet of patients suffering from arteriosclerosis, as the most efficient means of checking the degeneration of the arteries..." Foods containing uric acid, plus coffee and tea, should be discarded. Bran, agar, paraffin oil, and an enema should be used freely.

Note 1. This is the earliest document seen (Jan. 2021) concerning diet as a root cause of heart disease.

Note 2. This is the earliest document seen (Nov. 2020) concerning soy and mental health. Address: M.D., LL.D., F.A.C.S., Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

3228. Kellogg, John Harvey. 1921. To fu (Document part). In: J.H. Kellogg. 1921. *The New Dietetics: What to Eat and How...* Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 303-04. 24 cm.

• **Summary:** "This is a cheese like preparation made from the soy bean, much used in China. The method is as follows:

"Prepare soy bean milk. While it is boiling add one-fifth its volume of a one-half per cent solution of citric acid, stirring. Strain through a cloth to separate the curds.

"To fu omelet is more palatable and more wholesome than ordinary egg omelet. It is made as follows: Four ounces of to fu, one rounded teaspoonful of graham flour, milk sufficient to give the mixture the consistency of pancake batter. Add one well beaten egg. Cook in the usual way. This to fu or soy bean omelet is more wholesome than the ordinary egg omelet and is more easily digestible. Made without the addition of flour the to fu omelet is a valuable dish for diabetics.

"The following is the [percentage] composition of to fu as given by Adolf [sic, Adolph] and Kiang [1920]:

"Protein 10.22, fat 3.66, salts 1.09, [nitrogen-free] extract 4.13, water 80.90." Address: Battle Creek, Michigan.

3229. Kellogg, John Harvey. 1921. Animal foods (Document part). In: J.H. Kellogg. 1921. *The New Dietetics: What to Eat and How...* Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 363-435. 24 cm.

• **Summary:** Dr. Kellogg confines to this one chapter all of his discussion of meat, poultry, fish, eggs, and milk. Contents: Introduction: Special characteristics of animal foods. Meats: The iron of meats, the lime [calcium] content of animal foods, beef, mutton, goat, venison, pork, fowls, fish, "sea foods," oysters, meat extractives, the poisons of meat, viscera highly objectionable. "high" meats, putrefaction products in meat, the bacteria of meat, acidosis from a flesh diet, effect of flesh eating on animals, parasites of meat, flesh meat not essential, meat unnecessary, raw beef not antiscorbutic, special contraindications of flesh foods. Eggs: Introduction, egg yolk, egg white, the cooking of eggs, influence of hen's food on eggs, eggs and biliousness, the food iron of eggs, the lime content of eggs, egg substitutes, preserved eggs, bad eggs, candling of eggs, egg poisoning, when eggs should not be eaten. Milk: Introduction, table showing composition of cow's milk and milk products, why milk sours while meat putrefies, the special value of milk proteins, milk rich in vitamins, influence of food of cow upon milk, milk rich in salts, dried milk, cream, butter (rich in vitamins), butter color, cheese, skimmed milk, canned milk, buttermilk, whey, modified milk, the iron content of milk, the lime [calcium] content of milk and cheese, "yogurt cheese" (fermented using pure cultures of the *bacillus acidophilus*), whey, milk must be clean, sour milk, bitter milk, slimy and colored milk, bacteria on milk bottles, infections due to unclean milk, infected milk a cause of tuberculosis, injurious effects of sterilizing or pasteurizing milk, buddized milk (sterilized with peroxide of hydrogen), certified milk (and specifications established by the American Association of Medical Milk Commissions), a person may be sensitized to milk, medical uses of milk, how to eat milk (it must be chewed to mix it with saliva, not just swallowed; never eat it with meat), milk a cheap food, table showing composition of milk of various animals (human milk is the lowest in total protein {2.01%} and reindeer milk is the highest {10.90%}), table showing the composition of certain infant foods.

Photos show: (1) The appearance of eggs when candled (4 types). (2) The Battle Creek Sanitarium dairy barn (very clean, with cows standing in two long rows), (3) Beefsteak preserved in buttermilk for 15 years.

Note: Dr. Kellogg advocated a vegetarian diet. He opposed the consumption of meat, fowls (poultry), fish, or sea foods. Eggs are good food if they are fresh and properly

cooked to make them digestible—at a low temperature (150-160°F) until they are "soft boiled." Milk is an excellent food (good source of protein, calcium, and vitamins; and inexpensive) if it is fresh and clean (ideally certified), and comes from cows which have been fed upon fresh grass or other green food (which supplies vitamins). Unsanitary milk may contain disease-producing organisms such as those of typhoid fever, tuberculosis, and diphtheria. Butter is the most important of all animal fats because it is rich in vitamins. Fresh, unripened cheese (especially cottage cheese) and yogurt cheese are good foods. Fresh, clean milk is better than clean eggs. Address: Battle Creek, Michigan.

3230. Kellogg, John Harvey. 1921. Vitamins (Document part). In: J.H. Kellogg. 1921. *The New Dietetics: What to Eat and How...* Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 185-197. 24 cm.

• **Summary:** Contents: The anti-scorbutic vitamin. The antineuritic or anti beri-beri vitamin. Yeast extract very rich in vitamins. The fat-soluble vitamin. How vitamins are destroyed. The unique value of the tomato.

This chapter begins: "These subtle elements, which have been in recent years proven to be absolutely essential to life and health, are present in food in such small quantities that notwithstanding the prodigious amount of work which has been bestowed upon them, their chemical composition is not yet known. The proof of the existence of this class of food principles and their importance to human life rests upon numerous observations which have shown that in their absence various disorders known as deficiency diseases make their appearance.

"Vitamin appears to be an essential constituent of nerve tissue. Funk found vitamin in ox brain and other investigators have found vitamin in the spinal cord.

"When vitamins are not present in the food in sufficient amount, the vitamin constituent of the nerves is gradually lost and degeneration of the nerve tissue with paralysis follows as the result."

"Vitamins are necessary to promote growth. In their absence young animals do not develop, reproduction does not take place, mothers are not able to nurse their young, appetite and nutrition and various diseases develop, among the best known of which are scurvy, beri-beri, rickets, perhaps pellagra, and certain diseases of the eye."

The section on "The antiscorbutic vitamin" (p. 187) notes: "The Chinese have long made use of sprouted seeds in the form of salad and combined with vegetables in various ways. Sprouted soy beans is one of the constituents of the famous chop suey. Recently Chick and Delf, of London," have found that peas and lentils, when soaked of 24 hours in water and then sprouted for 48 hours at room temperature "were five to six times as active as dry seeds in preventing scurvy, and in this respect compared well with many fresh vegetables. So small a quantity as one and one-fourth

grams (one-third dram) of the sprouted seeds fed daily was found sufficient to prevent scurvy in guinea pigs.” “The antiscorbutic power of germinated seeds is considerably lessened by boiling. Holst tells us that Cartier, on his last voyage to Newfoundland [Canada] in 1535, cured his crew of 103 men, who with the exception of three were sick with scurvy, by administering to them a freshly prepared decoction of pine needles.”

“A very good salad may be prepared from sprouted soy bean seeds which have been allowed to grow to the length of about an inch. Sprouted soy bean seeds also add an excellent quality to vegetable soups. The property which these seeds have of producing highly valuable vitamins makes very desirable the encouragement, in this country, of the use of sprouted seeds.” The author then describes how to grow sprouts at home. Address: Battle Creek, Michigan.

Address: Writer on food.

3234. Salt, Henry Stephens. 1921. *Seventy years among savages*. London: G. Allen & Unwin Ltd. 251 p. Index. 22 cm.

• **Summary:** Contents: The argument. Where ignorance was bliss. Literæ inhumaniores. The discovery. Cannibal’s conscience. Glimpses of civilization. The poet-pioneer. Voices crying in the wilderness. A league of humaneness. Twentieth-century tortures. Hunnish sports and fashions. A faddist’s diversions. Hoof marks of the vandal. The forlorn hope. The cave man re-emerges. Poetry of death and love. The talisman.

Salt’s autobiography describes a life lived entirely in

England, containing reminiscences criticizing English life and customs from a humanitarian point of view. “Why the diet of my countrymen should have been the first thing to set me pondering, I am unable to say... I then found myself realizing that the ‘meat’ which formed the staple of our diet, and which I was accustomed to regard—like bread or fruit or vegetables—as a mere commodity of the table, was in truth dead flesh—the actual flesh and blood—of oxen, sheep, swine, and other animals that were slaughtered in vast numbers under conditions so horrible that even to mention the subject at our dinner tables would have been an unpardonable offence” (p. 9).

Salt, then an Eton master, began to question his friends and acquaintances “about this apparently glaring inconsistency in our ‘civilization.’” He describes his changing consciousness about the ethics of eating meat, how “gradually the conviction had been forced on me that we Eton masters, however irreproachable our surroundings, were but cannibals in cap and gown—almost literally cannibals, as devouring the flesh and blood of the higher non-human animals so closely akin to us, and indirectly cannibals, as living by the sweat and toil of the classes who do the hard work of the world” (p. 64).

As one might guess, his brilliant and farsighted writings in the fields of humanitarianism, vegetarianism, animal rights, the importance of preserving nature and places of natural beauty, socialism, and corporal punishment, were not well received in his native country when they appeared during the late 19th and early 20th centuries. In his 88 years he published more than 47 books on a wide variety of subjects, including biographies of Shelley, Thoreau, De Quincey, and Richard Jefferies. Address: England.

• **Summary:** “Teachers in the pulpit and teachers in the class room should be prepared to instruct in the care of the body. They should understand the science of physiology and hygiene, and should teach those under their direction the sacredness of the human body and the laws of its life.”

“Simple preparations are to be made, the price of which will fall within the reach of the poor, and many are to be taught to make their own foods rather than to depend upon factory-made foods.

“Every cafeteria, every sanitarium, every school, and likewise, every home table, should be a practical demonstration center of foods properly prepared to give health of body and mind.”

3237. Lust, Benedict. 1922. *The science of health: What should we eat. Herald of Health and Naturopath (New York*

City) 27(1):8-10. Jan.

• **Summary:** Continued. "Even a simple blade of grass contains all that the body of huge animals (the ox, the horse, and so forth) needs for its growth, its maintenance, and its capacity for the heaviest labours. How much more nourishment must there be in the fruit of cereals and leguminous fruits! In many countries the people are entirely restricted to such food." Peasants in many countries taste meat only once or twice a year. Yet they are healthy, vigorous and intelligent.

"A diet that is mostly vegetarian enables us to get through our work with perseverance and regularity, and without undue fatigue; only we must take care to choose nutritious food, and especially we must pay proper attention to the cooking of it.

"In the first place the leguminous food—lentils, peas, and beans—far surpass meat in nutritive value and are devoid of its injurious heating elements. They contain plenty of albuminates—in general 10 to 15 per cent. more nourishment than meat... Leguminous fruits are not only a very agreeable dish, but they may completely replace meat as sources of strength. Yes, you will say, dear reader,... but they are not easy to digest and they are very flatulent." Not true when they are properly cooked. Lust explains how best to cook legumes.

"Immediately after the leguminous fruits, in respect to nutritive value, we must place the familiar cereals—wheat, rice, oats, barley, and maize, etc." Address: N.D.

3238. *Los Angeles Times*. 1922. Course of lectures by Linda Burfield Hazzard and Otto Carque (Ad). Feb. 12. p. VIII18.

• **Summary:** The lectures will be at Metaphysical Hall, 512-13 Fay Building, Third and Hill Streets, Wednesday and Friday evening, Feb. 15 and 17, at 8 p.m. "No admission fee. Dr. Linda Burfield Hazzard, author of *Fasting for the Cure of Disease, Diet in Disease and Systematic Cleansing*, etc. is the greatest recognized authority on the fast and all natural curative methods. These will be fully explained.

"Mr. Otto Carque, food chemist and biologist, author of *Natural Foods of California, Curative Foods, Biological Chemistry*, etc. is California's foremost purveyor of natural unfired foods. Mr. Carque will give a complete exposition of these and allied subjects."

Dr. Hazzard, Chirothesian, can be reached at 6912 Sunset Boulevard, Hollywood. Phone: 577-382.

Note: A Google Internet search (March 2005) for "Chirothesia*" gets 499 hits, and for "Chirothesian Church" gets 23 hits. The Chirothesian Church of Euth and the Chirothesian Church of Faith are both said to have been founded in 1917.

3239. United States Library of Congress. Div. of Bibliography. 1922. List of references on vegetarianism. Washington, DC. 13 f. 4°. Series: Select List of References,

No. 629. *

• **Summary:** This selected bibliography covers general references, cookbooks, and periodicals.

3240. *Madison Survey (Madison, Tennessee)*. 1922. Madison Food Factory products. 4(10):3. March 8.

• **Summary:** The factory's loaf of whole-wheat bread is riding a wave of popularity. "With many who are studying diet problems the first question is, 'What shall I prepare in place of meat?'"

"There are vegetable preparations just as rich in food elements as the flesh of animals, and not only more easily prepared than meats, but lacking in those undesirable points that are driving a good many people to give up the use of flesh foods. The food factory puts out Nut Meat, Savory Meat, and Soy Bean Meat.

"Recipes for dishes made from these vegetable meats are sent with every order.

"Much is being said and written against the free use of cane sugar, and cane sugar products."

Note: This is the earliest document seen (Aug. 2013) that mentions "Savory Meat" in connection with Madison College. This product may have been made with wheat gluten. The last mention seen of Savory Meat in the *Madison Survey* is on 2 July 1922, page 3.

3241. Carqué, Otto. 1922. *Natural foods of California*. Los Angeles, California: Carqué Pure Food Company. 21 p. 22 cm. *

• **Summary:** A review in the *Herald of Health and Naturopath* (March 1922, p. 148) states: "Mr. Carque, who is so well known to Naturopaths and Physical Culturists, has here given to his friends an interesting discussion of the relation of food to health. Mr. Carque, who did so much to educate the American public upon the importance of the positive organic mineral salts found in natural food has again placed due emphasis upon this phase of the food problem. He asserts that the body if fed natural foods can build its own vitamins and does not need to depend upon the artificially prepared foods, the commercial world is now exploiting." Address: Los Angeles.

3242. Ehret, Arnold. 1922. The diagnosis of your disease and the "magic mirror." *Herald of Health and Naturopath (New York City)* 27(3):114-17. March.

• **Summary:** The "magic mirror" is your tongue. It reflects the state of your entire intestinal tract. Ehret is "Originator and founder of the mucusless diet healing system." Address: [California].

3243. Littauer, M.I. 1922. *Vegetarianism by a naturist*. Plainfield, New Jersey: Published by the author. *

• **Summary:** A review in the *Herald of Health and Naturopath* (March 1922, p. 149) states: "In this little

booklet Mr. Littauer has brought together the opinion of some of the world's best authorities on the relative merits of the vegetable diet and mixed diets. Being one of the few Naturists [Nudists] who have the courage to 'practice what they preach, Mr. Littauer is himself a living example of the merits of the vegetable and fruit diet... his great strength and rugged health are the result of the life and diet he advocates.' He "lives the life." Address: Naturist Colony, Plainfield, New Jersey.

3244. **Product Name:** Vej-Meat: A Vegetable Meat [Plain, Chicken, Chili, Bologna].

Manufacturer's Name: Vej-Meat Company.

Manufacturer's Address: 227 N. Manassas St., Memphis, Tennessee.

Date of Introduction: 1922 March.

New Product–Documentation: Ad in *Herald of Health and Naturopath*. 1922. March. p. 149. "Vej-Meat: A vegetable meat. Are you looking for a real meat substitute? One that not only looks and tastes like meat and has the food elements of meat, but really tastes good?" "Made from sun-kissed nuts, cereals and vegetable products... 50% more nourishing than meat. Satisfaction positively guaranteed or money refunded. Send 60¢ for a 1 pound can, or \$5.40 for a dozen delivered."

3245. *Madison Survey (Madison, Tennessee)*. 1922. Bits of news. 4(14):4. April 5.

• **Summary:** "The Louisville [Kentucky, vegetarian] cafeteria workers have been giving food demonstrations at the health institute conducted at the Louisville church, and Mrs. Sutherland spent the weekend with them, giving instruction on dietetics.

"Two members of the family, Mrs. Scott and Dr. Caroline Hilborn, spent the week visiting the cafeterias in Chattanooga, Knoxville [both Tennessee], and Asheville [North Carolina]..."

3246. Hashimoto, Hirotooshi. 1922. Carotinoid pigmentation of the skin resulting from a vegetarian diet. *J. of the American Medical Association* 78(15):1111-12. April 15. [4 ref]

• **Summary:** Briefly describes the yellowish discoloration of the skin in some Japanese consuming diets high in yellow vegetables. Address: M.D., Dep. of Internal Medicine, Sapporo City Hospital, Sapporo, Japan.

3247. Eddington, Jane. 1922. Tribune Cook Book: Vegetarian chop suey. *Chicago Daily Tribune*. May 2. p. 24.

• **Summary:** A new recipe. "To make it most like the chop suey use one tablespoon of soy sauce or any of the heavy and syrupy commercial sauces."

3248. *Madison Survey (Madison, Tennessee)*. 1922. Instead

of meat. 4(19):3. May 10.

• **Summary:** "The Food Department of the Madison School puts out a number of foods to take the place of flesh meats, such as Nut Meat, Soy Bean Meat and Savory Meat." Two recipes for serving Nut Meat or Savory Meat are given.

3249. *Madison Survey (Madison, Tennessee)*. 1922. Is flesh food essential to health. 4(22):1-3. May 31.

• **Summary:** "Many times the patrons of our vegetarian cafeterias and sanitariums ask why flesh food is discarded."

"The flesh eater is getting his food second-hand. It is a little strange that people who would shrink from using second-hand clothing will eat second-hand food without giving the matter a passing thought. There is no advantage in passing vegetable food through the body of an animal before it is consumed by a human being."

"McCullum, an authority on diet has stated, 'We could entirely dispense with meats without suffering any ill effects whatever.'"

Discusses the benefits of a vegetarian diet and cites numerous authorities who advocate such a diet.

3250. Kellogg, John Harvey. 1922. "Concerning meat." *Good Health (Battle Creek, Michigan)* 57(5):186-91. May.

• **Summary:** Page 191: "E.V. McCollum, the Johns Hopkins University School of Hygiene and Public Health, Baltimore, Maryland, said: 'I have not the slightest hesitation in saying that a vegetarian diet, supplemented with fairly liberal amounts of milk, is the most satisfactory type of diet that man can take... I feel that you would be entirely safe in adopting this kind of diet and that you would be doing much better by your patients than is now being done in many of the best hospitals in the land, where patients are attempting to recover from wasting diseases or from surgical operations on diets of the cereal, tuber, and muscle-meat type. Palatable and attractive as they may be, I feel confident that they are not very satisfactory as human foods when adhered to over appreciable periods.'"

This article begins: "The [meat] packers are out with a new document which they designate, 'Concerning Meat,' with the sub-titles: 'Superiorities of Meat,' 'What Is Meat?' 'The Value of Different Proteins,' 'Digestibility of Proteins,' 'Meat Is a Healthful Food.' This pamphlet is being widely circulated throughout the United States and gives so much misinformation and so many misleading statements that it is only fair that the public should be undeceived; hence, we are ready to comply with the request of a prominent citizen who is a reader of *Good Health*, to present in a concise way the truth 'concerning meat,' or, at any rate, a few of the essential facts."

Concerning a vegan or plant-based diet Dr. Kellogg states: "If, by a strictly vegetarian diet, the advocates of 'more meat' mean a dietary which excludes milk and eggs, their argument is wholly gratuitous, for no one but faddists

would advocate the exclusion of milk and eggs from the dietary. McCollum, Sherman and others have demonstrated the great importance of milk as a constituent of the bill of fare.”

Other testimonials in favor of a vegetarian diet are given as follows:

“Russell H. Chittenden, Sheffield Scientific School of Yale University [in Connecticut] said: ‘In reply to your letter of June 9, I beg to state that in my opinion it is quite possible, and indeed a desirable thing, for many reasons, to establish a lacto-vegetarian dietary in the wards of your hospital. There is no question in my mind that such a diet can be made nutritious and healthful.

“‘With vegetables of all kinds, and milk, bread and butter, you have at your command all the necessary resources for a nutritious diet.’

“Graham Lusk, Cornell University Medical College, Department of Psychology, New York, said: ‘I believe that the lacto-vegetarian diet could be established in any hospital without detriment to the health of the patients. It would be well to provide green vegetables or spinach, so that iron could be taken in this form. Of course, as you know, a milk diet was long the only support of typhoid patients.’”

“Lafayette B. Mendel, Sheffield Laboratory of Physiological Chemistry, Yale University, said: ‘I have given some thought to the advisability of introducing a meatless dietary into your hospital regime, and have reached the conclusion that there will be no objection to this upon physiological grounds. Inasmuch as I myself lived upon a diet devoid of meat, fowl and fish for nearly a year, for purely experimental purposes, and remained in excellent health and vigor during that period, I have no fears regarding the wholesomeness of such a procedure.’” Address: Battle Creek, Michigan.

3251. Lust, Benedict. 1922. Whole wheat bread. II. *Herald of Health and Naturopath* (New York City) 27(5):227-29. May.

• **Summary:** Continued. See Article I in the Dec. 1921 issue. Here, Dr. Lust explains how to make this bread, with many variations, at home. Many bakers omit the yeast. Freshly ground meal or flour is preferable.

Includes ideas by vegetarian pioneers Carlotta Schultz (a great German authority on diet), the late Alfred von Seefeld, and Prof. Dr. Gustav Jaeger. Address: Dr.

3252. *Madison Survey* (Madison, Tennessee). 1922. The manufacture of health foods an important part of our work. 4(30):1-2. July 26.

• **Summary:** “For a number of years before the establishment of the school, a food factory was operated in this section of the South. It was in the days when flake foods had been popularized, and this factory was started as a money-making enterprise. Although it was in no way connected with the work of the denomination, yet our people were looked

upon as responsible for the project, and when it failed they received the censure.

“In order to keep alive the health food industry, the factory was purchased and operated for a number of years by the conference. The location was unfavorable and the labor problem a perplexing one, and so in spite of the fact that good foods were manufactured, the enterprise was a losing one, and it was decided to close.

“Finding it difficult to dispose of the property to any company whose object was the making of money, it was decided to scrap the plant, but Brother Jethro Kloss, who had a keen interest in the food work, and who had some experience in a small way in the manufacture of foods in Minnesota, decided to buy. He operated the factory for several years. He was enthusiastic over the production of foods, not so much from the financial as from the philanthropic side of the question. But the labor problem was still a difficult one. He could not pay the prices demanded, and the factory was again to be shut down.

“When the Madison School faced the closing of the food factory,—the only one then operating in the South for the manufacture of health foods,—and considered the statement made in the early history of the institution, that Madison should interest itself in the food work in the South, the management of the School decided it to be their duty to keep the health food business alive.

“This was in the time of the Great War [World War I], a time of unusual stress everywhere. But with the assistance of Sister Josephine Gotzian, who has befriended more than one struggling health food enterprise, the Madison School faculty purchased the plant. The buildings were wrecked and brought to the School farm. Here, a new factory was built. It is not large but it is well planned and thoroughly sanitary. It has cost nearly fifteen thousand dollars, and aside from Sister Gotzian’s assistance the School has borne the expense. The money came out of what otherwise would have gone to faculty members as a salary. They willingly made the sacrifice because of their love for health principles and their desire to help forward this type of work in the South.

“The factory has had a moulding effect on the work in this field. It has made possible the whole grain bread campaign that is being carried forward in many other places... It is encouraging men and women to discard the use of flesh foods by providing proper foods to take the place of meat.”

Note 1. Though soy beans are not mentioned, by April 1919 this food factory was canning soy beans grown on the school farm. In later years it would make many commercial soy products and sell some of them throughout the USA and the world.

Note 2. This is the earliest document seen (May 2009) related to Jethro Kloss which mentions his name.

3253. Kellogg, John Harvey. 1922. Bacteriology condemns

meat. *Good Health (Battle Creek, Michigan)* 57(7):318-20. July.

• **Summary:** “Recently the writer had the pleasure of visiting in his laboratory an eminent bacteriologist, professor this newest branch of this important science in one of the world’s greatest universities. In the course of the conversation, the writer remarked, for the purpose of eliciting an opinion of the professor:

“‘A bacteriologist ought to prohibit the use of meat, because every morsel is swarming with putrefactive organisms, Welch’s bacillus, and other pernicious germs which infect the alimentary canal, particularly the colon, and so become the cause of colitis, appendicitis, and other diseases, beside producing virulent poisons which damage the liver, kidneys and other bodily structures in a great variety of ways.’”

“‘Yes,’ said the professor, ‘as meat comes from the butcher shop, as it is ordinarily eaten by people, it is filled with putrefactive bacteria. I entirely agree with you. *Meat is unnecessary as an article of food and is harmful.*’

“Dr. Tissier, one of the most eminent and celebrated bacteriologists of the Pasteur Institute of Paris, for many years assistant of the late Professor Metchnikoff, and later his associate, was among the first to make a careful study of the bacteria of the colon. He then made a study of meat, obtaining specimens first from the butcher shops. He found every specimen swarming with the bacteria of putrefaction... Dr. Tissier then went to the slaughterhouse and obtained specimens of meat from the slaughtered animals as quickly as possible after the animal was killed.” The same putrefactive germs were found. “As a result of these experiments, Dr. Tissier abandoned the use of flesh foods, and for more than twenty years has prohibited the use of flesh foods by his patients. He treats his patients by changing the intestinal flora. This he accomplishes by implanting cultures of the protective germs which discourage the growth of putrefactive germs in the colon. These germs are implanted in the infant’s intestine within a few hours after birth. Nature starts out in life every young warm-blooded animal, every calf, every kitten, even puppies and chickens, with a stock of protective germs (*B. bifidus* and *B. acidophilus*). So long as these germs flourish, the animal remains in health. Through errors in diet, particularly by the use of meat, these germs are lost. The auto-intoxication begins, with all the evil consequences which follow.” Address: Battle Creek, Michigan.

3254. Brook, Harry Ellington. 1922. Care of the body. *Los Angeles Times*. Sept. 10. p. X122. Sunday magazine.

• **Summary:** The section titled “Vegetarian restaurants” states: “The vegetarian restaurant site on Hill street is now occupied by one of our leading grocery stores. For many years, it was conducted by the Seventh-Day Adventists, and, according to the tenets of that sect, was closed on Saturday.

Since then, it has changed hands several times, gradually falling into ‘innocuous desuetude.’

“It seems as if there should be a good field for several vegetarian restaurants in this city, where there are thousands of people who do not eat meat. The explanation may be that of late the restaurants and cafeterias have come to cater more and more to this class of customers.

“There are several raw food restaurants in Los Angeles.” Address: N.D. [Naturopathic Doctor].

3255. Hollister, M.A. 1922. The relation of the church to city treatment rooms, vegetarian cafeterias, and rural community work. *Madison Survey (Madison, Tennessee)* 4(41):4-5. Oct. 18.

• **Summary:** “The work of the church is the saving of souls, and since the real object of such enterprises as our cafeterias and treatment rooms is to save men, the attitude of the church and conference should not be mere toleration of these enterprises, but they should encourage and foster by active participation and cooperation.”

“The vegetarian cafeteria [in Nashville] is a most excellent line of work, as it serves healthful foods to the people and gives instruction in healthful cookery. We are told that the cafeteria should be a school—not merely a place to feed people but to educate them... Many of the same things may be said of treatment rooms... The workers in these city centers should be examples of neatness, Christian courtesy and with a character above reproach.”

3256. Ehret, Arnold. 1922. The truth about stimulants and condiments. *Herald of Health and Naturopath (New York City)* 27(10):481-83. Oct.

• **Summary:** “Alcohol, coffee, cocoa, teas, tobacco, salt, pepper, etc., and sugar are all together poisons; so I was told when I was interested in dietetics after physical treatments had improved my conditions, but failed to heal me perfectly... I was a ‘strict’ vegetarian.

“Today my general attitude to these ‘poisons’ is this: In general they are, if used in a moderate way, far less harmful than over-eating,... They stimulate more or less at the expense of vitality and the efficiency of the nerves; but they don’t produce nor do they leave any substantial waste in the body like meat, eggs, milk, fats and starchy foods.” Address: Prof.

3257. Kneipp Store. 1922. Health foods. Toilet articles (Ad). *Herald of Health and Naturopath (New York City)* 27(10):512-13. Oct.

• **Summary:** Under “Health foods: Breads and specialties. Diabetic foods and remedies (incl. Gluten bread). Laxative foods and remedies (incl. bran bread, crackers, wafers, and cookies). Cereal coffees (8 brands). Tea substitutes and health cocoas. Nut butters, honey and jellies (incl. Carqué’s almond butter, Lust’s peanut butter {roasted or unroasted}).

Vegetable extracts, food additions and olive oil. Unfermented imported wines. Unsulphured, sundried fruits (incl. Black Mission Figs). Meat substitutes (Protose, Nuttose, Vegetable Meat or Roast, Vej-Meat or Vej-Roast, Watson's Nut Meat, Beans–Kidney, Soya, or Navy, Bromose–Nut or Fig, Mushrooms). Cereals (11 brands, incl. Carqué's Natural Whole Rice).

Note: The "Health Foods" half of this add appeared in the Sept. 1925 (p. 854) issue of this magazine. Address: 110 East 41st St., New York City.

3258. Moulton, C. Robert; Trowbridge, P.F.; Haigh, L.D. 1922. Studies in animal nutrition. III. Changes in chemical composition on different planes of nutrition. *Missouri Agricultural Experiment Station, Research Bulletin* No. 55. 88 p. Oct. [8 ref]

• **Summary:** This experiment was conducted on 31 beef steers divided into 3 groups. In results showing the gross efficiency of eleven beef steers, the two animals most nearly representative of commercial beef production exhibited gross efficiency of 9.6 and 8.3% respectively. [i.e., 100 pounds of feed were required to 9.6 or 8.3 pounds of weight gain by the animal]. These figures must be reduced by 30 to 60% to allow for parts not eaten. Address: 1&3. Agricultural Chemistry; 2. Animal Husbandry. All: Columbia, Missouri.

• **Summary:** Contents: Part I: Vegetarianism, foundation of a perfect life and its relationship with the natural sciences and the higher aspirations of humanity. Preface. 1. Definition. 2. Perspectives. 3. The animal kingdom. 4. Scientific demonstration. 5. Intense scourges. 6. Physical devastation: Tobacco habit–alcoholism–morbid sexuality. 7. Economic devastation. 8. Social devastation. 9. The supreme remedy. 10. Modern dietetic science. 11. The attitude of the conservatives. 12. The testimony of sincere doctors. 13. The testimony of antiquity. 14. The testimony of sacred scriptures. 15. The testimony of Jesus Christ. 16. The testimony of Christianity. 17. Liberty and independence. 18. More optimism. 19. Better longevity. 20. Classical beauty. 21. Maximum resistance and vigor. 22. Maximum intellectual power. 23. Maximum physical strength. 24. Vegetarian ethic. 25. Actual society. 26. Our future. 27. Initiation.

II. The basics of dietetics. Preliminaries. 28. A nutritious diet. 29. Be frugal! 30. Fundamental notions. 31. Selection of foods. 32. Sufficient quantity. 33. Dietetic fasting. 34. Correct planning.

III. The nutritional value of foods; dietetic rules. 35. Table A of nutritious values and commentaries. 36. Table B of nutritious values and commentaries. 37. Table C of

nutritious values and commentaries. 38. Toxic products. 39. Dietetic rules. 40. Culinary rules. Address: Director, Asesoria Uranus, Barcelona, Spain.

3260. Arnbrecht, Jacob. comp. 1922. Hygienic cook book: A collection of choice recipes carefully tested. Revised and enlarged. Battle Creek, Michigan: Shaw Printing Company. 416 p. Index. 21 cm. [10 ref]

• **Summary:** This is a Seventh-day Adventist vegetarian cookbook (which includes dairy products and eggs), containing much basic information about nutrition and hygiene. A full-page table titled "Typical foodstuffs representative of each food nutrient" (p. 14) lists soy beans as a food that contains protein, but less than is found in eggs, meat, milk, or cheese. It also notes that soy beans are "Starchless." A half-page table titled "Classification of proteins" (p. 18) states that the proteins legumin and glycerin [sic, glycinin] are found in soy beans. The chapter titled "Entrees" contains a recipe for "Soy bean loaf" which includes 1½ cups soy bean puree and ½ cup peanut butter. This is the only soy recipe in the book. This same chapter contains many recipes using "substitutes for flesh meats" (such as Protose, Nuttolene), and other innovative ingredients (gluten meal, ground nut meats, vegetable butter, nut butter) made by Seventh-day Adventist companies. Recipe names include: Vegetable meat. Vegetarian beefsteak. Mock veal pie.

Cellulose (p. 26): It "has no nutritive value, but because it is not digested in the human body it forms the larger part of the ballast or bulk of our food which is so necessary to a normal intestinal movement. It stimulates peristalsis by acting as a gentle mechanical irritant." Those who have a tendency to "sluggish intestinal movement" may want to add bran to their food or consume a diet consisting of "a greater proportion of foods which contain a large amount of 'roughage' or ballast, such as green vegetables, fruits, and whole grain products."

Note: This is the second earliest Seventh-day Adventist cookbook seen (Oct. 2004) that contains a recipe using soybeans or soy ingredients.

Also discusses: Lecithin (p. 28; soy is not mentioned). Food combinations (good, fair, and bad; p. 44). Acid and alkali forming foods (p. 48). Natural diet of man. Shall we eat meat? Dangers of disease in meat. Was flesh first used before or after the flood? (p. 50-55). Diet for constipation: Lists of laxative foods to be recommended and avoided (p. 147-49). Sago is used in puddings (p. 237). Many desserts contain a great deal of sugar, plus eggs and milk; others use "vegetable gelatine" (p. 262). Pies use butter, peanut butter, granola, etc. Whole wheat bread/flour is different from Graham bread/flour (p. 293). Recipes for gluten bread, and Gluten biscuit or sticks (p. 301), and Gluten mush (p. 319).

Chapter 32, titled "Nut preparations" (p. 375-77) contains a recipe for peanut butter using two processes, one

of which states: "Grind them through a meat chopper or nut butter mill (the Quaker City Mill is best for family use)." Recipes are given for Almond milk (p. 382) and Peanut candy (p. 394).

FIRST CHURCH EDIFICE, THIRD STREET ABOVE GIRARD AVENUE. 1823-1844

Cowherd (Document part). In: History of the Philadelphia Bible-Christian Church for the First Century of Its Existence, from 1817 to 1917. 1922. Philadelphia, Pennsylvania: J.B. Lippincott Co. ix + 192 p. See p. 20-21, 25.

• **Summary:** Chapter 4. The Ministers. “The sincere conviction in the mind of the Rev. William Cowherd that vegetarianism was a method of life taught in the letter and spirit of the Holy Scriptures marks the establishment of the Bible-Christian Church in England.

“Mr. Cowherd was originally a minister of the Church of England, a rector of Christ Church, Manchester, England. He is described as ‘possessing a strong and vigorous intellect, an inquisitive and earnest desire after truth and a deep sense of moral responsibility.’

“He later withdrew from the established national Church, and accepted the charge of the New Jerusalem Church, in Peter Street, Manchester.

“In the beginning of the year 1800 he opened the church in King Street, Salford, which had been erected principally through his personal efforts; consecrated it to the service of ‘The only Wise God our Saviour,’ and taught the doctrine that all religious principles should be drawn directly from the Bible; and required everyone who became a member of this church to proclaim himself or herself simply a ‘Bible-Christian.’

“In 1807 he began to inculcate the doctrine of abstention from the flesh of animals as food, and total abstinence from all intoxicating liquors, as religious duties. He founded his principles on the testimony of the Bible, and confirmed them by appeals to the facts taught by physiology, anatomy and personal experience.

“Among the persons who resorted to Dr. Cowherd’s church, was William Metcalfe a native of Sproadgill, in the parish of Orton, Westmoreland County, England, where he was born March 11, 1788, the son of Jonathan and Elizabeth Metcalfe.”

Rev. Dr. Cowherd died on 29 March 1816, “and quite a gloom was cast upon all who had connected themselves with the Bible-Christian Church, by that bereavement.” Address: Philadelphia, Pennsylvania.

3264. Bible-Christian Church, Maintenance Committee (Philadelphia). 1922. Biography of Rev. Henry S. Clubb (Document part I). In: History of the Philadelphia Bible-Christian Church for the First Century of Its Existence, from 1817 to 1917. 1922. Philadelphia, Pennsylvania: J.B. Lippincott Co. ix + 192 p. See p. 67-89.

• **Summary:** “Henry S. Clubb was born at Colchester, Essex, England, June 21, 1827. He was the youngest of nine children of Stephen and Elizabeth Clubb. Colchester is about fifty-two miles northeast of London. The following is a little description of his home town as written by himself in March, 1905:

“The house where I was born was a three-story brick on

North Street, Colchester, Essex, England, with a windmill behind it. It was north of the river Collie, which meandered through the town to the Hithe, where ships came, but water mills prevented their coming farther into the town. There was an old-fashioned brick bridge of three arches, over which we had to walk in order to reach the business part of the town. South of this bridge was what was called ‘Middleborough,’ a locality where the street widened out; leaving room for stalls where, on Saturdays, which were market days, fruit and vegetables were sold.

“On crossing this bridge we would come to an old frame building used as a small brush manufactory. It was carried on by an old friend of my father, named Rowland. Father used to go for an hour’s gossip with his old friend, who could listen to my father’s talk while boring holes in the wood pieces which were thus prepared to receive the bristles. The boring was done by a small lathe, and it was my delight to stand and see the holes bored while my father talked ‘Radical’ reform to his friend Rowland, who generally approved. While father was talking I would sometimes slip away and explore the neighborhood.

“Among my earliest recollections was, when five years of age, going to see Mrs. Rowland, and she remarking that as it was the longest day in the year (21st of June) she would cut the longest piece of fruitcake for me.

“There was a neat row of brick dwellings, with gardens in front, running at right angles with the street, the back lots of which were gardens running down to the river on the north. These gardens were my chief attraction. The flowers in front of the houses were sometimes very beautiful, especially in the spring season, while in the summer the black-currant bushes growing along the river bank at the north end of the gardens were still more attractive, as they hung full of luscious fruit. Henry S. Clubb became early impressed with the truth:

“There’s a divinity that shapes our ends, Rough-hew them how we will.”

“His education, like that of many English lads of the time, was picked up from various sources: attending evening school; studying Cobbett’s Grammar and Pitman’s phonography up to the age of twelve. At thirteen he received the appointment of money-order clerk in Her Majesty’s service, in the Post Office of his native town. This was when Queen Victoria was known as the ‘Young Queen of England,’ having ascended the throne on Mr. Clubb’s tenth birthday. His salary in this position was first seven and afterwards nine shillings per week, with some additional perquisites obtained by carefully distributing the morning mail to the principal financial concerns that called at the office for their letters.

“His parents were at first Unitarians and afterwards became Swedenborgians. They adopted vegetarianism for a time and were members of the Vegetarian Society, as was also his brother Robert.

“At this early age he had acquired the art of

phonography with some proficiency and, like Isaac Pitman, the inventor of the art, was also a vegetarian.

"The way he became a vegetarian was from listening to the conversation of Wm. G. Ward, a commercial traveller, who called at his father's home every three months and usually spent the evenings there during his stay in Colchester. Wm. Gibson Ward, as he was afterwards known, was an enthusiastic vegetarian, and the way he described the horrors and cruelties of the slaughter house and the dangers of eating the flesh of animals killed there, under various degrees of suffering and disease, made such an impression upon Mr. Clubb when a mere lad, that he determined to give vegetarianism a fair trial.

"It had been customary in the family to eat meat once a day. His father used to grind their own wheat, and whole-meal bread was made by his mother. This was before Graham's advocacy of this kind of bread. This bread and plenty of milk formed the principal diet in his childhood days. At the age of fifteen he went to live at the Concordium, Ham Common, Surrey, about twelve miles up the Thames from London. The food there was wheatmeal bread made with a liberal scattering of raisins, and fruit and vegetables raised on the grounds attached to Alcott House, and in production of which the members of the Concordium found agreeable exercise, under the direction of an experienced horticulturist and vegetarian named Scott.

"Here, in addition to the esthetic teaching of James Pierrepont Greaves' *System and Philosophy*, the art of raising strawberries, cherries, apples, pears and plums was taught by a most competent and skillful master. He also obtained some knowledge of printing and the publishing business, as the community issued a periodical called *The New Age*. It was a vegetarian community and living there confirmed him in vegetarian habits, which he had commenced at the age of nine years. While there he found time to write articles which were printed in *The New Age* and *The Concordium Gazette*. The first of these appeared in the number for November, 1844, being an account of the Phonographic Correspondence Society, and must have been written at the age of sixteen.

"The Concordium was started early in 1841, and its leading founders were James Pierrepont Greaves, Henry Gardner Wright, Charles Land and William Oldham. The house was named Alcott House because of Greaves's friendship with Bronson Alcott. It was an attempt to realize the beautiful ideal of presenting the right 'love conditions,' so that the spirit of love or of Christ could operate and effect its beneficent purposes in the regeneration of the race. Greaves was a friend and congenial co-operator with Pestalozzi, the great promoter of infant education, by whom the kindergarten system, now so extensively taught, was first promulgated. Greaves had departed this life a few years before Mr. Clubb had entered the school.

"The Concordium might have become a most valuable educational institution if suitable teachers could have been

obtained, but the conditions, requiring teachers to labor without salary, did not produce the desired results, and the Concordium, after a few years of somewhat precarious existence, became only a memory of which even history has made but little record. (An article on Recollections of the Concordium and Alcott House was written by Mr. Clubb for the *Herald of Health*, London, England, June, July and August 1906.)

"Robert Aitkin, who was the baker at the Concordium, was one of the few whom Mr. Clubb met in later years who had remained true to his principles; he had become an Elder of a family of Shakers at Enfield, Conn. Mr. Clubb, after his arrival in the United States, was invited to visit this Shaker Community, which he did on several occasions, enjoying the spiritual atmosphere of these kindly people.

"The Concordium experiment, like that of the Brook Farm Association which started in New England about the same time, although failing financially was, so far as combining healthful out-of-door exercise with the intellectual instruction and a simple diet, eminently successful in promoting the physical and mental health of all engaged, as they lived long, healthful and useful lives.

"The short time that Mr. Clubb spent at Ham Common made a lasting impression on him, and it was always brought to his mind when hearing the old song, commencing: 'Oh come, come away from labor now reposing,' which was sung as a 'grace before meals' by the children.

"The chief pursuit in which Mr. Clubb delighted was reporting in shorthand. Phonography was just then becoming known as the best system of shorthand, and Isaac Pitman became noted as its inventor and promoter. Mr. Clubb became a correspondent in phonography with Isaac Pitman. The first letter he wrote to him in shorthand he also wrote in long hand, mistrusting his own knowledge of the art, but Isaac Pitman wrote to him that he need never do that again, as his phonetic writing was perfectly intelligible.

"At this time phonography and the spelling reform became the basis of a public movement. Isaac, Joseph and Benn Pitman delivered lectures expounding the science, and banquets were held at Ipswich and other places. A society was organized in Colchester by Mr. Clubb, consisting of learners and classes for the study of phonography. It was lecturing and teaching phonography which led Mr. Clubb, when but a boy in his teens, to public speaking. An engagement in his native town as a teacher of phonography to the pupils of a large grammar and commercial school was the result. He later became assistant to Mr. Johnson of London as shorthand reporter, whose chief business was taking verbatim reports of meetings in Exeter and other public halls. He made reporting his profession, which he found more remunerative than any previous occupation" (Continued). Address: Philadelphia, Pennsylvania.

3265. Bible-Christian Church, Maintenance Committee

(Philadelphia). 1922. Biography of Rev. Henry S. Clubb (Document part II). In: History of the Philadelphia Bible-Christian Church for the First Century of Its Existence, from 1817 to 1917. 1922. Philadelphia, Pennsylvania: J.B. Lippincott Co. ix + 192 p. See p. 67-89.

• **Summary:** (Continued): “As a result of his writings in the *Concordium Gazette* Mr. Clubb’s articles on vegetarianism were sought for, and they appeared in the *Truth Tester*, afterwards the *Vegetarian Advocate*, both as editorials and contributions; they also attracted the attention of James Simpson, the President of the Vegetarian Society, founded in 1847. His address was obtained from the editor, and a correspondence ensued which resulted in Mr. Clubb’s engagement by Mr. Simpson in the literary work of the movement.

“The first banquet of the Society took place at Hayward’s Hotel, Manchester, July 28, 1846. The report of the banquet was among Mr. Clubb’s first literary efforts for the then new Vegetarian Society, and he wrote an account of the banquet for the readers of the *Vegetarian Advocate* in a most attractive style. In fact it was an event at which all vegetarians naturally felt elated, as nothing had ever happened so well calculated to bring vegetarianism into public notice. It was also well reported in the Manchester papers, and no expense was spared by Mr. Simpson to make this event productive of abundant fruit in the vegetarian vineyard. So the report of it was disseminated quite extensively. Much could be quoted from this report which would be valuable even now in the promulgation of the vegetarian principles. The subject of this sketch, although but twenty years of age, laid down his reporter’s pencil and made his little speech, which was well received. He spoke of the advantages children raised on a vegetarian diet would have over those living on the flesh of animals in having their passions in subjection and consequently better able to acquire sciences and arts, and he predicted that when vegetarianism became generally adopted, instead of having a Shakespeare in one age, a Newton and Milton, and a Pope and a Franklin in another, almost every parish would have its poet, philosopher and inventor doing their part to elevate, refine and bless mankind.

“Mr. Clubb was engaged by Mr. Simpson to edit the *Vegetarian Messenger* when started by the Vegetarian Society in 1847, and the magazine still keeps at the top of the title-page this motto by Pythagoras selected by him:

“‘Fix upon that course of life which is best. Custom will render it most delightful.’

“The work went on, Mr. Clubb lecturing in and around Manchester and in his own native county of Essex until the Second Annual Meeting of the Vegetarian Society, which was held at the Town Hall, Manchester, July 12, 1849, where another banquet was served in a somewhat similar style to that of 1848, but more especially under the management of the Society, Mr. Simpson, the President of the Society,

presiding.

“The *Vegetarian Messenger* contained Mr. Clubb’s report of this banquet in its first issue. This was followed by his two lectures on the vegetarian principle which were subsequently translated into German and circulated at Berlin, laying the foundation of the vegetarian movement in Germany, where so much has been accomplished in the establishment of vegetarian restaurants.

“After continuing the work in England in connection with the Vegetarian Society until 1853, Mr. Clubb emigrated to the United States and attended the Fourth Annual Meeting and Festival of the American Vegetarian Society, August 24, 1853, at the Bible-Christian Church, Third Street, Philadelphia, and in conjunction with a committee for the purpose compiled an address ‘To the People of the United States.’ The cholera was then raging in many of the cities, and that became the foundation reason of the address to the public, as Mr. Clubb stated at the banquet that in no instance had a vegetarian died of cholera in England.

“A record in the Bible of Edmund Brooks informs us that Henry S. Clubb commented (‘commenting’ is Brooks’s word for preaching, for he applies it to both the Metcalfes) on Isaiah XI, in the church on Christmas Day, 1853. Another record introduces him as preaching therein once more on Acts X, July 4, 1862.

“Mr. Clubb was at this time one of the reportorial staff of the *New York Tribune* when Horace Greeley, Charles A. Dana and George Ripley were in their most active years as editors of that great newspaper. When Mr. Clubb first came to America he applied to Horace Greeley for a position on the staff of the *Tribune*. Speaking of his reception he said: ‘I remember well how Mr. Greeley took me to Mr. Otterman, who was then city editor of the *Tribune* and said: ‘This is Mr. Clubb, a friend of mine. See that he has something to do.’ After that Mr. Greeley and I were warm friends.’

“He subsequently was engaged as Congressional reporter for the *Washington Union* the organ of the Pierce administration. This brought him into politics, as he was in Congress during the long session of 1853-1854 in which the Kansas-Nebraska Bill was discussed and the Missouri Compromise repealed.

“The discovery in the *Union* office that he was intimate with Gerritt Smith, Joshua R. Giddings and other leading abolitionists, prevented his engagement for the *Union* the next term of Congress, the feeling against abolitionists being exceedingly bitter in the office of the *Union*. This was especially shown by the striking out from Mr. Clubb’s daily reports of remarks made by Gerritt Smith or Mr. Giddings, even when those remarks were necessary to a correct understanding of the report.

“Mr. Clubb’s release from the Congressional labors enabled him to resume his position on the *New York Tribune*. The Kansas agitation in Congress having given him some good opportunities to become acquainted with Kansas

affairs, he was entrusted by Horace Greeley to write a History of Kansas for the *Tribune Almanac*.

"Mr. Clubb was married, November 15, 1855, to Miss Anne Barbara Henderson of Allegan, Michigan, having become acquainted through the temperance question, Some of Miss Henderson's articles on the position of Michigan on Temperance are included in *The History of the Maine Liquor Law*, which Mr. Clubb published in 1856. This book gives the life of Neal Dow and contains portraits of Neal Dow, Gerritt Smith, Horace Greeley, John Pierpont, Henry Ward Beecher, Lyman Beecher and Lucretia Mott, all temperance advocates.

"In 1855, *The Philosophy of 'Sacred History Considered in Relation to Human Ailment and the Wines of Scripture* by Sylvester Graham, was edited by Mr. Clubb.

"In 1855, he published a *Vegetarian Almanac* which contains an article by Rev. William Metcalfe on the 'First Arrival of Vegetarians in the United States,' an account of William A Alcott, M.D., the President of the American Vegetarian Society, a vegetarian story by himself entitled 'Alice, or the Lost Child.' A list of anniversaries and chronology of reforms and a plan of the Vegetarian Kansas Emigration Company.

"After a trip to Columbia, South Carolina, Mr. and Mrs. Clubb lived for a while in New York City. On their way from the south they stopped at Washington, D. C., and at Philadelphia, and while in Philadelphia visited the Bible Christians.

"His interest in antislavery led Mr. Clubb to organize a small company who, with himself and wife, emigrated to Kansas in the spring of 1856, and they passed through a good part of the struggle for freedom in that territory. The object Mr. Clubb had in view was to start a vegetarian colony there. They camped on the banks of the Neosho River until a flood came and compelled them to get further inland. Made wiser by this experience they selected a site on a hill top. An old Indian log cabin was selected by Mr. Clubb and his wife. However the fever from exposure to malaria brought him down and he was taken out from Kansas to a Chicago water-cure by his wife, where he was skillfully treated and gradually recovered.

"Many were the experiences encountered while in Kansas, and he and Mrs. Clubb could relate thrilling tales of their life there. At one time Mrs. Clubb found a live rattlesnake as a bed-fellow in the log cabin, and Mr. Clubb was held up by Border Ruffians on his way home from Fort Scott.

"After recovery he settled in Grand Haven, Michigan, and in 1857 started the *Clarion*, the first Republican newspaper in Ottawa Co., Michigan, a very fine political as well as literary paper, which was widely quoted. He succeeded in transforming a Democratic stronghold into a staunch Republican county.

"He was one of the most active men of western Michigan in those days and was interested in a number of

pioneer enterprises.

"Mr. Clubb attended the Great National Republican Convention held at the Monster Wigwam at Chicago, May 16, 1860, which nominated Abraham Lincoln for President of the United States" (Continued). Address: Philadelphia, Pennsylvania.

3266. Bible-Christian Church, Maintenance Committee (Philadelphia). 1922. Biography of Rev. Henry S. Clubb (Document part III). In: History of the Philadelphia Bible-Christian Church for the First Century of Its Existence, from 1817 to 1917. 1922. Philadelphia, Pennsylvania: J.B. Lippincott Co. ix + 192 p. See p. 67-89.

• **Summary:** (Continued): "The Civil War, 1861-1865, deprived him of all assistants in the printing business, as all his printers joined the army, and during the early days of the war, Mrs. Clubb edited the *Clarion*. She afterwards followed her husband to the south and was there through much of the civil strife.

"In 1862, he received a commission from Abraham Lincoln as Asst. Quartermaster with the rank of Captain. He did not seek this position, but as it was offered in all friendship and seemed of a less belligerent character than that of a line officer, he accepted it and served in the volunteer army from June, 1862, until April, 1866. He occupied the position of aide-de-camp to Brigadier General Napoleon Buford during the battle of Corinth; was wounded in the side at that battle, granted leave of absence for recovery and returned after three months. The General remarked that Capt. Clubb appeared to be bullet-proof, as the ball did not enter far, but it was because a pocket book with \$2,000 of Government funds intercepted it and undoubtedly saved his life. (The wallet which contained this money was placed by Mr. Clubb in the Military Museum in the State Capitol, Lansing, Michigan.)

"He joined Grant's Army at Grand Junction, in the spring of 1863, and participated in both the Vicksburg campaigns, the second siege being successful. During the siege he had charge of River transportation and had the pleasure of furnishing transportation to his old friend Dana, who had then become Assistant Secretary of War.

"He was stationed in Vicksburg during the summer and winter of 1863-1864 and in the fall of '64 was ordered to report to Gen. Sherman at Savannah. The journey around from Vicksburg to New York and along the coast to Savannah was quite a long one. Gen. Sherman had left that city when he arrived. He then had to watch for Sherman to make his appearance at an accessible point. He stayed some time at Charleston, which had been evacuated and was now in great danger of destruction, as it had been set on fire by the retreating secessionists. However, the blue-coats kept the fire within certain limits, chiefly to the cotton warehouses and railroad stations, where cotton was stored, and saved the city from entire destruction. It presented a dilapidated

appearance, and cows were feeding amid the ruins of Secession Hall.

“James Redpath was at Charleston and organized colored schools. A procession was formed of the colored schools and Capt. Clubb acted as marshal. The procession sang the John Brown song, ‘Marching On,’ through the streets of Charleston. Capt. Clubb eventually reported to Gen. Sherman at Raleigh, North Carolina, and was assigned to duty as acting Quartermaster of the 17th Army Corps, under command of Gen. Frank Blair. This position he held until the corps was mustered out at Louisville, Kentucky, after the close of the war.

“He was then returned to Washington and ordered to report to Gen. Sheridan at New Orleans, by whom he was assigned to duty at San Antonio, Texas, where he remained, using the old Alama for storage purposes, until mustered out in April, 1866.

“On settling his accounts with the Quartermaster’s Department he received a highly complimentary letter from Quartermaster General Meigs, and in settlement with the United States Treasury after a four years’ examination of his accounts, his balance last reported on monthly statements was adopted as correct, and no attorney had to be employed to effect a settlement.

“In 1869, he founded the *Grand Haven Herald*, at Grand Haven, Michigan, which vigorously advocated the election of T. White Ferry as United States Senator. It also published information in regard to fruit culture which led to the foundation of the State Pomological Society, the charter of which he drew up and pushed through the Legislature, securing state aid in the publication of its reports, amounting to about \$6,000 a year.

“The result was the holding of fruit fairs. The organization, with the State Pomological Society, held the largest fair ever held in Michigan, there being as many as 40,000 people at a time on the grounds near Grand Rapids.

“In 1871, he was elected State Senator, resigning the office of alderman to accept it; he was also secretary of the Constitutional Convention, in which position he further promoted the fruit interests of Michigan.

“In 1876, having disposed of his printing business, he visited the Centennial Exposition at Philadelphia, representing several prominent newspapers in Michigan. This brought him into contact with the Bible-Christian Church again, and being invited to conduct its services, he was called to continue there as its pastor, which position he has held ever since.

“In 1886-1887 an attempt was made to renew the Vegetarian Society which during the war had ceased to exist. These efforts led to the organization of the Vegetarian Society of America in 1886. In June, 1887, its first anniversary was held at Alnwick Park, where there was a picnic of one hundred and twenty five persons. Mr. Clubb was elected President of the Society. In 1888, the *Vegetarian*

made its appearance under his management, but the difficulty of obtaining the postal privileges led to its abandonment, and in 1889, the *Food, Home & Garden*, a more popular title, was established and through many vicissitudes was continued until January, 1900, a period much longer than any periodical devoted to Vegetarianism had ever before been maintained in America.

“In 1893, Mr. Clubb attended the Vegetarian Congress in connection with the World’s Fair at Chicago. Delegates from all over the world were present.”

Note: On page 82, a full-photo shows “Rev. Henry S. Clubb, Minister 1876-1921.”

“The year 1901 being the twenty-fifth anniversary of Mr. Clubb’s ministry in the Philadelphia Bible-Christian Church, the members subscribed for the necessary expenses of a trip to England by himself and daughter Martha. Rev. James Clark, minister of the Salford Bible-Christian Church had been very desirous of this visit.

“On August 11, 1901, before setting sail on the *Campania*, the vegetarian friends in New York arranged a luncheon at the Universal Food Company’s Office, for Mr. Clubb and friends who had come from Philadelphia to see him off. On arriving at Liverpool Mr. Clark and a number of vegetarians from Manchester were at the wharf to welcome him to England, and a reception and lunch were held at Chapman’s Vegetarian Restaurant.

“After a few days rest in Liverpool with relatives Mr. Clubb and daughter were conducted to Salford, Manchester, the home of Mr. Clark and the location of the Bible-Christian Church. Their first stay in Salford was with Mr. Clark and daughter Bertha and afterwards at the home of Mr. and Mrs. Tongue at Da Vinci House, Eccles. A number of parties and receptions were given by different members of the Bible-Christian Church—Mr. Clark, Mr. Tongue, Mr. Axon, Mr. Harrison and Mr. Bradley, all doing their best to entertain Mr. Clubb and his daughter. On September 9th, Mr. Clubb accompanied Mr. and Mrs. Broadbent on a trip to Scotland to attend the Glasgow Exhibition in connection with which was held a Peace Congress and also a Vegetarian Congress, and they participated in the meetings.

“A programme had been previously arranged for Mr. Clubb’s reception, and on his return from Scotland, he proceeded to London where the London Vegetarian Society entertained him. A dinner was held at the Victoria Vegetarian Restaurant, which was conducted by Mr. Hills in very elaborate style. Mrs. Leigh Hunt Wallace was there and made a speech, also Mr. Forward, and Mr. Clubb responded. A meeting was held at Memorial Hall, Farrington Street, after the dinner.

“Mr. Clubb and daughter visited relatives at Nottingham, but the time being limited he was prevented from seeing again his native town of Colchester. This was his only visit to England since coming to the United States in 1853.

“September 28, 1901, the homeward trip was taken in

the steamer *Umbria* and the Rev. James Clark and daughter Bertha returned with them to Philadelphia. On arriving home in Frankford, Sunday evening, October 6th, a reception was given by Mr. and Mrs. Wm. M. Horrocks at their home, where the Clarks were entertained during their visit here.

"In 1904, Mr. Clubb attended the Vegetarian Convention in connection with the Louisiana Purchase Exposition at St. Louis, Missouri.

"On November 15, 1905, the Golden Wedding of Mr. and Mrs. Clubb was celebrated in the evening at their home. The church presented them with fifty gold dollars. There were over fifty persons present, members of the Church and friends, some coming from New York.

"May 21, 1915, Mrs. Clubb's death occurred after she had been an invalid for several years, owing to the effect of a fall when her hip was broken. She was eighty-two years of age. She was born at Thurso, Scotland, coming to America in 1834 with her parents, Mr. and Mrs. James D. Henderson, and settling in that early period in Allegan, Michigan" (Continued). Address: Philadelphia, Pennsylvania.

3267. Bible-Christian Church, Maintenance Committee (Philadelphia). 1922. Biography of Rev. Henry S. Clubb (Document part IV). In: History of the Philadelphia Bible-Christian Church for the First Century of Its Existence, from 1817 to 1917. 1922. Philadelphia, Pennsylvania: J.B. Lippincott Co. ix + 192 p. See p. 67-89.

• **Summary:** (Continued): When the Bible-Christian Church edifice, located on Park Avenue below Berks Street, was sold in 1916, Mr. Clubb was becoming too feeble to continue conducting services at that distance from his home, and since that time meetings have been held at his residence in Frankford. He, however, since March, 1917, has not felt capable of discoursing. His last sermon was delivered Sunday, February 25, 1917, the subject of which was 'George Washington,' the text taken from Isaiah, XXXV:1.

"One of his friends in the vegetarian cause, William E.A. Axon, of Manchester, England, when visiting this country as delegate from the Vegetarian Society to the St. Louis Exposition in September, 1904, went on a trip to Atlantic City in company with Mr. Clubb and others, on which occasion he wrote the following little poem and presented it to Mr. Clubb.

"To his Friend Henry S. Clubb:

'Blessed are the young in heart, Life Eternal is their part; In the life that is they see The glory of the life to be.'

"Mr. Clubb's ninety-fourth birthday anniversary, on June 21, 1921, was observed as usual by friends calling upon him, especially the children of the neighborhood, to whom he seems, as the editor of the *Frankford Gazette* said, in an account published of one of his birthdays, 'like good old Santa Claus all the year around.'

"On Saturday morning, October 29, 1921, Mr. Clubb 'passed on' to the spiritual life. He was taken sick on

September 5th with severe chills and fever. He lost all appetite for any kind of food and gradually became weaker until the end. He seemed to realize throughout his sickness that he would not recover and remarked several times that he was dying. All summer, although able to enjoy little walks with the help of his cane and one of his daughters accompanying him, he tired easily and it was noticed that his strength was failing.

"Miss Helen M. Rowland, of Frankford, a warm friend of Mr. Clubb, was visiting his old home town in Colchester, England, while he was nearing his end, and she sent him many postcards and photographs of old familiar places there which he much enjoyed.

The *Frankford Gazette*, the *Grand Haven Courier-Journal*, the Philadelphia daily papers, the *Vegetarian Messenger*, of Manchester, England, and the *West Suffolk Gazette* published good accounts of his life and a number included his picture in mentioning his death.

"Quotations are taken from these.

"Extract from the *Frankford Gazette*:

"On Tuesday afternoon (November 2) that grand old man of Northwood, Rev. Henry S. Clubb, was laid to rest in Oakland Cemetery alongside of his dear wife, who preceded him to that eternal rest some years ago.

"He had reached that good old age of 94 years, esteemed and loved by all who knew him, because of his unblemished character and his pleasant, genial manner to all. To the children of the neighborhood, by reason of his snowy white hair and flowing beard, he was their Santa Claus all the year round, always beaming with smiles and loving to chat with them. Their floral offering to their dear old friend on the day of the funeral was a beautiful basket of roses and chrysanthemums. He loved nature, the trees and beautiful flowers, and was always delighted to take walks. He believed that the Boulevard and the streets of Frankford should be lined with fruit trees bearing fruit for everybody, as well as giving shade.

"His funeral was largely attended and as his sweet, peaceful face lay amidst a great bank of roses, chrysanthemums and other autumn flowers, Rev. John B. Laird, of the Frankford Presbyterian Church, who knew him well, paid him one of the finest tributes that could be bestowed on man. Very truly a bright light has gone out of the community.

"From the *Courier-Journal*, Grand Haven, Michigan:

"Word has been received in this city of the death in Philadelphia, Saturday morning, October 29th, of the Rev. Henry S. Clubb. Mr. Clubb was a pioneer publisher of Grand Haven and was very prominent in the early days of Grand Haven as a municipality, being a member of the first city council and taking a leading part in the making of the city's first charter.

"He took a great interest in horticultural and agricultural subjects, and it was largely through his efforts and editorial

expression that the Grand Haven region became famous as a peach-growing section for several years.

"Mr. Clubb visited Grand Haven many times after leaving the city. Despite his advanced age, he was bright and active up to his last illness in September.

"The death of Henry S. Clubb marks the passing of a man who contributed his share to the making of Grand Haven, and his love and regard for the town was unshaken despite the nearly half-century of residence elsewhere.

"The *Philadelphia Record*:

"He was a well-known figure about Frankford for years, with his white, flowing beard and sturdy appearance, and always attributed his good health and long life to the vegetarian diet.

"The *Vegetarian Messenger*, Manchester, England:

"Mr. Clubb was a Vice-president of the Vegetarian Society (Manchester) and probably the last survivor of those who formed the Society in 1847.

"It was in 1853 that he emigrated to America, and there, as journalist and speaker, took part in the antislavery agitation. So annoyed were the slave owners with one series of his articles that a reward was offered for his capture.

"Mr. Clubb paid a visit to England in 1901, and vegetarians who had known him by name for many years had the pleasure of meeting a veteran who retained to an advanced age enthusiasm and hopefulness and energy.

"Throughout his long career in America Mr. Clubb was ever to the fore in vegetarian propaganda. He was President of the Vegetarian Society of America; he was largely responsible for the success of the International Conference of Vegetarians at the Chicago World's Fair in 1893, and his pen and his editorial skill were ever at the service of the cause. He was a good speaker, and his physical appearance was eloquent of the advantages of his diet, for he was a handsome old man with ruddy cheeks, and a mass of white hair.

"The *West Suffolk Gazette*, England:

"Death of an Old Colchestrian

"Rev. Henry S. Clubb

"A Soldier who never carried arms.

"One of the very oldest natives of Colchester, Rev. Henry S. Clubb, has passed away at Frankford, Philadelphia, U.S.A., at the age of 94.

"An extraordinary feature of his military career, which was an extended one, was the fact that while he was in the thick of the battles (in the Civil War) and had many narrow escapes, he never carried arms even for self defence, being conscientiously opposed to their use as a means of protection even in periods of greatest danger. Perhaps as a soldier this renders his career unique in the history of the world." Address: Philadelphia, Pennsylvania.

3268. Cooper, Lenna Frances. 1922. *The new cookery*. 8th ed., revised. Battle Creek, Michigan: The Modern Medicine Publishing Co. 449 p. Index. 23 cm.

• **Summary:** Contents: Poem by Oliver Goldsmith facing the table of contents. 1. Food values. 2. The art of preparing foods. 3. Beverages. 4. Cereals. 5. Fermented breads. 6. Unfermented breads. 7. Sandwiches. 8. Dairy products. 9. Cream soups. 10. Plain soups. 11. Meat substitutes and entrees. 12. Macaroni and Italian pastes. 13. Eggs. 14. Gravies and sauces. 15. Vegetables. 16. Salads and relishes. 17. Toasts. 18. Fruit Desserts. 19. Custards and cold desserts. 20. Frozen desserts. 21. Pastry and pies. 22. Cakes. 23. Cake fillings and frostings. 24. Hot puddings. 25. Sauces for puddings. 26. Canning and preserving. 27. Special dishes for invalids. 28. Balanced menus."

Soy is not mentioned in this Seventh-day Adventist vegetarian cookbook; soy flour was mentioned in 9th edition (1924).

This book is dedicated to the author's mother. Page 13 states: "The author wishes to express her indebtedness to Dr. and Mrs. John Harvey Kellogg, of the Battle Creek Sanitarium, who have inspired her with a love for the study of foods and their scientific preparation and who have since been constant sources of help and encouragement."

With each recipe is given the calories in the recipe and per serving from protein, fat, carbohydrate, and total. Interesting items: Cereal coffee, Kaffir tea, and Health Koko (p. 33). Yogurt buttermilk and Orange yogurt (p. 34-36). Sterilized bran (p. 44). Graham mush with dates, Gluten mush, and Creamed gluten mush (with 1 cup 20% Gluten Meal, p. 47). Granola fruit mush (p. 49-50). Graham bread (p. 54-55). Peanut butter sandwiches (p. 84-85). Protose sandwiches (p. 85). Cream of almond soup (p. 104-05). Noodle soup with Savora (p. 126-27). Chapter 11, titled "Meat substitutes and entrees" contains many interesting recipes, including some commercial products made by SDA companies: Roast Protose with dressing (p. 129). Protose fillet (p. 130). Nut fillet (with Protose and Nuttolene, p. 131). Fillet of nut meat (with Protose and Cereal Coffee, p. 131). Nut meat loaf (with Protose and Nuttolene, p. 143). Vegetarian ham (with Nuttolene, Protose, and Savora, p. 143). Nut patties. Nut chops (with peanut butter, p. 144-45). Peanut roast (p. 145-46). Jellied peach (with 1 cup sugar, p. 284). Spanish cream (with 3 cups hot milk, 3 eggs, and ½ cup sugar, p. 285). Hot Malted nuts (with ¼ cup dry Malted Nuts, p. 386). Hot Malted Milk (with 4 tablespoons Malted Milk, p. 386). Almond cream (p. 388). Meltose ice cream (with 1 cup Meltose, p. 389). Almond ice (with 6 tablespoons almond butter, p. 389). Frozen malted nuts (with 1½ cups Malted Nuts, p. 390). Gluten bread (with 3.75 cups 40% Gluten Flour, p. 390-91). Gluten puffs (with 1 cup 40% Gluten Flour, plus soda and hydrochloric acid p. 391). Note: In 1923 Lenna F. Cooper was secretary of the American Home Economics Association (see *Journal of Home Economics*, Oct. 1923, p. 588). Address: Director of the Battle Creek Sanitarium School of Home Economics, Head Dietitian of the Battle Creek Sanitarium [Battle Creek,

Michigan].

3269. Cooper, William Earnshaw (Sir). 1922. The blood-guiltiness of Christendom: A startling indictment of the needless systematic and wholesale massacre taking place daily in Christian countries; and a clear presentation of facts concerning the physical and moral results accruing therefrom. The connection between flesh-eating and the prevalence of Cancer is explained and demonstrated. London: The Order of the Golden Age. 163 p. Plates. 18 cm.

• **Summary:** The author believes that a vegetarian diet can reduce cancer rates and animal suffering. Contents: The blood-guiltiness of Christendom. Man as an organism. A tale of Christian cruelty. The questions considered. Blood-stained and disease-laden food. The physiological value of food. The alimentionation of man.

Chapter 1 discusses Hesiod (lived 9 centuries B.C.), the Arcadians (who were fruitarians), Pythagoras, the early Christian fathers. The author lived 1843-1924. Advertisements p. 151-63. Page 151 discusses the Order of the Golden Age (founded in 1895) and its objects. The first is: "To promote obedience to God's Laws of Health on all planes, and earnest effort to further the Divine Purpose concerning the upliftment and evolution of mankind." The fourth is: "To advocate the universal adoption of a bloodless and natural dietary, for philanthropic, ethical and humane reasons, as well as for hygienic considerations." The Order is presently located at 153, 155 Brompton Road, London, S.W.3. Address: England.

3270. Ehret, Arnold. 1922. Physical fitness thru a superior diet. Los Angeles, CA: Ehret Literature Publishing Co. 194 p. [Eng]*

3273. McCollum, Elmer V. 1922. The newer knowledge of nutrition: The use of food for the preservation of vitality and health. 2nd ed., entirely rewritten. New York, NY: The Macmillan Co. xviii + 449 p. [200*+ ref]

• **Summary:** A nutrition classic, first published in 1918. The soy bean is mentioned on pages 96, 97, 116, 133-34, 184-85, 250, 378, 437, 445, and 448. The author was introduced to the importance of the soybean during his

studies with Osborne and Mendel at Yale Univ. [New Haven, Connecticut].

Chapter 7, "The vegetarian diet" (p. 157-73) has these contents: Vegetarianism generally practised as a fad. Food faddists frequently discredit themselves by their philosophy. Meat eating cannot be condemned as deadening the moral faculties. The more valid arguments against meat eating. Slonaker's study of the vegetarian diet. Even with wide variety vegetarianism is likely to lead to disaster. Rats can be grown successfully on a strictly vegetarian diet (See table 7, showing growth curves for 3 generations of rats). The cause of the failure of Slonaker's vegetarian rats. Evvard's studies on the appetite as a guide to the selection of food. The deficiencies in inorganic elements in seeds are quantitative rather than qualitative. Vegetarianism has been viewed from the wrong angle. Some characteristics of vegetarian diets. Certain mineral elements are essential for the normal functioning of the tissues. Most foods are too poor in the element calcium.

Page 162: "These experiences make it evident that there is nothing in vegetarianism *per se*, which makes it possible for an animal of the omnivorous type to be satisfactorily nourished on this kind of diet."

Page 168-69: "It is possible to make a fairly satisfactory diet of foods entirely derived from vegetable sources, but it is not easy to do so. In general, a vegetable diet will be markedly improved by the inclusion of muscle tissue meats, and more so by the addition of glandular organs, but even these features of the subject are not from the standpoint of good nutrition the most important. It is scarcely practicable for man to eat enough leafy foods to enable him to succeed with the strictly vegetable diet. The limiting factor is the amount of leafy food which can be consumed. Lack of sufficient calcium is one of the most important deficiencies in such a diet, and a great abundance of leaf is necessary to supply this element in adequate amounts."

The diet which is strictly vegetarian will practically always be of relatively low protein content."

Page 170: The importance of table salt (NaCl) in the diet is emphasized. There are 10 references at end of the "Vegetarian Diet" chapter.

The author, Elmer Verner McCollum, was born in 1879. Subsequent editions were published, in 1923, 1925, 1927, 1929, and 1939. Address: Ph.D., Sc.D. Prof. of Chemical Hygiene, School of Hygiene and Public Health, Johns Hopkins Univ., Baltimore, Maryland.

3281. *Naturopath (New York City)*. 1923-1927/-. Serial/periodical. Published in New York City by Benedict Lust, M.D. Vol. 1, No. 1. Jan. 1923.

• **Summary:** Preceded by *Herald of Health and Naturopath*. Note: The last issue of this title was June 1927. This magazine was not published from 1928 to 1933 (probably because of the Great Depression and the loss of Benedict Lust’s entire life savings in a bank that declared insolvency in June 1929). The “Herald of Health and Naturopath” and the “Naturopath and Herald of Health” seemed to have been appear cut from the same cloth. These two titles were flip-flopped a few times throughout their history. Here is what the National College of Natural Medicine Library (NCNM, Portland, Oregon), which has the full set, has in their collection:

Naturopath and Herald of Health—1902-1915.

Herald of Health and Naturopath—1916-1922.

Naturopath—1923-1927 (appears to be same publisher as above)

Naturopath and Herald of Health—1935-1944.

Herald of Health and Naturopath—1947-1957.

Kirchfeld & Boyle. 1994. p. 313. This periodical was succeeded by *The Naturopath and Herald of Health*, which became the official publication of the American Naturopathic Association.

OCLC gives no dates for this periodical but says: Preceding titles: Hausdoctor. Amerikanische Kneippblätter. Kneipp Water Cure Monthly. Liberator of Medical Thought. Phrenological Journal. Herald of Health and Naturopath. Address: New York.

3282. Hirsch, Fred S. 1923. Arnold Ehret. *Naturopath (New York City)* 28(1):11-12. Jan.

• **Summary:** Note: Starting with the issue of Jan. 1923, this magazine (Vol. 28, No. 1. Whole No. 330, formerly titled *Herald of Health and Naturopath*) has a new title.

A eulogy for Arnold Ehret. A man of retiring disposition and self-effacement, he had difficulties mastering a foreign language. “At first friends encouraged Ehret to speak with small groups and at private gatherings, thus gaining proficiency in English enunciation. Later, cafeterias and clubs offered their lecture rooms free of charge for select audiences. Gradually his renown spread, and overflowing meetings in rented halls were becoming the rule rather than the exception at his lectures.”

“On October 8, 1922, Prof. Ehret held in Los Angeles one of his most successful lectures. At least a hundred persons were unable to secure seats and had to be turned away (as Los Angeles laws allow no standing in aisles).

“On leaving the lecture hall, Prof. Ehret was hastily making his way to the railroad station to board the train for his home in one of the suburbs of Los Angeles. He was wearing a pair of new shoes for the first time. The street was poorly lighted, and, in stepping off the curb, he lost his balance, falling backward and striking his head on the stone curbing. A few minutes after the fall he breathed his last, never regaining consciousness. The autopsy revealed a basal fracture of the skull.

“Prof. Ehret’s remains were cremated at Forest Lawn Cemetery, thereby carrying out his desire as expressed to a number of friends on various occasions. Thousands of people, scattered in almost every part of the civilized globe now mourn the loss of their teacher and friend, and the tears that were shed over his remains were genuinely sincere, for he had endeared himself to a host of friends.

“His loyal and devoted followers have started a memorial fund for the double purpose of erecting a fitting mausoleum and final resting place for his ashes and for carrying on the good work he started for the benefit of suffering humanity.”

An oval portrait photo shows Arnold Ehret. Address: Los Angeles, California.

3283. Hamburger's Grocery Store. 1923. Go to Hamburger's Grocery Store for Health Foods (Ad). *Los Angeles Times*. Feb. 7. p. II20.

• **Summary:** "We carry the most complete line to our knowledge on the West Coast. Established 1881. 'Some ha' meat who canna' eat'—then it is they seek the most appetizing, most nutritious health foods. Hamburger's has searched this country and abroad to bring the best to you. One entire department is given over to health foods alone..." Two lines of health foods are advertised: Eugene Christian Vitamin Foods (Vegex brand), and Battle Creek Sanitarium Health Foods. For the latter: "— new goods arriving daily. Laxa—a combination of sterilized wheat, bran and Ceylon agar. Calax, Paramels, Paralax, Lactose, Dextrine, Acidophilus Lactose, Dialectic [sic, Diabetic] Bran, Cooked Bran, Soy Biscuit, Black Fig, White Fig and Prune Marmalade, Gluten Meals, Malted Nuts, Yogurt Tablets. Among the many meat substitutes are Protose, Nuttose and Nuttolene."

"Free delivery, convenient charge account and special phone service." Groceries delivered free twice a day.

Note: A similar but larger ad appeared in 11 April 1923 issue, p. II22. Here we read "Diabetic Bran, Soy Biscuits." Address: Fourth Floor [Broadway at Eighth, Los Angeles]. Phone: Broadway 3940.

Address: Bulgaria.

3285. Ammon, Ernst von. 1923. Sektionsbefund an einem Vegetarier [Findings of a post-mortem examination on a vegetarian]. *Archiv fuer Verdauungs-Krankheiten, Stoffwechselfathologie und Diatetik* 31:71-94. March 23. English-language summary in *J. of the American Medical Assoc.* 81:80, 7 July 1923. [29 ref. Ger]
Address: Aus dem pathol.-anatom Institut in Freiburg im Breisgau.

3286. Piper, Charles V.; Morse, William J. 1923. Soybean flour (Document part). In: Piper and Morse. 1923. *The Soybean*. New York: McGraw-Hill. xv + 329 p. See p. 222-25, 266-73.

• **Summary:** "Soybean flour, though not as yet a common commodity, has been used for many years in America and Europe in invalid dietetics. This flour which is made by grinding either the whole beans or the press cake remaining after the oil has been removed from the bean, is becoming an important article of food in America and European countries

as it is of high food value and can be used as one of the ingredients of many palatable and nutritious dishes.

"Utilization and products.—"Extensive investigations have been conducted by the United States Department of Agriculture and Domestic Science Schools relative to the utilization of soybean flour. It has been found that this flour can be successfully used as a constituent for bread, muffins, biscuits, crackers, macaroni, and in pastry. In these various food products about one-fourth soy flour and three-fourths wheat flour have been found to be the proper proportion. In some of the pastry products, however, as much as one-half soy flour can be used. It will be found that in several dishes, as soybean mush, soy flour can be used entirely.

"In the United States soybean flour is on the market, being put up like ordinary cereal flours; also in special packages for invalids. In England, manufacturers have placed on the market a so-called 'soya flour' which is 25 per cent. soybean flour and 75 per cent. wheat flour. This soya flour is being used by bakers in making a soy bread which is very palatable and is extensively used by the English bakers. A similar flour is said to have been manufactured in Holland for 25 years. Soya biscuits and crackers are also manufactured from this flour and constitute articles of export from England.

"German millers have been experimenting to some extent with soy flour in making brown bread by mixing with rye flour... Soybean flour enters largely as a constituent in many of the so-called diabetic breads, biscuits, and crackers manufactured as food specialties. It also is utilized in the manufacture of breakfast foods and can be used in the preparation of vegetable milk and bean curd.

"Composition and value for invalids.—The soybean contains at the most but a slight trace of starch, and extensive experiments in American and Europe indicate that value of the bean and its products as the basis of foods for persons requiring a low starch diet."

A table (p. 224, from the USDA Bureau of Chemistry) compares the composition of two types of soybean flour (made from whole soybeans, or from soybean cake), wheat flour, corn meal, rye flour, Graham flour, and whole wheat flour. The two types of soybean flour contain by far the most protein (39.56% and 47.30% respectively), followed by Graham flour (12.60%) and whole wheat flour (12.00%). The two soybean flours also contain the least carbohydrates (26.63% and 33.85%).

Also summarizes research on: (1): The value of soybean flour for feeding infants and young children; (2) The nutritive value and digestibility of soybean flour.

Thirty-one recipes for soy flour are given on pages 266-73.

Nashville Cafeteria. 5(20):3. May 9.

• **Summary:** A story in the *Nashville Banner* explains that the "Vegetarian Cafeteria, closed for some months, reopened today in attractive new quarters, 151 Sixth avenue, North, in a building which has been remodeled for the purpose. The cafeteria, with the treatment rooms in the same building,

which will be reopened early in May, is a branch of the Nashville Agricultural Normal Institute and Madison Rural Sanitarium at Madison, and has a large clientele in Nashville."

3292. Lust, Benedict. 1923. Diet reform. *Naturopath (New York City)* 28(5):234-36. May.

• **Summary:** One can get albumin from plant foods as well as from animal products. Likewise vegetable oils (from nuts and seeds) are at least as nourishing. Among all grain substances, whole wheat bread is the most important. Discusses the findings of Hindhede of Denmark during World War I. Address: N.D., M.D.

3293. *J. of the American Medical Association*. 1923.

Necropsy findings in a vegetarian (Abstract). 81(1):80. July 7. [1 ref]

• **Summary:** An English-language summary of the following German-language article: Ammon, Ernst von. 1923. "Sektionsbefund an einem Vegetarier [Findings of a post-mortem examination on a vegetarian]." *Archiv für Verdauungs-Krankheiten...* 31:71-94. March 23. "Ammon publishes the findings in an almost strict vegetarian, and reviews literature. He finds: A lactovegetable diet is sufficient for nutrition. A purely vegetable (without milk or eggs) diet is possible only if the subject exercises a great deal. The diet diminishes gout and diminishes fat deposits, but lowers the immunity against purulent infections, and dilates the stomach and colon because of the large amounts of food required."

3294. Vital Food Company of California. 1923. Consecrated to health: VPO makes for happiness (Ad). *Los Angeles Times*. Sept. 16. p. XI31. Sunday magazine.

• **Summary:** "Let's talk less of disease. "Let's talk more of health. "Let's try a dose of VPO. "Let's talk be Healthy and Happy.

"Nature's remedy for constipation and the ills arising from it. VPO is a compound of Natural herbs, based on a formula by Mrs. W.S. Wilke, natural food specialist. 50¢ per package, or 55¢ postpaid. Sample mailed for two-cent stamp. 'Worth a dollar a dose.'

"For sale by Carque's. 2618 W. 7th St. Eutropheon [Dr. J.T. Richter], 927½ W. 6th St., Vitamine, 713 S. Figueroa St.

"And at your favorite drug or 'drugless' store, or direct from the manufacturers."

Note 1. This is the earliest document seen (July 2021) in the *Los Angeles Times* that mentions Eutropheon, an early raw-food vegetarian (actually vegan) restaurant—probably the first in California and perhaps even the first in the United States. The last document in the *Times* that mentioned Eutropheon (actually *eutropheon*) was an article on 13 April 1932. "Eutropheon" is mentioned in at least 44 ads and articles between those two dates—so it was well publicized.

Note 2. This is the earliest document seen (March 2003)

that contains the word “vitamine” (or “vitamin” or the plural of either) in connection with the health food movement in the USA. This is surprising, since the word was coined in 1912. Notice that here it is the name of a company. Address: 650 N. Mariposa Ave., Los Angeles, California. Phone: 596-861.

3295. Ehret, Arnold. 1923. An explanation of colds, “flu,” laryngitis, etc. *Naturopath (New York City)* 28(9):424-25. Sept.

• **Summary:** In these conditions, the body is trying to expel mucus via the mucus membranes, and should be assisted.

3296. Healtheries Natural Foods Company (The). 1923. Welcomes mail orders for... (Ad). *Naturopath (New York City)* 28(9):492. Sept.

• **Summary:** “... 100% whole wheat bread (Maxwell’s 3V Bread, for Vim, Vigor and Vitality, has been used for extensive feeding tests at Westfield Laboratory and is highly endorsed by Professor Allyn after those tests. It is made of whole wheat, whole milk and further fortified with vegex [sic, Vegex], the wonderful vegetable extract and nerve nutrient, rich in vitamins and organic mineral salts.)

“Delicious sun-dried fruits (not chemically treated). Wild fruit juices,... Crackers, cookies, cakes; whole grain foods that are naturally laxative. Cereal drinks instead of coffee. Nuts and nut meats in choice selection...”

“You must get acquainted with these two stores, just the kind a true Naturopath longs for. We need you. You need us.”

“No white denatured flour or refined sugar used in any of our products. John Maxwell, the President, hopes to meet you at the convention.” Address: (1) 23 E. Van Buren St.; (2) 2731 No. Clark St. Both: Chicago, Illinois.

3297. Kloss (Jethro) Health Food Co. 1923. Health foods (Ad). *Naturopath (New York City)* 28(9):488. Sept.

• **Summary:** See below. “We manufacture an unusual line of Health Foods. Have thirty-four years of experience along the Naturopathic line. Our years of experience in Institutional feeding of the sick, as well as out of Institutions, watching the results obtained from feeding Natural Products, has enabled us to present something to the public that is of infinite value.”

“We manufacture a line of foods that most perfectly takes the place of meat, milk, eggs and butter. There are no animal products used in the manufacture of our foods. We have used no animal products in our home for over eight years [i.e., since 1915], no meat for over 30 years [since 1893 or before].

“We are just completing a book, which will be off the press in September, on Natural Products of the earth...”

“Send for the price list of our health foods and complete description of our new book.” Address: Brooke, Virginia.

3298. Vitamin Restaurant Corporation. 1923. “Vegetarianism necessary for good health” (Ad). *Naturopath (New York City)* 28(9):502. Sept.

• **Summary:** The corporation has two vegetarian restaurants in New York City: (1) 1226 Broadway (Near 30th St.). (2) 6 East 29th St. (Near Fifth Ave.). Others will be opened in the near future.

“Dr. Benedict Lust says: ‘The Vitamin Corporation is giving the public the best vegetarian restaurants I have ever

HEALTH FOODS.

WE manufacture an unusual line of HEALTH FOODS. Have thirty-four years of experience along the Naturopathic line. Our years of experience in Institutional feeding of the sick, as well as out of Institutions, watching the results obtained from feeding NATURAL PRODUCTS, has enabled us to present something to the public that is of infinite value.

Our prices are so reasonable that everyone can afford to use our foods.

We manufacture a line of foods that most perfectly takes the place of meat, milk, eggs and butter.

There are no animal products used in the manufacture of our foods. We have used no animal products in our home for over eight years, no meat for over thirty years.

We are just completing a book, which will be off the press in September, on Natural Products of the earth, giving not only the value of them and how to feed them, but the effects they have upon the system and how to prepare all these HEALTH FOODS in your own home.

There is valuable information on foods in this book that is not found elsewhere as far as the writer has been able to learn.

Nature’s simple remedies with the right food bring unfailing results in the treatment of disease, even in the diseases that are called incurable.

In this book will be given the recipes for all the foods we manufacture and many recipes for good foods that are sold on the market for a very high price, which we do not manufacture, also many tried and tested NATURAL REMEDIES.

The regular price of this book is \$2.50. In order to get it before the people, we will set the price at \$1.75 postpaid, for all orders received before October 1st, 1923.

Send for price list of our health foods and complete description of our new book.

JETHRO KLOSS HEALTH FOOD CO.
BROOKE, VIRGINIA.

seen any place in the world.’” Address: New York City.

3299. *Madison Survey (Madison, Tennessee)*. 1923. Reason for reform in diet. 5(41):2-3. Oct. 10.

• **Summary:** “Men do not love pain, but most of them are loath to attribute suffering to errors in diet and other wrong habits of life... However no less an authority than Dr. E. V. McCullum of the School of Hygiene and Public Health of Johns Hopkins University, tells us ‘that a dietary reform is essential as a part of any general program of public health work.’

“The legumes such as soy beans, lentils, peas, and beans of all kinds are rich in lime [calcium], much richer than the cereal grains.”

Note: This is the earliest document seen (Oct. 2001) concerning dietary/health reform and soy.

3300. Van Houten’s Health Food Company. 1923. Prof. Arnold Ehret’s wonderful discovery: Inner-Clean assists nature (Ad). *Los Angeles Times*. Oct. 14. p. IX26.

• **Summary:** “Not a drug but nature’s way. Makes you better day by day. Are you constipated? Intestinal scourer and toxemia remover. Insist on the genuine Inner-clean! Will give immediate relief. 50¢ per packet. Send for free sample.” “In business for your health.”

Note: This company’s name and address have changed. On 19 Aug. 1923 it was Van Houten’s Health Food Store, 323 So. Hill St., Los Angeles, California. Address: 746 West 7th St., Los Angeles, California.

3301. *Madison Survey (Madison, Tennessee)*. 1923. A city church cooperates with the cafeteria. 5(43):3. Oct. 24.

• **Summary:** “The city treatment rooms and the vegetarian cafeteria [in Nashville] are well known among the business men.”

• **Summary:** “Paper read before the 27th Annual Convention of the A.N.A. in Chicago.” About the teaching of Arnold Ehret, who died in an accident in 1922. Promotes “Inner-Clean” herbal laxative. Address: Los Angeles, California.

3303. Shelton, Herbert M. 1923. The functions of a health school. *Naturopath (New York City)* 28(10):541-43. Oct.

• **Summary:** “Dr. H. Lahn says in his work on Iridology that the highest aim of the physician is to make himself dispensable.” He means that the physician should so instruct and advise the patient so that he can do without a physician; he can care for himself. The same idea has been held by various pioneers of the Nature Cure.

“The Health School recognizes that all disease is an outgrowth of a common fundamental cause—toxemia.

Toxemia is a state of the body tissues and fluids in which there is an abnormal percentage of toxins or poisons.”

Address: D.P., N.D.

3304. Vital Food Company of California. 1923. To Otto Carque—author, lecturer, scientist, purveyor of natural foods—VPO extends congratulations (Ad). *Los Angeles Times*. Nov. 11. p. IX25.

• **Summary:** Congratulations to Otto Carque “upon the publication of his new book, *Rational Diet*, in our estimation the most exhaustive scientific study of foods and their values.”

“VPO is a compound of Natural herbs, based on a formula by Mrs. W.S. Wilke, natural food specialist.” For sale at all Sun Drug Stores, Carque’s, Eutropheon, and Vitamine. The address of each is given. Address: 650 N. Mariposa Ave., Los Angeles, California. Phone: 596-861.

3305. Carqué, Otto. 1923. *Rational diet: An advanced treatise on the food question*. Los Angeles, California: Times-Mirror Press. xvi + 540 p. Illust. 24 cm. [104* ref]

• **Summary:** In a review of this book, *California Health News* (30 Nov. 1933, p. 2) calls it “Carque’s master work...”

The preface of this book begins: “The aim of this book is to disseminate a better knowledge of diet and its relation to health and disease, in plain non-technical language, understandable to all who seek more scientific information on this vitally important subject.” The author advocates a vegetarian diet, with dairy products and eggs consumed in small amounts—if at all; their pros and cons are discussed on pages 324-340.

In the chapter on “Flesh Foods,” pages 353-54 state: “Writing to his friend Firmus, who had abandoned the Pythagorean doctrine in order to eat meat, the philosopher Porphyry, living in the third century, said: ‘I cannot believe that your change of diet is due to reasons of health, for you yourself have constantly affirmed that a vegetable diet is much more suitable than any other, not only to give perfect health, but even a philosophic and balanced judgment, as a long experience had taught you.’

“And Seneca, who, after studying the problem of nutrition for many years, had adopted vegetarianism, wrote: ‘Struck by such arguments, I also have given up the use of flesh of animals, and at the end of a year my new habits have become not only easy to me, but most agreeable; and it even seems to me that my intellectual aptitudes have become more and more developed.’

“Isaac Newton adhered strictly to a vegetarian regimen while performing the prodigious intellectual work which made his name immortal. Among the modern philosophers and artists who have followed or advocated a rational vegetarian regimen may be mentioned: Shelley, Byron, Thoreau, Tolstoi [Tolstoy], Richard Wagner, Tagore, Maeterlinck, Alexander Pope, and George Bernard Shaw.”

Chapter V, "Cereals, Legumes, and Miscellaneous Food Products," contains a section titled "Beans," which is largely devoted to soy beans (*Dolichos soya*) (p. 316-318). It discusses green vegetable soybeans ("Soy beans, when about three-fourths grown, make a most palatable and nutritious green vegetable, like the green pea or the lima bean."), soy flour, soy bean milk, bean cheese (tofu), and soy sauce.

Note: This is the earliest document seen (Nov. 2010) in which Otto Carqué mentions or discusses soybeans or soyfoods.

Concerning the wastefulness of the animal as a converter of feed to food, page 361 contains a long quotation from an article in the prestigious journal *Science* titled "The cost of roast pig," by Prof. Henry P. Armsby (1917).

In extensive tables of food composition, the composition of soy beans is given on page 504. The author lived 1867-1935. Address: Los Angeles, California.

3306. Schweitzer, Albert. 1923. *Ethics and civilization: The philosophy of civilization, Part II*. Translated by John Naish. London: A. & C. Black, Ltd. xxvi + 298 p. Nov. Index. 22 cm. Also published in German in 1923.

• **Summary:** Written in an attempt to explain the underlying causes of World War I, this book introduces Schweitzer's central ethical concept and world view (*Weltanschauung*), that of "reverence for life" (in German, "der Ehrfurcht vor dem Leben"). The powerful Preface, by one of the 20th century's greatest thinkers and writers, sets the stage: "I have undertaken to write a tragedy—the tragedy of the occidental world-view. Even as a student I used to be struck by the fact that the history of thought was always presented as a history of philosophical systems, not as that of the struggle for a world view. Later on... the sinister and inexorable relations existing between civilization and world-view became clear to me... I recognized and admitted that Western thought has been seeking for that world-view which is the only possible foundation for profound and comprehensive civilization. It has genuinely desired to attain to world- and life-affirmation... It has proved fatal that Western thought has failed to realize the unsatisfactory nature of the results of its search for a securely based world-view of real value... It has lost touch with the elemental questions regarding life and the world which it is man's task to pose and to solve... It has become increasingly absorbed in side issues... And so this philosophy... has led us to a position where we are devoid of any world-view at all, and as an inevitable consequence of this, of any real civilization."

Chapter 20, "The evolution of the ethic of self-sacrifice and the ethic of self-fulfillment into the ethic of reverence for life: The ethic of self-sacrifice enlarged to become a cosmic ethic. The ethic of self-fulfillment and mysticism. Abstract mysticism and the mysticism of reality. Supra-ethical and ethical mysticism." Past European thinkers have taken "the greatest pains to prevent any non-human

animals from finding their way into the realm of ethics. It is really incredible what follies they commit in their efforts to maintain this traditional narrow point of view and to erect it in principle. Either they refuse to admit the ethical nature of any sympathy for life outside the circle of humanity, or at best they treat such sympathy as a mere ethical fringe of no importance whatever." "It seems as if Descartes had bewitched the whole of European philosophy when he declared that animals are mere machines." "Kant declares categorically that ethics has only to do with the obligations of men to men" (p. 239). Bentham does champion the cause of animals, and Darwin and Schopenhauer do so even more, but they are never followed up. "This backward tendency is the more incomprehensible when we remember that both Indian and Chinese thought, at a very early period of their evolution, declared ethics to consist in the kindly treatment of all living beings. What is more, they arrived at this result independently of each other" (p. 240).

In addition, the book contains two important chapters (21 and 22) on ethics as they relate to animal rights and vegetarianism: "The ethic of reverence for life" (p. 251-76), and "The ethic of reverence for life and its creative force with reference to civilization" (p. 277-93). "A man is truly ethical only when he obeys the compulsion to help all life which he is able to assist, and shrinks from injuring anything that lives. He does not ask how far this or that life deserves one's sympathy as being valuable, nor, beyond that, whether and to what degree it is capable of feeling. Life as such is sacred to him. He tears no leaf from a tree, plucks no flower, and takes care to crush no insect. If in summer he is working by lamplight, he prefers to keep the window shut and breathe a stuffy atmosphere rather than see one insect after another fall with singed wings upon his table."

"Until he extends the circle of his compassion to all living things, man will not himself find peace."

The author, recipient of the Nobel Peace Prize in 1952, earned three doctoral degrees (in theology, philosophy, and medicine), was a medical missionary in Gabon, a famous musician (organist) and author of a book on Johann Sebastian Bach, and a lifelong advocate of animal rights and reverence for all living things. Schweitzer was born on 14 January 1875 at a parsonage in Günsbach in the Münster valley of Alsace (then in Germany); at the time of his birth, his father was a curate in charge at Kaysersberg in Upper Alsace, but 6 months later he was transferred as vicar to Günsbach. (Schweitzer's birthplace is often given as Kaysersberg). He died 5 Sept. 1965 at his hospital in Lambarene, Gabon, at age 90.

This two-part book is based on The Dale Memorial Lectures, which Schweitzer delivered in the spring of 1922 in French at Mansfield College, Oxford, England. But the final copy of the manuscript was in German, and the translation was from the German. Part I is titled *The Decay and Restoration of Civilization*, translated by C.T. Campion.

The first American edition of this work was published in 1949 in one volume titled *The Philosophy of Civilization*, translated by C.T. Campion (New York: The Macmillan Co., 347 p.). The key parts are the preface and chapters 26 and 27. Address: D. Theol., D. Phil, D. Med., Strasbourg, Alsace, France.

3307. Shelton, Herbert M. 1923. Naturopaths, forward! *Naturopath (New York City)* 28(11):635-37. Nov.

• **Summary:** “A question that perhaps every naturopath has asked himself at one time or another is ‘Why has not Naturopathy spread as have the other drugless systems?’

“Naturopathy is older than Osteopathy, older than Chiropractic or Naprapathy. Yet these, or at least the first mentioned two, are better known than is Naturopathy. Why is this?” This paper tries to answer this question—focusing on the issue of the name. Address: N.D.

• **Summary:** The chapter in these essays titled “The meaning of mock turkey” critiques the philosophical viewpoints expressed in a vegetarian pamphlet.

3315. Estes, St. Louis A. 1923. *Raw food and health*. Chicago, Illinois: Estes Raw Food, Health and Psychological Club. 443 p. Portrait. 20 cm. *

3316. Faulkner, James. 1923. *The unfired food diet simplified*. Pasadena, California: Published by the author. 47 p. Portrait. 18 cm.

• **Summary:** The subtitle continues: “A simple guide for those who are interested in unfired foods. It offers dishes pleasing to the eye and good to the taste. The Unfired Food Idea is not the fancies of an idle dreamer. It is practical. It is a simple plan which if followed will liberate the cookstove slave and make for health and happiness.”

This book is not vegan—it uses dairy products. The author was formerly with the Lindlahr Sanitariums, now with The Caldwell Health Home. Address: Pasadena, California.

3317. Forward, Charles Walter. 1923. *Butchers’ meat, and its effects upon the human body*. London: Denny & Thomason, Ltd. 119 p. 17 cm.

• **Summary:** The author also wrote several books about animal welfare, published by the Humanitarian League, London. Address: England.

3318. Juckenack, A. 1923. *Was haben wir bei unserer Ernahrung im Haushalt zu beachten? Zweite, umgearbeitete Auflage* [What must we be aware of concerning the foods

in our homes? 2nd rev. ed.]. *Volksernaehrung (Die)* (Berlin) No. 6. xi + 75 p. [Ger]

• **Summary:** Some 129 numbered questions / subjects are considered, including: No. 38. What is artificial milk? (*Kunstmilch*). One type is the so-called vegetable milk (*vegetabilische Milch*), a beverage made with help from the soybean.

No. 89. Does the soybean deserve special attention? It is a legume that is unusually rich in nutrients, containing about 32-40% protein and 14-20% fat. Therefore its carbohydrate content is low (32.0-36.5%). Soybean oil is good for food use and has long been used to make margarine. Defatted soybean meal is sometimes used for livestock feed, and sometimes for protein-rich foods. Also, vegetable milk or plantmilk (*Pflanzenmilch*) is made with help from the soybean. So-called soybean milk (*Sojabohnenmilch*) can be used in place of cow's milk in the home in preparations such as soups, baked goods, egg-cakes, and puddings; it can also be added to coffee. It should obviously not be used for infant feeding, however it is noteworthy refreshing drink.

Also discusses: No. 81. What is artificial edible fat? (*Kunstspeisefett*). It is a lard substitute, which can be made from various vegetable oils, including peanut oil and sesame oil.

No. 129. What is vegetarianism? Is it scientifically grounded? Address: Berlin-Charlottenburg, Germany.

3319. Kellogg, John Harvey. 1923. *The new dietetics: A guide to scientific feeding in health and disease*. Revised ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 1021 p. Index. 24 cm.

• **Summary:** About the principles of physiology, metabolism, dietetics and vegetarian nutrition (for both healthy and sick patients) as practiced at the Battle Creek Sanitarium. Dr. Kellogg was a pioneer in emphasizing the importance of dietary fiber, as illustrated in the following four sections. The content of these sections is nearly identical to that of the 1921 edition (which see for details).

(1) In the chapter titled "Cellulose" (p. 211-22) are four sections: Bran, Bran does not irritate, Agar-agar, and Manyalla.

(2) In the chapter titled "Regimens and Dietaries" (p. 572-670), following a section on "The Laxative Diet," are long sections titled "Bran" (p. 626-27) and "When the Laxative Diet is Indicated" (p. 627).

(3) In the chapter titled "Diet in Disorders of the Digestive Organs" (p. 671-755) is a section on "Diet in Constipation" (p. 682).

(4) Several pages later, the section titled "Rules for Care of the Colon to Combat Constipation" (p. 686-87) gives 20 basic rules.

Note 1. This book is widely cited by Trowell (1979) and others as the one in which Dr. J.H. Kellogg stimulated the study of fiber in the United States, and was thus a pioneer in

this field worldwide. However most of the information about fiber in this 1923 edition first appeared in the original 1921 edition.

Note 2. The section titled "The soy bean" (p. 315-321) is quite similar to that in the 1921 first edition of this book, but on different pages. Changes appear on the following pages: 316, 318, 320-21. Address: M.D., LL.D., F.A.C.S., Superintendent of the Battle Creek Sanitarium, President of Battle Creek College, Battle Creek, Michigan.

3320. Kellogg, John Harvey. 1923. *The natural diet of man*. Battle Creek, Michigan: The Modern Medicine Publishing Co. 386 p. Illust. Index. 20 cm. [50+* ref]

• **Summary:** This classic of vegetarian literature contends that a vegetarian diet is the natural diet of man. Contents: 1. Man not naturally a flesh-eater: Modern civilized life unnatural and unbiologic, animal dietaries, lessons from the monkey, porcine wisdom in diet, animals classified by diet, the ancient family of primates, all mammals originally vegetable feeders, when germ diseases were unknown, kinship of higher apes and men, flesh-eating never a universal human custom.

2. Twenty popular delusions about flesh foods: D-1. That meat is superior as a blood-making food, and, hence, is needed in anemia. D-2. That meat is essential as a flesh-building food. D-3. That a flesh diet is essential to support severe or prolonged activity; that is, promotes endurance. D-4. That flesh-eating is necessary to produce physical courage. D-5. That vegetarian races are inferior physically and mentally to races using a mixed diet. D-6. That flesh foods are more refined and more easily digested and, hence, more nutritious than are foods of vegetable origin. D-7. That man is naturally omnivorous. D-8. That flesh foods are stimulating and thus supply an element needed especially by brain workers. D-9. That beef tea is a useful nutrient. D-10. That a meat diet is required to prevent or cure gastric acidity. D-11. That a meat diet is desirable in tuberculosis. D-12. That a meat diet is necessary in diabetes. D-13. That a flesh diet is essential in the treatment of obesity. D-14. That meat is required in beri-beri. D-15. That meat is essential as a "building-up" or restorative food. D-16. That meat is needed by growing children. D-17. That meats are needed as a stimulus to appetite. D-18. That the beef industry is a necessary part of our national economic system. D-19. That a meat diet is necessary to insure reproductive activity. The law of diminishing returns versus flesh-eating. D-20. That meat is a harmless luxury.

3. Scientific objections to the use of meat: Human liver not adapted to meat diet; important differences between meat and milk; meat deficient in vitamins and food lime; Eskimos eagerly seek vegetable food; ill effects of meat diet on Arctic explorers; meat saturated with tissue poisons; meat readily putrefies, natural foods do not; the poisons of meat; meat extracts; why viscera are especially

objectionable; bacteriology condemns meat as food; vast numbers of bacteria in meat; putrefactive products of meat; why physicians forbid meat in cases of kidney disease and high blood pressure; how flesh-eating causes constipation (“partly because the flesh diet is lacking in the roughage or indigestible material required to stimulate the intestine to action”).

4. Diseases due to flesh eating: Tuberculosis in animals, cancer from meat eating, cancer rare and appendicitis unknown among flesh abstainers, meat-eating causes disorders of nutrition, acidosis from a flesh diet, a meat diet and scurvy, meat eating and arteriosclerosis, pernicious effects of a meat diet experimentally proven, recognized meat contraindications, the peregrinations of a deadly parasite, typhoid germs in meat products, flesh poisoning, no protection for meat-eaters, oyster poisoning, converting sewage into food.

5. Experimental evidence against flesh eating: McCollum’s experiments, Dr. S. Weir Mitchell endorses the meatless regimen, an eminent scientist on meat diet, Fauvel’s observations, greater endurance of flesh-abstainers, the death rate reduced by meatless diet, flesh-eating does not develop intelligence, meat-eating and race degeneracy, meat-eating a city habit, non-meat diet best even for carnivorous animals, the Scotchman’s dog, the effects of a meat diet on rats, the effects of a flesh diet on rabbits, flesh-eating animals short lived. 6. The ethical argument.

7. Historical facts and authoritative opinions: Biblical teaching about flesh eating, apostles who were flesh abstainers, the Essenes were flesh-abstainers, the diet of the ancient Greeks, King Cyrus a flesh-abstainer, Julius Caesar’s army ration, diet of Peruvian soldiers, diet of athletes of ancient Greece, ancient philosophers were flesh-abstainers, Plutarch’s essay on flesh-eating, fleshless diet of a Roman emperor, meatless diet endorsed by Gautier, views of Seneca, diet of the ancient Sumerians [today’s Iraq], eminent modern flesh abstainers, vegetarian monks, Thoreau on the fleshless diet, a Chinese statesman’s experience, the views of two great naturalists, the poet Shelley a food reformer, a child’s natural repugnance to meat, Liebig on the advantages of a non-flesh diet, Sylvester Graham’s diet reform movement.

8. Interesting facts concerning the dietary habits of various peoples. 9. The marvelous adaptation of the natural diet to human needs. 10. How to discard meats comfortably and safely.

11. Is the disuse of meat advisable from a practical standpoint? The U.S. Department of Agriculture shows the use of less meat to be safe and economic, the importance of planting nut trees, avoidance of meat is necessary to change the intestinal flora, vegetable substitutes for meat, the recent low protein movement in the United States, the half century experience of the Battle Creek Sanitarium with a fleshless diet.

12. Newspaper and magazine misinformation: An “eat-

more-meat” campaign, Professor Fisher of Yale University [Connecticut] refuses to support the “eat-more-meat” campaign of the [Chicago, meat] packers, pernicious piffle.

Soy is mentioned in many places. The section titled “Flesh-eating never a universal custom” states (p. 33-34): “According to Mori, the Japanese peasant of the interior is almost an exclusive vegetarian. He eats fish once or twice a month and meat once or twice a year... The soy bean is held in high esteem and used largely in the form of *miso*, a purée prepared from the bean and fermented; also *to-fu*, a sort of cheese; and *cho-yu* [shoyu, soy sauce], which is prepared by mixing the pulverized beans with wheat flour, salt, and water and fermenting from one and a half to five years. The Chinese peasant lives on essentially the same diet, as do also the Siamese, the Koreans, and most other Oriental peoples. Three-fourths of the world’s population eat so little meat that it cannot be regarded as anything more than an incidental factor in their bill of fare.”

Page 45: Complete “proteins are found in milk and eggs as well as in most nuts, peanuts, and the soy bean...”

Page 73: “The protein of milk, of the soy bean, and of nuts is known to be superior to meat as a source of body nitrogen.” Address: M.D., LL.D., F.A.C.S. [Fellow of the American College of Surgeons], Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

3321. Kellogg, John Harvey. 1923. The ethical argument (Document part). In: J.H. Kellogg. 1923. The Natural Diet of Man. Battle Creek, Michigan: The Modern Medicine Publishing Co. 385 p. See p. 216-27.

• **Summary:** Page 221 states: “When man slays to eat, what a picture arises! *‘Deaf to the calf that lies beneath the knife, / Looks up, and from her butcher begs her life; / Deaf to the harmless kid, that, ere he dies, / All methods to procure thy mercy tries, / And imitates in vain thy children’s cries! / Where will he stop who feeds with household bread, / Then eats the poultry which before he fed?’*”

Kellogg continues: “Man rears his cattle, his sheep, and his poultry much like household pets. His children make his lambs their playmates. Side by side his oxen toil with him in the field. In return for kindness, they give affection. What confidence they repose in him! how faithfully they serve! With winter’s frost an evil day arrives,—a day of massacre, of perfidy, of assassination and bloodshed. With knife and ax he turns upon his trusted friends,—the sheep that kissed his hand, the ox that plowed his field. The air is filled with shrieks and moans, cries of terror and despair; the soil is wet with warm blood, and strewn with corpses.

“Is there a brute on earth that would be capable of such a crime? In such an act have we not the veritable spirit of murder in an aggravated form? Let us listen to the appeal of a pagan who lived five centuries before Christ (Pythagoras):

‘Whoever was the wretch (and cursed be he) / That envied first our food’s simplicity, / The essay of bloody feasts

on brutes began, / And after forged the sword to murder man,—/ Had he the sharpened steel alone employed / On beasts of prey that other beasts destroyed / Or man invaded with their fangs and paws, / This had been justified by Nature's laws / And self-defense: but who did feasts begin / Of flesh, he stretched necessity to sin. / To kill man-killers, man has lawful power, / But not the extended license to devour. / Take not away the life you can not give; / For all things have an equal right to live: / Kill noxious creatures, where 'tis sin to save; / 'Tis only just prerogative we have: / But nourish life with vegetable food; / And shun the sacrilegious taste of blood.'

"Well did Plutarch say, 'Alas, for our savage inhumanity! It is a terrible thing to see the tables of rich men decked out by those layers-out of corpses, the butchers and the cooks.'" Address: Director, School of Hygiene and Public Health, Johns Hopkins Univ., Baltimore, Maryland.

3322. Kellogg, John Harvey. 1923. Vegetable substitutes for meat (Document part). In: J.H. Kellogg. 1923. *The Natural Diet of Man*. Battle Creek, Michigan: The Modern Medicine Publishing Co. 385 p. See p. 334-36.

• **Summary:** "By the combination of nuts and cereals, a product very closely resembling meat may be prepared. The process for doing this was discovered by the writer many years ago in a series of experiments undertaken for the purpose by the request of Professor Dabney, then assistant professor in the Department of Agriculture. Recognizing that the increase of population would ultimately lead to an increase in the price of foodstuffs and particularly of meats, and possibly a scarcity of meats, Professor Dabney requested the writer to solve the problem by the production of a vegetable substitute for meat. The result of the experiment undertaken was Protose, a nut-cereal preparation, which to a considerable degree resembles meat in appearance, taste and odor, having a slight fibre like potted meat.

"Earlier experiments made by the writer led to the production of peanut butter, which has since developed into a great industry and has increased enormously the size and value of the peanut crop of the South. From a food standpoint, a pound of peanut butter is more than equal to the same amount of pork or meat of any sort.

"In Malted Nuts, another product of our experiments, is provided a product [probably peanut milk] resembling Malted Milk, which has been extensively used as a substitute for milk by those unable to tolerate cow's milk.

"No doubt the future will develop a large number of vegetable products which will so fully supply the place of various meat products and dishes that all of these unwholesome products may be dropped from the bill of fare without being missed. As a matter of fact, it is now recognized by the most eminent authorities in dietetics that the flavor of meats is about the only reason or apology which can be offered for their use." Address: Director, School of

Hygiene and Public Health, Johns Hopkins Univ., Baltimore, Maryland.

3323. Kellogg, John Harvey. 1923. *The natural diet of man* (Continued). Battle Creek, Michigan: The Modern Medicine Publishing Co. 386 p. Illust. Index. 20 cm. [50+* ref]

• **Summary:** Continued: Page 74: "Vegetable extracts (yeast extracts and soy sauce) are now prepared which are finer in flavor than the best meat extracts..."

Page 191: "Complete proteins are found in the almond and also in the soy bean and the peanut, a fact which accounts for the large use of the soy bean and the peanut in China and other Oriental countries as a supplement to a diet of rice and green vegetables."

Page 198: "The soy bean contains more protein than does beef, and 20 per cent of oil."

Page 282: G. Yukawa reports that the diet of Japanese monks "consists exclusively of vegetable products, rice being the staple, supplemented with soy beans and vegetables. The diet contained an average of 70 grams of protein, 15 grams of fat, 514 grams of carbohydrates, an average energy intake of 2,500 calories. The experimenter concluded that the absolute vegetarian diet of the Buddhist monks of Japan is entirely adequate to maintain perfect health."

Page 285: "Some years ago (1899) the Emperor of Japan appointed a commission to determine by investigation whether it was necessary to add meat to the national dietary to improve the physique of the race, especially to increase their stature. As regards the use of meat, the commission reported 'that the Japanese had always managed to do without it, and that their powers of endurance and their athletic prowess exceeded that of any of the Caucasian races. Japan's diet stands on a foundation of rice.' The rice diet of the Japanese is supplemented by the free use of peanuts, soy beans, and greens, which supply all that rice lacks to constitute a wholly sufficient bill of fare."

Page 306: "The experiments of McCollum and numerous others have in recent years demonstrated the entire feasibility of living exclusively upon a diet of purely vegetable origin. It is only necessary to make such a selection of foodstuffs as will supply the body with all the elements necessary for complete nutrition; and this may be easily done, as has already been indicated. It has also been shown that two widely used legumes, the soy bean and the peanut, as well as nuts, supply complete proteins and may be used in supplementing the incomplete proteins of cereals and vegetables. This fact explains the great rôle played by the soy bean in the bills of fare of the Orientals."

Pages 313-14: "Certain proteins known as complete proteins, when taken into the body in proper quantities may be wholly utilized in tissue building, because they contain exactly the elements needed, no more and no less, for the building of muscles, nerves, glands, and other nitrogenous

tissues.” “The protein of the soy bean, the peanut, the almond, and various other nuts has, however, been shown to be of high quality, practically equal to the protein of flesh... When meat is discarded, it is evidently necessary that care be taken to supply in its place an adequate amount of protein derived from the soy bean, the peanut, the almond, or other nuts, or from milk or eggs. Four or five ounces of soy beans, peanuts, or almonds afford an abundance of protein for a day’s ration. See also p. 320.

Page 322: “But even in the absence of milk and eggs, an abundant supply of protein could be readily secured by the planting of peanuts and the soy bean, two remarkable legumes which, pound for pound, supply more nourishment than beef or pork and of finer quality.” “Nuts, together with the peanut and the soy bean, afford a protein which is equivalent to that of meat at a cost far below the cost of meat proteins. For example, an acre of very ordinary ground will produce twenty bushels, or twelve hundred pounds of soy beans, which contain 40 per cent, or four hundred and eighty pounds of excellent protein. It takes an acre of ground and two years to produce seventy-five pounds of dried protein in the form of beef. The same land will produce in the same length of time nearly one thousand pounds of soy bean protein. In other words, an acre of ground devoted to soy beans will produce more than thirteen times as much protein as the same ground used as a pasture for fattening steers...”

Page 338: The section titled “The recent low protein movement in the United States,” notes that the daily protein requirement for a person weighing 120 pounds could be “provided by 2½ pints of milk or by 6 ounces of almonds, 5 ounces of peanuts, 6 ounces porterhouse steak, 6 ounces navy beans, 4 ounces soy beans, 5 ounces lentils, 5 ounces black walnuts.”

Page 359: “Animals furnish us a good object lesson on this subject. Compare the agility, alertness, curiosity and intelligence of the fruit-eating chimpanzee with the dull stupidity of the lion and the tiger; or the vivacity and progressiveness of the rice- and soy-eating Japanese, with the dull-witted, decaying Eskimo.”

Nuts are discussed favorably on pages 56, 297, 327-31 but neither peanuts nor peanut butter are mentioned specifically.

Dr. Kellogg was a pioneer in promoting the importance of dietary fiber. The following terms appear: Bran or wheat bran (p. 40, 155, 157, 201, 301). Bulk, bulky, or bulky diet (referring to “roughage”) (p. 70, 135). Cellulose (p. 57, 70, 297, 303). Constipation (p. 10, 66, 135-138, 148, 157, 161, 332, 382). Roughage (p. 57, 135, 297, 301). But none of the following terms appears in the index: Laxative, laxatives.

The author lived 1852-1943.

Note: This is the earliest English-language document seen (June 2004) that contains the term “natural foods” and that also discusses soy. Address: Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

3324. Lefèvre, Jules. 1923. A scientific investigation into vegetarianism. Authorized translation from the French by Fred Rothwell. London: J. Bale, Sons & Danielsson, Ltd. 4 + 189 p. Index. 19 cm.

• **Summary:** This book was first published in 1904 in French in Paris by the Vegetarian Society of France; a revised French-language edition was published in 1919 by the same organization. The author was born in 1863.

Contents: Translator’s note (Dr. Lefèvre coined a new word “végétalien,” which the translator renders as “vegetalian,” but which by the 1940s was the same as “vegan”). Preface. 1. Vegetarianism and statistics: Historical bases—present trend and development, brief historical sketch of vegetarianism, flesh-eating and the anti-flesh-eating reaction in the 19th century, Gleizes and the vegetarian Renaissance in England, vegetarianism in Germany and America, French vegetarianism—its rapid development. 2. The physiology and vegetarian doctrines: Complete foods, chemical analysis of the principal foods, remarks on the choice of albumens, and on the fundamental rule of salts and vitamins, the diet ration from the dual point of view of matter and energy—critical study of the nitrogenous ration, regimes of diet—the inadequacy, danger and illogicality of a flesh-eating regime, physico-chemical justification of anti-flesh-eating systems—critical investigation of digestibility—fritarianism, vegetalism [veganism], vegetarianism, investigation into the natural regime of man along the lines of comparative anatomy and physiology, what we are to understand by food in general biology. 3. Illness and a food regime. 4. Food regimes in social and economic problems. 5. The feeding of the human motor. 6. Animal heat and a cold-resistance regime. Address: Prof. at the Lycée Pasteur, France.

3325. Lust, Benedict. 1923. The fountain of youth: or, curing by water. How you may quickly overcome acute and chronic illness by the use of the biological blood-washing bath. New York, NY: Macfadden Publications, Inc. viii + 142 + [10] p. Illust. Portraits. 21 cm. *

3326. Miles, Hallie Eustace (Killick). 1923. Health without meat. 10th ed. London: Methuen & Co. x + 137 p. Illust. 17 cm. *

• **Summary:** The British Library Catalogue lists the author’s name as “Killick, afterwards Miles (Hallie).” But the National Union Catalog (USA) lists her name as “Miles, Halie Eustace (Killick).”

3336. Slosson, Edwin E. 1924. Soy. *Scientific Monthly* 18:109, 111. Jan.

• **Summary:** "The recent rise in restaurant prices has sent economical Americans flocking to the chop sueys, where a savory and satisfying meal can still be obtained for a small

sum. The Chinese, in their efforts to keep three hundred million people above the starvation point for three thousand years, have been forced to figure closely on food values... With us Americans meat has been the main part of the meal with vegetables on the side. With the Chinese this is reversed, and meat has in many cases been reduced to a condiment...

"The chief difficulty of a vegetarian diet is to get a sufficient amount and variety of proteins. Beans and peas are the richest in proteins, but they are not of the sort and proportion found in meats and needed for our muscle-making.

"But there is one exception and that is the soy-bean... The soy bean resembles animal foods in being rich in fat and protein and devoid of starch. What is more remarkable, the soy bean contains a dozen kinds of protein compounds that are the same as those found in milk. In fact a 'vegetable milk' can be made from soy beans and from this vegetable curds and cheese. These form a large part of the diet of Chinese and Japanese who abstain from animal food either because they are Buddhists or because they are poor. By milking the soy bean they can get ten times as much lacteal fluid per acre as if they pastured cows on the land. Italian physicians who used soy milk as infant food during the war report that it was better tolerated than cow's milk by some of the babies.

"The soy milk products have not yet come into use with us, but the American patron of the chop suey has acquired a taste for another product of the bean, the little glass cruet of brown sauce that seasons the rice. It looks and tastes like meat extract, such as we use in making beef tea, and is really much like it in composition and nutritive value. This shoyu or soy sauce is made by long fermentation and ripening of a mixture of beans and wheat in brine. The longer the process the better the product. Six months or a year may suffice for the masses, but to suit the taste of the Oriental connoisseur it must be sunned for five years or even thirty, the jars being patiently uncovered every day and covered every night or whenever it rains. Over two million barrels of soy sauce are made in Japan every year."

3337. Ehret Literature Publishing Co. 1924. Just off the press (Ad). *Los Angeles Times*. Feb. 17. p. J28.

• **Summary:** "The book that thousands have been waiting for!! Prof. Arnold Ehret [signature]. Mucusless Diet Healing System. Copyrighted, 1923. Complete course in 25 lessons for Practitioners and others who desire to learn how to control their health. Postpaid anywhere in U.S.A. \$1.50 per copy."

Note: This is the earliest article seen (Nov. 2005) that mentions "Ehret Literature" or "Ehret Literature Publishing Co." Address: 846 East Sixth St., Los Angeles.

3338. Easterbrook, L.F. 1924. Alcohol and meat. *Nineteenth*

Century and After (London) 95:306-14. Feb. *

• **Summary:** Slaughterhouse cruelties lead the author to conclude, in this era of Prohibition (1917-1933), that prohibition of meat is more justifiable than prohibition of alcohol.

3339. Brook, Harry Ellington. 1924. Care of the body. *Los Angeles Times*. March 2. p. I24.

• **Summary:** The section titled "Sweetness and sickness" quotes Otto Carque, "whom I regard as one of the best authorities in America on food values," as saying that refined sugar is harmful to good health. Other sections include "Raw foods" (by Jesse M. Gehman) and "Fasting." Address: N.D. [Naturopathic Doctor].

3340. Hamburger's. 1924. Established 1881 (Ad). *Los Angeles Times*. March 2. p. A15.

• **Summary:** This full-page ad shows that Hamburger's is a full-service department store selling silks, fine clocks, draperies, framed mirrors, floor lamps and shades, Chinese rugs, talking Panama parrots, etc.

A box at the top of the ad shows that it also sells: "Health Foods: Headquarters for the famous Battle Creek Health foods. We carry the most complete line of these foods on the Coast. (Hamburger's—Fourth floor)." Address: Fourth Floor [Broadway at Eighth, Los Angeles]. Phone: Broadway 3940.

3341. Paget, J.B. 1924. The health of a nation. *English Review* 38:377-85. March.

• **Summary:** "Thirty years ago questions of health had very little interest for the average person, but to-day the position is changed, and nearly all thinking people take an interest in and are searching for facts which can improve our national health. This is probably due partly to the spread of education... but more, I fancy, to the fact that the health and physique of the nation are not up to their former standard, and that this unsatisfactory state of affairs is so evident that it can hardly escape the notice of the least thoughtful amongst us."

British soldiers, "before they enlisted were nearly all agricultural labourers who were brought up on a hard wholemeal bread, garden produce, and apparently very little meat, as the consumption of meat then was three pounds per head per annum." This British military officer traces the deterioration of physique and stamina of his countrymen to overconsumption of meat, refined foods (such as white instead of wholemeal bread) and tea. He related personal experiences showing that Chinese soldiers and women (who are largely vegetarian) are stronger than their British counterparts. Dr. Robert Bell, one of Britain's leading cancer researchers, believes "that cancer is essentially a disease of civilisation; it is practically unknown among savages and amongst those who lead a simple life." Its cause: The

civilised diet based on meat. Address: Major, England.

3342. Vegetarian Cafeteria. 1924. A complete line of cooked and raw foods (Ad). *Los Angeles Times*. April 20. p. I30.

• **Summary:** A small classified ad. Address: 713 South Figueroa [Los Angeles].

3343. *Los Angeles Times*. 1924. Death claims "Times" writer: Dr. Harry E. Brook succumbs... Spent life trying to give health to humanity. May 5. p. A1.

• **Summary:** Contains a good biography and portrait photo of Dr. Harry Ellington Brook, N.D., who for 38 years was a member of The Times editorial staff. He was known to readers nationwide for his column "Care of the Body." He died at his home at 2129 Elsinore on Saturday night [May 3]. Death resulted from a nervous breakdown from overwork several months ago.

Dr. Brook was born on 21 March 1849 in St. John's Wood, London. His father, of Norse descent, was a merchant. "As an infant, Dr. Brook was poisoned by inoculation against smallpox, losing permanently the hearing of one ear and the use of a finger, and being reduced from a robust vitality to a weakly frame." From this affliction he traced his interest in health. At age 12 he began to study health, especially diet, and he took up long-distance walking. As a result, before he was out of his teens, he had overcome the handicap of his infancy.

At age 17 he first traveled to Europe, then spent much of the next 10 years back packing around Switzerland, Italy and France, studying nature cures and preparing himself for his career.

In 1877 he came to the USA and immediately headed for California. He spent 5 years in San Francisco editing *The Wasp*, then 5 more years in the mountains of California and Arizona. In the mining camps of Arizona he edited and published several newspapers. In 1884 he married Mr Agnes Plath, a widow with children. In 1886 Dr. Brook came to Los Angeles and became a member of The Times editorial staff, except for the years 1912-1917 when he published and edited a health magazine, *Brain and Brawn*. In 1921 he was awarded a special degree from the American School of Naturopathy.

He leaves a widow, a son and daughter, three stepdaughters, a stepson, and a cousin.

3344. *Naturopath* (New York City). 1924. Late naturopathic news: In memoriam—Harry Ellington Brook. 29(5):491. May.

• **Summary:** Dr. Harry E. Brook, editor of the "Care of the Body" department of the *Los Angeles Times* passed on Saturday, May 3. "In him we lost the most important pioneer and effective worker for Naturopathy, medical freedom and constitutional and national human rights in the State of California. No other man has shaped public opinion to such extent for Naturopathy as the deceased did."

3345. Seibert, R.R. 1924. A fleshless diet. *Naturopath (New York City)* 29(5):530-32. May.

• **Summary:** What can comparative anatomy teach us about the human diet. Humans have canine teeth; does that mean we are omnivorous? No. Many non-carnivores have canine teeth. The great class of monkeys has very strong and pointed canines. "The anthropoid ape, which is a fruit and leaf eater, can be taken as an example, and from him down the whole family of monkeys is exceedingly well supplied, though most of them are vegetarian in mode of life." Canines, in various forms, are also suited for digging and defense. Address: Naturopath.

3346. Winslow, Emma A. 1924. Food values and body needs shown graphically. *Farmers' Bulletin (USDA)* No. 1383. 36 p. See p. 23.

• **Summary:** The charts of the foods in this Bulletin are arranged into five groups: Vegetables and fruits, efficient-protein foods, cereals and cereal preparations, sugar and sugary foods, and fats and fat foods. The foods in Group II, efficient-protein foods, are all of animal origin, except for two legumes—soy beans and peanuts (p. 5). All foods in this group "contain efficient protein in amounts sufficient to supply at least one-sixth of their total fuel value." The foods of animal origin include "milk, eggs, cheeses, various meats (except the very fattest), poultry, game, fish, and sea foods."

"Food values not shown on the charts" (p. 3-4): The three vitamins now recognized by scientists (A, B, and C) are not shown in these charts. "Cellulose or roughage, an important constituent of food, is not shown in these charts. Only a small proportion of it is digested and assimilated by the body, but it is valuable because it gives bulk to the food mass as it passes through the digestive tract and tends to prevent constipation. Most vegetables and fruits furnish cellulose. So also do the outer layers of the cereal grains which remain in the 'whole grain' products, but have been removed from the more highly milled preparations."

Chart 30 (p. 23) shows the percentages of the total energy (71%), protein (117%), calcium (47%), phosphorus (137%), and iron (61%) needed per man per day which would be furnished by 1 pound of shelled peanuts. Chart 32 and 33 (p. 24-25) give values for 1 pound of "wheat flour (patent roller)" and 1 pound of "graham flour." The superiority of graham flour in every category except energy is clearly shown.

Note: This is the second earliest document seen (Aug. 2002) that arranges foods into various groups for the purpose of nutrition education. Soy is included in one of those groups. Address: Secretary, Committee on Home Economics, New York Charity Organization Society, and Lecturer, Teachers College, Columbia Univ.

3347. Reinhold, Alice M. 1924. The passing of Harry

Ellington Brook, of Los Angeles, California. *Naturopath (New York City)* 29(8):720-21. Aug.

• **Summary:** "On May 5th, 1924, Nature Cure lost one of its ablest writers and best friends. For nearly half a century the brilliant mind and gifted pen of Dr. Brook was devoted to the cause of helping suffering humanity disentangle itself from the evils of drug poisoning, and to educate itself into clean and correct habits of living and eating.

"His contribution of seven columns each week on the subject of Nature Cure, in Los Angeles Sunday *Times*—entitled "Care of the Body"—was eagerly read by thousands. Replying to the vast correspondence with which he was deluged by those readers, kept several stenographers busy, under the Doctor's personal direction, and answers to all letters were dictated by himself.

"A multitude of books and magazines are published in the U.S. dealing with the subject of Health, Diet, and Hygiene, and I am surprised if Dr. Brook missed getting a copy of any one of them. His valuable criticisms and deductions on such literature are well known to readers of his Department. After reading and commenting on the current stacks of such literature, Dr. Brook kindly 'passed them on,' consequently every little while a small library was donated by him to some worthy cause.

"Like many other teachers of health, Dr. Brook attributed his first interest in Nature Cure to his own sufferings add afflictions in early childhood, Which were cause by vaccination 'against Smallpox,' the results of which poison troubled him for years. About the age of 12 he studied health and diet matters for himself; took up physical culture—chiefly walking, and before finishing grade school, he had made of himself a robust, athletic youngster.

"From the age of 17 to 27 he spent most of this time tramping through Europe and America, studying Nature Cure in the different places, and otherwise preparing for his later famous work as a writer on the subject, and a teacher of health, which he faithfully and fearlessly continued to be until the other day, when, at the age of 75, he reluctantly laid down his pen—for ever.

"Dr. Brook's breakdown was really due to overwork. Shortly before his death he wrote me, 'I have for a long time been overworking my brain, and not sufficiently exercising my body, and Nature has at last punished me for it. * * * What I should do, of course, is to take a long vacation and get out into the open. But I see no chance of doing this. I am a slave to my job, which pays so little that * * *.' Well, the groans of sick and suffering ones penned into the pages of his daily mail, were the chains of slavery which unselfishly held the doctor to his job, and kept from him the necessary contact with Nature and outdoors which his soul and body craved for.

"In private life Dr. Harry Brook was one of the most lovable and affable of men. The charm of his personality won him a host of devoted friends. As one of the *Time's*

editors states—"He wrote 'Care of the Body,' but he could have written anything else with just as much interest and fascination. * * * He was a charming, cultured, highly educated gentleman, with the simplicity and tenderness of a great soul. * * * Men live, and do and lie and soon are forgotten, but it will be a long time before the personality of Harry Brook will be forgotten by the thousands who knew and loved him."

"The successor to Dr. Harry E. Brook in 'Care of the Body,' is our young enthusiast Dr. Philip M. Lovell—a Drugless physician and Chiropractor, who modestly states that he is 'stepping into shoes that will be difficult to fill.' He asks for our cooperation to make the subject of Nature Cure increasingly of value and interest to the reading public. Address: N.D.

3348. Gehman, Jesse M. 1924. I let the sun do my cooking: For two years mine has been a raw food diet. I like it and it likes me. *Naturopath (New York City)* 29(9):806-11. Sept. • **Summary:** Two photos show Gehman: (1) In a coat and tie. (2) Bare from the waist up, flexing his muscles. Address: N.D.

3349. Lust, Louise. 1924. Vegetarian regime important in health and disease. *Naturopath (New York City)* 29(9):812. Sept. Address: N.D.

3350. *New York Times*. 1924. Shaw berates all who feed on flesh: Meat diet is dope, he declares, in an election debate—vegetarianism for revolution. Oct. 24. p. 11, col. 1. • **Summary:** G.B. Shaw discusses effect [of vegetarianism] on disposition.

3351. Carqué, Otto. 1924. The naturopathic movement in Southern California. *Naturopath (New York City)* 29(11):1030-31. Nov. • **Summary:** 1900—Dr. Carl Schutz, the pioneer, opened the first Naturopathic Institute and Sanitarium on West Seventh St., not far from Figueroa St. A few years later he moved to Hill Street and later to Fifth Street near Olive St.

1899—Harry Ellington Brook, N.D. starts his "Care of the Body" column in the *Los Angeles Times*. It continued until his death on 5 May 1924. His very able successor was Philip Lovell, N.D.

1904—Otto Carque starts his long career of making and selling natural foods in Los Angeles.

1909—California State Legislature passes the Naturopathic Bill, largely due to the untiring efforts of Dr. Schultz. Other early naturopaths in Los Angeles were Dr. Henry Gross and Dr. P. Olsen. Dr. George Starr White was the author of many valuable books on natural living and healing.

1915—Arnold Ehret arrives in the USA, at the invitation

of Dr. Benedict Lust to visit the Panama Exposition [1915, held in San Francisco] and to examine the fruits raised in California. World War I forces him to prolong his stay. He settles down in Southern California, the land of fruits and flowers.

1917—John and Vera Richter start the first truly raw foods dining room in the United States.

Every year Southern California is attracting more and more people "as a place where an ideal climate, fertile soil and beautiful scenery combine to make this favored spot a practical out-of-door sanitarium." Address: Author of "Rational Diet" [California].

3352. Garden City Pure Foods Co., Ltd. 1924. Soya Milk & Soya Cream (Plain and Malted), Pure Vegetarian Butter Substitute [Margarine], Soya Flour. Garden City, Letchworth, Hertfordshire, England.

• **Summary:** Ad in the *Occult Review* (England). 1924. Nov. 24. "Soya Beans."

"The Garden City Pure Foods Co., Ltd., Letchworth, are now manufacturing Pure Vegetarian Foods from the Soya Bean at their Garden City Works.

"Soya Milk and Cream (Plain and Malted).

"Pure Vegetarian Butter Substitute.

"Soya Flour for bread, cakes, etc.

Various other foods.

"Full particulars from Sole Distributing Agents -

"Firth. Weir & Co., Ltd., Dept. C. "95 Westminster Bridge Road, London, S.E. 1. Tel. HOP 145.

"The Soya Bean is unequalled as a human food, owing to the high percentage of proteins and fats, and the low percentage of Starch, whilst the amount of vitamins in the Soya Bean makes it one of the Most Valuable foods, especially for Vegetarians and Food Reformers.

Note 1. Thomas Penry Evans—who was involved with the company by 1938—was married (first) to Violet M. Firth (aka Dion Fortune). The name of the "sole distributing agents" indicates her parents' interest in the venture. Her parents moved to Letchworth, which was one of England's first Garden Cities.

Firth, Violet M. 1925. *The Soya Bean: An Appeal to Humanitarians*. 55 p. The Foreword (p. 5) begins: "The manufacture of a vegetable milk from the soya bean is a matter in which I was much interested during the war, and I think I may claim to be the first person, in this country at any rate, who succeeded in making a cheese [tofu?] from vegetable casein.

"Shortly after the war [World War I] the company that was making soya milk closed down, the milk was unobtainable, and I lost touch with the matter. During a recent visit to Letchworth, however, I found that the making of soya milk was again in full swing, and I was so impressed with the spirit of service and humane ideals in which the enterprise was being conducted that I suggested

to the managing director of the company that if he would assist me with the necessary technical details, I would like to write a little book on the possibilities of the soya bean, and bring to the notice of humanitarians in general the work that has been going on so quietly in this little country town. All information was freely given to me...

For more about Letchworth, a remarkable, pioneering town, see Wikipedia. As one of the world's first new towns and the first garden city it had great influence on future town planning and the New towns movement. Address: Garden City, Letchworth, Hertfordshire, England.

3353. Hirsch, Fred S. 1924. In memoriam: Arnold Ehret. *Naturopath (New York City)* 29(11):1015-17. Nov.

• **Summary:** "Years may elapse before the world fully appreciates that wonderful message which the great teacher and physician, Professor [sic] Arnold Ehret, left suffering humanity.

"Prof. Ehret's method of healing embraces a much wider field than merely knowing the difference between good and bad foods. He actually tells one what to eat; when to eat and how to eat foods during transition periods. This knowledge, gained by Prof. Ehret through twenty years of actual contact with suffering humanity, is presented in a clear, concise manner in his latest book, 'The Mucusless Diet Healing System.' The sale price of \$1.50 asked for same barely covers the cost of printing and advertising.

"The Mucusless Diet Healing System embraces the teachings of all recognized branches of the Nature Cure. It cannot, therefore, be classed with the works of 'faddists,' for, while the ultimate goal to be reached is a diet composed wholly of fruits and green-leaf vegetables, this cannot possibly be attained without first passing through the necessary transition stages. Persons not acquainted with the Mucusless Diet Hearing System should avail themselves of the first opportunity to secure information regarding this book. Keeping the intestines thoroughly cleaned out and preventing chronic constipation—this is the price of good health. The hard, gluey impactations on the walls of the intestines are disease-producing, and until they are entirely removed it is impossible for anyone to enjoy the vigorous, vital abounding health which we are all so desirous of attaining.

"True happiness is a matter of health. Not the inefficient, 'half alive' condition which ordinarily passes as 'health,' but the abundant, joyous, magnetic vitality of superb manhood and womanhood. Radiant, joyous health is the natural heritage of mankind, and is primarily a result of compliance with Nature's laws.

"Our civilization brings on old age when life should be at its prime. The physical and mental vigor of former years can be again enjoyed in work and recreation, for the primary cause of every ailment—by whatever name it may be called—is one. Indigestion, headaches, nervousness,

boils, gout, rheumatism, catarrh, lumbago, diabetes, or a general rundown condition—can all be directly traced to a clogged condition of the bowels, caused through eating the wrong food of present day civilization. Therefore the utmost precaution must be observed in intestinal hygiene. One so-called regular evacuation each day is not necessary [sic] indicative of a healthy condition. Normal healthy bowels should act as often as food is eaten. Fruit juices and green-leaf vegetables may succeed in loosening some of these incrustations, but due to the weakened condition of the intestines, they cannot eliminate the poisons as rapidly as they are generated. For this reason Prof. Ehret's Innerclean is peculiarly well adapted for assisting Nature in her house-cleaning efforts by removing the noxious poisons and mucus which have accumulated since..."

3354. *Naturopath (New York City)*. 1924. In memoriam: Henry Lindlahr, M.D. 1st March 1862–26 March 1924. 29(11):1009-1014. Nov.

• **Summary:** An excellent two-part tribute: (1) A letter from his son, Victor H. Lindlahr. (2) An obituary and biography by W.M.D. A portrait photo shows Henry Lindlahr, M.D.

• **Summary:** See next page. Amílcar de Sousa's books was translated into Spanish: https://es.wikipedia.org/wiki/Am%C3%ADlcar_de_Sousa

"He translated *Vivamos de Frutos*, originally written by Viaud-Bruant (annexed here)." Address: Portugal.

3359. Brandt, Carlos. 1924. The vital problem: The path to health, wisdom and universal peace. New York, NY: Benedict Lust. 219 p. 24 cm. *

• **Summary:** Contents: The basis of morals. Philosophy of vegetarianism. Philosophy of disease. Philosophy of morals.

Universal peace. Moral conduct. The problem of health.

Note 1. The first and second treatises are translated from the author's *El Fundamento del la Moral*, published in 1918. Note 2. The author was born in 1875.

3360. Christian, Eugene. 1924. Uncooked foods & how to use them: A treatise on how to get the highest form of animal energy from food. With recipes for preparation, healthful combinations and menus. New York, NY: The Health Culture Co. 246 p. 19 cm.

• **Summary:** This book on vegetarianism is similar to the 1904 ed. It is not vegan, as it uses milk. Address: 1133 Broadway, New York.

3361. Cooper, Lenna Frances. 1924. The new cookery. 9th ed., revised. Battle Creek, Michigan: The Modern Medicine Publishing Co. 475 p. See p. 76-77. Index. 23 cm.

• **Summary:** The Preface (p. 11-12) states: "Housewives who have been accustomed to providing meat and other high protein dishes for their families are oft times at a loss to know how to prepare a well-balanced meal without these articles and at the same time serve one that is palatable and attractive. This combination of wholesomely prepared and palatable foods constitutes, in a sense, a New Cookery. It is the hope of the author that this volume may be of service to many who need a guide in that cookery which has for its object efficiency of body and mind."

"Approximately one hundred new recipes have been added to this edition. The book contains practically all of the recipes now in use at the Battle Creek Sanitarium and some additional, the latter being recipes that are not practical in large quantity cooking.

"The important feature of the third, fourth and present editions is the addition of a statement of the number of calories in each recipe—a feature found in no other general cook book—and a chapter on food values and menu making.

"The author wishes to express her indebtedness to Dr. John Harvey Kellogg, of the Battle Creek Sanitarium, and to his wife, the late Mrs. Kellogg, both of whom have inspired her with a love for the study of foods and their scientific preparation and have been constant sources of help and encouragement." The author also thanks Miss Clara B. Lambert and Mrs.

Estella F. Ritter.

In the chapter on "Unfermented breads," the recipe for "Soy cakes and waffles" (p. 76) calls for "2 cups Soy flour."

The section titled "Unusual foods referred to in this book" (p. 462-64) states that the following are made by the Battle Creek Food Company, Battle Creek, Michigan: Protose (a meat substitute made from cereal and nuts), Nuttolene (a pure nut product with the consistency of brick cheese), Savita (a pure vegetable meat flavoring), Meltose (malt honey), Meltose Sugar, Sanitarium Cooked Bran (an appetizing food that supplies the necessary roughage, stimulates intestinal activity, and is rich in vitamins), Vita-Wheat (rich in gluten, lime, iron, and Vitamin B—the anti-

neuritic vitamin), Branola (breakfast food that is 2/3 bran and 1/3 wheat), Zo (a body-building, ready cooked cereal breakfast food), gluten flour (contains 44% of wheat gluten), Malted Nuts (“A delicious nut cream—Contains the same nourishing food values as human milk and is even richer in its tissue building elements. It has an appetizing flavor and can be used with excellent results by those with whom cow’s milk is found to disagree. It is excellent for those who wish to gain weight”), Minute Brew (a cereal coffee), Kaffir Tea, B. Acidophilus Culture (Bacillus Acidophilus is the strongest known lactic acid producing organism), Vegetable Gelatine or Agar (Made “from Ceylon moss, a seaweed that grows off the coast of Japan.” It is “a form of cellulose resembling bran in chemical composition but somewhat like animal gelatine in physical appearance”).

Note 1. This is the third earliest Seventh-day Adventist cookbook seen (Feb. 2018) that contains a recipe using soybeans or soy ingredients.

Note 2. The first edition of this book was copyrighted in 1914, the 11th edition in 1929. There is no mention of soya in Mrs. E.E. Kellogg’s *Science in the Kitchen* (revised ed., 1892. Battle Creek, Michigan: Health Publishing Co.), nor in H.S. Andrews’ *Science of Food and Cookery* (1921. Pacific Press Publishing Co.), nor in George Cornforth’s *Good Food* (1920. Review and Herald Publishing Assoc.). Address: Dean of Home Economics, Battle Creek College; formerly, Head Dietitian of the Battle Creek Sanitarium; and later, Supervising Dietitian, United States Army (1918-1919).

3362. Drews, George Julius. 1924. Unfired food and trophotherapy (food cure). 9th ed., revised. Chicago, Illinois: The Apyrtropher Publishing House. 313 + x p. Illust. 23 cm. *
• Summary: This is a broad-ranging book about health. The author (born in 1873) advocates raw foods and a vegetarian diet for physical and spiritual health. A German-language edition, translated and edited by Walter Sommer, was published in 1924 by Walter Sommer in Rendsburg. A 10th ed. was published in Chicago and Los Angeles (by J.T. Richter) in 1927.

3363. Drews, George Julius. 1924. Gems of the wisdom of life. Chicago, Illinois: The Apyrtropher Publishing House. 80 p. Portrait. 23 cm.
• Summary: The author (born in 1873) advocates, in poetic form, a raw food, vegetarian diet for physical and spiritual health.

3364. Drews, George Julius. 1924. Die natuerliche Ernaehrung. Ubers., bearb. und hersg. von Walter Sommer [The natural diet. Translated, edited, and published by Walter Sommer]. Rendsburg, Germany: Sommer. 325 p. Illust. [Ger]*

• Summary: This is a translation of *Unfired Food and Tropho-therapy*. The author (born in 1873) advocates raw

foods for physical and spiritual health.

3365. Ehret, Arnold. 1924. A scientific method of eating your way to health: Ehret’s mucusless-diet healing system. Los Angeles, California: Ehret Literature Publishing Co. 124 p. Index. 21 cm.

• Summary: This therapeutic system, based on fasting and a vegetarian diet, is designed to prevent mucus formation. The author lived 1866-1922. A 3rd edition (134 p., 21 cm) and an 8th edition (196 p.) are also listed as being published in 1924 by this author and publisher (134 p., 21 cm.). The frontispiece is a portrait photo of Ehret. Partial contents: Arnold Ehret: An appreciation and endorsement, by graduates of Class 1921-22. Ehretism, a poem by Arnold Ehret. Introduction, by Fred S. Hirsch. (Prof. Arnold Ehret... was born 26 July 1866. On October 9th, 1922, while still in the very prime of life, while still enjoying a superior state of health known to but few men of present day civilization, he met with an unfortunate accident, suffering a basal fracture of the skull which caused almost instant death.” His father was a veterinarian.) General introductory principles: Constipation. Late, acute and chronic disease no longer a mystery. The diagnosis: Naturopathy, uric acid. Ragnar Berg’s tables (show how much acid a food produces; flesh, fish, fats, and cereal grains are all minus = bad; fruits and vegetables are plus. Soy beans (p. 68) are +26.58). Fasting: Important rules to be studied carefully and memorized.

Ehret, who is a vegetarian, believes fruits, raw foods, and a mono-diet are the most cleansing and best for elimination of poisons / toxins. But he differs from “raw food fanatics” in his belief that food value is not important in a diet of healing (p. 76). He uses peanut butter in a salad dressing (p. 77). He has made four “public scientific fasts” during which he was observed, of duration 21, 24, 32, and 49 days (p. 83). He has developed Innerclean, a harmless herbal laxative.

“The most exact, unerring diagnosis we have is a short fast.” “Lean people can fast easier than fat ones.”

Talk with Gordon Kennedy, an organic farmer from Ojai, California. 1992. Jan. 26. Arnold Ehret was a German who came to America in about 1917-18 to visit the Panama Exposition. He ended up living in Southern California, which he loved for its Mediterranean climate and fruits. When he died he had many followers, some of whom felt he was almost a saint. Fred Hirsch taught him English and translated his books into English. Ehret may have been part of the larger Wandervogel movement, nature lovers and vegetarians with long hair and a love of life close to nature, who migrated from Germany to southern California in the late 1800s and early 1900s. Akin to them during the 1920s and 1930s were Benedict Lust, Bill Pester (a hermit who had a Christlike appearance and lived in the wilds around Palm Springs and Indio), and Eden Jacobson, Al Jacobson’s brother. Address: Los Angeles, California.

3366. Ehret, Arnold. 1924. A scientific method of eating your way to health: Prof. Ehret's mucusless-diet healing system. A complete course for those who desire to control their health. 3rd ed. Los Angeles, California: Ehret Literature Publishing Co. 134 p. Index. 21 cm.

• **Summary:** This therapeutic system, based on fasting and a vegetarian diet, is designed to prevent mucus formation. The author lived 1866-1922. An 8th edition is also listed as being published in 1924 by this author and publisher. Address: Prof., Los Angeles, California.

3367. Ehret, Arnold. 1924. Prof. Arnold Ehret's mucusless-diet healing system. 9th ed. Los Angeles, CA: Ehret Literature Publishing Co. 195 p. Illust. (portrait). 18 cm. *

• **Summary:** Arnold Ehret lived 1866-1922. Talk with Gordon Kennedy of Ojai, California. 2003. April 18. When Arnold Ehret died in 1922, Fred Hirsch was his closest friend and was with him at the time of his death. Ehret spoke fairly good English with a strong German accent, and Hirsch spoke a little German. Hirsch, (whose life Ehret had saved by having him fast for 30 days; Hirsch had lupus of the feet, and his feet were going to be amputated) owned all the rights to Ehret's writings, and he made a very devoted, concerted effort to publish all of them. He established Ehret Literature Publishing Co. at 846 East 6th St., Los Angeles, California, and began publishing Ehret's writings as books and pamphlets. Hirsch was very persistent and was even arrested several times for his publishing activities. Hirsch stayed at this address for many years (until the early 1950s) before he moved his company to Beaumont, California—to get away from the Los Angeles smog. Gordon interviewed Hirsch in 1977. While in his 90s, Hirsch met Alvin Last at a trade show; he sold the rights to all of Ehret's writings to Alvin Last. All of Ehret's books are still available from Ehret Literature Publishing Co., Dobbs Ferry, New York. Or from Nature's First Law at 1-888-RAW-FOODS. Address: Southern California.

3368. Ehret, Arnold. 1924. Método científico practico de curar por medio de dieta de alimentos que no produzcan mucosidades: Un curso completo para todos aquellos que deseen aprender como conservar su salud [A practical scientific method for curing by use of a diet of foods that do not produce mucus: A complete course for all those who want to learn how to preserve / maintain their health]. Los Angeles, CA: Ehret Literature Publishing Co. 169 p. Illust. (1 leaf of plate). 20 cm. [spa]*

• **Summary:** Arnold Ehret lived 1866-1922. A positive review of this book appeared in *Naturopath* (July 1925, p. 589). "This work gives the course of the famous 25 lessons which Prof. Ehret gave and many a doctor paid \$100 for the knowledge contained in this volume." The titles of the principal chapters are given. "The book and other Ehret

literature can be procured from the Naturopathic Supply Office, 110 E. 41st St., New York, Pay \$1.65 for the English and \$2.10 for the Spanish edition, post-paid." Address: Southern California.

3373. *London Vegetarian Society Annual Report*. 1924--.. Serial/periodical. London, England: London Vegetarian Society. Frequency: Annual. * Address: London, England.

3374. Richter, Vera M. 1924?. Mrs. Richter's cook-less book: With scientific food chart. Second ed. Los Angeles, California: Los Angeles Service and Supply Co. and Eutropheon (Published by the author). 53 p. Undated. No index. 19 cm.

• **Summary:** A book of raw food vegetarian recipes. Contents: Preface. Vegetable salads. Fruit salads. Dressings. Soups for the toothless. Beverages. Sun-dried breads. Cakes. Pies. Confections. Curative values of natural unfired foods (Food chart).

The chapter on "Confections" (p. 42-44) contains a number of natural-food confections in which the ingredients are rolled out, cut into squares, and served. these include: Carob confection (with pignolias and honey). Coconut-honey caramel. Coconut-raisin caramel. Peanut butter confection (with dates). Figola. Fig-almond confection, etc.

At the back of this book are many ads on unnumbered pages. One of these is titled "For a taste of sunshine try Dr. Richter's Natur-Bits: Unfired confections made of high grade fruits, nuts, honey—Delicious and nourishing. Twelve kinds; \$0.70 a pound." The first three are: Coconut-Honey Squares. Coconut-Raisin Squares. Walnut and Fig Squares. (The Eutropheon, 927½ W. Sixth St., Los Angeles). Note:

These natural confections sound like the forerunners of today's nutrition bars.

The previous ad, titled "The natural food diet courses," shows that John T. Richter, N.D., A.D., gives a series of 7 free lectures at 927½ West Sixth St, Wednesday afternoons at 2:30 and Thursday evenings at 7:30. The public is invited and questions are answered. The 7th lecture includes an examination and certificate of endorsement.

The next ad, titled "What is health," is by The Grist Mill, at Sanitary Market, 251 South Spring St., Los Angeles. Tel. MAin 4874. "Health follows the keeping of natural laws." A few of the company's many products are listed, including whole wheat flour, and soy bean flour.

Two pages later is a price list of 25 products made and sold by the package goods department of the Los Angeles Service and Supply Co. and Eutropheon. These include breads, nut butters, and 12 kinds of confections. Address: 927½ West Sixth St., Los Angeles, California. Phone: BRoadway 0643.

3375. Bauer, A. [Anita]. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(1):23-30. Jan.

• **Summary:** Ehret came to Bauer in a vision at night, singing "I have forgiven you. I now go to rest." He soon discovered, to his great sadness, that his dream had been true; Ehret had been killed in an accident.

"My second thought was: 'Has he met Hilda, his beloved, in the great hereafter?' And then I remembered that once he had said: 'Some day my biography will be written.' But little did I dream that this precious responsibility was to grace me."

Note: This is the first of a long, multi-part biography of Arnold Ehret, starting with the story of how the writer met Prof. Ehret, and Ehret's early life in Europe. To be continued. Address: San Francisco, California.

3376. Hogan, A.G.; Weaver, L.A.; Edinger, A.T.; Trowbridge, E.A. 1925. The relation of feed consumed to protein and energy retention. *Missouri Agricultural Experiment Station, Research Bulletin* No. 73. 42 p. Jan. [8 ref]

• **Summary:** While gaining the first 50 pounds, pigs had to consume more than 4 lb of feed for each pound of gain. The feed requirement increased thereafter until during the interval from 250 to 300 lb, more than 6 pounds of feed were required for each pound of gain. The pigs were fed a mixture of 45% corn, 45% shorts, and 10% tankage. No soy products were used. Address: 1,2&4. Animal Husbandry, Columbia, Missouri.

3377. Viswanathier, P.S. 1925. Ghandhiji's long fast. *Naturopath (New York City)* 30(1):61-62. Jan.

• **Summary:** Mahatma Gandhi has recently decided to start

a 21-day fast "as a penance for removing the Hindu-Moslem tension at present existing in India, especially in the north." Long "fasts like this are not at all dangerous provided that the faster has got the necessary vitality, knowledge, and above all, will-power.

Arnold Ehret, the famous German who wrote about fasting, says that even fasts as long as 60 days will do no harm provided the person has preceded the fast by a number of short fasts of increasing duration, each followed by a non-fasting period during which the person eats only fruit—for at least as much time as the long fast is expected to last. One must also pay careful attention to the way the fast is ended or broken.

Edward E. Purinton says that one can fast for various purposes, such as health, strength, penance, beauty, realization of God, illumination, etc.

Gandhi has been a faithful follower of Adolph Just and Louis Kuhne, the great pioneers of the Naturopathic way. And he is a "staunch follower of the true science of living." Address: Lawyer, Pudukotah [British India].

3378. Bauer, A. [Anita]. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(2):122-28. Feb.

• **Summary:** About Ehret's early life, a Sanitarium in Switzerland, and the devout Hilda, who is unhappily married. Address: San Francisco, California.

3379. Lust (Benedict). 1925. Mucusless-diet healing system, by Prof. Arnold Ehret (Ad). *Naturopath (New York City)* 30(2):177. Feb.

• **Summary:** "4 volumes. \$3.60 postpaid." Address: N.D., M.D., Naturopathic Supplies, 110 East 41st St., New York City.

3380. Lovell, Philip M. 1925. Care of the body. *Los Angeles Times*. March 15. p. L24. Sunday magazine.

• **Summary:** When Commodore Perry visited Japan and created the "open door" in the mid-1800s, he found many interesting things. "For instance, dairy cows were unknown and milk from animals was something not used." When a mother died at childbirth, either a wet nurse was found or "ample substitutes for animal milk were found.

"The article below, reprinted from the *Vegetarian Magazine* [Chicago, Illinois], is especially interesting, not only because it presents a food infrequently used by the American public, but also because it presents a new outlook on the problem of feeding the delicate, keenly sensitized stomach of the tiny baby."

"The American public, almost unawares, witnesses today the tedious process of the advent of a new food. Slowly and laboriously, as was the case with the tomato and potato, the soy bean is fighting its way into popular favor.

"In sustaining 300,000,000 people for 3,000 years the

Chinese have worked out a vegetable diet with the necessary constituents of a meat diet. The soy bean is the backbone. Lack of proteins handicaps a vegetarian diet. Beans and peas are richest in proteins, but not of the sort of proportion found in meats—and needed for muscle building.

“But the soy bean, having no starch, contains 40 per cent of protein and 20 per cent of oil, thus resembling animal foods; moreover, it contains a dozen kinds of proteins found in milk. Some babies thrive better on soy milk than on cow’s milk.”

“Chinese make milk of soy beans, but our Americans are so occupied in making cream puffs, serum, and money that they have no time for making anything but animals to kill and eat.”

“Perhaps some day it [the USDA] will awaken to the fact that soy bean milk having nourished the Chinese centuries before the white man robbed the Indian of his heritage, can more profitably adopt the same product to save the nation. Sander Christensen has produced milk from rice and it was good milk, but has not yet successfully canned it. Americans want everything canned—religion, music, milk. If this inventive man would turn his attention to soy bean milk, we doubt not but we should soon be flowing in soy bean milk and gaining health thereby.”

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “backbone” in connection with the soy bean. It says: “The soy bean is the backbone” of China’s meatless diet. Address: N.D. [Naturopathic Doctor].

3381. Bauer, A. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(3):228-32. March.

• **Summary:** About Ehret’s early platonic loves in Germany—and disappointments. He remained a life-long bachelor. Address: San Francisco, California.

3382. Bogart, Guy. 1925. Lessons from the life of Arnold Ehret. *Naturopath (New York City)* 30(3):210-15. March.

• **Summary:** “Address at the Ehret Memorial Dedication Services at Forest Lawn Cemetery on the 2nd day of the 28th Convention of the American Naturopathic Association, Los Angeles, California” (i.e., Nov. 21, 1924). A good summary. Address: Dr. [California].

3383. *Naturopath (New York City)*. 1925. Notes on the proceedings of the Twenty-Eighth Annual Convention of the American Naturopathic Association. Los Angeles, California, Nov. 20-22, 1924. 30(3):[205]-09. March.

• **Summary:** Summarizes presentations by Dr. Starr White—“The true physician.” Dr. J. Haskel Kritzer—“Iridiagnosis.” Otto Carqué—“The value of fruits.” Dr. Harvey Hazel—“The doctor’s reward.” Dr. James Faulkner—“Unfired foods.” E.C. Burton—“Battle Creek [Michigan] and Dr. John

Harvey Kellogg.” Harry G. Cubbison [husband of Sophie C. Cubbison, health food pioneer in Los Angeles]—“The value of whole wheat.” Dr. C.A. Newcombe [former police surgeon in New York City]—“Treating incorrigible inmates at Sing Sing penitentiary with a vegetarian diet.”

3384. Lovell, Philip M. 1925. Care of the body. *Los Angeles Times*. April 17. p. K24. Sunday magazine.

• **Summary:** The section titled “The folly of cookery” contains a long summary with excerpts of an article by Vera Richter, published in *Health Culture* magazine. “Dr. and Mrs. Richter have been pioneers in this community [Los Angeles] for the raw food idea.”

“During the last decade we have witnessed gigantic changes in the cafeterias of this State as well as others. Where before the raw salad, fruit, and other green was a very incidental dish, the vegetable and fruit counter now occupies a considerable percentage of the entire cafeteria service.” Considerable credit for this must go to the Richters. Address: N.D. [Naturopathic Doctor].

3385. *Vegetarian Magazine and Fruitarian*. 1925-1926/01. Serial/periodical. Chicago: Vegetarian Society of America. Published April 1925 (v. 24, no. 4) to Jan. 1926 (v. 25, no. 1). Monthly. Edited and published by Jean Roberts Albert in Juliaetta, Idaho—a vegetarian colony.

• **Summary:** Continues: *The Vegetarian Magazine* (June 1903–March 1925). The following description is based on the cover of the July 1925 issue (Vol. 24, No. 4). In three horizontal lines at the top, middle, and bottom of the page, in large bold letters, are the following names (from top to bottom): Gandhi, Hesiod, Lambe, Kingsford, Wagner, Plato, Zoroaster, Aristotle, Seneca, Ovid, Plutarch, Pope, Swedenborg, Voltaire, Buddha, Wesley. Written vertically, in smaller bold letters, on two columns at the left and right: Leonardo de Vinci [sic], Thoreau, Ella Wheeler Wilcox, Diana Belais, Maeterlinck, George Bernard Shaw. In the center of the cover is an illustration of a lovely, long-haired maiden in flowing robes, standing by a cornucopia of fruits and vegetables, picking a cluster of grapes from a tall grape vine.

Across the very top of the cover we read: “Take not away the life you cannot give, for all things have an equal right to live.” Across the bottom of the title page, in smaller letters: “An illustrated magazine of better living. An authority on foods, selection, preparation. Discountenances the use of flesh, fish and fowl for food. Upholds the right to life for the whole sentient world. Advocates justice, humanitarianism, purity, hygiene, temperance. Stands for a stronger body, a healthier mentality, a higher morality. Literature of the XXth Century Home. Published monthly.” Departments: Editorials. Poem. Monthly letter from William Howard Hay, M.D. (Buffalo, New York). The vegetarian table (mostly recipes). Essays, letters, and/or news. New

publications (book reviews). Ads on back cover (Most issues have about 2 more pages of ads before the title page or the back cover but no ads in the body of the magazine, intermixed with the text). Each issue contains 28 or 30 pages (22 cm).

Succeeding title: *Vegetarian and Fruitarian*. Address: Chicago, Illinois.

3386. Bauer, A. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(4):313-17. April.

• **Summary:** About his five years of sickness and visit to a Kneipp sanitarium in southern Alsace. No cure. Visit to beautiful Lichtenthal by Baden-Baden near the Black Forest. Address: San Francisco, California.

3387. Evans, Newton; Risley, E.H. 1925. High protein ration as a cause of nephritis. *California and Western Medicine* 23(4):437-42. April.

• **Summary:** Rats fed a series of high-protein diets invariably showed kidney damage. The authors urge limited use of meat and increased use of fruits and vegetables in the prevention and treatment of nephritis. Whole soy beans, wheat gluten, peanuts, and meat were among the foods fed to the rats. Address: M.D., Depts. of Biochemistry and Pathology of the College of Medical Evangelists, Loma Linda, California.

3388. Millennial Food Co. 1925. "1000" brand whole treated rice (Ad). *Vegetarian Magazine and Fruitarian* 24(4):28. April.

• **Summary:** "The only Whole Rice upon the world's market in which the Malt Flavor is brought out, hence partly predigested... Shipped in 12-pound cartons."

Note: From the ad in this issue of the magazine on p. 29 we can see that this is a dry rice base for making rice milk. Address: 223 Minna St., San Francisco, California.

3389. Millennial Food Co. 1925. Agents wanted (Ad). *Vegetarian Magazine and Fruitarian* 24(4):29. April.

• **Summary:** "All over America agents are wanted to establish Rice Milk Dairies. Rice milk has been taken up with keen interest and the demand is sharp, but we need live men to promote its further introduction. Chicago [Illinois] has a successful dairy, Palestine [in the Middle East], and the calls coming in to California from stations proves its popularity. For information address Millennial Food Co.,..." Address: 223 Minna St., San Francisco, California.

3390. Millennial Food Co. 1925. Vegetable powder (Ad). *Vegetarian Magazine and Fruitarian* 24(4):30. April.

• **Summary:** "Rich in vegetable fats and containing all vitamins, natural and Balanced for Man. Used instead of milk and eggs in bread making, hot cakes and waffles, in soups and other cooking. Mix with eight times its weight of

water.

"Shipped anywhere in the U.S., 4 pounds for \$1.00 postpaid." Note: This is probably rice flour, which can be used to make rice milk. Address: 223 Minna St., San Francisco, California.

3391. Bauer, A. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(5):417-22. May.

• **Summary:** Ehret had studied in Berlin and had investigated spiritual movements [Spiritualism]. He was in Ascona—where he met Hilda's spirit. He learned about fasting from Ferdinand in Wiesbaden. Address: San Francisco, California.

3392. *Science*. 1925. Vegetable diet and the length of life. 61:X, XII. Supplement. June 26.

• **Summary:** A summary of a early experiments by professor James R. Slonaker, Stanford University (California) physiologist, in which rats fed various restricted diets failed to thrive and reproduce. "After experimenting with rats for eight years, Professor Slonaker applies his findings to humans and declares that meat is essential if the human race is to continue."

• **Summary:** "Official journal of the lay department of the American Naturopathic Association and other similar societies."

3394. Bauer, A. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(7):615-20. July.

• **Summary:** "With the adoption of the Kneipp treatment I had turned my back on medicine and sought healing in nature. My groping was to become entirely well. This I did with strict vegetarianism, eating hardly anything but fruit." He reverts to drinking milk. His false glory lasts about 6 months, then his kidney pains return. He goes to Algiers and fasts until he becomes a mere skeleton. His strength returns after 6-7 days. Exuberant, he lifted up the dresser then rode his bicycle to the city of Blieta, 42 km away. He writes of his fast, goes to Cairo, Egypt, and encourages others to fast. Address: San Francisco, California.

3395. Brandt, Charles. 1925. Vegetarianism and naturopathy in Egypt. *Naturopath (New York City)* 30(7):655-60. July.

• **Summary:** Herodotus, the Greek historian who lived in the 5th century BC (ca. 484 BC–ca 425 BC) said that the Egyptians "are the most healthy people in the world." Address: N.D.

3396. Gehman, Jesse Mercer. 1925. The uncooked diet: Can

one maintain health and strength on the raw food diet? Yes. *Naturopath (New York City)* 30(7):621-27. July.

• **Summary:** “My first impressions on the question of diet were received nearly eight years ago, and since then I have followed devotedly vegetarianism and physical culture. However, it was not until June 1920, that the uncooked diet received my attention.” His first experiment with raw foods was made from June 26 to Sept. 11, 1920. He adopted this diet a few months after recovering from a very severe case of influenza and pneumonia—the effects of which (weak lungs) he was to carry through life, and which caused him to lose 5 pounds. However after the uncooked diet experiment, his weight had risen to 151 pounds, an increase of 6 pounds. On the 6th week of his new diet he ran 10 miles in 70 minutes flat—a good time.

Since the results of this experiment were very pleasing he decided on March 22 to follow a raw food diet for at least one year. At the time of this writing he has followed it for 34 consecutive months—2 months short of 3 years. Throughout this time he has followed a system of wrestling, hiking, and strenuous physical exercise—all to good results. Address: N.D.

3397. *Naturopath (New York City)*. 1925. In memoriam: Dr. Louisa Lust, nee Stroebele. 30(7):[600-01]. July.

• **Summary:** The wife of Dr. Benedict Lust has died. She was one of the pioneers of Naturopathy in the USA. “Her place will not be easy to fill. All the world over there are former patients and guests of Yungborn whose lives were prolonged, thanks to her ability and untiring sympathy. Hers was a labor of love. She was a tireless worker.”

“Mrs. Lust early being a Catholic, the religion of her fathers, and as a true Catholic she administered to the wants and needs of the sick who came under her care, regardless of color, nationality, or religious belief, Jew and Gentile alike.”

“Our sympathy goes forth to her loving husband who labored with her side by side for years for the benefit of mankind.

“Her earthly remains were buried in the burial grounds in Butler, New Jersey, only a little way from her beloved Yungborn, where she worked for many years ministering to the wants of those ailing who were fortunate enough to come under her care.

“Memory of her will ever be dear to her fellow-workers, patients, students, and all men and women who came in contact with her.

“July 10, 1925” [the date of her death].

A full page portrait photo shows Louisa (“Louise”) Lust.

Note: The place of her death is not given. However she died in Butler, Morris Co., New Jersey. She and her husband are buried side by side in Mt. Calvary Cemetery, Butler, Morris County, New Jersey.

3398. *Vegetarian Magazine and Fruitarian*. 1925. Rice milk

all over the world. 24(7):23-24. July.

• **Summary:** “Palestine has already interested itself in our American rice milk, and now the French government has had representatives visiting the California rice milk plant with a view to making contracts for it. Also British representatives are interested and present outlook is that foreign countries will adopt rice milk...”

“Well, bakers are coming to see the value of both rice milk and Vegetable Powder now placed on the market by that wonder worker, Sander Christensen, who invented the rice milk, and has furnished the country with a superior brand of rice, called ‘1000.’”

“When we first learned of rice milk we knew it would revolutionize our present food conditions. Sander Christensen’s name will stand out as a brilliant star among world progressives as having brought to it a value not before known in our history.” Christiansen traces his origins to Denmark.

“Now the warm weather will begin and heat increase in July and August. Begin now to select a cooling diet and when the heated term arrives you can meet it with a cool smile.”

Note 1. This is the second earliest English-language

document seen (Aug. 2013) that uses the term “rice milk” to refer to a commercial product.

Note 2. This is the earliest English-language document seen (Dec. 2020) that contains the term “cooling diet” (or “cooling food”). Address: 223 Minna St., San Francisco, California.

3399. Bauer, A. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(8):749-53. Aug.

• **Summary:** With a friend he travels by bicycle in North Africa to Setif, Biska, over the Atlas Mountains, to Tunis. Address: San Francisco, California.

3400. Bauer, A. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(9):840-42. Sept.

• **Summary:** Tunis is a wonderful place, cleaner and more genuine than Constantinople (Turkey) or Cairo (Egypt). The Arabs here drink coffee, smoke cigarettes. After eating a piece of unleavened bread and a few dates or oranges, they perform the hardest labor. They taste a delicious Turkish cake and get the recipe for it—barley, almonds, and burned sugar with icing. They take the ship from Tunis to Marsalla, at the southern tip of Sicily. Still traveling on bicycles, they rode northward to Palermo—a holy place. Address: San Francisco, California.

3401. Carqué, Otto. 1925. Natural foods: The safe way to health. Los Angeles, California: Carqué Pure Food Co., Inc. 359 p. Illust. Index. 20 cm.

• **Summary:** This book advocates a natural-food, vegetarian diet, but not necessarily a vegan diet.

Contents: Part I: Fundamental facts about food and health. 1. The old and new conceptions of the cause of disease. 2. Drug medication, vaccination, and serum therapy. 3. Nature’s healing factors: Sunlight, fresh air, exercise, rest, water, the importance of natural foods for life and health, why denatured foods (white flour, refined sugar, candies, etc) are injurious. 4. The constituents of food considered in the light of modern physiology and biology: Proteins, carbohydrates, fats and oils, cellulose, fruit acids are organic acids, organic salts, the alkaline or base-forming elements (iron, sodium, calcium, magnesium, potassium, manganese, and aluminum), the acid-forming elements (phosphorus, sulphur, silicon, chlorine, fluorine, iodine, bromine, arsenic), the vitamins.

5. Rational soil culture essential for the production of superior foods. 6. The conservation of vital force (stimulants, narcotics, elimination of waste, quality of foods, prolongation of life, alkaline and acid-forming foods). 7. Why the calorie theory is misleading. 8. Fruit, man’s best friend (the fruit of the tree, sulphured and unsulphured fruits). 9. Nuts—Nature’s most concentrated foods.

10. Vegetables—Nature’s blood purifiers (Great hygienic value of green leaves, proper soil fertilization most essential to vegetable culture, loss of organic salts in cooking, classification of vegetables—5 classes). 11. Cereals and legumes (Cereals falsely called “The staff of life,” whole grain products are the best, the great waste of food elements by modern milling processes, legumes—an important food). 12. Milk and dairy products (Milk not a perfect food for adults). 13. Meat—the least essential and most expensive of all foods (the vegetarian alternative).

Part II: Practical dietetics. 14. How to live well on less food. 15. The feeding of infants and children (lactation, almond milk, soy bean milk). 16. The rational preparation of foods. 17. Rational food combinations (importance of simplicity of eating, the mono-diet and its advantages). 18. Simple and well balanced menus for all seasons.

Appendix: Tables and statistics. A1. Analyses showing the amount of sodium, calcium and iron in foods. A2. Amount of food materials necessary to supply one ounce of protein. A3. Amount of calories contained in one pound and one ounce of 200 food products. A4. Average time required for gastric digestion of foods. A5. Annual consumption of sugar, soft drinks, salt, spices, coffee, tobacco, drugs, alcohol, etc., in the United States. A6. Regulations for the enforcement of the Food and Drug Act. Important information about chemical preservatives and artificial colors.

The Preface (and the book) begins: “Two powerful superstitions are impeding the welfare and progress of the human race. The one is the conviction that disease is an entity, a mysterious something that attacks us without warning from the outside, either in the form of germs or as inclemency of weather. The other—perhaps the more harmful of the two—is the belief that for each disease specific remedies must be found, such as drugs, serums, vaccines, glandular extracts, etc., and that, when we are afflicted, we have to submit to a specialist’s treatment or even to the affected parts or organs.”

The average individual tries “to shift the responsibility for his sins of omission or commission to some imaginary cause, rather than to hold himself accountable for the violation of nature’s laws.” There is “almost universal ignorance of the fact that disease is merely an effort on the part of nature or the universal life force to restore normal conditions in the organism. Our present system of commercialism has taken advantage of this situation by misleading people through clever advertising to persist in their errors in order to maintain the demand for drugs and serums, proprietary medicines,...

Chapter 11, “Cereals and Legumes,” briefly discusses many types of soyfoods—soy bean sprouts, milk, flour, tofu, soy sauce, and oil (p. 142). Page 196 discusses the use of soy bean milk and almond milk for feeding infants and children.

Chapter 16, titled “The Rational Preparation of Foods,”

contains a long and detailed section on soy beans (266-71), with subsections on boiled soy beans, soy bean milk, tofu, soy sauce, and soy bean sprouts. Home preparation of each is described. Miso, yuba, natto, and hamananatto are also mentioned (p. 268). Soy-related recipes include: Baked soy beans (p. 269). Soy bean loaf. Soy bean croquettes. Soy bean bread (p. 270).

The section titled “Home made cheese” begins: “Man can live well without milk and dairy products, if he makes judicious use of legumes and nuts in various forms, as has been explained in the preceding chapters, but under the present system of agriculture and production of foodstuffs, many people have to make occasional use of milk products... As the commercial cheese are generally heavily salted, preference should be given to home made cheese... Cottage cheese made without salt is the most wholesome of the cheeses.”

Chapter 9 (p. 119-24), about nuts, states: “The making of nut butters is not a difficult process. At present peanuts and almonds are chiefly used for this purpose... The blanching of peanuts and almonds is now done on a large scale by special machinery, and the blanched nuts can be procured in nearly all the larger cities.” Break the blanched nuts into small pieces by running them through the Climax Grater or a food chopper. Put them into a moderately hot oven for a few minutes to make them dry and crisp, then run them through a tightly adjusted nut mill to create a “smooth, palatable nut butter.” A large table (p. 122) compares the composition of various nuts and nut butters (almond butter, peanut butter) with meat, cheese, eggs, cow butter, and whole wheat bread. “The pecan contains the largest amount of fat, about 70%, closely followed by the hickory nut, brazil nut, filbert and pine nut, which all contain over 60% of fat. The pignolia imported from Spain ranks highest in the amount of protein, containing nearly 34%; the peanut comes next with 29.8%; the butter nut, almond, pistachio, all contain over 20% protein, excelling the best cuts of meat in that respect. The almond does not contain any starch as is, therefore, the nut best suitable for infants, especially in the form of almond milk.” Chufa contains 3.5% protein and 31.6% fat.

The section titled “Fruit and nut confections” (p. 212-15) discusses and has recipes for natural candies and confections.

The section titled “How the American people deplete their vitality by their favorite poisons: The tremendous waste of our material wealth” (p. 328-43) discusses (p. 338-43): The amount spent in 1924 on each of 15 “adulterated foods and drinks and of poisonous stimulants and narcotics” (\$5,040 million) compared with the amount spent on foods and vegetables (\$850 million, or 16.8% as much). Refined sugar. Coffee. Tobacco. Condiments, etc. Alcoholic beverages. Drugs. Regulations for the enforcement of the Food and Drug Act (due to untiring efforts of Dr. Harvey W. Wiley, former chief of the Bureau of Chemistry, USDA).

Sodium benzoate and sulphur dioxide. Salt. Saltpeter. Boric acid and borax. Saccharine. Mineral and coal tar dyes. Laxity in enforcement of the Pure Food Law.

On pages 344-47 is information about the Carque Pure Food Company (incorporated 1912) and its founder and owner Otto Carque, including a brief biography of Otto, a list of leading Carque food products, and a full page photo of the company’s new home at 729 Seward St., on 1 Oct. 1925 (2 story brick building).

The food products are arranged by groups: Fruits: Sun-dried and dehydrated, without bleaches or preservatives (Black mission figs, white Smyrna-type figs, prunes, dates, olives, raisins, apricots, peaches, pears). Nuts: Fresh, selected and unroasted (almonds, walnuts, Brazil nuts, pecans, pignolias, pistachios, peanuts). Confections: Of assorted fruits, nuts and honey, without sugar, salt, glucose or preservatives (delectables, fruit nuggets, Kandy-Andy). Stamina and laxative foods (Nut-Fruto, Prunola {prunes and olives}, fruit laxative). Nut butters: Ground from whole nuts, uncooked and unsalted (almond, nut cream, peanut). Cereals and products: Made from re-cleaned whole grain (wheat flour, yellow corn meal, brown rice, breakfast food, crackers). Miscellaneous (olive oil, strained honey, raw sugar, fig-cereal breakfast drink {instead of coffee}). Price list and descriptive circulars on request.

Note 1. This is the earliest English-language document (or book) seen (June 2021) with the term “Natural foods” in the title that also discusses soy.

Note 2. This is the earliest document seen stating that Carque’s company had a new home at 729 Seward St. Address: Los Angeles, California.

3402. *Vegetarian Magazine and Fruitarian*. 1925. Progress of the movement: Report of National Vegetarian Society. 24(9):12. Sept.

• **Summary:** “National Vegetarian Society officers: President, L.J.C. Daniels, Trinity Court, Boston, Massachusetts. Vice President, George Starr White, M.D., 327 Alvarado St., Los Angeles, California. Secretary and treasurer, Jean Roberts Albert, Juliaetta, Idaho. Board of directors: Mrs. Mary Smith Heywood, Chadron, Nebraska. William Howard Hay, M.D., Buffalo, New York. Sara Lee Doyen, Madison, Maine. Dr. Philip G. Peabody, Boston, Mass. Prof. John Orth, Boston, Mass. Alice Park, Palo Alto, California. Otto Carque, 2618 W. Seventh St., Los Angeles, Calif. The society is chartered under the laws of Illinois.

“Membership, 25 cents. Annual subscription to *The Vegetarian Magazine*, \$1.50 in America; Canada and foreign, \$1.75.”

3403. Bauer, A. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(10):897-900. Oct.

• **Summary:** Ehret often sang for Mr. Bauer—this time a

beautiful old Neapolitan song. They took an inexpensive ship from Palermo to Naples, where people drink fresh goats' milk. Ehret once lived with a German family near Jerusalem. Above Naples on a mountain stands a cloister named Kamaldoli [Camaldoli]. It is a Benedictine monastic community. He went there, and felt the "soul of the place," with its peaceful life. It is "the most ideal spot on earth. I sat there in the garden under an arbor trying to picture an isle of the blessed, but could not imagine anything better than this place with its ideal beings and its outlook upon the gulf of Naples."

After that they went to Rome. Address: San Francisco, California.

3404. Firth, Violet Mary. 1925. The soya bean: An appeal to humanitarians. London: C.W. Daniel Co., Graham House, Tudor St., London E.C. 4, England. 55 p. Oct. Reviewed in Russian by N.I. Morosoff in Manchuria Monitor. 1930. No. 5. p. 104-05.

• **Summary:** Contents: Part I: An appeal to humanitarians. Introduction. 1. Practical application of idealism. 2. Economic considerations. 3. Milk is not a humane food. 4. The power of humane ideals in commerce. 5. The burden of the animal kingdom. 6. The freedom of the cattle.

Part II: The making of soya milk. 7. The cultivation of the soya bean. 8. Early experiments with soya milk. 9. Process of manufacture. 10. The soya meal [okara]. 11. The soya bean industry. 12. The soya bean in the kitchen. 13. Medical and dietetic aspects. 14. The soya bean in national emergencies.

The foreword begins: "The manufacture of a vegetable milk from the soya bean is a matter in which I was much interested during the war, and I think I may claim to be the first person, in this country at any rate, who succeeded in making a cheese [tofu?] from vegetable casein.

"Shortly after the war [World War I] the company that was making soya milk closed down, the milk was unobtainable, and I lost touch with the matter. During a recent visit to Letchworth, however, I found that the making of soya milk was again in full swing, and I was so impressed with the spirit of service and humane ideals in which the enterprise was being conducted that I suggested to the managing director of the company that if he would assist me with the necessary technical details, I would like to write a little book on the possibilities of the soya bean, and bring to the notice of humanitarians in general the work that has been going on so quietly in this little country town. All information was freely given to me...

"I must express to the Garden City Pure Food Co. my thanks for their assistance and my admiration for the spirit in which their work is being carried on." That company has neither commissioned, nor subsidized this book.

This book is "written in an endeavour to make those who are "earnest for animal welfare realise that the

exploitation of our younger brothers can be prevented more effectually from the commercial aspect than by individual abstention from flesh-food..."

"Over a hundred thousand pounds has been spent in England alone in experiments in making milk from the soya bean... The original company closed down during the post-war trade depression, and the wonderful soya milk was unobtainable; the work on the soya bean has been taken up again by a body of people actuated by philanthropic and humanitarian motives, whose names are well known among workers for human and animal welfare.

"The dearly bought secrets of the soya bean must not again be lost to the world..."

Pages 35-36. Before World War I, the Royal Botanic Society and Mr. North obtained one soybean plant from the agent of a German cultivator. On the plant were 13 tiny soybean seeds. After the War, these seeds were grown and produced 440 seeds.

Pages 38-39: The process for making soymilk was developed in Manchuria [sic, how does she know?]. German scientists went to work to eliminate its horrible taste. "This process in an imperfect form was known in Germany for some years before the war, and was eventually taken up by an English firm, which continued to experiment upon and improve it. [In 1912 they started making Solac]. The writer well remembers visiting the factory and tasting the milk.

It is now an excellent product and is available as fermented soya milk (with lactic bacteria) and in the form of a powder.

Note: The author sometimes writes under the pseudonym of Dion Fortune. Address: Author [England].

3405. Bauer, A. 1925. The isle of the blessed: Being the story of Prof. Arnold Ehret. *Naturopath (New York City)* 30(11):960-62. Nov.

• **Summary:** They traveled around Italy, visiting Florence, the seaport town of Genoa, the island of Capri, where Ehret decided to take a final fasting cure. Address: San Francisco, California.

• **Summary:** The chapter titled "The meaning of mock turkey" (p. 35-45) critiques the philosophical viewpoints expressed in a vegetarian pamphlet.

3413. Devereux, James Raymond. 1925. Eating to banish disease and to save civilisation. London: C.W. Daniel Co. 146 p. 19 cm. *

• **Summary:** A pleas for a diet consisting of uncooked nuts, fruits, etc.

3414. Finkel, Harry. 1925. Diet and cook book... A vegetarian cook book including recipes and menus that aid in the recovery of every disease. 1st ed. New York, NY: The Society for Public Health Education. 285 p. 23 cm.

• **Summary:** The title page states that this is "A scientific plan of eating for the prevention and cure of disease." The author has also written "Health Via Nature." Address: N.D., D.C [Los Angeles, California].

3415. Finkel, Harry. 1925. Health via nature: The health book for the layman, including a rational system of health culture and the prevention, treatment and cure of disease by natural methods. Also the study of natural dietetics, the preparation and combination of foods for health and disease. Los Angeles, California: Society for Public Health Education. 270 p.

• **Summary:** "Dedication: This book I dedicate to those who have been sacrificed on the altar of science, and to those who have died through lack of understanding of the proper care of their bodies."

Poisons or toxins in the body are the primary basis of all disease (p. 8).

"Dear reader, you are sick because you have disobeyed the laws of nature and abused your body. To correct your debilitated condition you must change your mode of living and remove the cause that is responsible for your physical derangement" (p. 10).

"The time for drugless methods has arrived. Nature cure treatment is spreading like wildfire in all parts of the world, tearing down and sweeping away the false notions of drug therapy" (p. 11).

Chapter 8 begins: "Meat not a fit food for man: From all evidence presented by science meat is not fit for human food." He then discusses human anatomy and physiology (p. 131) and advocates a vegetarian diet (p. 134-35).

Chapter 9, titled "Key to the charts," begins with: "How to select and combine foods" [food combining]. In the chart on p. 151, under Legumes, one of the foods is "Soy beans, dry." They are a Class 1 food with a high degree of toxicity. "All foods are uncooked unless otherwise indicated."

Finkel's three classes of food, defined on page 130, are "based on the degree of toxin usually produced by them in the body." Class 1, the least toxic, contain less than 5% protein. Class 2 contain 5-15% protein. Class 3, the most toxic, contain more than 15% protein. Class 3 foods "are mostly fresh cheese, cream, and most of the nuts and legumes.

“There are other articles generally classed as foods, such as meat, fowl, fish, and aged cheese. These so-called foods are not advisable to be eaten at all because of their extreme production of uric acid toxins in the body and their rapid rate of decomposition.” Address: N.D.D.C., The Society for Public Health Education, 544 No. Rossmore Ave., Los Angeles, California.

3416. Lopez, A.L. 1925. *Cocina vegetariana* [Vegetarian cookery]. Havana, Cuba: Pro-Vida. [Spa]*

• **Summary:** A review of this book in *Naturopath* (Aug. 1925, p. 779) says that the excellent book contains about 500 descriptions of vegetarian meals. The author is the editor of “Pro-Vida” and a leader in the Spanish-American Naturopathic movement. Price: \$1.40 postpaid. Address: Dr.

3417. Olsen, Mahlon Ellsworth. 1925. *A history of the origin and progress of Seventh-day Adventists*. Washington, DC, South Bend, Indiana, and Peekskill, New York: Review and Herald Publishing Assoc. 768 p. Illust. Portraits. Index. 22 cm. Reprinted in 1972 by AMS Press. [31 ref]

• **Summary:** Prof. R. Numbers, in *Prophets of Health: A Study of Ellen G. White* (1976, p. 209), calls this the best history of Seventh-day Adventists written to date. It is widely considered a valuable account of the denomination’s history and activities worldwide into the early 20th century.

The Preface and Introduction state: “The history of a denomination is best understood when viewed in its relation to church history as a whole, and especially to that history in its early stages” (p. 11).

Chapters 8 and 22 are about publishing work and publications. Chapters 11, 31, and 34 are about health and temperance work. Contains a good bibliography and a chronology of key events in the history of the Advent movement from 1831 to 1924. On 1 Oct. 1860 the name “Seventh-day Adventist” was adopted by the denomination. In 1865 the first health publication, titled “How to Live,” was published. It was written and compiled by Mrs. Ellen G. White. On 1 Aug. 1866 the first denominational health journal, titled *Health Reformer*, was published. Later that year, on 5 Sept. 1866, the Health Reform Institute (later Battle Creek Sanitarium, Battle Creek, Michigan) was opened for patients.

W.W. Prescott had general charge of Adventist work in Great Britain from 1897 to 1901. During this time beginnings were made toward a health magazine and a health food factory. Note: The factory was operated by The International Health Association Ltd., founded in 1899; the Association was renamed Granose Foods

Ltd. in 1926.

“The health food factory, situated in Surrey [it began operating in 1899], burned to the ground [in 1907]; but through the efforts of H.G. Butler the business was put on its feet again, the factory moved to Birmingham, and a good patronage built up” (p. 368-69).

Note: In 1907 all SDA institutions in England, including the food factory, were centralized at Stanborough Park, Watford, Hertfordshire.

“The Stanborough Park Sanitarium, located on grounds adjacent to the college of that name, was dedicated on July 3, 1912.” A health food factory was also built at Stanborough Park [in about 1907-09]. A photo (p. 377) shows this health food factory.

“An important feature of our medical education is in the operation of our College of Medical Evangelists at Loma Linda and Los Angeles, California. This unique institution, the only one of its kind in the world, was established for the purpose of training medical missionary physicians and other medical evangelists” (p. 648-49).

“Our health food factories are flourishing. With ten food factories, many food stores, cafés, and cafeterias, this feature of our health work occupies a wide field of usefulness. The health food business of the Australasian Union deserves notice. With several factories, a large wholesale depot, many retail stores, and a system of affiliated cafés, it represents an enterprise of widespread usefulness and influence. The food sales of a single year amount to \$750,000. The profits are largely used for the support of church schools.

“Our health work stands distinctly as one of reform... This means to point out the better way of living, make plain the laws of health, and urge obedience to them. It enables us to present these laws as the laws of God, and to point men and women to Him as the healer alike of body and soul” (p. 649).

Mahlon Ellsworth Olsen lived 1873-1952.

THE HEALTH FOOD FACTORY

3418. Richter, Vera. 1925. *Mrs. Richter's cook-less book: With scientific food chart*. Third ed. Los Angeles, California: Los Angeles Service and Supply Co. and Eutropheon (Published by the author). 53 p. 19 cm.

• **Summary:** A book of raw food recipes. Contents: Preface. Vegetable salads. Fruit salads. Dressings. Soups for the toothless. Beverages. Sun-dried breads. Cakes. Pies. Confections. Curative values of natural unfired foods (Food chart).

The Preface states: "To the logical thinker it is plain that a sound body cannot be built of poor material. Of what does the right material for body-building consist? How shall we judge? We read many books, attend lectures, we hear divers theories expounded.

"We must judge by results. 'By their fruits ye shall know them.' A system of living which will take us through life without sickness and without fatigue is sought by all. Taking this as a criterion, the natural food system stands the test. *It gets results*—not only the negative results of freedom from sickness and fatigue, but creates a new feeling of well-being and vigor. However, those who have built their bodies year after year of poor material and too much of it, must not expect to rejuvenate themselves quickly. There are no miracles in Nature. Results of a lifetime of indulgence in cooked food cannot be expected to be eradicated by just a few meals of natural food.

"People who have existed for years on devitalized food, when making the change to natural or uncooked food, sometimes complain of not feeling satisfied on their new diet. This is because their body cells are clamoring for the old stimulants, cooked foods, of which they are built. Such individuals usually do not realize that the artificial energy which they experience for a time on the cooked food diet is but due to a whipping or irritation of the nerves by the poisons with which the system is loaded.

"In cleansing a dirty house dust will arise and inconveniences must be endured. When one resolves to cleanse the physical temple after a long period of wrong living it must be remembered that the eliminations which will occur are preliminaries in the re-building process. Perseverance must be the watchword during these temporary conditions, in the knowledge that the disagreeable symptoms will soon give way to normal and healthy reactions. It will be found that the cleansing period will be shortened if, in addition to natural food, sun and air baths are indulged in, thus encouraging elimination through the skin, also deep breathing and exercising. Remember that 'Nature cures, not the physician', and once the question of the proper care of the body is settled, the natural life may be lived automatically. It isn't necessary to talk and think food ad nauseam, but go about the real business of living, knowing that the body will not intrude upon our attention with the usual train of ills which mankind unnecessarily endures.

"These recipes you will find simple, economical and satisfying to the unpurverted taste—more so with time. They are in use at our Dining Room, the Eutropheon.—Vera Richter."

The chapter on "Confections" (p. 42-44) contains a number of natural-food confections in which the ingredients are rolled out, cut into squares, and served. these include: Carob confection (with pignolias and honey). Coconut-honey caramel. Coconut-raisin caramel. Peanut butter confection (with dates). Figola. Fig-almond confection, etc.

At the back of this book are many ads on unnumbered pages. One of these is titled "For a taste of sunshine try Dr. Richter's Natur-Bits: Unfired confections made of high grade fruits, nuts, honey—Delicious and nourishing. Twelve kinds; \$0.70 a pound." The first three are: Coconut-Honey Squares. Coconut-Raisin Squares. Walnut and Fig Squares. (The Eutropheon, 927½ W. Sixth St., Los Angeles). Note: These natural confections sound like the forerunners of today's nutrition bars.

The previous ad, titled "The natural food diet courses," shows that John T. Richter, N.D., A.D., gives a series of 7 free lectures at 927½ West Sixth St, Wednesday afternoons at 2:30 and Thursday evenings at 7:30. The public is invited and questions are answered. The 7th lecture includes an examination and certificate of endorsement.

The next ad, titled "What is health," is by The Grist Mill, at Sanitary Market, 251 South Spring St., Los Angeles. Tel. MAin 4874. "Health follows the keeping of natural laws." A few of the company's many products are listed, including whole wheat flour, and soy bean flour.

Two pages later is a price list of 25 products made and sold by the package goods department of the Los Angeles Service and Supply Co. and Eutropheon. These include breads, nut butters, and 12 kinds of confections.

Note 1. Vera Richter's life before coming to Los Angeles is a bit of a mystery. She was born in Pennsylvania in 1884. At some point, she married Dr. John T. Richter, a naturopathic physician, who was two decades her senior. By 1917, they had arrived in Los Angeles, and soon opened their first restaurant, the Raw Food Dining Room, at 640 South Olive St. Considered by many to be the first raw vegan restaurant in the world, it was an anomaly in a meat-and-cheese era, according to naturopath Phillip Lovell, who wrote the "Care of the Body" column in the Los Angeles Times. By the March 1926 the Richters had moved, opening several new restaurants, including ones at 833 South Olive St. and 209 South Hill St., Los Angeles

Note 2. A 13th ed. was published in 1925, and 18th ed. in 1945, and a 30th edition in 1948 (the latter by Hale publications). Address: 927½ West Sixth St., Los Angeles, California. Phone: BRoadway 0643.

3419. Thayer, Verna; Thayer, Gilbert. 1925. *The diet of life*. [Lafayette, Indiana]: G. Thayer. 64 p. *

Address: Lafayette, Indiana.

3420. Valeta, A. 1925. El regimen vegetariano [The vegetarian diet]. Montevideo, Uruguay: Biblioteca del Centro Naturista Higiene y Salud. [Spa]*

• **Summary:** A review of this book in *Naturopath* (Aug. 1925, p. 779) says that the excellent book contains about 500 descriptions of vegetarian meals. The author is a leader in the Spanish-American Naturopathic movement. The book is now in its 7th edition [printing]. Price: \$1.00 postpaid. Address: Dr.

3421. Hough, James. 1925? The ethics of diet (Leaflet). London: London Vegetarian Society. 2 panels each side. Each panel: 22 x 15 cm. Undated. Series: The Humane Diet Leaflets, No. 6. *

3422. Kuhne, Louis. 1925? The new science of healing: or, The doctrine of the oneness of all diseases forming the basis of a uniform method of cure, without medicines and without operations. An instructor and adviser for the healthy and the sick. Translated from the 3rd greatly augmented German edition by Th. Baker. Leipsic [Leipzig], Germany: Louis Kuhne. x + 460 p. Index. 23 cm. Undated. [Eng]

• **Summary:** In German: *Die Neue Heilwissenschaft*. This book enjoyed worldwide success, eventually appearing in 24 languages. Louis Kuhne, born in 1853, was the first nature-cure doctor to practice outside the villages in Germany. The frontispiece is a black-and-white illustration of Louis Kuhne. Two pages thereafter is an illustration of the "Louis Kuhne International Establishment for the Science of Healing without Medicines and without Operations." A huge 3-story building, it was established on 10 Oct. 1883, and enlarged in 1892, 1901, and 1904.

In the chapter titled "What shall we eat? What shall we drink? The digestive process" (p. 117-52), he advocates a vegetarian (esp. a frugivorous) diet and gives recipes. He believes that "disease can only arise as a consequence of wrong food." The "most nourishing and suitable foods and beverages are not flesh-meat, eggs, extracts, wine, beer, cocoa, coffee, tea, etc. but only foods as can be quickly and easily digested." He discusses the teeth, digestive system, senses, and breast milk of humans in order to determine, in part, what is the best diet—"a vegetarian diet" (p. 143).

He is strongly opposed to allopathy, "the whole scheme of poisoning patients by medicine." He supports homeopathy. Address: Founder and Director, Louis Kuhne International Establishment...". 15-24 Flossplatz, Leipsic [Leipzig, Germany].

3423. Rowley, Francis Harold. 1925? The cattle traffic (Leaflet). London: London Vegetarian Society. 2 panels each side. Each panel: 22 x 15 cm. Series: The Humane Diet Leaflets, No. 9. *

• **Summary:** Includes a description of sea transport of cattle by W.H. Davies, "the famous poet." Francis H. Rowley was born in 1854. William H. Davies lived 1871-1940.

3424. Landmann, F. 1926. Ein Beispiel vegetarischer Ernahrung [An example of a vegetarian diet]. *Volksernahrung (Die) (Berlin)* 1(5):74-75. Jan. 5. [Ger] Address: M.D., Oranienburg-Eden [north of Berlin, Germany].

3425. *Tennessean (The) (Nashville, Tennessee)*. 1926. Dr. Sutherland to operate Knoxville cafeteria. Jan. 23. p. 2.

• **Summary:** "A vegetarian cafeteria, similar to the one on Sixth avenue, with treatment rooms attached, will be operated by Dr. E.A. Sutherland of the Madison Park Sanitarium, on property at Clinch avenue and Walnut street, Knoxville, purchased last week.

"Dr. Sutherland and his associates already operate similar Institutions in Asheville [North Carolina], Birmingham [Alabama], Memphis and Louisville and Nashville [Tennessee]. In the rooms maintained in connection with the cafeteria, treatment by massage will be given. Purchase price a the property was reported as \$45,000.

"Dr. Sutherland's associates in the Knoxville project who live there are Dr. C.L. Loyal and John Crowder." Address: Nashville, Tennessee.

3426. *Vegetarian and Fruitarian (The)*. 1926-1934. Serial/periodical. Chicago: Vegetarian Society of America; Lewiston, Idaho. Edited by Jean Roberts Albert. Published Feb. 1926-Aug. 1934. *

• **Summary:** Preceding title: *The Vegetarian Magazine and Fruitarian* (April 1925-Jan. 1926). Succeeding title: *Vegetarian-Fruitarian-Humanitarian* (after Aug. 1934).

Ad in *California Health News*. 1933. June 30. p. 3. "Your humaneness, your Christianity, your culture, begin at the dinner table. *Vegetarian and Fruitarian*, Lewiston, Idaho."

Ad in *California Health News*. 1933. Nov. 30. p. 10. "Do you know how to eat for health? Let us show you. For \$1 a year you get 12 issues... *Vegetable and Fruitarian Magazine* (Established in 1896), Lewiston, Idaho."

Ad in *California Health News*. 1935. Jan. 25. p. 12. "Learn how to eat for health. We show you how. Only \$1 a year brings 12 lessons in right living; developing efficiency with fruits, vegetables, herbs. Sample 10¢. Lewiston, Idaho."

Naturopath and Herald of Health. 1937. Jan. p. 12. "On Nov. 11th a special meeting of the Vegetarian Society of New York was held... a glowing tribute was paid to the memory of the late Jean Roberts Albert, editor of the *Fruitarian and Vegetarian* magazine." Address: Chicago, Illinois; Lewiston, Idaho.

3427. *New York Times*. 1926. Vegetarians besiege markets

of London: Lady Fisher's diet cure causes a demand for lemons, oranges, cabbages and onions. Feb. 26. p. 8, col. 2.
 • **Summary:** Vegetarianism receives impetus in England by Lady Fisher's recommendation of fruit and vegetable juice diet as cure for anemia and auto-intoxication.

3428. *New York Times*. 1926. This fad better than some (editorial). March 6. p. 14, col. 6.

• **Summary:** Editorial on Lady Fisher's recommendation of fruit and vegetable juice diet as cure for anemia and auto-intoxication.

3429. Lovell, Philip M. 1926. Care of the body. *Los Angeles Times*. March 7. p. K24. Sunday magazine.

• **Summary:** The section titled "Raw vegetables" notes that Lovell recently spent 2 weeks in and around New York City, which "boasts more vegetarian restaurants, both in number and per capita, than any other city in the world. There are literally hundreds of them."

When dining out, he patronized many of them, but not one of them offered a raw vegetable dish prepared as tastily and deliciously as prepared by his own housekeeper at home in Los Angeles. The hundreds of vegetables and fruits can give tremendous variety, as well as good health, to the diet of any family. Address: N.D. [Naturopathic Doctor].

3430. Eutropheons (The). 1926. Goodbye cooks & disease! Mrs. Richter's Cook-less Book (Ad). *Los Angeles Times*. March 21. p. K25.

• **Summary:** "... means no more sickness, food waste and drudgery in your home. Eat your way to health and youth through the wonderful variety of raw foods described in this book. \$1.00 postpaid.

"The Eutropheons (Raw food dining rooms)." Note: The Richters now own two of these dining rooms. Their first Eutropheon was at 325 West 3rd St. in Los Angeles. Source: *Children of the Sun*, by Gordon Kennedy. They have apparently moved from their 2nd location (since Sept. 1923) at 927½ W. 6th St. Address: 833 South Olive St. and 209 South Hill St., Los Angeles.

3431. Donaldson, Arthur N. 1926. The relation of protein foods to hypertension. *California and Western Medicine* 24(3):328-31. March.

• **Summary:** Blood pressures of vegetarian college students increased significantly within 2 weeks of adding meat to their diet. Address: M.D., College of Medical Evangelists, Loma Linda Sanitarium and White Memorial Hospital, Los Angeles, California.

3432. Eutropheons (The). 1926. Dr. Richter's sun baked breads (Ad). *Los Angeles Times*. April 18. p. K28.

• **Summary:** "Magnetized and vitalized by the life-giving rays of the California sun. Also health drinks, uncooked

soups, fruit, and vegetable salads, fruit-nut cakes and confections—delicious and wholesome—will build and maintain perfect health."

"The Eutropheons (Raw food dining rooms)... Free lectures, 7:30 P.M. Tues. at 209 S. Hill St. and Thurs. at 833 S Olive St. 7 different breads 50¢." In this beautiful little display ad, illustrations show: (1) A rayed sun with a smiling face. (2) A pretty, smiling girl is eating a wafer; in front of her is a food package. Address: 833 S. Olive St. and 290 S. Hill St.

3433. Kellogg, John Harvey. 1926. Biologic living becoming popular. *Good Health (Battle Creek, Michigan)* 61(4):34. April.

• **Summary:** "Every reform movement goes through three stages. The new truth is first derided, perhaps persecuted, then tolerated, and finally applauded and adopted. The idea of... regulating one's conduct in harmony with the requirements of biologic laws, has gone through the first two stages of experience, and is well advanced in the third. In England there is today beginning a strong movement toward a reform in living habits as a necessary means of promoting race betterment. Such well-known leaders as Lord Oxford and Asquith, Ramsey Macdonald and Dr. Arbuthnot Lane, the noted surgeon, are announced as supporters of the movement, which seems to be particularly active among the nobility. The Duchess of Manchester has for some years been an ardent supporter of biologic living (since a visit to the Battle Creek Sanitarium). The following article by the Duchess of Hamilton and Brandon, contributed to the *London Daily News*, recently appeared in several American newspapers:"

A long excerpt follows; as a vegetarian, she regards the "eating of meat as objectionable both from a moral and a hygienic point of view." Address: M.D.

3434. *New York Times*. 1926. World vegetarians gather in London; Their first theme and food is 'nuts.' May 27. p. 4.

• **Summary:** "London. May 26.—The International Vegetarian Union met in London today with delegates. attending from all parts of the world." An English firm is said to make shoes for vegetarians that contain no leather or other animal substance. "One of the delegates wore a derby hat made without silk and another wore vegetarian furs." Many of the articles made without animal sacrifice are listed.

Note: This is the earliest English-language document seen (Feb. 2022) that contains the term "International Vegetarian Union."

3435. *New York Times*. 1926. Let them have their fun (Editorial—Topics of the Times). May 28. p. 20, col. 4.

• **Summary:** The author is critical of vegetarians, who he believes feel themselves to be different from other people and therefore superior. It is absurd to say that because some

of the strongest animals eat only vegetable foods, therefore man needs nothing else. Those animals have a different digestive system than humans. Vegetarianism is unnatural for human beings. Even vegetarians must kill insects with which they compete for food.

3436. *New York Times*. 1926. His logic stopped too soon (Editorial—Topics of the Times). May 31. p. 14.

• **Summary:** The author is critical of vegetarians and of a high medical authority who addressed the International Vegetarian Union in London and “scolded his hearers for compromising with evil to the extent of drinking milk... [He] declared that the drinker of cow’s milk ‘develops the brain and mentality of a cow and is only a cow in human form.’” The writer argues that if the same logic were applied to eating vegetables, the result would be humans with the brain and mentality of vegetables.

3437. Sale, George. 1926. Eat or be eaten. *English Review* 42(211):830-35. June.

• **Summary:** After dinner with a vegetarian friend named Green Sprouts, the author has a dream in which he reads a book titled “Reflections on the expediency of reverting to the use of animal food,” written in A.D. 2000 by Rev. Brussels Sprouts D.D., the great grandson of Green Sprouts. Starting with the work of Colonel Olcott in Japan and the rise of the doctrine of the “sacred nature of all life” spread largely by Japanese Buddhists, the world becomes vegetarian by the year 1950. The leaders of the new movement even held that it was downright sacrilegious to use tallow candles, wear leather boots, eat with ivory-handled knives, make glue from hooves or bones, weave woolen garments or rugs, or utilize the bodies of animals in any fashion. With these changes, by the year 2000, including the end of eating flesh, many traditional industries were threatened with extinction. Numerous herds of domesticated and wild animals and birds roamed the world, competing with human beings for their food supply and threatening the survival of men and women. Humans had to protect their diminishing crops with fences and overhead netting. As a compromise, humans began breeding and releasing carnivores to eat the other animals. But now towns and homes had to be fenced in to protect against the wild beasts, while the law of the jungle ruled outside. The extremism, fanaticism, and strict vegetarianism of humans had led to total chaos. The author awakes and tells his dream to Green Sprouts, who then loses his enthusiasm for vegetarianism.

3438. *New York Times*. 1926. Austrians turning to vegetarian diet: Theatregoers becoming radio fans—male population regaining its pre-war dominance. July 17. p. 6, col. 5.

• **Summary:** “Vienna—Austrians are changing from meat eaters to vegetarians...”

“Meat statistics show how the standard of living has

diminished. Austrians have tightened their belts to the point where they now consume only one-fifth of the amount of veal eaten in 1913. Even the favorite German delicacy, pork, has lost two-thirds of its pre-war popularity, while eggs in the same period have increased 44 per cent.”

3439. Williamson, H. 1926. Appendicitis and vegetarianism (Letter to the editor). *British Medical Journal* ii(3432):714. Oct. 16.

• **Summary:** Dr. Williamson, a surgeon in Burma, writes: “During recent years I have seen many Oriental and relatively few European patients: I have removed many European appendixes but never an Oriental one.”

“Dr. Leonard Williams points out that owing to a largely vegetarian uncooked diet, regular habits, and squatting defecation posture, the savage completely empties his lower bowel every day, and thereby escapes the large group of diseases due to intestinal stasis. It seems logical to suppose that if we were to adopt their habits we should not suffer from appendicitis.” Address: M.D., F.R.C.S., Ightham, Kent [England].

3440. Bragg, Paul C. ed. 1926. Health Center newsletters (Ad). *Los Angeles Times*. Oct. 17. p. K27.

• **Summary:** “‘Jiddu Krishnamurti is a nut.’ That is what thousands of people will be saying of the 30-year-old seer from India who is being hailed by some as the new World Teacher. But he is a healthy nut. When he arrived in Los Angeles recently” he discussed the importance of “bodily cleanliness. Another was that he had never eaten meat, drunk liquor or smoked.”

“Krishnamurti says our goal is happiness. He’s right. And the first ingredient of happiness, to my mind, is health.” Address: Prof., Chief Clinician, Health Center of Los Angeles, 1000 W. Seventh St.

3441. Wilkerson, Clennell. 1926. The vegetarian dilemma. *Outlook (London)* 58:429. Nov. 6. *

• **Summary:** Vegetarians find themselves in a predicament because, despite their protestations to the contrary, they probably still crave meat, and furthermore must deal with the guilt of killing plants for food.

3442. Bircher-Benner, Maximilian Oskar; Bircher, Max Edwin. 1926. Fruit dishes & raw vegetables. London: The C.W. Daniel Co. 52 p. Illust. 12°. *

• **Summary:** A translation of *Früchtespeisen und Rohgemüse*. About vegetarianism. At head of title page: “Sunlight (vitamine) food.” First published: Nov. 1926. Third edition, June 1933 (still 52 pages).

Note: Dr. Maximilian Oskar Bircher-Benner was a world-famous Swiss physician and naturopath. He developed and introduced Muesli, the raw-food equivalent of America’s Granola. He died on 24 Jan. 1939 at age 72.

3443. Kellogg, John Harvey. 1926. Biologic living not a modern idea. *Good Health (Battle Creek, Michigan)* 61(11):40. Nov.

• **Summary:** This article is taken from one of Dr. Kellogg's "Question Box" lectures. He begins with a long quotation from Plato's great book, *The Republic*, in which Socrates and Glaucon, his pupil, discuss how people ought to live. They conclude that eating meat requires lots of land, which increases the likelihood of war. He then talks about Pythagoras, the teacher of Socrates, who taught Plato, who taught Aristotle. Pythagoras was a vegetarian who advocated living biologically. Address: M.D.

3444. Forbes, E.B. 1926. The present and the future food supply. *Industrial Engineering and Chemistry* 18(12):1263-67. Dec. [7 ref]

• **Summary:** Contents: Introduction. Qualitative aspect of food problem (plant vs. animal foods). Data on food production and consumption in the U.S. (largely from Pearl 1920). Factors in local food production. Possible competition between man and animals for food. Relative economic efficiency of different animals. The food supply becomes a chemical enterprise. Conclusion.

"Armsby computed that the farm animals of the United States consume 3.9 times as much food, on an energy basis, as people; that three-fifths of the food given to animals consists of grains; and that this three-fifths, in grains, has an energy value two and-a-third times as great as that of the aggregate human ration... In view, however, of the food which these animals eat is comprised of products which human beings either cannot eat or do not want, it is necessary to consider animal production in a broad and general way, as justified by a great complication of conditions, and especially accomplishing most important food and fertility conservation functions." Address: Inst. of Animal Nutrition, Pennsylvania State College, Pennsylvania.

3445. Shelley, Percy Bysshe. 1926-1930. The complete works of Percy Bysshe Shelley. Newly edited by Roger Ingpen and Walter E. Peck. 10 vols. London: Published for the Julian Editions by E. Benn Ltd.; New York, NY: Charles Scribner's Sons. See vol. VI, p. 335-44. *

• **Summary:** D.L. Clark (1939, p. 70) states that when Shelley died, he left an unpublished essay on the subject of vegetarianism, which appeared in 1929 in this work, volume VI, p. 335-44.

Note: It was also published in a limited edition as a small separate monograph the same year.

3446. Belfrage, Sydney Henning; Yates, Lucy H. 1926. What's best to eat? London: W. Heinemann. xi + 199 p. No index. 22 cm.

• **Summary:** The author is much indebted to the writings

of Sir William Arbuthnot-Lane (1856-1943 of England; he founded the New Health Society in 1925 to publicise his views on healthy diet and life), Prof. Elmer V. McCollum (1879-1967, an American biochemist known for his work on the influence of diet on health), Prof. Henry George Plimmer (1856-1918), and Colonel Robert McCarrison (1878-1960; a Northern Ireland physician and nutritionist, he conducted the very first experiments to demonstrate the effect of nutrition on the epidemiology of disease). In the Introduction (p. 5) is a long quotation from the book *Studies in Deficiency Disease*, by Col. Robert McCarrison concerning his seven years of experience among the people of the State of Hunza in the far north of India, "whose sole food consists to this day of grains, vegetables, and fruits, with a certain amount of milk and butter, and goat's meat only on feast days."

In Part I of this book, Chapter 4, "Proteins" emphasizes the importance of animal protein foods, and especially of milk. For example, pages 44-45 state: "Animal flesh is not strictly necessary, and no one will be the worse who for sentimental or other reasons does not include either butcher's meat, fish or bird in his dietary. Some of the finest races of mankind seldom or never eat flesh foods and practical experience has shown that flesh abstainers are capable of as great or greater endurance than flesh eaters. The worst that can be said about the meatless diet is that it is apt to be dull and unappetising. We shall have more to say about this later.

"Nevertheless, it is necessary that the diet contain some animal, i.e., first-class protein, and we find that most so-called vegetarians include milk, eggs and cheese in their dietary. There are few if any examples of well developed and sturdy races who subsist on vegetable products alone, and it is certainly not a diet to be recommended. If a purely vegetarian diet is selected with the greatest care and considerable knowledge of the food value of the various proteins directly derived from plant life, it is just possible to obtain good nutrition."

"The individual who abjures flesh but takes milk, eggs and cheese is probably on the safest ground. He claims that meat is unnecessary, that it contains the poisonous waste products of the animal which supplied it, that it is generally eaten to excess, that the eating of it is apt to be followed by a lethargic condition, that some of the best intellects and most useful lives have belonged to men who abjured flesh foods and that the eating of flesh is a relic of barbarism. There is much truth in these claims. We may add to them the fact that the raising of meat on economic grounds is grossly extravagant, seeing that the dairy cow is capable of returning at least 18 per cent. of the food value of the food she consumes while the sheep and ox can only return 3.5 per cent. Flesh foods are therefore, as a rule, the expensive foods."

The practical supplement to this book (Part II, p. 139-99), written by Miss Lucy H. Yates, M.C.A., contains numerous recipes for meat, fish, fowls [poultry] and eggs (p.

185-95). Address: 1. M.D. (London), M.R.C.S., L.R.C.P.; 2. M.C.A.

3447. Cairns, Dorothy. 1926. *Your healthy diet*. London: Lutterworths. 37 p. 19 cm. *

3448. Ehret, Arnold. 1926. *Rational fasting for physical, mental, and spiritual rejuvenation*. Los Angeles, California: Health Center of Los Angeles (1000 West 7th St.). 64 p. Frontispiece. 21 cm.

• **Summary:** Contents: Preface. Other publications by Prof. Arnold Ehret. Ad for Innerclean Mfg. Co. (846 East Sixth St., Los Angeles). Part I. 1. The common fundamental cause in the nature of diseases. 2. Remedies for the removal of fundamental causes and the prevention of their recurrence. 3. The fundamental cause of growing old. 4. The preservation of the hair. 5. Increasing longevity.

Part II. 6. Complete instructions for fasting. 7. Rational fasting for physical, mental and spiritual rejuvenation. 8. Building a perfect body through fasting. 9. Important rules for the faster. 10. Rules during fast. 11. Short fasts and the non-breakfast plan. 12. Fasting for spiritual rebirth. 13. Ragnar Berg's tables of food analysis. 14. Menus and recipes.

In Berg's tables, soy beans are mentioned on p. 60. In the category of "Grains, beans," they are the most "Plus [good], acid binding," not "Minus, acid forming."

Note: A 2nd revised edition was also published in 1926. A portrait photo shows Arnold Ehret (lived 1866-1922); beneath it he has written: "Yours for 'Ehretism.' Prof. Arnold Ehret." Address: Prof. [Los Angeles, California].

3450. Freshel, Maud Russell (Lorraine) Sharpe (Mrs.). 1926. *Some reasons against the carnivorous diet as given in the preface to the "Golden Rule cook book."* New York, NY: Vegetarian Society of New York, with the Millennium Guild. 25 p. 21 cm.

• **Summary:** The cover title states: "Preface to the fifth edition and introduction." These are the first 25 pages of the fourth printing, 1926 (copyright 1910) bound as a separate book.

"An illuminating fact is that the newest hospital in New York, now nearing completion, has announced that it will be entirely vegetarian,..."

M.R.L. Sharpe lived 1867-1949. Note: Stanford University (California) is the only library in the world that own this document, according to OCLC. Yet the words "Some reasons against the carnivorous diet" do NOT appear in the preface to the "Golden Rule cook book" (1926).

3451. Freshel, Maud Russell Lorraine (Mrs.). 1926. *The*

golden rule cook book: Six hundred recipes for meatless dishes. Originated, collected and arranged by M.R.L. Freshel. New ed. New York, NY: Dodd, Mead and Co. 323 p. Illust. Recipe index. 21 cm.

• **Summary:** This important, well written, early vegetarian cookbook was first published in 1908 under the title *Six hundred recipes for meatless dishes*. The author's full name was Mrs. Maud Russell (Lorraine) Sharpe; thus her maiden name was Maud R. Lorraine. Born in 1867, she sometimes writes her first name "Emmarel."

This 1926 edition is very similar to the 1908 edition except for four things: (1) There is a new publisher, Dodd, Mead in New York. (2) The copyright page uses the 1910 copyright date, but lists a 4th printing in Feb. 1926. (3) The Preface is titled "Preface to the Fifth Edition." (4) At the end of the Preface we read: "M.R.L.F., New York, Feb., 1926." Address: Providence House, Chestnut Hill, Massachusetts.

Feb. 20. Part 7. p. 24, col. 5.

• **Summary:** J.B. Paget blames modern diet for physical deterioration in England; urges vegetable regimen in article in *New Health*.

3465. Bragg, Paul C. ed. 1927. Health Center newslets (Ad). *Los Angeles Times*. March 13. p. K27.

• **Summary:** "Did you read that Emile Vandervelde, head of the Belgian Socialist party and Minister of Foreign Affairs, attributes his unusual physical fitness to the 'simple life?' He eats with moderation and in recent years has cut out breakfast and dinner altogether. Bernard Shaw, the famous writer, is another stickler for sane living and careful diet. Nine-tenths of mankind are still eating themselves into a premature grave—but I think they are gradually getting a little sense." Recent government statistics show that U.S. meat consumption has decreased by about 25% during 1926. Address: Prof., Chief Clinician, Health Center of Los Angeles, 1000 W. Seventh St.

3466. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(3):298-309. March. [24 footnotes. Eng]

• **Summary:** Contents: Soybean milk for food: Introduction. Preparation of soybean milk. Properties (Yu-P'i is Chinese for yuba; Laxa). Market prices. Composition. Nutritive value. New methods in the manufacture of soybean milk (Prof. Laxa in Prague [Czechoslovakia], Li Yu-ying, Soyama). Some dietetical advantages and applications of the soybean milk. Condensed soybean milk and milk powder (Soy Lac soybean milk powder made in America by Chard). Soybean cake, soybean meal and soybean flour as material for soybean milk. Yu p'i and yu ba (yuba; also fu chu).

"In 1905, Li Yu-ying submitted a paper on the subject [of soybean milk] to the 2nd International Milk Congress in Paris, in which he emphasized that the introduction of soybean milk to Western countries 'will be highly beneficial to public health as well as to the budget of the poor.' Also by those who advocate and urge a vegetarian diet, a very strong case can be made for this Oriental substitute" (p. 298).

According to Prof. Laxa: "Soybean milk, supplemented with lactose and inoculated with a culture of yoghurt [yogurt] bacteria, coagulates at 40° C. in 4 hours and gives a curd-like acid mass" (p. 300).

"Market prices. In Peking soybean milk is sold in small bottles in portions of about 200-220 cc. labeled 'Bean milk, a Chinese product, the most nourishing food, made by...' For such a bottle, delivered daily, the big factories of Peking asked in 1925 \$1.00 (Mex.) per month. One liter of such milk costs, therefore, about 15 cts. (Mex.)... A fine soybean milk powder, called *Soy Lac*, has recently been prepared in America by Chard" (p. 300-01). Note: This company (Chard) was first referred to by Piper and Morse in 1916 in *USDA Bulletin* No. 439, "The soy bean, with special reference to

its utilization for oil, cake, and other products.” Soy Lac is mentioned again by Horvath on p. 307.

A table (p. 302) compares the composition of soymilk made in 3 locations (Tsinanfu, China; Peking, China; and Japan) with that of human, cow, and goat milk. Human milk has the lowest protein content (1.25%) and ash content (0.25%); soymilk has about the same protein content as cow’s milk (3.3%) but an ash content (0.40%) which is higher than that of human milk but lower than that of cow’s milk. Footnote: “To supplement the deficiency of the soybean milk in mineral constituents [such as calcium], it is recommended by von Noorden and Salomon to add to it the salt mixture of Pirquet, which consists of: sodium chloride, 0.3 gm.; potassium chloride, 1.1 gms.; calcium glycerophosphate, 1.7 gms.; magnesium lactate, 0.5 gm.; ferrum glycerophosphate, 0.1 gm. This mixture is called *Nemsalz*. If diluted in 1 liter of water it gives the same percentage of salts as in women’s milk” (p. 302).

“In Germany the Soyama factory (in Frankfurt) manufactures soybean fresh milk (mostly from soybeans), soybean normal cream, and also condensed bean milk and cream. Soyama bean milk looks like cow’s milk, contains the same constituents, even in larger amount and in a state of finer dispersion. Only its taste is different. According to Fuerstenberg, Soyama milk can be qualified as a special, very valuable dietetic nutrient. The high lecithin content of this preparation adds to its value too” (p. 306). A table (p. 306, based on the analyses of Dr. G. Popp of Frankfurt) shows the nutritional composition of 6 types of Soyama milk and cream preparations: Normal milk. Milk for diabetics. Milk for baking purposes. Normal cream. Cream for diabetics. Cream extra rich in fat (especially for diabetics). “According to von Noorden and Salomon, Soyama preparations may be kept as long as almond milk and Paranut milk. Soyama milk looks just like cow’s milk. By keeping, cream separates and it must be shaken before using” (p. 306).

“In using Soyama milk and cream preparations, v. Noorden confirms the following statement of Fischer (for vegetable milk in general): ‘1. In the stomach soybean milk gives a much finer flocculent precipitate than does cow’s milk, produced by acid or even rennet. 2. The ingestion of soybean milk results in a feebler (smaller) secretion of gastric juice; the period of secretion is also shorter. 3. The period of stay in the stomach of the finely flocculent precipitate of the soybean milk is shorter than that of the casein-fat coagulum of cow’s milk. 4. The peristaltic motion of the stomach is less after the ingestion of soybean milk and more coordinated than in the case of cow’s milk, as shown by X-ray investigation’” (p. 307).

“On the basis of these observations soybean milk is recommended by v. Noorden in cases of gastric and duodenal ulcer, states of peritoneal irritation, hypersecretory conditions of the stomach, disturbances of the motility of the stomach, uric acid diatheses, kidney disturbances,

conditions with edema where a food poor in sodium chloride is required, Basedow’s disease, cholecystitis, cirrhosis of the liver, diabetes, and in cases where a very nutritious diet is required” (p. 307).

“Soybean milk powder will undoubtedly have a successful future in the Orient as well as in European countries and the United States. Its great advantage in comparison with cow’s milk powders is its cheapness. Soybean milk powder can be easily stored and transported... It is believed that at present some of the commercial milk powders contain an admixture of soybean milk powder” (p. 307-08).

“*Yu P’i* and *Yu Ba* are the Chinese and Japanese names of the pellicula formed on the surface of soybean milk when the latter is gently heated. Good *Yu Ba* has a bright yellow color when properly dried. The best *Yu Ba* is that obtained after the first heating. In repeating the heating of the remaining soybean milk, pellicules of gradually inferior quality and color are obtained. As much as 30 pellicules can be secured from the same portion of soybean milk. In China, a product called *Fu Chu* is manufactured in a way similar to *Yu Ba* (Footnote: See this journal, Vol. VIII, 1926, p. 179). Recently an improved method for the manufacture of *Yu Ba* was patented in Japan, consisting in the use of an electric fan adjusted over the surface of a kettle containing the soybean milk heated to a temperature of 90°C.

“*Yu Ba* has a great nutritive value, as it contains a high percentage of protein and fat...”

A table (p. 309) gives the nutritional composition of five types of yuba: Common yuba, Kyoto yuba, Shimada yuba, Peking yuba, and *Fu chu*.

Note: The values for *Fu chu* are based on those previously reported by Adolph. *Fu chu* contains much more water (53.68%) than any of the other four types of yuba; common yuba contains only 21.85% and Peking yuba only 9.15%. So it is either fresh or reconstituted.

“In Japan, Kyoto and Nikko are noted for *Yu Ba*. *Yu Ba* is in much demand in China and Japan and is used in numerous ways as an essential ingredient in many very palatable dishes. Its price is high and therefore yuba is used only by the rich.”

Reprinted in 1927 as part of an 86-page monograph titled “The Soybean as Human Food” (Peking, China). Address: M.D., Peking Union Medical College, China.

3469. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(4):415-25. April. [34 footnotes. Eng]

• **Summary:** Contents: Soybean curd (tofu) for food: Preparation and types ("The Chinese classical name for *tofu* is *li chi*, probably meaning 'the morning prayer'"), historical, present state (of *tofu* in China), chemical composition, digestibility, utilization (incl. frozen *tofu* and fried *tofu*).

Fermented soybean products for food. Soy sauce: Kibiki and sobiki tamari, composition of various soy sauces. Natto. Miso. Conclusion. Bibliography.

Tofu—Historical (p. 416): "The manufacture of soybean curd (*tofu*) was started in China in 164 B.C., during the reign of the Emperor Han Wen, by a man named Liu An, the duke of Hwai Nan. Liu An was a great friend of the Buddhist monks, and it seems quite probable that he made this bean curd to provide a change or delicacy to break the monotony of the monastic ration (Adolph). *Tofu* was introduced into Japan from Korea for the first time during the Toyotomi government, and Buddhist priests and some other people used it for their daily food among others before it was generally used in Japan.

Tofu—Utilization (p. 418-19): "Both the composition and the digestibility of *tofu*, therefore, prove it to be a very nutritious food material. In the Orient *tofu* forms a very popular and almost indispensable dietary article for the Buddhist priests, as well as the strict adherents to Buddhism, who eat no animal food [i.e., are vegans]. A common saying in some parts of China terms 'bean milk the poor man's milk, and bean curd the poor man's meat.' *Tofu* is also called 'the meat without the bones.'

Note: This is the earliest English-language document seen (Aug. 2016) that contains the phrase "the meat without the bones" (or a similar phrase containing the words "meat" and "bones"); the phrase is used to refer to *tofu*, not to soybeans.

In Indo-China the daily consumption of *tofu* by an adult is about 3/4 of a pound. *Tofu* in its various forms is also used very extensively by all classes of Japanese. In the interior of the country where fish cannot be easily obtained, it is a most important source of protein.

"In the Orient *tofu* is eaten in a fresh condition simply with a little *shoyu*, though it is also frequently cooked in soup. Fried *tofu* is also a very popular article of food. Rape-seed oil, sesame oil or soybean oil are generally used in frying.

"*Tofu* may also be prepared for preservation and transportation. For this purpose fresh *tofu* is cut into smaller

pieces and exposed to severe cold weather, to remove the water by freezing, and is then dried in an oven. As thus prepared it can be preserved for several years. When the *tofu* is frozen the water collects in fine needles of ice distributed throughout the mass. When the ice melts and the water runs out, it leaves the *tofu* porous and it may be easily dried. If it is not frozen, it is difficult to dry and the resulting material is dense and horn-like. The *tofu* also cooks very well if cooked in diluted soy sauce and smoked in the same manner as meat. The resulting product forms in the Orient the basis for the manufacture of various 'artificial meat' preparations.*" Footnote: * "In Germany, the Soyama factory prepared during the Great War [World War I] a meat supplement from soybeans. It was cheaper than beef, contained less carbohydrates and had a nutritive value of about 1500 Calories in 1 kilo."

"In Peking, at the Kai Cheng Bean Products Company, various preparations manufactured from *tofu* may be purchased, such as different kinds of soybean meat, soybean sausages, etc. The company has established a restaurant in Peking (at 86 Morrison Street, the name is written in Chinese characters) where one can get a Chinese dinner of numerous dishes prepared mostly from soybean products (chicken meat, pork, ham and beef, manufactured from *tofu*).

Also discusses: "Dr. Yamei Kin, a Chinese dietitian, has become particularly well-known as an exponent of bean curd on her visits to the United States" (p. 419).

A note at the end of this April issue states: "A reprint of Dr. Horvath's paper in booklet form may be obtained from the Bureau of Economic Information. Price \$1, Peking Currency.—Ed." Thus, these six articles were reprinted in 1927 as part of an 86-page monograph titled "The Soybean as Human Food" (Peking, China). Address: M.D., Peking Union Medical College, China.

3470. *New York Times*. 1927. Diet 'fads' scored at medical session: Mayo Clinic physician says the sick are often "stuffed" with green foods. "Formula eating" decried. Illinois doctor declares that child feeding propaganda has been overdone. May 21. p. 24, col. 1.

Address: Wilton, Connecticut.

3477. Taylor, Alonzo E. 1927. The future food supply of the United States. *Bulletin of the New York Academy of Medicine* 3(11):610-32. Nov.

• **Summary:** "Based on the experiences of other countries, it is possible to adjudge the population-carrying capacity of the United States. On the basis of representative European crop yields, the United States could support some 500 million people on a largely vegetarian diet, in which cereals and legumes would form the chief sources of protein, with only such animal products as could be secured from inedible residues and forage on land not adapted to the raising of primary crops. On a lacto-vegetarian diet, something like 400 million people could be sustained" (p. 624).

This is the Wesley M. Carpenter lecture, delivered before the New York Academy of Medicine. The author admits that his prophesy "is essentially the projection of existing knowledge into the future." He begins by discussing population growth (the U.S. population is projected to be 180 million in 1987; it was actually 242 million, 34% higher than forecast), mechanization, reduction of waste, and per capita daily food requirements (calories 2,800 to 2,900, protein 75 gm, fat 100 gm, carbohydrate 400 gm).

"Vegetal oils may be expected to continue a prominent component of the diet... Americans taste seems to favor bland vegetal cooking oils over animal fats, as illustrated in the preference for vegetal lard substitutes over lard."

Note: In 1928 Alonzo Taylor was a Director of the Food Research Institute, Stanford, California.

3478. Williams, George Albert. 1927. A study of the laxative action of wheat bran. *American J. of Physiology* 83(1):1-17. Dec. 1. [6 ref]

• **Summary:** "The expenses of this investigation were partially defrayed by a grant from the Postum Cereal Company." The article begins: "Ever since the days of Sylvester Graham (1794-1851, physician, vegetarian, and writer on dietetics), pioneer advocate of the wholesomeness of whole-wheat and Graham flour, the presence of bran in the human dietary has been regarded as more or less beneficial. Wheat bran has long been used as a diabetic food because its carbohydrates are apparently poorly utilized by man. However, in the last few years this supposedly indigestible part of the wheat kernel has taken its place on the breakfast table of millions of Americans along with cereals of high food value. The recent popularity of bran in the dietary is due to its reputed excellence as a laxative."

"In 1906 Jordan, Patten and Hart (in this journal, xvi, 268) observed that cattle became constipated when the unwashed whole bran in the ration was replaced by washed bran, and that the constipation disappeared when the washed bran was discontinued and the use of washed bran was resumed. These investigators attributed the constipated

condition of the cattle to the absence of phytin from the washed bran, and the relief afforded by the unwashed bran to the phytin present in the latter. Phytin is very soluble in water..."

"The prevailing idea in more recent years has been that bran owes its peculiar laxative power to the crude fiber it contains."

In this study, various types of bran and substances isolated from bran were fed to adult dogs. Results showed that the laxative effect of bran was due, at least in part, to the crude fiber present in the bran. The crude fiber was laxative even when fed in small quantities corresponding to the crude fiber content of 3 per cent bran. These small quantities caused a marked increase in the number of defecations per 8-day period. Crude fiber also had the power of producing more than its own weight of feces; 1 gm of fiber produced about 3 gm of feces. "In general bran did not possess feces-forming power to this extent."

The article concludes: "The crude fiber of wheat bran is an important contributory factor to the laxative effect of bran, and, gram for gram, is a much more powerful laxative than the bran itself." Address: Lab. of Physiological Chemistry, Yale Univ., New Haven, Connecticut; Physiological Chemistry Lab., Jefferson Medical College, Philadelphia, Pennsylvania.

3479. Shippey, Lee. 1927. Lee side o' L.A. *Los Angeles Times*. Dec. 17. p. A4.

• **Summary:** There are two Eutropheon dining-rooms in Los Angeles. Eutropheon means "uncooked" in Greek. They serve pies, with sub-baked crusts and a filling of dried or fresh crushed fruits. "These restaurants also, of course, serve a great many nuts. But most of the diners we saw looked like extra-intelligent people."

3480. Bois, Désiré. 1927-1937. Les plantes alimentaires chez tous les peuples et à travers les âges. Histoire, utilisation, culture. 4 vols. [The food plants of all people across the ages. History, utilization, culture. 4 vols.]. Paris: Paul Lechevalier. See vol. 1, p. 119-30. Vol. 3, p. 153-55 (shoyu). (*Encyclopedie Biologique*, vol. I, III, VII, XVII. Fourth edition of *Le Potager d'un Curieux* by Paillieux and Bois). Illust. Index + Index of Illust. 25 cm. [12 ref. Fre]

• **Summary:** Vol. I. Phanérogames légumières. The section on the soybean (*le Soya*) (p. 120-130), discusses the history of the plant in various countries, the oil and its uses, the preparation of soybean cheese and soy sauce, the nutritive value of the soybean, the place of the soybean in the culture of various countries including the United States, yields of various varieties, and use as a forage crop.

At its annual lunch on 15 May 1911, following its tradition of introducing new products from little-known plants, the Society for Acclimatization (in France) served samples of various soyfoods (*plusieurs préparations à base*

de Soya) prepared by Mr. Li Yu-Ying, technical director of a factory established on the outskirts of Paris for the preparation of various products from this legume: vegetarian ham (*jambon végétal*), soy cheese (*fromage de Soya*), soy preserves (*confitures de Soya*), soy bread (*pain de Soya*), etc. (p. 126).

Vol. III. Plantes à épices, à aromates, à condiments. The section on shoyu (p. 153-155) describes soy sauce and its preparation. Note: Désiré Bois lived 1856-1946. Address: Prof., France.

3485. Carbonell, J. Fernando. 1927. El vegetarianismo [Vegetarianism]. Montevideo, Uruguay: Published by the author. [Spa]*

• **Summary:** Note: A book review in *Naturopath* (USA) (March 1927, p. 153) states that Dr. Carbonell is "the foremost authority on nature cure and vegetarianism in South America. Dr. Carbonell has a well known Naturologic Institute in Montevideo and his magazine, *Natura*, is the oldest magazine on nature cure published in Spanish. His book from the theoretical and from the practical point of view, and ends with a series of recipes to prepare delicious vegetarian dishes. The vegetarian movement is increasing very rapidly in South America, but nowhere there is it more conspicuous than in Uruguay." Address: Dr., Montevideo, Uruguay.

3486. Deflacelière, L. 1927. Hygiène et menus de réforme alimentaire: 750 menus d'hygiène gastronomique [Hygiene and menus for food reform: 750 menus of gastronomic hygiene]. Paris: L'Éleveur. 159 p. 12°. [Fre]*

• **Summary:** About vegetarianism. Address: France.

3487. Estes, St. Louis A. 1927. *Raw food and health*. New York City, NY: Estes Raw Food and Health Association. 443 p. Portrait. 20 cm. No index.

• **Summary:** This book also calls for the use of cow's milk, ice cream, cheese, and eggs. Under the author's portrait photo is written: "Discoverer of dynamic breath controls for disease prevention. Father and founder of the raw food movement, and international authority on old age and raw foods."

3488. Fishbein, Morris. 1927. *The new medical follies: An encyclopedia of cultism and quackery in these United States, with essays on the cult of beauty, the craze for reduction, rejuvenation, eclecticism, bread and dietary fads, physical therapy, and a forecast as to the physician of the future*. New York, NY: Boni and Liveright. 235 p. No index. 20 cm.

• **Summary:** Contents: 1. An encyclopedia of cults and quackeries. 2. The cult of beauty. 3. The craze for reduction [of body weight; slenderization]. 4. Rejuvenation. 5. Rejuvenation: The mechanical and glandular methods. 6. Bread and some dietary fads [white vs. whole wheat bread]. 7. The end of eclecticism. 8. Physical and electrical therapy. 9. Psychoanalysis—a cultist movement? 10. Ethics—medical otherwise. 11. The physician of the future.

This is a completely different book from his 1925 book having a similar title. Chapter 1 begins with a definition of healers (a word that Fishbein belittles) and cults—and with these words: "Of all the nations in the world, the United States is most afflicted by its healers." "The scientific medicine of to-day is based on the discoveries made in the fundamental sciences. It holds to no single theory as to the causation of disease and it does not insist correspondingly that the successful treatment of disease depends on the use of any single method of manipulation or administration." Cults criticize the "germ theory" of disease. They have excessive devotion to some person, idea, or thing which they consider a cure-all. Many cults, classed as "non-medical," deprecate the use of medicines. "Many cultist leaders denounce the eating of meat because of some weird notions of body chemistry." There follows an alphabetical list of all the different cults that the author has been able to discover. Among these are chiropractic, Christian Science (which contends that death does not exist), Faith Healing, Homeopathy, Irido-Diagnosis [iridology], Kneipp Cure, Naturopathy [misrepresentations and unfair criticisms], Osteopathy, etc.

Note: Morris Fishbein lived 1889-1976. Address: Editor of the *Journal of the American Medical Assoc.* [and its executive director] and of *Hygeia*, the health magazine.

3489. Gandhi, Mohandas Karamchand. 1927. *The story of my experiments with truth*. Translated from the original in Gujarati by Mahadev Desai. Vol. 1. Ahmedabad, India: Navajivan Press. 602 p. Index. 24 cm. See also Vol. 2, 1929.

• **Summary:** This magnificent autobiography opens with

a sepia photo of Gandhi (lived 1869-1948), dressed only in a dhoti (a long loincloth worn by Hindu men), sitting on the ground and looking contemplatively downward—a characteristically humble pose for such a great man.

Before Gandhi left India for London on 4 Sept. 1888, 1 month before his 19th birthday, as a shy young man to further his studies in law for 32 months, he took 3 vows before his mother to set her heart at ease and to prevent him from violating the rules of his caste: he would not touch wine, woman, or meat (including eggs). The first friend with whom he lived in London persistently pleaded with him to eat meat, but he refused. The next family with whom he lived knew nothing of vegetarian cookery so Gandhi was always hungry—though he never mentioned it.

Finally, after much searching, he found a vegetarian restaurant on Farringdon Street in London. "The sight of it filled me with the same joy that a child feels on getting a thing after its own heart. Before I entered I noticed books for sale exhibited under a glass window near the door. I saw among them Salt's *Plea for Vegetarianism*. This I purchased for a shilling and went straight to the dining room. This was my first hearty meal since my arrival in England. God had come to my aid.

"I read Salt's book from cover to cover and was very much impressed by it. From the date of reading this book, I may claim to have become a vegetarian by choice. I blessed the day on which I had taken the vow before my mother. I had all along abstained from meat in the interests of truth and of the vow I had taken, but had wished at the same time that every Indian should be a meat-eater and had looked forward to being one myself freely and openly some day, and to enlisting others in the cause. The choice was now made in favour of vegetarianism, the spread of which henceforward became my mission.

"My faith in vegetarianism grew on me from day to day. Salt's book whetted my appetite for dietetic studies. I went in for all books available on vegetarianism and read them. One of these, Howard Williams' *The Ethics of Diet*, was a 'biographical history of the literature of humane dietetics from the earliest period to the present day.' It tried to make out that all philosophers and prophets from Pythagoras and Jesus down to those of the present age were vegetarians. Dr. Anna Kingsford's *The Perfect Way in Diet* was also an attractive book"—as the writings of Dr. Allinson [probably Thomas Richard Allinson]" (p. 118-21).

As Gandhi set out to try to play the English gentleman, his vegetarianism occasionally led to awkward social situations but he never broke his vows—except for a brief lapse into eating eggs, which he later regretted.

Chapter 17, titled "Experiments in Dietetics," describes Gandhi's growing awareness of the many facets and implications of a vegetarian diet and of the relationship between humans and animals. He met many kindred spirits in vegetarian restaurants, joined a vegetarian society in

England and subscribed to its journal. Soon he found himself on the Society's Executive Committee. "Here I came in contact with those who were regarded as pillars of vegetarianism, and began my own experiments in dietetics" (p. 137-39).

"Full of the neophyte's zeal for vegetarianism, I decided to start a vegetarian club in my locality, Bayswater. I invited Sir Edwin Arnold, who lived there, to be Vice-President. Dr. Oldfield who was Editor of *The Vegetarian* became President. I myself became the Secretary. The club went on well for a while, but came to an end in the course of a few months. For I left the locality according to my custom of moving from place to place periodically. But this brief and modest experience gave me some little training in organising and conducting institutions." Gandhi's extreme shyness prevented him from expressing himself on any subject, including vegetarianism, throughout his stay in England.

"It is my firm conviction, that man need take no milk at all, beyond the mother's milk that he takes as a baby. His diet should consist of nothing but sunbaked fruits and nuts... Restraint of the sexual and other passions becomes easy for a man who lives on such food. My co-workers and I have seen by experience that there is much truth in the Indian proverb, that as a man eats, so shall he become." But while "engaged in a recruiting campaign in Kheda, an error in diet laid me low, and I was at death's door. I tried in vain to rebuild a shattered constitution without milk. I sought the help of doctors, *vaidyas*, and scientists whom I knew to recommend a substitute for milk. Some suggested *mung* water, some *mowhra* oil, some almond-milk. I wore out my body in experimenting on these, but nothing could help me leave the sickbed." Finally he started drinking goat's milk; the spirit of his vow was destroyed—but he recovered and admitted that his theory had failed him. Nevertheless, he declared his "firm conviction, that for the seeker who would live in fear of God, and who would see Him face to face, restraint in diet both as to quantity and quality is as essential as restraint in thought and speech." (Vol. II, p. 45-47).

Gandhi wrote most of the history of his struggle in South Africa while in Yeravda jail, and finished it after he was released (p. 155). "I was now anxious to observe brahmacharya in thought, word and deed, and I was equally anxious to devote the maximum of time to the Satyagraha struggle and fit myself for it by cultivating purity... Fasting and restriction in diet now played a more important part in my life. Passion in man is generally co-existent with a hankering after the pleasures of the palate. And so it was with me" (p. 157-58). Gandhi first went to jail in 1908. At one point he voluntarily gave up salt and pulses. His wife observed that "all restraint, whatever prompts it, is wholesome for man" (p. 171-74). In 1912 Gandhi, Mr. Herman Kallenbach, and 4-5 Musalmans [Muslims] lived at Tolstoy Farm, a community started by Gandhi in 1910 in Transvaal (22 miles from Johannesburg), South Africa;

all were vegetarians. Gandhi decided to give up milk and cereals, and to live on a diet of uncooked fruit, nuts, and olive oil (p. 180-83).

Note: This is the earliest document seen (Oct. 2010) concerning Gandhi and vegetarianism. Address: India.

3490. Kellogg, John Harvey. 1927. *The new dietetics: A guide to scientific feeding in health and disease*. 3rd ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 1031 p. See p. 188-93, 322-28. Illust. Index. 24 cm.

• **Summary:** This is an encyclopedia of food, diet, and nutrition. Earlier editions were published in 1921 and 1923. The author, a physician and a vegetarian, lists his credentials on the title page: "Fellow of the Royal Society of Medicine of Great Britain, of the American Medical Association, Member of the American Economic Association, and of the National Geographical Society, Member of the Société d'Hygiene of France, Late Member of the Michigan State Board of Health, Editor of "Good Health," Superintendent of the Battle Creek Sanitarium, President of Battle Creek College.

Table XIV (p. 188) lists soy beans as a food rich in lime (calcium), containing 0.46%. Pages 189-93 discuss "Acids and bases of food—The acid alkaline balance." It begins: "As pointed out by Bunge many years ago, and as further shown by an extensive research conducted by Sherman, of Columbia University, foodstuffs differ in relation to their acid and basic contents. In certain foods, bases or alkalies predominate, while in others the mineral acids predominate.

"The waste products of the body are predominantly acid; consequently it is desirable that the foodstuffs should be predominantly basic. If acids predominate in the ration, and this condition continues for a considerable period of time, the effect will be to disturb the nice balance between acids and bases which is normally maintained in the body fluids and which is essential for life. A deficiency of alkalies constitutes acidosis.

"It is necessary that the alkalinity of the blood should be constantly maintained as the only means by which the acid wastes of the body which are constantly accumulating as the result of all sorts of vital work may be promptly removed." All flesh foods leave highly acid residues. Eggs are also acidic, though less strongly than meat. Cereals and bread are acidic, though much less so than meats. Milk is slightly alkaline. Most fruits, and all green and root vegetables are strongly basic and tend to alkalinize the tissue fluids... Generally it is better to select foods which afford a large basic margin so as to add to the alkali reserve of the body, which always tends toward diminution, especially in old age. A strongly basic diet is especially indicated in cases of arteriosclerosis and disease of the kidneys, in fevers, in pregnant women, in all forms of acidosis, and in old age...

"At the present time all physiologists are agreed that the highest degree of physical vigor and efficiency may

be maintained on a diet which excludes flesh foods and physiologists the world over are unanimous in advising a curtailment rather than an increase in meat consumption.”

Table XVI (p. 192-93) is titled “Excess of acid or alkali in one ounce and in 100 calorie portions of common foodstuffs.” The Soy bean has an excess of base (alkali), 12.0 units per 100 calories or per 1 ounce.

In the chapter on Legumes, pages 322-28 give a detailed and accurate discussion of the soy bean and various soyfoods, including the history and nutritional composition of the soy bean, soy bean milk, to fu [tofu], soy sauce, and soy bean sprouts. On the first page, Dr. Kellogg states: “The soy is the best of all beans.”

In the chapter titled “Infant Feeding,” under “Vegetable Milk” (p. 956), Dr. Kellogg states: “The Chinese have for ages made from the soy bean a preparation which so closely resembles the dairy product that it may not inappropriately be called vegetable milk. A much better preparation is made from walnuts, almonds, and even peanuts... Milk prepared from walnuts and almonds is used in China, the Philippines and throughout the Orient, as a food for nurslings for whom a wet nurse can not be provided. This custom prevails extensively in those Asiatic countries in which cow’s milk is but little used.

“A nut milk commonly known as ‘Malted Nuts’ has been made in this country for more than thirty years and has come into extensive use... These plant protein milks render great service especially in the treatment of infants and invalids who are sensitized to cow’s milk. They are also valuable resources in the treatment of colitis in infants and in cases in which change of the flora is found difficult, so that the suppression of all animal proteins becomes necessary.”

Also discusses quinoa, kaoliang, and the adzuki bean.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “alkalinize” to refer to making a food more alkaline. Address: Battle Creek, Michigan.

3491. Leclerc, Henri. 1927. *Les légumes de France: Leur histoire, leurs usages alimentaires, leurs vertus thérapeutiques* [The vegetables of France: Their history, their food uses, their therapeutic virtues]. Paris: Masson et Cie. 257 p. 21 cm. [Fre]*

• **Summary:** The author was born in 1870.

3492. Lovell, Philip M.; Press-Lovell, Leah. 1927. *Diet for health by natural methods: Together with health menus and recipes. Complete instructions for the cure of the sick without the use of drugs.* Los Angeles, California: The *Times-Mirror* Press. xiii + 428 + [7] p. No index. 21 cm.

• **Summary:** Part I: Treatment and diet, by Dr. P.M. Lovell. Part II. The preparation of health foods, by Leah Press-Lovell (recipes, p. 129-428). Some of the recipes in this book first appeared in the “Care of the Body” section of

the *Los Angeles Times*, which Dr. Lovell has edited for the past few years. “This is the pioneer health department of any newspaper in the country, undoubtedly the most widely read and unique, in so far as it advocates drugless, natural therapy” (p. 4). “This book is based on vegetarian principles. Meat recipes... are not included.” Many reasons for this are given. Meat includes fish and fowl (p. 8-9).

Soy-related: “Soy sauce or shoyu is made from soy beans and can be bought at Japanese stores. It gives a tasty flavor to gravies and to cereals” (p. 134). Chop suey (3 types), each served with “Soy bean sauce” (p. 290-91). Soy gravy (with soy—also called soy sauce or shoyu, p. 305). Chapter 14, “Legumes” (p. 366-70) discusses chick peas (Garvanza), lentils, peanuts, and “Soy beans: Best known in China and India. Rich in oil. Contain almost no starch. Require slow cooking to bring out flavors. Hulls are difficult to digest. Therefore remove them by rubbing through a colander.” “About the soy bean: The soy bean is very important in the Orient. When three-fourths grown it makes a nutritious green vegetable [yes] known as ‘bean sprouts’ [no]. Products of soy beans are soy bean flour, soy bean milk, soy bean cheese (tofu), soy sauce, soy bean oil, sprouts, etc. Soy bean products can be bought at Japanese and Chinese grocery stores.” Contains 3 recipes: Soy roll or bread (replace 25% of the whole wheat flour with soy flour in any whole wheat bread recipe). Soy bean porridge (cook 1 cup soy bean flour with 3 cups water for 2 hours in a double boiler. Cool, slice, roll in corn flour and bake with butter or oil to make croquettes). Soy bean croquettes (with “1 cup soy bean porridge”). Soy bean milk (made from soy bean flour, p. 420; also almond milk and cocoanut milk).

Also discusses: Of the general advice given to patients, “the subject of diet occupies the leading position” (p. viii). Agar flakes (vegetable gelatine) are better than animal gelatine (p. 135). Almonds—How to prepare almond milk, cream, and meal (p. 152). Cocoanut—To prepare cocoanut milk. Peanuts—How to prepare raw peanut butter (p. 153). Garvaza [garbanzo] beans and meal (p. 308-09). Nut loaf (Vegetable turkey) (with peanuts, p. 315). Carqué’s unfermented whole wheat bread (p. 351). Carqué’s unleavened fruit bread (p. 351). Recipes using Graham flour (different from whole wheat flour, p. 356-59).

• **Summary:** "450,000 years ago there were intelligent human beings on earth... But they were far cleaner internally than mankind today... If you want to know what it really

feels like to be thoroughly, refreshingly clean inside, take Innerclean Intestinal Laxative. This is not a drug extract but a wholesome compound of dried aromatic herbs and vegetables perfected by Prof. Arnold Ehret,..."

"Nature will keep you clean internally if you give her a chance. But you have to do your part with exercise, proper breathing, and non-clogging foods... fruits and non-starchy vegetables mostly." Discover the Health Cafeteria, 217 West 6th St. (between Spring and Broadway), and 1000 West 7th St., and the Whole Wheat Bakery-Cafe at 820 West 6th St., near Figueroa. The latter is open all day Sunday and specializes in a "wonderful 60 cent table d'hote vegetarian dinner."

"I speak every Tuesday at 8 p.m. in conjunction with Dr. Newcomb, Chief Clinician of the Health Center, and Prof. Barclay Severns has charge of a lecture program every Friday at 8 p.m. Our hall was packed last week. Were you there?"

Note: This is the earliest document seen (March 2007) in which Paul Bragg is *not* mentioned in connection with the Health Center. It is also the earliest document seen (July 2021) that mentions Fred. S. Hirsch or Dr. Newcomb in connection with the Health Center. Fred Hirsch has been Arnold Ehret's manager since about the early 1920s. Newcomb is probably a naturopathic doctor. But does he have any credentials? Note the three addresses given above. Starting on about 15 Jan. 1928, Bragg and his Health Center are at a new address, 840 South Hill Street. What's going on here? Address: D.N.S., Managing Director, Health Center, 1000 West Seventh St. [Los Angeles].

3500. *Volksernaehrung (Die) (Berlin)*. 1928. Kuechenzettel fuer vegetarische Speisen und Schonungsdiaetspeisen [Menu for vegetarian foods and protective diet foods]. 8(3):41-42. Feb. 5. [Ger]

• **Summary:** This menu is divided into two parts: Vegetarian and protective. The protective diet, which is not vegetarian, allows fresh quark, veal, and fish cutlets.

3501. Carque, Lillian R. 1928. Mrs. Carqué's recipe book. Los Angeles, California: Otto Carqué. 32 p. Illust. 15 cm.

• **Summary:** Inside front cover: "Dear Friends: This recipe book has been created to fill a deeply felt human need, namely to emphasize the importance of a fruitarian as well as vegetarian dietary, and to encourage the greater use of nature's most wholesome foods..." Signed, Lillian Carqué (Mrs. Otto Carqué).

This book has no table of contents. However the recipes are divided into "divisions." Fruit & nuts (p. 1-12). Vegetable salads (p. 13-18). Cooked dishes (p. 18-23). Vegetable soups (p. 23-24). Fruit soups (p. 24-25). Fruit cocktails (p. 25). Desserts (p. 25-27). Sandwiches (p. 27-28). Unfired pies [raw] (p. 28-29). Sauces & dressings (p. 29-31). Breads (p. 31). Health confections (p. 32).

Soy related recipes include: Soya bean bread (with 1½ cups Carque's Soya Bean Flour 2 cups whole wheat flour, 1½ cups nut milk, 2 tablespoons Carque's Honey, etc., p. 31).

A photo at the top of many pages shows the dish prepared from the recipe on that page.

The recipes call for many Carque brand products by name—such as: Carque's Almond Butter, Carque's Black Mission Figs, Carque's California Dates, Carque's California Honey, Carque's California Olive Oil, Carque's Celery Salt, Carque's Cracked Wheat, Carque's Deglet Noor Dates, Carque's Dried Apricots, Carque's Fig Paste, Carque's French Dressing, Carque's Gem Peanut Butter, Carque's Granulated Agar, Carque's Lentil Flour, Carque's Natural Whole Rice [brown rice], Carque's Nut Cream Butter, Carque's Nut Fruto, Carque's Nuts, Carque's Onion Salt, Carque's Orange Blossom Honey, Carque's Peanut Butter Dressing, Carque's Peanut Meal, Carque's Pecan Meal, Carque's Pitted Dates, Carque Powdered C-Leaves, Carque's Prunola Dressing, Carque's Raw Hawaiian Sugar, Carque's Ripe Olives, Carque's Savory Nut Loaf, Carque's Seeded Muscat Raisins, Carque's Seedless Raisins, Carque's Shredded Coconut, Carque's Soya Bean Flour, Carque's Thompson Seedless Raisins, Carque's Unsulphured Dried Peaches, Carque's Unsulphured Dried Pears, Carque's Whole Wheat Macaroni.

Lillian R. Carqué was born in 1899. This book was published about 7 years before Otto Carqué's death on 9 Jan. 1935.

According to OCLC (Dec. 2010) Helen Evans Brown was a former owner of this book. It was donated to the Huntington Library by Philip S. Brown. Address: 1016 So. Hill St., Los Angeles, California.

3502. Thoms, Herbert. 1928. William Andrus Alcott: Physician, educator, writer. *Bulletin of the Society of Medical History of Chicago* 4(1):123-30. April. [10 ref]*

• **Summary:** An excellent, scholarly biography of Dr. William Alcott. Address: New Haven, Connecticut.

3503. Wu, Hsien; Wu, Daisy Yen. 1928. Growth of rats on vegetarian diets. *Chinese J. of Physiology* 2(2):173-94. April. [8 ref. Eng; chi]

• **Summary:** Rats, which are omnivores, grew slowly on a strictly vegetarian diet. Address: Dep. of Biochemistry, Peking Union Medical College, Peking, China.

3504. Kellogg, John Harvey. 1928. The rise of bran. *Good Health (Battle Creek, Michigan)* 63(5):36-37. May.

• **Summary:** The article begins: "The rise of bran in public esteem and general use as an article of diet has in recent years been so rapid as to be almost spectacular."

"Of course bran is not a new discovery... All primitive grain eaters... made use of the bran along with the rest of the grain."

"In this country the interest in bran began with the diet reform movement started by Sylvester Graham in the forties of the last century." He lectured widely, "advocating the use of whole meal flour. The graham flour and graham bread, with which everybody is familiar, and the great interest in bran, are the results of his efforts."

Dr Morris Fishbein, editor of the *Journal of the American Medical Association*, and one of the most prolific of modern medical writers, wrote about the importance of bran in the April 1928 issue of *Scientific American*. Hippocrates was also a believer in bran.

3505. Winckel, Max. 1928. Die vegetarische Kueche in der Praxis [Vegetarian cooking in practice]. *Volksernaehrung (Die)* (Berlin) 8(13):203-04. July 5. [Ger]

Address: PhD, Meraner Strasse 1, Berlin-Schoeneberg, Germany.

3506. *Literary Digest*. 1928. America going vegetarian. 98(3):19-20. July 21. [1 ref]

• **Summary:** A writer in *American Medicine* (New York) bemoans the fact that since World War I, vegetarianism has rapidly become more popular in the USA. Though until recently "vegetarian restaurants were the quaint, secret resorts of pale, anemic, queerly drest dyspeptics, who ate etiolated food in silence, and meanwhile registered acute agony facially, to-day vegetarianism pays, and even the healthy and corpulent are vegetarian..."

"In our passion for vitamins and minerals, we may even forget that meat protein is more easily assimilated than vegetable protein, and that it therefore admirably balances a meal. 'We may even be safe in suggesting a decided curtailment of meat consumption. Yet Vilhjalmur Stefansson, the Arctic explorer, lived for nine years on an exclusive meat diet... and emerged in a state of perfect health according to a complete physical examination made soon thereafter.'" Address: USA.

3507. *New York Times*. 1928. Tombs bad for vegetarian: "Go to jail, yes; but what shall I eat?" says Dooniefsky. July 26. p. 12, col. 2.

• **Summary:** S. Dooniefsky, sentenced to jail, objects to meat fare.

3508. Bragg's Health Center. 1928. This advertisement may save your life: Read every word of it (Ad). *Los Angeles Times*. Aug. 5. p. K29.

• **Summary:** A photo at the top left of the ad shows "Prof. Paul C. Bragg: He may save your life," standing in a full-length gym outfit and looking very fit and strong. Discusses: "Know your physical condition: Everyone should have a thorough Physical Examination once a year." Bring this ad and you will be given one for free by "the Chief Diagnostician of the Bragg Health Center." Keep your

“intestines clean and free from putrefaction. Hundreds of folks eat daily at my famous Vegetarian Health Cafeteria.” “Prof. Hall can give you luxuriant hair... the noted hair specialist is doing wonders for folks with falling hair, dandruff, oily, gray, off colored hair.” Call for a free scalp examination. Free lecture by “Betty Brownlee, the Health girl.” Address: 840 So. Hill St. [Los Angeles].

3509. McCoy, Frank. 1928. Health and diet advice. *Los Angeles Times*. Aug. 8. p. A6.

• **Summary:** The section titled “Cheese without pie” notes that cheeses from which the cream [fat] has been partly removed are most easily digested. “Cottage cheese is very wholesome, and is often used by vegetarians as a substitute for meat.”

“Even the Japanese, who are too crowded in their picturesque island islands to raise cows, have a kind of cheese [tofu] manufactured in much the regulation manner by souring soy bean milk.” Note: Tofu is made by coagulating soy bean milk with a salt (such as magnesium chloride and/or calcium sulfate), not by souring it. Address: Dr., author of “The Fast Way to Health”.

3510. *Los Angeles Times*. 1928. Eutropheons to be meet motif. Aug. 14. p. A3.

• **Summary:** “The Eutropheons, who claim the distinction of having originated the only dining-rooms in the world in which no cooked foods are served, will be the guests of Dr. Philip M. Lovell and staff at the dietetic lecture-demonstration this afternoon at 2 o’clock... at 130 South Broadway.

“Dr. Lovell will talk on the preparation of unfired foods, while Mrs. Eva Richter, manager of the Eutropheons, and her assistants will prepare and serve... natural products without any cooking except that done by the sun.

A booth will display more than 50 natural food products and samples of olive bread, nut roll and rhubarb drink will be served.

3511. Mitchell, Helen S. 1928. Nutritive value of the garbanza pea. *Western Hospital and Nurses’ Review* 11(6):26-27, 52-53. Aug. [9 ref]

• **Summary:** The garbanza is also known as the gram or chic pea, and sometimes as the Idaho pea. Artemus, in *The Encyclopedia of Foods and Beverages*, states that it is widely used in Mediterranean countries and was probable the “pulse” of the ancient Hebrews. Today is it a leading article of diet in Spain.

Pages 26-27 show the growth rates of rats fed garbanza pea, soy bean, and casein diets. Address: PhD, Nutrition Lab., Battle Creek Sanitarium [Michigan].

3512. *Literary Digest*. 1928. Tabus and humors of a life bowed down to spinach. 98(9):43-44. Sept. 1. [1 ref]

• **Summary:** Describes some humorous and philosophical aspects in the life of vegetarian Elsie McCormick, who wrote of her experiences in the *New York World*. Her vegetarian doctor told her to try a vegetarian diet to combat digestive problems. The tone of both articles is critical or sarcastic.

3513. Damrau, Frederic. 1928. Eat all the meat you want. *Independent (The) (With Which is Incorporated Harper’s Weekly)* 121(4087):303-04, 312. Sept. 29.

• **Summary:** The beliefs of vegetarians and others that meat is harmful to one’s health are unfounded; the best diet is a mixed one containing both meat and vegetables. “A deep-rooted conviction that meat is intrinsically harmful dates as far back as mythology, wherein we read of the Hyperboreans, a fabulous race of people who were reputed to live a thousand years and longer by the simple expedient of eschewing all forms of flesh...”

“When we seek real proof of the harmfulness of meat, we find nothing but tradition and supposition. It is true that Dr. Alexander Haig, some years ago, wrote a book in which he attributed many human ills to uric acid poisoning. As meats are rich in substances from which uric acid is formed, Dr. Haig advised a meatless but not strictly vegetarian diet in the treatment of the various diseases which he believed to be due to uric acid excess. His ‘theory’—it never really attained the scientific dignity of a true theory—has long since been repudiated. It is now known that uric acid is not harmful, that it merely represents an innocent end product of the body’s activities, and that it is the failure of the body’s furnaces to burn up the food products and the consequent formation of uric acid that causes the real trouble.

“The cause of vegetarianism and subvegetarianism receives a rude jolt when we consider the experience of Vilhjalmur Stefansson. This famous explorer lived for eleven and one half years within the Arctic Circle. During nine of them he ate nothing but meat. Did his health suffer, as the vegetarians would have us believe? No. He never felt better in his life.” Address: M.D.

3514. Bircher, Max Edwin. 1928. Der Einfluss der fruktovegetabilen und vorwiegend rohen Ernährungsweise auf die Viskosität des Blutes, auf dessen Haemoglobingehalt und auf den Blutdruck. I. Der Einfluss... auf die Viskosität des Blutes. II. Der Einfluss... auf den Haemoglobingehalt [The influence of vegetarian diet, predominantly raw, on the viscosity of the blood, the hemoglobin content, and the blood pressure. I. Influence on the viscosity of the blood. II. Influence on the hemoglobin content]. *Schweizerische Medizinische Wochenschrift* 58(40):987-93. Oct. 6. [Ger]

• **Summary:** A vegetarian diet appears to normalize the viscosities of the blood, hemoglobin, and blood pressure.

The original famous Swiss natural doctor was Max Oscar Bircher-Benner, born in 1867. He was head of a sanatorium in Switzerland, where he advocated a raw-

foods vegetarian diet. Address: From the Sanitorium of Dr. Bircher-Benner, Zurich, Switzerland.

3515. Bircher, Max Edwin. 1928. Der Einfluss der fruktovegetabilen und vorwiegend rohen Ernährungsweise auf die Viskosität des Blutes, auf dessen Haemoglobingehalt und auf den Blutdruck. III. [The influence of vegetarian diet, predominantly raw, on the viscosity of the blood, the hemoglobin content, and the blood pressure. III. Influence on the arterial blood pressure]. *Schweizerische Medizinische Wochenschrift* 58(41):1010-14. Oct. 13. [20 ref. Ger]

• **Summary:** A vegetarian diet appears to normalize the viscosities of the blood, hemoglobin, and blood pressure. Address: From the Sanitorium of Dr. Bircher-Benner, Zurich, Switzerland.

3516. Health Center. 1928. Are you playing safe when you eat? (Ad). *Los Angeles Times*. Nov. 18. p. H27.

• **Summary:** "There is more truth than folks realize in the statement that many people dig their graves with their teeth." Bad diet is the main cause of disease and suffering. "Highly seasoned foods, such as are served at most restaurants and homes, are bad for a healthy stomach, and if the person who eats them has anything wrong with his digestive system they may be as bad as poison."

"There is just one way to play safe with your diet and that is to eat at a place where the most scrupulous care is taken to avoid dangerous combinations of highly seasoned or otherwise unwholesome foods."

The Health Cafeterias: In Los Angeles there are four Health Cafeterias which are seriously dedicated to the principles of scientific diet. Only such foods as are known to be beneficial are selected. All meats are omitted from the menus. Specially designed cooking utensils insure the maximum retention of the vitamin content and mineral salts which are known to be veritable well springs of health."

Initially, "you may miss the pepper, the vinegar and the other condiments to which you may be accustomed. But the taste of Health Cafeteria food will grow on you, especially after you have noticed a marked improvement in your health and general well being."

"Health is wealth—Why be poor? Patronize the Health Cafeterias at either of the following locations: 217 West Sixth Street, 320 West Sixth Street, 639 South Olive Street, 1000 West Seventh Street."

"The Health Cafeteria at 639 S. Olive St. is open Sundays! Good music every evening."

"More benefits—Less costs at Highland Springs Health Resort." There "you can get the celebrated Arnold Ehret System of Mucusless Diet." Sunbathing, sports, and "entertainment of all sorts." "Enjoy a week end for as low as \$4. Make reservations at any Health Cafeteria..."

Free lectures Monday and Tuesday nights by Dr. C.A. Newcomb and Fred S. Hirsch. Weavever aluminum cooking utensils given away with lecture on "Proper cooking as health insurance."

"Send for a free package of Prof. Arnold Ehret's Innerclean intestinal laxative, from Innerclean Mfg Co., 846 E. 6th St., L.A."

Note: This is the earliest document seen (March 2007) that a Health Cafeteria (or any other health-related organization) at 630 South Olive Street. However Paul Bragg is not mentioned. Address: 1000 West Seventh St. [Los Angeles].

3517. Abbott, George Knapp. 1928. High blood pressure: And degenerative diseases of the heart, blood vessels, and kidneys. Takoma Park, Washington, DC, Peekskill, New York, and South Bend, Indiana: Review and Herald Publishing Assoc. 176 p. Illust. No index. 20 cm. [50+ ref]

• **Summary:** This book, by a Seventh-day Adventist physician, is "the outgrowth of 25 years of medical practice, chiefly institutional, where high blood pressure and degenerative diseases have been an ever-present problem... The problem of so-called essential hypertension had been a baffling and discouraging one until the researches of Sansum and Nuzum gave the added detail of the acid factor [acid-alkali balance], and we have made very definite and precise the rationing in both protein and alkalizing dietary factors" and standardized these into "a simplified system understandable and practical for the use of the patient..." (p. 5).

A poem titled "The fence or the ambulance" humorously encapsulates the debate between prevention and treatment of illness (p. 7).

A table (p. 26) shows the increase in heart disease death rate in the USA from 1900 to 1925, It was 132 death per 100,000 population in 1900 and 186 in 1925, for a 41% increase. Heart disease is the leading cause of death in the USA.

The chapter titled "Strength and endurance" (p. 38-53) discusses: The research of Russell H. Chittenden of the Sheffield Scientific School at Yale University [Connecticut]. He found that a relatively low protein diet helped develop endurance. He was not interested in vegetarianism. "Chittenden's conclusions have never been disproved. No flaw could be found in his experiments." Yet prejudice persists that humans do best on a high-protein diet. Fatigue poisons include uric acid or purine substances. Caffeine and uric acid are nearly alike. Graphs show the effects of caffeine on producing premature muscle fatigue.

The chapter on "High blood pressure and degeneration" (p. 54-66) shows that a low protein vegetarian diet leads to low blood pressure. Three groups of rabbits, placed on high-protein diets, each group on a different type of protein, developed increased blood pressure. These experiments,

lasting for nearly 3 years were conducted at the Potter Memorial Clinic of Santa Barbara, California. In the “Soy bean protein group” (p. 57-58) a group of 12 normal rabbits was fed a diet containing 38% protein, chiefly from soy beans. A graph shows that within 4 months (relatively late) elevation of blood pressure occurred, the range for the first year being 78 to 94—the highest 4 diets graphed. But after 18 months (graph, p. 59) the soy beans diet produced the next to lowest blood pressure. Ultimately the liver diet produced the highest blood pressure. “Not one of the twelve rabbits on the soy bean diet presented arteriosclerosis... but three showed spontaneous sclerosis.” 89% of rabbits on the liver diet showed a kidney disease similar to Bright’s disease found in humans—marked especially by albumin in the urine. 80% of the rabbits on the soy bean diet showed this kidney disease (p. 59-60). The summary (p. 60) states that increased blood pressure appeared latest in those “on a vegetable (soy bean) diet, which kept the urine alkaline.” “The meat and grain protein diets contributed to acidosis, that is, increased acids in the blood. This was not true of the vegetable [soy] protein diet. The acidifying diets, meat and cereal, resulted in hardening of the arteries, while the alkalinizing did not.”

The chapter titled “The food problem” (p. 67-76) discusses Denmark’s food experiment under Dr. Hindhede, who was made “food dictator” during World War I, and the good health that resulted when the entire nation ate a vegetarian diet largely free of dairy products and eggs. They ate all natural “pig food and hen food.”

The chapter on “Hardening of the arteries” (p. 83-94) defines the development of arteriosclerosis and atherosclerosis; It was not present in any of the 12 rabbits “on a soy bean diet, a strongly alkalinizing diet.” “A high protein diet from liver makes a decidedly acid urine with reduction in alkali reserve (carbon dioxide combining power) of the blood” (p. 86-88).

The chapter titled “The unbalanced ration” (p. 122-29) uses the writings of Dr. McCarrison and Dr. Hindhede to argue that simple, primitive diets are healthier than civilized diets.

The chapter titled “The normal diet” (p. 134-60) suggests three basic principles for a healthy diet: (1) Avoid excess protein foods above the normal body requirements of 40-45 gm/day of protein. (2) Avoid excess of acid-ash foods over alkalinizing foods. (3) Avoid excess of total calories (overeating). Soy beans are listed (p. 138) as a high-protein food with an alkalinizing ash. The section on “Complete and incomplete proteins” (p. 140-41) lists soy beans as a source of complete proteins. Meat, although a complete protein, is considered “an inferior food.” The section on “Alkalinizing balance” (p. 143-49) states that acid ash comes from sulphur and phosphorous acids. Alkaline bases are sodium and potassium. The blood and tissue fluids “are normally slightly alkaline. If the blood became even very slightly acid, death would result.” A full-page table (p. 144) ranks many foods

on a scale ranging from acid forming to base forming, with “Foods nearly neutral” in the middle. “Of the legumes, peas and beans are alkaline, the latter very strongly so, while lentils and peanuts are acid in ash. Almonds are alkaline...” Address: A.B., M.D., Medical Director of the Washington Sanitarium and Hospital, Washington, DC.

3520. Beston, Henry. 1928. *The outermost house: A year of life on the great beach of Cape Cod*. Garden City, NY: Doubleday, Doran and Co. xv + [2] + 222 p. See p. 25. Illust. (photos). 20 cm. Reprinted in 1992. [1 ref]

• **Summary:** “We need another and a wiser and perhaps a more mystical concept of animals. Remote from universal nature, and living by complicated artifice, man in civilization surveys the creature through the glass of his knowledge and sees thereby a feather magnified and the whole image in distortion.

“We patronize them for their incompleteness, for their tragic fate of having taken form so far below ourselves. And therein we err, and greatly err.

“For the animal shall not be measured by man. In a world older and more complete than ours they move finished and complete, gifted with extensions of the senses we have lost or never attained, living by voices we shall never hear.

“They are not brethren, they are not underlings; they are other nations, caught with ourselves in the net of life and time, fellow prisoners of the splendour and travail of the earth.”

Henry Beston lived 1888-1968. Address: Cape Cod, Massachusetts.

• **Summary:** An English-language edition of this vegetarian cookbook, translated by Marguerite Meisner, was published in London in 1934.

3522. Christian, Eugene. 1928. Why die. New York, NY: Eugene Christian. xx + 356 p. 22 cm.

• **Summary:** About vegetarianism, with menus. Many Americans of all ages die because they eat a poor diet. Address: New York, New York.

3523. Freud, John. 1928. Berczeller's soya flour: An economic aspect of the alimentary problem. In: L. Berczeller. 1928. Publications on Berczeller's Soy Flour. Vol. I. 3 p. Unpublished manuscript. [Eng]

• **Summary:** It is very difficult to introduce a new foodstuff into the general diet. "The history of nutrition gives few examples of this kind. In the pre-scientific era, 400 years ago, the potato was introduced in Europe. It took many decades, perhaps a couple of centuries, to make it popular. This is hardly surprising if we just remember that the means available at those times did not allow an exact scientific judgement [judgment] or commercial propaganda in favour of the new product."

Is there any necessity of dietary reform today? A careful review convinces us of the uneconomic way we obtain our food supply. "There will hardly be a possibility of reducing the expenses for vegetable foodstuffs. These contain almost directly the converted energy of the sun. Quite different is the outlook for the animal protein. Here the enormous waste of energy in the process of transformation of vegetable calories into animal calories is plainly visible. A simple illustration of this fact is yielded by the comparison of the prices of one vegetable with one animal calorie... we pay up to ten times as much for the animal calorie as we pay for the vegetable one. Here... the national economic necessity of the food reform is plainly demonstrable... The hygienic possibility of such a reform is the next problem. Medical Science has to reject an indiscriminating vegetarianism. We cannot dispense with the animal protein, without an equivalent substitute. Any of the vegetable proteins, now in general use, cannot possibly compete, in the sense of equivalence to meat, with the *Protein of the Soya Bean*."

The best way to consume soybeans is in the form of Berczeller's Soya Flour. It retails for no more than 3 pence a pound. "The 'food reform' might be perhaps the key to the problem of financial struggle. Let us say to the shortsighted cautiousness that what appears today a private or national economic possibility, will become tomorrow a mathematically inevitable necessity of human nature." Address: Asst. Physiologist, University College, Cork, Ireland.

3524. Hartmann, Arthur. 1928. Rohkost und fleischlose Ernaehrung [Raw foods and meatless diets]. Munich, Germany: J.F. Lehmanns Verlag. 90 p. 23 cm. [Ger]

• **Summary:** Discusses the health benefits of vegetarian and raw foods regimens, gives details on minerals and nutrients in various foods, and presents sample diets and menus. Address: Heidenheim a. Br., Germany.

3525. Harwood, Dix. 1928. Love of animals and how it developed in Great Britain. New York, NY: 381 p. 23 cm. *

• **Summary:** Harwood argues (p. 300) that Dr. George Cheyne and Joseph Ritson were the only two true vegetarians in England in the late 1700s "who practiced what they mildly preached."

3526. Kellogg, John Harvey. 1928. Experience proves the advantages of a meatless diet. Battle Creek, Michigan: Good Health Extension Bureau. 8 p. 16 cm.

• **Summary:** Contents: Introduction. The Battle Creek Sanitarium has excluded meat for more than fifty years. Science demands disuse of meats. A meatless diet helps surgery. A New York hospital adopts a meatless dietary. Address: M.D., Battle Creek, Michigan.

3527. Kellogg, John Harvey. 1928. Filth germs in meat. Battle Creek, Michigan: Good Health Extension Bureau. 8 p.

• **Summary:** Contents: Introduction. Cooking does not protect against meat germs. Meat is not essential. Meats encourage intestinal putrefaction. A beefsteak that killed guinea pigs. Vegetable proteins (nuts, beans) and milk do not encourage putrefaction. Address: M.D., Battle Creek, Michigan.

3528. Kellogg, John Harvey. 1928. Pythagoras on the ethics of diet. Battle Creek, Michigan: Good Health Extension Bureau. 8 p. 16 cm. [1 ref]

• **Summary:** "Pythagoras, the founder of Greek philosophy, was born in the early part of the sixth century, B.C. (586), on the Island of Samos, from which he was driven by the tyrant Polycrates. He and his followers formed a colony at Crotona, in southern Italy, which seems to have been a model health city, where the rules of biologic living were established conventions.

"The philosophy of Pythagoras recognized the blood brotherhood of living creatures and prohibited the taking of life, and hence of eating flesh. Pythagoras and his followers, among whom was Milo, the Greek athlete, dressed in white clothing, and maintained the highest standards in manners and morals. Their virtues were, naturally, a living condemnation of the conduct of most of their contemporaries, who ultimately, by persecutions drove Pythagoras into exile, and one night gathered in a mob and fell upon and massacred the remnant of his devoted disciples,

who were gathered in the house of Milo.

"The following poetical description of the ethical teaching of this great thinker on the subject of diet, was written by the famous Latin poet Ovid, who lived shortly before the Christian Era, and was translated from his 'Metamorphoses,' by the English poet, Dryden."

There follows five pages of quotation from Ovid's Metamorphoses. Address: Battle Creek, Michigan.

3529. Kellogg, John Harvey. 1928. Should an athlete eat meat? Battle Creek, Michigan: Good Health Extension Bureau. 7 p. 16 cm.

• **Summary:** "Science says 'No.'"

"And why?"

"Here is the answer.

"The muscle is a machine, like an automobile.

"When a muscle, works, it burns sugar and makes acids (lactic acid and carbon dioxide).

"Exercise does not use up the muscles, but only the sugar stored in them.

"What an athlete needs, then, to feed his muscles is not muscle meat, but sugar, Vegetable food, chiefly starch, which becomes sugar, when digested.

"Running at top speed, a sprinter makes a dram of lactic acid every second, half a pound in one minute. This acid must be instantly neutralized. If it accumulates, the runner becomes exhausted and his muscles refuse to act. To neutralize this acid, the blood is made alkaline. The more alkaline the blood, the longer the athlete can run or wrestle or row.

"The blood gets its alkaline substances or 'bases' from foods. Some foods, like fruits and vegetables, are rich in bases. Meats are strongly acid foods (phosphoric and sulphuric acids). All meats lessen the alkalinity of the blood. Animals that eat much meat have little endurance. Said Roosevelt, 'A horse (grass eater) with a heavy man on his back, can run down a lion (meat eater) in a mile and a half.'

"Milo, the strong man of history, was a flesh abstainer.

"The famous gladiators of the early Roman arena were trained on a meatless diet.

"Caesar's victories were won by an army fed on wheat.

"A Tarahumara Indian (Mexican) runner carried a government dispatch three hundred miles and back (six hundred miles) through a wild mountainous region, in five days.

"Indian porters in the Andes carry two hundred pounds on their backs thirty miles a day on a diet of bananas.

"A Riffian warrior, sixty-seven years old (vegetable feeder) ran seventy miles in ten and one-half hours.

"Professor Joteyko, of Japan, showed that flesh-abstainers have two or three times the endurance of meat-eaters.

"Prof. Irving Fisher of Yale University made a comparative study of the endurance of flesh-eating athletes

and flesh-abstainers. Of the results of one of the tests, he says (*Yale Medical Journal*, 1907), 'Even the maximum record of the flesh-eaters was barely more than half the average for the flesh-abstainers.' As a matter of fact, the endurance of the flesh-abstaining athletes was nearly nine times that of the flesh eaters in one test (arm holding, arms stretched out horizontal). Professor Fisher says further respecting his experiments:

"The flesh-eaters were largely men in training for athletic contests at Yale; the abstainers were such Yale students as I could find who did not use meat, or used it very sparingly, and nurses and physicians of the Battle Creek Sanitarium...' One of the most severe tests was in deep knee-bending, or 'squatting.' Few of the meat-eaters could 'squat more than three hundred to four hundred times, and it was almost impossible for them to walk down the gymnasium stairs after the test, without falling, so weakened were their thigh muscles. On the other hand, one of the Yale students who had been a flesh-abstainer for two years did the deep knee-bending eighteen hundred times without exhaustion; after which he ran without difficulty on the gymnasium track and walked several miles. Another subject, a nurse at the Battle Creek Sanitarium, did the deep knee-bending twenty-four hundred times; after which he proceeded with his regular work without serious inconvenience. Another nurse has recently accomplished the surprising record of five thousand times. One remarkable difference between the two sets of men was the comparative absence of soreness in the muscles' of the meat-abstainers after their tests.'

"Meat Makes the Athlete Tired: The acids of meat 'make the athlete tired. Said Battling Nelson after being defeated in a boxing bout, 'Twas the beefsteak that done it. I swiped an extra 'beefsteak when my trainer wasn't looking, and it made me tired.'

"Meats are in a state of beginning putrefaction when eaten. The ten per cent residue which reaches the colon undigested, while waiting for evacuation becomes highly putrescent. The poisons produced (skatol and indol) are fatigue poisons (Doctor Herter, Professor Lee, of Columbia). This is the explanation of the results of Professor Fisher's experiments.

"The athlete needs a liberal amount of protein to build up his growing muscles; but he does not need a surplus, and is injured by the excessive quantities usually given him. Meats may be suppressed with great advantage. The best protein for muscle building is found in milk and nuts. A quart of milk a day, plenty of butter, a moderate amount of graham bread, a liberal supply of potatoes, greens, fresh fruits, malt or milk sugar and bran, will put the athlete in the finest possible condition to profit to the fullest degree from muscle training and will give him the maximum degree of endurance." Address: M.D., Battle Creek, Michigan.

3530. Kellogg, John Harvey. 1928. What scientific men say

about meat and meat eating. Battle Creek, Michigan: Good Health Extension Bureau. 8 p. 16 cm. [3 ref]

• **Summary:** “The ‘Meat Board’ says, ‘Eat more meat to save the live-stock industry!’

“Eminent medical authorities say, ‘Eat less meat’ to save yourself from autointoxication, Bright’s disease, high blood pressure, apoplexy, and premature old age.

“Biology says, Eat no meat if you want to live as well and as long as possible.

“Here are the clear-cut, unbiased statements of eminent men of science whose authority cannot be questioned :

“Prof. Alonzo E. Taylor says (*Popular Science Monthly*, 1911), ‘A properly selected and prepared vegetarian diet meets completely the highest requirements of the diet.’

“Dr. Graham Lusk says: ‘If one takes milk with other foods, meat may be dispensed with... Splendid health, both of body and mind, the peasant’s comparative immunity to indigestion, kidney and liver disease, as well as an absolute immunity to gout, is the alluring prospect held out by the following dietary,—graham bread, potatoes, vegetable fat, apples, milk... The question is, Is meat necessary? The description of the Italian dietary answers this in the negative.”

“Professor Tibbles (England) tells us that ‘No long-lived person is a large consumer of meat.’

“Professor McCollum says: ‘I have not the slightest hesitation in saying that a vegetarian diet, supplemented with fairly liberal amounts of milk, is the most satisfactory type of diet that man can take.’

“Doctors Gamier and Simon (*Societe de Biologie* of Paris, 1907), showed that meats given to rabbits cause death from degeneration of the liver, the result of an ‘intoxication originating in the intestine.’ Thousands of human beings die annually from the same cause. A flesh diet is no more natural to man than to rabbits.

“Doctor Pezard, a French investigator, showed that an exclusive diet of meat causes degeneration of the genital glands in cocks, and Chalmers Watson (Scotland), showed the same effects in rats on a meat diet.

“Professor Newburgh, of Michigan State University, showed that meat powder mixed with the food of rabbits invariably produces arteriosclerosis, Bright’s disease and death within a few months. Doctor Newburgh finds that a liver diet causes nephritis in mice in ten days.

“Overton and Dennis in their excellent work, ‘The Health Officer,’ tell us that:

“‘The most prolific oyster and clam grounds are located in shallow bays and estuaries where the water is likely to receive sewage from houses and villages. These waters nearly always contain colon bacilli [manure germs], which are derived from the banks of rivers and creeks which flow into them. Oysters feed by extracting bacteria [germs] and other microscopic plants from the water which passes over their gills. The kinds of bacteria that are in the water will

usually be found in the liquor which surrounds an oyster in the shell. Colon bacilli are nearly always found in this liquor.

“Meat Poisons: Roger, an eminent French physiologist, asserts that meats contain real poisons. ‘Dogs fed with extracts of meat die more rapidly than dogs which receive nothing at all... It is necessary to prohibit meat extracts for invalids.’

“Said the late Doctor Gautier, another of the world’s greatest authorities on diet and nutrition, with reference to meat extracts, ‘We must not forget that these bases are poisons.’ According to Gautier, a quart of beef tea contains enough creatin to kill nine guinea pigs.

“Legendre says that ‘Bouillon is a veritable solution of poisons.’ Said the late Prof. Robert Bartholomew, of Jefferson Medical College, ‘Nothing has been more conclusively shown than that beef tea is not a food. It is nothing more than a stimulant. The chemical composition of beef tea closely resembles that of urine, and it is more an excrementitious substance than a food.’

“Diseased Meats: Says Mr. J.R. Mohler, chief of the Bureau of Animal Industry, United States Department of Agriculture, in the *American Journal of Public Health*, May, 1920:

“‘The great need of an efficient meat inspection is shown by the number of animals and the quantities of meats and products which are condemned yearly on account of disease. For instance, on the postmortem inspection alone there was condemned in the fiscal year 1919 a total of 212,245 cattle, sheep, swine, and goats; while organs and parts of carcasses condemned on account of localized disease run into the hundreds of thousands.’

“In view of the above facts, it will be interesting to the meat eater to learn that, according to the Bureau of Animal Industry, fully one-third of all the meat eaten in the United States is eaten without inspection. And it is a well-known custom among meat and cattle dealers to send meats which will not pass inspection to markets where there is known to be no inspection.

“Meat Germs: All meats are contaminated with colon bacteria (manure germs) in the process of slaughtering. These germs grow in lean meat with extraordinary rapidity, spreading through the whole carcass.

“When meats are hung or kept for some time after slaughtering, putrefaction becomes from day to day more advanced. This is the chief factor in the process of ripening, by which meats are made tender. It is, hence, no wonder that germs are found in great numbers in ordinary fresh meats.

“The tender, juicy beefsteaks served at first-class hotels, when received from the butcher, are often so far advanced in decomposition that the chef has to trim off from the surface a thick layer of mold and slime. These bearded beef steaks have a *haut-gout* which is greatly relished by gourmands, and would tickle the palate of a turkey buzzard or a hyena. Such a decayed carcass found in the back alley, would be

removed by the public scavenger. The fact that it comes from the meat shop does not increase its wholesomeness.

“It is instructive to contrast these unnatural and repulsive products with the pure, wholesome foodstuffs with which Nature provides us, the products of the field, orchard and garden—human foods par excellence, on which the race was fed during the long years of its primeval development, the diet to which man’s nearest relatives, the great apes of tropical forests still closely adhere, and the foods which constitute the staple foodstuffs of the great masses of the world’s population. Such legumes as the soy bean and the peanut, with nuts, milk, cheese and eggs, supply protein in every way as good that supplied by meat, while butter and various vegetable oils supply superior fats.” Address: M.D., Battle Creek, Michigan.

3531. Kellogg, John Harvey. 1928. The world’s greatest authorities pronounce meat unnecessary. Battle Creek, Michigan: Good Health Extension Bureau. 4 p. 16 cm.

• **Summary:** Contents: Introduction (The Inter-Allied Scientific Food Commission). The United States Department of Agriculture declares meat to be non-essential. Man not naturally a flesh eater. Milk and nuts better than meat.

“The United States Department of Agriculture Declares Meat to be Non-Essential: The United States Department of Agriculture maintains a department for research in nutrition. A few years ago [probably during World War I] this department sent out a circular in which it was clearly pointed out that meat is not an essential article of diet, the scientific basis of this statement being also given as follows,—‘for it has been determined that all the necessary protein and energy may be obtained from other materials, if one so desires and the diet is so arranged that it remains well balanced.’” Address: Battle Creek, Michigan.

3532. Marquette, Jacques de. 1928. J.A. Gleizès et son influence sur le mouvement naturiste [J.A. Gleizès and his influence on the naturist movement]. Paris: Edition du “Trait d’Union”. 332 p. 23 cm. [Fre]*

3533. McCurdy, Edward. 1928. The mind of Leonardo da Vinci. London: Jonathan Cape; New York, NY: Dodd, Mead & Co. 360 p. Illust. 21 cm. *

• **Summary:** Discusses the views on vegetarianism and animal welfare of Leonardo da Vinci (lived 1452-1519).

3534. Portrait of Henry Salt (Photograph). 1928.

• **Summary:** Henry Salt (1851-1939) was a vegetarian, a pioneer in the field of animal rights, and a prolific and reform-minded author.

Wikipedia says of Salt (March 2014): “Henry Stephens Salt (20 September 1851–19 April 1939) was an English writer and campaigner for social reform in the fields of prisons, schools, economic institutions, and the treatment

of animals. He was a noted ethical vegetarian, anti-violence, socialist, and pacifist, and was well known as a literary critic, biographer, classical scholar and naturalist. It was Salt who first introduced Mahatma Gandhi to the influential works of Henry David Thoreau.

“Salt is credited with being the first writer to argue explicitly in favour of animal rights, in his *Animals’ Rights: Considered in Relation to Social Progress* (1894), rather than focusing on improvements to animal welfare. He wrote: ‘If we are ever going to do justice to the lower races, we must get rid of the antiquated notion of a ‘great gulf’ fixed between them and mankind, and must recognize the common bond of humanity that unites all living beings in one universal brotherhood.’”

3535. Reichelt, Karl Ludvig. 1928. Truth and tradition in Chinese Buddhism: A study of Chinese Mahayana Buddhism. 2nd ed. Translated from the Norwegian by Katharina van Wagenen Bugge. Shanghai, China: The Commercial Press, Ltd. x + 330 p. Plus 25 unnumbered leaves of plates. Illust. Index. 21 cm. Reprinted in 1968 by Paragon Book Reprint Corp. (New York).

• **Summary:** Vegetarianism is mentioned on pages 13, 91, 113, 165, 167, 228. Vegetarian food on page 295. Vegetarian groups on p. 241. Vegetarian restaurants on p. 288. Address:

1. Nanking, China.

3536. Shupper, Frances. 1928. *Why grow old?* Rockaway Beach, New York: Juvenal Publishing Co. 64 p. 19 cm. *

3537. Battle Creek Food Co. 1928? *Entrées for the vegetarian dinner*. Battle Creek, Michigan. 16 p. Undated. Illust. 17 x 9 cm.

• **Summary:** On the cover of this small booklet is a chef, with white chef's hat and moustache, tasting a spoonful of something. On page 1 is a "Personal letter to chefs," encouraging them to serve Battle Creek Food Co. dinner entrees since "The time is no longer when people demand meat three times a day. Once a day is a good average. Research surveys tell us that the consumption of meat in hotels and restaurants has decreased 45% since 1927... You will find that Protose, Nuttose and Savita help make your vegetable dinners as delicious as the old-fashioned meat and vegetable dinners."

The booklet contains many recipes using Protose and Nuttose like meat, and Savita as a savory vegetarian seasoning in soups, sauces, broths, bouillon, and gravies. All 3 products are canned. One 2-page spread titled "Protose and Savita served from coast to coast" shows menus of many hotels and restaurants where these products appear on the menu. The Busy Bee in St. Louis, Missouri, for example, has a full page of the menu devoted to "Battle Creek Specials." Sales helps and table cards are also available from Battle Creek.

"Savita is an extract of a special yeast plant [i.e. yeast extract] that imparts a delicious mushroom flavor to soups, gravies, sauces, vegetables and bouillons, that makes every chef proud of his cooking."

"Protose is purely vegetable, being made of nuts and grains, yet it looks and even tastes like choice meat. Serve with your vegetable dinners, as well as a special on Fridays and during Lent. Protose dishes generally cost around 7c [cents] per serving. The usual charge for a Protose vegetable dinner ranges from 45c to 75c."

"Nuttose is made from choice nuts, and is most enjoyable in croquettes, salads and nut fillet. It has a rich, meaty flavor, yet is made purely from nuts. A serving costs about 7c." Address: Battle Creek, Michigan.

3538. Bragg, Paul C. 1929. *Cure yourself*. Los Angeles, California: National Diet & Health Association of America. 240 p. Jan. Frontispiece (2 portraits). Illust. No index. 21 cm.

• **Summary:** There are two frontispiece portraits: (1) Portrait of a handsome, confident-looking man, dressed in a coat and tie, with his hair parted in the middle, titled "Professor Paul C. Bragg." (2) Full-body photo in a black one-piece wrestling or swim-suit, with one strap over his left shoulder and his right breast bared—looking rather like Tarzan. Same title.

In the introduction, titled "My message to you," begins: "The world is full of sick people, nervous people, weak ineffectual people, men and women lacking the vital energetic force to become successful and happy." "There is no one alive who cannot be strong and well, full of pep, free from all hampering ailments.

"I have rejuvenated myself from the lowest ebb of vitality. What Nature has done for me, she can do for anyone. I was a hopeless invalid, doomed to death..." The South was his home. "From birth I suffered from chronic catarrh and asthma, which later developed into tuberculosis. At one time my left breast almost caved in. Constipation poisoned my blood stream to such an extent that I was practically blind in the left eye, and for days could not see out of either eye. At [age] twenty I was thirty-five pounds underweight and so crippled with rheumatism that at times I could hardly walk.

"I was taken to Richmond, Virginia, Louisville, Kentucky, Atlanta, Georgia, and Birmingham, Alabama, securing no relief. At a consultation of five physicians in Washington, DC, I was given thirty days to live.

"From this twisted, pain-wracked creature I have rebuilt myself to one of America's leading athletes. In 1918 I won the South Atlantic A.A.U. Wrestling championship at Baltimore, Maryland. In Los Angeles in 1926 I won the Pacific Coast Endurance Championship, having run from Los Angeles to Santa Monica, California and return, a round trip distance of forty miles. At the finish of the race I was declared by physicians to be in perfect condition after a thorough examination of heart and lungs. I am always active in swimming, boxing and wrestling at the Los Angeles Athletic Club."

He is in "the highest and most perfect physical condition. Because I have found this wonderful thing, the Secret of Health; because I have proved, not only in my own body, but in that of thousands of others who have been my patients, that sickness and disease can be banished, that splendid health is impossible to no one; because, if you will listen to me, I can help You, I am writing this book and presenting my information to the world." "You can Cure Yourself through hygienic living, and possess Perfect Health, Strength and Vigor" (p. 13-15).

Why are we sick? Living a civilized life, "we are slowly, insidiously, surely, *making ourselves sick*. When man discovered Fire and first learned to cook his food, the Demon Disease was born. That is when the custom of *preparing* our food instead of eating it as presented to us by Nature, had its beginning, and with it an endless train of human ills."

One section / chapter is titled "There is but one disease" (p. 23-29), and the next is titled "One doctor" (Nature). In "Why vegetarianism has failed" (p. 48-50) he gives two reasons, both based on misunderstandings or fallacies. First, people think they need more protein than they actually do, so they substitute "copious amounts of beans, nuts, eggs, cheese, bread, potatoes, cereals, and so forth, for the meat

they have discarded.” Consuming an over-abundance of these “nourishing” foods is a grave mistake. Second, people misunderstand that eating a healthy, natural diet leads to elimination crises. They think they are getting worse, when they are actually getting better.

Part II is titled “How to cure yourself.” “Whatever is wrong with you, your cure will be through elimination of the poison matter in your body.” There are five factors which bring this about: “Diet, exercise, deep breathing, sunshine, and fasting. All of these factors are essential in a well-balanced program of regaining health.” In the section on “Diet” is a table of “bad foods” (incl. eggs, dairy products, dried peas, dried beans, peanuts) and “good foods” (fresh fruits, raw vegetables, and cooked succulent vegetables only). Natural cereal grain, and nuts are neither good nor bad. The chapter on “Fasting” (p. 147-52) explains that will be part of the best cure for a serious or long standing ailment. Details are given on how to fast, what to expect during elimination, and how to break a fast.

Part III, “Recipes” (p. 199-240), contains many salads, some whole wheat breads, and some baked natural desserts. The “Health ice cream” calls for equal parts fruit (fresh or stewed) and whipped cream.

Note 1. This is Paul Bragg’s first book. An ad for it appeared on 29 Jan. 1929 in the *Los Angeles Times*.

Note 2. For the first time in this book, Paul Bragg reveals something about his life story; yet he never explains three key facts: (1) When and where he was born. In 1976, he told a reporter in Hawaii that he was born in 1881 in Wakefield, Virginia, and that he was now age 94. That means in 1929 he would be age 48. Yet in the two photos he appears to be in his late 20s or early 30s. Actually, he was born on 6 Feb. 1895 in Indiana. So in 1929 he was about age 34. (2) His educational background. (3) When or how or where he became a professor.

Note 3. This is the earliest document seen (Sept. 2011) in which Paul C. Bragg mentions tuberculosis or claims that he suffered from tuberculosis when younger.

Note 4. This is the earliest document seen (Sept. 2011) in which Paul C. Bragg claims that he was once crippled with rheumatism.

Note 5. This is the earliest document seen (Sept. 2008) in which Paul C. Bragg claims that he was once crippled.

Note 6. In one book, facing the first photo, is an inscription, in well-formed script: “Yours for Health Truth, Paul C. Bragg, Denver, Colo. [Colorado], May 22, 1929.” Address: Los Angeles, California.

3539. Carver, G.W. 1929. Re: Preparing peanut milk and soy milk for Mahatma Gandhi. Letter to Mr. [Charles Freer] Andrews, Feb. 24. 1 p. Typed, without signature (carbon copy).

• **Summary:** “My Dr. Mr. Andrews: Our various, previous conversations, marvelous lectures, followed by our

conference this morning, all convince me that a new day is dawning for India. I believe Mr. Gandy’s [sic, Gandhi’s] physical strength can be greatly improved by following out the ideas we discussed in the matter of foods.”

They must have discussed the method for preparing soy milk, for Dr. Carver concludes: “A peanut emulsion can be made in the same way as that recommended for the soy bean, and is a little richer in food nutrients.”

Note 1. Charles Freer Andrews was an Anglican minister who worked with Gandhi, first in South Africa and later in India. See also Carver’s letter to R.B. Eleazer dated 29 Nov. 1930, in which Carver discusses Andrews’ visit in Feb. 1929 and mentions the development of a menu containing soymilk to help Gandhi. Andrews also knew Tagore and Carver and it is apparently he who is referred to in this letter. B. Chaturvedi and Marjorie Sykes, in their book titled *Charles Freer Andrews: A Narrative* (p. 238) note that Andrews visited Tuskegee in Feb. 1929. During his stay of 10 peaceful days, he attempted to establish ties between Santiniketan in India and Tuskegee in America. *The Tuskegee Messenger* of 9 March 1929 reported: “Tuskegee has had a messenger from the East. His spirit was a spirit of simplicity, of repose, of reflection and peace... One of the boys said it was just like Jesus himself talking to us.” For more on Andrews see *C.F. Andrews and India* by Hugh Tinker (Oxford Univ. Press, 1979).

Note 2. This is the earliest document seen (Oct. 2010) that mentions Mahatma Gandhi in connection with with soybeans or soyfoods. Thus George Washington Carver apparently introduced Gandhi to soyfoods. Gandhi first began to write about them, in order to introduce them to India, in Sept. 1935. Address: Dep. of Agricultural Research and Experiment Station [Tuskegee, Alabama].

3540. Yogananda, Swami. 1929. Health recipes. *Nature’s Path* (New York City). Feb. p. 72, 92.

• **Summary:** He advocates a vegetarian diet. “Eating three meals a day is an extremely dangerous habit.” Two meals a day is enough unless you are hungry and working hard. “Fast one day a week. If complete fasting is difficult for you, then fast on orange juice.” “Vegetarians should eat abundantly of bananas, cream or milk, ground nuts, cheese, cocoanuts.”

“Raw food is nature- and sun-cooked food with even temperature. Use it abundantly. But if you eat cooked food, let it be steamed or baked food without loss of the natural juices, which boiling evaporates.” “Milk curd is one of the best substitutes for meat. It is made by curdling one quart of milk, heated in a double boiler, by adding the juice of one orange and one-half a lemon at the time the milk begins to boil. When the milk separates, the solid curd will be found floating over slightly green water beneath. Drain the curd through a cheesecloth and let it drip for a half hour.”

Delicious nut paste pies, filled with almond butter or peanut butter, are a good substitute for meat and far more

wholesome than most pies. A small portrait photo shows Swami Yogananda.

3541. *Tennessean (The)* (Nashville, Tennessee). 1929. Classified ad: Madison methods. March 31. p. 20.

• **Summary:** "Vegetarian cafeteria serves a diet for health. 151 6th Ave., N. Phone 6-0943. Treatment rooms. Using Madison health foods by Madison Food Co., Madison, Tennessee. Phone 3-3445."

Note: This ad also ran in the April 7 issue (p. 22), the April 21 issue (p. 26), and the May 12 issue (p. 25) of this newspaper.

3542. *Madison Survey* (Madison, Tennessee). 1929. Soy-bean products replace dairy products. 11(20):78-79. May 15.

• **Summary:** "For many years we have been warned that the increase of disease among cattle would put an element of danger into dairy products. This set us to studying foods that contain the essential elements of dairy foods with [sic, without] this objectionable feature." Describes the post-graduate work with soybeans done by two of the school's teachers, Miss Frances Dittes (Peabody College, Nashville) and Prof. P.A. Webber (Michigan State Agricultural College, Lansing).

"It is intensely interesting to those who are looking for something to replace dairy products, to see the products of the soy-bean cheese is delicious and capable of many variations in the dietary. One of the latest articles sampled is a loaf of yeast bread in which soy-bean milk was used instead of water. The bread is fine of grain, sweet, light, and with a toothsome crust that will appeal to the taste of the most fastidious."

"The soy-bean with nuts will supply every thing we have been obtaining from milk and flesh foods. And the danger that lurks in the products of diseased animals is entirely eliminated by the use of soy-bean products."

"There is a future for soy-bean products. We expect to see hundreds of our people demonstrating the value of these foods. This is a real missionary work for which Madison is preparing."

3543. Wu, Hsien. 1929. Vegetarianism. I. Introduction. *J. of Oriental Medicine* (S. Manchuria) 10(6):65-74. June. Lecture delivered at the Manchurian Medical College, Mukden, 25-28 Feb. 1929. [5 ref. Eng]

• **Summary:** "Excellent review of vegetarianism."

"Vegetarianism, the practice of living solely on foods of plant origin [sic], is as old as the time of Pythagoras (6th century B.C.). This Greek philosopher taught the doctrine of kinship of all living beings and especially the brotherhood of man and beasts, from which his rule of abstinence from flesh probably originates. The Hindus, Buddhists and others who have for ages observed strict vegetarianism did so out of a regard for the right of animals to live, and out of a sympathy

for all that suffer.

"The beginning of vegetarianism in China is not known, but there is evidence of it before the introduction of Buddhism from India. Certainly it was known as an observance as early as the Hsi Han (2 Chinese characters) Dynasty (206 B.C. to 24 A.D.). Thus we find in Han Su (2Cc) the following passage:

"Prince Chang-Yi, forgot that he was in mourning,... disregarded decorum, and did not use vegetarian diet. He often secretly bought chicken and pork to eat." Again we find in the Life of Wang Mang (2Cc) the following passage:

"Whenever a flood or a famine occurred Wang Mang took to vegetarian diet. The Empress Dowager, having heard of this, sent a message to him, saying; I hear that you practice vegetarianism. You are indeed greatly concerned about the people..." Address: Dep. of Biochemistry, Peking Union Medical College, Peiping, China.

3544. Wu, Hsien. 1929. Vegetarianism. II. General characteristics of vegetarian diets. *J. of Oriental Medicine* (S. Manchuria) 11(1):1-11. July. [11 ref. Eng]

• **Summary:** Table 1, "Amount of protein, fat, carbohydrate, crude fiber, calcium, phosphorus and iron per 3000 Calories of some common vegetable foods" (p. 2-3) lists "Soy beans (dried)" as the most concentrated source of protein.

"Summary: Summing up the general properties of a vegetarian diet, we may say that it is apt to be low in protein, fat, and fat-soluble vitamins. It is rich in vitamin C, and there is no danger of deficiency in the anti-neuritic factor unless highly polished cereals form the bulk of the diet. The anti-pellagic factor [vitamin G] is apt to be low. A vegetarian diet may contain enough calcium for an adult, but for the growing young, it cannot be compared with a milk diet. The digestibility of vegetable foods is lower than that of animal foods. A vegetarian diet is apt to be more alkaline than a mixed diet." Address: Dep. of Biochemistry, Peking Union Medical College, Peiping, China.

3545. *Madison Survey* (Madison, Tennessee). 1929. Food work. 11(33):126-27. Aug. 14.

• **Summary:** "The raising of foods is an interesting and profitable work for students. The manufacture of health foods and the serving of those foods to the public is a close second in educational value. The Madison Food Factory is putting up crackers of various sorts, nut meats, malt honey, soybeans and steamed wheat in cans, and other attractive products. A variety of bakery goods, specializing in whole wheat breads and buns, gives employment to a group of students."

"A group of men and women drive to the city each morning and return each evening. They are the working force of the vegetarian cafeteria, located on Sixth Avenue, just off Church Street, and a short distance from the busiest section of the city. The cafeteria is one of the most attractive projects of the institution. It affords a business training that ought to

be the delight of any active student. A group is training there throughout the year under the direction of Kenneth Sheriff.

"The training of cooks and dietitians is given special attention at Madison... The Dietitian's Course is headed by Miss Francis Dittes."

3546. Kellogg, John Harvey. 1929. Stefansson's tallow-eating stunt. *Good Health (Battle Creek, Michigan)* 64(8):5-6. Aug. [1 ref]

• **Summary:** In a recent issue of the *Journal of the American Medical Association* (6 July 1929), Dr. C.W. Lieb describes an experiment in which arctic explorer Stefansson and Andersen ate a daily diet that provided 2,100 calories of fat and 550 calories of protein. Dr. Kellogg says that they were paid to endure this diet by the Meat Board, and that the diet was not a meat diet but a "tallow diet." He says Stefansson's "diet was four-fifths fat and only one-fifth muscle meat."

Note: On the cover of this issue the subtitle is now: "The Battle Creek Journal of Health and Hygiene."

3547. Wu, Hsien. 1929. Vegetarianism. III. Nutritive value of vegetable proteins. *J. of Oriental Medicine (S. Manchuria)* 11(2):25-38. Aug. [30 ref. Eng]

• **Summary:** A good summary, including the proteins of the soy bean, adzuki bean, yellow lupin, peanut, hemp, etc. Address: Dep. of Biochemistry, Peking Union Medical College, Peiping, China.

3548. Wu, Hsien. 1929. Vegetarianism. IV. Feeding experiments with vegetarian diets. *J. of Oriental Medicine (S. Manchuria)* 11(3):67-84. Sept. [9 ref]

• **Summary:** The soy bean is mentioned as a good source of protein on pages 69, 70 and 71. Address: Dep. of Biochemistry, Peking Union Medical College, Peiping, China.

3549. Wu, Hsien. 1929. Vegetarianism. V. Human experience with vegetarian diets. *J. of Oriental Medicine (S. Manchuria)* 11(4):113-23. Oct. [15 ref]

• **Summary:** Page 122: "We have seen from chemical analysis that certain animal foods are far superior to any vegetable food in respect to the quality of the protein. We have seen from animal experimentation that the best vegetarian diets which we have been able to find can support growth, reproduction and lactation but they cannot be compared with a balanced mixed diet. Comparative anatomy and physiology are not in favor of vegetarianism. Human experience everywhere, though not conclusive, points to the superiority of a mixed diet. The physique of races living on largely vegetarian diets is inferior to those who have more animal food in their diet. Vegetarianism, as a doctrine of nutrition, has no advantage whatsoever except as a corrective of over-eating."

"Vegetarianism has changed its aspects in recent

years. It was a doctrine which inveighed above all things against the use of meat. The modern student of nutrition does not consider meat an ideal food and would use it only in moderation. As far as the evil of excessive meat-eating is concerned, the vegetarian and the modern dietitian are agreed. The modern dietitian realizes the high value of leafy vegetables as sources of vitamins and minerals and would recommend their increased use. In this respect also they are agreed. But what the modern dietitian regards as the most valuable of all foods are milk, eggs and dairy products, and possibly liver and other glandular organs, and it is the exclusion of these foods by the vegetarians, voluntary or involuntary, which is a matter of grave concern to some people.

"Fortunately, voluntary vegetarians are on the decline and there is no danger of an invasion of dietetic practice by vegetarianism as a doctrine. Unfortunately, however, the demand for more food as the result of an increasing population has forced man more and more to farm his land for the greatest yield in protein and in calories—namely, for cereals and legumes. This natural tendency towards vegetarianism cannot be halted by eloquence of argument and it will become stronger and stronger as the human population approaches the limit of the world's capacity to support. If over-population has no other evil, it has at least the one of forcing people to live on diets which, being largely or wholly vegetarian, are not for his well-being." Address: Dep. of Biochemistry, Peking Union Medical College, Peiping, China.

3550. Nayler, John. 1929. The wonderful soya bean. *Vegetarian Messenger and Health Review (Manchester, England)*. Dec. p. 301-02. [1 ref]

• **Summary:** The author begins with a brief discussion of growing world soybean trade, and a discussion of soybean production in the USA, based on articles in *Country Gentleman*. "The soya would not grow in the United Kingdom. To your readers the soya bean is of special interest on account of its high protein ratio, and its lack of starch, and the many uses to which portions of it may be put. It is particularly rich in protein and oil..."

"The commercial chemist has discovered that the bean is useful in the preparation of coffee substitutes, chocolates, soups, baked beans, confection, meat substitutes, vegetarian sauces, vegetable casein, vegetable milk and vegetable cheese."

"The meal prepared from the bean has also a long list of uses. We have mentioned its use to the farmer and his stock. As a diabetic preparation it is supplanting gluten flour, as it has practically a no-starch content. It is used for infant foods, macaroni, breakfast foods, and in certain matters used by specialised trades."

"It appears to me that it is to the soya bean and the use which clever manufacturers may eventually make of it that

the vegetarian may hopefully look forward to the day when really acceptable tasty substitutes will be on the market at a moderate price to take the place of present day dairy supplies, namely, milk, butter and cheese—possibly eggs also. The essentials to be sought for are palatability, a low competitive price, and practical value to the human economy. I am not aware as to how far these points have been realised, so far, but there does not seem any insuperable difficulty in achieving them all.” Address: J.P.

3551. *Vegetarian Messenger and Health Review* (Manchester, England). 1929. The soya bean. Dec. p. 284. [1 ref]

• **Summary:** “Our esteemed contributor, Mr. John Naylor, in a communication appearing on a later page, has done us excellent service in drawing our attention to the potentialities of the soya bean. The vegetarian who bases his practice on the principle of humaneness is aware of his inconsistency when taking milk and milk products. To replace cow’s milk by a satisfactory milk made from the soya bean would be to replace a food that is provided at the cost of suffering with one free from that taint. The vegetarian strengthens his claim to be a humanitarian whenever he uses a vegetable substitute for an animal product and many have made the first forward step by using only artificial leather. The soya bean makes it possible to advance still further by giving us not only milk, butter, cheese and meal, but many by-products which will satisfactorily replace by-products of meat. Statisticians have stated that before the close of the present century land will not be available to grow cattle for the meat and milk required, and Dr. Kellogg, of Battle Creek [Michigan], is of opinion that the soya bean will then become one of the great food staples of the world.

“The Vegetarian Society allows members the use of milk, butter and cheese, and for the majority of vegetarians, during the present transitional period, the use of these animal products is both necessary and convenient. Milk and milk products have been aptly called ‘protective’ foods and it has been demonstrated that they have often made up what was lacking in the dietary of a vegetarian doing hard physical or mental work. The soya bean, however, promises the greatest of possibilities, for by its use the time is brought appreciably nearer when vegetarians will obtain all their food from the vegetable kingdom.” Address: The Vegetarian Society, 39 Wilmslow Rd., Rusholme, Manchester, England.

3552. *Vegetarian Messenger and Health Review* (Manchester, England). 1929. Vegetarian M.P.’s. Dec. p. 284. [1 ref]

• **Summary:** The following is summarized from the *Nottingham Evening Post* 6 Nov. 1929. “Yesterday saw yet another innovation in the House of Commons dining-room, when, for the first time, a separate section of the menus was devoted to the needs of vegetarians. Miss Ellen Wildinon

was unable to secure this during the last Parliament, as the demand was thought to be too small. Now that the ranks of vegetarians have been augmented by many I.L.P. nut-eaters, the experiment is to be tried.”

3553. Ankenbrand, Lisbeth. 1929. *Gesunde fleischlose kuche* [Healthy meatless cookery]. Stuttgart, Germany: Sueddeutsches Verlagshaus GmbH. 152 p. Illust. 22 cm. [Ger]*

• **Summary:** The subtitle states that this book contains “619 tested and approved recipes prepared according to the newest nutritional teachings. Supplement: Menu for each month (lunch and dinner) with suggestions for all types of cures. With fine-art prints. Number 6,000 to 11,000.” The author was born in 1885. Address: Germany.

• **Summary:** A 10th revised edition (70 p.) was published in 1949 in Stuttgart by Reclam.

3556. Cooper, Lenna Frances; Hall, Margaret Allen. 1929. *The new cookery*. 11th ed., revised. Battle Creek, Michigan: The Modern Medicine Publishing Co. 493 p. Illust. 22 cm.

• **Summary:** This is a vegetarian cookbook.

Poem facing the table of contents: “No flocks that roam the valley free,

“To slaughter I condemn;

“Taught by that Power that pities me,

“I learn to pity them;

“But from the mountain’s grassy side,

“A guiltless feast I bring;

“A scrip [small bag] with herbs and fruits supplied,

“And water from the spring!”

- Oliver Goldsmith [1728-1774, Ireland]

Contains a recipe for Soy bean muffins on p. 72-73. It calls for “1 cup soy bean flour.” Address: 1. Food Director, Univ. of Michigan; formerly Dean of Home Economics, Battle Creek College; formerly, Head Dietitian, Battle Creek Sanitarium; and later, Supervising Dietitian, United States Army 1918-1919; 2. Consulting dietitian and lecturer on dietetics, Battle Creek Sanitarium and Chautauqua Lecturer.

3557. *Encyclopaedia Britannica* (14th ed.): Vegetarianism. 1929. New York & London: Encyclopaedia Britannica, Inc.

See vol. 23, p. 27-28. [7 ref]

• **Summary:** Similar to the entry for 1911.

3558. Light, Henry. 1929. Common-sense vegetarianism. London: Vegetarian Cycling & Athletic Club. 100 p. 19 cm.

*

Address: Vegetarian.

3559. Monteath, Kenneth McLaurin. 1929. The principles of true religion with special reference to food supply. 2nd ed., with supplement. York, England: W.H. Smith & Son. 7 p. 19 cm. *

3561. Parkes, Louis Coltman. 1929. Hygiene and public health (Parkes and Kenwood). 8th ed. Revised by Henry R. Kenwood and Harold Kerr. Philadelphia, Pennsylvania: P. Blakiston's Son & Co. xi + 823 p. Illust. Index. 22 cm.

• **Summary:** In Chapter, titled "Food, beverages, and condiments," in the section on "Proteins" we read (p. 268): "Whilst there is not sufficient evidence to prove that vegetarianism, so-called, is more conducive to health or longevity than a mixed diet, there can be but little doubt that the wealthier classes eat too largely and too frequently of meat. During growth a purely vegetarian diet is inadequate, as the vegetable proteins are deficient in the amino-acids so necessary for growth and repair." Address: 1. Kenwood: C.M.G., M.B., Emeritus Prof. of Hygiene and Public Health, Univ. of London; 2. Kerr: O.B.E., Prof. of Hygiene and Public Health, Univ. of Durham. Both: England.

3562. Schweitzer, Albert. 1929. Civilization and ethics: The philosophy of civilization, Part II. 2nd ed. Translated by C.T. Campion. London: A. & C. Black, Ltd. xxiv + 288 p. Index. 22 cm.

• **Summary:** A new translation of the original 1923 edition; in German it was titled *Kulturphilosophie*. The last two chapters are particular interesting.

Chapter 21: The ethic of reverence for life. The basic principal of the moral. The ethic of resignation, an ethic of veracity towards oneself, and an activist ethic. Ethics and thoughtlessness, ethics and self assertion. Man and other living creatures. The ethic of the relation of man to man. Personal and supra-personal responsibility. Ethics and humanity.

Chapter 22: The civilizing power of the ethic of reverence for life. Civilization is a product of reverence for life. The four ideals of civilization. The struggle for a civilized mankind in the machine age. Church and State as historical entities, and as ideals of civilization. The

moralizing of the religious and political community.

In this book Schweitzer is said to have written: "Until he extends the circle of his compassion to all living things, man will not himself find peace." However, we have been unable to find this quotation in this book, or in any other book written by Albert Schweitzer, who lived 1875-1965. Address: D. Theol., D. Phil, D. Med., Strasbourg, Alsace, France.

3563. Shelley, Percy Bysshe. 1929. On the vegetable system of diet, now first printed from the original manuscript. Bungay, Suffolk, England: Printed by Richard Clay & Sons. 14 p. 25 cm. *

• **Summary:** "Twelve copies only printed for private circulation." D.L. Clark (1939, p. 70) states that when Shelley died, he left an unpublished essay on the subject of vegetarianism, which appeared in 1929 in *The Complete Works of Percy Bysshe Shelley*, in ten volumes (edited by Roger Ingpen and Walter E. Peck). This essay is in volume VI, p. 335-44.

• **Summary:** About vegetarianism and legumes. Address: France.

3568. *Lancet*. 1930. Annotations: Vegetarianism. i(5551):144. Jan. 18. [1 ref]

• **Summary:** The writer uses the term "purely vegetarian diet" to refer to one derived wholly from the vegetable kingdom. Note: He mistakenly believes that "vegetarian diets" are derived wholly from the vegetable kingdom, whereas, in fact, they can include dairy products and eggs, but no flesh foods.

"There is little doubt that health can be maintained in a normal adult on a diet derived wholly from the vegetable kingdom, but there is no evidence that such a diet is better than the mixed diet employed by most races of mankind."

"It may be difficult to find any scientific reason why mankind should regularly include animal flesh in his diet." Address: London.

3569. *Guardian (England)*. 1930. Miscellany: Chemical "meat." Feb. 10. p. 7.

• **Summary:** A correspondent writes: The movements to "Eat more meat" and "Eat more fish" may soon be followed by an "Eat more monosodium glutamate" campaign. "A few years ago this queer chemical, made by hydrolysing gluten [sic] of soy beans with hydrochloric or sulphuric acid, was a mere academic fact."

Lately, however, it has come to be manufactured on a huge scale in China and Japan because of its meatlike taste. In Japan, where it is called "Ajinomoto" (the Element [Basis] of Taste) it has come to be used almost as commonly as sugar or salt. Restaurateurs in China find they can substitute it for meat flavoring or extracts (it is much cheaper) without diners knowing the difference. Perhaps the meatless sausage or the fishless rissole have already begun to appear in our own teashops.

Note 1. This is the earliest English-language document seen (Nov. 2014) that contains the word "meatlike."

Note 2. This is the earliest English-language document seen (Nov. 2014) uses the word "meatless" to describe a meat alternative.

3570. Oldfield, Josiah. 1930. Gandhi as I knew him. *John O'London's Weekly*. March 29. *

• **Summary:** Josiah Oldfield, a well-known British vegetarian writer, became M.K. Gandhi's closest friend during the latter's last year in London (1891). In this account the overpowering of the Mahatma has overlaid the picture of the "young, shy, diffident youth, slim and a little weakly," who called on Oldfield when he was editor of *The Vegetarian*. Oldfield outlived Gandhi.

3571. *Punch (London)*. 1930. A vegetarian snack bar? April 16. p. 433. *

• **Summary:** "A vegetarian snack bar."

3572. *Christian Century*. 1930. Murder, its use and abuse: A parable of Safed the Sage. 47(22):681-82. May 28.

• **Summary:** In this dialogue, a vegetarian seeing a friend consuming a beefsteak admonishes him by saying "Thou shalt not kill." To which the meat-eater replies that the vegetarian is killing even more by destroying the life of 100 beans. They then quibble over the ethics of killing pestilential insects and harmful bacteria, of lambs murdering the grass they eat, etc. The moral: One cannot live in this blessed world without killing. Address: Chicago, Illinois.

3573. Norges Vegetariske Landsforbund [Norwegian Vegetarian Association]. 1930. New vegetarian society. Oslo,

Norway.

• **Summary:** Source: *History of the Norwegian Vegetarian Societies*. 2004. <http://www.ivu.org/history/societies/norway.html>. The website quotes an article from the report of the 1938 IVU Congress, held in Hurdals Verk, Norway: "On the 29th May, 1930, the Norwegian Vegetarian Association (*Norges vegetariske Landsforbund*) was founded, its first president being Mr. Hans E. Andersen... The secretary of the Association and editor of the magazine *Naturlo/egen* [sic] ('The Naturopath') is Dr. H.J. Røglér."

"The Association has branches in Oslo, Bergen and Stavanger. Natural diet is the first point in its programme and it excludes flesh-meats, fish and eggs." Mr. Røglér is later given credit for founding the Association. He also helped to organize and host the 1938 IVU Congress, which was held in Norway.

In 1994 or 1995 the Association joined with a vegetarian youth association to form a new society called *Norsk Vegetarforening*. Address: Oslo, Norway.

3574. *Kokomo Tribune (Indiana)*. 1930. Geo. B. Lane passes away in his sleep: Had come here from Florida to spend summer—Formerly prominent here. July 21. p. 1, 8.

• **Summary:** This front page obituary notes that George B. Lane, age 60, died in his sleep early Monday morning [July 21], in Kokomo. His home is in Orlando, Florida, but he had been residing temporarily at 615 North Wabash avenue. Death was due to heart trouble.

"Surviving are the widow, Lillie Charles Lane; one son, Ovid C. Lane, 901 West Monroe street, a member of the news staff of the Tribune; two daughters, Mrs. K.F. Brown, Battle Creek, Michigan, and Mrs. D.A. Bays, Orlando, Florida; four granddaughters, Myra Janice Lane, Jeanette Bays, and Anita and Bonnie Joan Brown; one brother, Ira B. Lane, 814 West Jackson street, and two sisters, Mrs. William C. Adrian, 1101 South Bell street, and Mrs. Amos Brubaker, residing near Burlington" [Indiana].

"Mr. Lane was born near Point Isabel, Grant county [Indiana], May 16, 1870, the second son of James and Rebecca Lane, both dead several years. The parents moved to the city of Tipton and later to the village of Kempton, while he was still a child. When he was eleven years old the family moved to Kokomo, where he continued to reside until 1919, when he moved to Orlando, Fla., going there on account of failing health. He returned for a period practically every year. He came back several weeks ago and was intending to spend the summer here.

"As a young man, Mr. Lane followed the baker's trade. He was employed at that time in the Zwisler restaurant in Buckeye street [in Kokomo]. Thirty-five years ago [i.e., 1895], he went to Battle Creek, Michigan, where he was employed for several months by the Kellogg Company, and where he made the first peanut butter that concern ever marketed. He also created other new foods for them.

“Returning to Kokomo, he started a health food factory in South Webster street, just north of the Palmer School building. This enterprise was highly successful. It was, however, wiped out by fire and, unfortunately, at a time when the insurance had lapsed. After this disaster, he entered the truck gardening business, here and at Denver, Indiana.”

“In 1915, Mr. Lane entered the real estate business, a line which he followed the remainder of his life.”

“Mr. Lane was a man of intelligence, character and thrift. He was largely self taught, but was well informed on a number of subjects. He was straightforward and square in his dealings, did not hesitate to express his convictions and had the respect of all circles in which he was known. The record he leaves is one by which he will be long and pleasantly remembered.

“Mr. Lane was a member of the Seventh Day Adventist church, and was head deacon in the church of that denomination in the city of Orlando.”

Talk with Bonnie Van Kley, Curator of Archives, Howard County Historical Society, Kokomo, Indiana. 2004. Jan. 13. Bonnie found this important article. She adds: George’s brother, Ira Lane, helped to build the Seiberling Mansion, which is now the Howard County Historical Museum, located in Kokomo.

3575. McClellan, Walter S.; Rupp, V.R.; Toscani, V. 1930. Prolonged meat diets with a study of the metabolism of nitrogen, calcium, and phosphorus. *J. of Biological Chemistry* 87(3):669-80. July. [16 ref]

• **Summary:** This is the earliest known study to show that in humans a diet with a high meat content causes the loss of large amounts of calcium and a negative calcium balance. It analyzes the diet of two arctic explorers who lived for one year exclusively on meat.

Note: This is the earliest document seen (Feb. 2022) concerning minerals in a vegetarian diet. Address: Russell Sage Inst. of Pathology in Affiliation with the Second Medical (Cornell) Div., and the Pathological Dep. of Bellevue Hospital, New York.

3576. *Madison Survey (Madison, Tennessee)*. 1930. Demonstrating health foods. 12(30):119. Aug. 6.

• **Summary:** “As an advertising scheme for the health foods of the Madison Food Department and for other lines which are being handled by Mr. Ralph Meade, this gentleman gave a banquet for the men heading the chain stores of the Atlantic and Pacific Grocery Company, of Birmingham, Alabama. The company of some seventy or eighty business men was entertained in the Vegetarian Cafeteria of that city.

“A group of young people from Madison, and another from Southern Junior College, took part in the program of music and song, and assisted in the serving of lunch.”

3577. Raadt, O.L.E. de. 1930. Waar wordt in het lichaam

het ureum gevormd [Where is urea formed in the body?]. *Nederlands Tijdschrift voor Geneeskunde* 74(2):4323-29. Aug. 30. [23 ref. Dut]

• **Summary:** With a vegetarian diet, most of the urea is formed in the liver, whereas with a meat diet it is formed in the tissues. Address: Oegstgeest, Netherlands.

3578. Lane, Dorothy E.; Bosshardt, Florence H. 1930. Nutrition of children on a mixed and on a vegetable diet. *American J. of Diseases of Children* 40(2):285-97. Aug. [23 ref]

• **Summary:** “Many investigators in the science of nutrition have demonstrated that in certain animals the rate of growth and the size can be influenced through the choice of foods, irrespective of heredity and environment. With the rapid progress in the study of foods along this line, various experiments on the growth of children have been undertaken, and much has been said concerning the ‘normal’ rates of growth.

“Several standards are now employed for these ‘normal’ calculations, but a student of a critical mind must necessarily question the accuracy of the ‘normal,’ since many factors must be involved in drawing a conclusion. Generally and for the most part, the ‘normal’ has been applied merely to the rate of growth in body weight compatible with a given height and age. For a number of years it has appeared to one of us (D. E. L.) that overemphasis has been placed on this phase of ‘normal’ development, for there appear other factors of equal importance...” Address: Berkeley, California.

3579. *Tennessean (The) (Nashville, Tennessee)*. 1930.

Display ad: Fresh vegetables aid in health. Sept. 15. p. 7.

• **Summary:** “You do not wear second-hand clothes. Then why eat second-hand food? That is the question asked by the Vegetarian Cafeteria, 151 Sixth avenue, north, which has for its slogan, ‘Fresh from the Garden.’

“The Vegetarian Cafeteria has a deck beautifully supplied with wholesome foods—vegetables and fruit—that are the best that can be raised.

“There is economy, real economy, in eating at the Vegetarian Cafeteria because:

“It caters to health.

“Health is what you want.

“Health is what you need.

“Health cannot be bought; it must be built.

“With health built very largely on the food that is eaten, good food, freshly grown, well prepared and full of life-giving vitamins is of untold value. Such foods build red blood and that spells health.

“Under the same management as the Madison Rural Sanitarium and the Nashville Treatment Rooms, the cafeteria caters to the health of the people of Nashville. It advocates disease prevention through rational ways of eating and living.

"The Vegetarian is a student enterprise. Young people are the cooks and servers. Meals are scientifically prepared under the direction of a trained dietician. And advice on matters of diet are given freely.

"Business men and women and shoppers as well enjoy having their noon-day meals at the Vegetarian Cafeteria and taking home with them some of the health foods that are sold in wrappers and packages—whole wheat bread, crackers, fruit sticks and canned goods from the Madison Food Factory and factory [sic]. It is located just a few steps south of Church street, on Sixth avenue, south."

At the top of the ad is a large field of a row crop that looks like soybeans. The caption: "Garden products for Cafeteria decks."

3580. Kellogg, John Harvey. 1930. Soybeans as human food. Paper presented to the American Soybeans Grower's Association, Sept. 11. 20 p.

• **Summary:** Dr. Kellogg shows that he has an excellent knowledge of the world literature on soybeans and soyfoods, much of which he summarizes in this speech. "Many years ago (1899), the United States Department of Agriculture, called upon me to undertake the preparation of a vegetable meat. The Assistant Secretary, Dr. Charles Dabney, wrote me, suggesting that the navy bean might be used for the purpose. I found, however, as I expected, that this legume was not suited to the purpose. At that time the soybean was not grown to any extent in this country, I was wholly unacquainted with it, and so naturally sought to find in nuts, especially the peanut, a solution of the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have since been made and consumed. But the introduction of the soybean renders quite unnecessary any other substitute for flesh meats." The author discusses his belief that primitive man subsisted wholly upon plant products (i.e. ate a vegan diet "according to Prof. Elliot of Oxford University, Prof. Ami of Montreal, and other distinguished paleontologists"), and the nutritional value of soybeans and their basic-ash quality. "All meats yield a highly acid ash. The excess of acid in these foods produces a lowering of the alkalinity of the blood and tissue fluids when they are freely used, a condition which is known as acidosis." He also discusses soya sauce (which is now being manufactured in the USA), miso (which like soy sauce has a flavor resembling that of the osmazomes found in meat and meat sauces), roasted soy nuts (resembling roasted peanuts), pressure cooking whole soybeans, adding soy meal (flour) to breads, soy milk (which, in certain parts of China and Japan, "is made in quantities and distributed in bottles like milk in this country"), soy cheese [tofu], and the many health benefits of soy milk described in the medical literature, the many health problems caused by consuming flesh foods.

"Von Noorden, the world famous German physician, has demonstrated that the soy bean is of very great service

in changing the intestinal flora." Note 1. This is the earliest document seen (Nov. 2020) concerning soy and changing the intestinal flora. It is also the earliest document seen (Nov. 2020) that uses the phrase "changing the intestinal flora" in connection with soy.

"In spite of the frantic efforts of vested interests to promote the uneconomic live-stock industry, it will no doubt gradually disappear as a true science of agriculture is developed and the country becomes more densely populated. The conversion of vegetable into animal protein by feeding to steers and pigs, is one of the most wasteful of all human activities. Armsby has shown that 100 pounds of digestible vegetable protein are required to produce 3 pounds of meat protein..."

Discusses Stefansson's absurd so-called meat-eating experiment, which was really a publicity stunt. Stefansson took no more than 20% of his calories in the form of lean or muscle meat. The rest of his diet was fat. "Excessive meat consumption is one of the begetting sins of the people of this country. Our per capita meat consumption is 5 ounces per day, just 5 times that of Italy (1.0 oz.) and ten times that of North China (0.5 oz.), while the average native of South China eats no meat at all, and is one of the hardiest and most industrious of workers."

"Thanks to the efforts of our efficient Plant Introduction Bureau, the soybean is beginning to get a start toward recognition and appreciation in this country; but it is evident that a plant possessed of such superlative values and such astonishing versatility and adaptability should receive far more serious attention than has heretofore been given it by the agriculturalists of this country... There can be no doubt that it is destined to play a large part in the feeding of America's millions..."

Note 2. This is the earliest English-language document seen (Sept. 2021) that uses the term "soy nuts" or the term "roasted soy nuts" to refer to soynuts. Address: Battle Creek, Michigan.

3581. *Afro-American (Baltimore, Maryland)*. 1930. 'Kegee savant makes up menu for Gandhi: Dr. Geo. W. Carver asked to help perfect diet for great leader. Gives lectures. New products shown at Morgan and Hopkins. Nov. 22.

• **Summary:** Dr. Carver is collaborating in formulating a menu for Mahatma Gandhi, who weighs only 94 pounds. The great leader of India is struggling to help India free itself from British dominion. A friend and representative of Gandhi's [Dr. C.F. Andrews] had come all the way to Tuskegee to consult with Dr. Carver about the menu which, it is hoped, would add strength and perhaps years of life in which Gandhi could engage in the cause of his country's freedom. "Dr. Carver made the announcement during the course of a lecture at Morgan College, where he talked on his 202 products obtained from the peanut. In the evening he lectured on the same subject to a group at Levering Hall of

the Johns Hopkins University.”

Carter then said in his unassuming manner: “‘Possibly you would like to know something of the work I am trying to do, the motive power, the spirit that prompts it, how I began, and where I got the idea. I am going to tell you how my discoveries are made,’ he continued. ‘I simply tune in with the creative powers—the Great Creator. There are certain things, however, I must do to tune in.’”

“While not indifferent to the potential commercial importance of his discoveries, Dr. Carver’s primary interest is the pursuit of useful truth. He seeks to find the purpose suggested in Genesis, which he quoted: ‘Behold, I have given you every herb-bearing seed which is upon the face of all the earth. To you it shall be meat.’”

“‘The Creator asks me what I want to know,’ said Dr. Carver, ‘and I tell him I want to know about the peanut. With my knowledge of chemistry and physics I set to work to take the peanut apart.’”

Note 1. Other reports of Carter’s work at this time show that one of the key elements in the diet he developed for Gandhi was a nourishing milk made from soy beans. Note 2. Carver was never able to do anything with his original peanut milk formula, developed in 1919, because he discovered that an Englishman already had a patent that might be in conflict. He didn’t think it was worth fighting the matter out in court, so he let it go.

3582. *Literary Digest*. 1930. A medical slap at the vegetarian gospel. 107(8):26. Nov. 22. [1 ref]

• **Summary:** A review, with lengthy excerpts, of an editorial in the *Journal of the American Medical Association* stating that consumption of meat is not harmful, and criticizing the reasons related to health (such as purines and uric acid) that vegetarians follow their diet. The editorial summarizes a report by Thomas published several years ago showing that 142 Eskimos, accustomed to an almost exclusive meat regimen, were in good health. Moreover a series of carefully controlled observations were conducted in New York on two Arctic explorers, who lived for a year on a diet consisting exclusively of flesh foods. Both ended in good health although they showed negative calcium balances when they were eating meat and fat alone. “The investigators failed to find any ill effects from the prolonged use of the exclusive meat diet.” Address: USA.

3583. Carver, G.W. 1930. Re: Preparing soy milk for Mahatma Gandhi. Letter to Mr. R.B. Eleazer, 409 Palmer Building, Atlanta, Georgia, Nov. 29. 1 p. Typed, without signature (carbon copy).

• **Summary:** For at least ten years George Washington Carver has been working to develop milk-like beverages from plants. “I have made up many menus and offered suggestions to missionaries, etc. I am now cooperating with the Johns Hopkins University, that is with one of the professors who is

very much interested along this line, and is doing some very excellent work with reference to making up food for babies that will take the place of milk, which they do not have in many sections of Africa and some of the other mission fields.

“I have just answered a communication from Miss Elsie M. Irmand [sic, Irland] of the Natal Branch of the Order of the Golden Age, to a milk, made from soy beans, which is very rich and profitable and can be used largely instead of cows milk.

“I have sent out quite a number of these recipes. One hospital has written me that it is working out nicely with them...”

“When Dr. Andrews* was here, we made out a menu for Mr. Gandhi, which included the milk from soy beans.”

* Note: Charles Freer Andrews was an Anglican minister who worked with Gandhi, first in South Africa and later in India. See letter from Carver to Andrews dated 24 Feb. 1929. Address: Director, Agricultural Research and Experiment Station [Tuskegee, Alabama].

3584. *Constitution (Atlanta, Georgia)*. 1930. Carver’s work aid to Gandhi. Dec. 13.

• **Summary:** “Tuskegee, Alabama, Dec. 12.—That the discoveries of Dr. George [Washington] Carver, noted agricultural chemist of Tuskegee Institute, may become a factor in India’s fight for freedom was revealed here recently when it was learned that Dr. Carver, at the request of a close friend of Mahatma Gandhi, has formulated a menu for the great Indian leader, designed especially to build up his emaciated body.

“The request, it is understood, came to Dr. Carver through Dr. C.F. Andrews, a recent visitor to Tuskegee, who for years has been Gandhi’s intimate friend, adviser and associate. The menu prepared, it is said, makes large use of a nourishing milk derived from soy beans. Dr. Carver, it is understood, is co-operating also with a member of the Johns Hopkins faculty in the development of a vegetable baby food that can be used in Africa and other countries where milk is not available.”

3585. Einstein, Albert. 1930. Re: Vegetarianism. Letter to Harman Huth in Berlin, Dec. 27.

• **Summary:** “Although I have been prevented by outward circumstances from observing a strictly vegetarian diet, I have long been an adherent to the cause in principle. Besides agreeing with the aims of vegetarianism for aesthetic and moral reasons, it is my view that a vegetarian manner of living by its purely physical effect on the human temperament would most beneficially influence the lot of mankind.”

Note: This English-language translation from the German is found in: Calaprice, Alice. comp. and ed. 2005. *The New Quotable Einstein*. Princeton, New Jersey: Princeton University Press. 440 p. See p. 281. Einstein

Archive 46-756. Address: Berlin, Germany.

3586. Francisco, Maria. 1930. Woes of a vegetarian: 'Vegetable platters' terrible things, especially with poached eggs. *New York Times*. Dec. 27. p. 12, col. 6.

• **Summary:** In this letter to the editor, dated, December 23, 1930, the author urges the omission of poached egg from platters. Address: New York, New York.

3587. Kellogg, John Harvey. 1930. Soybeans as human food. I. *Good Health (Battle Creek, Michigan)* 65(12):5-7. Dec. Continued Jan. 1931. Paper first read at the meeting of the American Soybean Assoc., held 11 Sept. 1930 at Urbana, Illinois. [1 ref]

• **Summary:** Contents: Introduction. An age-long esculent. The soybean is richer in protein than beefsteak. An extraordinarily versatile food. The soybean replaces milk and eggs as well as meat in China.

"Many years ago (1899), the USDA called upon me to undertake the preparation of a vegetable meat. The Assistant Secretary, Dr. Charles Dabney, wrote me, suggesting that the navy bean might be used for the purpose. I found, however, as I expected, that this legume was not suited for this. At that time the soybean was not grown to any extent in this country. I was wholly unacquainted with it, and so naturally sought to find in nuts, especially the peanut, a solution to the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have been since made and consumed.

"But the introduction of the soybean renders quite unnecessary any other substitute for flesh meats. As a matter of fact, the protein rich foods of vegetable origin, such as nuts, which the soybean resembles, as Professor Sherman of Columbia University suggests, are not meat substitutes, but are the original meats for which the flesh of animals became a substitute when the glacial cold of the Ice Age drove our prehistoric forbears into the caves and grottoes of Southern Europe.

"The proteins of the soybean are, according to McCollum, distinctly more valuable from the point of view of nutrition than are those of the other legumes. The work of my own laboratory as well as that of others has shown that this bean is almost unique among seeds in its vitamin content." Address: Battle Creek, Michigan.

3588. *Observer (Moultrie, Georgia)*. 1930. Bean milk. Dec.15.

• **Summary:** "Dr. George Carver, noted agricultural chemist of Tuskegee Institute, has been called on to prescribe for Mahatma Gandhi, leader and reformer of India. Gandhi is thin and does not respond to food such as is obtainable in his country. Professor Carver has found in Alabama what he thinks will build up the emaciated body of the noted reformer.

"The request, it is understood, came to Dr. Carver through Dr. C.F. Andrews, a recent visitor to Tuskegee, who for years had been Gandhi's intimate friend, advisor, and associate. The menu prepared, it is said, makes large use of a nourishing milk derived from soy beans. Dr. Carver, it is understood, is cooperating with a member of the Johns Hopkins faculty in the development of a vegetable baby food that can be used in Africa and other countries where milk is not available.

"To date Dr. Carver's contributions to science include 202 products derived from peanuts, 118 from sweet potatoes, a large number from other common plants, and 300 colors and tints from Alabama red clay. Among the latter is a blue stronger than any on the market, said to be identical with the long lost blue used to decorate the tombs of the ancient Egyptian kings. He is now on the trail of another lost color, the famous Egyptian purple."

3589. **Product Name:** Soy Ice Cream (Honey Sweetened) [Strawberry, Chocolate, Vanilla], and Soy Coffee with Soy Cream.

Manufacturer's Name: Scientific Food & Benevolent Association.

Manufacturer's Address: Takoma Park Station, Washington, DC.

Date of Introduction: 1930.

New Product-Documentation: Miami Daily News. 1934. April. "He [Jethro Kloss] exhibited 21 articles made from soy beans" including "ice cream." He invited the public in Miami, Florida, to taste them.

Jethro Kloss. 1935. *Back to Eden*. Page 105 contains a recipe for non-dairy soy ice cream.

Letter from Jethro Kloss, president of this association, to his daughter, Promise. 1936. May 11. The letterhead states that this is "Manufacturers, Jobbers, and Distributors" with "A marvelous line of foods made from the soy bean..." Note: It is not clear when this company was founded, or if it existed in 1930, when Kloss first started making and selling soy ice cream commercially.

Letter from Eden Kloss, son of Jethro Kloss. 1985. Nov. 15. He recalls that in about 1930 he helped his father make soy ice cream (honey sweetened in strawberry, chocolate, and vanilla flavors) and soy coffee with soy cream. They sold it to the public as part of a quick lunch out of a small trailer on Pennsylvania Avenue near the White House.

Note 1. This is the world's earliest known non-dairy soy ice cream.

Note 2. This is the earliest known commercial soy product made in Washington, DC—in the early years of the Great Depression. It is also the earliest known commercial soy product introduced by a Seventh-day Adventist that contained chocolate.

3590. Bragg, Paul Chappius. 1930. Professor Bragg's live

food cook book and menus. Hollywood, California: National Diet and Health Association of America; and, Live Food Products. 170 p. No index. 24 cm.

• **Summary:** About raw food and vegetarianism. Contents: 1. Why I write this book. 2. Our daily food, is it nourishment or poison? 3. There are no meat recipes in this book. 4. Poisonous white sugar. 5. Dairy products not human food. 6. Coffee and tea are drugs. 7. Don't use condiments. 8. Salt—The enemy of life and health. 9. Pure food. 10. Don't use aluminum cooking ware. 11. Gas, indigestion and stomach trouble. 12. Acknowledgment of recipes and suggestions from other health food writers. 13. Salads. 14. Fruit salads. 15. Salad dressings. 16. Directions for making nut butter and nut milk. 17. Relishes. 18. Soups (incl. Carque's nut milk soups, made with his nut milk). 19. Cooked vegetables. 20. Meat substitutes and main dishes. 21. Desserts. 22. Breads and bread foods. 23. Sauces and gravies. 24. Drinks. 25. Health confections. 26. Health sandwiches... 30. Baby's diet from birth to 18 months. 31. Diet schedule for the growing child.

Chapter 1 (p. 11) states: "The drug doctor has been a failure. After hundreds of years of his reign there is still universal sickness and suffering which, instead of abating, is unmistakably on the increase."

Chapter 12 (p. 26) acknowledges: "A few of the recipes in this book were taken from the works of some of the most prominent men in the field of Natural Living. I have considered, in giving a cook book to my people, that they should have, not only my own favorite recipes, but also the best of other men who have experimented along this line. I have therefore included recipes from the books of: Dr. John T. and Mrs. Vera Richter, the leaders of the Raw Food movement in the West. Dr. Philip M. Lovell, distinguished editor of the most widely read Health column in the world, the Care of The Body section of the *Los Angeles Times*. Dr. Henry Lindlahr, the great pioneer Nature Doctor. And Otto Carque, chemist, research worker and crusader in the fight for natural foods."

Chapter 16, "Directions for making nut butter and nut milk," begins with a long passage from *Natural Foods: The Safe Way to Health*, by Otto Carqué (1925). It contains recipes for: Cocomilk. Nut milk (made by mixing 1 level tablespoon nut butter with 1 cup warm water, plus a little honey or sweet fruit juice if desired). Almond milk for infants. Nut cream (made from unroasted nut butter, warm water, and honey). Combination nut butter (peanuts, pignolias, cocomilk). Apple and almond butter. Nut meal.

Chapter 20, titled "Meat substitutes and main dishes" (p. 111-18), contains largely cooked dishes, and makes widespread use of the "Battle Creek Sanitarium product, Protose, being available at most fancy grocers." Vegex and Savita are also widely used in recipes. Soy sauce is used to season Vegetable chop suey (p. 114). It "may be purchased at a Chinese store or any fancy grocers."

The National Diet and Health Association of America is

located at 1109 North Hudson, Hollywood, California.

Note: This is the earliest document seen (July 2021) by or about Paul C. Bragg that mentions soy. No juicer is mentioned in this book. A portrait photo (just after the title page, p. 5) shows handsome "Prof. Paul C. Bragg." Address: Professor, California [Los Angeles].

3591. Carqué, Otto. 1930. The key to rational dietetics: Fundamental facts about the prevention of disease, the preservation of health, the prolongation of life. New, revised and enlarged ed. Los Angeles, California: Published by the author. 151 p. See p. 86. 24 cm.

• **Summary:** The Preface notes: "In this volume the author has condensed the teachings presented in his larger volume 'Rational Diet.'" Discusses the therapeutic and health-enhancing benefits of vegetarian foods, exercise, rest, fresh air, sunlight, and pure water. Though soybeans are not mentioned, the author recommends cooking other legumes in a pressure cooker with baking soda (p. 86). Address: Los Angeles, California.

3592. Ferrier, John Todd. 1930. On behalf of the creatures: A plea historical, scientific, economic, dynamic, humane, religious. London: Order of the Cross. 142 p. 19 cm. [100 ref]

• **Summary:** Contents. Foreword. The records of history. The testimony of science. Some economic problems. The dynamics of natural food. A plea for humaneness. The voice of religion.

The Foreword notes: "It is more than 23 years since the chapters of this little brochure were first published as Letters to the Press, and then in a Booklet in response to many inquiries and requests."

This book, which includes many quotes from prominent scientists, also contains a chapter titled "The Dynamics of Natural Food" (p. 70-90) in which the author strongly advocates a vegetarian diet and abstinence from alcohol. Dr. Cheyne convinced his distinguished friend, John Wesley (the father of the Methodist movement), to experiment with a vegetarian diet in 1735-37 (p. 73-74). In 1747 he wrote to the Bishop of London: "Thanks be to God. Since the time I gave up the use of flesh-meat and wine, I have been delivered from all physical ills."

The goals of the Order of the Cross are "To attain by mutual helpfulness, the realisation of the Christ-life, by the path of self-denial, self-sacrifice, and absolute self-abandonment to the Divine will and service." And to practice pity, compassion, love, devotion, and purity.

3599. Pitman Health Food Co. 1930. "Pitman" Health Food Co. New factory: Vitaland, Four Oaks: The home of health foods (Brochure). Four Oaks, Sutton Coldfield, Warwickshire, England: Pitman Health Food Co. 15 p. Illust. Portraits. 12 x 15 cm.

• **Summary:** Cover title: A commemorative booklet containing portraits of the founder, James Henry Cook, his managerial staff, and exterior & interior views of the new factory, Vitaland. On each page (except the cover and pages 8 and 9) is a photograph with a caption. The numbers that follow are the page numbers. These photos show: Cover: Illustration of an aerial view of the plant. (2) Portrait, with signature, of James H. Cook, F.I.S.A., "Founder and principal 'Pitman' Health Food Co." (3) "Executive and heads of departments, 1930. Standing [left to right]: Mr. J.B. Lief (Order Dept.); Mr. J. Pickering (Despatch); Miss F.M. Price (Retail Accounts); Mr. A.J. Townley (Engineer); Miss M.M. Hope (Wholesale Accounts); Mr. F.M. Sutherland (Stock Keeper); Mr. R. Roberts (Milling). Sitting: Mr. P.S.

Barber (Secretary); Miss. K.V. Cook (Cashier); Mr. Jas. Hy. Cook (Principal); Miss F.A. Vernon (Statistical Dept.); Mr. R. Turner (Factory Manager)."

(4) Vitaland (view from East). Showing terraces, rockery [rock garden or alpine garden] and flowering shrubs. (5) Vitaland (view from West). Showing lawns, fruit trees and rose beds. (6) Order department With a floor space of 3,200 square feet. (7) Corner of stores. Showing overhead traveling cranes and conveyors.

(10) Wrapping section. Size of open space in main factory, 100 ft. by 160 ft. (11) Machinery bay. Total area of glass covering the six factory Northern lights: 5,850 superficial feet [square feet]. (12) Vacuum plant for reducing liquids at low temperatures (130°F). (13) Wheat mill showing right to left, wheat pit, elevator, mill (without stones or rollers), conveyor, receiver, and sack being filled with flour, as finely ground as ordinary white flour. (14) Mill house with overhead runway. Showing high speed grinders, up to 4,000 revs. a minute. (15) Boiler house showing patent oil fuel burners. (16) Land tennis court, Four Oaks, Warwickshire.

Text on pages 8-9: "Vitaland is undoubtedly the latest, the most modern, the most up-to-date factory in a garden for the production of health-giving Vital Foods. It is built in a green field of 1.5 acres, in rural England with in a few minutes walk of Sutton Park, one of the largest and most interesting natural public parks in England. The park comprises 2,280 acres of unspoiled heather-clad moors, century old woodlands, and lakes that provide unbounded joy and pleasures to thousands of people.

"The factory presents a very pleasing effect with its white cement facing contrasting well with the quaint old pattern red pantiles [interlocking clay tiles] on the roof. The lay-out of the space between the road and front of factory indicates the fact that a sense of beauty need not be destroyed by a factory and its precincts.

"The main entrance opens to a reception hall containing handsome show cases, its walls being hung with portraits of noted Vegetarians and pioneers in the food reform movement. Over the door leading from the reception hall to factory appear the lines from William Blake's poem—"To build a New Jerusalem in England's green and pleasant land."

"On the right of the reception hall are situated the private and general offices. To the left are the raw material stores with receiving deck, overhead travelling cranes and conveyers to facilitate the quick conveyance of goods to any part of the building. On left and back of the reception hall and offices are the stores for manufactured goods, and ordered departments. Extending to the rear is the large open factory with granolithic floor. The machinery and work-tables run parallel with front of the building, under northern lights, ensuring excellent lighting. A broad centre gangway runs from front to back. The power for machinery is transmitted from electric motors, by shafting so arranged as

to make it available wherever required. The tables are served by metal trucks on rubber wheels, each truck capable of holding hundreds of full bottles or other articles, for removal to the stores for finished goods.

“Along the right hand side of the factory are situated the packing department with despatch deck; the mill-house for grinding of wholemeal flour; also separate departments for dry and wet steam-cooking ranges; the baking and drying ovens; the roasting and vacuum plant; and the plant for special chocolate making. The boiler house is also located on the right-hand side of the main building. But as oil is the only fuel used, unsightly chimney stacks are entirely absent.

“The oil is fed to the heating boiler through patent burners, with the flow of oil automatically controlled (according to the degree of heat required in any particular part of the factory) by means of a thermostat. In the same way the desired pressure in the steam-boiler is automatically maintained. Once the controls are set, the oil supply needs no attention as any excess, or deficiency of temperature or pressure at once provides the remedy by cutting out, or continuing (as the case may be) the supply of oil. There is thus complete elimination of dust and grime, inseparable from the usual coal-furnace installation. The boiler house can be accordingly kept as clean as any other part of the building.

“The factory is equipped with most up-to-date machinery and labour-saving appliances. An ample supply of soft water is assured, independent of the public supply.

“On the right of the main building, but separated from it by a paved yard, is the store for bottles and jars. Its position prevents the dirt and dust—connected with straw and packing—entering the factory. Here are also situated dining and cloak rooms and cycle sheds. At the back of the building there is space available for future extension, at present it forms the “Pitman” employees’ sports ground.

“In the planning of the factory, every care has been taken to ensure that working conditions are conducive to absolute cleanliness, and to the comfort and health of workers. It is realized that only under such conditions can a maximum of satisfactory service be rendered.”

Note: This is the earliest document seen (July 2021) that mentions “Vitaland,” formerly ‘Pitman’ Health Food Co. Address: Four Oaks, Sutton Coldfield, Warwickshire, England.

3603. Morse, W.J. 1931. Visit to Kyuemon Hayakawa Miso Co. in Okazaki, Japan, and soybean oil meal feeding experiments (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: Foreign Plant Introduction and Forage Crop Investigations, Bureau of Plant Industry, USDA. 8,818 p. See p. 6997-7000. Unpublished log.

• **Summary:** W.J. Morse took notes and photos of his visit to Okazaki on 16 Jan. 1931. He was told by an innkeeper in Okazaki that there are “two factories in Okazaki making the famous Okazaki black miso... We found the Kyuemon Hayakawa Miso Co. factory about 3 miles from the inn. The master of the factory took us through the plant and explained each step of manufacture. Okazaki miso is made entirely from soybeans while other forms of miso are made from rice and soybeans. It takes twenty months to cure black miso. This company sells about 50,000 kan yearly.

“Okazaki miso keeps indefinitely and is used in making soups and preserving vegetables. At breakfast at the inn this morning we had black miso soup and found it had a much better flavor than red miso soup. The black miso is also sometimes used in making forms of soy sauce [tamari] by adding water.

“After our visit too the miso factory we went to Anjo where the main agricultural experiment station of the Aichi Prefecture is located. We met the director, Mr. Shinto Kanai, to whom we had a letter of introduction from Mr. Sato, S.M.Ry. [South Manchuria Railway], Dairen. The work carried on by this station consists of animal husbandry (mostly poultry and hogs), horticulture, chemistry and soils, and rice breeding.

“The station has used soybean oil cake in feeding experiments with cattle, hogs and poultry about ten years. For five years it has cooperated with the S.M.Ry. in soybean oil cake feeding experiments. At the present time quite a lot of work is being done in soybean oil cake feeding experiments with poultry.

“Aichi Prefecture is one of the leading poultry sections of Japan. In Japan there are 46,000,000 head of poultry, of which 6,000,000 are in the Aichi Prefecture. Poultry feed consumed in this prefecture amounts to Yen 18,000,000 yearly, of which nearly 40 per cent is produced locally. About Yen 8,000,000 of soybean oil cake is used in the prefecture but largely for rice paddy fertilizer. However the use of the

cake for cattle and poultry feed is increasing rapidly.

"The station is doing no work with soybeans [edamamé] with are grown only on the edges of the rice paddies by the farmers. The crop is raised for seed which is used in the home manufacture of miso, soy sauce and bean curd. Several varieties are grown by the farmers and Mr. Kanai said he would collect some and send us."

Page 6999: "Negative #46448. Soja max. soybean miso (Black) Okazaki, Japan. Okazaki black miso made wholly from soybeans curing in the large wooden casks or tubs. The material cures in these casks or tubs twenty months before it is ready for use." The cask is held together by many wide braided bamboo hoops. The cask is several feet taller than the miso maker (wearing an apron with a crest symbol or *mon* on the front) standing next to it. The top of each cask is piled high with about 1,200 pounds of stones to weight the miso.

Page 7000. "Negative #46449. Soja max. Black soybean miso curing in casks, Okazaki, Japan, January 16, 1931, D&M.

"Negative #46450. Soja max. Black miso curing in wooden containers at Okazaki, Japan, Jan. 16, 1931, D&M. Okazaki back miso is made wholly from soybeans and cured in large wooden containers as shown here and in the two previous pictures. Black miso is used in soups, and in preserving vegetables. 1200 pounds of stones are used to weight the miso material."

Page 7002 (Sat., 17 Jan. 1931). Tokyo, Japan. "W.J. Morse's notes: On our way to the S.M.Ry. office we stopped at the Dollar Steamship Line Office to see about reservations for San Francisco.

At the S.M.Ry. office, Mr. Matsuda, agricultural engineer, advised that a special conference on soybean oil cake feeding experiments was to be held the coming Wednesday at the Hog Breeding Farm at Tachikawa. He thought it would be well worth our while to collect data on the experiments to be seen and discussed. It was stated that many of the experiments in which excessive amounts of soybean oil cake were used had not turned out very well. We were given some more publications relating to the results obtained in feeding soybean oil cake, soybean curd mash [okara] and soy sauce mash to cattle, hogs, and poultry."

Page 7005-7006 (20 Jan. 1931), Tokyo and Tachikawa, Japan. "W.J. Morse's notes: We called at the S.M.Ry. Office where we met Mr. Matsuda and some other men who were going to visit the Hog Breeding Farm at Tachikawa. Arriving at the farm we were met by the director who first gave us the results of the soybean oil cake feeding experiments up to the present time.

"Four series of feeding experiments with hogs and pigs are being run, using different percentages of boiled rice, barley and soybean oil meal in the standard feeding mash. With young pigs the different variations of mash are given in addition to the mother's milk. With young pigs the feeding

experiments were started when the pigs were two (2) days old.

"From 3-5 weeks the young pigs fed mash with the 40% soybean oil meal made very rapid gains but then began to develop serious stomach trouble (is it any wonder with a 40% bean cake feed?). After four to five weeks all of the pigs had died which were on the 40% bean cake meal feed. Knowing the high content of protein (44-46%) of soybean oil meal, it seems rather a drastic move on the part of the experimenters to start 2-day old pigs on mash containing nearly one-half highly nitrogenous feed.

"In the standard mash used by the station rice bran, barley bran, wheat bran, corn meal, soybean oil meal, fish meal, salt, and calcium carbonate are used. The analysis of this feed is as follows:

"Standard Hog Mash.

"Moisture 10.26%

"Protein 17.13%

"Fat 8.79%

"Carbohydrates 43.60%

"Fiber 7.24%

"Nutritive Ratio 1:5.16"

Page 7007-7008 (21 Jan. 1931) Tokyo, Japan. "W.J. Morse's notes: We visited the Institute of Physical and Chemical Research where we met Dr. U. Suzuki, Prof. of Biological Chemistry at the Tokyo Imperial University and Chief Chemist at the Institute of Physical and Chemical Research, to whom we had a letter of introduction from Mr. Sato, S.M.Ry. Dairen.

"The S.M.Ry. Bureau of Agriculture has a special cooperative relationship with the Chemical Division of the Institute through which Dr. Suzuki is making a thorough study of the utilization of the soybean and its products. The S.M.Ry. is especially anxious to increase the use of soybean oil cake in Japan other than for fertilizing purposes.

"In his work, Dr. Suzuki has been especially interested in the foods of the Japanese people. Next to rice the soybean is the most important food. Ninety-seven per cent of the food of Japanese people is vegetable, two percent marine products, and one per cent meat. Of the vegetables, 12 per cent in protein and 85 per cent carbohydrates, an extremely wide nutritive ratio. Much of the vegetable protein is supplied by beans, especially the soybean.

"Dr. Suzuki has done much experimental work in the use of soy flour from extraction process bean cake or meal. Much of the work has been done in cooperation with Tokyo bakeries. The bakers have not been successful in making a good bread containing more than 20 per cent soybean flour and 80 per cent wheat flour.

"With reference to Soyamint, Dr. Suzuki advised that this is a soy sauce substitute—one-half chemical and one-half fermentation. We were given considerable data on other soybean products and also publications."

Page 7030-7031 (17 Jan. 1931, Tokyo). In a letter to

Dorsett in Peiping, China, Morse comments on the two factories making black miso in Okazaki.

Page 7053 (27 Jan. 1931). Morse notes in a cover letter accompanying two parcels sent from the American Consulate in Tokyo to Mr. K.A. Ryerson, Foreign Plants, B.P.I. [Bureau of Plant Industry], Washington, DC: "Of the products the most interesting is the famous Okazaki Black Miso under [product] numbers 6670 and 6671 which were obtained on a recent trip to Okazaki to learn the process of manufacture. This form of miso is the only one made wholly from soybeans as other forms are made with soybeans and rice. Black miso has been made at the same factory for about three hundred years and no improvements have been made in the methods of manufacture." Address: Agricultural Explorers, USDA, Washington, DC.

3605. Dennoch, -. 1931. Sind Schweitzer und Einstein Vegetarier [Are Schweitzer and Einstein vegetarians]. *Vegetarische Warte* 64(1):20-21. Jan. [Ger]

• **Summary:** Concerning Einstein: In this article is a reprint of a letter that Albert Einstein wrote to Hermann Huth on 27 Dec. 1930. [Note: That letter is in the Einstein Archive (Jerusalem) 46-756]. A translation of Einstein's letter is: Although I have been prevented by outward circumstances from observing a strictly vegetarian diet, I have long been an adherent to the cause in principle. Besides agreeing with the aims of vegetarianism for aesthetic and moral reasons, it is my view that a vegetarian manner of living by its purely physical effect on the human temperament would most beneficially influence the lot of mankind.

Here is the letter in the original German: "Obwohl ich durch äussere Umstände an der Durchführung einer ausschliesslich vegetarischen Lebensweise verhindert gewesen bin, bin ich doch seit langem der Gesinnung nach Anhänger Ihrer Bestrebung. Abgesehen von der Billigung dieser Bestrebungen aus ästhetischen und moralischen Motiven, bin ich der Ansicht, dass die vegetarische Lebensweise durch ihre rein körperliche Wirkung auf das menschliche Temperament das Schicksal der Menschen in sehr glücklicher Weise zu beeinflussen vermöchte."

Note 1. This article is in the journal of the German Vegetarian Society. The journal's subtitle is *Monatsschrift fuer naturgemaesse Lebensweise und Gesundheitspflege*:

Organ des Deutschen Vegetarier-Bundes.

Note 2. This article was obtained by Christian Koeder of Germany from the university library of the University of Marburg, Germany. Address: [Germany].

3606. Wan, Shing; Chen, Tung-Tou. 1931. Growth of vegetarian rats on omnivorous diet. *Chinese J. of Physiology* 5(1):71-78. Feb. [2 ref. Eng; chi]

• **Summary:** The first 3 weeks of the rat's life were found to be of great importance in determining the future growth rate and the ultimate size of individual rats. That is to say, the food supplied by the mother is a greater determining factor than the diet upon which the animals are placed after weaning. Address: Dep. of Biochemistry, Peiping Union Medical College, Peiping, China.

3607. *New York Times*. 1931. Eliminating old Adam. April 5. Part 9. p. 2, col. 7.

• **Summary:** Discusses the effects of vegetarianism on character.

3608. *New York Times*. 1931. 20,000 Danes see vegetarian lose to beef eater in test race. June 8. p. 6, col. 3.

• **Summary:** A. Randrup, beef-eater, wins bicycle race against F. Nadsen, vegetarian, in Copenhagen.

3609. Wakeham, Glen; Hansen, Louis A. 1931. The basal-metabolic rates of vegetarians. *Science* 74(1907):70-71. July 17. Reprinted and abridged in *American Journal of Public Health*. 1931. 21:1157. Oct. [1 ref]

• **Summary:** Average basal metabolic rates for 5 girls who had been life-long vegetarians was 14% below the normal Du Bois rate, whereas 10 girls who were vegetarians for at least 5 years had an average basal-metabolic that was 4% below normal. These rates, compared with those of short-term vegetarians, show that "a long period of vegetarianism is necessary of the rate is to be noticeably reduced." Address: Univ. of Colorado, Boulder, Colorado.

3610. Samtlaben, Runalt. 1931. Amerikanische Ehrungen [American honors]. *Vegetarische Warte* 64(8):192-93. Aug. [Ger]

• **Summary:** A few months later we read the following memorandum in the *Berlin Boersen Courier*: Einstein and the mutton. Professor Einstein and his wife were in America a short time ago, and every city which they visited was very ambitious in honoring the great German physicist. One day Frau Einstein was asked by a journalist what her husband's favorite food was. Surprised by this question, and as he had no particular preference, she replied, after some hesitation, that he ate the meat of mutton.

After a few weeks, Albert Einstein and his wife were in San Francisco [California] at the time, they were reminded of this question most admirably. In the hotel there was a formal

procession. The chief of the hotel followed, followed by the cook, then some waiters who carried half a mutton on a huge plate. Einstein had to use this mutton. It was a very special mutton—an English mutton, and its particular delicacy was that the Prince of Wales himself had eaten a piece of this roast. Then this mutton, which had enjoyed such high honors after its death, was packed in ice, and sent by means of a ship, a train, and an airplane, to Einstein's immediate abode, in the quickest possible way. America has special methods to honor his greatest guests. Einstein could not say no nicely.

Note: Einstein traveled to the United States in 1930-1931, and he emigrated to the USA in Oct. 1933 as a refugee fleeing Nazi Germany. He worked as a resident scholar at the Institute for Advanced Study near Princeton University, in New Jersey, and lived with his 2nd wife (and cousin), Elsa. Address: [Germany].

3611. Horvath, A.A. 1931. Soya flour as a national food. *Scientific Monthly* 33(3):251-60. Sept. [51 ref]

• **Summary:** During the past two decades a breakfast that used to be based on meat has been replaced by one consisting of cereals, sugar, milk, and fruit. "The experience of the Chinese people is a good example that even an entirely vegetarian diet is adequate in every respect if supplemented by the use of soybean products."

In Italy extensive studies feeding soybean bread to men were conducted by Prof. Ducceschi of the Committee for the Study of Soya, which was founded by order of Mussolini.

Before World War I, the bakeries in Hamburg, Germany, used around two tons of solvent extracted soybean flour (made by the Hansa Mill in Hamburg) to make bread. And since 1920 in Hamburg a bread containing 10% soybean flour has been supplied to hospitals, asylums, and other public establishments. Prof. Neumann, director of the governmental Hygiene Institute in Hamburg (the largest institute of its kind in Germany) stated in 1928 that "The heads of the hospitals were unanimous in their praise of this bread..." The manufacture of a similar soybean bread was begun in 1920 in the coal mining and industrial districts of Bochum, Dortmund and Duesseldorf in the Ruhr (Germany).

Also discusses at length Prof. Berczeller's Soyolk flour, which contains 42.5% protein and 20.24% fat. "Berczeller made a noble gesture in making a gift of his patented procedure in Hungary to the Children's Welfare Society of that country. At present, factories manufacturing Berczeller's flour are also established in Austria, Germany and England, and the introduction of Soyolk flour has met everywhere with great success. In the United States the building of a Soyolk factory is under way."

"Professor Moll, of the State Institute for Mothers and Children in Vienna (Austria), has obtained very satisfactory results with Soyolk flour for weak and tubercular children."

"In Vienna, Mrs. Hess, the head of the Federal Institute of Home Economics, undertook the study of the application

of the Soyolk flour to cooking. Soon a large number of recipes were produced, the principal of which were soy-soups, meat dishes, cakes, fish salads, pancakes, etc."

Note: This is the earliest document seen (May 2010) by Dr. A.A. Horvath with the term "soya flour" (or "soy flour") in the title. Address: M.D., Former head of the Soybean Research Lab. at Peking Union Medical College, then with Rockefeller Inst. for Medical Research, Princeton, New Jersey.

3612. Shryock, Richard Harrison. 1931. Sylvester Graham and the popular health movement, 1830-1870. *Mississippi Valley Historical Review* 18(2):172-83. Sept. [30 footnotes]

• **Summary:** Also discusses: Bathing, Mary Grova, Paulina Wright, Dr. William Alcott, Amos Bronson Alcott, Dr. T.H. Trall, hydropathy or "water cure," Battle Creek, Michigan.

The "faddist fringe of the reformers' theories" are "displayed in their views on vegetarianism" (p. 181). "In the long run, however, the popular health movement accomplished good rather than ill" (p. 182).

Note: This is the earliest English-language document seen (Oct. 2004) that contains the term "health movement." Address: Formerly Dep. of History, Duke Univ. [North Carolina].

3613. Shryock, Richard Harrison. 1931. Sylvester Graham and the popular health movement, 1830-1870. *Mississippi Valley Historical Review* 18(2):172-83. Sept. [30 ref]*

• **Summary:** An excellent treatment of America's first health reform movement.

3614. *Madison Survey (Madison, Tennessee)*. 1931. A valuable but neglected food. 13(41):163. Oct. 21.

• **Summary:** "About half of the people of the world obtain their protein from the soybean. The soybean protein is complete and superior in some respects to the protein in milk and flesh foods. The protein of a pound of soybeans is equal in nutritional value to two pounds of beef and costs much less. It contains none of the objectional [sic, objectionable] features found in the protein of meat. The broken-down, worn-out dead matter—the result of metabolism—of flesh foods is injurious to the liver, kidneys, and blood vessels."

"The Madison School family is enjoying the milk made from soybeans. Already the medical profession is realizing the value of this milk for infant feeding. The milk and cheese of the soybean is a wholesome, delicious food."

"It has been discovered that the average per cent of tuberculous milk in the great cities of England is 7.36. There are over a million tuberculous milk cows in England and Wales. And there are only four hundred dairies in all England and Wales that produce an A-grade milk."

3615. Kellogg, John Harvey. 1931. The soybean vs. beef. *Good Health (Battle Creek, Michigan)* 66(10):35-36. Oct.

• **Summary:** This editorial is a summary, with long quotations, of the following article: Horvath, A.A. 1931. "Soya flour as a national food." *Scientific Monthly* 33:251-60. Sept.

The editorial concludes: "There is abundant reason for believing that the soybean will gradually win its way to popular favor in this country and that as its use increases, the consumption of meat will gradually decrease. For nearly five thousand years it has supplied the protein needs of the people of China so completely that the average Chinaman eats less meat in a year than the average American eats in a week. The soybean is the roast beef, beefsteak, veal, pork and sausage of China and in due time may likewise supplant these unwholesome disease-breeding comestibles in this country." Address: M.D., editor.

3616. Webber, P.A. 1931. Facts concerning the soybean. *Madison Survey (Madison, Tennessee)* 13(45):177-78. Nov. 18; 13(46):181-82. Nov. 25.

• **Summary:** "The soy bean is the only seed, as far as we know, which contains both the water soluble and the fat soluble vitamins."

"In 1917 during the World War, a special committee appointed by the Department of Agriculture, while searching for a cheaper source of protein for human consumption, discovered the soy bean. Shortly afterwards, soy bean in the form of flour was manufactured and this has been on the market now for some time. The entire soy bean ground into flour contains double the amount of protein and calories present in beefsteak."

"The soy bean is also very rich in lecithin. It has been clearly shown the soybean oil contains fat soluble vitamins A, D, and E."

A soybean milk can be prepared "in the same way as almond milk... Many tests have been made in the pediatrics departments of various universities in the United States showing that soybean milk can be used as the only source of protein in the nutrition of young infants." Also gives details on tofu. "In the Orient, 'tofu' forms a very popular and almost indispensable dietary article. This 'tofu' can be used in many different dishes, taking the place of meat or eggs. It is delightful as a constituent of roasts, omelets, etc."

"In Russia the soybean is taking prominence in the dietary of the people there. 'Plant soybeans and you plant meat, milk, egg omelets,' is the newspaper cry. A Soy Institute was recently organized in Moscow as well as a special exhibition of soy foods at which one hundred thirty varieties of soy dishes, including cutlets, pastry, salads, candy, and beef were shown. There is every reason to believe that the United States will become the leaders in introducing the soybean in the daily diet of the white race."

"The following are a few of the ways in which it is being prepared and used in the United States at the present time: Soybean flour is being used by large bakeries as a constituent

of bread, rolls, pastry for pies, cakes, etc. Baby foods are coming on the market containing certain percentages of soybean milk. Chocolate malted milk containing a good per cent of soybean products is now manufactured and sold by several companies. For some time, manufacturers of diabetic foods have been placing on the market productions made largely from the soybean. The soy sauce, otherwise known as Oriental 'Shoyu' has been popularized by the Chinese chop suey restaurants, and is now being used in many dishes made in the home. The bean curd is being canned and manufactured in various other ways and sold on the market. Powdered soybean milk has become a commercial product."

"For several years the Health Food Department of the Nashville Agricultural Normal Institute has been experimenting with this most interesting legume, and is now offering two basic products which may be used in many nutritious and appetizing dishes: the soy cheese and soybean flour. These two products have been used in scores of recipes tested out at the Madison Rural Sanitarium, the Nashville Vegetarian Cafeteria, and other health food places. Just recently several different recipes for the use of soybean flour bread, rolls, and cakes have been perfected. These with other recipes, will be sent free to those who inquire for them."

"A move to substitute vegetable proteins for animal proteins is a move in the right direction, and there is no plant so promising as the soybean. A soybean research foundation has been suggested. Large space at the coming World's Fair in Chicago [Illinois] will do much to bring this important but neglected food to the attention of the American people."

Note 1. This article was reprinted as a little 8-page booklet (15 x 9 cm, undated) by T.A. Van Gundy of La Sierra Industries. This shows that Van Gundy was aware of the pioneering work of Madison Foods at an early date. On the last page of Van Gundy's booklet is the following paragraph which does not appear in P.A. Webber's original article: "For some time the founders of La Sierra Industries, Arlington, California, have been experimenting with this most interesting legume and are now prepared to offer a number of products which may be used in many nutritious and appetizing dishes: canned soys, soy soup, soy flour, soy cheese, soyco (a coffee substitute), smoein (vegetable smoked meat), soy breakfast food and soy-loaf." What a shame that this little booklet is not dated! At least we know it was printed after November 1931.

Note. 2 This is the earliest English-language document seen (Dec. 2015) that contains the term "soyco." In this case it refers to a "soy coffee."

Note 3. This is the earliest document seen (Oct. 2020) that contains the term "soybean research foundation." Address: PhD, Madison, Tennessee.

3617. Gandhi, Mohandas Karamchand. 1931. The moral basis of vegetarianism. Paper presented to the London Vegetarian Society, 20 Nov. 1931. 6 p. Reprinted in Harijan,

20 Feb. 1949, and in "The Moral Basis of Vegetarianism" (1959 booklet). [25 ref]

• **Summary:** "I discovered that for remaining staunch to vegetarianism a man requires a moral basis. For me that was a great discovery in my search after truth. At an early age, in the course of my experiments, I found that a selfish basis would not serve the purpose of taking a man higher and higher along the paths of evolution. What was required was an altruistic purpose. I found also that health was by no means the monopoly of vegetarians."

"What I want to bring to your notice is that vegetarians need to be tolerant if they want to convert others to vegetarianism. Adopt a little humility. We should appeal to the moral sense of the people who do not see eye to eye with us." Vegetarianism "is for the building of the spirit and not of the body."

"I think that what should do is not to emphasize the physical consequences of vegetarianism, but to explore the moral consequences." Address: Bombay.

3618. Kellogg, John Harvey. 1931. The bran bugaboo. *Good Health (Battle Creek, Michigan)* 66(11):5-6. Nov.

• **Summary:** More than 80 years ago [about 1837], "Sylvester Graham, a highly cultured college professor and lawyer, became convinced that the fine flour bread that was then in general use was unwholesome because it represented only part of the grain, the mineral part, the bran and the germ being lost in the bolting process. He set out on a campaign to convince the public of the superiority of bread made from the whole grain meal. He was so able a lecturer that he soon had a great number of followers, and bread made from wheat meal in a few years became popular in many places, and was known as graham bread. In recent years, this wholesome bread has become so widely used its name is spelled with a small *g* instead of a capital, and probably few people know its origin.

When patent flour made by the rolling process came into fashion, the millers soon discovered that the growing popularity of whole meal bread was not at all in the interest of their business, and so began a campaign of opposition. Very soon articles began to appear in the papers about the injurious effects of bran and of whole meal bread." It was said that bran irritates the stomach and intestines. "Those who listened to this teaching soon found themselves suffering from distinct forms of constipation, which created a demand for mineral waters and laxative pills of many sorts."

"Very nearly thirty years ago [in the early 1900s] I suggested that sterilized bran be put up in packages ready for use. The idea was laughed at as being very absurd. I was often advised that intelligent people would never be induced to use bran, but as I had for years been prescribing it, I had frequently found difficulty in obtaining clean bran in fit condition for food." Note: By 1908 Dr. Kellogg's company was selling sterilized wheat bran.

Today, probably "more than ten million people in this country alone are making daily use of bran... Thousands of drug stores have become cafeterias and are selling more foods than drugs.

"While the popularity of bran has thus been increasing from year to year, the opponents of its use have continued their efforts but with little success..." The doctor advises taking psyllium seed with bran to help move it through the intestines. Address: M.D.

3619. Lane, Dorothy Engelhard. 1931. The nutrition of twins on a vegetable diet during pregnancy, the nursing period and infancy. *American J. of Diseases of Children* 42(6):1384-1400. Dec. [35 ref]

• **Summary:** The writer contends that while cow's milk has many advantages, it also has disadvantages" which are then summarized.

She arranged an experiment with an expectant mother who gave birth to healthy twins. The twins were nursed with mother's milk, supplemented at first by lactic acid cow's milk. A little orange juice and cod liver oil were given at each feeding. Gradually a vegetable milk was substituted for that from the cow and became the only milk used. This artificial milk was prepared by grinding unblanched almonds to make three level tablespoonfuls, and unroasted peanuts to make half a tablespoon. To these were added one half tablespoonful of wheat flour, one-fourth tablespoonful of shorts, one tablespoonful of soy flour, and one half tablespoonful of corn starch. Vegetable water was prepared from celery, chard carrots, string beans and lettuce according to season. One tablespoon of dextri-maltose and a little salt were added. The milk was rubbed through a fine purée sieve, so that it could be fed from an ordinary nursing bottle. A twenty-four hour supply could be prepared in half an hour.

At the age of two years and eleven months, they have made sturdy physical and mental progress. Their great endurance and strength call for special comment. Note: This vegan diet proved satisfactory in all respects for the nutrition of the mother during pregnancy and for her twins. Address: B.S., Berkeley, California.

• **Summary:** Food words that are not related to soy:

akameshi: see sekihan.

amanatto: sugared red beans [a very popular snack of cooked azuki beans coated with sugar].

ama-zake: sweet liquor (made from fermented rice).

an: bean jam. [an no haitte iru]: stuffed with bean jam.

[an o ireru]: to stuff (a cake) with bean-jam. [an ni kurumu]: to cover (a cake) with bean-jam.

anko: bean-jam = an.

azuki: a red bean; an India bean. [azuki-iro no]: reddish brown, russet. [azuki meshi] = sekihan.

beni-shôga: not listed.

goma: a sesame; a gingelly (plant); *Sesamum orientale*; a sesame seed. [goma abura]: gingelly oil. [goma-suri]: a flatterer, a toady, a sycophant. [goma o suru]: to pound sesame seeds; to flatter.

gomashio: not listed.

kaiseki: not listed (at least not using modern characters).

kaisô: seaweeds, marine plants; algae.

kombu: a tangle; a tang; a devil's apron. *Laminaria*.

konbu: not listed.

mochi: rice-cake. [mochi-tsuki]: rice-cake making.

[mochi o tsuku]: pound boiled [glutinous] for rice-cake.

[mochi ni tsuku]: cannot manage (handle); do not know what to do with. [mochitsuki saichû-datta]: we were in the middle of pounding [rice to make] mochi. [mochi wa mochi-ya]:

Every man has his forte = Every man to his trade.

nankin-mame: a groundnut; a peanut; a monkey nut.

nori: laver, sloke. [hoshi (ajitsuke) nori]: dried (seasoned) laver.

okowa: not listed.

sekihan: rice boiled together with red beans [azuki beans].

sembei: a cracknel [of wheaten flour]; a rice-cracker; a wafer.

senbei: not listed.

shiruko: red-bean soup with rice cake. [shiruko-ya]: a *shiruko* shop.

shôjin (3): abstinence from animal food; religious abstinence; lenten fare; vegetable diet; maigre food. [shôjin ryôri]: a vegetable diet. [Nihon no sôryo wa taitei shôjin o suru]: Japanese priests usually eat vegetarian food. [Uchi de wa kinyôbi wa shôjin de gozaimasu]: At my home we eat vegetarian meals on Friday.

soramame: A broad bean; a horse bean; a straight bean.

wakame: *Undaria pinnatifida*.

zôni: rice-cake boiled with vegetables. [zôni on iwau]: take the New Year's breakfast of rice cakes boiled with vegetables [to celebrate New Year's Day with zoni (mochi soup)]. Address: General editor, Japan.

3634. Castro, José. 1931? La nueva ciencia de comer y Tratado completo de cocina vegetariana eutrofologica. 2. ed. [The new science of eating and a complete treatise on eutrophological vegetarian cookery. 2nd ed.]. Barcelona, Spain: Casa Editorial Maucci. 413 p. Undated. Illust. Series: Biblioteca naturo-eutrofologica. [Spa]*

• **Summary:** "Contains 581 plates showing cooked vegetables, prepared eutrophologically. The most modern vegetarian cookery, by Prof. Dr. José Castro." By eutrophological vegetarian cookery, the author probably means by a method which reduces the number of nutrients removed from the food during the cooking process. Address: Author on vegetarianism, Spain.

3635. Lovell, Philip M. 1932. The care of the body. *Los Angeles Times*. Jan. 3. p. K20-23. Sunday magazine.

• **Summary:** The section titled "The soy bean" begins: "If you are worried about the proteins when you consume a vegetarian dietary, you should realize that there are about a dozen foods which not only make up for the protein you do not get when you go off the flesh food diet but which sometimes contain as much as two or three times the quantity there is in meat."

Whereas typical lean beef contains 17-20% protein, the soy bean contains well over 40%. "It is a food with which we should be better acquainted." We should use more sprouts made from soy beans.

Concludes with three recipes from Lovell's 1927 book *Diet for Health*: Soy roll or bread (with "soy flour"). Soy bean porridge (with "soy bean flour"). Soy bean croquettes (with soy bean porridge). Address: N.D. [Naturopathic

Doctor].

3636. Wan, Shing. 1932. Chemical composition of bones of vegetarian and omnivorous rats. *Chinese J. of Physiology* 7(1):23-34. Feb. [15 ref. Eng; chi]

• **Summary:** Omnivorous rats were larger than vegetarian rats, but there was little difference in the chemical composition of the bones of the rats on the two diets. Roasted soybeans were used in both the omnivorous and vegetarian diets; soybean oil was used in the vegetarian diet.

Note: This is the earliest document seen (Feb. 2022) concerning vegetarianism and the skeletal system. Address: Dep. of Biochemistry, Peiping Union Medical College, Peiping, China.

3637. Lovell, Philip M. 1932. The care of the body. *Los Angeles Times*. March 13. p. J20. Sunday magazine.

• **Summary:** The section titled "Salts" notes that England has an active and vigorous health food and physical culture movement. In London, Lovell ate at "several extraordinarily fine vegetarian restaurants where nothing but whole grain breads were served," along with a variety of vegetarian, raw, cooked and baked foods. Address: N.D. [Naturopathic Doctor].

3638. Lovell, Philip M. 1932. The care of the body. *Los Angeles Times*. March 27. p. K20. Sunday magazine.

• **Summary:** The section titled "Tropher club" states: Those of you who want to hear and discuss everything and anything concerning diet, "raw foods versus cooked foods,... for for your mother-in-law and food for thought,..." there is no better place than at the Tropher club. They usually meet at the "habitat of the raw food brigade—the home of the diet reformists, the religious vegetarians and the how-to-be-healthy vegetarians—none other than Dr. Richter's Eutropheon, located at Olive street between Eighth and Ninth." Its a rare treat and the public is invited. Address: N.D. [Naturopathic Doctor].

3639. Shippey, Lee. 1932. Lee side o' L.A. *Los Angeles Times*. April 13. p. A4.

• **Summary:** This entire long column is about Trophers—people who eat raw food. "'Trophers, Trophers, raw, raw, raw!' This is the college yell of the Trophers Club." They think their athletes "can out-swim, out-hike, out-tennis any Cook's tour party that ever was—for they do it all on raw food."

Trophers say they take their name from *eutropheon*, a "Greek word meaning an eating place in which nothing is cooked by fire." They have no dishes to wash, no pots or pans to scour after a meal. They just "throw the nutshells in the fireplace, the banana peels, apple cores and vegetable tops in the garbage can, and they're all set to enjoy themselves. So they go to their gymnasium, their clubhouse

or out for a lark in the mountains or at the beach while we carnivorous animals” stay home and wash the dishes.

There must be thousands of trophers in Los Angeles, for they have a clubroom [and restaurant] “at 833 South Olive street, publish a weekly newspaper and have a couple of get-to-gether every week.” Every weekend they take a trip, usually to the mountains or beach, for hiking, swimming, sun bathing, or athletic sports. Laughter “is one of the standard medicines among Trophers.” At one of their upcoming meetings, “Dr. Philip M. Lovell, to whom the California fruit, vegetable, and nut growers ought to erect a monument, is to speak.”

Clif Sherwod, chess editor of *The Times*—who isn’t a Tropher but who likes the crowd—says: “These Trophers are as fine looking a lot of men and women as I have ever seen in bathing suits. I train with them because they are always having such good times, and go in for the physical exercise I need. It isn’t just a fad with them, its a religion—outdoors, sunshine, hardening of their bodies to the elements and the belief that nature will take care of you if you give it a chance. They take delight in simple pleasures... A great many of the Trophers are young people who hardly know the taste of cooked food.”

Trophers say the original Eutropheons were Greeks during the Golden Age, and “that Greece owes much of its classic grandeur and greatness to them.” Contains 4 cartoons of Trophers.

3640. Lovell, Philip M. 1932. The care of the body. *Los Angeles Times*. April 24. p. I20. Sunday magazine.

• **Summary:** In the section titled “Soy bean” (p. 21) the following letter is reprinted in full: “Torrance, California. Dear Dr. Lovell. In the health section of the *Los Angeles Times Magazine* several weeks ago I read an article about soy beans.

“As a Japanese farmer I raised and used soy beans for many years but since coming to this country I have not seen soy beans grown. I believe this is too bad, as I believe soy beans are a valuable crop.

“For many centuries the people in Japan used this product for their main supply of protein. They also used it for nitrogen for their lands.

“Contrary to common belief, the Japanese have not used much fish for their diet and no animal meat at all, for Buddhism does not recommend its followers to kill and eat their fellow animals.

“Many due to Buddhism or the difficulty in transporting fresh fish, did not use much fish. The only thing they could depend upon for the protein was a cake made of soy beans, called tofu. We also make a sauce of the soy beans [soy sauce].

“In the Orient this is a staple crop. The farmers raise it as one of the rotating crops. I should really like to see more soy beans raised here but on account of the lack of popular

usage there is not much demand for them.

“Could you give me more information about the use of this product which would appeal to the popular taste? I would appreciate it very much.

“Sincerely yours, Tatsuo Inouje [Inouye].

Lovell responds that, as he has stated before, 80% of the people worldwide are “vegetarians, either by religion or economic necessity.” The Japanese are a progressive race. What they have accomplished during the past 70-80 years is “a miracle of the century. Yet they have done it essentially on a vegetarian diet.”

The soy bean has replaced animal protein for the Japanese and for most followers of Buddhists and Confucianism. “It is the roast beef of the Orient. It contains twice as much protein as the richest of meats. It is a very fine food indeed. The health food stores are slowly building up a sale for it. Recently I ran across a soy bean bread. I believe the average health food store can procure it.” Address: N.D. [Naturopathic Doctor].

3641. *Literary Digest*. 1932. Less energy from vegetable food. 113:23. June 25. *

3642. Forbes, E.B.; Voris, LeRoy. 1932. The economy of conversion of food energy into milk energy by the dairy cow. *J. of Nutrition* 5(4):395-401. July. [1 ref]

• **Summary:** Nine Holstein Fresian cows transformed 20.96% of their feed energy into milk energy during a period of lactation averaging 313 days in length; and transformed 18.68% of their feed energy into milk energy during the calendar year. The most efficient cow converted 23.35% and the least efficient cow 18.04% of her feed energy, into milk energy during the period of lactation. Soy was fed in the form of soy bean meal.

Note 1. This is the earliest document seen (Dec. 2020) concerning the efficiency if animals in converting feeds into human foods.

Note 2. In Sept. 1928 this peer-reviewed, scientific periodical began to be published by the American Society of Nutrition. Address: Inst. of Animal Nutrition, Pennsylvania State College, State College, PA.

3643. Wakeham, Glen; Hansen, Louis O. 1932. The basal metabolic rates of vegetarians. *J. of Biological Chemistry* 97(1):155-62. July. [6 ref]

• **Summary:** The average basal metabolic rate of 20 lifetime vegetarians was found to be 11% below Du Bois normals. Average basal metabolic rates dropped after 6 to 8 years in subjects consuming vegetarian diets. “The significance of these results is not at all clear... Perhaps it may be tentatively suggested that the cells of the organism, confronted over a long period of time with a low supply of amino acids, gradually adjust their metabolic processes in such a way as to increase the mechanical efficiency of the body as a

heat engine and thus enable the organism to carry on its normal functions with less loss of the total potential energy of the food in the form of heat. It should be stated that the sublingual temperatures of forty-two of the subjects—all of the cases in which this factor was observed—were always between normal limits, 36.7-37.2°.” This research was done in cooperation with the Boulder-Colorado Sanitarium-Hospital. Note: It was largely conducted at the Stanborough School, run by Seventh-day Adventists in England. It was the first experiment in Great Britain on the basal metabolism of vegetarians. International in scope, it involved vegetarians from 7 different countries. Address: Dep. of Chemistry, Univ. of Colorado, Boulder.

3644. *Vegetarian Messenger and Health Review* (Manchester, England). 1932. The “Pitman” Health Food Company: Vitaland, Four Oaks, Warwickshire. Aug. p. 223-25.

• **Summary:** The company’s model factory, Vitaland, is located only a few minutes’ walk northeast of Sutton Park, about 10 miles northeast of Birmingham. “Vitaland had its beginning in 1898 in the centre of Birmingham, but in 1908 it was found necessary to take larger premises, to meet the demands of a growing manufacturing business, and a move was made to Aston, a densely populated suburb, 2-3 miles northeast of central Birmingham. In 1930 the final move was made to Four Oaks. Mr. James H. Cook, the principal of the “Pitman” Company, looked upon the building at Aston as a step toward his long-cherished idea of a ‘factory in the country’ and Vitaland is a ‘dream come true.’

There follows a description of the large, spacious, well-lit factory. Photos show: (1) The Order Department with a floor space of 3,200 square feet. (2) Machinery Bay. “The total area of glass covering the six northern lights is 5,850 superficial feet [square feet].

“On the day following his visit to the factory our representative joined the ‘34th Annual Staff Outing’ [apparently starting in 1899] when a party of 70 journeyed by motor coach to Ludlow and Church Stretton and spent a thoroughly enjoyable time.”

“Food reformers who are interested not only in the composition of the food they eat, but also in the conditions in which they are manufactured are invited to visit Vitaland.”

Note: The statement that “Vitaland had its beginning in 1898” seems slightly misleading. According to “The First Century of Health Foods,” by Kathleen Keleny (the daughter of James H. Cook) (1996): “In the summer of 1898 the first Vegetarian hotel in England, called the Pitman Vegetarian Hotel, was opened and I was made manager of that too” (p. 7). The vegetarian meals were an immediate success, hundreds of people were soon enjoying lunch at the hotel daily, and many of the hotel’s visitors became vegetarians. “The customers started asking for foods which they could take home with them... I produced simple and appetising

foods from nuts, cereals, fruits and vegetables to take the place of meat, lard, butter, cheese and jelly made from animals...” So Mr. Cook, probably with his staff, made these vegetarian foods in the hotel’s kitchen. There is no indication that they were labeled or packaged; so they were more like “take out” dishes than commercial products.

In 1902 he started a health food store “and the manufacturing side was increased. “I realised that it was not economical to run a factory in the centre of Birmingham, so I bought a site in Aston where I could build the first factory” [in 1908] (p. 8).

But what products did he sell at his health food store starting in 1902? Many were probably made by the International Health Association at a real health food factory in Redhill, Surrey, starting in 1899. In his very carefully researched and documented book, *The Seventh-day Adventists in the British Isles, 1878-1933*, Gideon David Hagestotz, PhD, explains: In 1899, near Redhill, Surrey, the International Health Association purchased Harley Mill, which it enlarged and called Salford Mill before starting production of health products. The management imported some of the machinery and purchased the remainder in England. The products resembled the noted Kellogg and Post health foods; in fact the association had procured the ‘rights’ to make Battle Creek foods in England.

“Early in 1900, just after the factory gave promise of developing into a profitable industry, fire destroyed the plant... With the undamaged machinery as a nucleus for a new start, the Association leased property in Birmingham [far to the northwest, between London and Manchester] the following November [1901] where it functioned as a stock holding company under British law. Unfavorable conditions in the form of high rent and improper location” led to “a financial loss of £1,500 at the end of the first year of operation.” Thereafter “each year the plant showed a profit in spite of some competition created by substitutes for the commodities it produced.”

In short, the Seventh-day Adventists started the first health food factory in England in 1899. In 1926 the rapidly expanding International Health Association (I.H.A.) was renamed Granose Foods Ltd.

3645. *Madison Survey* (Madison, Tennessee). 1932. The food factory. 14(45):179-80. Dec. 7.

• **Summary:** “For many years, as one of the campus industries at Madison, a health food factory has been operated. It has furnished foods for the college cafeteria, for the sanitarium diet kitchen, and for the Nashville Vegetarian Cafeteria, and has sold much to the outside trade. Recently more than usual interest is being shown in health foods. Quotations from a few letters written by those representing and those using our food in other places will be of interest to many of the Survey readers.”

Popular products include Vigorost, Soy Cheese [tofu],

Soybean Dixie Fruit Crackers, and Soy Bread.

Dr. E.A. Ruddiman, in charge of Soy Bean Research at the Henry Ford Laboratory in Dearborn, Michigan, wrote that he took home the samples of Vigorost and Soy Cheese and enjoyed them very much; his wife made some croquettes from the Soy Cheese.

Dr. A.A. Horvath of the Bureau of Mines in Pittsburgh, Pennsylvania, ordered 12 small cans of soy cheese. "Dr. Horvath is an expert on the soy bean and our correspondence with him is most interesting.

"Dr. Harvey Holmes of the Severance Chemical Laboratory, Oberlin College [Ohio], writes: 'I am very anxious to try the "tofu" (soy cheese) and learn the various ways of serving it. I would like to obtain a sample of the Soybean Dixie Fruit Crackers.'"

3646. Anderson, Hans Steele. 1932. *Science of food and cookery*. 6th ed. Mountain View, California: Pacific Press Publishing Assoc. 298 p. Illust. Index. 23 cm. [7 ref]

• **Summary:** This book, by a Seventh-day Adventist, advocates a vegetarian, natural foods diet. "Natural foods, just as they come from the garden, field, and orchard, furnish the elements best suited to the harmonious development and functioning of all the tissues and organs of the body..." (p. 11). It discourages consumption of cane sugar (which is not digested by saliva, p. 14) and encourages consumption of cellulose and bran (p. 15).

Chapter 4, titled "The natural food of man" (p. 37-52) has sections on: True food satisfies hunger. Vegetarian diet and longevity. Vegetable and flesh foods contrasted. Vegetarian diet and endurance. Flesh eating a cause of disease. Ethics of flesh eating. Cruelty of flesh eating.

Recipes include: Gluten bread (p. 112). Diabetic bread (strong in gluten, p. 112). Gluten biscuit (p. 112). Homemade Nuttose (incl. nut butter, flour, tomato pulp, p. 134). Stewed soy beans (p. 156). Rice and soy bean loaf (with soy bean purée, p. 156). Rice and soy bean patties (p. 156). Favorite soy bean coffee (p. 281).

In the chapter on "Diet and disease" is extensive information and tables about acid-forming and base-forming foods (p. 237-39).

A 5th edition (same publisher, number of pages, and size) was published in 1929, and a 7th edition in 1938. Address: Dietitian.

3647. Baines, Maud. 1932. *Vegetarianism for beginners: Food reform for slender purses*. 1st ed. Manchester, England: The Vegetarian Society. 58 p. 19 cm. *

• **Summary:** A 3rd edition (66 p.) was published in 1933. The *Vegetarian Messenger* (Dec. 1946, p. 240) notes that over 80,000 copies of this book have been sold since publication of the first edition in 1932.

3648. Bartlett, Jenny. 1932. *Healthful cookery*. Warburton,

Victoria, Australia: Signs Publishing Co. 95 p. Illust. Index. 21 cm. *

• **Summary:** This is a Seventh-day Adventist cookbook. Address: Australia.

3649. Bell, Ernest. 1932. *The wider sympathy, etc.* London: G. Bell & Sons. 158 p. 19 cm. *

• **Summary:** This is a reissue of *Summer School Papers* (1928).

3650. Besant, Annie. 1932. *Vegetarianism in the light of Theosophy*. 3rd ed. Adyar, Madras, India: Theosophical Publishing House. 27 p. 19 cm. Series: Adyar Pamphlets, no. 27. *

• **Summary:** The author (née Annie Wood, an English Theosophist, who lived 1847-1933) explains the relationship of humans to the physical and spiritual order of the universe; she generally views humans as a disorderly element in nature. Explains that she had been deeply depressed by the experience of coming into Chicago, Illinois, by train because she began receiving reproachful astral messages from countless millions of beasts that had been slaughtered in the city's stockyards.

Though originally published in 1932, this document appeared as a souvenir presented at the First National Vegetarian Convention in Bombay, India (1964, p. 29-39).

3651. Boulder-Colorado Sanitarium. 1932. *Vegetarian cook book*. Boulder, Colorado: The Boulder-Colorado Sanitarium. 52 p. *

3652. Cottington-Taylor, D.D. comp. 1932. *Subtle seasoning 1932: A little book of recipes*. 5th ed. Worcester, England: Lea and Perrins Ltd. 70 p. Illust. Recipe index. 20 cm. 1st ed. Feb. 1926.

• **Summary:** A booklet of recipes advertising Lea & Perrins' Worcestershire Sauce. The sauce bottle, with its distinctive orange label, is shown on the front cover.

Contents: Subtle seasoning: Introduction. Domestic details: Cooking terms explained, menu making, marketing guide, table appointments, hints on entertaining, a lesson in frying, cooking temperatures, some facts on Lea & Perrins' Sauce. Recipes: Soups, fish dishes, vegetarian dishes, meat dishes and entrées, rechauffé [reheated] dishes, sauces, salads, snacks meals and sandwiches, sandwiches and rolls. Lea & Perrins' Mayonnaise. Lea & Perrins' Salad Cream. Handy household hints. Address: Director of Good Housekeeping Inst. [England].

3653. Graves, Lulu Grace. 1932. *Foods in health and disease*. New York, NY: The Macmillan Co. ix + 390 p. Illust. Index. 23 cm. [150+* ref]

• **Summary:** Contents: I: Foods in Health.

1. Food Elements: Classification. Carbohydrates. Fats.

Proteins. Mineral Salts. Vitamins.

2. Function of Food and Factors Which Influence Nutrition: Tissue Building. Energy Producing. Calorie. Nitrogenous Equilibrium. Metabolism. Food Selection. Care of Food. Cooking. Habits of Eating. Habits of Living.

3. Vegetables: General. Root. Stem. Leaf and Flower. Seed and Fruit, including Cereals.

4. Fruits. General. Pome. Drupe. Citrus. Melons. Banana Pineapple. Berries. Grapes. Figs. Avocado. Olive Pomegranate. Prickly Pear. Mango. Jujube. Breadfruit. Roselle. Cashew. Prunes and Raisins. Dates.

5. Sugars: Cane Sugar. Maple. Honey. Molasses. Saccharin

6. Nuts: General. Walnuts and Butternuts. Hickory. Pecan. Almond. Brazil. Paradise. Peanut. Chufa. Filbert. Chestnut. Beechnut. Acorn. Pine. Pistachio. Lichi. Ginkgo. Cashew. Coconut.

7. Animal Foods: Meat. Fish. Poultry. Game. Eggs. Milk. Milk Products. Ice Cream and Cheese.

8. Fats and Oils: Oils. Lard. Butter. Margarin. Mayonnaise

9. Beverages: Coffee. Tea. Chocolate. Cocoa. Yerba Mate. Carbonated Waters. Unfermented Fruit Juices.

10. Food Accessories: Baking Powder. Soda. Yeast. Gelatin. Algae.

11. Preservation of Foods: Refrigeration. Sterilization. Dehydration. Preservatives, Harmless and Harmful. Section II: Foods in Disease. Therapeutic Diets.

12. Overweight and Underweight.

13. Infectious Diseases: Colds. Tuberculosis. Typhoid Fever. Undulant Fever.

14. Nephritis-Gout and Arthritis-Epilepsy.

15. Gastro-Intestinal Diseases. Gastro-Intestinal Ulcers. Constipation. Diarrhea. Celiac. Sprue. Diseases of the Liver. 16. Diabetes.

17. Deficiency Diseases: Rickets. Tetany and Osteomalacia. Beriberi. Pellagra. Scurvy. Dental Caries. Pyorrhea.

18. Diseases of Circulation: Hypertension. (High Blood Pressure). Arterio Sclerosis. (Hardening of the Arteries). Anemia.

19. Infant Feeding.

20. Food Allergies and Food Infections. Appendix. Table of household measurements.

Table of vitamins.

Table of edible organic nutrients. A bibliography is found at the end of each chapter.

The author of this text on nutrition was co-founder (with Lenna F. Cooper) and first president of the American Dietetic Association. She comments (p. 36-37, in the chapter on vegetables): "The vegetarian diet has been the subject of discussion, more or less violent, for years. As yet no definite scientific deduction can be made for its use with man because of insufficient data. Observations to be

of value would have to begin in the early childhood and be followed through successive generations. The average diet of the Chinese is the nearest approach to it—but whether their small stature as a race is due to their diet is an unanswered question. Americans eat more meat than they need.

Soy is mentioned on several pages in this book:

In the chapter on vegetables: Page 52: In Japan, udo is seasoned with soy bean sauce. Page 73: Legumes, sometimes called pulses, include the navy, kidney, lima, string, soy and frijole. Dried beans, especially kidney, navy and soy, are rich in vitamin B and contain a small amount of vitamin A, but no vitamin C.

Page 74: The many beans of the tough pod variety include soy beans.

Page 75: "The soy bean is high in proteins, but, unlike other beans, it is high in fat and low in carbohydrates. The amount of starch present varies with the degree of ripeness when harvested, the thoroughly ripe beans being practically starch free. The soy bean flour is helpful in the diet for diabetes, tuberculosis, and other conditions of malnutrition. Because of the high fat content, it has a strong flavor, and breads or muffins made from it are not as light in texture as those made with other flours.

"A synthetic milk is made from soy beans which is similar to cow's milk both in chemical and physical properties. It is used by the Chinese in making a highly salted cheese called the Chinese Roquefort [fermented tofu], which may be found in Chinese restaurants in this country. It is good with salads, vegetables, meat combinations, and with bread. Soy bean sauce, a salty brown liquid sauce with a piquant flavor, is a favorite dressing with the Chinese."

Page 95: In China and Japan, soy bean is used in combination with rice.

Note 1. Lulu Grace Graves was born in 1874.

Note 2. The title of this book is very similar to "Nutrition in Health and Disease," by Lenna F. Cooper, Barber and Mitchell, published in 1928—four years earlier. The later became famous; its 16th edition appeared in 1976, yet it is cited only once, in the chapter on vegetables (p. 101) in this book. Address: Consultant in Nutrition and Diet Therapy; Formerly Prof. of Home Economics, Cornell Univ.; Formerly Assoc. Prof. of Home Economics, Iowa State College; Formerly Chief Dietitian at Michael Reese Hospital, Chicago, Lakeside Hospital, Cleveland, and Mt. Sinai Hospital, New York; Honorary President, American Dietetic Association.

3654. Kellogg, John Harvey. 1932. How to have good health through biologic living. Battle Creek, Michigan: Modern Medicine Publishing Co. vii + 498 p. See p. 88-89, 209-10. 21 cm.

• **Summary:** For Dr. Kellogg, biologic living includes a vegetarian diet (which includes dairy products and eggs). A section titled "The soy bean and the peanut, high quality

proteins” (p. 88-89) states: “The soy bean and the peanut are notable exceptions to other legumes. Their proteins are of the same high quality as those of eggs and milk.”

The next section, titled “Proteins of animal origin” (p. 89) starts by noting that animal proteins are “of the complete or balanced sort.” It concludes: “Lean meat is protein more or less saturated with blood and with a small admixture of fat. Such fat may constitute as much as one-half or more of fat meats. Meat contains uric acid urea, and other waste products. Newburgh has shown that toxic products constitute about one-fourth of lean meat solids.”

A section titled “Soy milk” (p. 209-10) notes: “Soy milk is in some respects superior to cow’s milk and its use in this country should be encouraged. Three quarts of excellent milk may be made from a pound of soy beans and the food value of the residue [okara] will be greater than that of a pound of beefsteak. A pound of wheat and a pound of soy beans will supply energy sufficient for a laboring man, and at a cost of less than three cents a day. Soy milk protein is of the superior quality necessary to supplement that of cereals and is of the basic or alkaline-ash type, and so corrects the acid-ash effects of cereal proteins.

“Soy milk is of special value in helping to change the intestinal flora. A very superior quality of acidophilus milk may be prepared from it*.” (Footnote: *”For information, address Battle Creek Diet Service, Battle Creek, Michigan.”).

“To fu [tofu], a curd prepared from soy milk, in China and Japan serves as the basis for a great number of meat-like and most delicious dishes.”

Note 1. This is the earliest document seen (Sept. 2012) that mentions an “acidophilus milk” made from soy milk or that discusses Dr. Kellogg’s work with it (one of two documents).

Note 2. This is the earliest English-language document seen (March 2022) that uses the term “animal origin” in connection with vegetarianism. Address: Battle Creek, Michigan.

3655. Lea & Perrins, Inc. 1932. Success in seasoning. New York, NY: Lea & Perrins. 49 p. Illust. (color). Index. 17 cm. Reprinted in 1934 and 1936.

• **Summary:** Recipes for using Lea & Perrins’ Worcestershire Sauce. Contents: The art of serving appetizing meals. Appetizers. Soups. Fish. Meats. Eggs and cheese. Entrées. Sauces. Spaghetti and rice. Vegetarian dishes. Garnishes. Stuffings. Salads and salad dressings. Sandwiches. Bridge party and Sunday night supper dishes. Vegetables. Hot dishes for cold days. Relishes. Dishes men like. Items—Small but important [kitchen tips].

The inside front cover states: “Nearly a century ago, Lea & Perrins of Worcester, England, compounded a sauce from the recipe of an English nobleman, who had spent many years in India. They began production on a large scale, and its local importance was followed by ever increasing

demand.

“Where the flag of civilization went, Lea & Perrins Sauce, the Original Worcestershire, followed. Scarcely a ship left Britain without a supply among its stores. Soon the great hostelrys at the ports of call featured in their menu attractions. Branch distributing houses were established in all parts of the world, thus making it available at even the remotest points.”

Note: Lea & Perrins, Inc., New York, NY, also issued the following leaflets and booklets, all of which are owned by the Texas Woman’s University Library (Denton, Texas) and cataloged as Title: “Recipe leaflets collection. Corporate author: Lea & Perrins, Inc. Publication: New York, NY: Lea & Perrins, Inc. Year: 1934.

3658. Winsch, Wilhelm. 1932. 50 Jahre Vegetarier! Erlebtes und gedachtes [Fifty years a vegetarian! Lived and considered]. Warnsdorf [Varnsdorf], Czechoslovakia: Reformverlag Warnsdorf. 38 p. 18 cm. [Ger]

• **Summary:** Pages 10-13 give a brief history of vegetarianism in Germany. In 1832 vegetarianism came from England to Germany. The first German vegetarian was a man who was very well known at the time, Gustav von Struve, a member of the Frankfurt Parliament. From him came the first German vegetarian book, *Mandaras Wanderungen*, which describes the journeys of a young Hindu named Mandaras. The second vegetarian in Germany was Wilhelm Zimmermann, who was in the seminary at Weissenfels. He was surprised to discover that he felt much better after a 4-week diet without meat. He authored the second German vegetarian book, *Der Weg zum Paradies*. The most significant promoter of vegetarianism in Germany was the former theologian, Eduard Baltzer, whose great work *Die*

natuerliche Lebensweise (The Natural Way of Life) was often called the vegetarian Bible. Also discusses Rudolf Virchow, Richard Wagner, Arthur Schopenhauer, and Leo Tolstoy.

Varnsdorf (German: Warnsdorf) is in Czechoslovakia, 58 miles north of Prague, near the East German border. Address: Doctor of Medicine.

3659. *California Health News (Hollywood, California)*. 1933. Here we are! 1(1):2. Jan. 30.

• **Summary:** Clarke Irvine explains why he has started a new newspaper. "Greetings from California. We hardly need say that this is the first issue of the *California Health News*. We hope that the future will be as inspiring as the work on this edition. "Old Man World is sick today. The year 1933 will hear much moaning before the big-head of *super-prosperity* drops to normal.

"And yet people are sick, suffering, dying—but today, *glorious 1933*, the world is becoming health-minded, and looks to its diet, care of the body—and pocketbook.

"Our purpose is to spread the knowledge of health, tell of the happiness that results from right living and the economic advantage thereof—so valuable today.

"This ideal is the culmination of ten years belief and practice of healthful living; a desire to turn a lifelong news training into more constructive lines; to sing of the exuberant life that all may live, here and now!

"This time is ripe for a frequently and regularly published health journal." Address: [Founder, editor-in-chief, and publisher].

3660. *California Health News (Hollywood, California)*. 1933. Hike dates. 1(1):2. Jan. 30.

• **Summary:** "Organizations holding regular hikes are invited to use this column for announcements. *Sundays*. L.A. Health club (Bragg group), starts 9:00 a.m., foot of Mt. Hollywood, Western avenue entrance to Griffith park. *Sundays*. Trophers club (Richter group), announced at Wednesday night meetings (see Lectures). Auto trips to distant points."

3661. *California Health News (Hollywood, California)*. 1933. Meetings. 1(1):3. Jan. 30.

• **Summary:** Wednesday, 7:30. Trophers club, 833 S. Olive [Richter's Eutropheons—Live Food Cafeterias]. Everybody welcome. Sunday hike announced here.

Wednesday, 8 p.m. Dance. L.A. Health Club, Goldberg ball room, Venice Blvd. at Flower, members 25¢.

Saturday, 6 to 8 p.m. 833 S. Olive. All invited to come and relax, rest, dine and express ideas or ask questions on any timely subject. No fees. Dining optional.

3662. *California Health News (Hollywood, California)*. 1933. Lecture dates. 1(1):4. Jan. 30.

• **Summary:** "Daily afternoon. Various doctors at United Health Service, Fourth and Broadway. Free. *Tuesday*. Dr.

Richter, 209 S. Hill, music 6:30, lecture 7:30. Free. *Tuesday*, 8 p.m. Dr. Rotondi, 1633 N. Argyle. Free. *Thursday*. Dr. Richter, 833 S. Olive, music 6:30, lecture 7:30. Free. *Friday*, 8 p.m. Dr. Rotondi, 1633 N. Argyle. Free."

3663. *California Health News. A National Journal of Better Living (Hollywood, California)*. 1933--.. Serial/periodical. Clarke Irvine, Editor and Publisher. 4647 Russell Ave., Hollywood, California. Vol. 1, No. 1, Jan. 1933 (4 p.). Biweekly.

• **Summary:** This was the first consumer magazine focusing on the young, but rapidly growing, health foods movement in and around Los Angeles, California, but also giving good coverage to events nationwide. It was one of America's earliest and most influential health periodicals.

The masthead for Vol. 1, No. 1 (30 Jan. 1933) states: "Free. Independent. Frank. Officially endorsed and recognized as the spokesman of Western health activities. Clarke Irvine: Editor and publisher. Marguerite Irvine: Business manager... dedicated to health, happiness, beauty, and economic security; and stands for freedom of thought, speech and action. Issued on the 15th and 30th of each month at 1255 N. La Brea, Hollywood, California, U.S.A. Telephone HEMPstead 2434. Price: 3¢. One year, one dollar. Accepts advertising only for items beneficial to health. Health lectures for schools, churches, clubs, shops, stores, etc. may be arranged through this office without cost." The top of page 1 states: Complimentary copy, Circulation: 5,000 this issue. "The only independent health journal on the Pacific Coast." At the bottom of page 1 in big bold capital letters: "Editors please note! Contents not copyrighted. Two copies mailed to you. Clip and use freely. Two copies mailed to you. Clip and use freely. Credit appreciated—Editor."

The masthead on 25 Jan. 1935 states: "Established 1933. 4647 Russell Ave., Hollywood. Phone No. 9017. Published fortnightly on Friday. Clarke Irvine, editor and publisher. Marguerite Irvine, business manager. Jack Silver, advertising manager. Accepts advertising only for items beneficial to health."

In. Feb. 1937 (Vol. 5, No. 4), some 7,000 copies of each issue were published fortnightly (once every two weeks) on Friday. A year's subscription was \$1.00; each issue was 5 cents. It was edited and published by Clarke Irvine, who wrote a column titled "Tomorrow" on page 1.

Starting with the issue of 17 Sept. 1937, the title was shortened to *Health News*. In 1939 each issue sold for 5 cents. The masthead on 14 March 1941 gives the address as 1702 N. Vermont, Hollywood. Tel. NOrmandy 9017. Clarke Irvine, editor and publisher. Tom Gaines, assistant editor. But by 23 May 1941 the address had changed to 4657 Hollywood Blvd.—with everything else the same.

On 15 May 1942, it became *Let's Live*, which still sold for 5 cents an issue—although the price had doubled to 10 cents by June 1945. In August 1988 the magazine celebrated

its 55th anniversary. In December 1999 it boasted “more than 2 million readers worldwide.” As of Nov. 2003 *Let's Live* (which see) is published by Franklin Publications in Santa Monica, California. Phone: 310-445-7504. They still have almost all back issues (except the year 1938), in excellent condition! Address: Hollywood, Los Angeles, California.

3664. Battle Creek Sanitarium. 1933. Menu. Breakfast, Tuesday, April 18 1933. Battle Creek, Michigan. 1 p.
 • **Summary:** At the bottom of each typed menu is a space for the dietitian's name. “Good morning!” is printed near the top of the menu, which is in the form of a table with 8 columns. Col. 1 are the menu items divided into main types: Fruits, cereals, entrees, breads, beverages. Cols. 2-8 give, for each menu item, the weight, the calories from protein, fat, and carbohydrates, and the total calories. Cols. 7-8 give the reaction of the food (acid or basic).

Only vegetarian foods are offered. These include soy milk, soy acidophilus [cultured soy milk], cereal coffee, whole wheat toast melba, cooked whole wheat cereal, bran flakes cereal.

3665. Poucel, J. 1933. Le naturisme et al vie; la joie d'être sains [Naturism and life: The joy of being healthy]. *Journal des Debats* 40(2):65-68. July 14. [Fre]*

3666. *California Health News* (Hollywood, California). 1933. Free health lectures. Tuesdays, 8 p.m. Dr. Pietro Rotondi (Ad). July 30. p. 7.

• **Summary:** This small ad states: “Questions answered. Free advice. Refreshments. No collection. Hours 2 to 5 and by appointment. Residence calls.” A small portrait photo shows Rotondi.

Note: This is the earliest document seen (Sept. 2004) concerning Pietro Rotondi. He later wrote extensively about vegetarianism and soyfoods. Address: 1633 N. Argyle (near Hollywood Blvd.), Hollywood [California]. Phone: GRanite 4492.

3667. Wartenweiler, Marion J. 1933. The bean in ancient and modern times. *Good Health* (Battle Creek, Michigan) 68(7):20-21, 26. July.

• **Summary:** Beans were not widely consumed in Egypt. Herodotus wrote that the priests regarded beans as unclean. Pythagoras, “although a vegetarian, forbade his disciples to eat beans. Borrowing the superstition from the Egyptians, he believed that they stupefied [dulled] the mind.”

Today there is a noticeable increase in the use of soybean flour in the United States and in Europe. “It has a strong and characteristic, although quite delicious flavor. Moreover, only recently Henry Ford has announced that the paint on his next model Ford will be compounded with oil developed from the soybeans raised on the Ford farms.”

3668. Lief, Stanley. 1933. Diet reform simplified. London: Health for All Publishing Co. 63 p. Sept. 19 cm. *

3669. Lovell, Philip M. 1933. Care of the body. *Los Angeles Times*. Oct. 1. p. G21. Sunday magazine.

• **Summary:** The section titled “Raw food” contains some raw food recipes “submitted by Mrs. Vera Richter, the local leader of the adherents of the raw food idea.” There are recipes for: Vegetable soup (with ½ pound unroasted, unsalted peanut butter). Nut roll (with crushed pignolias). Mock cheese (with ½ pound unroasted peanut butter). Avocado soup. Address: N.D. [Naturopathic Doctor].

3670. Lovell, Philip M. 1933. Care of the body. *Los Angeles Times*. Oct. 1. p. G21. Sunday magazine.

• **Summary:** The section titled “For raw fooders” begins: “There are thousands of persons in the city of Los Angeles who subsist entirely on raw fruits, raw vegetables, nuts and whole grains. Many of them give thrilling testimonials of their cures, of their physical regenerations, due to diets of this sort.

“As a matter of dietary policy, I am, personally, in hearty accord with the idea of incorporating a considerable quantity of raw fruits and raw vegetables in the dietary—at least, to the tune of 50 per cent.

“In no other diet do we get as many unchanged vitamins, mineral salts, and all the precious food substances exactly as nature wants you to have them.”

He then discusses and recommends “a recent book published by that grand pioneer of the raw food theory—John T. Richter. The book is called ‘Nature—The Healer.’” Address: N.D. [Naturopathic Doctor].

3671. *California Health News* (Hollywood, California). 1933. Otto Carque works for finer, healthier race. 1(21):1, 14. Nov. 30.

• **Summary:** Editor and publisher Clarke Irvine writes: “I am indebted to Otto Carque. He helped me regain my health, along with McFadden, Hauser, Marden, Lindlahr, Bragg, Ehret, Richter, and teachers of this decade. It was the benign Mr. Carque who first awoke in my drowsy mind the necessity of eating natural foods; given in poignant but brief instructions with his unsulphured, sundried fruits. He has helped thousands of others. I salute!”

Carque, who is nearing age 67, popularized the black mission fig. “This season he celebrates 25 years of health-building business, and almost one year at his new location for wholesale exclusively.

“Pioneer and staunch advocate of natural foods, he has unswervingly dedicated himself to the task of offering for public consumption foods as wholesome and undenatured as are possible to provide through commercial distribution. Otto Carque's first problem was to offer California fruits without sulphur. Apricots, pears, peaches, nectarines and white

figs are usually bleached with sulphur dioxide to improve their appearance at the cost of their wholesomeness. So Mr. Carque eliminated chemical treatments and processes and devoted himself to perfecting sundrying and dehydration.

“Otto Carque’s life story lacks drama—there is no period of outraging health, then a breakdown, followed by a slow, grim struggle back to health. On the other hand his story has the charm of intelligence, altruism, as well as a rare ability to apply to his being, nature’s immutable laws. An idealist, a man of vision, science and practical training in commercial life, the quality and purity of the nation’s food supply have always been his deepest concern.

“Otto Carque was a personal friend of the late Dr. Harvey W. Wiley, ‘father of the pure food and drug act of 1906,’ who often commended him for the good work he was doing. When on a lecture tour some years ago, he enjoyed the privilege of having Dr. Wiley introduce him to a large audience in Washington [DC] as one of the few men in America who practically carried out the spirit of the law.

“He attributes his health and endurance to a diet of simple, natural foods, mostly fresh fruits and vegetables, with some nuts, nut butters and occasionally legumes, whole grain and dairy products. He believes that simplicity in diet is the key to health and longevity; moreover that the building of a sound and healthy body and mind should only be a means to an end.

“‘It enables us to more efficiently discharge our duties towards ourselves and our fellowmen,’ he says.”

A portrait photo shows Otto Carque, balding with white hair, a large white mustache, wearing a two-piece suit with tie and a flower on the left lapel. The caption: “He popularized Black Mission Fig.”

3672. Hickman, Russell. 1933. The Vegetarian and Octagon settlement companies. *Kansas Historical Quarterly* 28(4):377-85. Nov. www.kancoll.org/khq. [39* endnotes]

• **Summary:** Begins with a brief history of vegetarianism in America, including Sylvester Graham, Amos Bronson Alcott, Henry Wright, Charles Lane, Fruitlands (a cooperative vegetarian community in Massachusetts, June 1844 to Jan. 1845. Fruitlands never numbered over eleven individuals), Henry S. Clubb.

The Vegetarian Kansas Emigration Company was established by Clubb in 1855 to establish a communal home for vegetarians. On 16 May 1855 the first meeting of the company was held in New York. It was organized on the joint-stock principle. Charles H. DeWolfe of Philadelphia [Pennsylvania] was made president. At the first meeting 47 signed an agreement to emigrate and 26 more said they would probably go. Individual investments varied from \$50 to \$10,000. Dr. John McLauren was sent to Kansas to find a suitable location. In Jan. 1856, upon returning, he appeared before the company and advocated an octagon settlement near Fort Scott, on the Neosho River. The organization of the

company was then completed. A constitution was adopted; its preamble (which is quoted) begins: “Whereas, The practice of vegetarian diet is best adapted to the development of the highest and noblest principles of human nature...” Each member was then called on to pay \$10 to a fund to buy provisions.

“Whatever their motives, Clubb and his colleagues decided to organize a second company... to be known as the Octagon Settlement Company.” The members would be those who followed “strict temperance principles” but they were not required to be vegetarians. The three officers were the same.

In late March 1856 a pioneer group, composed of members of both companies, proceeded up the Missouri River. Two more parties would follow in April. On 1 May 1856 Clubb reported at length on the progress of the colony. After the town of “Nesho City” it enjoyed a brief boom, with land values increasing almost five-fold. The majority of emigrants arrived from April to June of 1856. “The project thus brilliantly begun ended in complete failure.” By the spring of 1857 hardly a trace of the settlement remained.

The later history of vegetarianism in the USA was more successful in terms of colonization. “In 1890 [sic, Jan. 1889, with Vol. 1, No. 1] Henry S. Clubb, then president of the Vegetarian Society of America, became editor of *Food, Home, and Garden*, which in 1900 was united with *The Vegetarian Magazine*, published by The Vegetarian Company at Chicago” [Illinois].

Footnote 38: “The Vegetarian Magazine, Jan. 1900, p. 12.” “Besides promoting the vegetarian faith, The Vegetarian Company also sold various products at that time: peanut butter, Kunghphy (a substitute for coffee), Vegetarian soap, Ko Nut (a butter made from cocoa nut oil), Graham flour, etc. Compare the other Kellogg and other trade products of to-day. Vegetarianism thus became highly capitalized.”

“Clubb was then very active in promoting vegetarian colonies throughout the country and made personal tours to locate favorable sites. *The Vegetarian Magazine* and its successor, *The Vegetarian and Our Fellow Creatures*, published many accounts of such colonies during the first quarter of the twentieth century. In 1920 the place of publication of this magazine itself was moved to one of these colonies, in Idaho.”

Footnote 39: “Vegetarianism in America was always closely allied with prohibition. Clubb was the author in 1858 of *The Maine Liquor Law* (New York, 1856), a history of prohibition and of its leading advocate, Neal Dow. Clubb also wrote a serial ‘History of Vegetarianism,’ 1907. A likeness of Clubb also appears in the frontispiece of *The Vegetarian Magazine* for Feb. 1900. The John Crerar Library of Chicago has an incomplete file of *The Vegetarian Magazine* and its successors. The Kansas State Historical Society has documents and other information illustrative of the Kansas venture.”

3673. *Nature's Path* (New York City). 1933. Fall activities of vegetarians under way. Dec. p. 391.

• **Summary:** On Oct. 19, the Vegetarian Society of New York started its fall activities with a meeting at the Hotel New Yorker; about 150 people attended. One of the speakers was Benedict Lust, "America's leading authority on natural living," who spoke about "Vegetarianism in relation to the natural life."

The second meeting of the Society was held Nov. 13. On Nov. 30, the Society will hold a Thanksgiving Dinner at Schildkraut's Vegetarian Restaurant, 4 West 28th St., New York City. At least 125 participants are expected, because the society is planning a "very unique feature," which is being kept secret.

3674. Cubbon, W. 1933-1939. Bibliography of works relating to the Isle of Man. 2 vols. Isle of Man: Published by the author. 1500+ p. *

• **Summary:** This is basically the card index of the Manx National Library compiled by the first librarian of the Manx Museum. The first volume (topics A-G) was published in 1933.

Note that G.W. Wood was the great collector of Manx related material whose collection formed the nucleus of the Manx Museum's Library; it was acquired in 1924 while Wood was living in London. Address: Isle of Man.

3675. Baines, Maud. 1933. *Vegetarianism for beginners: Food reform for slender purses*. 110 recipes, 24 salad combinations. Why flesh meat is not desirable, simple rules for health, a salad a day, how to cook vegetables conservatively, etc. 3rd ed. Manchester, England: The Vegetarian Society. 68 p. 19 cm. *

• **Summary:** Advertising matter, p. 1-6, 63-68.

3676. Braune, Julius. 1933. *Ueber fleischlose Kost* [On the meatless diet]. Ebd. 27 p. 19 cm. [Ger]*

• **Summary:** The author was born in 1909.

3677. Carqué, Otto. 1933. *Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods*. Los Angeles, California: Published by the author. 208 p. Index. 24 cm. [20+* ref]

• **Summary:** This manual of food reform discusses the importance of a simple vegetarian diet of natural foods, sunlight and sunbaths, fresh air, pure water, exercise and rest. Also talks about acid and alkaline foods, the influence of mind on health, the failure of synthetic foods, why refined sugar is injurious, the dietetic value of sea plants, table salt is unnecessary and harmful, fruit is man's best food, sulphured and unsulphured fruits, nut butters, food preparation, and the treatment of disease.

"Dedicated to my dear wife, Lillian, who through her

sincere and earnest spirit of cooperation has greatly assisted the author in his work of food reform."

The germ theory of disease has not been proven since potentially harmful germs are omnipresent yet often fail to harm healthy individuals (Pasteur was a chemist and laboratory worker, not a physician. Germ action is always secondary; "when germs invade a living organism it is a sign that the organism is enervated and its chemistry perverted." p. 114-15).

The section titled "'Meat substitutes' not essential" (p. 130) states: "Those persons who want to adopt a meatless diet should not look for artificially prepared meat substitutes as a source of protein. A food constituent required in such a limited amount as protein is easily supplied by the various products of the vegetable kingdom. Such combinations as 'roast vegetable turkey' or 'vegetarian steak' seem to be the result of the belief that meat is a necessary food and must be replaced in some form. Indeed, vegetarians, who live largely on foods in which the protoplasmic cells have been more or less disorganized by prolonged cooking, have very little advantage over mixed eaters.

"All other factors being equal, a judiciously selected meatless diet is far more conducive to health than the usual mixed diet, consisting, for the most part, of animal and starch-bearing foods deficient in alkaline elements. We should understand that the proteins of fruits and vegetables, supplemented by a small amount of the proteins of nuts, legumes (especially soy beans), or dairy products, are fully able to maintain health and efficiency. It is entirely feasible to live on an exclusive diet of fresh ripe fruits and green-leaf vegetables for many weeks and months, thereby purifying the blood and greatly improving the keenness of our senses. In fact, in many pathological conditions such a restricted diet is more helpful than an absolute fast.

"Among the legumes which contain a large amount of protein, the soy bean takes first place. Its protein content, nearly 40%, is higher than that of any other food. Moreover, this protein is of excellent quality, as valuable as the casein of milk; it contains all the essential amino acids. It contains a sufficiency of vitamins A and B, and in this respect it is superior to all seeds. It contains very little carbohydrate, only about 6%, and is practically free from starch. The soy bean fills the place of meat as well as milk in the dietary of many millions of sturdy Orientals; it is destined to become one of the great food staples, not only of this country, but of the world. A number of recipes for the preparation of the soy bean are given in Chapter XXI."

The section titled "Fruit and nut confections" (p. 133-35) begins: "Fruit and nut confections made without refined sugar and glucose should take the place of candies." These "sweet-meats"... "should be the only kind of confections allowed to growing children, which have a natural craving for sweets." Recipes include stuffed dates, date caramels, nut fruitose, carob confection, raisin-nut balls, and honey

cocoanut balls. For Nut fruitose: Mix dates, figs, raisins, almonds and walnuts. "Run through a food chopper twice. Press the mixture into a flat pan in a layer about 1 inch thick, let stand overnight, and cut into convenient sizes." Note 1. Carque was a pioneer in the development of healthy, natural treats. The last recipe could be considered a forerunner of the less-healthful "nutrition bar" of the 1990s.

The next section, titled "Nuts and nut butters," states that "salting and roasting greatly impair the nutritive value of nuts and prevent their proper assimilation. The proteins become coagulated by roasting, and the fats split into glycerine and free fatty acids, while the vitamins are destroyed. Nut butters made from salted nuts should, therefore, have no place in our dietary." Rather, the peanuts or almonds should be blanched (scalded or parboiled in water or steam). "Since few people, on account of defective teeth, can masticate nuts well enough to be acted upon by the digestive juices, the mechanical emulsification of nuts by means of nut butter mills is quite dispensable."

The section titled "Melba toast" and "Melbettes" (p. 156) states: "These are delicious dextrinized whole wheat products made by the Cubbison Cracker Co., Los Angeles." Melbettes are also made from whole rye. "Calavo Melba Toast is another tasty whole wheat product; it contains the natural fruit fat of the California Avocado or Alligator Pear as shortening."

The section titled "Natural whole rice" (p. 156) notes: "Whole rice, also called brown rice, contains the bran, cuticle, and germ of the cereal. In milling nothing has been removed but the husk and dirt."

The section titled "The Soy Bean, a Remarkable Food" (p. 158-61) discusses boiled soy beans, soy bean milk, tofu ("it is called by the Chinese 'the meat without a bone...'"

Note 2. This is the earliest English-language document seen (Aug. 2016) that refers to tofu as 'the meat without a bone.'

"Other preparations of the soy bean, which are but little known in this country, are *natto*, *hamananatto* [*hamanatto*], *Yuba* and *Miso*. The principal use of miso, which is a slightly [sic] fermented mixture of soy beans and rice or barley, is for making soups and for cooking vegetables"), soy sauce, soy bean sprouts, and various recipes.

Under "Boiled soy beans" we read: "The dry beans are best soaked in soft water over night or for at least 20 hours and then cooked with sufficient water in a waterless cooker or Pressure cooker until tender. This may require as much as 2 hours or more, according to the variety of beans used. The best results are obtained if the beans are allowed to simmer rather than boil quickly. Onions, tomatoes, celery, parsley and other seasoning vegetables increase the palatability of the soy bean. A fireless cooker may also be used in preparing soy beans for the table."

Under "Ready made soy bean products" (p. 161) we read: "As the preparation of the soy bean in the average

household is often not convenient, the author has arranged to supply the following products at reasonable prices: Canned Soy Beans, Soy Bean Spread, Soy Bean Stew, Soy Bean Loaf, Soy Vegetable Onion Soup, Soy Bean Vegetable Bologna, Soy Bean Tasty Lunch, to which others will be added in the course of time. These products have met with ready approval, as they fill a long felt want for tasty, nutritious and wholesome vegetable protein foods to substitute meat and dairy products."

The author's signature appears at the end of the Preface. Address: Los Angeles, California.

3678. Finkel, Harry. 1933. Seven day trial on natural food diet... containing a week's recipes and menus for breakfast, lunch and dinner: Also natural food sandwiches and health drinks. 2nd ed. Los Angeles, California: The Society for Public Health Education. 182 p. Index. 23 cm.

• **Summary:** The author, a vegetarian, is now listed on the title page as "Dr. Harry Finkel, N.D., D.C., One of America's well known drugless doctors and dietitians, author of *Health Via Nature* and *Diet and Cook Book*." The Society is located at 425 North Larchmont Blvd. in Los Angeles.

The book contains a 4-page chapter titled "The Soya Bean" (p. 178-82), containing details on its nutritional benefits plus ten "Soya Bean Menus." "Like many leading scientists who believe in the great food value of the Soya bean, so does this author share the same opinion. It is for this reason that he desired to familiarize the public with the many advantages of this nutritious and valuable food."

Page 183 contains a full-page black-and-white ad for Gud Fud Soya Beans and 6 related soybean products, prepared in the laboratories of California Food Kitchens, Los Angeles, California.

Page 185 contains an ad for Hollywood Cup Coffee Substitute, made by Hollywood Cup, Inc., 823 Traction Ave., Los Angeles, California. It is "Made from figs, bran and barley." It is "different because it is not merely 'Figs and Barley,'" but a scientific mixture of California figs and various grains skillfully blended." Address: N.D., D.C., Los Angeles, California.

3679. Freshel, Maud Russell (Lorraine) Sharpe (Mrs.). ed. and comp. 1933. Selections from three essays by Richard Wagner, with comment on a subject of such importance to the moral progress of humanity that it constitutes an issue in ethics and religion. Rochester, New Hampshire: Millenium Guild. 184 p. See p. 19. Jan. 24 cm. *

• **Summary:** "Quotations and extracts against vivisection, including selections from Wagner."

3680. John, Joseph. comp. 1933. Gandhi as others see him: A collection of articles, opinions, speeches, sermons, etc. Colombo, Ceylon: W.E. Bastian & Co. xii + 96 p. Portrait. 18 cm. *

• **Summary:** Josiah Oldfield, a well-known British vegetarian writer, became M.K. Gandhi's closest friend during the latter's last year in London (1891). "We lived in the same diggings, shared the same tables, sat on the same committees, wrestled with the same social problems and were faced with the same temptations of youth..."

3681. Salt, Henry Stephens. 1933. The logic of vegetarianism: Essays and dialogues (Revised and abridged edition). London: London Vegetarian Society. 54 p. Illust. 19 cm.

• **Summary:** This book is written partly as a dialogue between a vegetarian and those opposing his views. See detailed summary at 1st edition, 1899. Contents: 1. Purpose. 2. Structural evidence (teeth, anatomy, etc.). 3. Appeal to natural law. 4. The humanitarian view. 5. A chat with father Christmas: A dream story. 6. The aesthetic sense. 7. Palliations and sophistries. 8. Ox in a tea cup: A colloquy. 9. The consistence trick. 10. Difficulties and doubts. 11. Kith and kin. 12. Conclusion.

The London Vegetarian Society is located at 8 John St., Adelphi, W.C.2, London, England. Address: England.

3682. Schweitzer, Albert. 1933. Out of my life and thought: An autobiography translated by C.T. Campion. New York, NY: Henry Holt and Company. 288 p. Portrait. 22 cm. *

• **Summary:** Page 124: "Late on the third day, at the very moment when, at sunset, we were making our way through a herd of hippopotamuses, there flashed through my mind, unforeseen and unsought, the phrase, 'Reverence for Life.'"

"Affirmation of life is the spiritual act by which man ceases to live unreflectively and begins to devote himself to his life with reverence in order to raise it to its true value. To affirm life is to deepen, to make more inward, and to exalt the will to live."

"Truth has no special time of its own. Its hour is now—always."

Note 1. The revelation of Reverence for Life came to Schweitzer in Sept. 1915. "When the phrase came to him, it was not of Christianity that he thought, not of Goethe, not even of Jesus. His mind went eastward, to Buddha. The antecedents of his great idea were worldwide" (Brabazon 1975, p. 242).

"From this moment on, almost everything that Schweitzer did, almost everything that Schweitzer wrote, led back in some way or other to Reverence for Life" (Brabazon 1975, p. 143).

Note 2. The author was born on 14 Jan. 1875 in Alsace-Lorraine, at that time part of the German Empire. He died on 4 Sept. 1965 in Lambarene, Gabon, Africa. He was a German citizen from 1875 to 1919 and a French citizen from 1919 to 1965. In 1919 Alsace-Lorraine went from being part of the German Empire to being part of France. In 1952 Dr. Schweitzer won the Nobel Peace Prize. Address: Strasbourg,

Alsace, France.

3683. Shipway, G.W. 1933. Why are folk so bovine? Haslingden, England: Haslingden Printing Works. 1 p. 19 cm. *

• **Summary:** A tract on vegetarianism.

3684. Whitaker, Sydney Morgan. 1933. Man's natural food: An enquiry. Manchester, England: The Vegetarian Society. 27 p. *

• **Summary:** "Man's dietetic history indicates fruit, nuts, green leaves and roots as the foods to which he is mainly adapted. Further, a study of man's food customs, though of less value than other lines of enquiry, indicates the vegetable kingdom as the main source of his food."

"Comparative anatomy and physiology indicate fresh fruit and vegetables as the main food of man." Address: M.R.C.S., L.R.C.P.

3685. Madison Food Co. 1933? Madison soy cheese. Madison, Tennessee. 6 p. Undated.

• **Summary:** Contains a brief introduction to tofu with 8 American-style tofu recipes. "The principal protein of the Soybean is much like the protein casein of milk, and when the bean is properly treated a milk quite comparable in appearance, taste, and food value can be manufactured from it. From this milk, when allowed to become acid, or when a slight amount of a precipitating agent is added, a cheese can be prepared in consistency much like cottage cheese. This vegetable cheese (tofu) has been one of the principal articles of diet in the Orient for many centuries.

"In order that the people of America may have this most important food as an article of diet, a method of manufacturing and preserving has been perfected at the Madison Food Factory.

"For several years it has been used as a daily article of diet in the Madison Rural Sanitarium, Nashville Vegetarian Cafeteria, and many other Good Health places. It has proven its value as a diabetic food, and as a splendid meat substitute."

Tofu recipes include: Soy cheese salad. Stuffed egg with soy cheese. Tomato soy sandwich. Soy sandwich filling. Soy croquettes. Soy cheese loaf. Soybean omelet. Soybean cutlets.

On the back panel is a list of "Health foods manufactured and distributed by Madison (Sanitarium) Food Company, Madison, Tennessee: Nut Meat, Vigorost, Peanut Butter, Fruit Sticks, Sterilized Bran, Psyllium Seed, Cereal Drink, Soy Flour, Soybeans (Dry), Malta (Malt Syrup), Soy Fruit Crackers, Soybeans (Canned with Tomato Sauce), Madison 3 Minute Breakfast Wheat, Sanitarium Baked Beans, Steamed Whole Wheat, Malted Breakfast Crisps, Whole Wheat Fruit Crackers, Sweetened Whole Wheat Crackers, Soybeans (Canned Plain), Soy Cheese (Bean

Curd), Madison Fruit Candy, Regulose (composed of Lactose and Dextrine). Write for descriptive literature.”

Note 1. The company is now named “Madison Food Company.”

Note 2. Many of Madison’s publications about its foods are undated; this makes it very difficult to determine when a specific food was first made and sold commercially. Address: Tennessee.

3686. St. Helena Sanitarium Food Co. 1933? St. Helena Sanitarium Foods: What they are and how to use them. Sanitarium, Napa Co., California. 14 p. Undated. 16 cm.

• **Summary:** Contents: Foreword. Brief description of each food product: Fruit nuts. Granola. Caramel cereal coffee. Peanut butter. Nut-Cereol. Nut loaf. Malted nut meal. Granose Flakes. Granose biscuit. Crackers (incl. Graham Crackers, Graham Sticks). Zwieback. Gluten. Olive oil. Grape juice. Sanitarium flour. Cooking oil (cottonseed). Choice food recipes (34 vegetarian recipes). Mail orders. Price list.

The descriptions of several of these products are especially interesting: “Fruit nuts: A scientific combination

of grains, fruit, and nuts thoroughly baked by a slow process to dextrinize all the starch, then ground to a coarse meal. It is slightly sweetened by the malting of the grain but contains no artificial sugar. The most perfect breakfast food.

“Granola: Similar in appearance to Fruit Nuts but without the sweet.” Therefore, Fruit Nuts was like today’s sweetened Granola, whereas this Granola was unsweetened.

“Peanut butter: We [Seventh-day Adventists] were the originators of Peanut Butter.”

On the last page is a directory of “Restaurants and Sanitariums on the Pacific Coast where these foods are used. Vegetarian restaurants: 435 Geary Street, San Francisco. Fifth and A Streets, San Diego. 259 South Hill Street, Los Angeles. 319-321 West Eighth, Los Angeles.

“Sanitariums: St. Helena Sanitarium, Sanitarium, Napa Co., California. Glendale Sanitarium, Glendale, California. Loma Linda Sanitarium, Loma Linda, California. Portland Sanitarium, Mt. Tabor Sta., Portland, Oregon. Paradise Valley Sanitarium, National City, California. Walla Walla Sanitarium, College Place, Washington.”

On the back cover is an ad for the St. Helena Sanitarium, with a photo of the 5-story building.

On the inside front cover: “Something to drink? Caramel cereal coffee. Something to eat? Fruit nuts. Nothing better. Nothing just as good.” Address: Sanitarium [St. Helena], Napa County, California.

3687. *Naturopath and Herald of Health* (New York City). 1934-1944. Serial/periodical. Published in New York City by Benedict Lust, M.D. of the American Naturopathic Association.

• **Summary:** Preceding title: *The Naturopath*. This is Lust’s professional magazine; *Nature’s Path* is his popular magazine.

The bottom of the title page (Jan. 1934) begins: “A monthly magazine devoted to Naturopathy, the art of Natural Healing, and the Science of Physical and Mental Regeneration on the basis of Self-Reform, Natural Life, Clean and Moral Diet, Hydrotherapy (Preisnitz, Kneipp, Bilz, Kuhne and Just Systems), Osteopathy, Chiropractic, Mechano-Therapy, Heliotherapy (Sun, Light and Air Cure), Diet, Phytotherapy, Physical and Mental Culture.

Subscription per year \$5.00 to all parts of the world, single copy, fifty cents; back copies of ‘Naturopath,’ 1902 to 1927 per volume, cloth bound, \$10.00. Back volumes ‘Nature’s Path.’ 1925 to current per volume, cloth bound, \$6.00.”

Note: This magazine was not published from June 1927 to Dec. 1933. This title starts with Jan. 1934 (Vol. 33, No. 1). This magazine is now published in a larger 8½ by 11 inch format, with fewer issues per issue and per volume.

PROPERTY OF NATIONAL COLLEGE
OF NATUROPATHIC MEDICINE

American Naturopathic Association.” Note that this periodical had this title previously from 1902-1915.

Note: The National College of Natural Medicine (NcNM in Portland, Oregon) has an excellent set of this magazine. Address: 236 E. 35th St., New York City (in Jan. 1934).

3688. *Naturopath and Herald of Health* (New York City). 1934. Ninth International Vegetarian Congress. 33(2):58. Feb.

• **Summary:** The 9th International Vegetarian Congress will take place at Zurich, Switzerland, in 1935.

3689. *Naturopath and Herald of Health* (New York City). 1934. “Pro-Vida” naturopathic institution (Ad). 33(2):58. Feb.

• **Summary:** “Head physician: Dr. Enrique A. Valdes. Naturopathic secretary: A.L. Lopez. Treatment of disease by physical, natural agents and vegetarian diet, scientifically combined. There is a monthly magazine published under the name, ‘Pro-Vida,’ written in Spanish, very noteworthy, which spreads the Natural and Social Sciences. Subscription for one year: \$2.” Address: Neptuno 57, Habana [Havana], Cuba.

3690. The wonder of the 20th century. Come and hear Dr. Kloss astonishing and interesting free lectures (Poster). 1934. Dr. Jethro Kloss, 500-44th St., N.W., Miami, Florida. 1 p.

• **Summary:** “Dr. Jethro Kloss of Washington, D.C. food chemist and scientist...” Dr. Kloss will show how to make soy bean milk and soy bean bread at the Miami School of Applied Arts, 406 N.E. 2 Avenue. These 2 exceptional food demonstrations have never yet been given to the public. “Dr. Kloss is one of the best informed chemists on the soybeans, which is fast coming to the front in food lines.

“Dr. Kloss makes more than 20 palatable edible table foods from the soybeans, they are very inexpensive and can be made in any home by a simple, practical method of which Dr. Kloss is the originator...”

“Dr. Kloss’ demonstration is truly amazing when one knows and considers that the soybean is a perfect food, and contains a high quality protein. Soybeans and their products perfectly take the place of meat, milk, and eggs. Soybean roast is better than the best beefsteak... Soybeans furnish the most economical supply of protein to be found, also contains all the other necessary elements of nutrition.

“Dr. Kloss’ classes in the preparation of these foods will begin, Thursday afternoon, March 28 at 2:30 p.m.” Address: Miami, Florida. Phone: Edgewater 1128-J.

3691. Humphrey, Fred. 1934. The philosophy of diet. *Naturopath and Herald of Health* (New York City) 33(4):101, 122. April.

• **Summary:** “Lincoln told Douglas in their great debates over slavery that no question was ever solved permanently

until it was settled philosophically. The same thing can be said about diet.”

3692. *Naturopath and Herald of Health* (New York City).

1934. Home study of Naturopathy for students and practitioners: For your convenience we offer the preparatory course in natural medicine. 33(7):212-17. July.

• **Summary:** Lesson X: Dietetics—Part III (p. 212-14). Nuts (“The queen of all foods”). Animal foods (“Second-hand foods” Unnecessary and undesirable). Milk diet (“Cow’s milk, raw, not pasteurized, is the most perfect food known”). Eggs (“The white of an egg is indigestible. The yolk only should be eaten by those who are sick” and should be cooked). Condiments (Should not be used, except for a sparing use of salt). Tea, coffee (Contain “caffein [caffeine], which is a poison capable of producing high blood pressure, heart trouble, and uric acid”). Medical dietetics (Errors of diet are the basic cause of the overwhelming majority of chronic ailments. Constipation is the main evil and consuming bran is the best way to prevent it). Diet to increase weight. Fasting. Specific diets: Reducing diet, diet for colitis, diet for hyperactivity, diet for gastric ulcer, diet for diabetes, diet during pregnancy, diet in fevers, diet in surgical cases.

Lesson XI: Massage.

3693. Dunlap, Knight. 1934. A possible dietary predisposition to stammering. *Science* 80(2070):206. Aug. 31.

• **Summary:** The author posits that a vegetarian diet predisposes children to stammering and stuttering, and that a meat diet alleviates these conditions. “Further survey of stammering cases,... has strengthened my suspicion that an insufficiency of meat in the diet is a predisposing factor in a great many cases.”

“Since a surprisingly large number of adult stammerers are relative vegetarians, however, it would seem possible that a meat diet would be advantageous to many of these cases.” Address: The Johns Hopkins Univ., Baltimore, Maryland.

3694. Wishart, George MacFeat. 1934. The efficiency and performance of a vegetarian racing cyclist under different dietary conditions. *J. of Physiology* (London) 82(2):189-99. Sept. 19. [9 ref]

• **Summary:** “Summary: The results are recorded of ergometer experiments carried out on a first-class long-distance racing cyclist who subsisted on rigidly controlled vegetarian diets of different protein content. The best performance was obtained on high-protein diets although the gross efficiency was then slightly lower than on diets poorer in protein.

Diet No. IV consisted of 1 lb “Soyolk” [whole soy flour], 3½ lb bananas, 5 oz tapioca, 6 oz sugar, and ½ lb apples. This was a very high protein that was “rigidly

vegetarian" (i.e. vegan, since it contained no animal products). This diet caused the cyclist "acute discomfort." The experiment with this diet "had to be abandoned owing to the extreme flatulence caused by this bean-meal food."

The cyclist (initials C.F.D.) now age 48, has lived on a vegetarian diet for the past 23 years. From 1910 until 1926, when he gave up racing, he secured many records and prizes. He competed in the Olympic Games in 1912 and 1920.

Note: This is the earliest English-language document seen (March 2022) that uses the term "rigidly vegetarian" to refer to a vegan diet. Address: Inst. of Physiology, Glasgow Univ., Glasgow, Scotland.

3695. Reichelt, Karl Ludvig. 1934. Truth and tradition in Chinese Buddhism: A study of Chinese Mahayana Buddhism. 4th ed., revised and enlarged. Translated from the Norwegian by Katharina van Wagenen Bugge. Shanghai, China: The Commercial Press, Ltd. xii + 415 p. Illust. Index. 23 cm. Reprinted in 1968 by Paragon Book Reprint Corp. (New York). [110* ref]

• **Summary:** The words "vegetarian" or "vegetarianism" appear on pages 80, 152, 154, 223, 234, 275, 293, 305, 310, 322. Includes a substantial bibliography on Buddhism worldwide.

Karl Ludvig Reichelt lived 1877-1952. Address: Tao-Fong Shan.

3696. *Naturopath and Herald of Health (New York City)*. 1934. State news: The Vegetarian Society of New York... 33(10):309. Oct.

• **Summary:** "... presented Dr. B. Liber in a lecture entitled 'Man and Nature' on October 2nd, which was very well attended and highly interesting. Dr. Liber needs no introduction as he is a well known speaker on Vegetarianism. He has just completed a book entitled 'Shall We Eat Flesh?' On November 29th, the Vegetarian Society will celebrate Thanksgiving Day with a Vegetarian Dinner."

3697. *New York Times*. 1934. Vegetarians have own feast. Nov. 30. p. 13, col. 6.

• **Summary:** Vegetarian Society of New York holds Thanksgiving Day dinner without meat.

3698. Baker, Ivan. 1934. Meet for the meatless: Four hundred meatless entrées, lunch and supper dishes. London: Ivor Nicholson & Watson Limited. xii + 340 p. 19 cm.

• **Summary:** In the chapter titled "Beans," the author notes that "the new Soyolk, fine meal of the soya bean, is now obtainable at all health food stores" (p. 143). Address: London.

3699. McCay, Clive Maine; Crowell, Mary F. 1934. Prolonging the life span. *Scientific Monthly* 34:405-14. Nov. [7 ref]

• **Summary:** This article begins: "In this day when both children and animals are being fed to attain a maximum growth rate, it seems little short of heresy to present data in favor of the ancient theory that slow growth favors longevity."

Roger Bacon (1214-1294), a scientist and monk of the middle ages, and Lord Francis Bacon (1561-1626) both wrote with great insight about the prolongation of human life. Lord Francis Bacon believed "that a spare and almost Pythagorean [vegetarian] diet, such as is prescribed by the stricter orders of monastic life or the institutions of hermits, which regarded want and penury as their rule, produces longevity" (p. 407).

The "life span of the rat is extended if the animal is retarded by inadequate calories and if an adequate intake of other essential nutrients is insured." Address: Animal Nutrition Lab., Cornell Univ.

3700. Carqué, Otto. 1934. Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods. 2nd ed. Los Angeles, California: Published by the author. 208 p. Index. 24 cm. [20+* ref]

• **Summary:** This so-called 2nd edition is identical to the first edition (1933) except that: (1) Two lines on the 2nd page of the Preface have been moved to the first page; both pages are unnumbered. (2) Two paragraphs, titled "Preface to the second edition" have been added to the end of the Preface and dated "November, 1934." The author's signature again appears at the end of the Preface.

Note: The first 5,000 copies were exhausted in about a year. Address: Los Angeles, California.

3701. *Vegetarian-Fruitarian-Humanitarian (The)*. 1934?-1941. Serial/periodical. Chicago: Vegetarian Society of America. Published 1934? to Aug. 1941. *

• **Summary:** Preceding title: *Vegetarian and Fruitarian*. Superseded by *Human Culture Digest* (Dec. 1941 or Jan. 1942). Address: Chicago, Illinois.

3702. *Health and Life (London)*. 1934-1967. Serial/periodical. London, England. Edgar J. Saxon, Editor. 1(1934)-52(1967, Aug.).

• **Summary:** Issues for 1934?-Jan. 1966 called No. 1-373. Frequent irregularities in numbering. Subject: Naturopathy and vegetarianism. Address: London, England.

3703. Battle Creek Food Co. 1934. Healthful living. Battle Creek, Michigan. 64 p.

• **Summary:** The top one-third of the front cover contains a photo of the Battle Creek Sanitarium, with the tall twin towers. The bottom third is a table of contents.

The section titled "Nut butters" (p. 13) contains a description of the company's products with a photo of a jar

of peanut butter; in the middle of the label is written “The Original.” “Peanut butter—We were the originators of peanut butter, which we first made for the Battle Creek Sanitarium in 1892. We at first roasted the nuts, but found that roasting destroyed some of the fine qualities and rendered the product hard to digest. After much experimenting, we discovered a new process whereby a far more delicious and entirely wholesome product could be made without roasting. The roasted nut butter is difficult for some people to digest.

“Our peanut butter is prepared from choicest nuts. A most excellent fattening food. Capital for use in sandwiches and salads.

“Almond butter—Prepared by our own process from the finest quality of sweet almonds. Thoroughly cooked and emulsified, it dissolves readily in water, and until opened will keep indefinitely in any climate.

“Almond butter may be prepared for table use by mixing with an equal amount of water and adding salt. This makes delightful sandwiches. Mixed with equal parts of lemon juice and salt to taste, you have a sour salad dressing. Makes delicious nut cream and nut milk.”

The price list (p. 64) gives the prices for 132 foods—including various sizes. Among these are Agar (flaked), Almond butter (8 oz jar, \$1.35), Bran biscuit, Bran-cooked, Bromose—Nut, Dietetic bran (starchless), Gluten bread in tin, Gluten biscuit—40%, Gluten flour (5 lb sack), Granola, Meltose, Kaffir tea, Malted nuts, Meltose sugar (malt sugar), Nuttolene, Nuttose, olive oil, Peanut butter (8 oz jar, \$0.40), Protose vegetable meat, Savita, Soy beans baked (11 oz tin, \$0.18), Soy bean biscuit (package, \$0.60), Soy flour (14 oz tin, \$0.35; 5 lb tin, \$1.25), Soy gluten bread (\$0.35), Vegetable gelatin, Whole wheat flour (100%, 5 lbs, \$0.55), Whole wheat wafers, Yogurt tablets, Zwieback. Address: Battle Creek, Michigan.

3704. Branch, Edward Douglas. 1934. *The sentimental years, 1836-1860*. New York, NY: D. Appleton-Century Company, Inc. xiii + 432 p. Illust. 23 cm. *

• **Summary:** This book is “A social discussion of the first generation of the American middle class.” It covers the period from Andrew Jackson’s descent from the presidency to Abraham Lincoln’s accession. In the chapter titled “The Pure Sciences and Some Others” the author discusses vegetarianism, Mrs. Lydia Pinkham and her patented remedies, Vincenz Priessnitz (the Silesian founder of the “water cure” or hydrotherapy, which filtered into the USA at the beginning of the 1840s), Lewis Hough (a fruitarian), the physiological reformers, Sylvester Graham (discussed at length; he began his active years in propaganda as general agent of the Pennsylvania Temperance Society in 1830), and the dress reformers (especially Amelia Bloomer). Orthodox medicine was torpid, but because of the national zest for formal education, many new colleges of medicine were founded between 1835 and 1860. The one conspicuous

advance in medical technique was in the field of anaesthetics. Dr. Crawford W. Long first used ether while performing a surgical operation in Georgia on 30 March 1842.

Note: This book was re-issued in March 1965 by Hill and Wang, New York, as part of the American Century Series. It bears the new subtitle “A Social History.”

3705. Brupbacher-Bircher, Bertha (Frau). comp. 1934. *Health-giving dishes*. London: Edward Arnold & Co. xvi + 239 p. Foreword by Florence Petty. 20 cm.

• **Summary:** This vegetarian cookbook was translated by Marguerite Meissner from *Das wendepunkt-kochbuch* (The Turning Point Cookbook). At the head of the title page is M.O. [Max Oskar] Bircher-Benner. He was born in 1867. Address: Manageress of Dr. Bircher-Benner’s Sanatorium, Zurich, Switzerland.

3717. Weber, G.M.; Alsberg, C.L. 1934. The American vegetable-shortening industry: Its origin and development (Continued—Document part III). Stanford University, California: Food Research Institute. xii + 359 p. See p. 106-22. Fats and Oils Studies No. 5. [200+ ref]

• **Summary:** (Continued): War-time [World War I] and post-war developments: By 1914 the production of compound had reached industrial maturity. Although animal fats and ingredients continued to be used as ingredients in a considerable fraction of compound output, vegetable oils constituted by far the greater part of the raw material used, with cottonseed oil heavily predominating (p. 106).

During the War, bakers were required to use vegetable shortening exclusively in bread to allow lard to be exported

to northern Europe, where the people were not accustomed to using compound. Thus, many bakers used and learned to use compound for the first time, discovering that it was a quality product (p. 111).

After World War I, three types of compound were manufactured (p. 114): In the period from 1925-1931 vegetable shortening accounted for 63 to 73% of all compound. Raw materials: Through the war and postwar periods, cottonseed oil was by far the predominant ingredient in compound, accounting for an estimated 92% of the total materials in 1912-14 and 80% in 1920. Among animal ingredients, oleostearin and edible tallow were the two most important.

In 1912, peanut oil was the major type of oil used in compound. The first record of soy bean oil being used in compound dates from 1914, when it accounted for 0.1% of the total compound ingredients (p. 125). That year 1,585,000 lb of soy bean oil were used in lard substitutes. Soy oil rose to a peak of 4.6% of total ingredients in 1918, then fell to less than 1% between 1921 and 1933. The maximum amount used in one year after 1920-1933 was 41.5 million lb, and the average annual usage for 1921-1929 was under 20 million lb. High import tariffs on soy bean oil in 1921 and low U.S. production kept it out of shortening until the mid-1930s. In shortening, "Soy bean oil is not so satisfactory as cottonseed oil because it is difficult to refine to make it permanently white and bland in flavor" (p. 130). Soy got a boost in May 1933 with the passage of the Agricultural Adjustment Act, which called for a considerable reduction in cotton acreage and hog numbers.

Coconut oil was less expensive than cottonseed oil, but it was not widely used in compound because it causes foaming during deep frying. In margarine, it accounted for 65.7% of fats in 1930-31 and 70.1% in 1931-32.

The production of compound from its earliest years was divided between two groups of companies: those engaged primarily in production and marketing of animal products (in the early years slaughterers, meat packers, and independent lard refiners) and those engaged in the crushing and refining of cottonseed oil. From 1914 to 1925 the first group produced about 40% of all compound, but their proportion decreased to 33% by 1931. Since 1925 the majority has been produced by the vegetable shortening industry. During the period 1920-1923 some 54-59% of compound was made entirely of vegetable oils; this increased to 63% in 1925, 69% in 1927, and 79% in 1929, dropping to 73% in 1931 (see Table XIV). However if meat packers had been included, these figures would have been less.

In 1916 the cottonseed oil manufacturers (led by Procter & Gamble) made about 50% of the total compound, and the Big Five packers (led by Swift & Co.) made 42.5%; other slaughterers made 7.6%. Total output was 839 million lb. Of the total output of refined cottonseed oil that year, the five larger refiners (led by P&G) had 52.2%, the Big Five packers

(led by Swift) had 31.8%, and others had 16%.

In the late 1800s the production of compound was concentrated largely in Chicago [Illinois], but by the early 1900s there was a definite drift southward and soon the South, with its cottonseed oil became the industry's center. By the leading 1920s, leading compound producing states were Texas and Tennessee. Competition between the Cotton Belt (with its output of cottonseed oil), and the Corn Belt (with its output of corn-fed hogs and lard) ceased when soy oil passed cottonseed oil in 1944 as the leading oil in shortenings.

Why did Europe not develop a large compound industry? The people had a preference for lard, inexpensive margarine was widely available, and Europe did not grow a lot of oilseeds.

In the early days, vegetable shortening manufacturers found it necessary to make shortening as much as possible like lard in appearance and texture, but by the 1930s lard was finding it advantageous to adopt some of the characteristics of shortening: uniformity, a refined and deodorized taste (removing the characteristic lard flavor and making it bland) and brand names. Vegetable compound developed new markets, some of which were not open to lard or lard compounds: Jews, Moslems, vegetarians, and industrial users like bakers and confectioners.

Terminology used for lard compounds and shortenings by the Census of Manufacturers: 1914-19-Lard compounds and substitutes. 1925-29-Lard substitutes and cooking fats. 1931-Shortenings, other than lard. Note: This is a very early use of the word "shortening."

Table XVIII (p. 339-40) shows the amounts of various animal fats (edible tallow, oleostearin, oleo oil, pork fat and lard, and fish oils) and vegetable oils (peanut oil, soy bean oil, corn oil, coconut oil, and other oils) used in the manufacture of compound in selected years from 1912 to 1933. (Continued). Address: 1. Formerly Research Associate, Food Research Inst; 2. Director, FRI.

3718. Wood, Francis. 1934. A reply to Dean Inge's defence of flesheating. London: The C.W. Daniel Co. 64 p. 19 cm.

• **Summary:** Contents: 1. Examination of the first argument. 2. The adequacy of a natural diet. 3. Examination of the second argument. 3. Some further criticisms. 5. The slaughtering system in the light of religion.

Rev. Wood supports both vegetarianism and humane treatment of animals. "Dean Inge" refers to William Ralph Inge, born 1860. His thoughts on this subject are given on pages 56-57 of the Second Series of *Outspoken Essays*. Chapter 1 begins: "Dean Inge is one of the outstanding and influential personalities of our day. He is eminent alike by his great ability, his ripe learning, and his abounding energy. He is an able and eloquent speaker and preacher, an extensive and versatile writer, and a tireless worker. An especial characteristic is his width of outlook, the variety of

his interests. Although by profession an ecclesiastic, he is quite a man of affairs; while deeply concerned with theology and philosophy, he is also alive to all the practical and ethical interests of men. On social, national, and many other issues he has his own individual ideas, and is eager and outspoken in the expression of them.

"It was to be expected that such a man would, sooner or later, find himself facing the many questions arising out of our relations with the myriad other than human denizens of this world, questions of cruelty to animals, of Blood Sports, of Big Game Hunting, and other such."

Note: This is the earliest English-language document seen (March 2022) that uses the term "flesheating" to refer to eating meat. Address: Rev.

3719. Claunch, B. Stanford (Mrs.). 1934? Natural food recipes. San Francisco, California: 47 p. 18 cm. *

• **Summary:** On the cover: "Gift A.W. Bitting Oct. 6, 1934." Emphasizes raw foods.

3720. Live Food Products Co. 1935. At last! The perfect vegetable juicer arrives from Europe (Ad). *California Health News (Hollywood, California)*. 3(1):13. Jan. 11.

• **Summary:** Contents: Drink your way to health. Put life into your blood. Live Food Juicer no toy. "Famous health specialist endorses juicer. Paul C. Bragg, nationally famous health lecturer, says 'It's the greatest invention that has come to the health world in 150 years. Send for free booklet and health cocktails. Machine sent postpaid on receipt of \$5.95.'" A photo shows the hand-turned juicer, with a stalk of celery in the hopper and many vegetables on the table. It looks and works quite like a hand-turned meat grinder.

Note: This is the earliest English-language document seen (July 2021) that contains the term "vegetable juicer" used generically (see title). This is also the earliest English-language document seen (July 2021) that mentions the "Live Food Juicer" or that uses the word "Juicer" in the brand name of a commercial product. Address: P.O. Box 428, Burbank, California.

3721. *Argus (The) (Melbourne, Victoria, Australia)*. 1935. Adventists in camp: Rise early, dine cheaply. Jan. 18. p. 11.

• **Summary:** "Seventh Day Adventists in camp at West Preston are early astir. The rising bell is run at 6 a.m."

"Meals are cheap. Foods are obtainable at 1d. and 2d. a portion and a good dinner may be purchased for 9d. There is no meat and no tea in the diet. A typical menu is as follows—Savoury soup, macaroni, and nut meat, potato pie roast and mashed potatoes, cabbage, parsnips, and parsley sauce, beetroot, soja beans, steamed bread pudding, and creamed rice."

3722. *California Health News (Hollywood, California)*. 1935. Vegetarians increase. 3(2):5. Jan. 25.

• **Summary:** As the standard of living rises the vegetarian tendency increases, according to a recent survey of meat preferences covering 16 representative American cities.

"The census disclosed that two thirds of the native white population has beef first on its marketing list, with pork, lamb, and veal in order. About 5 per cent use no meat at all, it seems that as intelligence increases mankind uses less flesh food, to his advantage, of course."

3723. *California Health News* (Hollywood, California). 1935. In memory of our beloved friend. 3(2):6. Jan. 25.

• **Summary:** In the center of this full page memorial is a large portrait photo of Otto Carque (1867-1935) titled "Auf Wiedersehen" [Goodbye]. Surrounding it are the names (and usually addresses) of 77 companies and individuals involved with health foods who wished to say goodbye. These include (listed alphabetically): Alvita Products, American Health Food Stores, Lima and Soya Bean Products (Mr. and Mrs. Bill Baker), California Food and Health Service (5 entries), California Health Food Store, California Health Hotel, Lillian Carque, Cubbison Cracker Co., Inc., Dr. Harry & Lucy Finkel, Defensive-Diet League of America, Health

Cafeteria, Health Foundation of California, House of Better Living (Mildred Lager, 1207 West Sixth), Hygienic Food Co., Dr. Philip M. Lovell, Dr. Benedict Lust and staff, Oakland Health Food Store, The Old Mill, Paradise Health Resort, Martin W. Pretorius, Richter's Live Food Cafeterias, Rosenberg's Original Health Food Store (San Francisco), Santa Monica Health Food, Sexauer Natural Food, Vegetarian Cafeteria and Bakery (San Diego) [San Diego's Health Food Center, C.A. Thompson, proprietor; 1125 Sixth St. Phone F. 2744 {see p. 15}].

Note: This is the earliest document seen (July 2021) that contains a directory of health food stores and individuals in the United States.

3724. *California Health News* (Hollywood, California). 1935. Hundreds of tributes sing Carque praises. 3(2):12. Jan. 25.

• **Summary:** "The truth is that really great men are never justly honored until after their passing is graphically illustrated in the death of Otto Carque. Mrs. Carque and *Health News* have received hundreds of letters and a few telegrams from all over the country extolling the virtues of this humble man who spent over 30 years in an endeavor to make life safer and better for all mankind..." Here are a few:

In a letter to "Dr. and Mrs. Harry Finkel, Dr. Benedict Lust, editor of *Nature's Path*, said: 'There is one man who had no enemies.' He well remembered the day Carque landed from Mannheim, Germany, in 1887. He was associated with Dr. Henry Lane, in New York, father of iridiagnosis in this country. He mentioned how Carque worked hard, overcame many struggles, published his first book, 'Foundation of Food Reform,' later challenging Arthur Brisbane on vegetarianism, and became nationally known—but never mentioned it.

"In 1915 we raced on the beach at Venice,' he wrote, 'and Otto won. He was always in fine shape. I loved him like a brother. Please express to all out west the sympathy of his many friends in the movement in New York.'"

"Bengamin Gayelord Hauser (from the platform)—Otto Carque was always at my lectures and we miss him tonight—all of us. He inspired me and you. When I came here he said, 'I am for you—you're just what America needs, you tell them.'"

3725. *California Health News* (Hollywood, California). 1935. Natural foods saved Carque: But unnatural living took him off prematurely at only 68. 3(2):17. Jan. 25.

• **Summary:** "Like many healthmen, Otto Carque worked for the emancipation of man; sought his release from machines, stores, offices; worked always to help man back to the land, away from unnatural foods and modes of life, and strangely enough, although his life was preserved through natural foods and living habits, it was an unnatural death, a tragic

accident, a violent death that ended his career of good work.

"In any company Carque was the healthiest individual around—yet he ate less, remained a vegetarian, used no liquor, tobacco, drugs or stimulants, and retained his buoyancy of mind and body until the very end.

"His boyish body was like a trim organic machine with few spare parts; usually bronzed, hard and enduring like the sturdy mountains that he so dearly loved to climb.

"Born in Germany near the French border, of French blood, Carque lived half his years with a smile on his face—no wonder he always beamed. Handicapped with a weak physique, he early took up physical culture. It restored him, along with right living and natural foods, which he found remedied his acute constipation. When quite young his mother died—"because of the doctors," he claimed, causing him to reflect upon health, disease and death, which in time wrought the mighty brainpower that carried him down through the years in his work for humanity.

"At 28 he was a vegetarian, lived 15 years on raw foods, then fresh fruits and vegetables, varied occasionally with eggs, cheese and nut butters, unroasted, sustained him in arduous endeavors."

3726. *California Health News (Hollywood, California)*. 1935. Dr. Pietro Rotondi (Ad). 3(2):17. Jan. 25.

• **Summary:** This tiny ad states: "Hours 2 to 5 and by appointment. Residence calls: GR. 4492. Free health lectures. Mondays. 7:45 P.M." A small portrait photo shows Rotondi. Address: 1633 N. Argyle, Hollywood [California].

3727. Richter's Live Food Cafeterias. 1935. Health and beauty for you in living foods (Ad). *California Health News (Hollywood, California)* 3(2):19. Jan. 25.

• **Summary:** Gives a list of products sold or served: "Delicious salads—26 varieties. Nut rolls. Vegetable nut loaf. Nutritious soups of vegetable juices. Fresh fruit pies with date-nut crust. Sun-dried breads of whole grains, dried fruits and nuts." "All unchanged by excess heat and harmful condiments." "Since 1917." Address: 833 S. Olive St.; 309 W. 2nd St. Both: Los Angeles, California.

3728. *Naturopath and Herald of Health (New York City)*. 1935. Otto Carque [obituary]. 40(2):35. Feb.

• **Summary:** "In the passing of Otto Carque of Los Angeles, the health food movement loses one of its pioneers.

"Late on the night of January 5th as he was leaving a health food store, he was struck by an automobile and dragged about 15 yards." He was taken to General Hospital, where he died on Jan. 10th. "Otto Carque was one of life's noblemen. Kind and considerate to all with whom he came in contact, no man was ever as genuinely and universally beloved as this aristocrat of our movement. He started making health foods long before the present generation of professional men and health food manufacturers were set out

of their cradles."

"Otto Carque, unlike most men who devote their lives to business, was a scholar. His books were among the first to be written on foods and through the years enjoyed a wide circulation. He 'knew whereof he spoke' for they were the result of long and arduous research and experimentation.

"We knew and loved Otto Carque and we shall miss him very much. May his soul rest in peace."

3729. Morgan, Agnes Fay. 1935. Shall we eat meat. *Woman's Home Companion* 62:65, 70. March. *

• **Summary:** Discusses the advantages of meat in the diet.

3730. *California Health News (Hollywood, California)*. 1935. Memorial for Carque in N.Y. April 5. p. 12.

• **Summary:** "New York—A large memorial meeting was held here at Hotel Imperial, on March 21, under auspices of the League for Health Education, to Honor the late Otto Carque of Los Angeles as one of the outstanding leaders of the health movement.

"Guest speakers were Dr. John Maxwell, Chicago [Illinois], chairman; Dr. Benedict Lust, Ralph E. Sunderland, George E. Harter, president Defensive Diet League of America; Dr. Sidney E. Smith, Max Warmbrand, Samuel Rosenbloom, J.E. Sidimus, Vegetarian society" [of New York].

3731. Crawford, Aird. 1935. San Francisco Bay and vicinity. *California Health News (Hollywood, California)*. April 19. p. 10.

• **Summary:** The section titled "Health show success" states: "San Francisco—Over a thousand health fans attended the health show put on by the Vegetarian society, which cleared a profit while exhibitors had satisfactory sales. They plan a show for Civic auditorium next year. It lasted ten days, with Drs. Bowen, De Latorre, Sykes, Burke, and Murphy making regular talks. Music was by Fraternal fellowship orchestra. Exhibitors were: Malvitose, Pleiner's store, Dr. De Latorre products, Dr. Gould's, Fagley Supreme Cooker, Fraternal Fellowship Anti-Vivisection societies, and others."

Note: Next to the small article is a directory of health food stores in San Francisco Bay and Central California: San Francisco (5 stores), Oakland (2), San Jose (1), Santa Cruz (1).

3732. *Naturopath and Herald of Health (New York City)*. 1935. Maimonides. 40(4):112. April.

• **Summary:** A biography of Moses Maimonides, the greatest physician of the Middle Ages. "Maimonides, a great Jewish scholar and philosopher, as well as a mathematician, astronomer and physician, was born in Cordova, Spain, on March 30, 1135. Persecution of both Jews and Christians by the Moslem rulers of Spain caused him, his brother and his father to flee Cairo, Egypt and there he rose to fame, first as a

great Jewish teacher and rabbi, later as a physician.

“So great was his fame among the Jews of his day that they called him ‘the second Moses.’

“His skill as a physician grew rapidly, and in time he became the physician to Saladin, the great and powerful ruler of the Moslem world, who defeated King Richard the Lion-Hearted in his attempts to wrest Jerusalem from Moslem control.”

He summed up his theory of health in two simple rules: (1) “A man should not eat too much, nor should he give up exercise.” (2) “If a person took as good care of himself as he does his domestic animals he would avoid many diseases.”

He also wrote: “In minor ailments, nature cures the body without the need of medical remedies if the patient only follows certain dietetic regulations.”

3733. Dittes, Frances Linda. 1935. *Food for life: The art and science of preparing food*. Madison, Tennessee: Associated Lecturers, Inc. xii + 332 p. Spring. Recipe index. 23 cm.

• **Summary:** This early Seventh-day Adventist vegetarian cookbook contains more soyfoods recipes than any published up to this time. The author, a soyfoods pioneer born in 1891, first attended Madison College in 1910 and joined the faculty in 1912. She did her graduate work in nutrition, specializing in soyfoods nutrition, at George Peabody College for Teachers (in Nashville, Tennessee), from which she received her MA degree in 1929. This book was printed by the “Rural School Press” (Madison College’s school press) and published in the spring of 1935.

Contents: Part I: Food and nutrition. Milk. The acid-base balance. Fruit acids. Balancing the food. Measuring food values. Menu planning. The art and science of food preparation (preceded by this quotation: “Food will be the medicine of the future”—Harvey W. Wiley). Food combinations. Condiments. Suggestions for flavoring. Garnishings. Measurements. Part II: Recipes (listed by recipe type such as breads {some recipes call for Crisco shortening}, soups, salads, desserts, etc.). One chapter titled “Dishes to take the place of flesh foods” (p. 149-65) contains many interesting recipes such as: Preparation of gluten. Gluten pot pie. Gluten loaf. Glutose (with 5 cups ground cooked gluten, plus potatoes, eggs, and cream). Cold sliced Nut Meat or Vigorost (Nut Meat is sold in 2-lb cans, Vigorost in 14 oz cans). Peanut roast. Chow mein (with soy cheese or Nut Meat). Boiled peanuts. Soy-related recipes are given below. Another chapter is “Nutritive value of the soy bean. Soy bean dishes” (p. 166-86).

Appendixes: A. Classification of carbohydrates. B. Canning. C. Sample menus. D. 100 calorie portions of foods. E. Approximate servings and values of a few common foodstuffs. F. Protein, calcium, phosphorus, and iron in 100 calories of food material. G. Ash constituents of foods in percentage of edible portion.

The author uses the term “soy cheese” to refer to tofu.

Soy-related recipes include: Soy bread (20% soy flour and 80% white wheat flour; p. 96). Soy gems (18-20 muffins using soy flour; p. 108). Tomato-soy sandwich (with grated soy cheese; p. 114). Soy noodle soup (with grated soy cheese browned in butter; p. 122). Jellied soy salad (with grated soy cheese; p. 138). Potato soy salad (with grated soy cheese; p. 138). Tomato and soy salad (with soy cheese). Waldorf soy cheese salad (with grated soy cheese; p. 139). Lentil-soy loaf (with soy bean puree; p. 157). Savory soy loaf (with soy cheese). Soy souffle (with grated soy cheese browned in butter; p. 159). To fu chi (deep-fried soy cheese stuffed with rice and seasoned with soy sauce). Soy gravy (with 3 parts soy flour and 2 parts white wheat flour).

The chapter titled “Nutritive Value of the Soy Bean” (p. 167-86) discusses the general nutritional composition, then gives details on protein, fats (including lecithin), minerals (including tofu made with magnesium chloride or calcium sulphate). Recipes are given for: Cooked soy beans. Soy milk (after soaking 1 lb of Mammoth variety soy beans overnight in water, “Wash several times in hot water to remove undesirable taste.”). Soy milk no. 2. Soy acidophilus milk. Soy bean cheese [tofu, curdled with calcium sulphate]. Soy bean cake [okara] loaf. Browned soy cheese. Green soy beans. Escalloped green soy beans. Dried soy beans. Baked soy beans. Soy beans southern style. Roasted soy beans. Soy beans in tomato sauce. Chop suey (with soy cheese). Sauce (with soy sauce). Soy bean omelet. Lentil soy bean loaf (with soy bean puree). Soy bean loaf. Soy bean pie (with soy bean pulp). Soy bean meat.

Note 1. This is the 2nd earliest English-language document seen (June 2013) that calls for okara as an ingredient in a recipe.

Note 2. This is the earliest English-language document seen (June 2013) that uses the term “Soy bean cake” to refer to okara.

* = made with soy bean flour. Soy bean muffins*. Soy muffins*. Soy biscuits*. Soy bread*. Soy nut bread*.

Escalloped onions with soy cheese. Baked rice with soy cheese. Escalloped potatoes with soy cheese. Spaghetti and soy cheese. Stuffed pepper with soy cheese. + = with soy cheese. Left-over croquettes+. Soy croquettes+. Soy cheese with rice. Stuffed baked potato with soy cheese. Soy fritters+. Soy cutlets+. Savory soy loaf+. Spanish chop suey+. Soy souffle (with grated soy cheese browned in butter). Cream of soy soup. Soy noodle soup+. Soy soup+. # = made with soy milk. Soy cream of tomato soup#. Soy cream of pea soup#. Soy cream custard#. Jellied soy salad+. Waldorf cheese salad+. Potato soy salad+. Stuffed egg with soy cheese. Soy bean salad. Soy bean sprout salad. Soy Vegex sandwich+. Tomato-soy sandwich+. Egg and soy sandwich+. Soy and cucumber sandwich+. Celery and soy sandwich+. Banana soy sandwich+. Scrambled egg and soy cheese sandwich. Diabetic crackers (with soy meal). Diabetic pie crust (with soy meal). Diabetic soy bean mush*.

Vegetables: Soy cheese sauce (with grated soy cheese and soy sauce, p. 195). Steamed cucumbers with soy cheese (grated, p. 201). Escalloped onion with soy cheese (p. 204). Spinach with soy cheese sauce (and Vegex, p. 207).

Desserts (p. 215-36), Cakes (p. 237-53), Pies (p. 255-60), Cookies (p. 261-68), and Ice creams and sherbets (p. 269-74). Some of these sweet recipes use agar-agar, gelatin, Malta (malt syrup), Health Koko, and Crisco. Some desserts call for 1-2 cups sugar per 4 servings and 1 pound of sugar is used in an icing for pound cake (p. 242). No soy is used in any sweet recipes. Note: It is surprising that Ms. Dittes and Madison had not discovered the use of tofu or soy milk in ice creams, other desserts, or dressings. Nor is peanut butter mentioned.

The chapter titled "Milk" (p. 17-21) states: "Since milk is an important food constituent, especially for children, those responsible for planning dietaries should see that each child has one quart of clean milk or its equivalent each day; adults, about one pint... *Grade A* is a raw milk from cows free from disease, having a bacteria count of not more than 100,000 per cubic centimeter at the time of delivery. *Grade B* must be pasteurized and the bacteria count must not exceed 1,000,000 per cubic centimeter. It must also come from cows free from disease." All other milk is *Grade C*.

The chapter titled "The acid base balance" (p. 23-24) states: "Most foods when burned in the body leave an ash in addition to the carbonic acid which is thrown off by the lungs. This ash may be either alkaline, neutral, or acid in reaction. The principal base-forming (alkaline) elements are calcium, potassium, magnesium, and sodium, while the chief acid-forming elements in foods are sulfur, phosphorus, and chlorine... A neutral or slightly alkaline condition will produce a feeling of buoyancy, health, vigor, and clear mental activity... In general, all fruits and vegetables (with a few exceptions) are potent in producing alkaline ash. Meat, eggs, breads, and cereals are acid-formers."

The chapter titled "Condiments" (p. 51-52) states: "Spices, such as mustard, ginger, pepper, horseradish, curry, and cloves, are among the most irritating of the seasonings used. It would be better if these exciting substances were not added to the food... Vinegar contains acetic acid which is burned in the body with difficulty. Citric acid as found in the lemon juice is more easily oxidized in the tissues. Lemon juice, therefore, makes a good substitute for vinegar, both as to ease of oxidation and flavor." Address: Director, Food and Nutrition, Nashville Agricultural Normal Inst., Madison Rural Sanitarium and Hospital, Madison, Tennessee.

3734. Gandhi, M.K. 1935. Soya beans. *Harijan* 3(33):263-64. Sept. 28. [1 ref]

• **Summary:** "As soya beans are claimed to possess high nutritive value, I reproduce the following from pamphlet No. 7 published by the Bombay Presidency Baby and Health Week Association to enable the food reformer to make

experiments."

Much of the pamphlet is published. It discusses: The introduction of the soybean to Europe by Kaempfer in 1712 and by Haberlandt from 1873. Soybean botany, regions of adaptation, and nutritional composition and value. Utilization of soybeans in diabetic diets and for the production of soya bean coffee, soya bean milk, and soya bean flour. For details see Bombay Presidency... 1935.

Note: The author is Mohandas Karamchand "Mahatma" Gandhi. This is the earliest publication seen in which Gandhi discussed soya beans or attempted to introduce soya beans to India. Address: Maganwadi, India.

3735. Bombay Presidency Baby and Health Week Association. 1935. Pamphlet No. 7. Bombay, India. *

• **Summary:** Discusses the introduction of the soybean to Europe by Kaempfer in 1712 and by Haberlandt from 1873. Soybean botany, regions of adaptation, and nutritional composition and value. Utilization of soybeans in diabetic diets, as whole dry soya beans, and for the production of soya bean coffee, soya bean milk, soya bean flour, and tofu.

"The soya bean is one of the most important articles of diet. It contains far more protein than any grain or pulse seed known so far. It has as much as 40 per cent. protein, i.e. twice as much as pulses and beans, three times as much as wheat, and five times as much as rice. Its proteins are of high biological value, as they contain all the important amino-acids... In fact, the protein of soya bean is similar to that found in cow's milk and animal foods... It is a boon to vegetarians, as its protein resembles animal protein. Soya bean oil contains a large amount of Lecithin and Vitamin A & D, and in this respect it resembles butter. Lecithin of soya bean is identical with that of yolk of eggs.

"Soya bean is one of the few seeds containing three Vitamins A, B & D, which are indispensable in a staple food consumed by mankind."

Note: Mohandas K. (Mahatma) Gandhi reproduced this pamphlet in the 28 September 1935 issue of his popular periodical *Harijan*. Address: Bombay, India.

3736. Live Food Vegetable Juicer Co. 1935. Build radiant health—with vegetable blood (Ad). *House of Better Living (Newsletter, Los Angeles)* 1(2):1. Oct. 11.

• **Summary:** "Science has at last found an amazing new way to put the vegetable mineral salts and health-giving vitamins into the body! The greatest utensil of the age.

"Food specialists and doctors agree that fresh, raw vegetable juices are builders of rich, red, healthy blood. With this new Live Food Vegetable Juicer you can take a carrot, put in juicer, turn the handle, out comes the life-giving carrot juice."

An illustration shows the hand-turned juicer. Note: This company is owned by Paul C. Bragg. This ad appeared in almost every subsequent issue of this newsletter, until at

least June 1939. Address: Box 428, Burbank, California; 126 Liberty St., New York, NY.

3737. Desai, Mahadev. 1935. Dietetic experiments. *Harijan* 3(36):281, 283. Oct. 19. [1 ref]

• **Summary:** “The reader must have seen the difficulty of procuring clean, wholesome, unadulterated ghee... It was partly with a view to getting rid of this eternal problem of getting good ghee that Gandhiji has been casting about for a substitute of milk and ghee. The high protein and fat content of soya beans and their procurability on the premises, combined with the successful experiment of Sjt. Narhar Bhavé, encouraged Gandhiji to start the experiment in Maganwadi last week. Oil and ghee and part of the wheat ration was cut out of the dietary of those who joined the experiment and substituted by a soya bean ration equal in dietetic value. It is difficult yet to say anything about the results of the experiments, but one might safely say that it is no longer the bugbear that it once used to be because of the unpleasant taste of soya bean milk. We soak the beans for a few hours and steam-cook them and serve them whole... Let the reader also know that we have grown soya beans on our own ground plenty enough for our experiments.”

Also summarizes an article on soybeans from the *Far Eastern Survey* of Sept. 11. discussing the current rapid growth of soybeans in the USA, used for industrial products (paints, soaps, linoleum, etc.). “An impressive number of foods—flour and flour products, candy, milks, oils, meat, and margarine—in which it is used suggests a steady increase in its dietary use because of its high protein, fat, and vitamin contents.”

Note: The introduction to the 1973 edition of *Harijan: The Journal of Applied Gandhism, 1933-1955* states: “*Harijan* made more news than it reported. Its inception in 1933, the impact of its suspension in 1940, the drama of its complete suppression in 1942, and its resumption of publication in 1946 were events of historical moment.”

“*Harijan* was not a party organ, yet it became the most influential journal involved in the movement for Indian independence... The journal provided the medium of moral instruction through which congressmen learned what Gandhi expected of them.”

“The word *harijan* literally means God’s people. It was the name coined by Gandhi to designate the so-called untouchables of India. The journal *Harijan* reflects the many social and individual concerns which were a part of Gandhi’s complex and continuing analysis of the human predicament. *Harijan* is indeed a highly political journal, and that is so because Gandhi directly related the concerns expressed throughout its pages to the political fact that the India which gave rise to the founding of *Harijan* was a subject nation. Freedom as Gandhi perceived and publicly pursued it, begins with the individual.”

“Mahadev Desai, whose initials, M.D., appear after so

many columns in *Harijan*, has been described as more than a mere Boswell and not only a faithful chronicler of Gandhi’s life and work. He was a peerless interpreter of Gandhi, gifted with a keen sense of humor and a penetrating intellect. Following his death (on August 15, 1942) Pyarelal took his place at Gandhi’s side to continue the distinguished tradition which ‘M.D.’ had established.” Address: India.

3738. Gandhi, M.K. 1935. Soya beans. *Harijan* 3(36):287. Oct. 19.

• **Summary:** “It has been found that soya beans can be cooked whole and eaten like any other beans. Shri Narhar Bhavé of Baroda, who has given his three gifted and gentle sons, Vinoba, Balkrishna and Shivaji to national service, is himself a careful observer, 61 years old. He is living almost wholly on milk and 6 ounces of soya beans and is keeping perfect health and strength. He is of the opinion that soya beans help him to avoid constipation which milk alone or milk taken in combination with cereals and vegetables could not do. Soya beans have in his opinion helped him also to avoid flatulence which other pulses or milk produced. He has come to this conclusion after an unbroken experience of over ten months. I may add that Shri Bhavé used to suffer from gout and corpulence and had a trace of diabetes. He got rid of this triple disability by mere careful dieting. In imitation of Shri Bhavé the inmates of Maganwadi including me have been trying soya beans for the last few days... Put these beans in boiling water and cook for fifteen minutes on a quick fire. No salt or soda to be added while cooking. Salt may be added after. At Maganwadi we steam them for two hours.

“Let those who are interested in food reform from the poor man’s point of view, try the experiment. It should be remembered that soya beans are a most nutritious diet. It stands at the top of all known articles of diet because of its low percentage of carbohydrates and high percentage of salts, protein, and fat. Its energy value is 2,100 calories per lb. against 1,750 of wheat and 1,530 of gram. It contains 40 per cent of protein and 20.3 per cent of fat against 19 and 4.3 respectively of gram and 14.8 and 10.5 of eggs. Therefore no one should take soya beans in addition to the usual protein and fatty foods. The quantity, therefore, of wheat and ghee should be reduced and dal omitted altogether, soya beans being themselves a highly nutritious dal. We are just now trying the Manchurian variety. The Baroda beans we have not tried. Maganwadi has its own crop of soya beans. I hope to report the quality of Indian varieties from a layman’s point of view as they come under my observation. Those who have Indian varieties are requested to send me samples with prices.” Address: Maganwadi, India.

3739. Gandhi, M.K.; Desai, Mahadev. 1935. A talk to village workers: The menu. *Harijan* 3(38):301-02. Nov. 2.

• **Summary:** This is the gist of a talk given on 22 Oct. 1935.

"Milk is an essential article of diet. Your menu contained half a pound of milk, but you must have seen that I gave you no ghee. I hope, however, that you did not miss it. For I gave you soya beans and oil. Soya beans are rich in oil (20 per cent) and proteins (40 per cent). Groundnuts also are rich in oil, but they have the disadvantage of containing too much starch from which soya beans are comparatively free. Milk with soya beans give us almost all that we need in the shape of fats and there is no need for ghee at all..."

"Our menu has cost us a little more than 6 pice [192 pice = 1 rupee]. It was a full meal and the other meals need not be so heavy as this. They, therefore, need not cost more than an anna or so. Milk may be omitted for the other meals. Wheat *bhakra*, soya bean and chatny should be quite enough." Address: Maganwadi, India.

3740. Gandhi, M.K. 1935. Soya beans. *Harijan* 3(39):312. Nov. 9.

• **Summary:** "Inquiries are being made as to where soya beans are to be had and how they are to be sown and in what ways they are to be cooked."

"The leaflet published by the Bombay Health Association [Bombay Presidency Baby and Health Week Association] was condensed in these columns only recently [Sept. 28]. I now give below a free translation of the main parts of a Gujarati leaflet published by the Baroda State Food Survey Office. Its cost is one pice" [192 pice = 1 rupee].

There follows a 1-page description of the soya bean plant and how it is grown. "So much for the crop. Now a word as to the results of the experiment being made at Maganwadi... The weight of the inmates has kept constant... Ghee has been stopped since the close of the first week. One ounce of oil is being issued instead. The ration of beans has been increased for the current week from two ounces to three per head. The bean is being served both morning and evening. They are soaked for some hours and then cooked well. Water in which it is steamed is strained out and tamarind and salt added to it. It makes a very popular soup. To the beans after straining are added linseed or *til* [sesame] oil and salt making a tasty dish. In the morning the bean is served with *chapati* or *bhakra* and in the evening with rice. The bean requires to be chewed well. No ill effect has yet been reported."

"The bean is obtainable in Bombay and Baroda. Negotiations are being carried out for a reduction in the price. Meanwhile small quantities can be had from Maganwadi at three annas per pound, railage extra. This price is prohibitive... Godrej and Co. (Parel, Bombay) supply the beans in Bombay and the Baroda Food Survey Office in Baroda." Address: Maganwadi, India.

3741. *Priroda i Nauka (Nature and Science, Bulgaria)*. 1935. Izlojbata na soia [Soya exposition. Editor's note]. 6(3):46. Nov. [Bul]*

• **Summary:** Editor's note states: "The pioneer in popularizing soya in Bulgaria is Dr. A. Zlatarov, who has been trying for many years to publicize the importance of soya. Now he is able to see the fruits of his work."

Rosen L. Paskalev (1986) adds that this soya exposition, organized in Oct. 1935, was supported by the Bulgarian Agricultural Bank, which was very interested in supporting soybean production and utilization. It had been proved in 1933 that soybean culture would be very profitable for export but its use as food was not widespread in Bulgaria. For this reason foods such as soy flour, biscuits, bread, cheese, and soymilk, and some industrial products, were displayed at the exposition. A soyfoods kitchen was organized at the expo and soyfoods were served at a special vegetarian restaurant throughout the exposition. Soy oil was even demonstrated as a fuel for a diesel engine. Address: Bulgaria.

3742. Baines, Maud; Saxon, Edgar J. 1935. Complete guide to sound, successful and attractive food reform. 14th ed. London: C.W. Daniel Co. 218 p. 8°. *

3743. Bragg, Paul C. 1935. Paul C. Bragg's personal health food cook book and menus. Burbank, California: Published by the author. Printed by Aetna Printing Co., Los Angeles. 201 p. No index. 24 cm.

• **Summary:** The Introduction to Chapter 22, titled "Meat substitutes or main dishes" states (p. 112): "Variety is the spice of life... Many people can live a vigorous, active, healthful life on a strictly vegetable diet, particularly those who are not engaged in a hard mental occupation. Even then, vegetable proteins, such as soy beans and nuts, can be substituted for meat. To take the place of meat there are the vegetables rich in protein—peas, soy beans, lima beans, kidney beans, Mexican beans, and lentils, and there are on the market many meat substitutes made of nuts and grains. The Battle Creek Sanitarium [Michigan] product, 'Protose,' is available at most fancy grocers and health-food stores. 'Savita' is a seasoning which gives a delicious meat-like flavor to all vegetable cooking. 'Vegex' is a product similar to 'Savita,'..."

"The vegetable diet is a very alkaline diet, and should be used three or four times a week by everyone. Vegetable foods are porous, furnish bulkage to the intestines, and enrich the body with valuable organic minerals that are very necessary to maintaining perfect health."

"Soy beans are a marvelous source of vegetable protein, and should be fed to the family several times a week, and they furnish a rich source of energy-building food. They can be soaked over night, and then baked in tomato sauce, with a small amount of onion and chopped mushrooms. The soy bean is a food that the American public has not yet cultivated." Surprisingly, neither this chapter nor this book contains any soy bean recipes! However Vegetable shop suey (p. 116) is served with Savita Gravy or Soy sauce.

Bragg urges his readers to eat “real, natural, live food” (including whole wheat bread—the staff of life) to eat simply with a small number of foods at each meal, only when hungry. Do not worry about combining foods. Avoid white sugar, coffee and tea, salt, seasonings and spices, aluminum cooking ware, alcohol, preservatives, dyes, and white flour. He believes that eating meat (rare and unfried), fish, and eggs are important for building perfect health. Note 1. The 1930 edition of this book contained no recipes using meat or dairy products.

Chapter 11 acknowledges the use of recipes and suggestions from several health food writers and men in the field of Natural Living: (1) Dr. John T. and Mrs. Vera Richter, the leaders of the Raw Food movement in the West. (2) Dr. Philip M. Lovell, distinguished editor of the most widely read health column in the world, the Care of the Body section of the Los Angeles Times [Sunday Magazine. Note 2. The section contained many fascinating ads]. (3) Dr. Henry Lindlahr, the great pioneer Nature Doctor. (4) Otto Carque, chemist, research worker and crusader in the fight for natural foods. (5) Fannie Merritt Farmer’s *The Boston Cooking School Cook Book*.

The last three pages each contain a full-page ad for mail-order products available from Bragg at Box 428, Burbank, California: (1) Bragg Dextrinized [sic, Dextrinized] (Toasted) Meal with Wheat Germ will keep your energy high and your weight right. 60 cents for a 2 lb. box. (2) “Drink health.” An illustration shows a hand-turned Live Food Juicer. Also mentions a large new book titled *Health Cocktails*, by Paul C. Bragg, “nationally famous Health Lecturer.” The book “is full of live juice treats.” Send \$5.95 for both, postpaid to Live Food Products Co., Box 428, Burbank, California. (3) O.K. Lax is a marvelous laxative for relief of constipation and cleansing agent for internal sanitation. 50 cents for one package. Address: P.O. Box 428, Burbank, California.

• **Summary:** The author was born in 1909.

3745. Cooper, Lenna Frances; Hall, Margaret Allen. 1935. The new cookery. 12th ed. Battle Creek, Michigan: The Modern Medicine Publishing Co. 493 p. Illust. Index. 22 cm.

• **Summary:** A vegetarian cookbook.

Poem facing the table of contents: “No flocks that roam the valley free,

“To slaughter I condemn;

“Taught by that Power that pities me,

“I learn to pity them;

“But from the mountain’s grassy side,

“A guiltless feast I bring;

“A scrip [small bag] with herbs and fruits supplied,
“And water from the spring!”

- Oliver Goldsmith [1728-1774, Ireland]

Soy-related recipes include: Soy bean muffins (p. 72, with 1 cup soy bean flour).

Gluten- and bran-related recipes include: Scotch bran brose (p. 50, with 1 cup Sterilized bran. Note: *Webster’s Dictionary* defines brose {a term first used in 1515} as “a chiefly Scottish dish made with a boiling liquid and meal”). Gluten mush (p. 51, with 20% gluten meal). Granola fruit mush (p. 52). Bran and Zo mush (p. 52, with 1 cup each Sterilized Bran and Zo—a body-building, ready cooked cereal breakfast food). Branola (p. 52, with 1 cup Branola). Gluten bread (p. 65). Bran griddle cakes (p. 74). Gluten griddle cakes (p. 75). Gluten puffs (p. 87, with 40% gluten flour). Gluten bran puffs (p. 87-88; If used by diabetic patients, Diabetic Bran should be used).

Note: *Webster’s Dictionary* defines Chautauqua (pronounced shuh-TAW-kwuh; a word first used in this way in 1873, after a lake in western New York) as: “an institution that flourished in the late 19th and early 20th centuries providing popular education combined with entertainment in the form of lectures, concerts, and plays often presented outdoors or in a tent.” Address: 1. Food Director, Univ. of Michigan; formerly Dean of Home Economics, Battle Creek College; formerly, Head Dietitian, Battle Creek Sanitarium. Supervising Dietitian, United States Army (1918-1919); 2. Consulting Dietitian and Lecturer on Dietetics, Battle Creek Sanitarium and Chautauqua Lecturer.

• **Summary:** This treasury of herbal lore and vegan cookbook

(it uses no dairy products or eggs, replacing them with soy products) is one of the most creative and original sources of early soyfoods recipes, and one of the two earliest Seventh-day Adventist cookbooks to contain many soyfood recipes (see also Frances L. Dittes' *Food for Life* published in the spring of 1935). The predecessor to the popular published edition of *Back to Eden*, it has a dark imitation leather cover and contains many Biblical passages. This book has no title page, copyright page, publication date, or table of contents. The first page (verso) states: "Send orders for 'Back to Eden' to the author, Jethro Kloss, Takoma Park, Washington, D.C., U.S.A., when you cannot secure it from dealers in your locality. Special Notice: This book is now being revised. Some things may be eliminated, and many new things added. I have a regular experimenting outfit, and I am experimenting all of the time. No doubt there will be many new recipes made from soy beans in the Revised book... This Revised edition will be printed in Regular Book Form. Just as this book is being closed up, another most excellent article has been perfected, a Soybean, Whole Wheat Noodle. Send all orders for this product to The Royal Cookie Co., Takoma Park, Washington, D.C.... This book is now being copyrighted. All rights reserved."

Underneath the copyright notice, Doris Gardiner has written "Copyright Jethro Kloss 1935." She does not recall where she got that information. No publisher is listed. Note: Takoma Park is now in Maryland, 6 miles north of Washington, DC.

This book is largely about herbs and natural healing. It contains many Biblical quotes.

Soy-related recipes include: Unleavened bread (with soy bean meal, p. 94). Gems (with soy bean flour). Soy bean bread (5:1 whole wheat flour to boiled soy bean meal, p. 97). Soy bean buns or cinnamon rolls (with soybean meal and soybean milk, p. 98). Soy bean cheese (fermented, with raw peanut butter, soy bean milk, and tomato puree, p. 104). Nut cheese No. 1 and 2 (made with raw peanut butter, water, and salt, p. 105). Can be made from different nuts; tastes like cream cheese made from whole milk). Ice cream (made with soy bean milk, dextro sugar, corn starch, and crushed fruits to taste, p. 105). Malted nut cream. Nut milk (with raw peanut butter and Soothe-a-lac {made with cocoa fat}). Soy bean milk (p. 106). Buttermilk (made from soy bean milk, p. 106). Malted nuts (with raw peanut meal), non-dairy butters (with ground peanuts and cocoa fat, p. 107). Nut sauce (made from Vegetarian meat). Peanut butter No. 4. Noyonnaise (with peanut butter and vegetable oil, p. 108). Canned soy beans (using soybeans sprouted about half an inch, p. 111). Soy beans and rice (using sprouted soy beans, p. 112).

How to sprout soy beans, lentils, and grains (p. 112). "Cover 1 pint of soy beans with water and let stand over night. Pour off water. Keep them moist. Rewash daily and keep moist for approximately three days until well sprouted. Allow to stand until sprouts are about ½ inch long. Lentils do

not take as long as soy beans.

"Sprouting of any bean or pea turns the protein into peptogen to a very great extent and the starch into dextrose or maltose and the sprouts are very high in vitamins,..."

Original meat #1 and #2 (using gluten and peanuts, p. 112). Granola #3 (with only whole wheat flour and soy bean flour, p. 116). Soybean coffee (p. 118). Note that Kloss has no recipes using whole dry soybeans in an unprocessed or unsprouted form.

"Loma Linda Food Company, Loma Linda, California, Manufacturer of Health Foods," has an ad on p. 189. They list their products, but no soy products are mentioned. Nature's Original Food Co. in Muirkirk, Maryland, is listed on pages 196 and 198. They make or sell strictly vegetarian pure health foods, incl. "Fine grade soy bean flour."

One interesting section is titled "Aluminum utensils for cooking purposes" (p. 80-84); Kloss strongly advises against their use, presenting much convincing but anecdotal evidence describing health problems that both he and other people have had after using aluminum cooking utensils. For example, Kloss bought a tea kettle which was constantly standing on the stove with some water in it. He would drink 2-3 cups of this water each morning, then some more about an hour before dinner. He developed terrible bowel trouble. He tried all kinds of remedies but nothing worked. The conditions grew steadily worse until finally he said to his wife, "Unless something helps me, I will surely die." One day he described his condition to a man, and the man said that the symptoms were similar to those that aluminum poison would cause. He began to research the subject by reading various books and found that "every one who had any practical experience in it condemned aluminum cooking utensils." Yet Kloss does not say that when he stopped using aluminum utensils his health problems disappeared. Kloss then includes a 3-page statement by Dr. Chas. T. Betts of Toledo, Ohio, on the dangers of using aluminum cooking utensils. Dr. Betts became very ill soon after his family began using aluminum cooking utensils. He too investigated the subject in depth and regained his health within 8 weeks after he stopped using aluminum cooking utensils. He has enjoyed good health for the past 17 years. While studying the subject in Washington, DC. he found that the U.S. government had made a thorough investigation of the matter from 1920 to 1925. The Federal Trade Commission Docket 540 contained more than 4,000 pages of closely typewritten testimony from 158 witnesses during the 5 years, after which an official report was made by Edward M. Averill. "Many of the witnesses above mentioned were professors, deans, biologists, and toxicologists from many colleges, some of which are the highest schools of learning in America." Averill's report noted. "The evidence in this record does not prove that they are harmless... It does prove that there are substantial grounds upon which to predicate an honest opinion that they are harmful."

Doris Gardiner notes (Oct. 1990) that “in the revised 1939 edition of *Back to Eden*, Jethro Kloss eliminated many Biblical texts. He didn’t want to turn off anyone that was not religious. He wanted to help everyone.” Kloss moved to Brooke, Virginia, in 1920. From there, in the early 1930s (by Sept. 1932), he and his family moved to Takoma Park. Address: Takoma Park, DC.

3750. Nelson, Charles W. 1935. Soynut spread from soybeans. BSc thesis, Chemical Engineering, Iowa State College, Ames, Iowa. 22 p. 28 cm. [12 ref]

• **Summary:** Contents: Acknowledgments (to Dr. Frank C. Vilbrandt, Professor in Charge). Introduction. Historical. Experimental: Materials, method of procedure (processing the soybeans for odor removal, roasting the soybeans, grinding the soybeans, mixing the soybeans with oil, addition of peanuts to modify the flavor, separate compounding of soynut spread to peanut butter, use of salt as a flavoring additive), results (effect of roasting soybeans Goesselized [oil-roasted] in lard, effect of roasting soybeans Goesselized in Crisco, effect of addition of peanuts, effect of addition of peanut butter, effect of addition of salt). Discussion. Conclusions. Summary. Literature cited.

The object of this work is to prepare a substitute for peanut butter and to prepare a suitable spread composed of soybeans and peanuts. The section titled “Historical” shows that the author is interested in “an entirely vegetarian diet” such as that long used by the Chinese.

The best “soynut spread” was made as follows: Goesselize the soybeans by heating them in lard and then in Crisco at 100°C for 5 minutes. Drain, then centrifuge for 8 minutes to remove the oil. Roast the soybeans in an oven at 160°C for 20 minutes; while in the oven, stir frequently. While still warm, grind the soybeans with or without peanuts. For the best flavor, grind equal weights of roasted soynuts and peanuts together. Before grinding, add a small amount of salt to improve the flavor. The professor in charge of this research was Dr. Frank C. Vilbrandt.

Note: This is the earliest English-language document seen (Dec. 2012) that contains the word “Soynut” or the term “Soynut spread.” Address: Iowa State College, Ames, Iowa.

cease. 7. Two similar pastimes. 8. Between human and sub-human. 9. Sacerdotalist and scientist. 10. Man’s mistake. 11. The sanctity of life. 12. Our relations with animals. 13. A free religion. 14. The sentimentalists. 15. Sensibility. 16. Civilisation: a phrase. 17. One who understood. Address: England.

3753. Battle Creek Food Co. 1935? *Appetizing health food recipes and menus*. Battle Creek, Michigan. 25 p. Undated. Illust. 15 x 17 cm.

• **Summary:** On the cover of this booklet is a 3-panel illustration of a family seated at the table enjoying a meal; the daughter is in the left panel, the wife and husband (with suit and necktie) in the center, and the young son (also in suit and tie) in the right panel. The booklet promotes and shows how to use the vegetarian food products made by Battle Creek Food Co.

Contents: The story of Battle Creek Health Foods (and its free diet service). Where these recipes are triple tested (the company’s modern test kitchen). Dinner menus and recipes (p. 4-7). Luncheon and tea menus and recipes (p. 8-11). Breakfast menus and recipes (p. 12-15). Reducing menus and recipes (p. 16-17). Wholesome diabetic foods (p. 18). Brawn-building menus and recipes (p. 19). A brief description of Battle Creek Health Foods (p. 20-21). Health candies (p. 22).

On almost every page of recipes is an illustration of one of the company’s products in its container/package, and in a prepared dish, followed by a description of each product on p. 20-21. The only two soy-related products are “Soy Biscuits—Best bread for diabetics. Contains less than 2% starch but is rich in protein and strength-building elements. (Also furnished in the form of a meal).”

Other products are: Agar (made from Japanese seaweed). Almond butter. Bran biscuits. Cooked bran (from wheat). Bran gluten flakes (crispy toasted breakfast cereal). Branola (hot cereal). Fig and nut bromose (with malt honey). Brose (hot cereal with dates, figs or raisins, and cream). Sanitarium canned fruits and vegetables. Chocolate nut bar. Cooked whole wheat. Fig bran. Fig bran flakes. Food ferrin (supplies dietary iron from green vegetables). Fruit crackers. Gluten bread (Low in starch, shipped in air-tight cans, ready to eat. A healthful reducing food). Gluten biscuit (40%, containing less than half the starch of ordinary bread; fine for diabetic patients). Gluten flour. Graham crackers. Health chocolates. Health koko. Kaffir tea (caffeine free). Lacto dextrin. Laxa (a biscuit with bran and agar). Malted nuts (increases the flow of milk in nursing mothers). Marmalades. Meltose (a malt sugar made from grains). Minute brew (A caffeine-free cereal beverage). No-fat (for use in place of butter). Nuttolene (“A nut meat product having the consistency of cream cheese. Makes healthful croquettes, cutlets, and stews”). Oatmeal wafers. Paralax with agar. Paramels. Peanut butter (made from steamed rather than

roasted peanuts to make it easier to digest). Preserved figs. Protose ("The vegetable meat—makes savory sandwiches, salads, meat pies, and roasts. Rich in iron, lime and protein for body-building"). Psylla. Ripe olives. Savita ("A vegetable [yeast] extract with a rich, meaty flavor, excellent for soups and gravies, Rich in vitamins, and wonderful for blood-building"). Sal-Savita (A vegetable seasoning with a meat-like flavor). Savita-yeast (new yeast with a rich meaty flavor). Starchless bran. Toasted rice flakes. Tomato soup. Vegetable gelatin. Vegetable soup. Vitamet (A savory vegetable meat that is rich in Vitamin B and food iron). Vita wheat (creamy hot cereal). Whole wheat cream sticks. Whole wheat flour. Whole wheat wafers. ZO ("The vitamin breakfast food, ready to eat with cream and sugar. Made from whole wheat and barley and enriched with Savita... Supplies the daily vitamins and minerals"). Zwieback.

On page 23 is an ad for a 64-page booklet titled *Healthful Living: Fundamental Facts About Foods and Feeding*. Address: Battle Creek, Michigan.

3754. Battle Creek Food Co. 1935? How to make savory roasts, steaks, croquettes without meat: Protose—A vegetable meat (Leaflet). Battle Creek, Michigan. 4 panels each side. Each panel: 16 x 8½ cm. Undated.

• **Summary:** Printed with brown and light orange on white. Contents: A brief history of Battle Creek Sanitarium Health Foods. Protose: A substantial food around which you can build your menu (2 panels; "Here is one of the most interesting of all the Battle Creek Health Foods..."). Six recipes using Protose. About Savita with 1 recipe. Send for "Healthful Living" (60 p. book).

Photos show: (1) On the front panel: A young lady in a white apron slicing a casserole containing Protose. (2) Three prepared Protose dishes. (3) A can of Protose. (4) Inside: The huge Battle Creek Sanitarium. (5) The huge Battle Creek Food Co. (5) The front cover of a 60-page book titled *Healthful Living*.

"A brief history of Battle Creek Sanitarium Health Foods: Battle Creek Sanitarium Health Foods were first made in 1899 for patients at the Battle Creek Sanitarium. Such Satisfactory results were obtained that soon outside demand made it advisable to stock them in leading grocery, drug, department and health food stores.

"At present there are over 100 Battle Creek Health Foods, including several groups covering almost every phase of diet—tasty vegetable meats, whole grain cereals, health confections, foods for the reducing diet and laxative diet, others for blood building, with a large assortment for diabetic and other conditions.

"Protose: A substantial food around which you can build your menu. Here is the most interesting of all the Battle Creek Health Foods.

This leaflet was apparently printed for an exposition in San Diego, California. At the bottom of the back panel is printed in large bold letters: "Vegetarian cafeteria. Battle Creek Section. California Pacific International Exposition. San Diego, USA. Palace of Foods and Beverages."

Note: This Exposition was held in 1935-36 at San Diego's Balboa Park. It opened on 29 May 1935 and closed on 9 Sept. 1936. Address: Battle Creek, Michigan.

A BRIEF HISTORY OF BATTLE CREEK SANITARIUM HEALTH FOODS

The Battle Creek Sanitarium

BATTLE CREEK SANITARIUM Health Foods were first made in 1889 for patients at the Battle Creek Sanitarium.

Such satisfactory results were obtained that soon the outside demand made it advisable to stock them in leading grocery, drug, department and health food stores.

At present there are over 100 Battle Creek Health Foods, including several groups covering almost every phase of diet—tasty vegetable meats, whole grain cereals, health confections, foods for the reducing diet and laxative diet, others for blood building, with a large assortment for diabetic and other conditions.

The Battle Creek Food Company

Here are foods of highest quality supported by recognized authority and having a background of forty years' use that has met every test.

PROTOSE LOAF

1 pound Protose	$\frac{1}{2}$ cup crumbs
1 onion	1 tablespoon Savita dissolved
2 eggs	in $\frac{1}{2}$ cup hot water
Cheese — yellow	

Mash the Protose, stir all ingredients together, roll into loaf and place in pan. Place thin strips of yellow cheese across the top. Bake in moderate oven until brown. Serve with Savita Brown Gravy.

ROAST PROTOSE WITH BROWN POTATOES

1 pound Protose	12 boiled potatoes
1 quart brown gravy	Butter

Remove Protose from can by first removing both ends of can. Cut the Protose in half lengthwise and make eight slices of each half. Arrange in buttered pan and cover with Savita Brown Gravy. Dip boiled potatoes in melted butter and arrange around the Protose. Bake in hot oven until potatoes are nicely browned.

PROTOSE VEGETABLE SALAD

$\frac{1}{2}$ cup chopped carrots	$\frac{1}{2}$ cup chopped Protose
1 cup chopped celery	Salt
$\frac{1}{4}$ cup chopped green pepper	Mayonnaise

Mix the chopped vegetables and add the Protose. Fold in the mayonnaise.

3755. Basu, Kali Pada; Mukherjee, Satiprasad. 1936. Enzymic digestibility of pulses: Action of salivary and pancreatic amylase and of the proteolytic enzymes pepsin and trypsin. *Indian J. of Medical Research* 23(3):827-30. Jan. (Chem. Abst. 30:2997). [4 ref]

• **Summary:** Pulses are a basic ingredient in the daily diet in India. "For vegetarians, they form the chief source of proteins." The food value of pulses depends in part on the rate of their digestibility. This paper contains the results of *in vitro* experiments on the digestibility of the most common pulses: "Green gram (*Phaseolus mungo*), lentil (*Lens esculenta*), peas (*Pisum arvense*), gram [chickpea] (*Cicer arietinum*), and also of two varieties of soya bean, the black and the white." The soya beans "were kindly supplied by the Economic Botanist to the Government of Bengal."

Table 1 shows the "variation in the digestibility of six different pulses, plus non-polished and polished rice, by the

proteolytic enzymes, pepsin and trypsin at temperature 40°C. and at pH 2 and pH 8.5 respectively during 1 or 3 hours. The digestibility of the two soya bean types was about average.

Table 2 shows the "variation in the digestibility of different pulses by the salivary as well as the pancreatic amylases" during 4, 8, or 15 minutes.

"Discussion: The pulse proteins, it will be seen, are more readily hydrolysed by trypsin than by pepsin. Towards pepsin, gram is the least and lentil the most readily digestible, whereas green gram and lentil are the least and most digestible respectively in case of tryptic digestion."

"The rate of digestibility of soya bean proteins is of the same order as that of the pulses studied. Our investigations show that soya bean contains a very high percentage of proteins, 46.10 per cent... Thus a more extensive use of the soya bean as a food-stuff, especially by the adult people in this country, can be recommended. The nutritive value

PROTOSE

A SUBSTANTIAL FOOD around which YOU can build Your MENU

HERE is one of the most interesting of all the Battle Creek Health Foods, and it deserves a place on every table because of its goodness. It is different from so many others in that it is a protein food serving the same purpose in the diet as meat, milk and eggs. Protein is that part of the daily food supply which contains the needed building material. It is essential for growth and replaces the tissue wear which results from one's daily work. The growing boy or girl, the laborer, and all who indulge in vigorous exercise need an extra measure of protein. With a few cans of Protose in your pantry, the protein part of the daily bill of fare is assured. It is a most delicious food with flavors which appeal to everyone, and at the same time

lends itself to the preparation of a great variety of dishes.

Protose is made from the grains of choice nuts. It may be served cold just as it comes from the can but more often appears in the form of roasts, steaks, salads or a filling for sandwiches.

Protose is a substantial food containing materials needed for the heavier part of the diet. While it is easily digested and can be managed by the indoor worker of sedentary occupation, it supplies at the same time the sturdy staying qualities required by those leading a strenuous, active life.

Protose is an excellent food for those who cannot use meat.

You will enjoy the rich, meatlike flavor of Protose, and will find it a welcome addition to your regular food supply. Its convenience, wholesomeness and economy will appeal to you. It is not only a dependable source of protein but stands high in food minerals containing double the amount of iron found in meat dishes, five or six times as much lime, with appreciable amounts of vitamin B.

• P R O T O S E • A VEGETABLE MEAT

of the soya bean is under investigation in this laboratory.”
Address: 1. D.Sc. (Dacca), Ph.D. (Munich); 2. M.Sc. Both:
Biochemical Section, Chemical Laboratories, Dacca Univ.
[Dacca, British India].

3756. *Naturopath and Herald of Health* (New York City).
1936. Mail bag: Mahatma Gandhi turns raw fooder and reads
book published by an American Naturopath, “The unfired
food diet simplified” (Letter to the editor). 41(1):30. Jan.
• **Summary:** This is an undated letter written to Dr. James
H. Faulkner, Cincinnati, Ohio. “Dear Friend: I thank you for
your letter and the booklet. A friend had shown it to me some
time ago. I cannot be satisfied that starchy vegetables and
grains can be taken raw without injuring oneself.

“We have not yet been able to find a proper substitute
for milk, much as I would like to do so. The Soya Bean
is supposed to have such properties. A friend is making

cautious experiments but he still combines milk with it.
Sincerely yours, M.K. Gandhi.

When this book was published in 1923, Dr. Faulkner
had an order or two from India; one copy went to a medical
library in Delhi. One of these copies, no doubt, was showed
to Gandhi by his friend.

3757. *California Health News* (Hollywood, California).
1936. Sexauer store moves: Serves health meals. 4(4):9. Feb.
21.

• **Summary:** “Santa Barbara—Moving across the street to 14
West Anapamu, Sexauer’s Natural Food shop is in fine new
quarters, is offering real health meals, served by Hoag and
Baker. These people have served Montecito with vegetable
juices for several months. Hoag became a health-minded
vegetarian five years ago largely through the influence of
Sexauer, vegetarian for 30 years, who is doing a fine work

here in educating people to the health regime. Lectures are to be held here soon.”

3758. Kanga, D.D. 1936. The soya bean: An ideal foodstuff for India. *Vegetarian News* (London). Feb. p. 46-49. [3 ref]
• Summary: Discusses the many food and industrial uses of the soya bean. “Millions of people in India live on a purely vegetarian diet.” “Hardly one person in a thousand even amongst our educated people has heard about this important foodstuff, much less seen or handled it.”

“From several experiments made in private families, and public institutions like the Sir Ratan Tata Industrial Home and the Bengali Girls’ School, and from the fact that soya bean preparations were made at the Soya Bean restaurant in the H.O.H. Fête held in Bombay and sold to the visitors, it seems that a number of table preparations can be easily made from the soya beans and soya bean products suitable to the varied tastes of our countrymen, such as coffee, cocoa, chocolates, biscuits, cakes, pastry, sandwiches, custard, pudding, soup, bread, milk, cheese, sauce, salad, macaroni, margarine, all sorts of sweets, *puri, ganthia, sev, bhajis, papads, vada, chevdo*, etc.”

“If Mother India wishes to have a race of strong, healthy and virile sons and daughters she must see that soya bean is grown most extensively in the different parts of our country* and that it becomes a household word in every home and is included in the dietary of every family.” (Footnote: *)It is gratifying to note that experiments carried out in Sindh, Poona, etc., show that the soya bean can be successfully grown in our country. It is also gratifying to note that the Saurashtra Seva Samiti Ranpur, Kathiawad, is doing some good solid work in popularising and distributing soya beans among the cultivators of its own province. It is equally gratifying to note that the Baroda State has also begun the cultivation of the soya bean in its territories.—Footnote in the ‘Indian Humanitarian’”).

Note 1. This article was reprinted from the Silver Jubilee Number of the *Indian Humanitarian* (Bombay). Note 2. *The Vegetarian News* was published by the London Vegetarian Society from 1921 to 1958. Address: Gujarat College, Ahmedabad, India.

3759. Lust, Benedict. 1936. Adolf Just. *Naturopath and Herald of Health* (New York City) 41(3):69, 87. March.
• Summary: One of the founders of the strict Nature Cure movement, Adolf Just passed away on 20 Jan. 1936. “When he opened his first ‘Yungborn’ Natural Life and Nature Cure Resort at Post Stapelburg, near Eckertal, Germany, nobody thought that he had laid the cornerstone of a new period of Nature Cure.”

His book *Return to Nature* was first published in 1896. He was a great teacher and a great humanitarian. Benedict Lust visited Adolf Just and his “Yungborn” in 1906 and 1926; both were an inspiration to him. A photo shows Adolf

Just.

3760. *California Health News* (Hollywood, California).

1936. Small ad brings old Carque books. April 3. p. 8.

• Summary: “Health News classified ads are result-getters! A small ad asking for out-of-print copies of the late Otto Carque’s ‘The Folly of Meat-Eating,’ printed 32 years ago, brought three replies in a hurry.

“One copy came from Skipper Clarke Irvine of Santa Monica, another from Los Angeles, a third from Lewiston, Idaho. What the beloved Carque had to say about meat three decades ago is still true today. ‘The health and welfare of nations depends on rational nutrition.’ When people stop killing animals to eat meat ‘then the shadows of disease, famine, murder and war will disappear from our planet,’ the book intimates.”

3761. *California Health News* (Hollywood, California).

1936. Raw food cook book now in 15th issue. April 3. p. 9.

• Summary: “Indicating an ever-widening interest in health foods, the 15th edition of Mrs. Richter’s ‘Cook-less Book’ has just been issued it is announced at the Live Food Cafeteria, 325 W. Third [Los Angeles]. This little volume is internationally famous for its unfired soups, salads, drinks, natural desserts, etc. Many of the tempting dishes offered at the cafeteria are included.

“Since the two cafeterias of Hill street and West Third were combined, business has more than doubled, the Richters report. Lectures almost every night, banquets, and special events have made the cafe a unique gathering place for the health-minded students of the new age.” Address: Ojai, California.

3762. *New York Times*. 1936. Vilhjalmur Stefansson, Arctic explorer (Photo caption). April 19. p. XX4.

• Summary: This photo, by Times Wide World, shows Stefansson looking at a huge globe. The lower caption states that he “proved in a year’s test that a man can live exclusively on meat and remain in perfect health. Cancer and tooth decay are unknown among meat and fish-eating Eskimos, who have never eaten white men’s food, he told the chemists.”

Note: In 1913, Vilhjalmur Stefansson, lead an expedition to the Canadian Arctic to study Eskimos, make geological surveys, explore uncharted Arctic waters, and find new islands to claim for Britain. But his ship was crushed by pack ice and, inexplicably, Stefansson abandoned his crew. Of the 25 men who sailed on the *Karluk*, 11 perished of disease, malnutrition, or by suicide. It was a year before the survivors were rescued. William Laird McKinley, a survivor of the tragic and ambitious expedition, wrote an account of what happened but never published it. Extensive use of McKinley’s manuscript was made in the book *The Ice Master*, by Jennifer Niven (Hyperiod, 2000).

3763. Guy, Ruth A. 1936. The diets of nursing mothers and young women in Peiping. *Chinese Medical Journal* 50(4):434-42. April. See p. 440. [9 ref]*

• **Summary:** Dr. Guy has found little evidence that Peiping women have ever used soybean milk to feed their children. She notes that though the drink was available through street vendors, it was generally drunk by “old people in place of tea.” Home preparation was difficult and laborious, and therefore avoided.

Note: This citation is further complicated by the fact that the next issue has the same information: vol. 50, April 1936, no. 4. Address: 1. M.D., First Health Station, Peiping Municipality, China.

3764. Health Book Service—Life Culture Center. 1936. Books on nature cure and natural living (Ad). *Naturopath and Herald of Health (New York City)* 41(4):129. April.

• **Summary:** A full-page ad with the bold banner title across the top. The books are divided into categories: Nature Cure. Diseases. Diet. Cooking. Hygiene. Child feeding. General books.

Note 1. This ad also appeared in the May 1936 issue (p. 161).

Note 2. The address is the same address as the Original Health Food Store. Address: 343 Lexington Ave., New York City.

3765. Siegmeister, Walter. 1936. Are vegetarians suffering from lecithin and vitamin deficiency? *Naturopath and Herald of Health (New York City)* 41(4):101, 120-21. April.

• **Summary:** Vitamin D and lecithin, essential for good health and sound teeth, are both present in the soy bean. “After over 15 years experimentation on various vegetarian, fruitarian, fruit-and-nut, raw food diets—living for several years at a time on each in turn, the writer was still in great uncertainty as to the nature of the best diet for physical and mental health. At this time, he first came across the soybean. At first he was somewhat prejudiced against this bean, as he was against all other legumes, believing that it formed uric acid in the system as peanuts and other legumes have a tendency of doing. But after eating some soybean bread, cheese, and soybean milk powder, he observed that there was something present in these foods which his body craved.”

Note: Talk with Gordon Kennedy of Ojai, California. 2002. Oct. 18. Walter Siegmeister also wrote under pen name of Raymond Bernard, especially in his works about eugenics. He was also interested in longevity. Address: PhD.

3766. Kloss, Jethro. 1936. Re: Trip from Houston, Texas, to San Francisco. Letter to his daughter Promise Kloss, May 11. 1 p. Handwritten, with signature on letterhead. Facsimile printed in *Back to Eden*, 1981 ed. center insert section.

• **Summary:** This letter is of interest both for its contents—it

shows a loving and caring father—and for its letterhead, which states in large letters: “Scientific Food & Benevolent Association.” Below that, next to a photo of Kloss is typewritten: Jethro Kloss, President. Herbalist, Public Lecturer, Food Scientist and Demonstrator. Manufacturers, Jobbers, and Distributors. Home address: Takoma Park Station, Washington, D.C. A typed description of the Association continues at the bottom of the page: “Distributors of non-poisonous herbs for medicinal and culinary purposes. A very practical course in nursing, including hydrotherapy. Scientific feeding for every purpose. Unexcelled substitutes for meat, eggs, cow’s milk and butter—cooking, canning, baking and health foods. How to live better on less money. A marvelous line of foods made from the soy bean, and their cultivation. Send for description of new book ‘Back to Eden’ (revised edition) revealing astounding truths on prevention of disease and revolutionary food and health methods not published before.” Address: 913 Yale St., Houston, Texas.

3767. Desai, Mahadev. 1936. Report of the A.I.V.I.A.—II (b). Diet. [All India Village Industries Assoc.]. *Harijan* 4(16):119-20. May 23.

• **Summary:** The present diet of villagers in India is very inadequate both because the people cannot afford adequate food and because milling in villages depletes cereals of key nutrients. “Soya beans were being experimented on in various parts of the country, and farmers have been induced to cultivate them. In some cases, seeds were distributed to farmers. At the Headquarters Soya beans were grown with quite good results, the beans being even larger than the Manchurian variety... Soya beans were also tried as diet at both morning and evening meals by those who reside at the Headquarters. Other articles of protein food such as *dal* and ghee were completely stopped, and wheat in the form of *rotis* was reduced in quantity. The weight of persons experimenting with Soya beans was taken from week to week, and after three months of this experiment it may be said that while in a few cases increased weight was recorded, the evidence from weight was on the whole against such diet. Medical opinion confirmed this result, for on further enquiry we were told by chemical and diet experts that Soya beans should not be taken as the sole source of protein, but was valuable only when taken in comparatively small quantities in addition to cereal proteins as it efficiently supplemented in a vegetarian menu the lack of proteins from animal food and made up such deficiencies in them.” Address: India.

3768. Faulkner, James. 1936. Carque’s little “black bag” symbol of future doctor. *California Health News (Hollywood, California)* 4(14):14. July 17.

• **Summary:** “When I came to California in 1920, Otto Carque was the first health food man I called on. I had heard of him back East and wanted to meet the man. As

I remember, he, Richter and Van Houten, were about the only ones here dealing exclusively in health foods. What a contrast now!

It was Carque who helped to develop and popularize the black mission fig, and he, perhaps more than any other man in California is responsible for the place this wonderful food holds.

“Otto was industrious, honest and at work all hours of the day and night spreading health methods. I soon learned that whatever meeting I attended pertaining to health he was sure to show up, many times late. And always with him he carried a black bag, a symbol of a new order of physicians. It carried black figs, nuts and other health goodies. from his supply store, and health literature—instead of drugs and sharp knives. This bag served as his lunchbox too, which he often referred to when sitting under an overly long or dry lecture—and at times I too had the pleasure of sharing the goodies.

“To him this health food movement was a work of art—he lived and preached his ideal and it is such men as he who laid the foundation for the rapid progress we now see all over the country. I am glad to have known Otto Carque as a personal friend.”

A photo shows Carque standing on the peak of Mt. Hollywood, which he often climbed (1,652 feet above sea level). “This shows it in the old days when the cross was there. He was a great outdoors lover.”

Note: “Richter” refers to Dr. John T. Richter N.D., A.D., who with his wife, Vera, came to Los Angeles in 1917 and started the first raw-food restaurant, named The Eutropheon. “Van Houten” refers to Van Houten’s Health Food Store located (in Aug. 1923) at 323 So. Hill St., Los Angeles, California. Address: Dr.

3769. Live Food Cafeteria. 1936. Health Ice Cream (Ad). *California Health News (Hollywood, California)* 4(14):6. July 17.

• **Summary:** “From soy bean milk, fresh fruit, honey. A refreshing food. We make it. Delicious salads from garden to you. Send for free literature and health hints.”

Note: This ice cream was served in the Richter’s raw-food cafeteria; we have no evidence that it was a commercial product, sold elsewhere. Address: 325 West Third St., Los Angeles, California.

3770. Webb, H.A. 1936. Review of the book *Food for Life*, by Frances Dittes. *Banner (Nashville, Tennessee)*. July 26. Magazine section. Summarized in *Madison Survey*. March 3. 1937. p. 33-34. *

• **Summary:** “This book makes a real contribution to the literature of cookery and nutrition from at least two standpoints: First, it is written by a Southern author who knows the Southern taste in sickness and in health; second, it is the vegetarian school, whose life work consists in administering foods as a true medicine to those who seek

for health.” Address: Head of the Chemistry Dep., Peabody College.

3771. Siegmeister, Walter. 1936. Soy beans. *Nature’s Path to Health (Melbourne, Australia)*. Aug. 15. p. 25-26.

• **Summary:** “Soy Beans contain a Complete Protein which can replace the proteins of meat, eggs, and milk.

“The verdict of modern biochemistry is that the alkalinity of the blood is the basis of physical and mental health, while a rise in acidity means lowered vitality and increased susceptibility to disease. Therefore it is of the highest importance to keep the blood alkaline. To do so, we must avoid acid-forming foods, consume those with an alkaline ration, and above all, thoroughly oxygenate the lungs with pure oxygen. Unless carbon dioxide is removed as quickly as it forms, there will be a rise in the carbonic acid content of the blood which means increased acidity.

“Chief among the acid-forming foods are meats, fowl, fish, eggs and grains. Flesh foods putrefy readily and hence are causes of constipation and intoxication... The soy bean is highly alkaline (as are potatoes and bananas)... It is one of the few vegetable proteins with a full biological value equal to that of meat, eggs, or milk. Soy bean powder [flour] dissolved in water makes a milk which has been found by experiments to be able to replace cow’s milk in the feeding of infants.”

“Butter is acid-forming; so are most vegetable oils. Soy bean oil is the only oil found to be alkaline in reaction and to contain vitamin D...”

Note: This is the earliest document seen (Feb. 2022) concerning a vegetarian diet and mental health. Address: PhD.

3772. Brewster, Clara M. 1936. The Soya bean: A four-star food. *Horizon (Tempo Books, New York City)* 1(3):9, 26-27. Aug.

• **Summary:** “Like the Fountain of Youth, the Perfect Food is a myth. There is, however, a well-nigh ideal substitute. It is 5,000 years old, yet fully appreciated only so recently that it can well be called the food of tomorrow. This food is the Soya bean—a four-star tiny seed, with one star for its exceptionally fine and healthful chemical composition, one star for its cheapness, one star for its taste, and the final star for its adaptability, which makes it a blessing to every health-minded housewife!

“In the Orient, the Soya bean takes the place of meat, eggs, milk, cheese, butter and wheat. Over its supply wars have been fought. On a diet of it entire races have been nourished and thrived. To approximately half the population of the world, it is food and drink day in and day out.

“And it is no wonder. An analysis of the chemical composition of the Soya bean shows that it is composed of 40% protein, 20% fat, and the rest is balanced carbohydrates and minerals. Also, research has shown that the Soya bean

contains all the vitamins, both the fat-soluble and the water-soluble."

"The Soya bean is a complete vegetable protein containing all of the amino acids in assimilable form; one pound of Soya beans equals the protein value of two pounds of beef, which is much more expensive. Also, quite the opposite of meat, which is highly acid forming, the Soya bean is alkaline, possessing more than twenty times the alkalinity of cow's milk."

From Soya beans we can make Soya bean milk, oil, "a perfect substitute for lard and other kinds of indigestible shortening," a substitute for fresh butter (when the lard substitute is colored with a bit of carrot juice and seasoned with a little Nu-Vege-Sal), a delicious flour (good for use in pancakes, soups, etc.), toasted soya bean (which resemble peanuts in flavor and texture), coffee substitutes and chocolate substitutes (from toasted soya beans—alkaline in reaction and minus all harmful stimulants), toasted soya flour (which has a nut-like flavor), sprouted soya beans, green vegetable beans (picked when the plant is three quarters ripe; they are easy to shell after boiling in the pods for five minutes), tofu (one of the most popular foods made by the Chinese from soya beans, it is a cheese resembling our cottage cheese but pressed into cakes), the curds used to make soya cheese (use in salads or other recipes calling for cottage cheese).

"There are 250 varieties of soya beans. Recipes are given for: Soya beans a la Hauser (boiled [whole dry] soya beans, seasoned with Nu-Vege-Sal and made into a casserole). Raw soya bean salad (with sprouted soya beans). Soya milk. Clabbered soya milk ("The pulp [okara] strained out of the milk may be used in a multitude of ways..."). Mock oyster patties (with 1 cup soya pulp). Soya muffins (with 2 cups toasted Soya Flour). Soya waffles (with soya flour). Soya fiddle sticks (with soya flour, raw sugar, dates, and nuts). Soya flour fruit cake. Soya sand tarts (with soya flour).

Note 1. Nu-Vege-Sal ("Nutrofed salt") is made by Modern Health Products (Milwaukee, Wisconsin), which has a full-page ad in each issue and also makes Swiss Kriss (natural herbal laxative), Sym (formerly called "Slim"), Vitana (ripe banana food), Santay Swiss Teas, Santay Meatless Bouillon, Sea Greens ("sea vegetables" in tablet form), Sipp (drink instead of coffee), and Aydee Vitamin Tablets.

Note 2. This stylish, spiral bound, quarterly magazine, edited by Bengamin Gayelord Hauser, began publication in early 1936. It is published by Tempo Books (580 Fifth Ave., New York City), the publisher of Hauser's many books with titles like *Eat and Grow Beautiful*, *Food Science and Health*, *Harmonized Food Selection*, *New Health Cookery*, *Types and Temperaments*, *Dictionary of Foods*, *Child Feeding* (written for mothers), *Health Day* (*Gesundheitstag*), *Here's How To Be Healthy* (sensational "health cocktails"). Focusing on

"Health, beauty, vitality," it emphasizes that all are related to a good diet. Hauser (whose full-page, dapper photo appears near the front of issue no. 1) "has been called into consultation by the world's most beautiful women, stars of the stage, screen and opera; and for the past two summers he has been Dietetic Director of Elizabeth Arden's exclusive 'Siesta' in Maine." Hauser appears to advocate a vegetarian diet (though he does not say so); he makes no mention of meat, fish or poultry in the text or recipes in the first four issues.

3773. **Product Name:** Roberts Soy-Wheat Macaroni.

Manufacturer's Name: Roberts (F.G.) Health Food Products.

Manufacturer's Address: 430 St. Kilda Road, Melbourne, S.C.2, Victoria, Australia.

Date of Introduction: 1936 August.

How Stored: Shelf stable.

New Product—Documentation: Ad in *Nature's Path to Health* (Melbourne, Australia). 1936. Aug. 15. p. 8. "Look for the name on the packet. Health Brand (a logo illustration shows a stylized portrait of F.G. Roberts wearing a bow tie). 12 ozs. Nett. "Obtainable at all Health Centres." Note: It is not clear who manufactured this product, and where it was made.

Ad in *Nature's Path to Health* (Melbourne, Australia). 1937. Sept/Oct. p. 34. "The perfectly balanced food. Made by and obtained at Roberts Health Services throughout the Commonwealth." Address: 40 Chapel St., St. Kilda. Same ad in Nov/Dec. 1937 issue, p. 14 and in the Christmas 1937 issue, p. 19 and 28. However on p. 28 we read: F.G. Roberts, N.D., D.O. [Doctor of Osteopathy], 430 St. Kilda Road, S.C.2.

Note: This is the earliest known commercial soy product made in Australia. In fact, F.G. Roberts Health Food Products, which made only vegetarian food products, launched the first twelve commercial soy products in Australia. The first soy product introduced by Sanitarium Health Food Co. in Australia was launched in 1954. It was named "Soya Beans in Tomato Sauce."

3774. Desai, Mahadev. 1936. Soya bean as a substitute for meat. *Harijan* 4(33):259. Sept. 26. [1 ref]

• **Summary:** Reprints parts of a review from "Vegetarian News" of a book titled *All About the Soya Bean* by Dr. Lieut. Col. Gray. Address: India.

3775. Lust, Benedict. 1936. The First Humanist-Naturist Vegetarian Colony. *Naturopath and Herald of Health* (New York City) 41(9):278. Sept.

• **Summary:** "Yesterday we had a visit from Dr. Juan Amon-Wilkins in regard to the Pan American Epicure Tropical Colonization project, known as the First Humanist-Naturist Vegetarian Colony, in the Isle of Pines, Cuba.

"We are fully in accord with this movement which is to be a genuine natural life colony, modelled after similar colonies in Germany, Switzerland, Brazil and in other parts of the world."

The philosophy and basis of this Colony is the same as laid down by the teachings of Dr. Benedict Lust's College of Naturopathy, and "by the fathers of natural life and Nature Cure such as Priessnitz, Schroth, Rickli, Louis Kuhne, Henry Lahmann, Father Kneipp, Adolf Just, Arnold Ehret and August Engelhardt, and American authorities such as Dr. Juan Amon-Wilkins himself in his Nature Cure books on natural living...

"We print herewith the fourteen Conscious Declarations for all members and adult associate members." No. 6 is "That I will not eat the flesh of any creature as long as I can be supplied with food from vegetation."

"By the way, Dr. Wilkins is also very much concerned about the deplorable situation in regard to the rights of the people in New York State to select their choice of healing methods." Note: "Naturist" is a non-pejorative word for nudist.

3776. *Time*. 1936. "Little honorable plant." Oct. 12. p. 76, 78, 80. [1 ref]

• **Summary:** "Last year 'the little honorable plant' put \$35,000,000 into the pockets of U.S. farmers, outranking in value rye and barley. Soybean trading had grown so active that the [Chicago] Board of Trade could no longer overlook it as a potential source of commissions. First futures transaction in soybeans in the Pit this week was 5,000 bu. sold by Archer-Daniels-Midland Co. to Bartlett-Frazier Co. at \$1.20 per bu..."

"A Yankee shipmaster brought the first soybeans to the U.S. in 1804... Yet no more than 500,000 acres were planted to soybean in the U.S. in any one year until 1917."

"In the U.S. some 600,000 farmers grow soybeans in 27 states." Illinois produced more than half the total U.S. crop last year.

"Food. Soybeans are ideal for diabetics because they contain little sugar, no starch. They do, however, contain more than three times the protein of wheat or eggs, more than twice that of lean meat. Soybean vitamins are A, B-1, B-2, D, E. For vegetarians and diabetics, the bean is converted into cheese, soup, butter, salad oil, macaroni, breakfast food milk (from grinding the beans in water). To bakers soybeans mean a new bread which is expected to break sales records. Last year vegetable shortenings and other lard substitutes required no less than 52,450,000 lb. of soybean oil, compared to a 1934 consumption of 2,735,000 lb."

"Factory. Each ton of soybeans yields 30 gallons of oil and 1,600 lb of meal. Industry takes the oil and the meal, uses one or both to make glue, paints, combs, candles, radios, buttons, axlegrease, paper size, explosives, linoleum,

oilcloth, printer's ink, billiard balls, rubber substitutes, cigaret holders, Christmas tree ornaments. Last year U.S. manufacturers consumed 91,166,000 lb. of soybean oil, of which 2,550,000 lb. went into soaps, 4,800,00 lb. into linoleum and oilcloth, 13,000,000 lb. into paints and varnishes."

"Ford & Future... The number 1 U.S. soybean man is Henry Ford. His reason: 'If we want the farmer to be our customer, we must find a way to be his customer.' Henry Ford began investigating the beans in 1930, spent more than \$1,000,000 in the next few years growing them, finding out how they could be used. Few months ago the River Rouge works got a \$5,000,000 addition in the shape of a soybean processing plant. Into Ford cars at present go the product of some 60,000 acres of soybeans. The oil goes into glycerine for shock-absorbers, enamel for body finishes [paints], binder for foundry cores. The meal, turned into plastics, rolls off the assembly line as horn buttons, gearshift knobs, window-trims, distributor cases.

"Said Mr. Ford few months ago: 'You will see the time when a good many automobile parts will be grown.'"

A portrait photo shows Henry Ford with the caption, "Motormaker Ford. A bean's best friend."

Note: This is the earliest document seen (Nov. 2013) that mentions the "assembly line" in connection with Henry Ford. Mass production was pioneered on the Ford moving assembly line in April 1913 at the Highland Park plant—and with it began the rise of the consumer economy.

3777. Lust, Benedict. 1936. State news: New York. *Naturopath and Herald of Health (New York City)* 41(10):306-07. Oct.

• **Summary:** "Another visitor who graced our home and table during August [1936] was the well-known editor of the California Health News, of Hollywood, California, Mr. Clarke Irvine, known to his intimates as the 'skipper.' It was a genuine pleasure to have this interesting and charming man with us..."

"Mr. Irvine is an advocate of natural foods and a believer in strict vegetarianism. He has to his credit the formation of the California Academy of Health and the Health Food Dealers Association. He is dead set against smoking and was particularly disgusted with the manner in which restaurants and theatres in New York and elsewhere have their air polluted with the smoking of men and women."

3778. *Nature's Path to Health (Melbourne, Australia)*. 1936. Remarkable dietary properties of the soybean. Nov. 15. p. 8.

• **Summary:** Gives a brief history of the soybean and an overview of its nutritional benefits. "For 5,000 years the Soy Bean has replaced meat, eggs, and milk in the diet of millions of vegetarian Chinese. It has also been used for food in Japan, Indo-China, Siam and India. The Chinese make practically no use of dairy products, and use very little meat,

yet they have lived for centuries in a state of prolific vigor on what appears to be a remarkably well-balanced diet by the use of the Soy Bean." Mentions soy bean flour and soy bean curd.

"Dresden, Germany—Dr. Ragnar Berg, famed city hospital food scientist, who wrote the Dictionary of Foods, recently conducted fundamental researches on protein requirements and found that Soy Beans are a splendid source of protein."

"Due to its content of lecithin and phosphorus, the Soy Bean is a nerve and brain food which is especially valuable in cases of neurasthenia for increasing nerve and brain energy."

3779. Schweitzer, Albert. 1936. The ethics of Reverence for Life. *Christendom* Winter. p. 233. *

• **Summary:** "Ordinary ethics seeks to find limits within the sphere of human life and relationships. But the absolute ethics of the will to live must reverence every form of life, seeking so far as possible to refrain from destroying any life, regardless of its particular type. It says of no instance of life, 'This has no value.'"

3780. Heiden, Konrad. 1936-1937. Adolf Hitler: Eine biographie. 2 vols [Adolf Hitler: A biography. 2 vols.]. Zurich, Switzerland: Europa Verlag. 22 cm. [Ger]*

• **Summary:** Says that Hitler was not an absolute vegetarian but only a partial abstainer.

Note: An English-language version was published in New York in 1936 by A.A. Knopf. Translated from the German by Winifred Ray. "First American edition."

3781. Friedmann, R.; Raab, W. 1936. [Behavior of the circulatory organs in vegetarians and in alcoholics]. *Zeitschrift fuer Klinische Medizin* 130:505-34. [Ger; eng]*

• **Summary:** A diet excluding meat, but not eggs and milk, did not prevent arteriosclerosis, but did tend to normalize blood pressure. Alcoholism did not promote arteriosclerosis or high blood pressure.

3782. 500 meatless dishes. 1936. England: Success Publishing Co. 92 p. *

• **Summary:** A previous edition was published in 1934.

3787. Forster, Emily L.B. 1936. Vegetarian cookery. London: W. Foulsham & Co. Ltd. 14 cm. *

3788. Hagstotz, Gideon David. 1936. The Seventh-day Adventists in the British Isles, 1878-1933. Lincoln, Nebraska: Union College Press. 231 p. Index. 23 cm. [611 ref]

• **Summary:** Chapter 1 begins with a historical sketch of the early Seventh-day Adventist church in the United States, plus general organization, work and doctrine: 1831-1844—William Miller of Low Hampton, New York, delivers his famous prophetic lectures concerning Christ's return to earth in 1844 (based on Daniel 14 in the Bible). 1844—The "disappointment" when Christ fails to appear, and attempts to predict another date (based on Revelation 14:6-14). Ellen Harmon experiences her first "vision" at age 17. 1845 (about)—A new religious movement is started by Captain James Bates, James White, and Ellen G. White; they follow the Ten Commandments, start to keep the Sabbath on Saturday, and preach the word of God for the "cleansing of the sanctuary" in heaven.

1848 Oct. 30—Ellen Harmon and Elder James White (a Methodist) are married. 1849—A newspaper titled *Present Truth* is published in Middletown, Connecticut, largely under the aegis of James White. "Shortly after this time Mr. and Mrs. White moved their headquarters to Rochester, New York. 1855—They relocated in Battle Creek, Michigan, which later became the SDA denominational headquarters. 1860 Oct.—The name Seventh-day Adventists is adopted at a conference held in Battle Creek. 1863—There are now about 3,500 Seventh-day Adventists having about 125 churches. 1873—There are now about 5,875 Seventh-day Adventists. 1893—The number of the SDAs has increased to 37,404. 1903—The SDA denominational headquarters is moved to Washington, DC, from Battle Creek.

Chapter 2 is "Organization of the British Union Conference," and Chapter 10 is "Medical Work and Health Food Factory." A merged chronology follows: From 1878 "until 1 July 1902, when the British Union Conference came into existence, the General Conference of Seventh-day Adventists located at Battle Creek, Michigan, directly controlled the denominational mission program in the British

Isles.” The headquarters was in London.

1898—Definite denominational medical endeavors began when Dr. D.H. and Dr. Lauretta Kress arrived in England under the auspices of the General Conferences of SDAs.

1899—These physicians began to publish a magazine devoted to healthful living titled *Life and Health*. They also “started a small ‘health home’ in Dunedin, a country villa Meadville, near Redhill Surrey, which they reported full to capacity by November of the first year.”

1899 (about, p. 146)—“The first venture at manufacturing health foods by the Seventh-day Adventists in England began in conjunction with the Sanitarium work of Dr. D.H. and Dr. Lauretta Kress near Redhill, Surrey. Here the International Health Association purchased Harley Mill, which it enlarged and called Salford Mill before starting production of health products. The management imported some of the machinery and purchased the remainder in England. The products resembled the noted Kellogg and Post health foods; in fact the association had procured the ‘rights’ to make Battle Creek foods in England.

“Early in 1900, just after the factory gave promise of developing into a profitable industry, fire destroyed the plant... With the undamaged machinery as a nucleus for a new start, the Association leased property in Birmingham [far to the northwest, between London and Manchester] the following November [1901] where it functioned as a stock holding company under British law. Unfavorable conditions in the form of high rent and improper location” led to “a financial loss of £1,500 at the end of the first year of operation.” Thereafter “each year the plant showed a profit in spite of some competition created by substitutes for the commodities it produced.”

In the spring of 1900, Dr. and Mrs. Kress had to leave England. But before they left, Dr. A.B. Olsen and his wife, also a physician, had arrived in England to replace them. The first magazine was discontinued.

1901 Oct.—A new health journal, *Good Health*, appears on the market thanks to a gift of \$300 from Dr. J.H. Kellogg and \$400 worth of advance subscriptions. By Feb. 1902 this periodical had reached a circulation of 30,000. Note: It advocated a vegetarian diet.

1902 Aug.—During the Bank Holiday the SDA food factory’s products were served as refreshments at the Salvation Army gathering at the London Country Athletic Grounds, Herne Hill; they were widely praised.

1903 March—Dr. Olsen completes the purchase of a small hydropathic institution in Caterham, Surrey, 18 miles south of London. The new property is named Caterham Sanitarium and Surrey Hills Hydropathic. The Sanitarium as soon thriving.

1906—A company named the Seventh-day Adventist Union Ltd. was created at the annual meeting to care for SDA property and transact all legal business with dispatch. “After some negotiations the company purchased an estate

known as The Stanboroughs for £8,250. This property, located near Watford, England, about 15 miles northwest of London, included fifty-five acres, a large residence and stables all surrounded by timber. Here the British Union Conference located its publishing plant, food factory, college, and sanitarium.” In Dec. 1906, when the Union Conference gained possession of the property, the denominational headquarters was moved to here from London, where it had been located since 1877.

1907 Oct.—The SDA food factory closes in Birmingham and starts to operate at Watford, 15 miles northwest of London. From 1907 to 1914 the SDA health food factory liquidated a deficit of \$7,000 and indicated a yearly profit of \$3,000 to \$400.

1908 Dec. 31—Organizations owned by the British Union Conference include “The International Health Association Limited, The Good Health Association Ltd., and Stanborough Park Training College...” (p. 28).

1913—The International Health Association recorded a net profit of \$3,930. Then came World War I and hard times, but business continue to improve.

1918—By the end of this year “the factory could no longer supply the demand, although operating on a twenty-four hour schedule with forty employees.” Assets totaled \$28,800 whereas liabilities were only \$5,400.

1926—The International Health Association is renamed Granose Foods Ltd. By year’s end the company had no more liabilities.

Note 1. Seventh-day Adventists appear to have been the first to make health foods in the UK, starting in 1899. In 1896 or 1897 a vegetarian restaurant opened in a new building on Corporation Street in Birmingham. James Henry Cook was appointed the manager. The landlord asked the consortium of businessmen funding the restaurant if they would like to use the whole seven story building and convert the upper five stories into a hotel. They agreed to do so. Thus, in the summer of 1898, the Pitman Vegetarian Hotel, the first Vegetarian Hotel in England, opened in Birmingham, again with James Henry Cook appointed manager. In about 1902, James Henry Cook opened a health food store either in the hotel or nearby, and some time after that he began to manufacture health foods in Birmingham. The manufacturing company was initially named the Pitman Health Food Co., but in about 1929 it was renamed Vitaland. Unfortunately the last two dates are not known. (See Ray Hill. 1998. *The Health Food Store* (p. 10-11). Also Kathleen Keleny. 1996. *The First Century of Health Foods*).

Note 2. This book is very well documented with 515 footnotes and 96 bibliographical references from both primary and secondary sources. Gideon David Hagstotz was born in 1896. Address: PhD.

3789. Heiden, Konrad. 1936. Hitler: A biography. Translated from the German by Winifred Ray. New York, NY: A.A.

Knopf. 390 + x p. 23 cm. *

• **Summary:** Says that Hitler was not an absolute vegetarian but only a partial abstainer. Translated from the German by Winifred Ray. "First American edition."

3790. Kale, F.S. 1936. Soya bean: Its value in dietetics, cultivation and uses. With 300 recipes. Baroda State, India: F. Doctor & Co. xxxi + 375 p. Illust. Index. 22 cm. 2nd ed. 1937. [75 ref]

• **Summary:** Contents: Preface. 1. Deficiencies in the Indian diet and soya bean as a means to rectify them. 2. History of the origin and growth of soya bean. 3. The use of soya bean. 4. World trade in soya bean. 5. Botany of the soya bean plant. 6. Classification of soya bean. 7. Cultivation of soya bean. 8. Diseases and pests of soya bean. 9. Cultivation of soya bean in India. 10. The constituents of soya bean. 11. Soya bean milk. 12. Soya bean flour. 13. Industrial uses of soya bean. 14. Enriching soil by addition of nitrogen and use of soya bean as fodder. 15. Food requirement of the human body. 16. European and American soya bean recipes. 17. Diabetic dishes, Mahatma Gandhi's experiments at Magan Wadi and opinion of scientists on soya bean. 18. Chinese and Japanese soya bean dishes. 19. Indian soya bean dishes: Hindustani dishes, Moglai dishes, Gujarati dishes, Maharashtrian dishes, Bengali dishes, Goa dishes, Tanjore dishes. Appendix.

For a more detailed table of contents and summary of the work, see the 2nd edition (1937).

Photos on unnumbered pages show: (1) Color photo (at front of book just before the Preface) His Highness the Maharaja Sir Sayaji Rao Gaekwad of Baroda, Royal Farmer, who takes keen interest in Soya Bean. (2) H.H. the Maharaja Gaekwar of Baroda the first Indian ruler to inaugurate the soya bean planting ceremony in his state—24 Nov. 1933. (2) H.H. The Maharaja of Baroda, seated in a chair, lecturing on the dietetic and industrial importance of soya bean. (3) The mature soya bean pods of Mammoth Yellow variety grown in Baroda territory. (4) Map of Baroda state showing areas of soya bean cultivation. (5) Map of Baroda state showing local distribution of soya bean. (6) A field of soya bean in rows grown by Patel Hargovan Bavabhai of Achisara Baroda District (with two white bullocks) who has been awarded the first prize for his good cultivation.

(7) Bavabhai B. Patel, a farmer age 65 who is interested in cultivation of soya bean; dressed in white, he is standing in a field of soya beans behind two large white bullocks. (8) The author's own child, three months old, fed on soya bean milk.

(9) Mahatma Gandhi who uses soya bean at Maganwadhi; he is seated in a chair reading.

Note 1. This is the earliest English-language document seen (Sept. 2006) that uses the term "soya bean" in a new way—as a singular noun, like the words "corn" or "wheat," not preceded by "the." Examples: "2. History of the origin and growth of soya bean. 3. The use of soya bean. 4.

World trade in soya bean... 6. Classification of soya bean. 7. Cultivation of soya bean. 8. Diseases and pests of soya bean." This usage originated in developing countries.

Note 2. This book was written as the princely state of Baroda was studying the possibility of growing the soya bean plant for food, feed, and fodder. It looked promising, but little headway was actually made in either production or utilization.

Note 3. The author's name is pronounced KAL-ay, not KAYL (rhymes with sail or tail). Address: Food Survey Officer, Baroda State, India.

3791. Kaunitz, Hans. 1936. Transmineralisation und vegetarische Kost [Transmineralization and a vegetarian diet]. *Ergebnisse der Inneren Medizin und Kinderheilkunde* 51:218-322. [336 ref. Ger]

Address: Aus der I. medizinischen Klinik der Wiener Universitaet [Vienna, Austria].

3792. Richter, John T. 1936. Nature—The healer. As edited by Henry Winfred Splitter, M.A. (Univ. of Wisconsin). Los Angeles, California: Published by the authors. 433 + [6] p. Illust. Index. 21 cm.

• **Summary:** John T. Richter was born in 1864. He earned his Doctor of Chiropractic and Naturopathy in Minnesota, but he did not practice "since coming to California. The management of his restaurants and educational work connected with the live-food movement have demanded his entire time." This book is dedicated to "to humanity whom we serve."

Perhaps the most interesting part of this book is the Biography (on unnumbered pages at the front). "My father was a country physician of the conventional medical type. He also owned a drug store in the little North Dakota town of Fargo" in which I was raised. He wanted me to be a medical doctor, just as he was; but, as it happened I had worked as a young man, for nine years in his drug store, and had had plenty of experience in the compounding of inorganic and organic drugs. I had observed their effects on my father's patients. He decided to send me to the Rush Medical College in Chicago [Illinois], and he thought it was strange when I showed no desire to fulfill his wishes."

He did go to Chicago and earned some type of diploma from an unnamed "institute" that taught the "'movement-cure' in which the general theory and practice of vegetarianism of the cooked food type was incorporated.

When he returned home, his father, upon seeing his degree said it was "quack." John drove with his father on rounds to see his patients. Some 20-30 were incurable charity patients. John offered to take all these from his father. Soon he had cured them all. "Notice all that all these cures were accomplished under the Battle Creek system of diet-cooked food vegetarianism, with a considerable amount of green vegetables and fruits. The results I had obtained were

marvelous.”

“After having lived for 15 years largely on a cooked-food diet (no meat, of course). I noticed that something was physically wrong with me. My kidneys were not functioning properly. I seemed to lack recuperative energy.” He often felt tired. He then read an article in a naturopathic magazine “describing how a certain Dr. Lust had been invited by Dr. George Drew of Chicago to partake of an uncooked food dinner.” He decided to give the new diet a trial. “Dr. Drew came to Minneapolis to teach me as well as the class I had organized for him.” After 9 months he felt much better. Tests showed his blood had changed from acid to alkaline. His weight, which began at 145 pounds, dwindled to 123, but eventually returned to 145 plus a little more. “For 25 years now I have lived according to this [raw food] system.” He was in his late 40s when he started. “Today, at age 72 (I was born in 1864), I can do more work, can do it more accurately, than I could when I was 35.”

This book consists of a number of health conditions / problems, foods, and stimulants, arranged in alphabetical order, and his advice concerning each. For example: Abscesses, acidity, adenoids, adhesions, alcohol, aluminum, anæmia, apoplexy, appendicitis, appetite, arthritis, asthma, auto-intoxication, bacteria and germs, etc. Other interesting sections include drugs and drug poisoning, eggs (forbidden), fasting, food-cooked, meat, milk, patent foods, philosophy of live food, sex, tobacco, vaccination, vegetable and olive oils, and vegetables and legumes.

He repeatedly advises people to “eat natural foods” and to live naturally. Richter was opposed to alcoholic beverages, coffee, cooked foods, dairy products, meat, salt, sugar, tobacco, and vaccination. He advocated conservation of bodily energy through continence—except for the purpose of reproduction. A full page portrait photo (frontispiece) shows John T. Richter.

Note 1. The index is largely useless, since it simply lists health conditions in alphabetical order.

Note 2. Despite the bibliography, this book contains relatively little information about John Richter’s life. When and where did he earn his “Doctor of Chiropractic and Naturopathy”? How long did it take him to complete the course? When did he move to California (by 1917) and when did he start each of his living food Eutropheon restaurants there (by Sept. 1923)? When and where did he meet his wife (who was very active in his restaurants and educational work)? When and where were they married? Address: 2844 Avenel St., Los Angeles 26, California.

3793. Shryock, Richard Harrison. 1936. The development of modern medicine: An interpretation of the social and scientific factors involved. Philadelphia, Pennsylvania: University of Pennsylvania Press; London: H. Milford, Oxford University Press. xv + 442 p. Illust. 24 cm. [500* ref]
• **Summary:** A very interesting and carefully researched

history of medicine. The author lived 1893-1972. The Thomsonians in America (1820s) exploited the rising tide of protest against excessive purging with calomel by using only vegetable drugs (p. 252-53). Priessnitz and water cures (p. 254). Sylvester Graham and vegetarianism (p. 254-57). Mary Baker Eddy and Christian Science (p. 257). Improved hygiene (p. 255-56).

“It was inevitable that some of the health sects, arising as they did in a romantic era, should be invested with the halo of humanitarian reform. This was the distinction of a small but articulate hygiene cult which flourished in the United States between 1830 and 1860. Its founder, Sylvester Graham, was a sincere reformer who believed that if the doctors could find no way to save mankind, it was high time the laity did so. Inspired by the temperance movement, Graham inquired why this should be limited to drink? After all, the most thirsty could not live by liquor alone. Were not men made gross, even diseased, by intemperance in food as well? Vegetarianism and the use of whole-grain cereals were recommended, and the latter program is still recalled when one refers to ‘Graham bread’ or ‘Graham crackers.’ Once aroused, the reformer naturally discovered that the problem was more serious than at first supposed. The American people were apparently headed straight for physical destruction, and physicians were doing little to stop it.”

“Widely as they varied among themselves, all the medical sects and health cults had one thing in common. This was their disdain for regular [medical] practice. Homeopaths, Thomsonians, osteopaths, hydropaths, Grahamites, and Christian Scientists all agreed that regular medicine was futile and even dangerous” (p. 257-58).

The chapter titled “The triumphs of modern medicine” (p. 273+) focuses on the history of bacteriology. “The possible significance of micro-organisms was never entirely forgotten after 1670... As is well known, Plenciz of Vienna [in today’s Austria] carried on the work begun by Leeuwenhoek, and worked out (1762) a well-rounded ‘germ theory’ of disease causation” (p. 273). During the early 1800s the American public lost faith in medicine. But this was recovered after the 1880s. “The discovery and isolation of specific organisms causing a certain disease provided, for the first time, a rational basis on which to build a real knowledge of the immunizing process.” Pasteur isolated the organisms he thought responsible for chicken cholera, then he “proceeded to prove this (1880) by injecting them into healthy fowl. The latter promptly died and the organisms were recovered from their bodies.”

3794. Van Gundy, Dorothea. 1936. La Sierra recipes. Campus and Maitland, Ontario, California: Published by the author. 47 p. 19 cm.

• **Summary:** Most (but not all) of the recipes in this book call for soy-based ingredients. Contents: Dedication. “This book is lovingly dedicated to the memory of my father.”

Foreword: "Due to the increase of disease in the animal kingdom, the diet should be as free as possible from these elements, including meat, eggs, and milk." Approximate composition for La Sierra Products: Soy butter [soynut butter] (27.6% protein, 47.1% fats). Soy breakfast food. Soy flour. Cooked soy beans. Soy loaf. Milk. Bean sprouts. Soy cheese [tofu]. Soy spread. Soy bologna. Dry soy beans.

1. The soy bean as a human food: Nutritional value, varieties of soy beans, flour, soy milk, soy milk from flour, soy milk from raw beans, soy cream (made by homogenizing / blending equal parts of soy milk and soy oil or other vegetable oil), soy cheese, soy bean sprouts, soy sauce.

2. Soups: Incl. Soyament bouillon. Many use Soyament (Soy Sauce), soy milk, or soy cream. 3. Entrees. Recipes incl. Soy croquettes (with Soy Bean Pulp and Smoein). Walnut Loaf (with Smoein and soy milk). Soy protose (with soy butter and Mamenoko flour). Gluten patties (with Smoein). Soy cheese with tomato sauce. Soy cheese croquettes. Soy cheese and Soyament sauce. Baked macaroni with La Sierra Vegetable Bologna. Soy loaf. Soy loaf a la king. Baked soy noodles. Chow mein (with La Sierra Soy Cheese). Lentil patties (with Smoein).

4. Sauces and gravies: Many use soy milk, Smoein, or soy sauce. 5. Vegetables. Incl. Creamed vegetables (with soy milk). 6. Salads and salad dressings. Soy recipes include: Carrot and soy cheese. Tomato and soy cheese. Pineapple and soy cheese. Stuffed celery (with soy cheese). Soy loaf salad. Cabbage and banana salad (with soy mayonnaise). Head lettuce (with soy butter dressing). Salad dressing (uses soy milk in place of eggs). Soy mayonnaise [Note: This is the earliest recipe seen for a soy mayonnaise]. Tomato mayonnaise (tomato juice beaten into soy mayonnaise). Thousand island dressing (with soy mayonnaise). Parsley and olive dressing (with soy mayonnaise; uses ¼ cup chopped olives, not olive oil). Soy cream dressing. Soy butter dressing [with soynut butter]. Cream golden dressing (with soy cream). French dressing (with soy oil or any vegetable oil).

7. Desserts. * = with soy milk. + = with soy cream. Cream rice pudding*. Rice pudding+. Blanc mange*+ [Blancmange]. Orange cream pudding+. Lemon fluff+. Fruit fluff+. Cream tapioca*+. Frozen pudding*+. Vanilla Ice Cream*+. Almond cream [Almond ice cream] (incl. 1 cup chopped almonds)*+. Strawberry sherbet+. Raspberry sherbet+. Butterscotch chiffon pie+. Lemon pie+. Banana cream pie*+. Pumpkin pie without eggs*. Soy pastry with soy flour. Soy cookies+.

8. Bread: Soy bread (with 4 cups entire wheat flour and 1 cup soy flour). Entire wheat bread (with 2 cups soy milk). Entire wheat sticks (with 3 parts wheat flour and 1 part soy flour). Corn meal crisps (with 4 parts corn meal, 3 parts wheat flour, and 1 part soy flour). Short cake (with 2 parts soy milk, 5 parts wheat flour, 1 part soy flour). Waffles (with 12 parts wheat flour, 2 parts soy flour, and 7 parts soy milk).

9. Sandwiches: Soy bean filling. Vegetable bologna. Soy delight filling (with soy[nut] butter). Soy cheese and raisin sandwiches. Soy butter (soynut butter thinned with tomato juice). Soy butter and honey. Soy cheese and olive [chopped green olives]. Soy spread [Made by La Sierra]. Sandwich salad (with many soy possibilities).

10. Beverages: "A very fine coffee substitute is made [by La Sierra] from the Soy Bean, and tastes remarkably like Coffee. It is particularly fine from an alkaline standpoint, and is particularly excellent to be used in connection with high alkaline diets." Soy-co (Beverage) Add 1 rounding teaspoon to 1 cup of water. "Percolate or boil until desired strength. Serve plain or with Soy Cream." Also delicious iced. Soy-co (Made with soy milk). Soy milk shake. Soy banana drink. Mamenoko drink (uses 3 tablespoons Mamenoko, which is processed soy flour). Soyament cocktail ("A very refreshing beverage may be made by using 1 to 2 tablespoons Soyament sauce to 1 cup of water").

11. Healthful confections: Beanut brittle (2 cups each Soy Beanuts and brown sugar). Victoria fudge (with "3/4 c Soy Milk").

Use of soy beans in the diet: Outline for 3 meals. Suggestion for 3 days' menus, using soy products.

La Sierra Industries manufactures the following 14 foods from soy beans: Canned soy beans, plain or with tomato sauce. Soy loaf. Soy vegetable bologna. Soy milk. Soy breakfast food. Soy butter [like peanut butter]. Soy-co (beverage) [coffee substitute]. Smoein (smoked meat flavor). Soy spread. Soy flour, raw and processed. Soy beanuts (parched soy beans).

Soyament brand bean sauce. This soya bean sauce is "prepared from soya beans by splitting up the bean protein by a special process which thoroughly decomposes it into Amino Acids. A number of Amino Acids, each possessing a sweet taste, is the most remarkable feature of the Soyament Sauce and makes it different from many of the so-called soy sauces... On sale at all grocery stores or write to Soya Bean Products Co., 3522 East Third St., Los Angeles."

In the section on "Soy milk" (p. 8) is a long quotation from Dr. [Walter] Siegmeister: "So well has the Soy bean served as a source of vegetable milk, that the records tend to show that it has proven superior to cow's milk in certain important respects. The most marked of these is the almost complete absence of rickets in China, which is quite probable in view of the fact that not only is the Soy bean rich in Vitamin D, but also in Calcium and Phosphorous, the chief requirements for healthy bone development."

Note: This is the earliest document seen (Dec. 2003) that mentions a soy-based shake. It is also the earliest English-language document seen (Dec. 2003) that uses the term "Milk Shake" to refer to a non-dairy soy milk shake or that contains the term "Soy Milk Shake" (p. 41). The recipe with that title states: "Soy Milk may be mixed with any of the fruit juices and beaten with a small amount of chipped ice.

It fluffs up and is very palatable. Soy Milk and orange juice combine splendidly.” Address: Dietitian, Box 203, Ontario, California.

3795. Vander, Adrianus [pseudonym]. 1936. *Cocina vegetariana racional y enseñanza de una alimentación sana* [Rational vegetarian cookery and teaching of a healthy diet]. Santiago, Chile: Ediciones Ercilla. 135 + 2 p. 19 cm. [Spa]
 • **Summary:** Part I is about the nutritional value and benefits of a vegetarian diet for the healthy and the ill. Part 2 contains 300 vegetarian recipes. Page 89 gives a recipe for “Purée de soja” (Soy Purée) which states: To make soy purée, it is sufficient to have soy which has been soaking for a while. Boil it and pass it through the machine. Have prepared fried onion and tomato, add it to the purée and stir, increasingly fast, and if it remains thick, add some vegetable broth. Address: Ex-Director-Médico del Sanatorio de Medicina Natural, Leipzig [Germany] [Ex-Medical-Director of the Sanatorium of Natural Medicine, Leipzig].

3796. When was the Nashville Agricultural and Normal Institute (NANI) in Madison, Tennessee renamed “Madison College”—according to *The Madison Survey* (Overview). 1936. Lafayette, California. 1 p. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** This is a hard question to answer since the new name was gradually phased in between 1934 and 1937, and the old name (NANI) was finally abandoned in April 1947.

First we should note that all issues of *The Madison Survey*—which started in 1919—have now (as of May 2017) been digitized and are available online at: http://centerforadventistresearch.org/madison/wp-content/uploads/b167106_17_1919_V01.pdf

In 1933, Vol. 15, the term “Madison College” does not appear.

In 1934, Vol. 16, the term “Madison College” appears for the first time in the March 14 issue, in an article (p. 31) that also mentions Madison Foods and soyfoods, and has two photos showing Madison’s soyfoods in cans and boxes.

In 1935, Vol. 17, the term “Madison College” appears twice, on pages 94-95, and on page 143.

In 1936, Vol. 18, the term “Madison College” appears 36 times, all after April 22, and the masthead on page 1 changed with the issue of 29 April 1936, p. 69, to include the words “Madison College.”

In 1937, Vol. 19, the term “Madison College” appears 116 times, and the masthead of all issues continues to bear the term “Madison College.”

In conclusion, we believe it is fair to say that the name of the organization was changed to Madison College by April 1936. However, in the first issue of 1938, Vol. 20, the masthead is changed to read: “Published by

“Madison College

“[Nashville Agricultural Normal Institute].”

The words Nashville Agricultural Normal Institute”—in square brackets—remain on the masthead until April 20, 1947. This issue bears a new masthead, which remains. Likewise, the announcement on the last page of each issue which used to state “Published semi-monthly by Madison College, formerly Nashville Agricultural Normal Institute. Entered as second-class matter February 8, 1939, under act of August 24, 1912, at Madison College, Tennessee,” is now also gone.

Therefore we think it fair to say that the Changeover had been completed by 20 April 1947. It was very gradual and conservative, taking about 13 years and 1 month. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

3797. Irvine, Clarke. 1936? *Health! With remedies and recipes: The book of the new race*. Hollywood, California: Clarke Irvine. 78 p. Undated. No index. 18 cm. [1 ref]

• **Summary:** Filled with mostly wise and practical advice. On the title page of this 9th edition published in Hollywood we read: “Evolved from the author’s original card ‘Eleven Rules for Health,’ published in 1924. First edition was three years in writing; printed in Auckland, New Zealand, 1927. In loving dedication to all little children; also to our dear mothers and fathers—they did the best they knew. No copyright; please credit. Published by the author in an effort to help suffering humanity.” Facing the title page is a large portrait photo of “Skipper” Clarke Irvine. Above it: “Health is wealth.” Below: “This book has helped you; buy another and pass it on.”

Contents: Introduction. 1. Breathe. 2. Drink. 3. Sleep. 4. Eat (vegetarian natural foods, uncooked, in season, especially fresh fruits and juices). 5. Eliminate. 6. Exercise—work. 7. Play. 8. Think. 9. Improve. 10. Examine. 11. Love. Remedies. Recipes.

Concerning soy: “Soy bean milk is replacing animal milk” (p. 26). The last chapter, titled “Recipes,” mentions Soy milk (p. 75) recommended as a “nightcap” or drink before bedtime. Raw peanut butter (p. 76, 77). Garbanzas (p. 76). Soy or lima bread (p. 77). A liquefier helps to make delicious drinks (p. 77).

All editions are undated. An early edition is listed in the Jones Grain Mill Natural foods catalog, probably published in 1933 (p. 49). The 4th edition was the most recent on sale in Jan. 1937. The 7th edition was published in about 1945. The 9th edition is 78 pages and bears the extra subtitle “The book of the new race.” It must have been published after Jan. 1935, the month that Otto Carque died (see p. 56).

Irvine, Clarke. 1964. Letter re: Irvine family genealogy to Myra, his only sister. May 5. He wrote “one little book which I’ve sold 10,000 on my own by mail,…”

Talk with Alice Marks Irvine, Clarke Irvine’s wife. 2004. Feb. 23. Clarke wrote and began publishing this long before she met him, in 1941. It went into a 10th or 12th edition and was being sold during the 1940s and 1950s. One could probably determine when it was first published

by looking through issues of *California Health News* from the 1930s. She does not have a copy. Address: Hollywood, California.

3798. Roberts, F.G. 1936? Long life and how to attain it: The great law of nature explained. Put yourself in nature's hands. 2nd ed. Melbourne, Australia: Nature Cure Research Laboratories. 32 p. Undated. 22 cm. * Address: Australia.

3799. *Naturopath and Herald of Health* (New York City). 1937. New York. 42(1):12. Jan.

• **Summary:** "On November 11th a special meeting of the Vegetarian Society of New York was held... a glowing tribute was paid to the memory of the late Jean Roberts Albert, editor of the *Fruitarian and Vegetarian* magazine."

3800. *California Health News* (Hollywood, California). 1937. Leading U.S. health food stores. Where to buy *Health News*. 5(4):19. Feb. 19.

• **Summary:** The first half of this directory is organized alphabetically by cities and neighborhoods in Southern California—especially the greater Los Angeles area. There is one store in each area unless otherwise noted: Alhambra, Arcadia, Beverly Hills, Burbank, Compton, Glendale (2), Hollywood (6), Huntington Park (2), Inglewood, La Jolla, Long Beach (5), Los Angeles (14), Monrovia, Newhall, Ontario, Pasadena (2), Pomona, Riverside, San Bernardino, San Diego (2), San Pedro, Santa Barbara, Santa Cruz, Santa Monica (2), Van Nuys, West Los Angeles.

Then there are listings for Central California: Fresno, San Francisco (4), Oakland (2), and San Jose (2). The last 40% of the ad gives the same information for other states.

Note: This is the earliest document seen (July 2021) that contains a real directory of health food stores and individuals in the United States.

3801. Green, Jay Arthur. 1937. Is man a vegetarian animal. *Nature's Path* (New York City). Feb. p. 48, 74.

• **Summary:** Using comparative anatomy and physiology, he concludes that man was designed by nature to be a vegetarian. Examines the length of the intestines, the presence of ptyalin in the saliva of herbivores but not of carnivores, and the way of drinking water (herbivores sip it between their teeth; carnivores lap it with their tongues).

3802. *Nature's Path to Health* (Melbourne, Australia). 1937. Soy bean recipes. Jan/Feb. p. 11-12.

• **Summary:** "Soy Beans are among Nature's greatest gifts to mankind. It has constituted the chief source of protein food of hundreds of millions of Oriental people for over 4,000 years of recorded history and for centuries prior to that time. Soy Beans play a much greater role in the nutrition of these people than does wheat in our country. It was sown yearly

with great ceremony by Emperors of China, and poets in the ages before the Christian Era extolled the virtues of the Soy Bean in its services to humanity.

"Weight for weight the protein yield from Soy Bean is approximately twice that of meat, four times that of eggs and cereals, five times that of bread, and twelve times that of milk. As compared with meat, Soy Bean is free from ingredients which form uric acid. It is an energy producing food and it is also one of the cheapest foods." Describes how to soak and pressure cook soy beans, and to mash them to make Soy Bean pulp.

Gives recipes for: Baked beans. Soy beans southern style (seasoned with a dash of Marmite). Baked soy bean croquettes (with 2 tablespoons copha [vegetable shortening] and 3 cups Soy Bean pulp, cooked and ground). Soy bean loaf. Soy bean vegetable soup. Soy loaf (with eggs). Soy bean souffle. Salad.

Note: A 4-page illustrated brochure titled "Curative Exercises," published at about this time, is by Mrs. G.M. Roberts—Osteopath, Dietitian, and Curative Exercise Expert. Associate Principal of—Roberts Health Academy. Head Office: 284 Post Office Place, Melbourne.

A large chart published by Roberts in the late 1930s, titled "Food Combination Chart," shows that he was interested in combining foods in what many naturopaths considered good and bad combinations. Thus, protein foods (incl. beans and nuts) were a bad combination with cooked fruit and acid fruit, and a fair combination with starch (such as bread, rice, cereal grains, and potatoes). Address: Australia.

3803. *Revista de Agricultura* (Cuba). 1937. La pequena planta honorable [Little honorable plant]. 20(2):67-69. Feb. [1 ref. Spa]

• **Summary:** This is a translation by Prof. Miquel A. Valdiva of the *Time* magazine article of 12 Oct. 1936. Discusses the value of the soybean crop to the United States, the increasing acreage planted in soybeans, their uses as food, and in the factory, and the utilization of the beans in the Ford Motor Co. plant. Address: Chicago, Illinois, USA.

3804. *Madison Survey* (Madison, Tennessee). 1937. Home economics and nutrition courses. 19(9):33-34. March 3.

• **Summary:** In recent years, the college has provided liberally for science courses and "other departments for the education of workers in the Southland. But the Home Economics Department has been operating in temporary quarters, and with meager equipment, waiting for the hour to strike, for the opportune time to arrive for advancement." Now the time has come.

"Madison College is eminently fitted to operate a strong department in Diet and Nutrition. Its medical department, known as Madison Rural Sanitarium and Hospital, makes a specialty in its treatment of diet in disease. In its Food

Manufacturing Department it is experimenting with foods and is placing on the market a variety of health products. Its experimental work with the soy bean has brought it into prominence in that field.

“Students in Diet and Nutrition have the privilege of practical demonstration and daily work in the Sanitarium diet kitchens and in the preparation and service of foods in the College Cafeteria. They are at work with foods in the Food Manufacturing Department, in the Cannery and Soy Milk departments, and it is from the college diet classes that the City Cafeteria draws its cooks and dietitians. Dr. Frances Dittes, who heads the college Department of Home Economics, has been Sanitarium dietitian for years. She is author of the cook book, to which you have been introduced, entitled “Food for Life.” Something of her equipment for her work both as teacher and writer is voiced in the review, of “Food for Life,” written by Dr. H.A. Webb, head of the Department of Chemistry, Peabody College, for the Magazine Section of Nashville *Banner*, issue of July 26, 1936. He says: “This book makes a real contribution to the literature of cookery and nutrition from at least two standpoints: First, it is written by a Southern author who knows the Southern taste in sickness and in health; second, it is the vegetarian school, whose life work consists in administering foods as a true medicine to those who seek for health.”

“By education, by close association with the Sanitarium staff of physicians in their care of patients, and by collaboration with Dr. Philip Chen of the College Department of Chemistry who is also chemist for the Food Manufacturing Department, Miss Dittes has a wide background for training dietitians and for leadership in the Department of Home Economics. Students otherwise qualified and who are interested in food work are unhesitatingly directed into this section of the college.

“It is in recognition of the wide field of usefulness open to those who are well trained in food preparation and food service, that Madison College is now preparing to equip new headquarters for this department of instruction, and solicits your cooperation.”

Note: This is the earliest issue of *The Madison Survey* that contains the term “Madison College.” Moreover, at the top of page 1 we read:

“The Madison Survey

“Published by

“Nashville Agricultural Normal Institute

“Madison College, Tennessee.”

3805. Richter’s Health Cafeteria. 1937. KFAC–Sunday 2:15 p.m. (Ad). *Los Angeles Times*. March 28. p. 8.

• **Summary:** “Free lecture. Tuesday, 8 p.m.” Note 1. This lecture apparently can be heard live at Richter’s Cafeteria and on KFAC radio. Note 2. This is the earliest document seen (July 2021) showing that the Richters had an enterprise

at 325 West 3rd St. Note 3. A similar ad appeared in the April 11 issue of this newspaper (1937, p. C10); the lecture was also on Sunday, but at 1:15 p.m. Address: 325 West 3rd St., Los Angeles, California.

3806. *Nature’s Path* (New York City). 1937. The healing diet. March. p. 91, 105.

• **Summary:** Discusses: What to eat before and after fasting. A few diet don’ts. Avoid devitalized and over-refined foods. Do not eat meat. Avoid high protein diets.

3807. Aykroyd, W.R.; Krishnan, B.G. 1937. The effect of skimmed milk, soya bean, and other foods in supplementing typical Indian diets. *Indian J. of Medical Research* 24(4):1093-1106. April. [13 ref]

• **Summary:** This major, early nutritional study on soy in India, using both animals and children, concluded that soy was not a good source of protein; this hurt later attempts to introduce it. Aykroyd and Doughty (1964, p. 84) wrote: “The unsatisfactory response to the soybean supplement was probably due to the fact that the soybeans without suitable processing were imperfectly assimilated.”

Contents: Introduction. Experiments in boarding schools. The effect of skimmed milk on general health and state of nutrition. The effect of soya bean supplement (a group of 38 girls at a boarding school was given 1.5 oz of soya bean daily for 20 weeks. “The beans were given ‘whole,’ being cooked until soft. They were well liked by the children.” In the diet at this schools, as at most schools, 70% of total calories were derived from cereals, milled parboiled rice.). Cost of supplements (“To supply 1.0 oz of skimmed milk powder daily costs 12 annas per month, a very appreciable addition to the budgets of residential institutions run at a minimum level of expenditure... 1½ ounces of soya bean daily cost about 5-6 annas per month”). Animal experiments (“There are three ways of testing the nutritive value of a diet.” The best way is to test its effect on the health and development of human beings.” “The additions which proved of most value in enhancing growth were milk powder and eggs, foods which contain proteins of high biological value and are rich in one or more factors present in the vitamin B-2 complex”). Discussion. The popularization of skimmed milk products in India. Summary.

Introduction: “Milk is a foodstuff of particular importance in a country in which the diet is largely vegetarian and the consumption of meat small. A small percentage of the population abstains from flesh food and eggs from religious conviction; the majority, however, have no objection to eating eggs and certain kinds of meat, but are prevented from doing so by their poverty and the scarcity of such foods. The average Indian diet is thus relatively deficient in proteins of high biological value and the food factors, e.g., vitamin B-2, which are usually found in association with proteins of this nature.”

The effect of a soya bean supplement: "Group receiving soya bean supplement of 1.5 oz. per day—Average *decrease* in weight (20 weeks) 2.37 lb. Average increase in height (8 weeks) 0.46 inch. "Group not receiving soya bean supplement—Average *decrease* in weight (20 weeks) 0.62 lb. Average increase in height (8 weeks) 0.45 inch. Note: By comparison, two groups of children, receiving 1.0 oz of skim milk powder per day: Average increase in weight 3.92 lb (over 14 weeks and 10½ weeks).

Discussion: "One and a half ounces of soya bean daily supplied about 20 grammes of protein and 9 grams of fat, while one ounce of skimmed milk powder contains about 11 grammes of protein and no fat. The fact that soya bean does not appear to 'supplement' South Indian diets may perhaps be ascribed to the low biological value of its proteins. In China and Japan, considerable use is made of fermented soya bean products, but the whole bean as such appears to be rarely consumed. It is possible that these soya bean products are of higher nutritive value than the whole bean itself. But the present experiments suggest that there is little purpose in encouraging the wider use of soya bean in India and that the present widespread enthusiasm for this legume is unjustified. From the rat growth experiments it appears that it has no advantage in nutritive value over certain pulses which have long formed part of the Indian dietary."

Summary: "1. The addition of liquid skim milk, reconstituted from powder, to the diet of children in residential hostels [boarding schools] in South India was found to produce an acceleration of growth and a marked improvement in general condition. The diets consumed by the experimental groups were typical South Indian diets.

"2. The addition of an amount of soy protein supplying rather more protein did not bring about the same effect." Address: Nutrition Research Laboratories, I.R.F.A., Coonoor, S. India.

3808. Rogers, James F. 1937. The health views of Benjamin Franklin. *Nature's Path (New York City)*. May. p. 171.

• **Summary:** Franklin was a vegetarian for about a year, at age 16; this saved him money and gave him more time for reading. The first rule on his list of moral virtues was: "Temperance.—Eat not to dullness; drink not to elevation." He was also a very good swimmer. But as soon as he began to become famous and sedentary, he forgot most of his health precepts—and paid for it with gout.

3809. *Desert Sun of Palm Springs (California)*. 1937. "The hermit of Palm Canyon"—William Pester. June 13.

• **Summary:** This is a long excerpt from an article about Pester from an article by J.H. Dyer of Hoopston (or Hoopston), Illinois, published in *Hoopston Chronicle*. It is one of the best biographies seen of William Pester.

Pester was born in Saxony, Germany, in 1885. He advocated the return to a simple life, close to nature, and a

simple diet.

3810. *California Health News (Hollywood, California)*. 1937. Article about Gandhi drinks soybean milk from Harijan. June 18. *

3811. Carver, G.W. 1937. Re: Soybean milk. Letter to Joseph Horsham, M.D., 623½ Kanawha St., Charleston, West Virginia, June 26. 1 p. Typed, without signature (carbon copy).

• **Summary:** Dr. Horsham wrote Carver on June 22: "I was also much interested in the preparation [soybean milk] that you made for Mr. Mahatma Gandhi. I have a patient who is suffering from an obstruction of the pyloric end of the stomach..."

Dr. Carver replied: "I suggest that you try out the following beverages. First, soybean milk. Grind the soybeans and cover them with cold water; heat slowly, stirring constantly. When it reaches the boiling point, remove from the fire and strain through double cheese cloth. This milky liquid can be sweetened, lemon juice or any other fruit juice added, making a very palatable drink. Peanut milk can be made the same way from either parched or raw peanuts." Address: Director, Research and Experiment Station [Tuskegee, Alabama].

3812. Sadacca, Albert V. 1937. Re: Health addicts in California. Offer to distribute Fearn products in middle west. Letter to Dr. Charles E. Fearn, Fearn Soya Foods Co., 355 West Ontario St., Chicago, Illinois, July 28. 1 p. Typed, with signature on letterhead.

• **Summary:** "Dear Dr. Fearn: With much interest I digested your letter of July 27th. I do believe that it is a good move for you to go to California inasmuch as most of the health addicts are located there." The writer then offers to distribute Fearn products in Chicago and the "middle west," "either under our brand name or under our own."

Note: Battle Creek Scientific Foods is not connected in any way with Dr. John Harvey Kellogg or any other member of the Kellogg family. Across the bottom of the letterhead are printed six products made or distributed by the company, including one named "Soy-O." Address: Battle Creek Scientific Foods, Health Food Products, General Offices and Factory, Battle Creek, Michigan.

3813. *Naturopath and Herald of Health (New York City)*. 1937. Nature's own oven bakes live bread. 42(8):256. Aug.

• **Summary:** "The most unusual bakery in the world, according to the *California Health News*, is in Hollywood where Dr. and Mrs. John T. Richter daily produce genuine live foods for their raw food cafeteria, incidentally the only stoveless eating place in the world."

Their oven, a solarium in their Hollywood home, is used to make sunbaked bread, cake, and pies. The heat is from

nature's own blazing California sun. The solarium is also used to dry fruits, nuts, and vegetables. All are served at the Richters' Live Food Cafeteria.

3814. Kaunitz, Hans. 1937. Ueber die Mineralstoffausscheidung nach Belastung mit verschiedenen Salzen und ihre Beziehungen zur Hemmung der "seroesen" Entzündung durch vegetarische Kost [On mineral excretion after loading with various salts and its relation to 'serous inflammation' by a vegetarian diet]. *Biochemische Zeitschrift* 293(1-2):142-56. Sept. 24. [18 ref. Ger]

• **Summary:** A raw vegetable diet mitigated the effects of serous inflammation of the parenchyma. Address: Aus der I. medizinischen Klinik der Wiener Universitaet [Austria].

3815. *Health News (Hollywood, California)*. 1937-- . Serial/periodical. Clarke Irvine, Editor and Publisher. 4647 Russell Ave., Hollywood, California. Vol. 1, No. 1, Jan. 1933 (4 p.). Biweekly.

• **Summary:** Preceded by California Health News (Jan. 1933+). Starting with the issue of 17 Sept. 1937, the title was shortened to *Health News*. On 15 May 1942, it became *Let's Live*. Most issues (except all those for 1938) are still owned by *Let's Live* (Franklin Publications) in Los Angeles, California. Note: According to OCLC, not one library in the USA owns a single issue of this pioneering periodical. Address: Hollywood, Los Angeles, California.

3816. *Naturopath and Herald of Health (New York City)*. 1937. We observe and comment: Throws turban in ring. Native of India says he'll run for governor in Jersey. 42(9):280. Sept.

• **Summary:** "Special to the World-Telegram. Malaga, New Jersey, July 26--Dr. Dinshah Pestanji Framji Ghadiali, 63, a native of India who served as an American captain in the World War [I] and won a fight against deportation in 1934, is going to run for governor on an 'independent' ticket promising 'no graft.' He conducts a health institute here.

"When the government sought to revoke his papers on the ground that he came under a ban against Asiatics, Dr. Ghadiali conducted his own defense at a hearing at Camden and quoted from ancient writings to prove that he was descended from fire worshippers and rulers of Persia and therefore an Aryan."

Dr. Dinshah gave memorable addresses at several Naturopathic conventions.

3817. Hoff, Hebbel E.; Fulton, John F. 1937. The centenary of the first American Physiological Society founded at Boston by William A. Alcott and Sylvester Graham. *Bulletin of the Institute of History of Medicine* 5(8):687-734. Oct. [81 ref]

• **Summary:** "A hundred years ago the first physiological society in the world was founded in Boston, under the name

of 'The American Physiological Society.' Nearly fifty years were to elapse before physiology became sufficiently popular to permit the establishment of the Physiological Society in England, and before a second American Physiological Society could be organized in this country... In 1837, American physiology had only recently yielded its first fruits in the work of William Beaumont."

Contains a good treatment of America's first health reform movement, the scientific basis for which lay in Europe. American reformers, thus, often referred to European authorities. Contents: Introduction. William Andrus Alcott (president of the Society). Sylvester Graham. The American Physiological Society (founded in 1837 in Boston, Massachusetts). The activities of the Physiological Society: Presidential address, first annual meeting (1 June 1837), second annual report (1 June 1838), third annual report (1 June 1839), public lectures, the American Health Conventions (the first was on 30 May 1838), The Graham Journal (founded less than 2 months after the American Physiological Society by David Cambell, who was at the same time corresponding secretary of the Society), the library of the American Physiological Society (incl. list of books owned in 1840 and books recommended by Alcott), physiological infirmary (which served vegetarian meals), the Society's provision store (vegetarian). The fate of the Physiological Society (it gradually ceased to concern itself with physiology and became a Graham Society; it was last heard of in June 1840). The physiology of the American Physiological Society (the Society used many ideas of William Beaumont, who had studied Alexis St. Martin's stomach, but conducted only one experiment). The constitution of the society.

A photo shows William A. Alcott (p. 689). An illustration (line drawing) shows Sylvester Graham (p. 693). Address: M.D., Lab. of Physiology, Yale Univ. School of Medicine, New Haven, Connecticut.

3818. Hoff, Hebbel E.; Fulton, John F. 1937. The centenary of the first American Physiological Society founded at Boston by William A. Alcott and Sylvester Graham. *Bulletin of the Institute of the History of Medicine (Johns Hopkins University)* 5(8):687-734. Oct. *

• **Summary:** Both Wm. Alcott and Sylvester Graham were vegetarians.

3819. *Nature's Path to Health (Melbourne, Australia)*. 1937. Soy bean--The perfect protein. Sept/Oct. p. 34.

• **Summary:** "Packed into the tiny soya bean is a wealth of nutrition; minerals, tiny vitamins, easily assimilated carbohydrates, and the greatest hoard of proteins that any food in the vegetable kingdom contains. Think of it! A vegetable product equal to most, and superior to some animal products in proteins, the body building element in food, without which there would be no life. And this same Soya

Bean, so rich in all the food essentials, produces an alkaline reaction in the body. It sounds almost unbelievable!

"The chief argument against a heavy meat diet is the acid reaction in the human system. So it is with all highly protein foods commonly used as meat substitutes—fish, eggs, etc.; but here is the most nearly perfect substitute for meat known to man, and it is one of the extremely rare foods which alkalize the body."

"Milk and butter made from soya beans are richer and more satisfactory than dairy products. Its oil equals the best grade of olive oil."

"Lecithin, in which the soya bean is rich, is a nerve, brain, and sex building food. Calcium builds bone, teeth, finger nails and accessories."

"From the seed comes meal and oil. Out of the meal can be made a flour for use of infants, macaroni, breakfast foods, bread, cakes... From the dried beans come soya sauce, soups, roasted beans, vegetable, milk, liquid and powder, cheese, soy cultures that taste like buttermilk, beverages, confections and so-called candy."

"Another valuable property of the soy bean is its high alkalinity, which amounts to twenty-four times that of cow's milk. Concerning this point, Dr. Kellogg says: 'We are certainly eating too much meat and not enough alkaline products.' A meat diet is heavily charged with acids which lower the alkalinity of the blood and tissue fluids and tend to cause acidosis, thus inducing chronic fatigue, lowered resistance to disease, and setting up degenerative processes in the liver, kidneys, blood vessels and other parts of the body. More people die in this country from these causes than from any other." Address: Australia.

3820. *New York Times*. 1937. Vegetarians dine, with nuts basis of feast; Condemn meat-eaters at holiday meeting. Nov. 26. p. 16, col. 3.

• **Summary:** Describes the Vegetarian Society of New York Thanksgiving Day dinner.

3821. Moore, Robert. 1937. The Meat Trust defends womanhood. *New Masses*. Dec. 21. p. 15-16. *

• **Summary:** Arguments of the Meat Trust for resisting compulsory meat grading.

3822. *Nature's Path to Health (Melbourne, Australia)*. 1937. Nutrition: Bernard Shaw, Gandhi, Henry Ford advocate soy beans and vegetarianism. Nov/Dec. p. 13-14.

• **Summary:** "In a recent visit to this country, Bernard Shaw was observed drinking a glass of milk. When questioned why he used milk, since he opposed exploitation of cows, Shaw replied that it was not cow's milk he used, but Soybean Milk. Bernard Shaw has been a vegetarian for a long time and has lately become interested in the Soybean."

"Gandhi becomes a champion of soybean—Abandoning his famous goat-milk, Gandhi, who is also a vegetarian,

has become an advocate of soybean milk. Gandhi is a great believer in the soya bean. He thinks that soya milk will eventually replace the dairy product." A long article about the soya bean published in a recent issue of *Harijan* is quoted.

"Ford predicts vegetarian world. Dearborn, Michigan—Henry Ford, billionaire, automobile maker, has visioned a future world without ham sandwiches, juicy steaks, and chicken dinners, but with a worthy substitute produced by science from grains and vegetables... Ford is now 73 and is in excellent health."

"In a recent interview with newspaper men, Ford predicted: 'The farm animal will go, but the farm will become larger. The horse is dying out through the increased use of machines. The cow is losing its economic importance through the great advances in chemistry. The farmer of the future will grow vegetable foods instead of livestock.'"

"According to Dr. Kellogg, a vegetarian diet is not new to Mr. Ford. For many years he has been practically a vegetarian. He owes to a vegetarian diet the health and vigor necessary to conduct successfully the gigantic industries his remarkable genius has created."

"Henry Ford, looking into the future, sees that the use of meat will have to be abandoned for economic reasons." Address: Australia.

3823. *Nature's Path to Health (Melbourne, Australia)*. 1937. The aims and objects of the F.G. Roberts Natural Health Organisation. Christmas.

• **Summary:** "1. To free humanity from the destructive influence of alcoholism, meat eating, tobacco habit, of drug poisoning, vaccination, surgical mutilation, vivisection, and other abuses practised in the name of science.

"2. To aim at returning to a natural way of living by the regulation of eating, drinking, breathing, bathing, dressing, working, resting and thinking; and establishing sexual and social relations on a normal and natural basis.

"3. To teach that the primary cause of disease is the violation of Nature's Laws, and that Nature Cure is a system of man building in harmony with the constructive principles in Nature on the physical and moral plane of being.

"4. To teach that Naturopathy presents man with the master key to all higher development on the mental, moral, and spiritual plane of being, and self-control of the physical body.

"5. To teach that Naturopathy selects and combines everything that is good in Dietetic Treatment, Hydrotherapy, Massage, Osteopathy, Chiropractic, Curative Gymnastics, and in Magnetic and Mental Therapeutics.

"6. Our Field.—The Universe is our school, Humanity our Text Book, and Nature our Instructor.

"7. Our Creed.—We believe in the ultimate triumph of Truth over Error, or Harmony over Discord, of Love over Hate, of Purity over Vice, of Smiles over Tears, of Life over

Darkness, of Life over Death.”

Note: An undated leaflet (from about 1937) with almost the same title (“The aims and objects of Australia’s National Health Organization”) has ten aims and objectives; it adds: “4. By joining the Natural Health Club of your own city you are not only able to exchange with others your ideas and experiences but you enjoy benefits that repay many times the nominal membership fee.

“5. In Melbourne, club meetings are held every Tuesday evening at 8 p.m., at The Athenaeum Art Gallery Hall, 188 Collins Street, next to the Town Hall. This weekly programme consists of bright, uplifting community singing, guest speaker, social items, questions and discussion, friendly free health guidance, physical culture and dietetic demonstrations.” Address: Australia.

3824. Abbott, George Knapp. 1937. High blood pressure: And degenerative diseases of the heart, blood vessels, and kidneys. 2nd ed. Takoma Park, Washington, DC, Peekskill, New York, and South Bend, Indiana: Review and Herald Publishing Assoc. 205 p. Illust. No index. 20 cm. [50+ ref]
• Summary: This book, by a Seventh-day Adventist physician, is an expanded version of the original 1927 edition. It is “the outgrowth of 34 years of medical and surgical practice,—institutional, where high blood pressure and degenerative diseases have been an ever-present problem...” The information about the soy bean and its use in rabbit feeding experiments is the same as in the 1927 edition. Address: A.B., M.D., F.A.C.S. [Former Medical Director of the Washington Sanitarium and Hospital, Washington, DC].

3825. Baltzer, Eduard. 1937. Vegetarisches Kochbuch fuer Freunde der natuerlichen Lebensweise. 1. verbesserte Neuauflage [Vegetarian cookbook for friends of the natural way of living. First improved new edition]. Lorch-Wuerttemberg, Germany: K. Rohm. xii + 116 p. Portrait. 20 cm. [Ger]*

• Summary: The author lived 1814-1887. Address: Germany.

3826. Bircher-Benner, Max Oskar. 1937. Fragen des Lebens und der Gesundheit. Vortraege aus der Sommerakademie 1935 der Zuercher Kulturgesellschaft [Questions of life and health. Lectures from the 1935 summer academy of the Zurich Cultural Society]. Zurich, Leipzig, Vienna: Wendepunkt-Verlag. 139 p. Series: Wendepunktbaeueher, Nr. 32. [Ger]

• Summary: Nine lectures, about fresh fruits, raw vegetables, and vegetarianism. The page facing the title page lists the 32 books in this series and how many copies of each have been printed. By far the most popular is *Fruit Meals and Raw Vegetables* (230,000), followed by the *Wendepunkt Cookbook* (82,000).

Dr. Bircher-Benner lived 1867-1939. From 1935-1938 he also published a number of books on Naturopathy.

Address: M.D., Zurich, Switzerland.

3827. Bodinus, Fritz. 1937. Der Schluessel zur wirksamen Krebsbekaempfung [The key to effecting fighting of cancer]. Cologne, Germany: Lindenthal, E. Stauf. 96 p. 21 cm. [Ger]*

3828. Brupbacher-Bircher, Berta. 1937. Das Wendepunkt-Kochbuch, 580 fleischlose Rezepte und 420 Speisezetteln: Ausgewaehlt, durchgearbeitet und zusammengestellt von Berta Brupbacher-Bircher. 17. Auflage [The turning point cookbook: 580 meatless recipes and 420 menus: Selected, edited, and compiled by Berta Brupbacher-Bircher. 17th ed.]. Zurich, Switzerland: Wendepunkt-Verlag. 210 p. Preface by Dr. M. Bircher-Benner. 22 cm. [Ger]*

• Summary: An English-language edition of this vegetarian cookbook, translated by Marguerite Meisner, was published in London in 1934.

3829. Comstock, Belle Jessie (Wood) (Mrs.). 1937. Three times a day. Takoma Park, Washington, DC, South Bend, Indiana, Peekskill, New York: Review and Herald Publishing Co. 96 p. Illust. No index. 20 cm.

• Summary: The author, whose name on the title page is written Belle Wood-Comstock, was born in 1880. Address: M.D., Asst. Prof. of Medicine (Nutrition and Endocrinology), White Memorial Hospital.

3830. Fishbein, Morris. 1937. Your diet and your health. New York and London: McGraw-Hill Book Company, Inc. x + 298 p. See p. 51, 204. Index. 21 cm. Whittlesey House Health Series. See also 1967 ed.

• Summary: Chapter 7, “Protein,” contains two tables (p. 51): (1) “Food rich in proteins: Beans (dried), cheese, crab, eels, eggs, fish, fish roe, gluten products, lentils (dried), lobster, meats, nuts, peanut butter, peas (dried), poultry shrimp, soy-bean products, wheat cereals. (2) “Food poor in proteins: Beans (string), cabbage family vegetables, carrots, eggplant...”

Chapter 19, “Milk and milk products,” contains a paragraph on soy-bean milk which states (p. 204): “Soy-bean milk is a product prepared from the soy bean. It seems to be a satisfactory food in the diet of invalids. It can be furnished at a reasonable price and is gaining importance in nutrition in this country. The soy bean, dried, provides [contains] 7½ per cent water, 33 per cent protein, 21 per cent fat, and 29.6 per cent carbohydrate. It provides 1,993 calories to the pound. This has also been used in the case of children who are sensitive to cow’s milk.”

Chapter 26, “Conclusion” states (p. 253-54): “Perhaps the most significant of all information offered in this volume is that concerning the protective foods: These are the substances like milk, fruits, vegetables, eggs, cod-liver oil, liver, lamb’s kidneys and similar substances which are essential in providing the diet with necessary vitamins and

mineral salts.”

Appendix B (p. 263) lists “Protein for building muscles and all tissues: Good protein foods: milk (all forms), cheese, eggs, meat (lean, all kinds), poultry (all kinds), fish, shellfish.”

Note: Only animal proteins are included. Legumes (beans, peas, etc.) and nuts are not mentioned. Milk is listed first, implying its believed superiority.

Appendix C: “Approximate food value table. Showing percentage composition” (p. 264, 269-70). In this table the same categories appear as on page 263, however nuts are added here. Legumes are, again, not mentioned.

Chapter 5, “Debunking diets” includes a section on vegetarianism as a cult diet (p. 27-30). He notes that many religions advocate some avoidance of meat. “Such avoidance of meat, of course, is entirely without scientific foundation.” Address: Editor, J. of the American Medical Assoc., Chicago, Illinois.

3831. Groener, Greti. 1937. *Vegetarische Kueche und Rohkost, ein Kochbuch fuer fleischlose Tage* [Vegetarian cookery and raw food, a cookbook for fleshless days]. Basel, Switzerland: F. Reinhardt. 138 p. Illust. (part color). [Ger]*

3832. Harjani, G.M.K. 1937. *The effect of diet on character*. Karachi. 47 p. 19 cm. *

• **Summary:** About vegetarianism.

3833. Kale, F.S. 1937. *Soya bean: Its value in dietetics, cultivation and uses*. With 300 recipes. 2nd ed. Baroda State, India: Baroda State Press. xxx + 375 p. Illust. (35 leaves of plates, described in a separate record). Index. 22 cm. 2nd ed. 1937. [66 ref]

• **Summary:** Contents: 1. Deficiencies in the Indian diet and soya bean as a means to rectify them. 2. History of the origin and growth of soya bean: Derivation of the word soya bean, origin of soya bean, literature, primitive man and soya bean, name of the plant, home of soya bean and its expansion, varieties of soya bean, the culture of soya bean is very remote (It “has been the chief article of diet in China for over 7,000 years.”), reference of soya bean in old Chinese records, how and when soya bean became known to Europeans, soya bean in England (from 1890; J.L. North and Henry Ford), soya bean in France (from 1739), soya bean in Italy, soya bean in other countries of Europe, soya bean in United States of America, India and soya bean.

3. The use of soya bean: Importance of soya bean, dietetic importance, industrial importance, agricultural importance (Russia, Mussolini in Italy), medical importance, soya bean is alkalising in its effect (“Soya bean milk as well as its flour is used in foods for invalids and infants, like Nestle’s food”), longevity and soya bean.

4. World trade in soya bean: Imports to Europe, production of soya bean in Manchuria (58% in North

Manchuria), exports from Manchuria, oil and cake industry in Manchuria, soya bean production in Japan, in America, in Africa, in Australia, in Europe, in Java, in India, in other British possessions, estimate of world production of the soya bean, the desirability of the expansion of soya bean cultivation, imports and exports of soybeans, soya bean oil, and soya cake—1913-1927: Denmark, Holland, United States, Great Britain, Japan, France, Russia, China, Germany, Norway, Korea. Source: International Institute of Agriculture, Bureau of Statistics, 1921, p. 420-21. A table (p. 38) shows statistics for world production of soybeans “as estimated by the leading firm of London soya bean dealers” for various years from 1923 to 1929. This includes individual statistics each year for China [incl. Manchuria], Japan, and USA. The world totals in tons are: 3,095,000 (for 1923-25). 3,397,000 (for 1926). 4,325,000 (for 1927). 6,000,000 (for 1928), and 6,570,000 (for 1929; incl. China 5,250,000; Japan 550,000; USA 250,000; Java & Dutch East Indies 120,000; Other Asiatic countries & Africa 400,000).

5. Botany of the soya bean plant. 6. Classification of soya bean. 7. Cultivation of soya bean. 8. Diseases and pests of soya bean. 9. Cultivation of soya bean in India. 10. The constituents of soya bean. 11. Soya bean milk. 12. Soya bean flour. 13. Industrial uses of soya bean. 14. Enriching soil by addition of nitrogen and use of soya bean as fodder. 15. Food requirement of the human body. 16. European and American soya bean recipes. 17. Diabetic dishes, Mahatma Gandhi’s experiments at Magan Wadi and opinion of scientists on soya bean. 18. Chinese and Japanese soya bean dishes: Toffu [tofu] or soya bean curd: Digestibility, utilization, toffu khan, toffu nao [doufu nao], tze toffu (fried bean curd), chien chang toffu (thousand folds), hsiang khan, kori toffu (frozen toffu), preservation of toffu. Natto. Tokio natto and Kyoto natto etc. Hamanan natto [Hamanatto]. Yuba. Misso [miso]. Soya sauce. Soya bean confectionery. Roasted beans (Chinese).

19. Indian soya bean dishes: Hindustani dishes, Moglai dishes, Gujarati dishes, Maharashtrian dishes, Bengali dishes, Goa dishes, Tanjore dishes. Appendixes. 1. Acreage of soya bean in Manchuria during the last 5 years. 2. Total figures of export during last 5 years. 3. Bibliography. 4. Some opinions about the first edition of this book.

The preface begins (p. iii): “This little book is written in response to innumerable inquiries I have had from time to time after the inauguration of the plantation ceremony of Soya Beans at the State Agricultural Experimental Station by H.H. the Maharaja Gaekwar of Baroda in November 1933.

“A few months after this a food exhibition was held in Baroda where many Soya Bean dishes—Indian, European and Chinese—were exhibited. The leading papers and journals all over the country spoke in very glowing terms about the Soya Bean dishes that were exhibited... Later on at the request of Messrs. Mitsui Bussan Kaisha Ltd., a leading Japanese Firm in Bombay, a Soya Bean Exhibition and Restaurant were

run in the Japanese village at the H.O.H. fete. So keen was the interest and enthusiasm evinced by the cosmopolitan public of Bombay that seats in the restaurant had to be reserved in advance. The presence of H.E. the Governor and Lady Brabourne and many Indian princes was an additional evidence of the ever growing popularity of the tasty Soya Bean dishes served there.

“At the closing of the H.O.H. fete many prominent people of Bombay requested me to continue the restaurant at a convenient place in the city, and asked me to open soya-bean milk centres for the children of the poor who could not afford to buy cow’s milk. Many were ready to finance any scheme that I would propose, but unfortunately my time was not my own as I had to attend to my duties in the State and could not take advantage of their generous offer.

“The Departments of Agriculture of the various provinces of India as well as many Indian States asked me to supply them with literature regarding the cultivation and the uses of this most useful bean. The Department of Commerce and Industry of the Government of Bombay inquired if I could furnish them with information about the machinery for the extraction of Soya-bean milk. Letters of inquiries from private individuals kept pouring in daily from all parts of India. All this has induced me to undertake the preparation and the publication of this book...

“From the number of experiments carried on in the Baroda territories and outside it, I feel sure that the Indian soil is most suitable for the cultivation of soya bean...

“The leading thought of the day in India is, ‘Village uplift,’ and ‘Rural reconstruction.’

“Baroda, 7th January 1936, F.S.K. (p. iv)

“Preface to the Second Edition: I feel grateful to the public for having given such a hearty reception to the first edition of my book. It is running into a second edition within a year...

“Now, Soya Bean Bakeries and Restaurants have been started in the city of Bombay and in many other towns in India, and Soya Bean products are exhibited in almost all the exhibitions...

“I feel highly thankful to His Highness the Maharaja of Baroda who gave me an opportunity last year of visiting Russia, where I have seen that seven to ten per cent. of Soya Bean flour was being added to the wheat flour in order to enhance the nutritive value of the bread. The Soya Research Institute at Moscow is making researches into the nutritive, industrial and economical values of Soya Bean. I have seen there the actual working of the Soya-bean milk extracting plant. They make casein out of Soya-bean milk. Soya-bean cream is sold in the market.

“I visited the dietetic clinics in England, France, Germany, Austria and other European countries, where doctors prescribe Soya Bean bread for diabetic patients. In Russia, rickets and consumption are treated by Soyolk extracted out of Soya Bean...

“France is growing Soya Bean on ct de jura [sic, Cte d’Azur, on the Mediterranean?]. In England, through the efforts of Mr. J.L. North, Soya Bean is realised as a field crop for the last two years.

“Paris, 3rd April 1937. F.S.K. (p. ix).”

Note: author’s name is pronounced KAL-ay, not KAYL (rhymes with tail or sail). (Continued). Address: Food Survey Officer, Baroda State, India.

3834. Kale, F.S. 1937. Soya bean: Its value in dietetics, cultivation and uses. With 300 recipes. 2nd ed. Chapter 9. Cultivation of soya bean in India (Document part). Baroda State, India: Baroda State Press. xxx + 375 p. See p. 79-111.

• **Summary:** Contents: Experiments in Baroda State (1934 and 1935) (p. 79-83): In June 1934, 15 lbs. of good seed was acquired by F.S. Kale, the Officer in Charge, Food Survey Department, Baroda state. Describes: Preparatory tillage, sowing on July 12, germination, interculturing [hoeing], gap filling, pod formation, ripening of pods on Sept. 26, harvesting, thrashing (by beating of sticks), yield (167 lb of seed total), cost of cultivation, net profit, and net profit per acre (in rupees). Experiment of 1935, using acclimatized seed from last year’s crop. The germination rate increased to 95% from 60% in 1934. The average number of pods per plant increased to 130 from 110. The yield doubled (given in maunds and seers). Signed: Hargovind Bavabhai Patel. Food Surveyor’s remarks.

Cultivation of soya bean in Surveys Nos. 199-212, supervised by Ranchhod Raghav Baria, head man of the village, Kerianagas, Amreli District, Gujarat (p. 83-85): The seed was given to 16-17 farmers; some intercropped it with cotton and others with Bajri [pearl millet]. After sowing, the soya bean was attacked by a beetle and so about 1/3 of the seed was spoiled. After 15 days only half the crop had survived. When pod formation began, crows and parrots began to attack the plants; half the pods were spoiled or damaged by them. Then the monsoons brought less rain than usual. The growth of both cotton and bajri was clearly aided by the soya bean. Food surveyor’s remarks: “We are very hopeful that this part of Gujarat will be very well suited for soya bean crop.”

Experiments of 1934 at the Baroda Agricultural Experiment Station. Soya bean–fodder type (p. 86-90): Two varieties of soya beans were planted in 1934: Poona greenish white, and Poona yellowish white, both brought from Poona Agricultural College. Both were planted on July 3, flowered on Sept. 28 and 29 respectively, pod formation on Oct. 20 and 15 respectively, both harvested on Dec. 4. A photo shows one plant that had more than 500 pods. Description of varieties. For Poona greenish white: Preparation of the soil, cultivation, ripening, harvesting (using a sickle), how to cure it for hay, the yield (900 lb per acre of seed, or 3-4 tons per acre of green crop). “We have given the green fodder to the bullocks on the farm and it seems that they relish it much and

they put on more fat and seemed to be healthy and strong. The plants when uprooted showed the growth of big nodules on the roots. For Poona yellowish white, the seed yield was 460 lb per acre and the yield of green matter was only about 75% as much. Mammoth Yellow soya beans from Baroda contained 41.1% protein and 9.9% moisture; the same soya beans from Manchuria contained 38.5% protein and 9.7% moisture.

Dep. of Agriculture, Central Provinces and Berar (p. 90-94): Soya bean ("In this province the Agriculture Department started some preliminary work on this crop as early as 1911. A collection of different varieties from foreign countries was made and grown on the Nagpur farm. Particular attention was given to acclimatize it and to obtain suitable high-yielding early strains, possessing at the same time a satisfactory percentage of oil. The work continued for some years but the results obtained were not satisfactory as none of the varieties were acclimatized. Further work was, therefore, dropped and the growing of Soya beans did not make any headway.

"In 1927, the Botanical station started the investigation of fodder supplies, and in this connection a large number of leguminous crops including Soya beans were tested. Of the Soya beans, two varieties, viz., Java black and Wilson early, were tested and gave encouraging results as regards their yield of green fodder" per acre (the sum of two cuttings)):

In a table of 7 crops: #1. *Alysicarpus rugosus* (Shevra) 20,105 lb per acre. #2. *Glycine hispida* (Soya bean Java black) 12,505 lb per acre. #4. *Glycine hispida* (Soya bean Wilson early) 11,905 lb per acre.

In recent years, tests of seed production have also been carried out on soybean. "A large number of fresh varieties from Kalimpong (Bengal), Kuala Lumpur (Federated Malay States), Barberton ([Ohio] USA) and Leningrad [USSR], etc. were obtained and tested. Of these, three white seeded and one black seeded varieties gave promising results as regards their adaptability, earliness and yield." An analysis (see table) of their chemical composition shows "that these selected strains are about 1½ times more nutritious than *mung* and *urid* and also contain a high percentage of oil" [12.8 to 15.2% compared with 0.73 to 1.46%].

"With a view to test its taste and other cooking qualities, the selected and acclimatized varieties were distributed for trial in small quantities amongst garden servants and some officials in Craddock Town, Nagpur. Their report shows that the soya bean is quite palatable and does not suffer from bad taste on account of the high percentage of oil. When ground into flour it can be mixed with wheat flour to make *chapatis*, *puris*, *kachoris*, fritters (*bhajias*) and other Indian preparations. One drawback, however, which has been noticed, is that it does not very well mix with [absorb] water in the preparation of 'dal' like other pulses."

The biggest problem is that India conservative farmers "take a long time to add a new crop to those already grown,

unless they can be persuaded that the crop will bring them more profit per acre."

Soya beans in Berar, by Mr. R.R. Dokras, B.A., LL.B., Chandur, Berar (p. 94-98): Improves soils ("It is of great value to persons who must abstain from meat and thus is a great help to the vegetarian population of the country"). Can be grown in Berar ("all over on a profitable commercial basis"). My experience ("growing soya bean from 1931 to 1934). A helpful crop. Best cattle feed.

Imperial Department of Agriculture of India, by Mr. Wynne Sayer, Esq., B.A., Dip. Agri. (Cantab.) Offg. Imperial Agriculturist, Pusa, Bihar (p. 98-101): Summarizes the strengths and weakness of the crop. "3. In India it is generally used as green vegetables, *dal* and *sattoo*." "4. Experts in India and outside are unanimously of the opinion that extension of soya bean cultivation is of great economic value as human food, cattle food and as seed of commercial interest in various industries."

"The only drawback is that there is no ready market for its disposal in India as the people of this country are generally ignorant of its valuable properties—an ignorance which can only be removed with the advancement of scientific knowledge and propaganda among the people."

Soya Bean (*Glycine hispida* Maxim), by M. Wynne Sayer, Esq., B.A., Dip. Agri. (Cantab.) Offg. Imperial Agriculturist, Pusa, Bihar (p. 101-07): Introduction: "The soya bean... is cultivated extensively throughout India, chiefly in the north Indian tract which extends from the Punjab to the Khasia and Manipur Hills and Burma. It is also grown on the slopes of the Himalayas up to an altitude of 6,000 feet" (Duthie 1905, Watt 1890). Economic importance of the soya bean: "The bean is much appreciated as human food on account of its protein and vitamin contents of high physiological value... It occupies a position next to rice in China and Japan. Various preparations such as *Tofu* (Soy-cheese), *Miso* (Soy-paste), *Shoyu* (Soy-sauce), etc. are made from the bean and widely used in those countries... In India it is used in various forms such as *sattu*, *atta* and *dal*. Cultivation of fodder-type soya-bean. Green fodder for cattle: At Pusa farm, cattle are grazed on soya bean in November. Green manure. Standard varieties of soya bean on the Pusa Farm: A table shows 10 varieties from 1917-1923, with the yield of each. The varieties: Local (Pusa), Nepali twining, Riceland, Barchet, Black early, Black late, Yellow hilum brown (highest yield, 1127.9 lb/acre), Chocolate (#2 highest yield, 1026.5 lb/acre), Assam, Barmeli. Chemical composition (table) of Yellow, Chocolate, and Black early.

Soya bean, by R.R. Rao Bahadur D. Ananda Rao Garu, B.Sc., Director of Agriculture, Madras (p. 107-08): "Soya bean is under trial from 1932 in the Research stations Aduturai, Maruteru, Hagari, Nandyal and Samalkota. The two varieties of Soya bean from Burma viz. Behrum and Pengypi have done well and the trials are being continued.

Soya bean, by K.S. Kulkarny, Professor of Agriculture,

Agricultural College, Poona (p. 108-09). Gives basic information about cultivation of soya bean.

Soya bean, by H.H. Stewart, Esquire, I.A.S., Director of Agriculture, Punjab (p. 109-110): "The area under soya bean crop in this province is practically nil. The crop has been tried on a few experimental farms of the Agricultural Department, where it yielded 12 to 16 maunds of seed per acre."

Soya bean, by the Superintendent of Agriculture, Darjeeling, Kalimpong (p. 110-11) [as of Sept. 2010 Darjeeling and Kalimpong are neighboring towns in the Indian state of West Bengal]: "Soya bean is cultivated chiefly as a secondary crop in rotation after maize or on the Alis or ridges of the paddy fields. The approximate 5 years' average under this crop in the Darjeeling District is about 200 acres; but in the neighbouring independent States, such as Sikkim, Bhutan and Nepal the approximate average is 750 to 800 acres. The average yield for 5 years would be about 7,500 to 8,000 maunds and there are 6 or 7 varieties of soya beans grown in and around this district." The crop is grown mainly for seed and human consumption, also as a green-manuring crop in Tea Estates.

Note: This is the earliest document seen (April 2021) that uses the term "Soy-Paste" (hyphenated) to refer to miso. Address: Paris, France; Formerly: Food Survey Officer, Baroda State, India.

3839. Shepard, Odell. 1937. Pedlar's progress: The life of Bronson Alcott. Boston, Massachusetts: Little, Brown and Company. xvi + 546 p. Illust. Index. 25 cm.

• **Summary:** William Andrus Alcott, Bronson's cousin and

a year his senior, lived just down the road. The two Alcotts grew up together, were very close, and were both devoted vegetarians; William once saved Bronson's life. William is discussed on pages 6-7, 12, 30-33, 57, 60-69, 75-76, 88, 97, 150, 172, 186, 296, and 440.

Bronson's interest in vegetarianism is discussed on pages 310-11, 350-51, 439-40. Both Bronson and his cousin William Alcott became vegetarians in 1835—when they were age 36 and 37 respectively. Bronson's ideas about diet probably came from William, who in 1835 started a monthly magazine titled the *Moral Reformer* in Boston, and followed it two years later with the *Library of Health*—both strongly vegetarian. William, in turn, had been influenced by the writings and lectures of Sylvester Graham, who, in 1829, had met a group of "Bible Christians" in Philadelphia [Pennsylvania]. This group, "recent immigrants from England, held as an article of religious belief that 'eating the flesh of animals is a violation of the first dietetic law given to mankind by the Creator.' But Bronson Alcott might well have become a vegetarian without any modern suggestions." He venerated Pythagoras and "read the powerful and disgusting little treatise *On Abstinence* by the Neo-Platonist Porphyry, the same treatise that had made a vegetarian of the poet Petrarch. And besides all this he was a vegetarian, as he himself said, 'by instinct'" (p. 440).

During the last 53 years of his life, Bronson Alcott never abandoned his "Pythagorean diet." He ate no meat, poultry, or fish. He also ate no butter, cheese, or eggs. Except during brief periods when Charles was at his home, he did not ask his wife and children to observe similar restrictions—and they did not do so (p. 439).

Amos Bronson Alcott lived 1799-1888. Address: Trinity College, Hartford, Connecticut.

3840. *SoyaScan Notes*. 1937. Table of early commercial meatless burgers / veggie burgers (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** See next page. The columns: (1) No. (2) Name of Product. (3) Year Introduced, (4) Manufacturer and Location (state) (5) Source (abbreviated).

3841. Vegetarian dishes: Vegetable soups, entrées and savouries, salads, sweets and farinaceous foods. 1937. London: Ward, Lock & Co., Ltd. 64 p. 19 cm. *

• **Summary:** On the cover: "Little books that tell you how."

3842. Postcards of William Pester of Palm Canyon (near Palm Springs, California). 1937? Palm Springs, California. Undated. 17 x 10 cm.

• **Summary:** There are two postcards: One the front of the first (#86-03-56) is a photo of William Pester seated on a stool, with long hair, a sleeveless shirt, and sandals, playing a slide guitar. On the front of the second are four photos of Pester.

The following is printed on the back of both in Spanish: The laws of nature are the laws of God. If you live in disaccord with them, you will have nothing but problems; and if you live in harmony with them, you will always have health.

Eat fresh fruits and vegetables, drink pure water, bathe in the sun and running water, and your health will always remain perfect. Meat, lard / fat, starch, salt, sugar, coffee, tea, alcohol, and tobacco are bad for your health. Address: Palm Springs, California.

3843. *Madison Health Messenger* (Madison, Tennessee). 1938-1949. Serial/periodical. Madison, Tennessee: Madison Foods. Vol. 1, No. 1. Spring 1938. Frequency: Irregular.

• **Summary:** This interesting periodical began publication in the spring of 1938, with Edwin M. Bisalski as editor. Above the title is written: "Devoted to the protection of your health." Near the top left is a marble statue of a Greek discus thrower, and next to it a triangle on whose sides are written the words "Strength. Beauty. Efficiency." This is the best source of information on and photos of soyfoods at Madison from 1938 on. It also contained general information on diet and health, and advocated a vegetarian diet. Unfortunately most issues are not dated. Vol. 2, No. 3 was published after March 1940—probably shortly after. Camp Meeting '41 was published after 31 May 1941. Campmeeting '42 was probably published after 31 May 1942. Vol. 7, No. 1 was published after 15 Aug. 1945. Vol. 49-3, which was probably published in 1949, is the last issue we have seen. Most issues contained 4-6 pages, each 8½ by 11 inches, and were filled with information about and photos of canned vegetarian foods (mostly soyfoods) made and sold by Madison Foods.

Andrews University (Berrien Springs, Michigan) has the following—all of which have been digitized: v.2 (1939) 1. v.4 [1941] 2, 3, camp meeting. v.5 [1942] 2.

3844. Horvath, A.A. 1938. The nutritional value of soybeans. *American J. of Digestive Diseases* 5(3):177-83. May. Earlier edition in *Deutsche Medizinische Wochenschrift*. 19:733. 1937. Amaral 1958. [114 ref]

• **Summary:** Contents: Introduction. Composition and properties. Nutritive value. Conclusions. This article contains a good review of the literature, with 114 references. Individual foods discussed include: Fresh soybean curd, smoked soybean curd, frozen soybean curd, soybean milk, soybean milk powder ("mostly nothing but a finely ground soya flour..."), soybean flour, soy acidophilus milk, immature green soybeans, boiled mature soybeans, soya bread.

"In the Orient soybean curd (tofu) has been in daily use since times immemorial, and is called 'the meat without the bones,' as it serves as a food rich in protein."

"The low basal metabolism of the orientals was to a certain extent attributed to their being vegetarians, and the basal metabolism was accepted as a measure of efficiency

of a nation until recent studies showed the basal metabolism of the Maya Indians to be about 5 per cent above that of the white race" (Shattuck & Benedict 1931, p. 518).

"It has been shown that while alkalization of a human being by the administration of sodium salts (bicarbonate or citrate) is followed by a retention of water amounting to one Kilo [kg] and greater perspiration during exercise, the alkalization by the corresponding potassium salts results in a one Kilo loss of water by the body and a marked reduction in perspiration during exercise (H. Dennig, 1937). The deficiency of the soybean ash in sodium and the large excess of potassium places the soybean in the latter class of alkalizing agents."

"Besides bread and bakery products (such as coffee cake and doughnuts) the other main outlets for soya flour are for the manufacture of crackers (only solvent extracted soya flour gives a product that will keep indefinitely), pancake flour, cocoa-malt mixes, baby foods, chocolate puddings, ice cream powders, macaroni products, and sausages*." (Footnote: * Mostly meal flours are used today for sausages. Since sausages containing a substantial amount of soya flour can be sold at a reduced price, this may provide the packing industry of our country with a means of expanding the consumption of meat").

Note: This is the earliest English-language document seen (Oct. 2021) that uses the term "immature green soybeans" to refer to green vegetable soybeans / edamamé. Address: Chemist, Agric. Exp. Station, Newark, Delaware.

3845. *Madison Health Messenger (Madison, Tennessee)*. 1938. Soy bean milk, coffee, meat, and cereal. 1(1):1, 4, 6. Spring.

• **Summary:** "More versatile than any other food is the soy bean. Previously used as stock feed, it has gradually won its way into many wholesome foods that are distinctly different, yet palatable and reasonable.

"Madison Foods, in conjunction with Madison College, has spent years in experimental research developing soy bean foods. Dr. Philip S. Chen, Professor of Chemistry at Madison College, a native of China who received his doctorate degree in chemistry at Michigan State College, together with Dr. Frances L. Dittes, Professor of Nutrition at Madison College, whose doctorate degree is also in the field of Chemistry and Nutrition, have successfully exploited the ancient bean, discovering its versatility as is evidenced by the possibilities of its use as milk, coffee substitute, meat substitute, breakfast cereal, flour, etc."

Kreme O'Soy Milk is the only homogenized soy bean milk on the market to date; it is made of soy beans, added soy bean oil, dextrose, and organic calcium. Zoy-Koff is an alkaline coffee substitute made from soy beans and grains. Kreme O'Soy Crisps is Madison's new ready-to-eat alkaline breakfast cereal. It is made of whole soy bean flour, whole wheat, and malt.

Foods made by Madison Foods that contain soy as an ingredient, described in this first issue are: Soy-Koff (with photo of front of package in front of Mr. Hubert Henken, assistant production manager of Madison Foods, from Albia, Iowa, and a "strict vegetarian"). Thin Things (a new soy wafer). Date-Stix (a natural sweet, with Kreme O' Soy Flour). Fruit Stix (a soy flour biscuit). Breakfast Crisps / Kreme O'Soy Crisps (with photo of front of package). Soyburger Loaf. Soy Beans (in 5 oz, 14 oz and 30 oz cans, with tomato sauce or plain). Soy Cheese [Tofu]. Vigorost ("Madison's finest protein food representing the 'steak' of its variety." A photo shows Vigorost sliced and ready to serve on a platter). Kreme O'Soy Flour. Kreme O'Soy Milk.

Note: This is the earliest English-language document seen (Nov. 2014) that contains the word "Soyburger" (spelled as one word, regardless of capitalization) or the term "Soyburger Loaf."

3846. Hill, Leonard. 1938. A strict vegetarian diet. *British Medical Journal*. ii(4050):417. Aug. 20. [1 ref]

• **Summary:** Discusses the case of a 9-year-old strict vegetarian [vegan] boy (weight 59 lb, height 52 inches) with remarkable endurance, stamina, and physical and mental health. A comparison of the boy's daily diet with that of chimpanzees in a zoo is given. Address: England.

3847. Adolph, William H. 1938. Vegetarian China. *Scientific American* 159:133-35. Sept. Reprinted in *China Weekly Review* 87:124-25. Dec. 24 (1938).

• **Summary:** "For centuries China has unconsciously been working out a vast food experiment from which the Western World can learn practical lessons." A comparison of the Chinese and American diets shows that they are made up respectively of 88% / 38% cereals and legumes, 5% / 12% vegetables and fruits, 3% / 21% meat and eggs, 4% / 10% fats and oils, 0% / 9% milk, 0% / 10% sugar and starch. In China 95% of the protein comes from vegetable sources and 5% from animal sources. In America the corresponding figures are 45% and 55%. The Chinese diet is low in both calcium and protein. Address: Prof. of Biochemistry, Yenching Univ., Peiping, China.

3848. Guy, Ruth A.; Yeh, K.S. 1938. Peking diets. *Chinese Medical Journal* 54(3):201-22. Sept. [20 ref]

• **Summary:** Two distinct types of diets are eaten in Peking. Whole cereal-legume diets tend to be eaten by the poor, whereas milled cereal-meat diets are eaten by the rich. "Both, at their best, are excellent," as can be seen from the tables of composition or from "the ultimate test, the health and vigor and reproductive performance of the people who eat them." Both include fresh vegetables. The diet in Table 2 is entirely vegetarian. "A little meat is usually eaten three or four times a year at festival times, but it cannot be considered nutritionally significant. The great bulk of the

rural population of North China eat it,..."

There are, however, a number of modifications in these two basic diets which render them highly unsatisfactory. In the first, lower-class, diet, extreme poverty leads to a reduction or omission of the vegetables and even of the yellow maize and soya bean. Or, the social prestige conferred by the use of milled [polished] cereals sometimes leads to a deficiency of vitamin B-1. The second, rich diet, is often rendered unsatisfactory with respect to protein and vitamin B-1, and with respect to vitamins A and C, by reductions in the amount of pork and leafy vegetables, respectively.

Contents: Composition of common foods. Whole cereal-legume diets. Milled cereal-meat diets. Distortions in whole cereal-soybean diets. Distortions in milled cereal-meat diets.

Mixed flour, which are sold in the Peking market, vary considerably in composition. "Some shops say they mix corn eight parts with soybean two parts (called *pang tzu mien*), millet five parts with soybean five parts (called *hsiao mi mien*). Other shops say the mixtures are: corn nine parts and soybean one part, or millet six corn nine parts and soybean one part. "The latter have been chosen as more probably true because of the higher price of soybeans. In any case no measurements are made, both cereal grain and soybeans being put into the mill and ground together."

Soyfoods whose composition is given in the tables are: Soybean meal [flour]. Ground mixture of 9 parts maize and 1 part soybean meal (*pang tzu mien*). Ground mixture of 6 parts millet and 4 parts soybean meal (*hsiao mi mien*). Soybean curd (tou fu). Soybean sauce.

Tables: (1) Composition of common foods. (2) Whole cereal-soybean diet (excellent; vegetarian). (3) Milled cereal-meat diet (excellent). (4) Whole cereal-soybean diet (deficient; vitamin C absent, vitamin A low, calcium low). (5) Milled cereal-meat diet (deficient; vitamin A absent, vitamin C absent, calcium very low). (6) Whole cereal-soybean diet (deficient in calories, protein, calcium, phosphorus, vitamin C). (7) Milled cereal-meat diet (deficient; vitamin B-1 low, protein of poor quality, calories low). (8) Milled cereal-meat diet (deficient; calcium low, vitamin A very low, vitamin C low). (9) Milled cereal-meat diet (deficient; vitamin B-1 low). Address: 1. M.D., Dep. of Public Health, Peiping Union, Medical College, China.

3849. Hastings, Milo. 1938. A college that feeds itself. *Physical Culture*. Nov.

• **Summary:** About Madison College near Nashville, Tennessee. About 500 people now live on the campus, of which 300-350 are students. About 90% of the vegetables (including soybeans) consumed by all these people are grown by student labor. The college has its own mills for whole-grain products and its own bakery, "which also serves whole-wheat and soy-bean bread to over one hundred retail stores in the nearby city of Nashville."

"The address Madison College, Tennessee, has become

familiar to patrons of health food stores as the place of origin of a distinctive line of products made from soy-beans."

The reason for that grew out of an interesting combination of circumstances. First, the college was founded upon the idea that the "students should by their own labor produce as nearly as possible all their own food supply for a completely nourishing diet. Second: Madison College and Sanitarium are strictly vegetarian, and, as at the Battle Creek Sanitarium, the vegetarianism has been worked out as part of the school dietary as well as the sanitarium dietary. To students and patients alike the importance of proper food for the body is emphasized.

"Third: one phase of the work at Madison College has to do with the training of medical missionaries. That has not only brought to the teaching staff people who have had experience in the Orient, but has also brought students from those countries. (At present there are six Japanese and ten Chinese students.)

"Out of these circumstances came the development of a new line of foods which we may call the Americanization of the second most important food material in the Eastern world and the greatest of all vegetarian sources of protein—the soy-bean."

To Madison College, with its interest in perfecting a vegetarian diet, came Perry A. Webber, as professor of chemistry. He had taken his doctor's degree at Michigan State College after a fourteen years' residence in Japan. It was a happy combination of circumstances, and the American chemist, with his Japanese experience, set to work to Americanize the soy-bean as a source of human food.

"It also happened that one of Dr. Webber's Chinese friends, Philip S. Chen, was a fellow student of chemistry at Michigan State College, having come to America to study science. When he had completed his chemical work for a doctor's degree at Michigan, he entered Madison College as a special student to take up practice teaching in the Department of Chemistry under Dr. Webber. The two men, each with a knowledge of soy-beans as used in the Orient, now worked together as chemists in the American college.

"After two years of this cooperation Dr. Webber was called back to Japan to become the head of a school there. Dr. Chen then became the professor of Chemistry at Madison College and continued to work on soy-bean products."

Though Dr. Chen says soy-bean milk has been used in China for 3,000 years, the type made at Madison "is new because it is different and superior to the older forms of the Oriental product." It has been made "more acceptable to American tastes and to the more exacting demands of present-day nutritional science. This also applies to the substitutes for meat and the cheese products made from soy-beans, and to the use of soy-bean flour as an ingredient in bakery and cereal products. Today all this is of special interest to vegetarians and to those who follow the latest forms of health foods. These advances in food science will

later become of far greater significance.”

Dr. Frances L. Dittes, head of the Department of Nutrition, specializes in soybeans, “both in nutritional research and menu applications. Thus, the new food products developed from soy-beans, along of course with other vegetarian dishes, were worked out and tried out in the students’ dining hall and also in the Madison Sanitarium. Patients cured at the sanitarium naturally wished to continue the use of the food products after returning home. This gave the nucleus of a health food manufacturing business.

“This, in turn, provided another campus industry for the work-your-way college, giving occupation for the students in which they could take an especial interest and pride, since the business grew out of the research work of the college and was closely tied in with both their agricultural and their health work.”

Note: This article is reprinted near the back of the 1989 edition of *Madison—God’s Beautiful Farm*.

3850. *Health and Life* (London). 1938. Recommended health food stores and restaurants [in Great Britain]. Nov. p. 362-64.

• **Summary:** Health food stores and restaurants are listed in 70 cities in the UK; they are listed alphabetically by city. The name and address of each is given. There are 25 listings in London alone, 2 in Belfast [Ireland], 3 in Bristol, 2 in Croyden, 4 in Glasgow [Scotland], 2 in Ipswich, 2 in Worthing, etc. The symbol “(R)” is used to designate restaurant. Most stores have the words “Health Food” in their name, but some have “Health Centre,” “Health Store,” “Pure Food,” “Food Reform Depot,” etc.

In Manchester, the Vegetarian Society store is at 39 Wilmslow Road, Rusholme. Also—“Coventry: ‘Pitman’ Health Food Stores, 6 City Arcades.”

3851. *Post-Dispatch* (St. Louis, Missouri). 1938. A college supported by its own industry: Madison College, Tennessee—the country’s most unusual educational institution. Dec. 7. Rotogravure section. p. 10-11. *

• **Summary:** This 2-page center spread is about Madison College in Tennessee, to which it brought much favorable publicity. Photos by Jack Schutz show: (1) Five women students with many Madison Foods packages. (2) Soy milk being made in the food plant. “Soy milk may be substituted for cow’s milk by those who require a strictly vegetarian diet” [i.e., a vegan diet].

3852. Adolph, William. H. 1938. Vegetarianism is no fad in China. *China Weekly Review* (Shanghai) 87(4):124-25. Dec. 24.

• **Summary:** “Rural China has furnished what is probably the best large-scale, longterm experiment with a vegetarian diet which the modern world has witnessed. Vegetarian fads in our Occident have come and gone and, while enthusiasts still stage occasional revivals, it is probable that as an accepted

nutritional regimen. pure vegetarianism is on the wane. By vegetarianism is meant eating food which is solely of vegetable origin. The ration therefore does not include milk, milk products. meat, eggs. or other food-materials derived from animal sources.

The experiment which the rural populace of China has been carrying on is in many respects unconscious, but one source of its importance lies in the fact that it is unconscious. Another reason for its importance is the fact that it has involved not merely a few selected white rats, or even a few human subjects sheltered in the artificial comforts of the nutrition laboratory, but several millions of people as experimental subjects. Furthermore, it has extended not over a few weeks but over a score or more of centuries. It is estimated that not more than 10 percent of China’s population live in the cities, and the food habits of the remaining rural 90 percent have remained largely unaltered, even as the agricultural economy has remained largely unchanged, over a period of thousands of years. The solution to its foremost problem which China has reached—that is, the problem of maintaining a large population on an agricultural basis—is therefore worthy of study. In fact, such a state of nutritional equilibrium as has been attained with human subjects in this area of eastern Asia is unique in the realm of nutritional investigation. Moreover, with the economic factors of the modern world rapidly changing, the opportunity which this experiment offers for study will quite probably never exist again.

“Figure 1 is based on a number of preliminary surveys of what Chinese natives eat. It provides a comparison of the average dietary of China with that of America. Also, it indicates the almost complete extent to which the Chinese diet is vegetarian. In the Chinese diet, meat, fish, and eggs furnish only a very small amount of the total food supply. Even then many observers feel the figure indicated for meat—3 percent—is too high and does not properly represent the facts, while the milk and milk products consumed in China are so small in amount that they do not appear in the diagram at all.” Address: Prof. of Biochemistry, Yenching Univ., Peiping, China.

3853. *Madison Health Messenger* (Madison, Tennessee). 1938. Madison College stresses health. 1(3):1, 3, 5. Fall-winter. [5 ref]

• **Summary:** Cites and discusses the many nationwide publications in which the story of Madison College has been told. For example: “*Reader’s Digest* published an article in the May issue entitled ‘Self-Supporting College.’”

“Early in June the *New York Times* sent a photographer to Madison College to take pictures for their rotogravure section. These pictures appeared in the June 19 issue of the *New York Times*.

“Mahatma Gandhi reprinted the entire *Reader’s Digest* article in his official organ the *Harijan*, in India.”

“From the very beginning nearly 35 years ago, the importance of correct eating and health habits was emphasized... A vegetarian bill-of-fare was adopted and is adhered to strictly today.”

3854. Alcott, Amos Bronson; Shepard, Odell. 1938. *The journals of Bronson Alcott*. Boston, Massachusetts: Little, Brown and Company. xxx + 559 p. Illust. Index. 25 cm. [346 footnotes]

• **Summary:** Contains a very interesting introduction and 2-page chronology (p. xxix-xxx) of the life of Amos Bronson Alcott. “So considered, they [Alcott’s journals] show his long struggle toward the integration of his experience and thought and mind. They record his patient search for the One that lies forever hidden in the Many.” He believed that every life “is an epitome of ultimate truth.”

He was deeply influenced by Coleridge’s book *Aids to Reflection*. Bronson Alcott began this journal under the influence of his cousin, William Andrus Alcott—a remarkable man of power and fine achievement, who himself kept a journal. Bronson early abandoned his early orthodox religious faith. Today he is “an almost forgotten man.” Yet his wife and daughters adored him, and he was greatly admired and respected by those who knew him best. Ralph

Waldo Emerson, his closest friend for more than four decades, called him ‘the most extraordinary man and the highest genius of the time.’ Henry David Thoreau said that Alcott was “the sanest man” he had ever known. A self-made man, Bronson Alcott was always first and foremost a teacher.

A search of this book on Google Books shows that none of the words “vegetarian” “vegetarians” or “vegetarianism” appear in the text of the book. Nor do the words “vegetable” (as in “vegetable diet”) or “vegetables” or “cow(s)” or “dairy” or “egg(s).”

However, a footnote (p. 115) states: “From the year 1835 to the end of his life Alcott was strictly vegetarian in diet. He did not, however, as is often said, forbid the use of meat to his family.”

The word “milk” appears on pages xx, 258, and 527—but none is of interest or importance. The word “cheese” on p. 180. “May 11. Replenish our stores from the grocery in the village. Maple sugar, flour, cheese, &c. We endeavour to use no articles of foreign or slave production in our diet. In apparel we cannot yet dispense with cotton and leather, the first a product of slaves and the last an invasion of the rights of animals.”

The word “diet” appears twice: Page 146: “as we are not favorably situated here for any experiments of diet—having little or no fruit on the place,...” The other is on page 180 (see above). The word “vegetarian” appears 4 times: Page 115. “The butcher again took advantage of my simplicity...” Footnote: “From the year 1835 to the end of his life Alcott was strictly vegetarian [vegan] in diet. He did not, however, as is often said, forbid the use of meat to his family.

Page 164. 1864 July 20 (London). “The conversation ran on various topics: Pythagorean diet,...” See also p. 492, 529.

Alcott traveled to England in 1842 (May to Oct.) and visited Alcott House, which is mentioned on pages 139, 144,

163, 167-68.

A portrait illustration (frontispiece, with his signature) shows Amos Bronson Alcott, lived 1799-1888. Odell Shepard (editor) lived 1884-1964. Portrait photos show: (1) William Andrus Alcott (facing p. 32). (2) Bronson Alcott, ca. 1875. (3) Bronson Alcott, in top hat and cloak, age 80 (ca. 1879).

The following are mentioned often in the index: Agassiz, Prof. Louis. Alcott, Louisa May. Alcott, Mrs. Bronson. Alcott House, England (p. 139, 144, 163, 167-68). Alcott, William Andrus (cousin). Bhagavad Gita. Boehme, Jacob. Brown, Captain John. Carlyle, Thomas. Channing, Ellery. Coleridge, Samuel Taylor. Dial, The. Emerson, Ralph Waldo. Fruitlands. Garrison, William Lloyd. 3867. Thomson, Jessie Robertson; Thomson, J. Eva. 1938. Food for health: The Kingston recipes based upon food reform. London: Thorson Publishers. 71 p. 19 cm. Rev. ed. 1942. Reprinted in 1947. *

• **Summary:** This is a vegetarian book which advocates two meals a day, the first being at around 11 o'clock, including only fruit and wholemeal bread. Children could have fruit and cereal, such as Force or Shredded Wheat. The second meal to be eaten around 6 o'clock basically included anything in the book, the likes of Westmoreland soup, wholemeal nut loaf, walnut mince and pineapple cream. The use of Nutter, Yeastrel and Marmite was fine, but pepper is not to be used and the use of peas, beans and lentils should be sparing, as they were classed as 'clogging.' Soya flour was also used if available.

3868. White, Ellen G. 1938. Counsels on diet and foods: A compilation from the writing of Ellen G. White by the Board of E.G. White Trustees. Takoma Park, DC: Review and Herald Publishing Assoc. 511 p. Index. 17 cm.

• **Summary:** The Foreword states: "Early in 1926 there was issued by the Loma Linda college press, a paper-bound volume entitled 'Testimony studies on diet and foods.' This was compiled by Dr. H.M. Walton from the writings of Mrs. E.G. White for use in the College of Medical Evangelists... The continued call for the book... justifies the issuance of this new and enlarged edition."

Quotations from previous writings by a founder of the Seventh-day Adventist faith are arranged by the following subjects: Reasons for reform. Diet and spirituality: The relation of diet to morals. Health reform and the third angel's message. The proper dietary: The original diet, the simple diet, the adequate diet, diet in various countries. Physiology of digestion. Improper eating a cause of disease. Overeating. Control of appetite. Regularity in eating: Number of meals, eating between meals. Fasting. Extremes in diet. Diet during pregnancy. Diet in childhood. Healthful cookery. Health foods and hygienic restaurants. Sanitarium dietary. Diet a rational remedy. Fruits, cereals, and vegetables: Fruits, grains, bread, vegetables. Desserts: Sugar, milk and sugar, pie, cake, pastry, puddings. Condiments, etc.: Spices and condiments, soda and baking powder, salt, pickles and vinegar. Fats: Butter, lard and grease, milk and cream, olives and olive oil. Proteins: Nuts and nut foods, eggs, cheese.

Flesh meats (proteins continued): Progressive dietetic reform in Seventh-day Adventist institutions. Beverages: Water drinking, tea and coffee, cereal substitutes for tea and coffee, cider, fruit juice. Teaching health principles: Instruction to be given on health topics, how to present the principles of health reform, cooking schools. Appendix: Personal experience of Ellen G. White as a health reformer, a statement by James White relating to the teaching of health reform. General subject index.

Concerning the consumption of milk, dairy products, and eggs, Ellen G. White stated (year of quotation, number in book): "Fruits, grains, and vegetables, prepared in a simple way, free from spice and grease of all kinds, make, with milk or cream, the most healthful diet. They impart nourishment to the body, and give a power of endurance and a vigor of intellect that are not produced by a stimulating diet" (1890, #601).

"Some, in abstaining from milk, eggs, and butter, have failed to supply the system with proper nourishment, and as a consequence have become weak and unable to work. Thus health reform is brought into disrepute... The time will come when we may have to discard some of the articles of diet we now use, such as milk and cream and eggs; but it is not necessary to bring upon ourselves perplexity by premature and extreme restrictions. Wait until the circumstances demand it, and the Lord prepares the way for it" (1909, #602).

"Milk, eggs, and butter should not be classed with flesh meat. In some cases the use of eggs is beneficial. The time has not come to say that the use of milk and eggs should be wholly discarded. These are poor families whose diet consists largely of bread and milk...

"Let the diet reform be progressive. Let the people be taught how to prepare food without the use of milk or butter. Tell them that the time will soon come when there will be no safety in using eggs, milk, cream, or butter, because of wickedness among men" (1902, #603).

"If milk is to be used, it should be thoroughly sterilized; with this precaution, there is less danger of contracting disease from it" (1905, #607).

"We place no butter on our table. Our vegetables are generally cooked with milk or cream and made very palatable... We think a moderate amount of milk from a healthy cow is not objectionable" (1870, #611).

Concerning the idea that the strictest diet is not the best, especially for the poor, see White's letter of 1901, #612. She feels that all people should stop consuming flesh meats, tea and coffee, but that the subject of giving up milk, eggs, cream, and butter needs to be handled carefully, especially by poor families. "No extremes in health reform are to be advocated. The question of using milk and butter and eggs will work out its own problem."

"The health food business is in need of means and of the active cooperation of our people, that it may accomplish the

work it ought to do. Its purpose is to supply the people with food which will take the place of flesh meat, and also milk and butter, which, on account of the diseases of cattle, are becoming more and more objectionable" (1900, #583).

"Large quantities of milk and sugar eaten together are injurious. They impart impurities to the system. Animals from which milk is obtained are not always healthy. They may be diseased... Could we know that animals were in perfect health, I would recommend that people eat flesh meats sooner than large quantities of milk and sugar" (1870, #533). Large amounts of milk and sugar "clog the system, irritate the digestive organs, and affect the brain" (1870, #534). "Especially harmful are the custards and puddings in which milk, eggs, and sugar are the chief ingredients" (1905, #536).

Concerning cheese (made by fermentation): "Cheese is still more objectionable [than butter]; it is wholly unfit for food" (1905, #633).

Concerning vegetarian restaurants: "In our cities interested workers will take hold of various lines of missionary effort. Hygienic restaurants will be established. But with what carefulness should this work be done! Those working in these restaurants should be constantly experimenting, that they may learn how to prepare palatable, healthful foods. Every hygienic restaurant should be a school for the workers connected with it. In the cities this line of work may be done on a much larger scale than in smaller places. But in every place where there is a church and a church school, instruction should be given in regard the preparation of simple health foods for the use of those who wish to live in accordance with the principles of health reform. And in all our missionary fields a similar work can be done (#412, 1900).

"Our Restaurants Stand for Principle: You will need to guard constantly against the introduction of this and that, which, though seemingly harmless, would lead to the sacrifice of principles that should ever be maintained in our restaurant work... We must not expect that those who all their life have indulged appetite will understand how to prepare food that will be at once wholesome, simple and appetizing. This is the science that every sanitarium and health restaurant is to teach...

If the patronage of our restaurants lessens because we refuse to depart from right principles, then let it lessen. We must keep the way of the Lord, through evil report as well as good report.

"I present these things to you in my letters to help you to cleave to the right and to discard that which we cannot bring into our sanitariums and restaurants without sacrificing principle (#413, 1902).

"Avoid Complex Combinations: In all the restaurants in our cities, there is danger that the combination of many foods in the dishes served shall be carried too far. The stomach suffers when so many kinds of food are placed in it at one

meal. Simplicity is a part of health reform. There is danger that our work shall cease to merit the name which it has borne.

If we would work for the restoration of health, it is necessary to restrain the appetite, to eat slowly, and only a limited variety at one time. This instruction needs to be repeated frequently. It is not in harmony with the principles of health reform to have so many different dishes at one meal. We must never forget that it is the religious part of the work, the work of providing food for the soul, that is more essential than anything else.

“The Mission of Hygienic Restaurants: It was presented to me that we should not rest satisfied because we have a vegetarian restaurant in Brooklyn, but that others should be established in other sections of the city. The people living in one part of Greater New York do not know what is going on in other parts of that great city. Men and women who eat at the restaurants established in different places will become conscious of an improvement in health. Their confidence once gained, they will be more ready to accept God’s special message of truth.

“Wherever medical missionary work is carried on in our large cities, cooking schools should be held; and wherever a strong educational missionary work is in progress, a hygienic restaurant of some sort should be established, which shall give a practical illustration of the proper selection and the healthful preparation of foods” (#416, 1902).

Other entries: Why use secondhand food? “The diet of the animals is vegetables and grains. Must the vegetables be animalized, must they be incorporated into the system of animals, before we get them? Must we obtain our vegetable diet by eating the flesh of dead creatures?” (1896, #703). Note: A revised edition was published in 1946.

Note: This is the earliest English-language document seen (July 2021) that contains the term “health restaurant” (or “health restaurants”).

3869. Roberts, F.G. 1938? Health via nature: Healing with food. 1st ed. Melbourne, Australia: Roberts’ Health Service. 32 p. Undated. Illust. Port. 21 cm. *

• **Summary:** This book is about naturopathy and diet therapy. The only advertisement is for Vita-elm as a product. Mentions the Roberts guest house at 428 St. Kilda Road and their head office at 430 St. Kilda Rd., Melbourne. The previous publications listed within it are: “Long Life and How to Obtain It” and “The Natural Health Cook Book.” Address: Australia.

3871. Clark, David Lee. 1939. The date and source of

Shelley’s “A Vindication of Natural Diet.” *Studies in Philology* 36(1):70-76. Jan. [17 footnotes]

• **Summary:** This essay contends convincingly that “A Vindication of Natural Diet” was Shelley’s earliest work on vegetarianism, and that he had been influenced by Joseph Ritson’s “An Essay on Abstinence from Animal Food” (1802) far more than by John Frank Newton’s *The Return to Nature, or a Defence of the Vegetable Regimen* (1811), and far more than had been previously recognized. Clark believes that Shelley adopted a strictly vegetable diet several months before he met Newton.

“Shelley made four attempts to put the case for vegetarianism, three of which, *A Vindication of Natural Diet*, the Note in *Queen Mab* [written after *A Vindication...*], a brief section of *A refutation of Deism*, were published in his lifetime. He also left an unpublished essay on the subject, which appeared in 1929, *The Complete Works of Percy Bysshe Shelley*, in ten volumes (edited by Roger Ingpen and Walter E. Peck), V, 335-44, as *On the Vegetable System of Diet*. If [his friend Thomas Jefferson] Hogg may be trusted, Shelley began a mild form of vegetable diet while at Oxford [after reading Plutarch]. But it was not until March 1, 1812, that Shelley and Harriet [Westbrook] adopted a strictly vegetarian diet.” Note: On March 14, 1812, Harriet Westbrook, with whom Shelley had eloped the previous year, wrote from Dublin to Elizabeth Hitchiner: “You do not know that we have foresworn meat and adopted the Pythagorean system. About a fortnight has elapsed since the change, and we do not find ourselves any the worse for it.”

Shortly after leaving Oxford, Shelley translated Plutarch’s two essays on Flesh-Eating, the two central arguments of which became the backbone of *A Vindication*. Address: Univ. of Texas.

3872. *Health News (Hollywood, California)*. 1939. Vegetaria success causes new policy. 7(4):9. Feb. 24.

• **Summary:** “Mounting business has made possible a policy change at Los Angeles’ Downtown Vegetaria, 343 S. Hill, announces Proprietor Ben Lieberman.

“‘Increased volume enables us to serve large portions at extremely low prices now,’ he states.”

A small ad on the same page shows that this is “A self-service Health dining room. All prices 5¢ to 7¢. Breakfast, lunch, dinner.”

3873. Broun, Heywood. 1939. The passing of Shaw’s mentor [Henry S. Salt]. *New Republic* 98:375-76. May 3.

• **Summary:** A witty tribute to and biography of Henry S. Salt, the father of modern vegetarianism, who died recently in Brighton, England, at age 87. Rather obscure himself, this assistant master and classicist at Eton (1875-84) converted Mohandas Gandhi to vegetarianism (Gandhi “later became one of the most active proselyters of the age”) and strongly influenced George Bernard Shaw. Salt’s vegetarianism

was based on moral rather than medical or health grounds. He was honorary secretary of the Humanitarian League from 1891 to 1920. "The late Henry Salt, father of modern vegetarianism, seems to have been a wild man." In his book 'The Creed of Kinship,' Salt wrote of his basic conviction that "a kindly consideration for the rights of all our fellow beings, human or subhuman, is the basis of any religion, any morality worthy of the name."

3874. *Lancet*. 1939. The wider aspects of nutrition: A national conference. i(6036):1057-59. May 6.

• **Summary:** "Prof. Cathcart considered that a diet made up of brown bread, butter, cheese, milk, vegetables and fruit would provide all the essential items. The slogan 'Drink more Milk,' however, ought to read 'Drink more Safe Milk.'" He also discussed combining protein foods in the correct proportions to increase their biological value.

Sir Robert McCarrison also discussed his views on nutrition.

3875. Live Food Cafeteria. 1939. New book—*Nature the Healer*, by John T. Richter (Ad). *Los Angeles Times*. May 14. p. I22.

• **Summary:** "Since 1917." Address: 325 West 3rd St., Los Angeles, California. Phone: MAdison 4061.

3876. Fritsche, H. 1939. Heilung durch Ordnung [Healing through orderliness]. *Neue Rundschau* 50(2):95-102. July. [Ger]*

3877. *Good Health (Battle Creek, Michigan)*. 1939. Diet for duodenal ulcer. 74(7):216. July. [1 ref]

• **Summary:** "The dietary faults which produced the ulcer must be carefully avoided. Most important of all is thorough daily cleansing of the colon and suppression of putrefaction in the intestinal tract... The cure of the infection which gives rise to the ulcer is greatly facilitated by the use of cultures of the *Lactobacillus acidophilus*. Soy acidophilus culture is especially to be recommended because the protective organism grows with much greater vigor in milk prepared from the soybean than in ordinary dairy milk. For this reason it is a wise plan for a person who has once suffered from ulcer to discard meats of all kinds and make free use of the soybean."

3878. *Good Health (Battle Creek, Michigan)*. 1939. Green soybeans growing in favor. 74(7):219. July. [1 ref]

• **Summary:** Originally the soybean varieties planted in the United States "were best adapted for forage and for industrial uses, but the Federal authorities have been distributing seed for raising edible types. Tests of eighteen kinds of soybeans have been made at the University of Illinois Agricultural Experiment Station." Through the cooperation of many people, a large body of practical information has been

gathered.

"To cook the green beans, add a cup of boiling water and three-quarters of a teaspoon of salt. Cover and cook for 10 minutes after boiling starts. Drain or season with butter or as desired.

"*The Vegetarian Messenger and Health Review* reports that the consumption of the soybean is increasing in Great Britain; the importation amounted to 98,916 tons in 1937... Germany, being highly scientific, has recognized very clearly the qualities of this crop and imported 591,376 tons in 1937... Russia has a soy institute in which the beans are converted into milk and milk products."

3879. *Health News (Hollywood, California)*. 1939. Vegetarian beach cafe. Aug. 11. p. 9.

• **Summary:** Venice, California. Now you can have good meals when out for a day at the beach—at the Dairy and Vegetarian Cafeteria, at 1301 Ocean Front.

3881. Weaver, Diana; Weaver, Purcell. 1939. Natural foods: their preparation and use. With dietetic tables by Edmond Székely. Victoria, B.C., Canada: The Cosmovitalist Press. 253 p. Index. 22 cm.

• **Summary:** This is a lacto-ovo vegetarian cookbook.

Page 162: In Chapter 8, "Vegetable oils and fats, is an entry for "Soya bean oil: Soya bean oil, or bean oil as it is sometimes called, is an oil extracted from the seeds of the plant *Soja (Glycine) hispida*, cultivated widely in China, Manchuria and Japan. In recent years it has acquired considerable importance in the United States, where it is grown for fodder and for the seed. It is also grown in Mexico. In the East the oil has long been used as a food. The seeds yield about 12 per cent of oil by expression. It is now obtainable as a salad oil in the United States and England. Its value depends on the processes used to extract it."

Pages 187-88: Soya Bean [188]

"The soya bean or soy-bean is an annual plant, *Soja hispida*, widely cultivated in China, Manchuria, Korea and Japan. It has recently been introduced into the United States, Mexico, the Argentine and various European countries. The stem grows erect and is covered with silky hairs, bearing two or three pods from the axil of the leaves. The soya bean is the most nutritive of all the beans. It has the most complete protein of any legume; it has a small amount of starch. Its mineral content is high. Despite its richness in phosphorus, it is an alkaline food, being also well supplied with potassium, calcium, magnesium and sodium. It contains vitamins A and B. It contains fair amounts of fat of good quality. The soya

bean requires less [sic, more] cooking than other dried beans. It is used in Europe and America as a diabetic food, owing to its low starch content. A bread is made from its flour. Other products are soy cheese [tofu], soy milk and soy sauce. The oil is industrially important."

Then come 7 recipes, each calling for whole soya beans: Boiled soya beans. Baked soya beans, Soya bean croquettes. Soya bean loaf. Soya bean milk. Soya bean soup. Soya bean coffee.

The table of foods (pages 226-34), compiled by Dr. Szekely, is reprinted from *Medicine To-morrow*.

"Note: The numerals in square brackets placed after certain of the foods mentioned in Part I refer to the number of that food in the Table of Foods given in Part III."

An insert gives a list of about 20 errata. Address: Leatherhead, England.

3882. Amon-Wilkins, Juan. 1939. The soy-bean and sound nutrition. *Nature's Path* (New York City). Sept. p. 349.

• **Summary:** Soybeans offer a nutritious alternative to meat. "After an animal is murdered, a considerable amount of uric acid is held up in its tissues." The soy bean is also "rich in the nerve-building element Lecithin..." Address: Dr.

3883. Borth, Christy L. 1939. Pioneers of plenty: The story of chemurgy. Indianapolis, Indiana and New York: Bobbs-Merrill. 303 p. Portraits. 22 cm.

• **Summary:** Soy is discussed at length (usually in connection with Henry Ford Sr. and Edsel A. Ruddiman) on p. 22, 40, 42, 202-06, 208-11. Henry Ford is also discussed on p. 21-22, 30, 69, 76-77, 118, 144, 246.

"A few years ago, Henry Ford was ridiculed when he said the time would come when most of an automobile would be grown on the farm. Since then, Ford chemists have perfected processes whereby soy beans are converted into plastic substitutes for automobile parts formerly made of metal. Ford Chemist Russell Hudson McCarroll estimated that the use of plastics for interior window moldings alone would increase that company's use of farm-grown metal-substitutes twenty-five million pounds annually." (p. 21-22).

"Dearborn was selected as the [first chemurgic] conference site because it was the home of Henry Ford, an industrialist who had demonstrated his understanding of the meaning of the farm problem, and because there were, in near-by Edison Institute, working exhibits of the processing equipment which Ford researchers had developed to convert soy beans into some thirty industrial products." (p. 40).

At the chemurgic conference Russell Hudson McCarroll, a Ford chemist, described how soy beans are converted into raw materials for industrial use. "From the bean oil Ford chemists make a lacquer which is claimed to be superior to the pyroxylin paints usually used in coating metals. From the residue of meal after extraction of oil, Ford chemists make plastic parts for automobiles, these farm-derived parts being

substitutes either for metals formerly mined or for rubber formerly imported." (p. 42).

Chapter 10, titled "Ford links farm and factory" (p. 200-12) is about Henry Ford, chemurgy, and soy beans. "Do you recall the gibes that greeted his [Henry Ford's] prediction that man would one day find a substitute for the cow, as revolutionary as the automobile which displaced the horse? It was very funny when the cartoonists and columnists leaped upon it gleefully—but it may not be so fantastic as it once seemed.

"Let's investigate it.

"Come now to the foot of Elm Street, in Dearborn, to a rejuvenated farmhouse whose homelike exterior masks a modern laboratory."

"Follow the truant chemurgists inside and meet Ford's boyhood companion, Dr. Edsel A. Ruddiman, the food-chemist whose services were enlisted by his old deskmate. In the back room, once a farm kitchen, is an electric refrigerator, filled with food made from soy beans. Milk, butter and cheese—the latter, fresh, dried, smoked and fermented—are there, soy-bean products all. In the pantry are breakfast foods, macaroni, salad oils, crackers, diabetic foods, infant foods, flour, bouillon cubes, soups, confections, coffee substitutes, sauces, gravies and beef substitutes—all produced from the soy" (p. 202-03).

A wonder bean indeed!" "During the World War [I], when Germany faced famine, German chemists extracted from the soy the glutamic acid which became the basis of the 'beef-tea' that kept patients alive in hospitals." The soy bean "gets into Heinz and Lea & Perrins' sauces and into oleomargarine" (p. 203).

A full-page photo (between pages 206 and 207) shows Irénée du Pont and Henry Ford talking and enjoying a meal together at a table.

• **Summary:** There are many ads in the back for vegetarian food products made by DE-VAU-GE (Hamburg 26), including Granovita (corn), Granola (wheat), Granutose (oats), and Gerstola (barley).

Note: This is the earliest document seen (May 2015) concerning DE-VAU-GE. Address: Kuechenmeister.

3891. Kloss, Jethro. 1939. Back to Eden: A book on herbal remedies for disease, and other natural methods of healing. 1st ed. [Washington, DC]: Published by the author. vii + 667 + [25] p. Illust. Portrait. Index. 21 cm.

• **Summary:** This treasury of herbal lore and vegan cookbook (it uses no dairy products or eggs, replacing them with soy products) is one of the most creative and original sources of early soyfoods recipes. Contents: Foreword. 1. Personal experiences. 2. Soil. 3. History of medicine. 4. Fresh air and exercise. 5. Fasting. 6. Effects of devitaminized, adulterated foods on the body. 7. Fruit diet. 8. Meat-eating. 9. Foods. 10. Diet. 11. Aluminum utensils. 12. Cooking under steam pressure. 13. Disease of animals. 14. History of water cure. 15. Water. 16. Water-effects and treatment. 17. Water-its effect in sickness. 18. Baths. 19. Compresses and fomentations. 20. Massage. 21. High enemas. 22. Nursing. 23. Fruits. 24. The eliminating diet. 25. Minerals found in the body. 26. Herbs. 27. Medical trees. 28. Tonics. 29. Herbs (Their description and use in treating disease). 30. Definitions of medicinal properties of herbs. 31. Herbs indicated for specific diseases. 32. Directions for use of non-poisonous herbs. 33. Treatment of disease. 34. Food preparations of various kinds. 35. Oranges. 36. Potatoes; gathering and preserving of herbs.

The Foreword states: "This book contains tried, safe, and inexpensive remedies for the prevention of disease and sickness, remedies which are the result of my own practical

experience of nearly forty years." "No matter how many germs get into the body, if the blood stream is clean and the blood corpuscles are in a healthy condition, you will be safe. Everyone comes in contact with many kinds of germs, but these organisms will not harm you or cause you sickness and death unless they have a place in which to propagate themselves." Sickness and illness are "caused by violating the laws of nature and health. "If then they would resort to simple means and follow the basic laws of health that they have been neglecting—proper diet, use of pure water, fresh air, sunshine, rest, and nature's remedies, herbs, etc., nature would restore the body to its original health." "God has provided a remedy for every disease that might afflict us." "The fundamental principle of true healing consists of a return to natural habits of living."

Virtually all of the information on soybeans and soyfoods is in chapter 34, "Food Preparations of Various Kinds" (p. 582-633). First come two sections of text: "The nutritional value of the soybean" (p. 582-84; "Taken from an address delivered by Dr. J.A. LeClerc, before the annual meeting of the American Soybean Association. Sept. 15, 1936"). "Uses of the soybean for industrial purposes" (p. 585).

Then comes an introduction soy-related recipes (p. 585-87): "The knowledge of the value of the soybean here in America is one of the greatest things that was ever launched in the food line in the history of the nation, and at this time of great poverty [the Great Depression], want, and disease, it is the most important thing that could be given the people." "Soybean milk can be made from soybeans at home for less than two cents a quart." Soybean milk "is not only a good food, but a real medicine." It is easily digested and highly alkaline. "I have experimented with soybeans for fifteen years [since about 1924] and have produced a fine, acceptable soybean milk as well as many other soybean products." "I use soybeans in more than fifty dishes."

Then come recipes (p. 587+): Soybean cheese (fermented soybean milk, peanut butter, and tomato puree, p. 587). Soybean cream cheese (from fermented soybean milk, p. 588). Nut cheese no. 1 (fermented soybean milk, peanut butter, and soybean butter {see p. 613}, p. 588). Nut cheese no. 2 (raw peanut butter, ground oatmeal flour, water and salt [no soy], p. 589). Nut milk (made with raw peanut butter and cow's milk [no soy], p. 590). Canned soybeans (p. 592). Soybeans and rice (with sprouted soybeans). Baked beans with tomato sauce (incl. soybeans, p. 593; "Soybeans are, no doubt, the best of all beans, but the flavor is not as pleasant. This can be overcome by using various seasonings, such as tomato sauce, a little onion, and celery). Vegetable protein (wheat gluten seasoned with soy sauce, p. 597). Nut loaf (seasoned with soy sauce). Kloss' granola (with soybean milk and soybean mash [okara], p. 599). Baked rice (natural brown rice baked in soybean milk, p. 600). Soybean coffee plus 2 recipes for Cereal coffee based on rye or wheat bran

[real coffee with caffeine is not included]. Soybean broth (with soybean milk and oatmeal, p. 604-05). Oatmeal broth (with soybean milk). Soybean buttermilk (fermented, p. 605-06; "Buttermilk is an excellent article of diet for everyday use, but is especially beneficial in malnutrition, tuberculosis, toxic conditions, and intestinal infections. Soybean buttermilk has the advantage of producing an alkaline effect and is more nourishing than ordinary buttermilk. It is rich in minerals and very palatable. More nourishing than yogurt buttermilk used under various names."). Soybean cheese (fermented soybean milk, raw peanut butter, and tomato puree). Soybean cottage cheese (fermented soybean milk, p. 608). Soybeans and rice (with sprouted soybeans, p. 608-09). To sprout soybeans, lentils, or grains (p. 609). Soy patties (with soybean pulp [probably ground soybeans, not okara] and soy sauce). Gluten patties (seasoned with soy sauce, p. 610). Soybean loaf. Soybean cottage cheese loaf. Soybean milk. Soybean milk no. 2 (made from "soy meal, p. 611). How to curd [soybean] milk (p. 612). Soybean jelly (soybean milk jelled with agar-agar flakes and sweetened with malt sugar). Soybean butter (made with 1 cup water, 2 tablespoons soybean flour, and 2 cups soybean oil, p. 613). Soybean cream (blend rich soybean milk and soybean oil). Soybean ice cream (made with 2 quarts rich soybean milk, 2 lbs. malt sugar, ½ pint soybean butter or soybean mayonnaise, and 1 tbsp. agar-agar). The yolk of an egg (made with soybean flour, p. 614). Pancakes (with cornmeal and soybean mash [okara]). Tomato soup (with soybean flour, soybean flour, soymilk, and/or soy sauce, Savita, or Vegex, p. 618). Cream of tomato soup (with soybean milk, p. 620). Cream of celery soup. Cream of lentil soup. Vegetable oyster soup (with rich soy milk, p. 622). Eggplant soup (with soybean milk). Cream of spinach soup. Potato soup. Soybean gravy. French toast (made with soybean bread soaked in soybean milk, p. 624). Soy oil mayonnaise (with soy oil and finely ground soy flour, p. 628). Vanilla sauce (with soybean cream, p. 632). Vegetable gelatin (with agar-agar and soybean cream dressing, p. 632). Orange jelly (with soybean cream). Strawberry jelly (with soybean cream). Rice pudding (cooked in soy cream, p. 633). Cream tapioca (with soy cream and soybean milk). Soybean bread no. 1 (with whole wheat flour, soybean mash or soybean flour, p. 648). Soybean bread no. 2. Soybean buns or cinnamon rolls (with soybean meal, p. 650). Cornmeal gems (with soybean milk, p. 651). Oatmeal or soybean gems (with soybean meal). Soybean gems (with soybean mash [okara] out of which soybean milk has been washed, p. 652). Pones (with soybean milk). Beaten biscuit (with soybean milk). Unleavened pie crust (with soybean flour or mash, p. 655). Raised pie crust (p. 656). Soybean pumpkin pie (p. 656). Fig marmalade pie (with soybean milk, p. 657). Mashed potatoes (with rich soybean milk, p. 666).

This book does not call for the use of dairy milk or eggs. Concerning cow's milk, Kloss states (p. 75): "Cow's

milk is not suited for human consumption. Half the invalids in the world suffer from dyspepsia, and milk should not be taken. Milk causes constipation, biliousness, coated tongue, headache, and these are the symptoms of intestinal auto-intoxication. Soybean milk and nut milks are excellent substitutes, and have practically the same analysis, and the danger of disease is removed." A recipe on page 614 uses a mixture of soybean flour and soya bean oil as a substitute for the yolk of an egg.

This book contains the same detailed information on the possible dangers of aluminum cooking utensils found in the 1935 edition.

Ads and advertorials on unnumbered pages in the rear include: (1) Dominion Herbal College, Vancouver, BC, Canada. (2) "Horta" Pure Vegetable Extract. "Of strong aromatic meat flavor, though made from leguminous materials only." F. Behrend, Inc., New York, NY. Established 1886.

(3) Old-fashioned Quaker mill. A photo shows Quaker City Mill No. 4 "This mill is excellent to grind various grains, to make peanut butter and other nut butters, also to make Whole Wheat Flour.

"These mills have stood the test of many years and are sold practically all over the world. The Government Experiment Station uses them extensively and they have been tested and approved by the Good Housekeeping Institute.

"I have used them in my food factory, and have used the domestic types as well, for over thirty years, and have found them very satisfactory. One of these mills should be in every home.

"Send all orders direct to the A.W. Straub Co., 3737-39-41 Filbert Street, Philadelphia, Pennsylvania." An illustration shows the "Enterprise No. 69, Hand Mill. Can be used for general grinding. It is very excellent to grind wet soybeans, to use in making soybean milk. Order direct from Enterprise Manufacturing Company of Philadelphia., Third and Dauphin Streets, Philadelphia, Pa.

"The Enterprise firm also manufactures many kinds of food choppers."

(4) Nature's Original Food Co., Falmouth, Virginia. "Nuts, grains, fruits and vegetables are Nature's original foods for men. Animal flesh has been substituted. If you want health, don't use it. "Try our [canned vegetarian] meats—see the difference." Meatose. Vegetose. To-Meta.

Note 1. This latter company was almost certainly founded and is owned by Jethro Kloss.

According to Doris Gardiner (Oct. 1990), the original book (of which she and her aunt each have copies) has a green hard cover. The first printing was probably done by a Mr. Brunck, who worked for the College Print Shop in Takoma Park, Maryland. She thinks Jethro self-published the book. He paid for the printing and sold the books himself. Jethro and his wife moved to Coalmont, Tennessee. There

they lived with the Hiatt family, and Mr. Hyatt, owner of Longview Press (renamed The Message Press by 1964) became the book's first legitimate publisher. His wife died in 1944. Jethro died in 1946 at age 83. The page numbers from the 1939 edition are unchanged in later editions.

Note 2. This is the earliest English-language document seen (Oct. 2013) that uses the term "Soybean cream cheese" to refer to soy cream cheese.

Note 3. This is the earliest English-language document seen (June 2013) that uses the term "soybean mash" to refer to okara.

Note 4. This is the earliest English-language document seen (Oct. 2013) that contains the term "Soybean cottage cheese" or that has a recipe for it. Address: Washington, DC.

3892. Lindlahr, Victor H. 1939. *The natural way to health*. New York, NY: Natural Nutrition Society. *

3893. Matagrín, Am. 1939. *Le soja et les industries du soja: Produits alimentaires, huile de soja, lécithine végétale, caséine végétale* [The soybean and soy industries: Food products, soy oil, vegetable lecithin, and vegetable casein]. Paris: Gauthier-Villars. x + 390 p. Illust. 18 cm. [300 ref. Fre]

• **Summary:** Contents: Introduction. 1. The agricultural, industrial, and commercial history of soya: Asiatic origins and propagation in Europe, soya in America (its cultivation and industries), soya in Europe, Asia, Africa, and Oceania (1936) (1. Admission of soya in the agriculture and industry of European nations (p. 35): Soya in France, soy industry and commerce in central and northern Europe {England, Germany, Holland, Denmark, Sweden, Poland, Austria and Hungary, Switzerland}, penetration of soya into southern Europe {Iberian peninsula, Italy, Balkan countries of Dalmatia, Istria, Yugoslavia, Greece (p. 47), Bulgaria, Romania, Ukraine}, the grandeur and decadence of soya in Russia. 2. Soya in modern Asia (p. 51): China and Manchuria, Japan, Korea, Formosa, French Indochina {Tonkin, Cambodia, Cochin China}, the British and Dutch Indies {Siam, Assam, Bengal, Burma, Ceylon, India, Straits Settlements [later Singapore] / Malacca}, western Asia {Turkestan, Persia (p. 57)}. 3. Soya in Africa and Australia (p. 57-58): South Africa, Rhodesia, Nigeria, Gold Coast [later Ghana], Cote d'Ivoire, Dahomey, Togo, Algeria, Tunisia, Morocco, Egypt, Australia {Queensland, New South Wales, Victoria}, Tasmania, New Zealand, not yet in British New Guinea [later Papua New Guinea], Philippines, Java).

2. The botany and agronomy of soya: The plant, its names, its botanical characteristics, its varieties (original and created by selection), the cultivation of soya.

3. The general chemistry of soya: Chemical composition of the plant, structure and chemical composition of the beans.

4. Using soya in soyfoods and soyfood products: Whole

soybeans (whole green, dry, sprouted, roasted and salted {soja á l'état vert, fève de soja sèche, fève grillée, fève salée de soja, fèves de soja salées, p. 166-67}, soynut butter {un mélange rappelant les beurres végétaux}, soy coffee, soy confections {confiture de soja}, soy chocolate, soy sprouts {fèves de soja germées, germes de fèves de soja}), soymilk and tofu (le lait et le fromage de soja; soymilk cream, concentrated soymilk, soymilk powder / powdered soymilk, fermented soymilk {lait fermenté, yoghurt, kéfir, koumys, p. 189}, fermented tofu {fromages de soja}), okara (pulpe résiduaire de la préparation du lait de soja), fermented soy products (solid, paste, and liquid condiments; natto, miso, and shoyu [soy sauce]; kiu-tsee and lactic ferments), soy flour and bread.

5. The soy oil industry and products derived from it: Extraction and refining of soy oil, properties and use of soy oil.

6. The vegetable lecithin industry: Extraction of vegetable lecithin, properties and use of vegetable lecithin.

7. The vegetable casein industries and plastic materials based on soya: Soybean cakes and flours from which the oil has been removed, use of such cakes and flours, in the crude state, as a raw material for plastics, manufacture and use of vegetable protein, soybean cellulose for artificial silk, soya furfural and furfuraldehyde (phenolic resins). Conclusion: How to launch soya industries in France. Important terms. A bibliography appears at the end of each chapter.

Note 1. This is the earliest French-language document seen that uses the terms *Fève grillée*, *fève salée de soja*, or *fèves de soja salées*, "roasted soy beans" to refer to soynuts.

Note 2. This is the earliest French-language document seen (April 2005) that mentions soynut butter, which it calls *un mélange rappelant les beurres végétaux*.

Summary: Matagrín wrote two previous books: *Manuel du Savonnier* (Paris, no date given) and *L'Industrie des Produits chimiques et ses Travailleurs* (Paris, 1925).

Francis G. Beltzer, a practical chemist, became a major force in visualizing new industrial uses for the soybean in the West. By contrast, Li and Grandvoinnet (1912) paid little attention to soy oil in their book, devoting only 3 pages out of 150 to the subject, and only ½ page to industrial uses, while largely ignoring lecithin. These two books had a great influence on soy in France and they nicely complement each other (p. vi).

The Soybean, by Piper & Morse (1923), was published in both New York and London. Horvath was a Russo-American chemist. Italians who made important contributions to the soybean were professors Bottari, Mattei, Panatelli, and Tito Poggi (p. vii).

Leon Rouest, French the agronomist, wrote an important book titled *Le soja français et ses applications agricoles et industrielles* (Chateauroux 1936). Since 1920 he has devoted himself to the culture of soybeans and to the selection of acclimatized varieties. He was director of the Laboratory of

Soja in the north Caucasus from 1930 to 1935, and in 1921 he had already published a book, *Le soja et son lait végétal*. His new (1936) book benefitted from the collaboration of Henry de Guerpel, an agricultural engineer and mayor of Percy-en-Auge, who was also an indefatigable prophet of soybeans in France, until his untimely death in Jan. 1937.

Anyone in the world can order (from the U.S. Government Printing Office in Washington, DC) the many U.S. publications about soybeans from the USDA or state agricultural experiment stations. These substantial works are based on careful research and enriched with numerous tables and photos—a fine example of the key role that governments can play in introducing and popularizing soya. Recently J.A. LeClerc (of USDA's Bureau of Chemistry and Soils) said the soybean has become a naturalized American (p. viii).

More than a century ago Lord Byron wrote *Beppo*, the first Western poem on soy. It was an account of a carnival at Venice, Italy, in 1818. He advised the tourists to bring “Ketchup, Soy [sauce], Chili-vinegar.”

Maurice Druel was one of the young engineers who worked with competence to launch a soy industry in France (p. x).

For an early chronology of soybeans and soyfoods in France (1856+, see pages 8-12). 1857-58: Lechaume planted soybeans at Vitry-sur-Seine and got encouraging results. A report by the National Society for Acclimatization declared: “The acclimatization of the soybean is complete.”

1859—Setback for the first tests by Vilmorin with Chinese beans that were too late, but success by Dr. Turrel in le Var.

1862-69—Success of Mme. Delisse, in Gironde.

Then the Franco-Prussian war arrested these tests, so the center of interest moved to central Europe. The world exposition of Vienna in 1873 and Friedrich Haberlandt. In his book one finds the first analyses of the seed by Steuf, of the cake by Woelker / Voelker, the results of texts by Berndt on oil extraction (p. 9).

Podolie is in Ukraine.

Of Haberlandt's 148 trials in 1877, only 12 failed for lack of warmth. Much new agronomic information was accumulated.

Back in France: 1874-80—Society of Horticulture d'Etampes (Seine-et-Oise) grew a yellow Chinese variety which succeeded. This “soja d'Etampes” was studied intensively from the chemical and agronomic points of view by Lechartier and various authors. A doctor from the region prepared, for his personal use, a vegetable cheese (tofu). But the grain did not find buyers so its cultivation did not spread. There now remain only 2 or 3 innovators to cultivate soybeans and on 5-10 acres maximum. But Chinese soybeans mature in the region of Paris, as in 1879 at Marseille.

1880—While the tests of Boursier in l'Oise have succeeded, and while Olivier-Lecq, ardent propagator of soybeans, distributed 100 kg to farmers in the north, the

national Society for Acclimatization organized cultural trials all over France. Results were obtained in each of the regions, some with record yields. The general objection of the farmers was the difficulty found in using the soybean as a legume (it was too hard) or to find buyers.

As Paillieux said so well: “Our point of departure has not been happy one; the soybean has been presented simply as a new legume” (p. 10).

The German successes in soybean cultivation were studied by Wein in 1881 (p. 10).

In the 1880s there was a big growth of interest in vegetarian diets in Europe. Compare this with the USA (p. 11).

Li Yu-ying: After his 1905 speech, in 1908 he created a laboratory for studies, which soon founded the factory La Caseo-Sojaïne at Valleees, near Colombes (Seine), administered by a French-Chinese company. This establishment made soyfoods using imported soybeans, especially tofu (p. 12).

Dr. Bloch of France recommended thin sheets of pressed tofu as a reserve ration for troops.

Lever Bros. soap works used lots of soy oil in Britain (p. 12).

The British did some cultural trials in India, Burma, Siam (Thailand), and South Africa.

Japan, in effect, annexed Korea in 1895.

It was only after 1905 that soybean tests took place, first in Guyana, where the soybean matured easily.

Soybeans were grown for forage more in the South of USA than in the north. Continued. Address: France.

3894. McCollum, Elmer Verner; Orent-Keiles, E.; Day, H.G. 1939. Newer knowledge of nutrition. 5th ed. New York, NY: The Macmillan Co. ix + 701 p. Illust. Index. 22 cm. First ed. was 1918 (199 p.); 4th ed was 1929 (594 p.).

• **Summary:** The author, a famous American nutritionist, discovered vitamins A and D. Chapter 1, titled “The Science of Nutrition, Early History and Development of Concepts,” gives a good chronology of major events and a detailed discussion about changing ways of thinking about protein and protein requirements for humans and animals. Chapter 5, titled “General Nature of Proteins and Amino Acids and Their Significance in Nutrition,” goes into more detail with discussions of protein metabolism, etc.

The section titled “Legumes—peas and beans” (p. 559), including soy beans, makes several statements about the protein quality and supplementary value of soy proteins that are no longer considered correct: “Their proteins are without exception of low biological value, but it is not known which amino acids are lacking in these proteins. Pea and bean proteins, including soy bean, do not make good the amino acid deficiencies of the cereal proteins and accordingly are not good supplemental foods in this or other respects... Like other plant products their mineral content varies greatly with

the nature of the soil on which they are grown.

"Most, if not all the beans, contain large amounts of certain hemicelluloses which undergo fermentation easily in the alimentary tract with gas formation, principally methane and carbon dioxide... Soy beans are used principally by rice-eating peoples, and serve as the principal protein supply when simple dietaries are taken. There seems to be little supplementary value in soy bean proteins for those of rice; accordingly, their value is independent of any improvement in utilization of rice proteins."

On pages 552-64 the authors discuss "The Vegetarian Diet," noting that "The elephant, ox, horse, and buffalo have great strength and endurance, and thrive on vegetable food alone. These and other vegetable feeding animals are leaf eaters. The leaves of all plants appear to be complete from the nutritive standpoint." Edible leaves also have supplemental values not possessed by other foods of vegetable origin. "It may be questioned whether any diet composed of cereal grains, tubers, roots, fruits, nuts, beans, peas, and sufficient leafy foods, is not more bulky than the human digestive tract can handle to best advantage. Nevertheless, modern nutritional researches make clear why subsistence by man on a strictly vegetarian diet is possible, but it cannot be asserted on any evidence known to the authors that such a diet will prove as satisfactory as does a mixed one.

"The lacto-vegetarian diet, or combination of vegetable foods and milk, is, however, easy to plan so as to be highly nutritious, and to promote optimal health. The same can be said of the ovo-vegetarian diet provided the egg moiety is sufficient... Unless a liberal quota of leaf food is included the ovo-vegetarian diet will be poor in calcium. A safe assumption would seem to be that 25 to 35 per cent of the total calories should come from the ingredient of animal origin" (p. 563). Address: 1. Prof. of Biochemistry; 2-3. Assoc. of Biochemistry. All: School of Hygiene and Public Health, The Johns Hopkins Univ., Baltimore, Maryland.

3896. Saxon, Edgar J. 1939. Sensible food for all in Britain and the temperate zones. London: The C.W. Daniel Co. Ltd. 135 p. Illust. No index. 23 cm. [5 ref]

• **Summary:** About vegetarianism. On p. 110 a table titled "Simple guide to fat (or oil) in foods" notes that soya flour contains 20% oil. On p. 112 a table titled "Simple guide to starch in foods" notes that soya flour contains 20% starch.

On p. 113 a table titled "Guide to alkaline minerals in foods" states that the alkaline minerals are potassium, sodium, calcium, magnesium, and iron. The foods richest in these minerals, in milligrams per 100 gm of dry substance

are: Irish moss (carrageen) 6,479, dried figs 1,482, almonds 1,370, Brazil nuts 1,350, spinach 1,271, sultanas 997, dates 886, potatoes 607, and chicken 485.

Foods lowest in these minerals are white sugar or tapioca 0, honey 2, polished rice 2, cornflour 3, Barbados sugar 8, wholemeal bread 9, oatmeal 9, eggs 21, cow's milk 34. Address: Editor of *Health and Life*, London.

• **Summary:** The most food-conscious work of Ming dynasty fiction is the famous novel of sexuality and sensuality, the *Chin-p'ing mei* (first printed in 1621-27) known in Egerton's translation as *The Golden Lotus*. For details see Hsiao-Hsiao-Sheng (Xiaoxiaosheng) (1621-27).

3901. Webber, P.A. 1940. Are soy beans a good food? *Madison Health Messenger (Madison, Tennessee)* 2(3A):1, 4. Undated.

• **Summary:** "There is probably no legume which has been more universally used, and justly so, than the soy bean. In the earliest Oriental records that go back to the beginning of the Historical Period its use is frequently mentioned. Today after thousands of years, in hundreds of recipes, it is

finding its way into the daily dietary of upwards of half the population of the world.

"Only within the last few years has this interesting food received any emphasis in the Occident, but now it is at last receiving at least a part of the attention that it so much deserves. Methods for its use are daily being perfected and presented to the people of Europe and America. United States government agencies and State Experiment stations are spending much time and money to bring this unique legume and its use to the attention of the people of the United States.

"Considerable research with experimental animals and humans has shown beyond a doubt its high value as a food. Its impressive chemical analysis 20% fat, 40% protein, 5% minerals, with its cheapness makes it one of the most economical and best sources of fat, protein, and mineral elements that can be found in any food. Combined daily in its various forms in the diet with plentiful supplies of vegetables, fruits, and grains, it contributes to a well-balanced ration providing adequate protein, fat, carbohydrate, minerals, and vitamins.

"Despite the above mentioned facts proven by many thousands of years of human experience and corroborated by the experimental evidence of scores of research laboratories, recently most adverse but unfortunate criticism has been published concerning the soy bean, attempting to lead the public to an unfavorable attitude toward this most useful food by cleverly covering the facts.

"Even the warmest enthusiast for this food would hardly think of it in terms of supplying all the needs of the human dietary. An All-Wise Providence has provided a great variety of foods, and nature indicates a generous and liberal intake from this bountiful supply. Far be it from those who know the nutritional values of the soy bean best, and are most vocal in its praise to divert attention in any way from any other worth-while food.

"We have been cited [sic] to the use of soy beans when fed to test animals, producing high blood pressure, indigestible wastes in the intestines, and albumin and casts appearing in the urine, showing kidney degeneration. It is unfortunate that along with this statement covering soy beans, it was not told the reader that excessive protein of whatever source in the diet, animal or vegetable in origin, will produce like results. This has been proven conclusively by Dr. Newburg of the University of Michigan Hospital and others. It would seem fair, to say the least, that the quantity of protein fed to these test animals would have been reported also, that the reader may know that the experiment was conducted to show what an 'excess' of soy bean protein would produce. In apprehension of this unscientific attempt calculated to mislead the reader, your attention is called to the word 'excess' which is the key to the whole situation. When too many soy beans are used over a long period of time these conditions may develop. This is true also of any of

the rich protein foods such as meat, eggs, cheese, etc. Here as in other things the rule of moderation can be well taken. As yet soy beans are not being used extensively enough in the United States to be considered a cause for the alarming growth of high blood pressure, kidney degeneration, etc., so it is hardly fair to lay the blame of these prevalent conditions in Americans today on the humble soy bean. It is plain to even the unscientific mind that these conditions are being brought on, at least to some extent, by the excessive use of other high protein foods and habits that bring about general health degeneration.

"A clear statement of truth on this subject instead of a half truth would have given the reader the proper impression; but half truths seem to be in vogue today; nevertheless such methods of deception are most reprehensible, and call forth a statement of the whole truth as recognized scientists report it. In spite of what has been written to the contrary, briefly the following facts still remain:

"1. The soy bean has been used successfully for thousands of years in the dietary of hundreds of millions of human beings.

"2. It is a high protein food and along with other high protein foods should be eaten in moderation.

"3. It is one of the cheapest and best sources of complete protein, fat, minerals, and vitamin B-1.

"4. Its proper use is being encouraged by Federal and State Agencies.

"5. Scientific, experimental and clinical evidence show that when eaten in proper combination with other foods it provides a most valuable adjunct to the diet.

"6. Scientifically trained dietitians and other medical experts are increasing their use of the soy bean in diet therapy. For twenty-five years the famous Battle Creek Sanitarium has been serving soy bean foods in many ways.

"7. Many manufacturers of soy bean foods are properly representing their foods to the public and are producing fine tasty foods.

"8. The public need not 'beware' of soy beans any more than they would beware of an excess of any other kind of protein food provided for our nourishment.

"In conclusion I wish to assure the reader that my acquaintance with soy beans covers many years, sixteen of which were spent in the Orient where I had a first-hand opportunity to observe soy beans as they were used in the diets of hundreds of millions of people and certainly if soy beans were such a dangerous food there would be little of the population of China and Japan left, considering that they have been using soy beans for thousands of years; however, instead today they are growing in numbers faster than Americans. I have been using soy bean foods for nearly twenty-five years and none of the symptoms which were so misleadingly presented to the reader are present in my body.

"The reader's attention is cited [called] to thousands of pages of scientific literature found in any large public or

other library, in corroboration of the above stated facts.”

A portrait photo shows Dr. P.A. Webber.

Note: two different issues of this periodical are shown to be Volume 2, No. 3. the earlier of these two, which we have decided to call 2(3A) was published after Sept. 1939 (see last page) and before 15 Feb. 1940. We have estimated the publication date to be Jan. 1940. the second of these two, which we have decided to call 2(3B) was published after March 1940 (see 1st page). We have estimated the publication date to be April. 1940–3 months later. Address: PhD, Head of Chemistry Dep., Madison College.

3902. *Madison Survey (Madison, Tennessee)*. 1940. Making a vegetarian dietary attractive. 22(5):18-19. March 13.

• **Summary:** Thirteen years ago, H.L. Nunn, President of Ninn-Bush Shoe Company, Milwaukee, was converted to vegetarianism after hearing a radio sermon which stated that “Bernard Shaw is a vegetarian because he dislikes the idea of killing creatures to live. Mr. Nunn to disliked the idea of taking life and decided to discard the use of flesh food. After a trial of six weeks, he began to search the libraries for literature on the subject,” and found that he was in good company.

“Visiting guests often told Mr. Nunn that if anywhere they could get such food as he served in his own home, they, too, would become vegetarians.” So he started a fine restaurant at the center of Milwaukee, Wisconsin, named Ambrosia House. “Miss Carolina Sweeney, Mr. Nunn’s niece, a college graduate and a student of dietetics at Battle Creek College, is the manager... who is responsible for the famous foods of Ambrosia House.”

“The food is of a home-cooked style, served in generous portions by young women of refinement.”

3903. Foote, Ruth; Eppright, Ercel S. 1940. A dietary study of boys and girls on lacto-ovo-vegetarian diet. *J. of the American Dietetic Association* 16(3):222-29. March. [6 ref]

• **Summary:** Data is presented on the food intake of approximately 50 boys and girls, 14 to 19 years of age, for a period of 30 days. The caloric intakes of the children were found to be slightly under recommended allowances, but their health was good, and their weights and heights compared favorably with the standards. The greatest deficiency observed as a whole was that of iron in the diet of the girls. One of the foods listed in the menus is Vigorost.

Note: This is the earliest English-language document seen (July 2011) with the term “lacto-ovo” or the term “lacto-ovo-vegetarian” in the title. Address: Texas State College for Women, Denton.

3904. Hankey, Adeline A. 1940. Changes in diet: An eight years’ test and its results. *Times (London)*. April 25. p. 9, col. 6.

• **Summary:** Letter to the editor. “For nearly eight years

my husband and I have applied the advice given by Dr. Drummond for our everyday meals.” She then describes the foods eaten in their largely vegetarian diet, which includes plenty of raw vegetables, milk or cream for breakfast. Lunch includes “potatoes cooked and eaten in their skins, and wholemeal bread or biscuits and butter.” Dinner includes vegetable soups, “hot vegetables conservatively cooked, with fish, or eggs or cheese or soya beans or poultry in some form... Soya bean flour is invaluable for using in wholemeal flour for cakes, biscuits, and pastry and makes excellent sauces.

“The results have been astonishing in the permanent improvement in health, in increase of vigor, in freedom from minor ailments, and our dentist scarcely recognizes our teeth! It simplifies life, is most economical, and leaves one practically unconcerned with [wartime] rationing restrictions.” Address: 56, St. James’s St., S.W.1 [London].

3905. Lager, Mildred. 1940. Summer foods for health. *Madison Health Messenger (Madison, Tennessee)* 2(3B):1-4. Undated.

• **Summary:** A large photo shows Miss Lager, next to a KFAC microphone. For 6½ years she has been broadcasting over the radio four times a week on station KFAC is Los Angeles. “She is the founder of the House of Better Living, and a tireless worker for better living. Her weekly free classes draw hundreds of people for instruction in healthful cookery and healthful living.”

She writes that now is a good time “to cut down on rich foods and the acid-forming foods, using instead the alkaline-forming foods and the bulk foods for the natural eliminative effects... With a liberal intake of the alkaline-forming foods, one may be assured of the natural alkalizers which neutralize body acids and in this way assist in the protection of health... Acid wastes produce fatigue; alkaline-forming foods neutralize the acid wastes to restore the normal body tone and stamina.

“The summer diet must necessarily contain adequate complete proteins, for protein foods are necessary for cell repair and growth... A lack of protein may cause retarded growth, lack of vigor, and poor appetite... The vegetable proteins are nuts, soy beans, legumes, and in general they are found in all vegetables. The proteins of nuts and soy beans are classed as complete proteins and are therefore especially desirable. The animal proteins are acid-forming, whereas the vegetable proteins are alkaline-forming. Animal proteins are also more putrefactive than vegetable proteins. The soy bean and nuts can be used in a great many tasty ways.”

Among the many recipes for summer the following include soyfoods: Cocktails—Soy milk and carrot (“Soy milk is a fine, alkaline, soft food. Excellent for those with sore conditions of the digestive tube.”) Protein salads—Soy bean salad. Soy cheese [tofu] tomato salad. Mock shrimp salad (with Zoyburger). Entrees—Soy cheese cutlets. Zoyburger

and mushroom sauce. Mock turkey legs (with Vigorost as the main ingredient). Broiled Vigorost with ripe olive sauce. Platter of cold cuts (Vigorost and Zoyburger). Hot Zoyburger sandwich. Stake-Lets (canned) for picnic dinner. Alkaline breakfast food—Wheatasoy. Alkaline beverage—Zoy-Koff (coffee substitute). Soy bean milk (Kreme O'Soy). Complete protein foods: Zoyburger, Vigorost, Stake-Lets, Not-Meat (made with unroasted peanut meal and seasoning), Soy Cheese, and Soy Beans. A brief description, nutritional analysis, and price is given for each product. "None of the Madison Foods contain animal products." A portrait photo shows Mildred Lager next to a KFAC radio microphone. The caption states that for 6½ years Miss Lager been broadcasting over the radio in Los Angeles. "She is the founder of the House for Better Living, and a tireless worker for better living. Her weekly free classes draw hundreds of people for instruction in healthful cookery and healthful living. Miss Lager is the author of *Food Facts*."

Note 1. This is the earliest document seen (Oct. 2014) that mentions or gives a recipe for a soy-based meatless turkey. Vigorost, a meatless / vegetarian roast introduced by Madison Foods in 1932, used wheat gluten and tofu as its two main ingredients.

Note 2. This is the earliest English-language document seen (Nov. 2014) that contains the word "Zoyburger," an early, popular vegetarian burger in the United States.

Although this issue is not dated, it contains the reprint a current article published in March 1940.

3906. Madison Foods. 1940. Price list [of products made by Madison Foods] (Ad). *Madison Health Messenger* (Madison, Tennessee) 2(3B):5. Undated.

• **Summary:** Breakfast cereal: Wheatasoy (9 oz).

Beverages: Zoy-Koff (No caffeine [caffeine]; 12 oz.). Kreme O'Soy Milk (plain, liquid, 15 oz and 29 oz; chocolate, liquid, 29 oz). Crackers: Thin-Things ** (5 oz). Whole wheat wafers ** (5 oz). Bran wafers ** (6½ oz).

Canned protein foods (used in place of meat): Zoyburger (14 oz, 30 oz). Stake-Lets (14 oz, 30 oz). Not-Meat (5 oz, 14 oz, 30 oz). Vigorost (5 oz, 14 oz, 30 oz). Soy cheese [tofu] seasoned (5 oz, 14 oz, 30 oz). Soy Beans with Tomato (5 oz, 14 oz, 30 oz). Kreme O'Soys, plain (14 oz).

Flour: Kreme O'Soy Flour (2 lbs, 5 lbs).

Note 1. Asterisks in the printed list indicate that all products except Whole wheat wafers, bran wafers, and Not-Meat are "Soy Bean Foods." ** = Wheat germ added.

Note 2. This is the earliest English-language document seen (Nov. 2014) that contains the word "Zoyburger" (or "Zoyburgers").

Although this issue is not dated, it contains the reprint of a current article published in March 1940.

3907. Webber, P.A. 1940. A vegetarian college. *Madison Health Messenger* (Madison, Tennessee) 2(3B):1, 3.

Undated.

• **Summary:** "For more than 35 years, Madison College, near Nashville, Tennessee, has been carrying on what might be called a 'long-time human experiment' in vegetarianism. From the very earliest days of the founding of the College to the present day, the diet has been strictly non-flesh with the use of a reasonable amount of milk and eggs. At present there are 450 students who largely work their way through school. The more than eighty buildings of the College and Sanitarium have been built through the years by students fed on a vegetarian diet." The 100 faculty members and administrative officers, and the 100 patients in the hospital "are, and have been for these many years, but human 'guinea pigs,' proving most conclusively the desirability of a fleshless diet." Address: PhD, Prof. of Chemistry, Madison College.

3908. Gian-Cursio, Christopher. 1940. Antiquarian nature cure: First health food store. *Health News* (Hollywood, California) 8(10):9. May 24; 8(12):16. June 28.

• **Summary:** The first U.S. health food store was opened in 1837. "The American Physiological Society of Boston was organized 103 years ago. The purpose was to teach the public the laws of health. Strictly for nature-cure, it emphasized vegetarian nutrition. More than 200 members followed its principles religiously.

"Early in 1837 they issued a notice that they wanted to procure foods of highest quality produced according to physiological principles. Farmers were invited to submit samples of products, to be scrutinized for possible use. The notice stressed that 'preference will be given to articles... raised on pure unadulterated soil... without aid of any artificial process by which they might become the procuring cause of diseases... Objection will also be made to articles raised on lands unfavorable to their reaching maturity before growth is checked by early frosts or cold weather.'

"Also in 1837, seeing the need of buying foodstuffs of high biological quality, they opened the world's first health food store called 'the Physiological Society's Provision Store,' with Nathaniel Perry, manager, in Fayette Court, Boston, Massachusetts.

"Baked foods from McShipley's bakery were featured. All baked goods were made from Graham flour. This was quite different from the wheat flour of that period. Ordinary wheat flour was stone ground but bolted. Sylvester Graham sought to remedy this by insisting on flour made from whole wheat.

"Also in 1837, George W. Light opened a health book shop for the sale of publications on health reform and vegetarianism. Success of the first, in Boston, led to his opening a second, in New York City, the Health Depository." Address: Dr., Rochester, New York.

3909. *Eat For Health* (Rosenberg's, San Francisco). 1940.

Here's an easy way to balance your diet. Spring. p. 2-5.

• **Summary:** A table (p. 4) titled "Essential foods for a balanced diet" gives a good summary. One should eat foods from four groups: Foods containing—(1) Body-building proteins: Cheeses, eggs, milk, nuts, whole-grain breads, flours, pasta, soy beans, dried peas, peanuts, dried peas [no meats, poultry, or fish]. (2) Body-heating fats. (3) Energy carbohydrates: Butter, cream, olive oil, honey, fruits, etc. (4) Regulatory substances: Whole grain cereals and their products (for cellulose or roughage), foods rich in vitamins and minerals like fruits and vegetables, and "all natural foods." Address: Rosenberg's Original Health Food Store, 1120 Market St., San Francisco, California. Phone: Market 3033.

3910. Madison Foods. 1940. Satisfying meatless entrees (Ad). *House of Better Living (Newsletter, Los Angeles)* 11(53):4. May.

• **Summary:** "Soyburger. Stake-lets. Vigorost. Not-meat. Soy cheese [tofu]. These foods have been designed by a group of experts in the field of nutrition to adequately take the place of meat.

"Get a free copy of the *Madison Health Messenger*, for complete list of foods and recipes." Address: Madison College, Tennessee.

3911. Oldfield, Josiah. 1940. Eating for victory (Letter to the editor). *British Medical Journal* i(4145):994-95. June 15.

• **Summary:** The author, a long-time vegetarian and "dietetic physician with over half a century's experience," scolds the Ministry of Food in England for not following the example of Hitler and Mussolini in adopting a diet with less meat and more cereal grains. Hitler decreed that the sausage-loving Germans should have 2-3 meatless days a week.

"One would have thought that the Minister of Food [Lord Woolton] would have studied these great signs of the times and would have tried to provide for the people of England a dietary which could be obtained from home-grown products, from Empire imports, and from foods which would travel in small bulk and possess great nutritive and vitaminic value. One would have expected the Minister of Food to have consulted not the theorists in laboratories, but the historical records; like Caesar's corn-fed army; like the Indian armies, which surprised even the great Lord Roberts when they marched and fought upon foods which the English Tommies despise as valueless." Address: London, W1.

3912. Battle Creek Sanitarium. 1940. Battle Creek Sanitarium biologic regimen: Supper menu. Battle Creek, Michigan. 1 p. Front and back.

• **Summary:** A remarkable menu, decades ahead of its time. At the top of each printed menu is a space for the "Guest's name" and the dietitian. The date "Tuesday, June 25, 1940" is printed near the top of the menu, which is in the form of

a table with 4 columns. Col. 1 are the menu items divided into main types: Relishes, soups, entrees, vegetables, salads, desserts, fruits, beverages, breads, miscellaneous. Col. 2 gives, for each menu item, the total calories per specified serving weight and the calories from protein, fat, and carbohydrates. Col. 3 gives the weight of 4 food minerals (calcium, phosphorus, iron, copper) per serving. Col. 4. gives the units of vitamins (A, B, C, D, G) per serving.

Only vegetarian foods are offered. These include soy acidophilus [cultured soymilk], Soykee [soy coffee], Soy bean bread, Soy gluten wafers, and Whole wheat toast melba.

The back is titled "Special features of The Battle Creek Sanitarium bill of fare." It was the "first to place upon its tables a bill of fare showing the energy values of each article of food served." "Dietetic supervision: Skilled dietitians cooperate with the physician in arranging the patient's bill of fare for each meal." Taboos: Tea and coffee. Wine, beer and all intoxicants. The cigar and cigarette; smoking on the premises is not permitted. Irritating condiments. An illustration shows the San. At the bottom: "Save your menus. Take them home for reference." Address: Battle Creek, Michigan.

3913. Rosenberg's Original Health Food Store and Whole Wheat Bakery. 1940. Catalog of health foods and manual of valuable health information. San Francisco, California. 76 p. Undated. Illust. 17 cm. Index

• **Summary:** Cover title: "Health from foods." Also on title page: "Eat to get well. Eat to keep well." "Where good health originates." "No branch stores." Contents: About your health, by Morris Rosenberg, president. Shop by mail. Parcel post scale. Eat to get well—Eat to keep well (rules and guidelines, p. 4). Vitamin chart (for each: Functions, results of deficiency, most reliable sources, p. 5-8). Biological chemistry of foods—Minerals (p. 9-10). List of products available, by product type, with weight and price. Incl. Soy bean bread, Soy toast, Soy bean wafers, Soy cookies (p. 12). Natural brown rice. Sun-dried, unsulphured California fruits. Salted nut meats (almonds, peanuts, cashews, pecans, p. 16). Nut butters (unroasted and unsalted: Almond butter, Nut cream butter {Carque}, Peanut butter, Cocoanut butter, Smucker's apple butter, Peanut oil (2 brands). Parkelp (minerals of the sea). Salt substitutes.

List of products available, by manufacturer or source, with weight and price. Incl. Battle Creek Health Products [Michigan] (p. 18-19): Beverages (SoyKee, Kaffir Tea), Gluten biscuit, Vegetable meats (Protose), Savita yeast, Psyllium seed. Cellu Dietetic Products: Canned vegetables (Soy bean oil, Soy bean spread, Soy flakes, Soy grits). Dia-Mel (dietetic food products): Gluten crackers, Soy-Rina cereal (to be cooked). Alberty Food Products: Cero-Fig coffee substitute. Modern Diet Products [Gayelord Hauser], incl. Juicex (electric juicing machine), and Fletcherizer

(juicers). Radiance Health Products (Los Angeles, p. 30-31). Tam Products (Joyana, the remarkable soybean health drink, plain or chocolate flavor). McCollum Laboratory Products (Soy-A Granules–Soy breakfast food). Penna Soya Products (soy foods): Tenderized whole soybeans, Toasted soy flakes, Toasted soy nut butter (8 or 16 oz), Soy malt–chocolate flavor, Creamee Soy Best (soy milk powder). Mrs. Hauser’s Soya Products: Hot cake and waffle mix, Pancake and muffin mix, Soya cereal. Hain’s Products (Hain Pure Food Co.): Nature’s Best Foods: Assorted candy bars, Fruit juices (6 types), Vegetable juices (7), Hollywood Foods (Meat substitutes: Protone-Soytone-Nutone, SoyBean with Tomato Sauce, SoyBeans T.S. & Protone, Soya sandwich spread), Nut butters (raw–Almond, cashew, pecan). Nut butters (roasted–Almond, cashew), Olive oil (California virgin). Hain’s vitamins. Alvita Products. Live Food Products (Paul C. Bragg). Books by Paul C. Bragg (*Paul C. Bragg’s Personal Health Food Cook Book*, *Building Health and Youthfulness Nature’s Way*, *Awaken Health and Happiness*, *The Art of Feminine Loveliness*, *Health Cocktails*, *The New Way to Health, Beauty and Youthfulness*, *The Chart of Scientific Diet*. Note: The first 4 books cost \$1.00 each. The last two cost \$0.25 and \$0.10, respectively). Loma Linda Foods (Tasty, wholesome, nutritious): Cereals (5), Soy products (Soy beans–plain, Soy beans with tomato, Soy beans with Proteena, Soy milk, Soy mince sandwich spread, Soy milk, Soy mince sandwich spread, Soy weet wafers, Fruities, Fruit wafers, date sandwiches), Vegetarian meats (Proteena {plain, smoked flavor, or mushrooms}), Nuteena, Gluten steaks), Other choice foods (Garbanzos, Savory lentils, Wheat kernels, Savorex). Radcliffe’s Famous Soya Products: Diabetic soya bars (flavors–maple, mocca, dark), Soya bon bons (light or dark), Soya candy bars, Soy milk powder, Soy milk powder–Cello, Cocoanut milk powder (8 or 16 oz), Soya malt (8 or 16 oz, 5 lb; Flavors–Nut, mocca, banana, plain chocolate), Soya beverage–coffee, Malvitose beverage (8 or 20 oz), Soya paste [pasta?] (7 or 14 oz), Soya ravioli, spaghetti, macaroni (7 or 15 oz, 2 lb), Unsweetened soya bean chocolate. Cubbison’s whole wheat products. Bill Baker’s flour: Lima and pancake flour, Soya and wheat flour, Lima bean cookies, Soy bean cookies. Figco instead of coffee. Carque’s natural foods. Carque natural brands. Books by Carque. Therapy, Ltd. (Pasadena): Theradophilus (a pure condensed acidophilus culture in soy bean milk). Health publications (22).

Health recipes (p. 68-71): Soya cup cookies. Soya loaf with rice. Soya cup custard. Soy bean goulash. Soy bean bread. Soy flour applesauce cake. Soy bean vegetable soup. Soy macaroni, noodles, or spaghetti. Baked soy bean croquettes.

Key to calories. The four types of foods: Regulatory, body-building, energizing, heating. Index.

On the back cover is an ad for the Juicex (“makes fresh, pure, undiluted vegetable juices”–\$49.50. A photo shows

this modern-looking electric juicer. Fruits and vegetables as pushed–using a wooden pusher–into a small hopper on top. The juice runs out of a spigot into a glass) and Fletcherizer [electric blender] (“The new 1940 model has all the latest improvements in construction and appearance. It liquidizes, whips, mixes, and chops...” \$14.95). Across bottom of ad: “See these products demonstrated at our store.”

Note: This 1940 date, plus other internal evidence, gives us a good estimate for the date of this undated catalog. Address: 1120 Market St., San Francisco, California. Phone: Market 3033.

3914. Madison Foods. 1940. Satisfying meatless entrees (Ad). *Madison Health Messenger* (Madison, Tennessee) 3(1):3. Undated.

• **Summary:** See next page. A full-page ad. Note: On page 5 of this issue are many “Requested recipes” that call for Madison Foods. Address: Madison College, Madison, Tennessee.

3915. Gian-Cursio, Christopher. 1940. Antiquarian nature cure: Early health products. *Health News* (Hollywood, California) 8(16):9. Aug. 23.

• **Summary:** “Granula, made from whole wheat flour, is believed to have been the first trade name of a health food. It was manufactured nearly 90 years ago by the nature-cure physician, Dr. James C. Jackson, Dansville, N.Y.

“An early coffee substitute, if not the first, to have a trade name was Soma, made from a combination of grains, also in Dansville.

“A few years after the civil war, health enthusiasts all over the country were able to secure supplies from the Health Food Company, New York City. This firm manufactured and sold dried Granulated Wheat (a fine Graham flour), White Wheat Gluten (free from starch and bran) and Pomarus [sic, Pomarius] (a fruit product, free from sugar and gelatin, and made into a dense jelly by evaporation of water).

“One of this store’s popular products was Granulated Wheat Biscuit, made from whole wheat flour that had been reduced to fine powder by pounding.” Address: Dr., Rochester, New York.

3916. Lust, Benedict. 1940. Vegetarian health farm and resort (Ad). *Nature’s Path* (New York City). Aug. p. 320.

• **Summary:** “Quiet, refined, secluded. Eat, rest your way to health. Write for particulars to: Dr. Benedict Lust. Health Resort.”

This ad also appeared in the Sept. 1943 issue (p. 359) of this magazine. Address: Butler, New Jersey. Phone: Butler 132.

3917. *Nature’s Path to Health* (Melbourne, Australia). 1940. Germany’s secret weapon–The soy bean. Aug. p. 21, 24.

• **Summary:** “Following the defeat of Poland, the world

Satisfying

MEATLESS ENTREES

A
Madison
FOOD

ZOYBURGER STEAK with onions

Place half-inch slices of Zoyburger on well-greased pan, with desired amount of onions. Prepare to a medium brown on both sides. Salt to taste. Serve with onions as the meat portion of a dinner. Zoyburger Steak may be served without onions or by substituting mushroom sauce, Creole sauce, tomato sauce, gravy, etc. If a sauce is used, prepare it separately and place on top of Zoyburger Steak when served.

BROILED VIGOROST with mushroom sauce

Cut Vigorost through center lengthwise, then crosswise, into half-inch slices. Arrange in greased baking pan. Put melted butter on top of each piece and broil until brown. When finished, arrange on serving platter, overlapping the slices. Garnish the edges with sliced tomatoes and crisp lettuce, and pour over the Broiled Vigorost a hot mushroom sauce. Serve with baked potatoes and garden peas. Zoyburger, Not-Meat, or Stake-lets may be used in this recipe in the place of Vigorost.

Fourteen-ounce can serves 5 with 2 pieces. 30-oz. can serves 8 with 2 large pieces.

Try This New Food

STAKE-LETS are the newest development of Madison Foods laboratories. Extensive experiments show that the combination of gluten and soy with a special meatlike sauce, an exclusive Madison formula, is superior in both flavor and texture to gluten itself. Already sliced in the can for your convenience with sauce. Dip in egg batter and crumb to serve as a Stake-let.

Madison Foods are available throughout the United States in stores specializing in natural foods.

BREADED CUTLETS — Dip half-inch slices of Not-Meat into beaten egg and crumb. Place a small chip of butter on each slice and salt. Prepare on top of stove or in oven in well-greased pan until brown. Serve with parsley garnish as the meat portion. Vigorost, Zoyburger, or Stake-lets may be used in the place of Not-Meat. Fourteen-ounce can makes 5 medium cutlets; 30-oz. can makes 8 large cutlets. Large cutlets may be sliced in two.

“Devoted to the

of your
HEALTH”

MADISON FOODS

discovered that one of Hitler's secret weapons was hidden in the rations of his soldiers. The use of the 'magic bean' enabled the German troops to advance very quickly because of the fact that by using soy beans in food preparations the soldier is able to carry three days supply in his haversack.

"We are informed that Germany has manufactured an excellent flour from soy beans called Edelseja, which it is claimed can replace meat or other similar foods."

"There should be ample space in Australia for the production of this beans on a very much larger scale than has yet been attempted. Private persons have demonstrated that this bean can be grown in Australian kitchen gardens without much trouble, and with considerable profit. With surplus stocks of wheat mounting high in Australia, and with the dwindling stock of soy beans due to war conditions, the local cultivation of this 'magic bean,' which originated in the East but is now very much in the West, should be encouraged.

"The diet of the future will be less in the direction of flesh foods and more in the way of a sound health regime, judging from the general trend in the world of dietetics just now.—Contributed."

Note: A similar article titled "A vital German supply—The magic bean—Soya food for man & beast" appeared 4 months earlier in the *Times* (London; 23 April, p. 7f, 8a).

3918. *Proceedings of the American Soybean Association*. 1940. Full soya in the soldier's diet. Translation of an article by Dr. H. Weiss, Berlin, taken from "Die Landward," May 10, 1940. Received from Herschel V. Johnson, Counsellor of the Embassy, London, June 18, 1940. p. 78-79. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan. [1 ref]
• Summary: "A new method of utilizing soya beans, which has been practiced for about 15 years in Germany as well as in other countries, is of the utmost importance in the effort to use soya beans not only for their oil content but for their entire nutritive value. The soya bean by simple cooking methods cannot be prepared in a way acceptable to European taste. That is why scientists such as Berczeller, Kupelwieser and others, devised the methods of milling and extracting the bitter substance from the soya bean in its original condition. The yellow flour which results from this process contains about 40 per cent protein, 20 per cent fat (1 to 3 per cent lecithin), 27 per cent carbohydrates, 5 per cent ash and 8 per cent water. This flour is called full soya or pure soya [Edelseja].

"This soya bean flour has no affinity with ordinary cereal flours. It differs from them both in its chemical composition... and in its baking properties (grain flour has a high gluten content, full soya has no gluten at all)."

"Full soya is used only as an ingredient for the nutritive improvement of various foodstuffs and dishes, and is never used exclusively for the preparation of a dish. Soya flour is a vegetable product and, therefore, costs much less than the livestock products which it replaces.

"These considerations and experiences are being made full use of by the fighting forces. The discoveries in regard to the utilization of full soya flour have been partly made by men in the supply services of the army. The utilization of soya bean flour in our army is particularly important in view of the fact that soya bean production has a secure basis within Germany's reach. The army, in conjunction with the Ministry of Agriculture, has actively promoted domestic soya bean growing within the frontiers of previous Germany, in Austria, and more recently also in the Polish districts. Moreover, soya bean growing by the German Dye Trust in Balkan countries, particularly Rumania, has assured a current supply which by far exceeds the largest possible requirements of the fighting forces."

Dr. Zieglmayer has discussed the reasons for the army's preference for full soya. "Full soya has already been used before the war in the field kitchens. In September, 1938, a collection of 262 recipes for field kitchens was issued. The utilization of full soya in the field kitchens has made it possible to economize in various ways. In the case of minced meat dishes, there was a saving of 25 per cent of the quantity of meat previously used, although the meat portions were increased from 25 to 45 per cent. Furthermore, eggs have been largely replaced by full soya bean flour. Milk in the preparation of dishes is largely being replaced by a mixture of 1 to 10 full soya bean flour and water." It is possible to save about 40% of the fat in liquid dishes by adding soya bean flour.

"In the case of industrially produced foodstuffs, the army authorities have ordered the utilization of full soya, particularly in the case of tinned soup. Soya bean flour is also used for mixed cocoa drinks, biscuits, and chocolate. Additions are also made in the case of tinned liver sausage, etc."

Note: This is the earliest English-language document seen (Jan. 2019) that uses the term "full soya flour" or "full soya" to refer to "whole soy flour."

3919. Yoga Research Institute. 1940. Yoga extension courses (Ad). *Nature's Path* (New York City). Aug. p. 320.

• Summary: This small (1¼ by 2½ inch) ad states: "Only scientific Yoga Institute in the world now giving courses in practical Yoga methods and exercises: Breathing, digestion, elimination, relaxation, control of heart, eyes, nervousness, sleeplessness, emotional disturbances, etc. Director of the Institute, Pundit Acharya, the Vedic Brahmin of India, author of *This Precious Heart* and *Breath is Life*. Every student given individual attention. Write to General Secretary." Address: 119 West 57th St., New York, NY.

3920. Gian-Cursio, Christopher. 1940. Antiquarian nature cure: First health restaurants. *Health News* (Hollywood, California) 8(18):6. Sept. 27.

• Summary: "The world's first health food restaurants were

in conjunction with Graham boarding houses. Meals served there were exact in principles, would meet the approval of precise modern nature-curists. Animal products were taboo; only fruit and vegetable dishes were served.

"First health dinners became available in old New York about 1831 and in 1836 at 23 Brattle Street, Boston. in 1839, Rochester, N.Y., was the only other city in the U.S. with an establishment specializing in health cuisine.

"Bathing in early America was not only a luxury but a rarity—but not at Graham boarding houses. Every boarder was expected to abide by the rule: exercise and bathe before breakfast! The shower was a favorite; others preferred the hand bath. Another health rule was 'No person is entertained as a boarder who uses tobacco or intoxicating drink.'

"The great and near-great partook of health meals. A patron describes the table as 'bountifully furnished with Nature's luxuries, so cooked as to retain their natural excellences instead of being saturated with that repulsive extract from hog's meat called lard, or mingled with pepper and spice enough to burn its way through the stomach.'

"Altruism, not money profit, was the incentive for these health restaurateurs. Obstacles were great and only the urge to create a better humanity made them surmountable. (To be continued)." Address: Dr., Rochester, New York.

3921. Anandan, M. 1940. Soy bean trials in Madras. *Madras Agricultural Journal* 28(9):329-37. Sept.

• **Summary:** As far as the writer knows, the first soybean trial in Madras was conducted in 1915-16 by Mr. R. Cecil Wood, then Principal of the Agricultural College, Coimbatore, in one of the fields on the Central farm. "The crop was a fair one but its cultivation was not continued in subsequent years.

"Great interest in this crop was aroused in India in about 1932-33 as a result of Major General Sir Robert McCarrison's advocacy for the inclusion of soy beans as a very cheap and valuable source of first class vegetable protein in the average Indian diet, which badly lacks it. Another contributory cause for the spurt of such enthusiasm of the people in this new food crop was the decision of Mahatma Gandhi to give it a trial by including it in his daily diet... A third reason for stimulating the interest of the people was the fact that the soy bean was becoming a serious competitor in the overseas market with the Indian groundnut, the premier oilseed crop of the country. The result of all this at the time was a great demand for soy bean seed and for information regarding its cultivation. But unfortunately, the Department of Agriculture could not help the public either with the seed or information regarding the cultivation of soy bean as it had not been grown or tried on any of the Agricultural Research Stations before, except once on the College Farm in 1915-16. The Department, however, lost no time in taking up the trial of this new crop... Field trials were carried out from 1935 onwards" at three locations: Agricultural Research Station, Hagari (two varieties, Kachin

and Pe Ngype, were obtained from Burma). Agricultural Research Station, Nandyal. Central Farm, Agricultural College, Coimbatore. Soybeans did best in the Godavary and Cauvery deltas with deep alluvial soil and annual rainfall of 40 inches or over. Address: L. Ag., Asst. Director of Agriculture, Cuddalore, India.

3922. *Good Health (Battle Creek, Michigan)*. 1940. Food and the war. 75(9):125. Sept.

• **Summary:** "The soybean has come to have a prominent place in the military dietetics of Germany."

In the *British Medical Journal* "Dr. Josiah Oldfield (of England) urges the British to learn from Hitler and Mussolini about diet. In Germany the populace has been put on two or three meatless days a week. Italy has decreed that the wealthy shall live two or three days a week on the peasant diet of corn, oil, chestnuts, raisins, macaroni, maize porridge, milk and cheese." "The Indian armies in the World War [I] surprised Lord Roberts when they marched and fought better on vegetable foods than the English Tommies on a heavy meat ration."

3923. Lindlahr, Victor H. 1940. You are what you eat. New York, NY: Natural Nutrition Society. 128 p. Sept. No index. 27 cm.

• **Summary:** Victor H. Lindlahr is the son of Dr. Henry Lindlahr, founder and head of the Lindlahr Sanitarium in Chicago, Illinois. Dr. Henry Lindlahr, "who first uttered the phrase, 'You are what you eat.'... and was one of a handful of pioneers who alone thought or knew much about diet in its relation to the prevention and cure of illness."

This book contains a wealth of interesting information on the history of nutrition. During 25 year "tenure of the Lindlahr Sanitarium, we used diet with excellent results in the treatment of more than 50,000 patients." In 1929 Victor shifted from sanitarium work to radio broadcasting. A major goal is to eat a balanced vegetarian diet. On page 43 are the "Ten Commandments of eating."

Contents of Part II: Vitamin tables. Vegetables and fruits highest in vitamins. Caloric value of vegetables and fruits. Mineral tables. Vegetables and fruits highest in minerals. Food classes. Pot liquors and fruit juices. Dry yellow soybeans are listed among the best sources of vitamins B-1, and E, and the single best source of vitamin G. They are a rich source of the minerals calcium, and an excellent source of protein. Green soybeans are an excellent source of vitamins A, B-1, and G, a good source of the minerals calcium, phosphorus, iron, and a good source of protein (p. 44-50).

In Part III, the section on vegetables contains a subsection on beans (p. 81-87), which includes "Soybeans, green-shell. Health factors: "Practically a 'life' staple in Oriental countries where meat is scarce. Protein in the diet supplied by soybeans; contain all essential amino-acid

constituents of animal *proteins*, and, in some instances, have twice the quantity. Soybeans used to replace all various products of the cow: meat, milk, butter, and cheese.

“Soybean milk similar in appearance and properties to animal milk. By certain processes, some of protein may be precipitated from it, forming a gray-white curd. This protein comparable to casein (the protein of animal milk); has been commercialized in form of powder which may be used in special feeding cases.

“Soybean oil more similar to butter in Vitamin A content than any other vegetable fat. Soybean flour or meal mixed with its proper constituents not only can be made into various types of bread and confections, but is today used in invalid and infant dietetics.

“Soybeans not so well known to Americans as they justly should be. Green-shell soybeans not readily available, although their cultivation is being encouraged.

“Excellent source of Vitamin A, especially the varieties that are deepest green in color. Also excellent source of Vitamins B-1 and G. Can be relied upon as a good source of essential minerals, calcium, phosphorus and iron.

“Alkaline-ash. Should not be used on soft diets unless puréed, as high in roughage. Comparatively high in calorie content, but only 6 to 12 per cent of their carbohydrate is available to the body. Starch makes up a very small part of total carbohydrate; hence soybeans may be used occasionally by reducers. Soybean meal is used in preparing breadstuffs sufficiently reduced in starch content to be used by diabetics.” Also discusses: Selection and care. Preparation. Basic method of cooking. Similar information is given under “Soybeans, dried,” which are better known in the USA than green-shell soybeans.

Chapter 2, titled “Different foods do different things,” contains one of the many interesting stories about the history of nutrition. “Hippocrates believed and taught that all foods served the *same purpose*, all contained a basic nourishment which he called the ‘universal aliment.’ Some foods, he taught, had more of the universal aliment than others, but insofar as a choice of foods was concerned, the only necessity was to eat enough foods containing the universal aliment, and all would be well.

“For almost 2300 years, physicians and laymen believed implicitly in this idea... Hippocrates’ theory was accepted blindly, even by top-ranking scientists, until little more than a century ago. The few chemists who began to question it then were afraid to oppose authority and state their misgivings. Even when undeniable proof was finally presented that there was more than one kind of nourishment in foods, the great majority of physicians and scientists were unwilling to depart from the idea of Hippocrates. Those who believed that different foods have different purposes were called fools, fanatics, faddists and worse!”

As recently as 30 years ago [1910] the universal aliment idea “was so ‘respectable’ that ‘rebels’ like my father, who

challenged it, felt the full weight of scientific scorn.

“The first wedge was driven in Hippocrates’ theory a little over 150 years ago. In the late 1700’s, a brilliant French scientists named Antoine-Laurent Lavoisier proved that the food you eat is gently burned (oxidized) in your body with the help of oxygen contained in the air you breathe into your lungs. He proved that *certain parts* of foods provide the body heat. Lavoisier, and a colleague by the name of Pierre-Simon Laplace, even developed a method by which the heat-producing value of foods could be measured.

“Later, an American by the name of Ben Thomson devised a unit of measurement for the heat which food produces in the body. This unit was called a *calorie*—the very same calorie that overweight people have been reckoning with ever since.”

“Once the important role played by food in creating body heat was understood, scientific circles began to talk of a food’s value only in terms of its calorie content, its heat-producing potentialities. The calorie became a tyrant; it was to rule most physicians and dietitians until the War of 1914.

“Lard and butter, with approximately 250 calories per ounce, became premium foods. Carrots, spinach, onions and other vegetables which have a low calorie content, sank to uncharted depths in scientific esteem. Sugar (approximately 120 calories per ounce) was a ‘wonderful’ food; ready-to-eat cereals (120 calories per ounce) became the ‘finest nourishment’ anyone could partake of!”

On the inside back cover is a description of many “Food & Health Guides” by the Lindlahrs. The back cover shows that in March 1941 this book was the No. 3 best seller nationwide in the category “General non-fiction.”

A portrait photo on the inside front cover shows Victor Lindlahr. For the past 10 years he has been a lecturer on health and nutrition, with a radio program broadcast by stations nationwide. He is also the author of: *The Guide to Balanced Health. Natural Way to Health. Eat and Reduce. Seven Day Reducing Diet. The Lindlahr Vitamin Cookbook. How to Win and Keep Health with Foods.* Address: Editor, Journal of Living, 1819 Broadway, New York City. President, National Nutrition Society, Inc., New York.

3924. Gian-Cursio, Christopher. 1940. Antiquarian nature cure: First health restaurants (Concluded). *Health News (Hollywood, California)* 8(19):5. Oct. 11.

• **Summary:** “From the start, proprietors and patrons of health restaurants have been ridiculed by the ignorant and antagonistic. An early aggressor was the *New York Review*. An article in 1837 condemned proper eating as ‘dietetic charlatanry,’ stated, ‘We think one of the rarest spectacles in the world must be a Graham boarding house at dinner hour. Along a table are seated some 30 lean-visaged, cadaverous disciples, eyeing each other askance, their looks lit up with a certain cannibal spirit... The gentlemen resemble busts cut in chalk or flint, the lady-boarders mummies preserved

in saffron.' Modern health reformers are confronted with similar false denunciations.

"In rebuttal, a health reformer pictured an orthodox eating place of the 1830's: 'As dinner hour approaches, eager fainting gourmands gather toward the scene of operations, portly gentlemen with forms which might have shamed Falstaff, visages which should provoke the envy of a turkey-cock. Bloated apoplexy, trembling palsy, racking rheumatism, gout, delirium tremens, the thousand ministers of death, all are there selecting each his victim and goading him on to the indulgence which will render him a speedier and surer prey.'

"The pioneer health restaurants were too far ahead of their time. In less than 10 years they ceased to exist and, as far as is known, there was not another in the U.S. until the dawn of the 20th century. Today we are in the midst of a glorious revival. With splendid styling and magnificent appointments, health restaurants of 1940 are replicas of centers that helped to make the 1830's a great decade of health and medical reform." Address: Dr., Rochester, New York.

3927. Branson, J.R.B. 1940. Eating for victory: Suggestions for war-time economy in food-stuffs. A sequel to *Grass for All*. Bordon, Hants., England: Branson's Publications. 19 p. 22 cm.

• **Summary:** The author used fresh grass-mowings to augment his vegetarian diet and to make the best of food rationing during World War II. Includes recipes. Address: B.A., LL.B., London, England.

3928. Carque, Otto. 1940. Vital facts about foods: A guide to health and longevity with 200 wholesome recipes and menus and 250 complete analyses of foods. 4th ed. Glendale, California: Natural Brands, Inc. 239 p. 23 cm. Revisions and supplements by Mrs. Lillian R. Carqué. [20+* ref]

• **Summary:** This manual of food reform discusses the importance of a simple vegetarian diet, fresh air, pure water, exercise, and rest. Also discusses acid and alkaline foods, the treatment of disease, and food preparation. The author lived 1867-1935.

The nutritional value of soy beans is discussed briefly on pages 113, 145, 153, 162, and 174. The section titled "The

Soy Bean, a Remarkable Food" (p. 176-78) describes and discusses boiled soy beans, soy bean milk, tofu, soy sauce, and soy bean sprouts; recipes for Baked soy beans, Soy bean loaf, and Soy bean bread are given. The content of this section is slightly different from that of the 1933 edition.

A table (p. 221) gives the average chemical composition of various legumes, including soy beans.

Note: This enlarged 4th edition contains 239 pages, compared with 208 pages in the first 3 editions. The type for the entire book appears to have been reset. Address: Los Angeles.

• **Summary:** One of the essays in this book of essays is titled "Confessions of a vegetarian." In a section titled "With love and irony," the author gives the rationalizations of a "vegetarian" who eats meat on occasion. Note: Lin Yutang lived 1895-1976.

3934. Mariposa. 1940. Hollywood glamour cook book. Miami, Florida: Glamour Publications. Distributed by M. Barrows & Co. xviii + 427 p. Portrait. No index. 21 x 16 cm. [3 ref]

• **Summary:** The author presents herself as a glamour girl, who lives in Miami, Florida. She is "Your 'Mystic Pot, with

herbs and spice. I charm your meals and make them nice.” “Foreword: You must have wondered how the Movie Stars keep so glamorous, vivacious, young-looking and slender, they seem more like gods and goddesses than real people. No wonder they are fairly worshipped by the Movie Fans! This book will disclose to you the beauty secrets of the Movie Stars...” The key is a healthy diet and herbs.

Recommended foods: Whole wheat and soy bean spaghetti, La Choy Soy Sauce and La Choy Molasses Sauce, Soy bean crackers, goat’s milk (not cow’s milk), all seafoods, fish, poultry, rabbit, venison, lamb, frogs’ legs. Foods to avoid: White bread, white flour, white sugar, white rice, spaghetti etc, made of white flour, beef, veal, pork, lard, suet, grease, sulphur dried fruits, table salt (“free running,” iodized, but “bag salt” is OK), most soda fountain drinks, “pop” or any drink put up with carbonated water, gassed, dyed, or faked foods. Soy-related: “Legumes” include soy beans (p. xi). Soy honey bread (with soy bean flour and soy milk, p. 7). Soy honey rolls (p. 8). Soy corn sticks (with soy bean flour, p. 22). Soy vegetable flour sticks (p. 23). Soy waffles (p. 24). Soy [pie] crust (p. 35-36). Soy short cake (p. 52). To make soy bean milk and corn milk (from soy bean flour, p. 78-79). Soy milk and carrot juice (p. 79). Soy bean coffee (p. 83). Coffee substitutes (incl. soy, p. 85). Canapes d’amour (with soy bean bread, p. 102). To cook Soy Sea Shells or Soy Macaroni (p. 122). Soy kidney pie (p. 132). Soy macaroni or spaghetti (with soy or Savita Sauce, p. 200). Soy beans—highlights (p. 213-14). Soy baked beans (p. 214). Proteins (incl. soy, p. 386-87).

Also discusses: Garbanza pie crust (p. 36, 212). Electric vegetable juicer (p. 68). Importance of alkaline diet (p. 68-69, 238-39, 388-91). A table (p. 101), titled “Raw nut butters,” lists 12 types: “Peanut, butternut, lychees, almond, pecans, pignolia nut, pistachio nut, paradise nut, cocoanut, hazelnut, beechnuts, cashew, walnut, chestnut, Brazil nut, and sesame tahini. Note: These butters are sold at the fancy grocer’s or Health Food Stores.”

Carrot peanut butter canape (p. 101). Mock liverwurst. Vegetarian dinner party (p. 287).

Glamour guide (p. 360-61). Planetary foods and menus (by astrological sign, p. 277-341). Tables showing the best food sources of various vitamins and minerals (p. 365-417).

In the chapter titled “Snacks and Beverages” is a recipe (p. 76-77) for a Date and goat’s milk shake, which is “better than any soda treat” and which calls for use of an “electric blender.” The recipe for “Orange honey nanny shake” (p. 77) states: “For a more frothy drink, whip with electric blender...” See recipe for soymilk made from soy flour. Recommends buying foods and herbs in health food stores.

In the section titled “Recognition and gratitude” (p. 392) near the end of the book, she thanks “Henry Lindlahr, M.D.,” “Otto Carqué, Mausert, M.D.,” and many other lesser-known people.

Talk with Chef Akasha Richmond. 2004. June 5. Akasha

has been able to find out very little about the author of this book, who she thinks self-published it. Although she lives in Florida, she talks about “glamour girls” and Hollywood. Address: 1265 S.W. 11th St., Miami, Florida.

3939. Glendale Sanitarium “vegetarian” cook book. 1940? Glendale, California: Glendale Sanitarium. 56 p. Undated. 21 cm.

• **Summary:** A full-page ad, facing the title page, states: “Twenty-eight acres—Spacious grounds. Quiet—Rest. Hospital service. Electrotherapy. Hydrotherapy. Medical care. Special diets. Sun baths. Massage. Fireproof building. Private rooms. Reasonable rates. For particulars write to Glendale Sanitarium and Hospital.”

The Preface states: “Rational diet has long been a basic principle in the Sanitarium System of treatment so we are

indeed happy to meet the need created by guests who have become acquainted with a palatable vegetarian diet and wish to continue it after leaving the institution. The recipes that we have compiled are representative of the food which makes up our daily menus.”

Contents (called “Index”). Beverages. Cakes. Cake icings. Cooked cereals. Cooked fruits. Eggs. Entrees. Entrees, supper. Gravies and sauces. Hot breads. Memoranda: Description of nut foods and flavorings. Miscellaneous. Pies. Puddings. Pudding sauces. Salads. Salad dressings. Sandwiches. Soups. Toasts. Vegetables.

Soy-related recipes: Chow mein (with “ $\frac{1}{4}$ cup soy bean sauce,” p. 19). Chop suey (with “Yong You or Soy bean sauce,” p. 20). Tofu loaf (with “1 pound tofu,” p. 23).

Proteena is called for in recipes on 8 different pages, Protose on 8 different pages, Nuttose on 3 different pages, and Savita (a seasoning) on 13 different pages. Address: 1509 E. Wilson Ave., Glendale California.

3940. Madison Foods. 1940? Featuring Madison Foods Quartet (Leaflet). Madison, Tennessee. 1 p. Single sided. 28 cm. Undated.

• **Summary:** See next page. A large photo shows cans of four products: Madison Burger–Vegetarian. Not-Meat. Cheze-O-Soy. And Dinner Morsels. Each appears to be dancing, with musical notes as its feet.

Note: This is the earliest document seen (Nov. 2014) that contains the term “Madison Burger.” This meatless burger was apparently launched at about this time by Madison Foods.

Note: Unfortunately the ingredients in these four undated products are not shown. Address: Madison, Tennessee.

3941. Loma Linda University, School of Dietetics. 1941. Lesson outlines in nutrition & cookery. 1st ed. Loma Linda, California: Loma Linda University, School of Dietetics. 114 p. Jan. 20 cm.

• **Summary:** Contains recipes, including soy-related recipes. At this time, the School of Dietetics was part of the College of Medical Evangelists. Address: Loma Linda, California.

3942. *Scotsman (Edinburgh)*. 1941. Vegetarians want cheese rationed. Feb. 22. p. 8.

• **Summary:** Yesterday a deputation of vegetarians made a plea to Lord Wolton at the Ministry of Food for the rationing of cheese and for permission to exchange their unused meat or bacon and ham for a weekly allowance of cheese.

The deputation complained that they were not receiving their quota of cheese, and that dealers were rationing cheese on their own account and apparently reserving it for customers registered with them for other foods. “On the basis of food value, they argued, cheese required less shipping space than meat. Alternative sources of proteins, especially

nuts and soya beans, were also discussed.”

Note: During World War II in Britain, some foods were rationed.

3943. Chen, Tung-Tou; Wu, H.; Chang, C-Y. 1941. Further experiments with soybean diets. *Chinese J. of Physiology* 16(1):91-96. Feb. [4 ref. Eng; chi]

• **Summary:** “Repeated attempts have been made in this laboratory to construct a vegetarian diet nutritionally comparable with our stock omnivorous diets. In the course of this endeavor we have experimented with many cereal-legume-leaf diets in which the legume is soybean. None of these diets proved any better than our stock vegetarian diet (D 41A) which, as we have reported [Wu and Chen, 1929; Wan and Wu, 1935] is much inferior to our stock omnivorous diets.

“Guy and Yeh [1938] in a recent survey of Peking diets have reported that the whole-cereal-soybean-cabbage-diet is excellent and is apparently adequate for normal growth, reproduction and lactation. The composition of this diet is similar to many of the cereal-legume-leaf diets which have been studied in our laboratory. Since their conclusion was based on casual observations on human beings without any control, it has seemed to us worthwhile to restudy the soybean diets with rats under controlled laboratory conditions. Accordingly, a number of cereal-soybean-leaf diets were constructed with different cereals and different percentages of soybean, and the growth and reproductive performance of rats on these diets were studied. The results are here reported.”

“Summary: Comparison has been made of the growth and reproductive performance of rats on our stock vegetarian diet (D 41A) and nine cereal-soybean diets so constructed as to simulate the Peking whole-cereal-soybean diet described by Guy and Yeh. None of these diets is significantly better than our stock vegetarian diet.

“The present finding lends no support to the belief that the mixed-flour diet commonly used in Peking can afford optimum nutrition for human beings.” Address: Dep. of Biochemistry, Peiping Union Medical College, Peiping, China.

3944. Frank, Milo O. 1941. Just what is health food? *Health News (Hollywood, California)* 9(5):5, 9. March 14.

• **Summary:** “Two meanings are attached to ‘health foods.’ The wider includes all nutriment that the body can digest with benefit. The narrower refers to *selected products of high natural value* and to *supplements* prepared for specific purposes. But in every case, a real health food, is truly beneficial.

“On the distributor rests the duty of investigating every product to make certain that it meets this definition.

“Are you aware that the sugar problem is solved? The National Sugar Refining Co. has heard our demands and

FEATURING

MADISON FOODS

Quartet

Reach for
"THE FOOD WITH A TASTE"

Madison Foods

Madison College Madison, Tennessee

agrees that we must have what we want. Health shops are busy selling *Grans*, 'raw sugar at its best.' It's wholesome with natural cane juice..."

"Some firms have won such a reputation that the very name is a guarantee. One of these is the Pfaffman Co., Cleveland [Ohio]. They began in 1873 and in 1914 pioneered health foods. From the start, they catered to those demanding utmost purity, served hospitals and other institutions where nutritive values are important. No one really knows how good macaroni can be unless familiar with their Soymac brand made of the highest quality durum wheat to which whole soybean flour has been added. And everybody likes their 'Kwik Soup'—even the sternest dieticians!"

"Also outstanding in the health field are the famous Madison products from Madison, Tennessee, delicious new soy foods and meat substitutes that accomplish more than arguing to produce enthusiastic vegetarians." Address: 2027 Hillhurst Ave., Los Angeles, California.

3945. Gaines, Tom. 1941. How health shops began and spread. *Health News (Hollywood, California)* 9(10):5. May 23.

• **Summary:** "American health food history began over 100 years ago. In the 1830's, Sylvester Graham called for diet reform. Fearless amidst ridicule and even physical attacks, he exposed the evil of depleting whole grains to manufacture lifeless white flour products that 'keep.'"

"Editors leaped to action. *Journal of Health* (1829-'33), *Moral Reformer* (1835-'37), *Library of Health* (1837-'42) and other predecessors of *Health News* began the work. A second reform wave in the 1870's brought *Science of Health* and *Herald of Health*.

"First health restaurants were in Graham boarding houses, according to Dr. Christopher Gian Cursio, nature-cure historian. Strict dietetic principles prevailed there and flesh foods, tobacco and alcohol were spurned. New York City had the first (1831), Boston [Massachusetts] the second (1836, at 23 Brattle St.), Rochester, N.Y., the third (1839).

"In 1850, James Jackson, M.D., began to manufacture the first health product with its own trade name, *Granula*, from wholewheat flour. Soon after this came his grain coffee substitute, *Soma*, precursor of the many food beverages now so popular.

"First of shops resembling today's was Health Food Company, New York City, in the 1870's, which manufactured and sold direct to consumers *granulated wheat* (fine, wholegrain flour) and *wholewheat gluten*, free from starch, also *Pomarus* [sic, *Pomarius*], a sugarless fruit product made into thick jelly by evaporation.

"In those days, health magazines carried ads for wholegrain crackers, Anger's wholewheat bread, health resorts.

"Although intelligent individuals saw the harm in processing foods, condemned the depletion of common

staples, and applauded the Pure Food laws of 1906, the movement did not gain force until the world war [1914-1918]. Then Alfred Watterson McCann astounded physicians by curing the scurvy-suffering seamen on the German raider *Kronprinzessin Cecilie* at Newport News, Va. [Virginia], with orange juice. This was the first dramatic vitamin victory in the U.S. McCann's books and articles attracted nationwide attention and other progressives joined the fight to save 'starving America.'

"In the early 1920's, health foods stores began to become more important. At first some resembled a sanitarium, all white, with foods hidden away mysteriously on shelves or under glass. Others operated by humanitarians without business experience, looked like grocery museums, wild confusion. Little by little, sound commercial methods were introduced. Today health foods have become an established industry. Dealers have associations, trade organizations. Trained dieticians and other counselors assist in guiding patrons. The public recognizes the need for products containing natural nutritional values in tasty and high potency concentrations.

"Other healthguards are now on sale, selected cooking utensils, shredders, juicers, cosmetics, etc. Foods include vitamin and mineral concentrates, dried fruits, juices, wholegrains, ingenious vegetarian meat substitutes, herbs, goat milk and cheese, sweets from fruit and honey, etc. Today huge vitamin purchases by the U.S. government and federal efforts to improve public eating habits forecast a new expansion for health foods."

A tiny portrait photo shows Father Kneipp, of European water-cure fame.

3946. Lust, Benedict. 1941. Come out to beautiful "Yungborn" nature cure home and recreation resort (Ad). *Nature's Path (New York City)*. July. Back cover.

• **Summary:** "Tune your system to the rhythm of good health. It's easy. Come out for rest and relaxation. Rebuild your health. Light air cottages. Walking barefooted. Sun, light and air baths. Vegetarian, fruitarian, raw food and specially prescribed diets. A real paradise for exhausted bones. in Ramapo Mountains, Butler, New Jersey." • **Summary:** Contents: 1. Introduction. 2. Food on the farm (1789-1840). 3. Menus in the city (1789-1840). 4. Prejudices and Reformers (1830-1840). 5. Health by rail (1841-80). 6. "And roast beef" (1841-80). 7. The fight against germs (1881-1916). 8. An indefinable loss (1881-1916). 9. The concept of scientific eating (1881-1916). 10. Waging a war (1917-29). 11. Unequal degrees of protection (1917-29). 12. Depression and nutrition (1929-39). 13. Education and food costs (1929-39). 14. Federal feeding programs (1935-40). 15. Nutrition for defense (1940-41). 16. Conclusion. Appendixes.

Soybeans are mentioned briefly in the chapter titled "Nutrition for Defense (1940-41) on p. 235 (considered a nutritious, low-cost food in 1941), and p. 247 (their production was encouraged during World War II).

Chapter 4, "Prejudices and Reformers (1830-1840)" (p. 43-52) is a sympathetic history of the early 19th century vegetarian food reform movement. The author praises the work of Sylvester Graham, starting in the 1830s, to encourage the consumption of more fruit and "less meat and white flour. His argument centered about what in modern parlance has been called 'lazy colon.' City dwellers, who did little exercise, were in the habit of taking their food in too concentrated a form. Heavy use of the concentrated foods, meat and bread made from bolted wheat flour, caused indigestion and other ills which in turn called for the use of condiments and alcoholic stimulants as aids to the digestive process. Bulk, he pointed out, was as necessary as nutriment; and if meat were used sparingly, and unbolted flour substituted for bolted flour, the diet would furnish sufficient bulk, make for temperance, and help to sustain the 'highest and best physiological and psychological interests of human nature.'

"This major aim of a plainer diet was summed up by Graham in the statement that the simpler, plainer, and more natural the food of man is, 'the more perfectly the laws of his constitution are fulfilled... the more health will be in his body... the more perfect his senses... and the more powerful may his intellectual and moral faculties be rendered by suitable cultivation.'

"In this emphasis on the necessity for food in a condition approximating its natural state Graham was far ahead of his time. He particularly expressed the belief that the bolting of bran from flour—that is, sifting it through very fine cloths—robbed it of vital elements. Instead he recommended that bread be made from unbolted flour according to a recipe given by Professor Thompson of Edinburgh" [Scotland] (see *Lectures on the Science of Human Life*, 1839, p. 533).

Also discusses: Dr. William Alcott, Prof. Reuben

Mussey of Dartmouth College (who advocated vegetarianism and invited Sylvester Graham to address the students of Bowdoin College and also to speak at Dartmouth College in Hanover, New Hampshire), early health reform periodicals, the American Health Convention of 1838 (which passed a resolution endorsing a vegetable diet), and the American Physiological Society.

Chapter 9. "The Concept of 'Scientific' Eating" discusses the early efforts to establish the protein requirement for a moderately active man by Voit in Germany (118 gm/day), Wilbur O. Atwater (Prof. of Chemistry at Wesleyan Univ.; 125 gm/day), Russell Henry Chittenden (Prof. and head of the Sheffield Scientific School at Yale; 60 gm/day), Henry Sherman (Prof. of chemistry at Columbia Univ.; 75 gm/day). Atwater worked to teach people how to get adequate nutrition at the lowest possible cost.

Appendix A is a League of Nations (1937) classification of foods into "highly protective foods" (milk, cheese, eggs, liver, fat fish, green vegetables, raw fruits, butter, and cod-liver oil), less protective foods (yeast, meat [muscle], root vegetables), and nonprotective foods (legumes, cereals, nuts, sugar, jam, honey, margarine, and vegetable oils).

Appendix B shows that annual per capita consumption (actually disappearance) of meat (excluding poultry) decreased from a peak of 183.9 lb in 1850-59 to 138.9 lb in 1918-19 (a 24.5% decline), down to 125.8 lb in 1937-38. Sugar consumption rose from 13.1 lb in 1830-39 to 85.4 lb in 1918-19, up to 96.1 lb in 1938-39. Address: Chicago, Illinois.

3950. *New York Times*. 1941. Herb to be featured at vegetarian feast: Salsify, or 'oyster plant,' will be served to 150. Nov. 20. p. 36, col. 5.

• **Summary:** Vegetarian Society of New York Thanksgiving dinner meeting planned.

3951. *New York Times*. 1941. U.S. gives thanks for its strength in world at war. Nov. 21. p. 1, 12.

• **Summary:** The very last paragraph of this long article states: "While these thousands of turkey dinners were being relished, 125 members of the Vegetarian Society of New York sat down to a six-course meal at Schildkraut's Vegetarian Restaurant, 4 West Twenty-eight Street. The meal consisted of spinach loaf, molded into turkey shape, with carrot legs; vitamin cocktail of sauerkraut and tomato juice; vegetable bouillon with whole wheat noodles; combination raw vegetable salad; oyster plant and whole wheat cookies."

• **Summary:** The efficiency with which animals convert vegetable protein to meat protein is of the order of 10-20%. Address: Aberdeen, Scotland.

3954. Berolzheimer, Ruth. ed. 1941. The American woman's cook book. New York, NY: Garden City Publishing Co., Inc. viii + 816 p. Illust. (incl. many full-page color). Index. 21 cm.

• **Summary:** The paragraph titled "Soy-beans" (p. 390) notes that of the many varieties of soy-beans grown in the USA, the yellow variety is most widely used for cooking, although black and green soy-beans are also used, and are especially good in soups. Soy-beans require longer cooking than white beans, but the cooking time can be decreased if the beans are first soaked for 12 hours. Soy-related recipes include: Baked soy-bans (2 cups yellow soy-beans plus ¼ lb fat salt pork, p. 390).

The introduction to the long section on "Vegetarian dishes" (p. 351-59) states that such dishes add variety to the diet and often reduce the food bill. "They are welcome in any household where the program of using meat only once a day is being followed." This section contains no soy recipes, but does contain many that use peanuts or peanut butter, such as: Peanut balls. Peanut scrapple. Peanut butter cutlets. Baked peanuts. Peanut souffle. Peanut chops. Bean roast. Peanut and carrot loaf. Peanut roast. Cottage cheese and peanut loaf.

Note: This book was apparently published shortly before the USA entered World War II in December 1941. Address: Director, Culinary Arts Inst.

3955. Diehl, Harold S. 1941. Healthful living. New rev. ed. New York and London: Whittlesey House, a div. of McGraw-Hill Book Co. x + 449 p. Foreword by Morris Fishbein, M.D. Illust. Index. 21 cm. Series: Whittlesey House; Morris Fishbein, editor. [150+* ref]

• **Summary:** This is a basic, interesting mainstream book on health, written in a language that any intelligent person can understand. For many years the author was associated with the care of student health at the Univ. of Minnesota. "As dean of the Medical School of the University of Minnesota and as a teacher of preventive medicine, he has devoted many years to presenting the problems of hygiene and health." "Our nation is about to engage in a vast campaign [World War II] of preparedness... Only those who are physically fit can consider themselves prepared" (p. vii-viii, by Morris Fishbein, M.D.).

The tuberculosis death rate as dropped steadily and rapidly since 1900. The death rate from pneumonia, measles, and whooping cough are also dropping. A few years

ago heart disease became the leading cause of death for Americans of all ages. The cancer death rate is also rising.

In the two chapters on food, milk is considered "the perfect food." Eggs and meat are "expensive but necessary."

In chapter 7, titled "Dietary dangers," is a section titled "Dietary fads and fallacies," which begins: "The food faddist, with his missionary spirit and his pet prescription for health, is always with us." The subsection on "Vegetarianism" states: "The disciples of this fad usually follow it either because they consider animal foods deleterious to health or because they object to the destruction of animals to supply food for man. This latter reason is purely sentimental; but the former merits consideration.

"Professor E.V. McCollum, leading authority on nutrition, has written that 'a vegetarian diet, supplemented by fairly liberal amounts of milk is the most satisfactory type of diet that man can take.' But this is not true vegetarianism [sic]. In fact milk, butter, eggs, cheese, and other dairy and animal products are rarely left out of the diets of vegetarians. Hence, most 'vegetarians' are not really vegetarians but only abstainers from meat."

Note: The author fails to understand that a vegetarian diet has been defined for 100 years as one that avoids consumption of meat, poultry, and fish.

Also in this subsection on dietary fads are the use of enemas, a raw foods diet, alkaline foods, food combining, and dieting.

Chapter 21, "Choosing a health adviser," has the following contents: Introduction, scientific medicine, cost of medical care, choosing a physician, what to expect from a physician, healing cults (osteopathy, chiropractic, faith healing), why cults flourish, medical quacks, self-medication. Address: Prof. of Preventive Medicine and Public Health, and Dean of the Medical Sciences, Univ. of Minnesota.

3956. Klein, Ida. 1941. Neuzeitliche Kueche: Fleischlose Gerichte fuer alle Verhaeltnisse [Modern cookery: Meatless dishes for all occasions]. Hamburg, Germany: Vollmer & Bentlin. 144 p. 8 color plates. 20 cm. [Ger]

• **Summary:** Discusses vegetarianism, vegetarian cookery, and nutrition. Pages 70-72 discuss soybeans and give recipes for cooking whole soybeans (#197), and the following in which soy flour is often used in place of the traditional ingredient of animal origin: Pancakes without eggs (#198). Cakes without eggs or milk (#199). Short pastry for a tart shell (*Tortenböden*) or small pastries (*Kleingebäck*) without eggs (#200). Meatless roast made with soy flour (and Granola, #201). Patties made with soy flour (#202). Mayonnaise without egg (#203).

Page 85 has a meatless-meat recipe for "Soy-flour meat" (*Sojamehl-Fleisch*, #256).

Note 1. This is the earliest German-language document seen (Nov. 2014) that mentions a meat alternative, which it calls *Sojamehl-Fleisch* (Soy-flour meat).

Note 2. This is the earliest German-language document seen (Nov. 2014) that mentions a meatless burger—"Patties made with soy flour." Address: Germany.

3957. Leclerc, Henri. 1941. *Les légumes de France: Leur histoire, leurs usages alimentaires, leurs vertus thérapeutiques*. 3. éd. rev. et augm. [The vegetables of France: Their history, their food uses, their therapeutic virtues. 3rd ed., revised and enlarged]. Paris: Amédée Legrand & Jean Bertrand. 318 p. 20 cm. [10+ ref. Fre]
• Summary: In the preface, the author (who was born in 1870) indicates his belief in the superiority of a vegetarian diet.

3958. Pritchard, Florence; Pritchard, Edgar W. 1941. *A scientific meatless diet: Being the principles and practice of lacto-vegetarianism based on the latest discoveries, with original recipes*. 3rd ed. North Kensington Park, South Australia, Australia: F. & E.W. Pritchard (Adelaide: Hassell Press). 14 p. Illust. Index. 21 cm. *
 Address: Australia.

3959. Vander, Adrianus [pseudonym]. 1941. *Cocina vegetariana racional y enseñanza de una alimentacion sana* [Rational vegetarian cookery and teaching of a healthy diet]. Barcelona, Spain: Librería Sintet, etc. 167 + 2 p. Illust. 19 cm. [Spa]
• Summary: Part I is about the nutritional value and benefits of a vegetarian diet for the healthy and the ill. Part 2 contains 400 vegetarian recipes. Page 137 gives 2 recipes for "Puré de soja" (soy purée), which are basically the same as the recipe in the 1936 edition. Address: M.D.

3960. White, Julius Gilbert. 1941. *The animal kingdom, a reservoir of disease*. Madison College, Tennessee: Published by the author. Distributed by Julius Gilbert White Publications, Madison College, Tennessee. 64 p. No index. 22 cm. [215 ref]
• Summary: The author is a teacher at Madison College, a Seventh-day Adventist college and sanitarium. He presents the potential dangers of eating animal products, thus implying his support for a vegetarian diet—such as that served at Madison College. The main diseases discussed that can be transmitted to humans include tuberculosis, brucellosis, Bang's disease, pullorum disease, and leukosis. Address: Madison, Tennessee.

3961. Leadsworth, J.R. 1941? *Diet and endurance*. n.p. 47 p. Undated. Life and Health Series, No. 3. Received by NAL Aug. 21, 1941. [3 ref]
• Summary: About vegetarianism. Discusses: Diet and endurance: Athletic contests, laboratory tests of the effect of diet on endurance, effect of diet on the strength of animals, endurance of vegetarians. Anatomy and physiology:

Testimony of naturalists and physicians. Disease among animals: Stock-yard abominations. Effect on disposition: Personal experience, vegetarians and carnivorous animals, physical and mental qualities affected by diet.

A stamp shows that this booklet was received by the National Agricultural Library on 21 Aug. 1941. Address: M.D., Loma Linda Sanitarium, California.

3962. Roberts, F.G. 1941? *The natural health cook book and compilation of special diets: Containing approximately 300 meatless recipes*. New rev. ed. Melbourne, Australia: F.G. Roberts' Health Academy. 84 p. Undated. Illust. Port. 22 cm. *

• Summary: This is quite a basic (no color) book. There are no advertisements in it except for health centres which are in: Adelaide, Rockhampton, Maryborough, Toowoomba (2), Glenelg, and Newcastle. The only previous publication listed within it is "Long Life and How to Obtain It"—the date of whose first edition is not known; it went through at least 5 editions over the years. Address: Australia.

3963. *Health News (Hollywood, California)*. 1942. Leading U.S. health food stores selling *Health News*. 10(8):10. April 30.

• Summary: This directory is organized alphabetically by state. Within each state, the entries are arranged alphabetically by city; for each is given the name of the store, its address and phone number. A bold dot before the city means that the store also serves health meals. The states are: Arizona (4 stores). Arkansas (1). California (66). Colorado (2). District of Columbia (1). Florida (2). Georgia (2). Hawaii (1). Illinois (10). Indiana (3). Iowa (1). Kansas (2). Michigan (10). Minnesota (2). Missouri (8). Nebraska (3). New Jersey (1). New York (18). Ohio (9). Oklahoma (1). Oregon (3). Pennsylvania (9). Texas (7). Utah (1). Washington state (11). Wisconsin (5).

Thus, the states with the most stores listed are: California (66). New York (18). Washington state (11). Michigan (10). Within California, there are 27 stores in the greater Los Angeles area (incl. Beverly Hills, Glendale, Hollywood, Huntington Park, Long Beach, Los Angeles, North Hollywood, Santa Monica, West Los Angeles), 7 in San Diego, 6 in San Francisco, and 1 in Berkeley.

Fifteen of the stores have the term "Natural Food(s)" in the store name; most of these are in California. Only one has the word "Vegetarian"—San Diego, California, Vegetarian Cafe & Bakery, 1125 6th St. Phone: Main 3159. Well-known stores include: House of Better Living, Los Angeles. Richter's Cafeteria, Los Angeles. The Food Mill in Oakland. Sexauer Natural Foods in Santa Barbara. Huni Health Products and Lust's Original Health Foods in New York City.

3964. *Health News (Hollywood, California)*. 1942. Health foods please booming in San Diego. 10(8):11. April 30.

• **Summary:** Thriving shops in “Boom Town” (San Diego) include “Vegetarian Cafe, 1125 Sixth St. downtown” [Phone: Main 3159]. The shop has a fountain, cafeteria, and bakery.

3965. *Madison Health Messenger* (Madison, Tennessee). 1942. Dr. E.A. Sutherland, Health Educator. Campmeeting '42. p. 1-2.

• **Summary:** An excellent biography of the President of Madison College, with a large portrait photo. He was a student at Battle Creek College in Michigan, where he “earned a large portion of his school expenses by canvassing [selling Christian books door to door] during the vacation periods and by other work he could pick up. His student days were in the era of denominational controversy over health reform, and students took sides. Keen in their study of the Spirit of prophecy, Sutherland and his friend and roommate, Percy T. Magan, persuaded the college matron to give the fleshless diet advocates a vegetarian table. Thus began a many-sided career in the field of health education.

Walla Walla College was founded as a Seventh-day Adventist college in the state of Washington—a first in the northwestern United States. Edward Sutherland, still a young

man and newly married, was chosen to be president of this pioneer effort. As a health reformer, he saw that students at Walla Walla College were served a fleshless [vegetarian] diet.

In 1897 he became president of Battle Creek College. He became a leader in a country life movement, which at the turn of the century resulted in the transfer of Battle Creek College to a beautiful 300-acre fruit farm on the banks of the St. Joe River; it was rechristened Emmanuel Missionary College (EMC [in Berrien Springs, Michigan]). “Here, the health principles were taught by precept and practice.”

Then Madison College was founded. “At Madison, another and important step came with the purchase of what had once been the conference-operated food factory at Edgefield Junction [formerly operated by Jethro Kloss]. The wrecked structure was rebuilt on Madison College campus, where, with meager facilities but with the pioneer spirit of former years and the faith of a Joshua, Dr. E.A. Sutherland and Mother Druillard set the pace for a health food manufacturing center that today [as Madison Foods] is distributing its products in the 48 states of the Union and some places across the sea.

“Madison Foods has carried on experimental work in its laboratories, especially with that rich, Oriental legume, the soybean, that has given Madison preeminence in its use as a successor of animal flesh.

“For fifty years, Dr. Sutherland has pioneered a many-sided work of health. He has ventured often into untried fields.” “In the field of health, he is recognized by many as the one who, in God’s hand, is responsible for the restoration of health. Through fifty years of unremitting service, he has come forth still sturdy in health, largely because of a consistent practice of the great principles he so strongly advocated and with a buoyancy of spirit that still serves to stimulate faith in many a faltering mind. To many who know him intimately, he is a fine example of the results of wholehearted commitment to the great principles of Christian education, with all that term implies, together with a simple personal acquaintance with the Saviour that makes it possible for him to say under all circumstances, ‘We know that all things work together for good to them that love God.’”

3966. Naylor, Mildred V. 1942. Sylvester Graham, 1794-1851. *Annals of Medical History* 4:236-40. May. 3rd series. *

3967. *Vegetarian Messenger and Health Review* (England). 1942. Soya upholstery. Aug. p. 147. [1 ref]

• **Summary:** The following is summarized from an article in *Bus and Coach*, June 1942. “One prominent transport engineer in this country has long advocated the operation of diesel engines on oil extracted from the soya bean. Another use of this accommodating vegetable product has been developed by the Ford Company in America, and is a link in Henry Ford’s efforts to bring agriculture and industry into a

closer relationship. From the soya bean is prepared a protein fibre which is at present 80 per cent. as strong as sheep wool, and it is hoped to improve still further on this.

"The fibre can be used in the same way as wool, being suitable for felting as well as weaving. Though primarily intended for the production of upholstery for Ford cars, it can also be made into suitings, heavy clothing materials or carpets, and as either clothing or furnishing material it hangs and drapes well."

3968. Davis, Adelle. 1942. *Vitality through planned nutrition*. New York, NY: The Macmillan Co. xii + 524 p. Sept. Illust. Index. 22 cm.

• **Summary:** This book is written for young people. Soybeans and their nutritional value are discussed throughout. "Dedicated to the high-school student who appreciates both the immediate and the future values of full health."

Of the 23 amino acids, all but 10 can be made by the body. These ten are called "essential amino acids" and must be obtained from food. Protein foods "containing all ten of the essential amino acids in generous amounts are called complete proteins, or proteins of high biologic value." "The proteins of eggs and milk have the highest value." The proteins in glandular meats (liver, kidney, etc.) rank second in value. "Proteins from nuts, soybeans, wheat, especially wheat germ, and cottonseed flour and meal are complete proteins" (p. 58-59).

"Proteins and vegetarianism. Many thousands of people in the world, particularly the Eskimos, Laplanders, and nomad tribes, eat little or no proteins from vegetable sources. Other thousands eat only vegetable proteins, because of poverty or religious scruples, such as the millions of people in India and China. Races which have a high animal-protein intake appear to have excellent physiques and virility and a capacity for endurance which far surpasses the energy and physiques of those eating only vegetable proteins.

"When the complete proteins of wheat, soybean, cottonseed, peanuts, and other nuts are eaten, and the diet is planned with utmost care, it is possible to supply the body with sufficient amounts of the essential amino acids. Some of the world's leading athletes have been vegetarians. If milk and eggs are generously added to an otherwise vegetarian diet, it can be made adequate in proteins though it is likely to be deficient in iron. There is no argument against a person's being a vegetarian, except that unless he is trained in nutrition, he is likely to become an unhealthy vegetarian." (p. 67, 71).

Many vegetable proteins, such as those in soybeans and other legumes, are not well digested unless heated (p. 69). Boys age 13-15 require 85 gm/day of protein, increasing to 100 gm/day for boys age 16-20. Adult women need 60 gm/day and adult men need 70 gm/day (p. 70).

Soybeans (and soy flour) are a good source of B-complex vitamins, including thiamin (p. 160), niacin (p.

186-87), pyridoxin [pyrodoxine] (incl. soybean oil; p. 193), pantothenic acid (p. 194). Since vitamins of the B complex cannot be stored in the body, "the daily diet must be carefully planned if full health is to be maintained." "Buy only wheat breads and cereals with 100 per cent whole grain marked on the labels. Use wheat-germ breads... and soybean bread whenever possible." Also blackstrap molasses and brewers' yeast. "Use soybeans, baked or in a loaf or patties, as meat substitutes... Cultivate a taste for liver, brain, kidney, heart and sweetbreads and use them more frequently than other types of meat (p. 208-09).

"Salted peanuts and roasted soybeans are ideal candy substitutes which build rather than destroy health. Both are excellent sources of vitamins of the B complex" (p. 210).

Wheat germ is the richest natural source of vitamin E, which is "also found in cottonseed oil, corn oil, sesame oil, soybean oil, and peanut oil" (p. 286-87). There are at least three forms of vitamin E, which are called the vitamin-E complex: alpha-, beta, and gamma-tocopherol. "Alpha-tocopherol is the most active and has been made in the laboratory."

Calcium: "Many Oriental races obtain their calcium principally from soybeans and soybean curds [tofu], which form a staple food."

Note: This is the earliest English-language document seen (April 2013) that uses the term "soybean curds" to refer to tofu.

Bones are used as a major source of calcium by Eskimos, Africans, and (formerly) American Indians. Adults should consume at least 750 mg/day of calcium, the amount found in 3 glasses of milk (p. 312-15). "Another vegetable which is rich in calcium is the soybean, a food all too little used in America. Soybean flour is fourteen times richer in calcium than refined wheat flour, and baked soybeans are many times richer in calcium than baked navy beans. Every person should learn to enjoy this highly nutritious food and make it an important part of his diet." (p. 319).

In Chapter 29, *The functions of the blood*" (p. 328-30), Davis discusses the effect of acid and alkali, but in a much different way than former health food advocates. She does not advocate alkaline foods, but shows how the body keeps its fluids near neutrality, or very slightly alkaline. "Soybeans are extremely rich in iron, of which 80 per cent reaches the blood. In a mixed diet as a whole, only about 50 per cent of the iron in foods is available" (p. 340).

Iodine is necessary to prevent goiter. "Since early times, the eating of seaweed has been known to affect goiter favorably" (p. 350). Salt (sodium chloride) is essential to good health. In very hot weather and dry air, so much can be lost through perspiration that death results. "Death due to salt deficiency occurred during the first years of work at Boulder Dam... In milder forms, a lack of salt causes heat cramps or heat stroke," which is "accompanied by nausea, dizziness, general exhaustion, and muscular cramps in the legs, back,

and abdomen. Without salt, the more water drunk, the worse the condition becomes.” “During very hot weather salty foods such as salted peanuts, popcorn, or soybeans, salty cheeses, or potato chips should be kept near the drinking water” (p. 367).

The section titled “Your body’s requirements” (p. 386-89) lists 8 food groups or foods that are the best sources of required nutrients. These include: “7. One serving of meat, fowl, fish, eggs, or a meat substitute such as baked navy beans or soybeans,...”

“Dried fruits should be the main candy substitute... Other health-building candy substitutes are unsweetened chocolate, salted peanuts or soybeans, chocolate-covered peanuts, and cracker jack made with black molasses” (p. 400-01).

A table (p. 484-85) gives the nutritional composition of soybeans: (1) dried, cooked; (2) dried, uncooked. Address: A.B., M.S., consulting nutritionist, Los Angeles, California.

3969. *Let’s Live*. 1942. San Diego’s Health Food Center—Vegetarian cafeteria and bakery (Ad). Dec. 15. p. 8.

• **Summary:** This tiny (2¼ by 1-inch) ad states: “C.A. Thompson, proprietor. Free dietetic service.” Address: 1125 Sixth St., San Diego, California. Phone: M. 3159.

3970. *Let’s Live*. 1942. Vegetable meat balls. Dec. 30. p. 10.

• **Summary:** Contains a recipe for meatless meat balls, based on ground almonds and cooked egg plant [eggplant]. It is not necessary to use soybeans when making meat substitutes. Rationing is now in force in America during World War II.

3971. Lust, Benedict. 1942. Come to sunny Yungborn: Nature cure health resort—Tangerine, Florida (Ad). *Nature’s Path* (New York City). Dec. Back cover.

• **Summary:** This full-page ad begins: “Sun, light and air baths. Vegetarian and special diets. Every facility for natural healing... To get well... To learn to keep well.” Photos show: (1) Spanish bayonet or yucca in full bloom. (2) Part of building with lawn and azalea walk. Orange grove in background. Address: P.O. Tangerine, Florida; or 343 Lexington Ave., New York City. Phone: Lex. 2-1263.

3972. *Nature’s Path* (New York City). 1942. 50th anniversary [of Benedict Lust in the USA]. Dec. p. 478.

• **Summary:** “Fifty years ago on November 17 [1892] a young immigrant stepped ashore on the Battery in New York from a fast steamer that had brought him from Liverpool. He was not blessed with worldly riches, but determined to carve himself a career and to become worthy of his newly adopted country.” His goal was to spread the teachings of Father Kneipp in the New World. “Today his magazines, his books, his Original Health Food Store (the first in this country), his school of Naturopathy, his two health resorts in Butler, New Jersey, and Tangerine, Florida, are the framework for

his educational work... We wish to express our appreciation for the privilege of working for him, and pray that he may be preserved in good health for many more years.” Signed: “The editorial staff and employees of Dr. Benedict Lust.”

3973. Reid, Marion. 1942. Soya beans help solve food problem. *Health Culture*. Dec. p. 28-30, 55.

• **Summary:** Describes Mahatma Gandhi’s work to improve living conditions in India, a country with a population of 350 million, all but 6 million of whom live in 700,000 villages. “Gandhi himself is a vegetarian and he is introducing a sane vegetarian diet into the villages. His medium of instruction is his little weekly paper called Harijan (i.e., ‘Child of God’). The people have acquired the pernicious habit of buying polished rice, white sugar, white flour and commercial oil, instead of growing these things themselves and using them in their natural condition as they used to do...”

“Gandhi is a great believer in the soya bean. He thinks that soya milk will eventually replace the dairy product. In a recent number of Harijan he published the following extract from pamphlet No. 7 issued by the ‘Bombay Presidency Baby and Health Week Association.’” The extract is reprinted in full. For details see Bombay Presidency... 1935.

Note: *Health Culture* magazine was published from 1894 to 1964 in New York City. In 1910 Elmer Lee, M.D., was the editor.

3974. Reiss, Joseph. 1942. Vegetarian Correspondence Health Club (Ad). *Nature’s Path* (New York City). Dec. p. 478.

• **Summary:** “Purpose: To disseminate health knowledge and exchange ideas. A lending library for members.

“Aims: To advocate the living of a higher life, a purer life physically. Moderation in all things mentally, physically, morally, and sexually. Send self-addressed stamped envelope for prospectus. I also want to buy all books pertaining to health. Write me what you have for sale.” Address: 3932 Blaine St., N.E., Washington, DC.

3975. *American Vegetarian-Hygienist* (The). 1942-1955. Serial/periodical. Santa Barbara, California, then Paterson, New Jersey, then Duncannon, Pennsylvania. Official Publication of International Vegetarian Union, Chicago Vegetarian Society, and American Vegetarian Union. *

• **Summary:** Title from Jan. 1956 to Feb. 1957 was *American Vegetarian*, published in Pismo Beach, California. However an ad in the May 1952 issue of *Nature’s Path* (USA, p. 24) gives the address of this monthly publication as: 117 W. 48th St., New York City, NY.

Talk with Jay Dinshah. 1992. May 8. This magazine probably started publication in California. One of the early editors and publishers was a Mr. Hilton in California. In about the mid-1960s it was taken over by Jesse Mercer Gehman, who lived in Patterson, New Jersey, for most

of his career; he published it there. In his later years, Gehman retired to Duncannon, Pennsylvania, and continued publishing the magazine there until his death in about 1977. It was one of the best vegetarian magazines in its day, published regularly (either monthly or bi-monthly) for many years. Address: Santa Barbara, California, then Paterson, New Jersey.

3976. Anderson, Hans Steele. 1942. Food therapy: Diet and the healing art. Fort Meade, Florida: The Anderson Publishing Company. 152 p. 23 cm.

• **Summary:** Chapter 2, "Dietetics and health rejuvenation" states (p. 37): "Therapeutic Value of Soy Bean Products: Analytical studies show that soy bean products are richer in protein than beefsteak; richer in calcium than cow's milk; richer than eggs in lecithin; and richer than any other source in protective mineral and vitamin. Its high protein content gives it a nutritive value per pound of more than two pounds of beefsteak or two quarts of milk. There are millions of Chinese people who have thrived for centuries on a diet in which soy beans have replaced flesh and fish and fowl and butter and milk."

Chapter 4, "Detoxicate and replenish the body fluids" gives these "Special Recipes" (p. 64-67): Soya bean milk #1 (made with light yellow soya bean flour) and #2 (made with powdered soya milk-soya lac). Soya bean butter #1 (made with soya bean flour) and #2 (made with powdered soya lac). Soya breakfast cereal (with soya flour dissolved in hot soya milk). Baked soya custard (made with soya flour blended with soybean milk, plus an egg beaten and a little Vegex or soy sauce). Soya flour muffins. Soy-wheat bread.

The author was born in 1877. Address: Author.

3977. Butler Food Co. 1942. Order blank. P.O. Box 4, Cedar Lake, Michigan. 1 p. Catalog. Undated (but date is written on by hand).

• **Summary:** The following soy products are listed: Cereals: Soy-fruit & nut cereal (ready to eat). Vegetarian Meats: ViM-eat soy-nut loaf, ViM-eat soy-nut cheese. Beverages: Soy-kawfee. Flour: Entire soybean (very fine) bulk, entire soybean wheat mix 30-70 bulk, soy beans with tomato sauce, ViM-ilk, and Soy-Nuts.

Note: This is the earliest document seen (March 2001) concerning Butler Food Co., Cedar Lake, Michigan. Address: Cedar Lake, Michigan. Phone: 128-F-21.

3978. Forster, Emily L.B. 1942. Everybody's vegetarian cook book... Revised and enlarged edition including a special chapter on wartime foods. London: Foulsham's Cloth-Bound Pocket Library. 128 p. 12°. *

3979. Giraud-Gilliet, J. 1942. Le soja, aliment d'avenir: manière de le cultiver; 2 à 300 façons de le consommer [Soya, food of the future: How to cultivate it; 200-300 ways

to consume it]. Saigon: Imprimerie de C. Ardin. 285 p. Index. [Fre]

• **Summary:** Contents: Dedication. Introduction. Part I: Summary study of soya (the soybean): Its cultivation. 1. The nature of soya: Its area of expansion. 2. Cultivation of soya: Soil, manure & fertilizer, seeds. 3. Interest in soya: Its richness in nutritive elements and comparison with other foods. Various possibilities for utilization: therapeutic uses for hygiene and diseases (vegetarian diet, diabetes, beriberi, diseases of the nervous system, anemia, slimming, milk diet), agricultural uses for fixation of nitrogen in the soil and as a fertilizer, use in the feeding of animals (green forage, dry forage, soybean cake, flour, seeds, germinated seeds, straw and pods, soymilk, milk), industrial utilization (soybean oil and its derivatives, glycerine, soy casein), use as human food (whole dry soybeans, soy sprouts, soybeans mashed or ground after they are cooked, soybeans cracked or crushed before they are cooked, fermented soybeans, soymilk, soymilk derivatives / foods made from soymilk {tofu / *dâu-phu*, yuba / *tao hu ky*, dry yuba rolls / *phu chuc*, beverages}, edible oil), utilization for social work (drops of milk, bowls of soya, inexpensive restaurants, battle against malnutrition and degeneration, for school gardens, pagodas, waste lands).

Part II: The main soyfood products and how to prepare them at home. 1. Soymilk, soymilk curds (*tau hu hoa*), small white cheeses (*petits fromages blancs* {*dâu-hu miêng*}), folded sheets of yellow yuba (*feuille jaune plissée de crème de soja* {*dâu-hu ky vang*}), white sheets of yuba (*feuille blanche unie* {*dâu-hu ky trang*}), dried or smoked yuba (*plquettes séchées ou fumées* {*dâu-hu ky ngot*}), fermented tofu-like cream cheese (*fromages fermentées: cancoillotte comtoise au soja*). 2. Soy flour: Roasted soy flour, soy bread, sojenta (soy polenta), pasta (soy vermicelli and vermicelli of mung beans {*dâu xanh*} or *song than*). 3. Soy condiments. Solid condiments: natto and douchi (*taotché*), condiments that are pastes: miso and doujiang (*tao tjiung*) and koji [sic, not a paste but used to make miso, doujiang, shoyu, and jiang-you], liquid condiments: shoyu, jiang-you (*tsiang yeou*), (*tao yu*), ketjap (Indonesian soy sauce), Vietnamese soy sauce (*tuong*).

Part III: Recipes. 1. Introduction: Essential recommendations, the cookery of the poor, comparative cuisine, general recipes. 2. Soups and paps. 3. Hors d'oeuvres and salads. 4. Vegetables. 5. Meat, fish and egg dishes. 6. Breakfasts, sweets, and desserts.

Conclusion. Appendix. Errata. Address: Administrateur des S.C. de l'Indochine; Vietnam.

3980. Roberts, W.E. 1942. Anatomical derivations and meanings. Sydney, Australia: Angus and Robertson (Halstead). vii + 66 leaves. * Address: Australia.

3981. Rotondi, Pietro. 1942. Vegetarian cookery. Los

Angeles, California: Willing Publishing Co. 151 p. Recipe index. 23 cm. 2nd edition 1948 (150 p.).

• **Summary:** This book, dedicated “To Humanity,” is basically a vegan cookbook—except for the use of a little honey. It uses no dairy products or eggs, and views a raw food diet as the ideal—although many recipes call for cooking. Following the dedication is this quote: “The human body is the temple of God and as real as God himself, because He dwells in it...”

Under “Substitutions” (p. 21) the author notes that “Soy milk may be substituted for cow’s milk...” Under “For the infant” we read: “Advice to the mother—Almond milk is the most perfect and ideal food for the infant both in nutritional value and digestibility.”

Soy sauce (p. 70-71, etc.), Savita, and Vegex are widely called for a seasonings. The soy-related recipes in this book seem extremely original and innovative; they include: Baked lima beans (with soy bean milk, p. 58). French-fried onions (with soy bean milk, p. 61). Peas cooked with potatoes and soy bean milk (p. 67). Whole wheat or barley chowder (with soy bean milk, p. 68). Ripe olive croquettes (with soy milk, p. 71). Vegetable hamburgers (with soy bean milk, p. 72). Carrot loaf I (with soy milk, p. 73). Tofu (fried in flour breading, p. 74). Tofu loaf (baked, p. 74). Tofu omelet (p. 74). Tofu and garbanza [garbanzo] beans (p. 75). Gluten steak (with 1 cup soy sauce, p. 75). Chop suey (with [mung] bean sprouts and soy sauce, p. 78). Savory lima patties (with soy bean bread, p. 85). Soy bean loaf (with cooked and ground soybeans, p. 85). Soy gravy (with soy milk and soy sauce, p. 87-88). Wholewheat bread and rolls (p. 89-92; many call for the use of soy milk). Tofu cake I (like a baked cheesecake with shredded coconut, lemon, and agar, but no crust, p. 99). Tofu cake II (like a cheesecake with a wholewheat or graham cracker crust, p. 99). Note: This is the earliest document seen (Jan. 2020) that mentions a tofu cheesecake, and the earliest recipe seen (Oct. 2003) for a tofu cheesecake.

“All Bran” muffins (with bran and soy milk, p. 112). Soy wheat germ muffins (with soy pastry flour, p. 113). Corn meal muffins (with soy milk, p. 113-14). Soy bean chocolate frosting (with “2 squares soy bean chocolate,” p. 116). Soy bean chocolate date pudding (with 5 oz “soy bean chocolate” and 1 tablespoon soy bean milk, p. 120). Rice pudding deluxe (with 1 quart soy milk, p. 121). Soy bean chocolate ice cream (with 1/3 pound soy bean chocolate and a pint coconut milk, p. 127). Fruit ice cream, Maple sugar candy, Maple fudge (each with soy milk, p. 129). Soy bean chocolate fudge (with 1 cup “grated soy bean chocolate” and 3 tablespoons soy milk). Peanut butter fudge (with soy milk, p. 130). Soy bean chocolate caramels (with 3 squares soy bean chocolate and ½ cup “soy milk,” p. 131).

On pages 141-43 are two charts: (1) Alkaline, acid and neutral foods (soy beans [dried or fresh], soy bean bread, and soy bean milk are listed as having an alkaline ash, whereas

flesh foods, eggs, cheese, and most nuts are listed as having an alkaline ash). (2) Vegetable protein vs. animal protein. Divides various foods that are high in protein content into vegetable and animal, then ranks them in descending order of protein content. Included in the vegetable protein are: 1. (highest) Soy bean flour 39.5%, 4. soy beans 34.0%. The highest ranked animal product is dried beef 39.2%. The average protein content of 26 vegetable foods is 25.89%, compared with 21.79% for 26 animal foods.

The author, a chiropractor, died in about 1986 in a fire at about age 92. A videotape of him has been produced by the Rotondi foundation in Los Angeles.

Note: This is the earliest English-language document seen (Nov. 2014) that contains the term “Vegetable hamburgers” (or “Vegetable hamburger”). Address: Los Angeles, California.

3982. Sarda, Har Bilas [diwan bahadur; Haravilasa Sarada]. 1942. Works of Maharshi Dayanand and Paropkarini Sabha: A reply to M. Amar Singh’s Views on Meat Diet and Forgeries suppressing Swami Dyanand’s Opinions. Ajmer, India: C. Chandak, Vedic Yantralaya. 129 p. [10+ ref]*

• **Summary:** About the Arya-Samaj, asceticism, Hinduism, and vegetarianism. The author, Sarda, lived 1867-1955.

3983. Son, A. van. 1942. Revolutie in de keuken en op den disch! Praktische handleiding voor voedingshervorming. 2. omgewerkte uitgave [Revolution in the kitchen and on the plate! A practical guide for food reform. 2nd revised ed.]. Antwerp, Netherlands: Terug ter Orde. 112 p. 21 cm. [Dut]

• **Summary:** About vegetarianism and a raw food diet. Page 42 mentions soya, used in a potato soup.

3984. White, Julius Gilbert. 1942. Abundant health: Expounding the Learn-how-to-be-well system of daily living. Madison College, Tennessee: Published by the author. xix + 378 p. See p. 298-303. Illust. Index. 24 cm. [50+* ref]

• **Summary:** The maintenance of physical and mental health can be achieved through a vegetarian diet and wholesome living. Interesting sections include: Denmark’s food experiment under Dr. Hindhede during World War I (p. 144). Sixteen reasons for vegetarianism (p. 144-48). Note that Madison College is a Seventh-day Adventist college and sanitarium.

Soya is discussed on the following pages: Soy bean flour (p. 136). Soybeans and soybean products as a replacement for meat (p. 143-44). One section titled “The Soy Bean: The Wonder Food” (p. 298-303) discusses soybean sprouts, soybeans as coffee, soy “butter” (this product, similar in taste and texture to peanut butter, is now on the market), home-made soy butter homemade soy mayonnaise (made from the above soy butter), soy acidophilus milk (also often called soy buttermilk).

Recipe for home-made soy butter: 4 tablespoons of

soy flour. 4 tablespoons of water. Mix well and cook four minutes or less. Add one cup soy bean oil and beat with a rotary beater till the oil disappears. If color is wanted add a little of some kind of butter color. Add a little salt to suit taste.

Note: This is the earliest document seen (Dec. 2012) that describes how to make soynut butter on a home or laboratory scale. Address: Madison, Tennessee.

3985. Wu, Ch'ên-En. 1942. *Monkey*, translated from the Chinese by Arthur Waley. London: G. Allen & Unwin. 305 p. 22 cm. *

• **Summary:** This literary masterpiece consists of selections from the *Hsi Yu Chi*, an anonymous Chinese novel often attributed to Wu Ch'ên-En, or sometimes to Ch'iu Ch'ang Ch'un. Tripitaka, whose pilgrimage to India is the subject of the story, is a real person, better known to history as Hsüan Tsang" (lived ca. A.D. 596-664). An American edition was published in 1943 by The John Day Co., New York.

Dr. H.T. Huang, expert on the history of Chinese food and agriculture (personal communication, 5 June 1993), notes that "Gluten is referred to often as a staple in vegetarian diets in this famous novel, written by Wu Ch'ên-En in about 1570, about the journey of a devout monk who was sent to the far Western region of China during the T'ang dynasty to bring Buddhist sutras back to the T'ang court. *West* refers to the home of the Buddha, that is India."

3986. *New York Times*. 1943. Special rationing plan for vegetarians studied. Jan. 25. p. 16, col. 4.

• **Summary:** Secretary Wickard assures vegetarians of special consideration in food rationing.

3987. Trussell, C.P. 1943. Wickard says U.S. faces British diet: Soy bean flour and other substitutes to rise. *New York Times*. March 9. p. 14, col. 2.

• **Summary:** Americans are going to have to learn to use their food more efficiently. The weekly U.S. adult ration for one week is itemized; it includes 1 lb of meat, 2 oz of butter, 4 oz of margarine, 2 oz of cooking fat, 8 oz of sugar, 4 oz of cheese, etc. Claude R. Wickard, Secretary of Agriculture and Food Administrator told a Senate subcommittee investigating food and manpower shortages: "We are going to use our peanuts and soy beans increasingly, it seems to me, for human food. I have asked that our production capacity of soy bean flour for edible consumption be increased from 400,000,000 pounds to 1,400,000,000 pounds by the end of this year, because a large part of that is going into human consumption, as a substitute for meat... And we are going to have to start with some of those grains, eating them ourselves, rather than feeding them to animals and eating the animals."

3988. Jennings, R.D. 1943. Feed consumption by livestock,

1910-41. Relation between feed, livestock, and food at the national level. *USDA Circular* No. 670. 57 p. April.

• **Summary:** Table 35 "Dairy feeds: Feed materials used in manufacture in 1940 as reported by feed manufacturers," by region and state, includes soybeans and soybean meal. Two regions using high percentages of soybean meal are: Kentucky and Tennessee (23.9%). Ohio, Indiana and Illinois (23.5%). Address: Senior Agricultural Economist, Bureau of Agricultural Economics.

3989. *Times (London)*. 1943. News in brief. June 23. p. 2, col. 3.

• **Summary:** "Under a Ministry of Food Order the pre-packing of soya flour will be prevented after June 30. Soya flour will in future be used primarily by manufacturers, but to assist vegetarians, &c. a quantity will be available at a price not exceeding 5d. a lb."

3990. Lust, Benedict. 1943. Come out to beautiful "Yungborn"—Nature cure home and recreation resort, Butler, New Jersey (Ad). *Nature's Path (New York City)*. June. Back cover.

• **Summary:** This full-page ad states: "Vegetarian, fruitarian, raw food and specially prescribed diets." "Tune your system to the rhythm of good health—its easy. Come out for rest, relaxation, rebuild your health. A real paradise for exhausted bodies. In Ramapo Mountains, Butler, New Jersey." Photos show: (1) Three ladies holding hands, dancing in a circle under trees. (2) Part of a building at Yungborn, with lawn and trees. Address: 343 Lexington Ave., New York City. Phone: Lex. 2-1263.

3991. *Nature's Path (New York City)*. 1943. From our book shelves [Reviews of five books by Prof. Dr. Edmond Bordeaux Szekely]. June. p. 250. [5 ref]

• **Summary:** The books are: (1) *The Future of Humanity* (20 p. 50 cents. "The author is a brilliant scientist and healer of international fame, and the series of books published by him reflect an unusual blending of scientific learning and lofty imagination and idealism.") (2) *Sexual Harmony* (54 p. \$2.00). (3) *The Dialectical Method of Thinking* (46 p. \$1.00). (4) *Modern Man's Philosophy* (2 vols., 131 p. \$3.00. Contains chapters on diet, agriculture, fruitarianism, longevity, man's adaptation to Nature, and Natural Living). (5) *The Therapeutics of Fasting* (26 p. 75 cents).

3992. *Time*. 1943. Down with meat. Sept. 27. p. 70, 72.

• **Summary:** "The U.S. Department of Agriculture warned the U.S. people to prepare for big changes in their diet in 1945. Example: they will get a lot less meat, a lot more beans.

"Harvard doctors, after a two-month feeding test, announced that an active adult can get along perfectly well with no more than an ounce of meat a day."

Food scientists are working to develop supplementary and substitute foods. "For almost two years a notably thorough analysis of possible meat substitutes has been conducted by Yale Botanist Paul Rufus Burkholder. He and others have found a number which on almost every food count (protein, vitamins, calcium, carbohydrates) are as good as or better than beefsteak; even whole wheat compares well with meat."

The researchers state that soybeans rival meat in protein, cost only about one-fourth as much, and that from soybeans one may secure a great variety of foods—from milk shakes to steaks. Soybean sprouts can be grown at home "indoors in a pot or jar, they can be raised the year round from dried field soybeans, sprout in five days or less, can be cooked as quickly as a pork chop, have several times as much vitamin B complex as the bean itself, rival tomatoes in vitamin C. A crisp, tasty dish, they have been a staple of the Chinese diet for centuries."

Other good sources of protein are cottonseed, peanuts, vegetable steaks [meatless] (Already on the market are "Soyage, Stakelets, Proteena, Victory Chops"), yeast, and germs [bacteria].

3993. *Let's Live*. 1943. Classified: Periodicals (Ad). Sept. p. 23.

• **Summary:** *American Vegetarian*—Only vegetarian newspaper in the world. Send 10 cents for sample copy. R.L. Pratt, editor, Pismo Beach, California.

Health Foods Retailing—Official trade publication of the National Health Foods Association. A newsy magazine for store owners, jobbers, and manufacturers. Bi-monthly. Circulated coast to coast. \$1.00 per year. Health Foods Retailing, 100 Stevens Ave., Mount Vernon, New York.

"*Nature's Path*, established 1896 by Dr. Benedict Lust. America's pioneer magazine devoted to Natural Living and Nature Cure." "10 cents a copy, \$1.00 a year. Canadian and foreign, \$1.50. Send orders to Dr. Benedict Lust, Dept. C., Lexington Ave., New York City."

Note: This is the earliest document seen (April 2007) that mentions the National Health Foods Association—which later became the NNFA.

3994. Gallup, George. 1943. The Gallup poll. One group not worried over meat rationing; U.S. survey indicates 2,800,000 vegetarians. *Washington Post*. Oct. 2. p. 9.

• **Summary:** A cross-section of Americans nationwide were asked the following question: "Some people in the United States are vegetarians, that is, people who eat no fish, fowl, or meat of any kind. Do you happen to be a vegetarian?" The results showed that, excluding members of the armed forces, there were 2.8 million vegetarians in the USA. "If all those people did eat meat, they would consume something like 5,060,000 pounds a week. Hence the meat-eaters can thank the vegetarians for making that amount of meat available to

them—if they can get it.

"The vegetarians encountered in the survey were asked why they happen to be vegetarians. The principal explanations given by them were reasons having to do with health, with religious or humanitarian considerations, or with taste preferences in food." Geographically, vegetarians are fairly evenly distributed throughout the USA however more of them are found in large cities than in small towns or farm areas. Most vegetarians are "lacto-ovo vegetarians."

Note: In 1943 the population of the U.S. was 137.3 million. Thus, vegetarians made up about 2.0 percent of the population at that time. Forty years later, Robeznieks (1986) estimated that vegetarians (those who do not eat flesh foods) as a percentage of the U.S. population, grew from 0.55 to 1.28% in 1977-78, to 3.7% in 1985, and 4.0% in 1986. Realistically the number is about 3-4% in 1986. Address: Director, American Inst. of Public Opinion.

3995. Kollmorgen, Walter M. 1943. The soybean goes to college. *Tennessee Planner* 4(1):15-20. Sept/Oct.

• **Summary:** The author was invited to lunch at Madison by E.M. Bisalksi, who is in charge of the food research and production program. The menu, typical of the meatless meals served on the campus, included: Meatless meat balls (Yum), fresh soymilk, Zoy-Koff (coffee substitute), margarine (75% soybean oil), and bread (made in part from soybean flour). "It should be noted that in the above menu animal foods and animal products are completely absent, with the exception of a small portion of cream used in the Zoy-Koff... Cans of Madison Foods substitutes for milk and meat carry the words "Contains no animal products." These food were not developed to stretch meat ration points during the war; some of them are nearly 20 years old.

Large photos on a 2-page spread show the following Madison products: Wheatasoy, Kreme O'Soy (sliced bread), Kreme O'Soy (canned soymilk), bottled soymilk, Yum, Zoyburger, Soy Cheese, Kreme O'Soy Butter Muffins, Stake-Lets, Not-Meat, Vigorost, and Zoy-Koff.

"Dr. Floyd Bralliar, Vice President of Madison College, has for years conducted experiments with soybean varieties. In this work he is closely associated with experts in the United States Department of Agriculture. Dr. Bralliar believes that Tennessee farmers can profitably devote more acreage to the soybean. He holds that canneries will do well to can more fresh soybeans..." Address: Research Director, Tennessee State Planning Commission.

3996. *Battle Creek Enquirer and News (Michigan)*. 1943. Dr. Kellogg is dead at 91. Pneumonia attack is fatal at home here. Dr. Kellogg wills entire estate to promote health. Dec. 15. p. 1-4, 9-10. Wednesday.

• **Summary:** This special reprint edition contains an excellent summary of the material concerning Dr. John Harvey Kellogg's life and death, with a large portrait of the

silver-haired goateed celebrity, published by the *Enquirer and News* in the week following his death. He was born in 1852 and died on 14 Dec. 1943. He was buried at Oak Hill Cemetery on Saturday afternoon, beside his wife who died in 1920. For 67 years he was associated with the Battle Creek Sanitarium.

Titles of the various stories are: Page 1: Pneumonia attack is fatal at home here: Distinguished head of Sanitarium active until last few hours in service of mankind. He perpetuates biologic living: Leaves nothing to individuals in creating trust to teach reforms. New officers chosen for Battle Creek Food Co. Funeral is held for Dr. Kellogg: "Life work a record of human helpfulness," the Rev. Carleton B. Miller says. For 'grass eater' [vegetarian], Dr. Kellogg reckoned he did pretty well. Page 2: His life work felt by the whole world. Dr. John Harvey Kellogg a factor in civilization (the story of his life and work). Photos of old and new (post-1942) sanitarium buildings. Page 3: A world authority on health methods. Biologic theories gained him fame. Battle Creek's tribute scroll on 90th birthday. Photos: Kellogg at age 41. Last big birthday party. Page 4: WELL [radio station] to carry funeral service. Nation's great pay homage to Dr. Kellogg in messages: including former president Herbert Hoover, Secretary of the Navy Frank Knox, philosopher Will Durant, senator Arthur Vandenberg and senator James J. Davis, C.R. Keypart (president of the Michigan State Medical Society), David Fairchild (Cocoanut Grove, Florida), Alonzo I. Baker, Miss Lenna F. Cooper (chief dietitian of Montefiore hospital, New York, first dietitian at the Sanitarium, and former dean of home economics at Battle Creek College), John D. Rockefeller Jr., Dale Carnegie, Prof. Irving Fisher of Yale Univ., Dr. E.A. Sutherland (head of the Madison Sanitarium, Madison, Tennessee), and Dr. Charles W. Dabney. Nurses stand by Dr. Kellogg's bier. Seen in review. The lengthened shadow. Public service for Dr. Kellogg: Funeral at San auditorium at 2:30 P.M.; Body to lie in state.

A beautiful scroll, hand written as a tribute on his 90th birthday states: "To Dr. John Harvey Kellogg

Whose foresight, ability, energy, inventive genius, philanthropy and deep understanding of existing conditions and needs of the generations to follow, have for well-nigh three quarters of a century contributed to the upbuilding of our community; and who as physician and surgeon, confidant and adviser, by his wisdom and skill has brought peace to troubled minds and healing to tormented bodies; and also as teacher, writer, lecturer and scientist, has rightfully attained world-wide recognition, and has made our community world-inclusive.

"To John Harvey Kellogg.

"Citizen and friend, we present this testimonial as a simple but sincere token of our deep appreciation of his unbounded interest and effort in behalf of our community.

"Presented this 26th day of February, 1942, on the

occasion of the banquet tendered in his honor, on his ninetieth birthday, at the Sanitarium by the Citizens of Battle Creek." Address: Battle Creek, Michigan.

3997. Marentette, Charles. 1943. For 'grass eater,' Dr. Kellogg reckoned he did pretty well. *Battle Creek Enquirer and News (Michigan)*. Dec. 15. p. 1. Wednesday.

• **Summary:** This article is part of a special reprint edition containing an excellent summary of the material concerning Dr. John Harvey Kellogg's life and death. "'They called me a 'grass eater' back when I first got started teaching people about biologic living,' he explained. 'All of us, even those who believed as I did, were laughed at. But I guess we showed 'em.'" At age 91, clad only in white shorts and running shoes, he trotted back and forth across a backyard cinder footpath for news photographers. He said "'That's something I do every day in the year. It's the best exercise in the world. People don't exercise enough... You can't smoke and drink alcohol and expect to live a long life... I believe that man was intended to eat the plants and fruits and not the animals. Meat is bad for a human being. It clogs your colon, and eventually you'll be sick..."

"I haven't touched meat for more than 75 years [i.e., since before 1868]. I don't smoke and I don't drink. Never have. I don't take patients at my Sanitarium unless they agree to abstain from eating flesh foods and from smoking and drinking, at least as long as they want me to help them." Address: Battle Creek, Michigan.

3998. Stare, Fredrick J.; Thorn, George W. 1943. Some medical aspects of protein foods. *American J. of Public Health* 33(12):1444-50. Dec. [6 ref]

• **Summary:** The author states on p. 1449 of this wartime article: "As long as this country has access to a plentiful supply of calories, and a variety of whole-grain cereals and legumes, it is most unlikely that *impairment of health* from protein deficiency will ever occur... Lumberjacks may demand plenty of red meat to get timber cut, but that demand rests on habit and not on a nutritional or medical basis."

There are protein foods that could be made available in this country and other countries, "protein foods which are superior not only in protein but in other essential nutrients. We refer specifically to wheat germ, corn germ, yeasts, dried legumes, and various products which can be made from peanuts and soybeans." Address: Schools of Public Health and Medicine, Harvard Univ., Cambridge; Medical Service, Peter Bent Brigham Hospital, Boston. Both: Massachusetts.

4004. Fletcher, Robert Samuel. 1943. *A history of Oberlin College: From its foundation through the Civil War*. 2 vols. Oberlin, Ohio: Oberlin College. [300+* ref]

• **Summary:** Volume I contains three books (parts): I. The shadow of a man (Charles Grandison Finney). II. Oberlinism. III. The struggle for existence. Volume II contains two books: IV: Learning and labor. V: War and transition.

Chapter 22 of this work is titled "Physiological reform: The health movement" (p. 316-40). Other reform movements and societies at Oberlin were: Anti-slavery. Educational reform. Moral reform movement. Peace movement. Temperance movement. See also: American Vegetarian Society (p. 331). American Health Convention (p. 324, 332). Address: Oberlin College.

4005. House of David. 1943. *Vegetarian cooking*. 4th ed. Benton Harbor, Michigan: House of David. 55 p. In a 4-ring binder. 24 cm.

• **Summary:** Contents: Foods and their values. Quick breads: Biscuits, muffins, griddle cakes. Soups. Meat substitutes: Nut dishes, cheese dishes, egg dishes. Sauces for meat substitutes & vegetables. Vegetables. Salads and dressings. Cakes and gingerbreads. Cake frostings and fillings. Cookies and small cakes. Pies. Puddings and desserts. Sauces for desserts.

In the "Table of food values" (unnumbered page near front of book), "Beans, dry, soy" are mentioned.

Soy recipes include: Soybean muffins (with "1 cup soy flour," p. 11). Soybean sausage (with "2 cups cooked soybeans," p. 13).

Note: A so-called 5th edition (with the same number of pages, and the same text on the same pages) was published in 1951. Address: Benton Harbor, Michigan.

4006. Malek, Leona (Alford). 1943. *Meatless meals*, by Jean Prescott Adams. Chicago, Illinois: Albert Whitman & Co. A Laird & Lee Publication. 192 p. Illust. 22 cm.

• **Summary:** A vegetarian cookbook. Under "New Menus and Recipes: A Hearty Dinner," p. 7 gives a recipe for Soy Bean Roast (with 2 cups whole soy beans). It "Supplies alkaline protein, starch, iron." The author was born in 1878. Address: Home economics lecturer, editor and consultant.

4007. Semple, Dugald; Semple, Cathie. 1943. *What to eat in war-time*. With meatless recipes by Cathie Semple. New and enlarged ed. Glasgow, Scotland: William McLellan & Co. Ltd. 63 p. Undated. 19 cm.

• **Summary:** The recipes are by Catherine Amos Tuckwell Semple. The author, a vegetarian, states (p. 4): "My contention is that if we grew more wheat, oats, barley, hazel nuts, fruits and vegetables—especially potatoes—we would, during even a blockade, be able to support ourselves on home-grown food.

"Food reform to-day is not a matter only for societies to propagate, it is of vital national importance. To live without meat or even eggs or cheese may soon be a national necessity. And there need be no real hardship or suffering in the absence of these.

"Denmark in 1917 was faced with starvation due to the blockade and placed Dr. Hindhede in charge of the nation's rationing. A keen food reformer, he reduced the pig, poultry, and cattle population to a comparatively small number, and told the Danes to be content with rye-bread, cereals, potatoes, margarine, and milk. Potatoes were undoubtedly the mainstay of their peasant diet. And what was the result? Whilst the death rate rose in other Scandinavian countries, Denmark's fell by 17 per cent. In 1918 it was the lowest ever recorded in any country. Even whilst German men and women were dying as the result of the blockade, the Danish people were actually thriving.

"Surely, therefore, we should listen seriously to food reformers who contend that flesh foods are not necessary, and that the best way to use the land is to grow food instead of live stock." Address: Wheelhouse, Beith [Scotland].

4008. Shone, F.C. 1943. *Should a Christian eat blood?* London: D.E. Parkins. 28 p. 19 cm. *

4009. *American Vegetarian (The)*. 1943---. Serial/periodical. Pismo Beach, San Luis Obispo County, California. E.L. Pratt. 51 cm (newspaper format). *

• **Summary:** Ad in *Nature's Path* (New York City). 1944. Aug. p. 313. States that *American Vegetarian* is located at 117 West 48th St., New York City. So perhaps it moved to Pismo Beach, California, after this date. The *Union List of Serials* (1960) says "See *American Vegetarian-Hygienist*." OCLC (Sept. 2007) says at "Notes": "'The exponent and representative of vegetarianism in all its phases.' Description based on: Vol. 8, no. 12 (Nov. 1950). Latest issue consulted: Vol. 10, no. 7 (July 1, 1953)." Address: New York City; Pismo Beach, California.

4010. Paddleford, Clementine. 1944. Food for conversation. *Los Angeles Times*. March 12. p. F14.

• **Summary:** "Beanburger is a meatless meat, packaged as a powder." Ingredients include "soybean grits, wheat flour, cracker meal and dehydrated onion." Just mix with water, form into patties, and fry like hamburger.

A new seasoner, called "sodium glutamate," gives a true chicken flavor. It is a by-product of processing wheat or molasses for industrial alcohol, "and is now used to improve the taste of the dehydrated stews and hashes developed to feed the liberated peoples" during World War II.

Note: This is the earliest English-language document seen (Nov. 2014) that contains the term "meatless meat" (or "meatless meats," regardless of hyphenation).

4011. *Let's Live*. 1944. Meat packers and government officials attack soy—Rich source of protein: Growers and consumers amazed. March. p. 3.

• **Summary:** The U.S. government urged farmers to plant more soybeans with the pithy slogan: "Plant soybeans and you plant meat, eggs, and milk." The farmers produced bumper crops to the great satisfaction of lend-lease officials and those responsible for feeding the armed forces. Now the meat packers are planning to combat the rapidly increasing use of soy products.

First the War Food Administration fostered the use of soy flour by bakers. "Then the Pure Food and Drug office [FDA], using its gestapo powers, virtually undid the other's constructive efforts. Today they're fighting the question of making bakers label bread 'adulterated' if containing over 2% of the valuable, alkalizing soya! So when bureaucrats fall out, the health-minded must run for the nearest foxhole!

"WFA wanted bakers to use at least 3-5% soy flour. With nutritionists working toward the same end, considerable headway was made." Then the FDA, "suspicious of every forward movement, dug some bread standards out of the mothballs" and used them to rule that "soy flour was good only as a bleaching agent. This meant that only one-half of 1 per cent soy flour might be used, or it could not be labeled bread."

Then the "meat barons, goaded by the news that the populace was turning to soy products for protein,... loaded up for an assault against 'planted meat'—soybeans and vegetable

proteins. The American Meat Institute, comprised of most of the big packers, is launching a large scale assault... over airways, editorial and news columns and medical journals, to combat the use of meat substitutes."

"To meat or not to meat,' may not be a good paraphrase, but the nots have it in the highest health circles."

4012. *Madison Survey* (*Madison, Tennessee*). 1944. Madison College. 26(8):29-30. April 26.

• **Summary:** "Newspapers and magazines have for some time given much publicity to the rather remarkable soybean. This little pulse provides useful ingredients for many scores of industrial products, such as plastics, soaps, paints, explosives, feeds, and many forms of human food. Almost weekly the list of soybean products is extended; and in the associated research program, at least one Tennessee institution is playing a prominent part.

"Since May, 1938, most of us should have been somewhat familiar with Madison College, because in that month an article in the *Reader's Digest* brought this institution almost world-wide attention. Two short paragraphs of the article dealt with the Madison Foods prepared and sold by the college. These foods are prepared mainly from the soybean and represent pioneer efforts in this country to give dignity and prestige to this bean, which almost by itself provides the essential ingredients for 'fifty-seven varieties' of foods, let alone the almost innumerable products also fabricated from this rapidly expanding farm crop.

"Tennessee, of course, looks with much favor on new industries. In the Madison Foods line the state has, if not a strictly new industry, a unique and different industry, one which may have unusual significance at this time.

"Cans of Madison Foods substitutes for meat and milk carry the words, 'Contains no animal products.' These words give the key to the motive that brought these foods into existence. Those of us confronted with the problem of stretching our meat ration points may assume that Vigorost, Zoyburger, and other products were originated only recently to capitalize on a situation brought on by war. This is not the case. Work on the soybean as a meat substitute was begun at Madison College years ago; and, for over forty years, no meat has been served on the campus.

"The search for an adequate plant-food diet—no meat and no animal products—of Madison College, rests on religious grounds. This institution was developed and is operated by a group of Seventh-day Adventists, whose leaders entertained a conviction that man will gain in health and strength by avoiding animal foods.

"Long development work on meat substitutes naturally places the institution in a favorable position today to give to all of us the benefits of its findings in actual food products.

"The soybean differs from most vegetables in its unusually high content of proteins. Moreover, this protein

content can be made available to a high degree for assimilation in the body, whereas only about 41 per cent of the protein of meat is available for nourishment in the body.

“Significance of Meat Substitutes: Rationed meat-eaters who have trouble in stretching their meat points may find at least a partial solution to this problem by using some of the Madison meat substitutes. Mixing one of the substitutes, such as Yum, with ground meat, results in a product as nourishing as meat; and if the substitute is added in a proportion up to 50 per cent, the meat flavor remains almost completely unmodified.

“In a Hungry World: We are beginning to learn what it means to have shortages of food. In this connection, some food experts have recommended that more plant foods be consumed direct by man, with a reduction in the consumption of animals and animal products. Much of the food value in feeds fed to animals is wasted. Why not have man eat the plant foods direct and eliminate this waste? In substituting plant foods for meats, however, it is important to utilize some plants or vegetables with high protein content. The soybean supplies one of the answers.

“The professors at Madison College point out that the long under-fed peoples of Asia could remedy their problems in large part by greatly increasing the acreage of soybeans and processing the beans into various staple food items—from milk and cheese to meat and bread. It is thus no longer necessary to keep a cow in order to enjoy a quart of milk a day, or to have cheese or meat.

“The soybean may also save many lives in war-ravaged Europe. Meat animals are scarce, or even absent in parts of Europe. Crop acreages, however, can be expanded rapidly, and plants yield food in a relatively short time. Madison College recommends the soybean as the best guarantee to feed the greatest number of mouths adequately in the shortest possible time.

“In Tennessee, soybeans yield more bushels per acre than wheat, and usually bring a better price. Moreover, the soybean is a legume and improves the land.

“During the war period, a good market is assured for the soybean, because Uncle Sam needs both the oil and meal obtained from the bean. Prospects are good also for a postwar market, because the soybean provides good food and feed, a most useful and adaptable oil, raw material for plastics, and has many other industrial uses.”

Note: How refreshing to read (from high school students in 1944) such a clear analysis of some of the problems with feeding soybeans to animals, and with eating animals, and the benefits of a vegan diet—one containing no animal products.

4013. Lepkovsky, Samuel. 1944. The bread problem in war and in peace. *Physiological Reviews* 24(2):239-76. April. [138 ref]

• **Summary:** During World War I, the Allied blockade of

1917 cut off imports into Denmark. On a diet largely of whole grain and bran bread, barley porridge, potatoes, greens, and dairy products, the Danish people survived the war with improved health and lowered mortality rates. The author praises whole wheat flour and is highly critical of refined white flour and white bread which (even if enriched) have been deprived of much of their nutritive value. Address: Div. of Poultry Husbandry, College of Agriculture, Univ. of California, Berkeley.

4017. **Product Name:** Butler's Soya Butter (Non-Dairy Margarine made with Soybean Oil and Soy Milk).

Manufacturer's Name: Butler Food Products.

Manufacturer's Address: P.O. Box 4, Cedar Lake, Michigan.

Date of Introduction: 1944 August.

New Product–Documentation: *Business Week*. 1944. July 22. p. 85-86. “Soya Butter.” *Soybean Digest*. 1944. Aug. p. 16. “What is Status of Soya Butter?” Ad in *Soybean Digest*. Sept. 1944. p. 11. “New foods from the wonder bean: Butler’s Soya Butter.”

Short in *Soybean Digest*. 1945. Feb. p. 22. “The *Detroit News* puns in headlines: ‘Uses his bean to make butter: Spread it soya can forget about points,’ which doubtless refers to the soya butter of Butler Food Products.” Note: “Soya” is a pun on “so you.” During World War II dairy butter was rationed and one needed points to buy it. *Soybean Digest*. 1945. May. p. 14. “Ohio Ruling on Soya Butter.”

Note: This was the first all-soy margarine and the first non-dairy (vegan) margarine made in the USA. It appears to be related somehow to Shedd’s Willow Run Margarine. There were conflicting state and federal regulations to whether the product was margarine or not. Finally in December 1945, at which time the company was manufacturing 100,000 units of soya butter a month, a federal judge in Detroit ruled that the product was oleomargarine as defined by the internal revenue code, and therefore subject to back taxes of 10 cents a pound on every pound made to date. The three-year battle and the ruling assessing an estimated \$150,000 in back taxes drove the company out of business in 1946. In about 1950, while typing out an appeal to the government to reconsider his case, Butler suffered a fatal heart attack. Shortly after his death, the margarine law was changed and the tax (on other companies) removed.

4018. Butler Food Products. 1944. New foods from the wonder bean (Ad). *Soybean Digest*. Sept. p. 11.

• **Summary:** A full page ad. “Mean a greater demand for soybeans and high prices for soybean growers.” “Butler’s Soya Butter was developed to meet the specific need of those who have allergic reactions to dairy products and for those who wish to maintain a strictly vegetarian [vegan] diet. Only Butler’s Soya Butter can fill the above specific need. Butler’s Soya Butter is available only to Health Food Stores and other outlets catering to those whose diet requires specialty foods.” Photos show cans of each of these five Butler products: Butler’s Soya Cheese [tofu]. Butler’s Vegeburger. Butler’s Soya Nut-Loaf. Butler’s Vegetarian Chops. Butler’s Soya-Butter.

Note: This is the earliest English-language document seen (Nov. 2014) that uses the word “Vegeburger” to refer to a meatless / vegetarian burger. Address: Cedar Lake, Michigan.

4019. Lust, Benedict. 1944. Naturopathy. *Naturopath and Herald of Health (New York City)* 49(9):263, 279. Sept.

• **Summary:** Contents: Vegetarianism. Change of diet. The mid-day meal. The evening meal. Beverages. The article begins: “The great importance of vegetarianism, particularly

in regard to rearing children and in cases of illness, should be recognized.” Eating moderately at regular mealtimes is very important. The best beverage is pure water. All alcoholic beverages should be avoided. A large portrait photo shows Father Sebastian Kneipp.

4020. Price, Robert. 1944. A boyhood for “Johnny Appleseed.” *New England Quarterly* 17(3):381-93. Sept. *

• **Summary:** John Chapman (Johnny Appleseed), lived 1774-1845.

4021. Rudolph, E.L. 1944. Another discordant harmony. *Arkansas Historical Quarterly* 3(3):211-16. Autumn. [6 ref]

• **Summary:** The best history seen to date of the Harmonial Vegetarian Society, of Harmony Springs, which “existed for some months in Benton County, Arkansas, in the halcyon days preceding the Civil War.” The author begins by quoting in full “the longest and most misleading account of the Harmonial Vegetarian Society...”

A fairly detailed history of the society is then given, based on land deeds. On 29 Oct. 1860 the 520 acres of land were originally purchased. A few weeks later, on 13 Nov. 1860, “the first seeds of dissent made their appearance; two families (Sites and Dunn) sold their interests withdrew. On week later, on 21 Nov. 1860, John M. Adams accepted \$1 for his interest and withdrew. About 3 months later, on 23 Feb. 1861 Milton Vale, one of the original trustees, and his wife surrendered their claims for \$500 a withdrew.

“In the fateful spring of 1861 [as the Civil War began], the society remained in existence another three months, but on May 2 the Utopia died aborning when the group sold its land to two of its own members” for \$4,600.

“The last entry concerning the society was made on May 29, 1861, when with a realistic touch the legal career of the society was brought to its close.” Address: Rice Institute [Houston, Texas; renamed Rice Univ. in 1960].

4022. Loma Linda Food Company. 1944. Re: Loma Linda Soy Milk. Letter to Mrs. Marie G. Thompson of Milwaukee, Wisconsin, Oct. 17. 2 p. Typed, without signature on letterhead.

• **Summary:** This letter is written on the company letterhead which contains an illustration (line drawing) of the new Arlington headquarters, and gives the address and phone number. Across the bottom is written: “Tasty. Wholesome. Nutritious.” The author writes: “We are surely interested to know that you have had such good success in raising your baby entirely on Soy Milk and we trust that this good progress will continue. It encourages us to know that there are those who believe in the vegetarian regime and... are willing to demonstrate that babies can be raised on Soy Bean Milk. We are sending you with this letter a copy of our folder featuring Loma Linda Soy Milk. The Kreme O’Soy put up by Madison [Foods] is also a good product. They do not

add Carotene [which Loma Linda does, to provide essential vitamin A].

“One of the largest children’s hospitals in Los Angeles where they have many allergy cases is using our Soy Milk very extensively and has done so for a number of years.” Address: Arlington, California. Phone: Riverside 9217.

4023. Price, Robert. 1944. John Chapman: A bibliography of “Johnny Appleseed” in American history, literature and folklore. Patterson, New Jersey: The Swedenborg Press. vi + 40 p. Oct. 23 cm. [393 ref]

• **Summary:** Contents: Foreword. 1. Bibliography. 2. References, chiefly biographical: Book- and pamphlet-length studies, accounts of family and youth in New England, local history references in Pennsylvania, Ohio, and Indiana, references to death, burial place, and estate, references to work as a New-Church missionary, references to work in American horticulture. 3. Johnny Appleseed in story and art: Drama, fiction, poetry, the story as folklore, stories for children, miscellaneous literary references, art, music. 4. Miscellaneous references: General reference works, miscellaneous periodical references, miscellaneous books and pamphlets, selected newspaper items from centers of special local interest in John Chapman. 5. Monuments and other memorials: References, monuments, miscellaneous memorials.

Within each subsection, the references are arranged alphabetically. John Chapman (Johnny Appleseed), lived 1774-1845. Address: English Dep., The Ohio State Univ.

4024. *Vegan News (The) (England)*. 1944-- . Serial/periodical. Leicester, England. Frequency: Quarterly. Publisher: Donald Watson.

• **Summary:** The subtitle, starting with the first issue in Nov. 1944, reads: “Quarterly magazine of the non-dairy vegetarians.” The text on page 1 begins: “The recent articles and letters in ‘The Vegetarian Messenger’ on the question of the use of dairy products have revealed very strong evidence to show that the production of these foods involves much cruel exploitation and slaughter of highly sentient life. The excuse that it is not necessary to kill in order to obtain dairy products is untenable for those with a knowledge of livestock farming methods and of the competition which even humanitarian farmers must face if they are to remain in business.”

A link to past issues of The Vegan is: www.vegansociety.com/resources/magazine

An ad in the *Vegetarian Messenger and Health Review* (Manchester, England) (April 1945) gives the price as 3d. per issue, post free. 1 shilling for a 1 year subscription from D. Watson.

Mr. Donald Watson, Secretary of the Leicester Vegetarian Society, was instrumental in forming “The Vegan Society.” He was both a founder and the first secretary.

The first issue of *The Vegan News*, a quarterly bulletin, was issued in Nov. 1944.

Review in *Vegetarian Messenger*. April 1946. p. 82-83.

Note: This is the earliest English-language document seen (March 2022) that contains the word “vegan” or the term “non-dairy vegetarians.” Address: 67 Evesham Rd., Leicester, England.

4025. *New York Times*. 1944. La Guardia to seek U.S. help on meat: Will fly to Washington today to confer with top men in federal agencies. See dealers tomorrow. Threatened shutdown of all retail shops here next week seems less likely. Dec. 18. p. 21, col. 8.

• **Summary:** Universal Vegetarian Society plans citizens aid if meat strike materializes; president to lecture.

4026. Valle, Adrian. 1944. Influencia moral de la alimentaci6n vegetariana [The moral influence of a vegetarian diet]. *Pro-Vida (Havana, Cuba)* 25(280):3-4. Dec. [Spa]*

4027. *American Naturopath: The National Naturopathic Journal*. 1944-1964? Serial/periodical. Published in Hollywood, California. *

• **Summary:** Description based on Vol. 15, no. 6 (Sept. 1959).

4028. Anderson, Hans Steele. 1944. The new food therapy: Diet and the healing art. Maitland, Florida: Printed by The Academy Press. 165 p. See p. 37-38, 64-66, 85-86, 89, 118-19. 23 cm.

• **Summary:** This is a rewritten and enlarged edition of the author’s *Food Therapy: Diet and the Healing Art*, published in 1942. The author, apparently a Seventh-day Adventist, was born in 1877.

Pages 37-38 contain a discussion of soya bean products (including Soya Lac, which is alkaline in reaction, and is made by the International [Nutrition] Laboratory, Mt. Vernon, Ohio). There are home-scale recipes for: Soybean milk no. I (made from soybean flour). Soybean milk No. II (made from powdered soybean milk–Soya-Lac). Soy butter substitute No. I (made by blending soybean flour, soybean oil, and a few drops of dandelion butter color with a Dover beater). Soya bean butter substitute No. II (made by blending Soya-Lac powdered soybean milk with soybean oil; refrigerate). Soybean cheese, made by curdling hot soybean milk with a little citric acid. “Season with rich soybean milk and salt as you would flavor ordinary cottage cheese and serve.”

Pages 64-66 give nutritional information on soybeans and soy-products, and compare soybean milk with cow’s milk. “As a source of wholesome food constituents, the soybean probably has no peer... Soya bean milk contains more food mineral and vitamins than cow’s milk; is alkaline

in reaction; has a greater proportion of calcium; and forms into smaller curds in the stomach. Soya milk, moreover, is far cheaper than cow's milk and may be prepared fresh as required, and can be seasoned to suit anyone's taste."

Other soy-related recipes include: Soybean-wheat muffins (p. 85-86). Use of soy bean flour in wholewheat bread (p. 89; it can be substituted for up to 25% of the wheat flour).

In the chapter titled "Diet and the healing art," under "Lecithin," pages 118-19 note that "there is a new food factor called lecithin which promises to become a factor of importance on account of its being essential for reconstruction and for the maintenance of vital organs, including the brain, nerve forces, heart and liver. Oil that is contained in the soybean is comparatively rich in lecithin and vitamin A and in this respect it is said to resemble butter. Cow's milk proves rather deficient in lecithin whereas soya milk is fairly rich in this essential constituent. Nutritional anemia which has been brought about through an exclusive use of cow's milk may be quickly eradicated by a liberal use of soybean milk."

4029. Davis, Max. 1944. The case for the vegetarian conscientious objector. Brooklyn, New York: Tolstoy Peace Group. 15 p. Foreword by Scott Nearing. 21 cm. *

• **Summary:** Writing during World War II, a 22-year-old imprisoned vegetarian appeals for conscientious objector status on the basis of his vegetarian pacifist philosophy.

4030. Miller, Harry W. 1944. The story of milk from the soya bean. Mount Vernon, Ohio: International Nutrition Laboratory. 37 p. See p. 1-6.

• **Summary:** This rare and very interesting booklet was sent to Soyfoods Center by Charles D. Howes of Mt. Vernon, Ohio, in Feb. 1979.

Contents: Full page photo of the "International Nutrition Laboratory established for processing soya bean foods, located at Mt. Vernon, Ohio. Foreword, by J.A. LeClerc, PhD, Formerly Senior Chemist of the USDA (Retired). March 5, 1944. The story of vegetable milk (Soyalac), by Harry W. Miller, M.D. Early trend, observations in China, back in America, the milk question, encouraged to produce a vegetable milk, further studies in China, the role of the International Nutrition Laboratory in America. Other products of the International Nutrition Laboratory.

"Foreword: The preparation of a palatable and appetite-appelling soya milk is proving a great boon to people allergic to cow's milk. It has been estimated that 20 to 25 per cent of our population are allergic to ordinary milk and many thousands of babies suffer from infantile eczema and other violent symptoms, whose condition clears up when transferred to soya milk feeding.

"Soya milk as prepared has approximately the same composition as cow's milk, except when soya milk is

especially prepared for infants its formula simulates mother's milk. Soya milk contains more Vitamin B than cow's milk, and an equal quantity of Vitamin B-2. The valuable proteins found in soya milk contain all the Amino-acids known to be essential for growth. Preparations made from the soya bean are relatively rich in iron and copper, so that soya milk compares very favorably with animal milk as to its nutritional and biologic values.

"Soya milk has this further advantage that it does not endanger the user to disease producing germs.

"In view of the fact that there is not enough animal milk available in this country for the optimum nutrition of our population, also that it takes three years of care and feeding before a cow gives milk, that only a small percentage of the food consumed by the cow is returned in the form of milk, and further that the use of only ten million bushels or one twenty-fifth of our annual soy bean crop for conversion into soy bean milk, would supply a pint of milk every day to 8,000,000 people, at a cost less than that for cow's milk, and that soya milk is palatable, and especially acceptable by children, it would seem the sensible thing to encourage the preparation and consumption of soya milk on a large scale.

"The 'Story of Vegetable Milk' is most interesting to read. The successful preparation of an appetite-appelling soya milk, after years of experimentation by Dr. Harry W. Miller, now bids fair to become one of the most practical of modern food discoveries. Its use will not only be the means of saving thousands of children from unnecessary suffering and sickness but soya milk should prove a good substitute for cow's milk for those who are allergic to animal milk.

"It is my sincere wish that all who are fortunate enough to obtain a copy of Dr. Miller's "Story of Vegetable Milk," will study its contents and then pass it on to others, in order that in due time, millions of our people will have recognized the full nutritive value of this most excellent food product."—Signed, Joseph A. LeClerc, PhD.

"Early trend: Being the oldest of a family of five children, it fell to my lot to help Mother about the kitchen. She was well known for her sumptuous meals, and we always had many visitors at our house. Later as a part of the curriculum of the college which I attended was a course in cookery, and this stimulated my interest in knowing how good things were made as well as their food values. Then when I became a student of medicine we were introduced into a study of food preparation which in those days (1898) was rather unusual in the program of a medical school. This course only seemed to further whet up my interest in the study of foods and their preparation.

"Having to earn the resources for pursuing my medical education. I secured the position of guiding visiting groups through a food factory. As I explained the processes of manufacture, many questions were directed to me on all phases of nutrition as it relates to health and disease, and I took great interest as a guide to inform myself in every

way available. I hungrily devoured literature on the subject and was fortunate in being under the tutorage [sic, tutelage] of the father of nutrition work in America, namely the late Dr. John Harvey Kellogg, to whom more credit belongs for furthering the selection, processing and sanitary packaging of breakfast foods than any other man. He was forty years ahead of the times in advocating the value of proper diet in relation to the cure of the sick, and so I have been able to grow up with the advance of nutrition work from its beginning and see the birth of the science of dietetics.

“Observations in China: In the autumn of 1903 my wife and I sailed as medical missionaries for interior China. After a stormy voyage, in which seasickness had deprived us of rations that were included in the price of our ticket, as well as several pounds of flesh, we arrived at the port of Kobe, Japan, where our colleagues, Dr. and Mrs. Lockwood, who preceded us one year, had a small sanitarium and had prepared a sumptuous meal for us. Half starved, we ate with great relish. One dish that was new to us especially attracted attention. It was a protein loaf made from the soy bean curd which was marketed under the name ‘To Fu.’

“Arriving at the port of Shanghai, China, we went inland and took up our abode in the central part of the province of Honan, where we not only wore the Chinese costumes, including the queue, but our diet was from foods bought from the local markets, and consisted of only those edibles indigenous to China. Here again we were introduced to the soy bean, whose home is China, and which has been the great source of protein of the Chinese people for millenniums.

“The bean was grown abundantly in Honan, and in fact in all parts of North and Central China. Wherever the Chinese emigrate, they utilize this bean in many marvelous and tasty ways, mostly, however, in the form of cheese made by coagulating the milk with calcium sulphate. This curd is eaten in its soft state, or else pressed into little square cakes. The curd may be formed in sheets by pressing cloths. They also gather sheets of almost pure albumen [yuba] from a scum arising to the top of the soy milk on heating same. Accustomed to people chiefly drinking cow’s milk, rather than making products from it, I questioned the Chinese why they did not use the soy milk. They said some of the aged with weak digestions do, but that the cheese was more popular, as they could combine it with other cooked foods. Still more did I wonder why, for the much undernourished infants of the Orient, they did not give them soy milk, containing as it does such important food entities as salts, vitamins, protein and oil in richer amounts than the bean curd and without the undesirable gypsum.

“Being engaged in language study and other mission responsibilities for several years I could do but little more than ponder over what I felt were great possibilities in soy milk for the people of China as well as other lands, were it scientifically studied.

“Another observation I made was that the people of North and Central China who were vegetable-protein eaters, getting especially soy bean rations, were a large and muscular people in comparison with those of the South, where rice was the food, and who used more meat in their diet. These results were later confirmed by experiments to show that the protein of the soy bean is one of the greatest body building foods known.

“Back in America: After eight years’ service in China, I was compelled to return to America on account of illness contracted in interior China. When sufficiently recuperated, I was called to the position of medical superintendent and surgeon of the Washington Sanitarium and Hospital at the nation’s capital. This again brought me in touch with important nutrition studies carried on at the government bureaus in Washington [DC] and also the work at Johns Hopkins University. We also had our own laboratory where we prepared several soy products and introduced many original dishes into our hospital dietary. The Washington Sanitarium was an institution whose dietary was of the lacto-vegetarian type” (Continued). Address: M.D., Mt. Vernon, Ohio.

4031. Mind, the natural adjuster in human lives. 1944. Los Angeles, California: Human Culture Union. 64 p. Illust. 23 cm. *

• **Summary:** “Cover title: A publication consisting of selected articles from the *Human Culture Digest* from the years 1943-1944.” Address: Los Angeles, California.

4032. White, Julius Gilbert. 1944. Abundant health: Expounding the Learn-how-to-be-well system of daily living. 4th ed. Madison College, Tennessee: Published by the author. xix + 437 p. Illust. 24 cm. [21+ ref]

• **Summary:** The maintenance of physical and mental health can be achieved through a vegetarian diet and wholesome living. Interesting sections include: Meat not necessary (p. 150-52; 13 quotes from authorities). Denmark’s food experiment under Dr. Hindhede during World War I (p. 152-53). Sixteen reasons for vegetarianism (p. 153-). The animal kingdom a reservoir for disease (p. 165-). Note that Madison College is a Seventh-day Adventist college and sanitarium.

Soya is discussed on the following pages: Soybeans and soybean products as a replacement for meat (p. 151-52). One section titled “The Soybean: The Wonder Food” (p. 345-59) discusses many aspects of soybeans and how to use soybeans: In baking. In general cooking. As beans. As beans ready-cooked. As meat. As milk (gives 3 recipes for making soybean milk and ways for using “the pulp left after making milk”). As cream. As cheese (“A very satisfactory soybean cheese is now available in the health food stores. It has a texture something like cottage cheese...”). As butter. As oil. As home-made soy butter (made from 4 tablespoons each soy flour and water, 1 cup of oil, a little salt and butter color

if desired). As home-made soy mayonnaise (based on the above home-made soy butter). As soy acidophilus milk (also often called soy buttermilk). As greens (soy sprouts). As soy sauce. As coffee. As substitute for egg white.

On page 389 begins a long treatise on the safety of aluminum in connection with cooking and foods, a subject which is causing much debate. Address: Madison, Tennessee.

4033. Soya Foods Ltd. 1944? Soya flour: The most highly concentrated natural food. Boreham Holt, Elstree, England. 16 p. Undated.

• **Summary:** Contents: Comparative analysis of [whole, full-fat] soya flour and common cereals (soya flour contains 3 times as much protein, 3-13 times as much fat, 4-10 times as much iron, and 4-9 times as much calcium). Introduction. Soya flour—An ideally balanced food: Vitamins, proteins, fat, carbohydrates, starch, alkalinity (soya flour very alkaline at 11.0; acid foods include eggs at 3.1, beefsteak at 3.0, white bread at 2.0), lecithin. Report from a medical officer of health: Feeding trial with 40 children fed 10% soya bread, tuberculosis, nutritional analysis (1 lb of soya flour is equal in protein values to 26 eggs or 9 pints of milk or 2¼ lbs. of lean meat).

General application: In wheat and wholemeal bread (dietetic), soya flour bread (22½%), soya flour in cakes and confectionery (12½ to 20%), puddings, porridge, oatmeal and breakfast foods, invalid and health foods, baby foods, vegetarian foods, macaroni, spaghetti, etc., diabetic food, meat and fish pastes, minced meats, pie crusts, short pastry, etc., soups, cake and flour mixtures, chocolate, cocoa, hospitals, sanatoria, etc., schools, British restaurants, canteens, etc. “A book of recipes for ordinary, diabetic and vegetarian dishes for use in the home will be posted if stamped enveloped is sent.”

Note: No mention is made of the word “Soyolk” except that the company’s “telegraphic address” is “Soyolk, Elstree.” Address: Offices: “Boreham Holt,” Elstree. Works: Rickmansworth, Herts [Hertfordshire], England. Phone: Elstree 2421-2-3.

4034. Oldfield, Josiah. 1945. Proteins. *Vegetarian Messenger and Health Review* (Manchester, England). Jan. p. 4-6.

• **Summary:** “The problem of protein is one that has vexed the mind of vegetarian students from the time I first came into contact with the Food Reform Movement. I well remember how I used to go down to the little Oriole Hospital, at Loughton, in the Epping Forest, where as long ago as 1898 Mr. Arnold Hills and I cooperated in founding a hospital for the purpose of treating patients on a non-flesh dietary and replacing flesh-foods by wisely selected foods from ‘the kindly fruits of the earth.’

“The stationmaster at Loughton used to talk to me whenever he could upon the question of proteins, and again and again he assured me that if I could prove to him that

man could get enough protein without using flesh-food, he would give up flesh-food at once. Like many people, he used his objection as a reason for not giving up something that he liked very much, and so far as I know he was never able to be ‘assured’ that he could live sufficiently well to be in abounding health and strength without using any portion of the dead body of an animal.

“I remember that the answer usually given to enquirers in those days was that pulses, and legumes generally (like lentils, beans and peas), were very rich in protein and that therefore those who wanted to give up meat could readily replace it by taking a daily dish of one of the legumens. When I was in India I found that the excessive use of pulses, and especially of lentils and dahl, was a custom amongst most Hindus; but I also noticed that they all, more or less, suffered with eructation or belching of wind, shortly after taking their pulse meal. This was so noticeable that when I was sitting with Hindus I found their habits very unpleasing and often very objectionable. I have found by further experimentation that there is always a tendency during the digestion of pulses for gas to be produced and therefore, generally speaking, pulse foods are things which should be taken admixed with other foods rather than as the stable basis of a meal.

“When one comes to this question of protein however, one is met nowadays with a very different objection. Modern dietists have grasped the fact that all proteins are not the same; that there is the protein of yolk of egg, the protein of milk, the protein of cheese, all of which come under the head of proteins obtained from the animal kingdom. Then come the proteins of pulses which are plentiful in supply but not so easy in digestion, and then the proteins of nuts, and lastly the proteins of cereals.

“To-day there is no trustworthy scientist who would put his name to, a statement that ‘man must eat meat to get enough protein,’ because he knows it would be false. It is quite recognized as a scientific fact that even the advocates of the ‘high ratio’ of protein in the diet can find a plentiful supply of it in the foods that I have enumerated above. The objection to-day that is raised is that there are two sorts of protein, namely, ‘high grade’ protein, which is supposed to possess nearly all the important elements of value, and the ‘lower grade’ protein which only possesses some of these elements. This teaching depends upon the discovery of the fact that protein is a compound substance, and that protein as protein cannot be digested by the human body. Before protein can be digested, it is necessary for it to be broken up into its constituents. These constituents are called amino-acids. Now these amino-acids vary in their composition and in their value and in the proportion in which they are combined in order to form different proteins. If we suggest for a moment that there are, we will say, half-a-dozen of these amino-acids, and that the human body needs some of all of them, and that some proteins only contain one or two

of them, and others four or five, then we quite see that it is not so easy to select a diet containing the right proportion of amino-acids, even although we get the right ratio of protein.

“For all those who are anxious about their protein supply, I would therefore comfort them by saying that every protein that you eat is broken up into its little various blocks, of different sizes and different constituents, and that if you eat one sort of protein alone you may get a large proportion of one sort or two sorts of these blocks, but not enough of all the sorts to make up the new protein which the body builds up inside itself for its own use. If the mixture is bad, then you get a large number of wasted blocks of one or two types which are in excess, and these are injurious rather than beneficial, because they cannot be built up and they cannot be utilized as they are. We know that if we want to build a house we have to get a right proportion of bricks and of lime and of timber and of glass, and so on, and that if we have nothing but glass or have no mortar, we cannot go on with our building. We must have a right amount of each sort to make the complete erection. It is the same with the building up of the protein in the body ready for use.

“A word of helpful advice that I would give then, is this. All diets should contain a variety of food, that is to say, one day we may have wheat with oatmeal and maize, and another day rice and barley, and so on. With nuts, variation should also be carried out. There is sufficient variety in the cereals and nuts for all we need. A larger percentage is found, with variations also, in the various pulses and legumens, but legumens need sufficient cooking to make this protein readily assimilable.

“Lastly, by using milk and cheese and yolk of eggs—all in small quantities—we get an ample supply and may even get an excess in our diet of every amino-acid, without having too many of any one sort. Our protein supply is amply provided for by, should I say, one yolk of egg per week, two ounces of cheese per week, a pint of milk per week; a few slices of bread twice a week, wheat, barley, oats, rice or maize porridge, in rotation, once a day, and nuts as they may be found available with beans or peas or lentils. Even half this choice would provide all that is necessary!”

The rest of the article is “Health giving menus” with various recipes in each menu. Address: Earnshaw Cooper Lecturer in Dietetics to the Lady Margaret Hospital.

• **Summary:** See next page. For each record is given: The distance and type of bicycle used. The year set. The name of the record holder. The record time. Whether or not a world record.

4036. Efron, Edith. 1945. Heydays for the vegetarians. *New*

York Times Magazine. April 8. p. 17, 32. (New York Times section 6).

• **Summary:** The New York Times Magazine is part of the Sunday New York Times and may be simply listed as such. Briefly describes various vegetarian philosophical positions. Julius Saffren, president of the New York Vegetarian Society, notes: “The whole trouble is that people think vegetarians are crackpots... We’re not. We’re just like other people, only we don’t eat meat.”

Symon Gould, associate editor of the *American Vegetarian*, explained that vegetarians have their own “caste system—each caste having its own reason for refusing to eat meat.” In descending order: Ethical vegetarians (refuse to eat meat on moral and philosophical grounds), religious vegetarians, esthetic vegetarians (who would rather avoid “the gray, parboiled flesh of dead animals”), scientific vegetarians (who believe that man is by nature a herbivorous animal—like the elephant), and lastly the untouchables or dietetic vegetarians (who eat no meat only because it is healthier not to).

Fruitarians are a division of vegetarians who avoid dairy products and eggs. Those who do eat such foods are called “lacto-ovarians and are slightly defensive about it.” Dr. Rose, a naturopathist (he cures without drugs) notes that vegetarians are healthier and live longer than non-vegetarians. Modern doctors “only cure the symptoms instead of going to the cause of the diseases—meat! The fact is that man isn’t supposed to eat meat.” Mr. Gould mentions a “cutlet” composed of soybeans.

While vegetarians have great tenderness for their “fellow creatures,” they have a “veritable disgust for their carnivorous fellowman.” Therefore vegetarians tend to marry other vegetarians. The cultural implications of vegetarian philosophy are widespread. For example, vegetarians celebrate Thanksgiving Day cynically as “the day when man gives thanks—and murders turkeys!”

“Vegetarians prefer to take their culture straight from such old vegetarian notables as Buddha, Plato, Pythagoras, Aristotle, Socrates, Leonardo Da Vinci, Plutarch, Hans Christian Andersen, Bronson Alcott, Nicola Tesla, Marconi, Edward Bellamy, Bernard Shaw, Gandhi, Voltaire, Browning, Tennyson, Shelley, Pope, St. Francis, Emerson, Spinoza, John Wesley, Swedenborg.”

4037. *Business Week*. 1945. Is it oleo, or not? Soya butter subject to a jumble of conflicting rulings. April 21. p. 95-96.

• **Summary:** “Soya butter is bringing lots of business and plenty of grief to W.G. Barnard of Cleveland [Ohio], whose vegetarian Natural Foods Institute has developed a thriving business distributing this butter substitute.

“Margarine or not?: The Bureau of Internal Revenue has ruled that soya butter is oleomargarine, that Barnard must have a \$480 wholesaler’s license, a \$48 retail license, and must collect a 10¢-a-pint tax from his customers. But

the U.S. Food & Drug Administration holds that soya butter is not oleomargarine and that to label it as such would be misbranding, inviting penalties." The sole manufacturer of this product is Butler Food Products Co. of Cedar Lake, Michigan.

4038. Marshall, Leslie. 1945. Swedenborg. *New York Times Magazine*. April 22. p. 44, col. 3. (New York Times section 6).

• **Summary:** The New York Times Magazine is part of the Sunday New York Times and may be simply listed as such. In this letter to the editor, the author discusses the article in

the April 8 New York Times Magazine titled "Heydays for the Vegetarians," which included a mention of Emanuel Swedenborg among "old vegetarian notables." Although Mr. Shearsmith, the keeper of Mr. Swedenborg's lodgings in London, England, declared years later to an interviewer, that "his famous roomer 'ate little or no animal food,' Swedenborg kept his feet on the ground here as in all else." Address: Paterson, New Jersey.

4039. *Vegetarian Messenger and Health Review* (Manchester, England). 1945. Dr. M. Bircher-Benner. April. p. 62-63.

• **Summary:** During 40 years Dr. Bircher-Benner built up a clinic in Zurich, Switzerland. At the time of his death in 1938 it had 110 beds and attracted patients from all over the world. The magazine published by the Bircher-Benner Clinic in Zurich is titled *Der Wendepunkt*.

4040. *Vegetarian Messenger and Health Review* (Manchester, England). 1945. The evolution of the new doctor: The autobiography of the late Dr. M. Bircher-Benner. Translated by Marion Reid. April. p. 67-70; May. p. 84-87; June. p. 104-06; July. p. 129-32; Aug. p. 147-51; Sept. p. 168-72; Oct. p. 189-93; Nov. p. 206-10.

• **Summary:** Note: This book is presently available only in monthly extracts in this magazine. It is not likely to be printed until after the war. "He believed that over 90% of the diseases that afflict humanity are due to errors of diet. His decease, in January, 1939, was a great loss to the world" (p. 62-63).

"I am going to tell you about my methods and experiences. I would replace the old-fashioned orthodox doctor by the modern progressive doctor who, driven by an inner urge, ceaselessly and untiringly fights disease, death and the devil. Thus he is continuously increasing his knowledge and skill, his wisdom

and experience. Through the conquest and discipline of his own body and soul he knows how to influence his patient to overcome those habits which are the cause of his disease. The new doctor will be the guide to health, the preserver of life and the friend and benefactor of the sufferer.

"The knowledge and experience I have gained during forty-five years of research and practice have taught me that tasks of the highest importance await the doctor in the near future. Unfortunately, he is usually not equipped for these responsibilities. Therefore we need a new science of medicine and new doctors.

"Civilization has provided us with many amenities but

it has also brought much disaster. The average life may have been lengthened, but the slow and steady increase of disease and constitutional debility give cause for grave anxiety. A famous biologist sees in this alarming state of affairs the fatal degeneracy and inevitable decadence of civilized man and apparently there is nothing left for us to do but sit with folded hands and let things take their course. Actually the facts are very different. There are certain definite causes for physical and spiritual deterioration, against which a successful fight is possible, and it is these causes that the doctor should combat. More easily said than done ! For at this point a malignant destiny seems to take control so that nobody dare look the facts in the face, as if the sight of them would paralyze every energy that would fight against them.

“There is a profession entrusted with the task of finding out the causes of suffering in order to fight against them—my own—the medical profession. It has accomplished great things and it has discovered many secondary causes of disease. It has described and named every conceivable form of suffering. I myself have to thank it for much knowledge. But what amazed me more and more was its attitude towards primary causes. It either sought them where they were not to be found or it ignored them even when they were only too obvious. Why this refusal to recognize primary causes and to fight against them?

“I should like to preface my remarks on the way a doctor develops with a quotation from the great Greek doctor Hippocrates. He said: ‘Whoever would thoroughly master the science of medicine, must have the following qualifications—natural inclination, right training, a liking for work from earliest childhood and plenty of time.

“The most important of these requirements is natural inclination. If this is lacking all else is vain; whereas when present and rightly directed, it becomes an invaluable asset. Further, the doctor must take a keen and unflagging interest in his work; his experience is a rich treasure giving both confidence and courage.’

“The growth of medicine is the result of the struggle of all seekers after wisdom and knowledge in healing from earliest times. It is the result of the endless effort of the human spirit to comprehend life, death and disease with its cause and the secret of immunity from it. The science of medicine grows and develops through the infinite experience of its pioneers and through the co-operation of all the sciences dealing with the phenomena of nature and with the spiritual and intellectual manifestations of life. This world-wide growth of medicine is repeated in miniature in every disciple of Aesclepius—in every doctor.

“When the medical student enters the modern school of medicine he receives the undeniable benefit of a course of study of scientific facts, for which he is eternally grateful. When he has passed his examinations and walked the hospitals he has reached the average standard of the old school. When he starts practising he gains his own particular

medical experience. Then begins his medical development according to his talents. This consists of independent reasoning, investigation of problems, efforts to fill in gaps in his knowledge and the conquest of materialism. With this independent searching and striving comes the urge to make every effort and to toil unceasingly. He discovers scientific principles and methods of healing, his horizon broadens and old difficulties and problems are solved in the light of his new knowledge. It is this spiritual progression which I call the evolution of the new doctor. It takes place according, to the individual, with varying intensity; but it is only fruitful in those whose talents and urge to work raise them above the average.

“The first difference in treatment which impresses my patients is the absence of practically all medicines and the regulation of their daily life, including diet. ‘What! Is our food to be our medicine?’ they ask. That is always the first question. And they say: ‘Before I came here my doctor used to tell me to stay in bed until eleven o’clock in the morning. But you tell me to get up early and go to bed early. Why this difference?’ When they first come they are all afraid of fresh air and draughts. From me they hear that fresh air is welcome day and night. Their skin is exposed to the influence of air and sunshine and to alternate heat and cold, though previously it has been carefully protected from every breath of air, every ray of the sun, and every change of temperature. Why? Then these patients are told for the first time in their lives that it is not only the doctor who must try to cure them; they must help themselves, for success depends above all upon them. If the patient is to be cured he must work harmoniously with the doctor and with God.

“Such methods of healing are not new, of course, yet a relatively small number of doctors practise them. As a rule my patients have behind them years of unsuccessful treatment. They expect to be cured by prescriptions and not through their own efforts. They are all the more astonished when the new healing restores them to health.

“Before I grew up I had several illnesses, experiences which have not been irrelevant to my development as a doctor. When I was eleven I had an attack at school of violent pains in the abdomen on the left-hand side. Our family doctor, Dr. Heinrich Bircher, an eminent surgeon, diagnosed inflammation of the colon in the region of the sigmoid flexion, and he prescribed a strict fast. For ten days I sipped only water; then I was cured though I was still very weak. I was given no explanation of the primary cause of my illness, nor instructions as to my future diet, but I had learnt something about fasting...”

4041. *Vegetarian Messenger and Health Review* (Manchester, England). 1945. Some popular fallacies [concerning vegetarianism]. April. p. 77-78.

• **Summary:** “The ill-health of certain people living on a vegetarian diet condemns such a regimen.’

“Some years ago, Mr. Eustace Miles wrote a book on the ‘Failures of Vegetarianism.’ The treatise was no doubt inspired by the fact that Mr. Miles, although a vegetarian himself, had never liked the word ‘vegetarian,’ and had come across so many exaggerated claims for the vegetarian way of living. These claims, however, were not failures of ‘vegetarianism’ but mistakes of individual vegetarians and from that point of view the book itself failed to justify its title. Misconceptions regarding any system of government or philosophy of life usually spring from a lack of knowledge as to what the particular system or philosophy implies. Vegetarianism is the practice of living on the products of the vegetable kingdom—not vegetables only—with or without the addition of dairy produce. The claims of vegetarianism, on the other hand, fall into two categories: humaneness and health. The former is quite clear—the vegetarian way of life is definitely more humane than a system which is absolutely dependent upon the slaughter of millions of animals and birds.

“The claims of health, however, are necessarily governed by the choice of diet and the constitution of the individual. Vegetarian foods are, on the whole, cleaner and purer than flesh-foods and, therefore, other things being equal, the human digestive system is not burdened with the impurities which always accompany the latter. It is a well-known fact that the body requires certain elements for proper nutrition and as one type of diet will not be satisfactory for all, on account of the vast differences of metabolic capacity of the individual, discrimination is of the utmost importance. A haphazard diet of any description is bad but the vegetable kingdom will provide all the necessary elements required in order to sustain human life in a healthy condition. If certain individuals make mistakes in their choice of food, this fact does not condemn vegetarianism; it merely indicates a lack of knowledge on their part. If again (and this occurs very frequently), a person has damaged some part of his digestive apparatus as a result of ill-usage, and then adopts a vegetarian dietary in the hope of improving matters, it cannot be regarded as a failure of vegetarianism if that person continues in a state of ill-health; any other form of diet, under such circumstances, would not be likely to produce good health.

“On the health side it can be claimed that a well-chosen vegetarian dietary is superior to one which includes the flesh of dead animals. It is superior because it introduces into the system less toxic matter (e.g. no extractives such as are present in flesh) and thus puts less strain on the organs of elimination. Obviously the purer the diet the purer the blood-stream is likely to be, and this, in itself, is a very effective bulwark against the intrusion of undesirable organisms which are always ready to develop wherever the ‘soil’ is suitable. There is ample evidence to show that in every sphere of life—from the most placid occupations to the most strenuous (whether in work, recreation or sport)—a vegetarian dietary is

eminently satisfactory.”

4042. Taylor, Geoffrey F.; Chhuttani, P.N. 1945. Nutritional macrocytic anaemia and the animal protein of diet. *British Medical Journal* i(4405):800-02. June 9. [7 ref]

• **Summary:** A striking contrast was noticed between the vegetarians and the meat-eaters of the Indian soldier population (Iraq) in the incidence, severity, and type of anemia suffered. Address: 1. Lieut.-Col., I.A.M.C.

4043. Powell, Milton. 1945. Vegetarianism and psychology. *Vegetarian Messenger and Health Review (Manchester, England)*. June. p. 107-10.

• **Summary:** One can advance the cause of vegetarianism by understanding and purging the unconscious mind of its aggressive, war-making, meat-eating impulses. This is the summary of a lecture presented at Leicester on 6 May 1945.

4044. Toronto Vegetarian Association. 1945. New vegetarian society. Toronto, ONT, Canada.

• **Summary:** *The British Vegetarian*. 1969. Nov/Dec. p. 552. “Return to Unity. Greetings & best wishes.” From Toronto Vegetarian Association (Miss Ruth Playle).

Form filled out by Peter McQueen. 1992. July 8. “The Toronto Vegetarian Association was founded in June 1945. In the early 1950s it joined with a few other small vegetarian groups and called itself ‘The Canadian Vegetarian Union—Toronto Unit.’ The first newsletter, simply called ‘Newsletter’ or sometimes ‘Toronto Newsletter,’ was published in April 1954. The Association was formerly located at 28 Walker Ave., Toronto, ONT, M4V 1G2. It is now located at 736 Bathurst St., Toronto, ONT M5S 2R4, Canada. Phone: (416) 533-3897.

Leaflet (undated) sent by Kevin Pickard. 1992. Oct. “Toronto Vegetarian Association.” States that “The Toronto Vegetarian Association was formed in 1945 so that vegetarians could meet and exchange ideas.” Address: Toronto, ONT, Canada.

4045. Pink, Cyril V. 1945. The late Dr. Bircher-Benner & his clinic. *Vegetarian Messenger and Health Review (Manchester, England)*. July. p. 126-27.

• **Summary:** “Readers of the extracts of Dr. Bircher-Benner’s last book, now being published in *The Vegetarian Messenger* cannot fail to appreciate the author’s wide knowledge of doctors and of healing methods. This is no surprise to anyone who knows something of his life. His mother often said that from the age of three his choice of a profession was never for a moment in doubt. How early the genius declares himself! In his student days he won great academic distinction but yet found time to read papers to learned societies on oriental philosophy and to organize and conduct an orchestra! When he embarked on practice in Zurich he was marked as a future leader of his profession. A few years

later he became convinced of the value of the fresh food diet in healing disease. He said little of this to his colleagues till he thought he had collected sufficient evidence to convince them. This took several years and then, when the evening came to make known the discoveries which he knew ought to revolutionize medical practice in Zurich, he suffered a rude shock. The President of the Medical Society in winding up the proceedings said that Dr. Bircher-Benner had 'left the path of science'! That evening he stepped out of the orthodox medical camp of his day and fell into line with the very best tradition of healing which comes to us from the past. From that time till the day of his death he met with bitter hostility from his medical colleagues. But his ability to cure his patients was appreciated by the thousands whom he treated. They came from all parts of the world. For forty years Dr. Bircher-Benner used his great talents to heal the sick and to bring to light the real causes of disease. To this end he made a most patient study of the lives of those who came to his consulting room and read widely. His library contained the best medical books written in German, French and English. He kept abreast of the times by reading the best medical periodicals in these three languages. Thus, his writings rest on a broad foundation of knowledge.

"The Clinic he Built: When I visited his clinic just before the war it had 110 beds and was worked by five whole time doctors. I had the chance to study his methods and to talk to the patients themselves about results. I had never seen such careful diagnosis, all carried out on the most modern orthodox lines. (We should not fail to appraise the high efficiency reached in the medical schools in this branch of the healing art.) The treatment was far more satisfactory than any I had previously seen. Dr. Bircher-Benner had discovered how the fresh food diet could be used as a weapon against disease. I saw it skillfully combined with psychotherapy of a robust variety, outdoor exercise, hydrotherapy and sun therapy, and the results were most satisfactory. But in addition, the doctors study the mode of life of each patient and form an opinion as to the fundamental cause of his illness; the most important part of their advice is based on this. Here lies the essential difference between orthodox doctors of to-day and the doctors of the future of whom Dr. Bircher-Benner is the forerunner. Skilful treatment cures the disease of the moment and wise advice is given which should enable the patient to keep well after discharge from the clinic. Here is a revival of the true Art of Healing as taught by Hippocrates and Paracelsus.

"During the War: Throughout the war the clinic has carried on, though naturally in the face of considerable difficulty. I have had occasional letters from members of the Bircher-Benner family, and they report that it has been possible to provide their patients with a curative diet throughout the war. Like us, they hope that their food problems will soon be resolved and they look forward to the time when patients are again able to come to them from

Britain. English patients are very popular in the Bircher-Benner clinic at Zurich." Address: M.R.C.S., L.R.C.P.

4046. *Vegetarian Messenger and Health Review* (Manchester, England). 1945. Soya bean protein. Aug. p. 145. [1 ref]

• **Summary:** This summary of an article from the *Journal of the American Medical Association* (3 Feb. 1945) compares the digestibility and biological value of three sources of soybean protein with that of egg protein. The results are: soybeans (90.5 / 94.5%), soy flour (94 / 91.7%), and soybean milk (89.6 / 89.6%).

"Apart from these tests which give results in mathematical terms, the centuries of experience in parts of China, where soya bean protein has been the principal, and in some cases, the only protein available in adequate amounts, amply confirms the value of this legume as a body-building food."

4047. *New York Herald Tribune*. 1945. Dr. Benedict Lust, 73, sanatorium operator. Practiced system of drugless treatment of disease. Sept. 6. p. 20.

• **Summary:** "Special to the Herald Tribune. "Butler, New Jersey, Sept. 5—Dr. Benedict Lust, seventy-three, naturopathic physician with office at 343 Lexington Avenue, New York, died here yesterday of a heart ailment at his sanatorium. He lived at the Lexington Avenue address and operated another sanatorium at Tangerine, Florida."

Dr. Lust came to the United States in 1892 from Germany, and began the practice of naturopathy, a system of physical culture and drugless treatment of disease. In 1896 he founded the American Naturopathic Association. "He was also president of the World Naturopathic League and was founder and president of the American School of Naturopathy.

"Dr. Lust wrote a number of works on naturopathy and related sciences and was founder and editor of several periodicals in that field."

He is survived by two brothers, Leo and Louis Lust. Address: Butler, New Jersey.

4048. *New York Times*. 1945. Obituaries: Dr. Lust, advocate of water healing. Sept. 6. p. 25.

• **Summary:** "Butler, New Jersey, Sept. 5—Dr. Benedict Lust, who founded the American Naturopathic Association in 1896 and has been its president ever since, died here last night in his sanitarium of a heart attack." He has lived in the USA since 1892 and was a naturalized citizen. His office in New York was at 343 Lexington Ave.

He established one of the first health-food stores in New York City on East 58th St.

Members of the American Naturopathic Association do not believe in drug treatments, vaccination, vivisection [dissection of live animals], or drug treatments.

He is survived by two brothers, Louis Lust of Flushing, Long Island, owner of the Lust Health Food Bakery at 311 East 56th Street, New York, and Leo Lust of Butler.

Note: This article is a special to the New York Times. Address: Butler, New Jersey.

4049. Butler Food Products. 1945. Nutritive value of the soybean (Ad). *Soybean Digest*. Sept. p. 58.

• **Summary:** The company's main product is Butler's Soya-Butter [a non-dairy margarine made from soy oil], which contains 97.2% fat, 1.8% carbohydrates, and 1% protein. "Non Fattening: The fat of soybeans is of a particular quality and it is not stored in the body as is animal fat, therefore you may eat freely of Butler's Soya-Butter without the fear of putting on additional weight... No Contamination: There is no animal product of any kind in Butler's Soya-Butter..."

Other Butler Foods: Butler's Vegetarian Chops. Butler's Soya-Nut Loaf. Butler's Vegeburger. Butler's Meatlike. Butler's Soy-Nut-Cheese. A photo shows H.O. Butler. Address: Cedar Lake, Michigan.

4050. Nelson, Aaron G. 1945. Relation of feed consumed to food products produced by fattening cattle. *USDA Technical Bulletin* No. 900. 36 p. Sept. [12 ref]

• **Summary:** "Summary: Fattening of cattle is an integral part of Corn Belt farming. Corn Belt farmers who fatten cattle from the western ranges and from farm pastures make a substantial contribution to the food supply. Normally, about 4 million head of cattle are fattened in the Corn Belt each year and about 1.5 billion pounds of live weight is added to these cattle. About 11 billion pounds of grain (equivalent to about 200 million bushels of corn) and 275,000 tons of protein supplement are normally utilized annually in this fattening process."

"Cattle that are fattened in the Corn Belt to Choice or Prime slaughter grade gain an average of about 6 pounds of edible protein, ash, and fat (that is later consumed in the form of beef) per 100 pounds of grain fed during the part of the fattening period that comes before the animals reach the average of the Good slaughter grade. During the rest of the fattening period they gain an average of about 2 pounds of edible protein, ash, and fat (that is later consumed in the form of beef) per 100 pounds of grain consumed." Address: Agricultural Economist, Bureau of Agricultural Economics.

4051. *Vegetarian Messenger and Health Review* (Manchester, England). 1945. The Vegan Society—A non-dairy produce group. Sept. p. 163-64.

• **Summary:** Mr. Donald Watson, Secretary of the Leicester Vegetarian Society, was instrumental in forming "The Vegan Society." The first issue of *The Vegan News*, a quarterly bulletin, was issued in Nov. 1944. In the May 1945 issue Veganism is defined as "(i) the practice of living on fruits, nuts, vegetables, grains, and other wholesome non-animal

products; (ii) excluding as human food: flesh, fish, fowl, eggs, honey, animal's milk, butter, and cheese; (iii) aiming at encouraging the manufacture and use of alternatives to animal products."

Note: This is the earliest English-language document seen (March 2022) with the word "vegan" in the title.

4052. *Vegetarian Messenger and Health Review* (Manchester, England). 1945. Health foods, natural remedies, vegetarian footwear, etc. Oct. p. 204.

• **Summary:** This is a directory of stores where these products may be purchased. The Imperial Stores and Health Centre, 14 & 15 High Street, High Wycombe, Bucks, carries various vegetarian health foods, including "Soya Nut Meats 1/3, and Soya Flour 5d/lb."

4053. Henry, Moira. 1945. Via vegetarianism. *Vegetarian Messenger and Health Review* (Manchester, England). Nov. p. 211-12. [2 ref]

• **Summary:** The author describes his conversion (and that of his sister) to vegetarianism, starting in March 1934. After 12 months on a meatless diet he felt "like one completely transformed." "When considering vegetarianism one is reminded of the famous Hippocrates who advised us to let food be our medicine and medicine our food." Address: Dublin, Ireland.

4054. Lattie, Athelstan. 1945. Ninety-four years a vegetarian. *Vegetarian Messenger and Health Review* (Manchester, England). Nov. p. 216-18.

• **Summary:** The reflections of a bishop, now age 94, who served as a missionary in the East Indies and East Asia. He feels that complete abstinence from all kinds of strong liquor is a major reason for his longevity. His father may have been a vegetarian pioneer, for he gave up eating meat in 1840, on the advice of his brother, his doctor. A photo shows Rev. Lattie in China. Address: D.D., Formerly Bishop of Labuan and Sarawak.

4055. Thayer, Rollin H.; Jaap, R.G.; Penquite, R. 1945. Fattening chickens by feeding estrogens. *Poultry Science* 24(6):483-95. Nov. [36 ref]

• **Summary:** The chickens in this experiment were fed DES (diethylstilbestrol) and dianisylhexene. When sexual maturity is eliminated entirely by caponization [castration], the fattening process proceeds for a much longer time, and thus the chickens become fatter than usual. The blood of a laying hen has a much higher fat content than the blood of a non-layer. "Estrogen produced by the active ovary is responsible for this rise in blood lipids." In most of the tests, the estrogens were dissolved in crude soybean oil in an amount equal to 1% or more of the ration. The chickens fed estrogens did indeed become fatter and market quality improved.

Note: This is the earliest document seen (Jan. 2021) containing the word “diethylstilbestrol” in connection with soy. Address: Oklahoma Agric. Exp. Station, Stillwater, Oklahoma.

4056. Chao, Buwei Yang. 1945. How to cook and eat in Chinese. New York, NY: The John Day Co. xviii + 262 p. Foreword by Hu Shih. Preface by Pearl S. Buck. Illust. Index (of both recipe numbers and page numbers). 21 cm. An Asia Press Book. New editions, 1949 and 1963.

• **Summary:** A superb, funny, authentic Chinese cookbook. The “Author’s note” begins: “I am ashamed to have written this book. First, because I am a doctor and ought to be practicing instead of cooking. Secondly, because I didn’t write the book... You know I speak little English and write less.”

The section on “Conventions and hints” states: Clear-simmering is slow cooking without soy sauce. Red-cooking is slow-cooking with soy sauce (p. xvi).

In Chapter 2 titled “Eating materials,” the section on “Grains” (p. 21-22) notes: There are two important supplementary starchy foods in the Chinese diet: Sweet potatoes (the poor man’s luxury) and “beans: red beans [probably azuki], horse beans, and above all soy beans and their products. Bean milk and bean curd [tofu] are regarded in this country [America] as specialties. But in China, cabbage and bean curd mean a poor family’s home cooking. Soy beans not only give starch, but are also the most important source of protein, since most people cannot afford much animal food.”

In Chapter 3, “Cooking materials”: “The commonest vegetable oils in China are [soy] bean oil and peanut oil” (p. 24). Soy sauce is a “salter,” which is not freely exchangeable with salt. It is never used in the white kind of cooking but it is used (sometimes with salt) in red-cooking and red-stir-frying (p. 25).

“Flavorers.—The most important flavorer of Chinese food is soy-bean sauce or soy sauce for short. With soy sauce you can cook an untiring series of Chinese dishes with nothing but those foods you can get at any American chain market. In fact even pretty good soy sauce can now be bought at such chain markets. Chinese dishes are called red-cooked or white-cooked according as soy sauce is or is not used. But even in the white-cooked dishes, especially the slow-cooking ones, the morsels, or rather the chopsticks [chopsticks], of food are often dipped in soy sauce before eating. One thing we never do, however, is to pour soy sauce on rice. When Americans do that, it looks funny. It must taste funny too.

“Soy sauce is made from fermented boiled soy beans in which salt is added. Several kinds are now seen in this country. The least useful is called in Cantonese *chü-yau*, “pearl sauce,” a dark thick sauce without too strong a taste, which lends much color to the dish and is much used in

restaurants. Next is *shang-ch’au* “raw extract,” which is light brown, tastes very fine, but is not colorful enough for red-cooking and not available in any great quantity. The sauce most suitable for general purposes is called *ch’au-yau*, “extracted sauce,” which fortunately is made by several manufacturers in this country and Canada. All varieties of soy sauce are also called by the general name *shi-yau* in Cantonese.

“Similar to soy sauce is a soy jam [chiang], which is much thicker in consistency. In China, fermented flour jam is even more common. Good samples of such jams are scarce in this country.

“There is a whole class of whitish savory powder made mostly from gluten of flour. We shall call it **taste powder** in the recipes. The oldest form of this is made from the dried fermented muscle-of-flour (flour gluten), often made in old Chinese households. Almost thirty years ago the Japanese manufactured, from hydrolyzed gluten, a powder called *ajinomoto*, ‘prime element of taste.’ Later a Chinese firm manufactured *ve-tsin* [*vetsin*], “essence of taste, which is still found on some shelves of Chinatown. ‘Pickup’ and *mee boan* taste powders are made in this country and sold mostly in Chinatown.

“You will note that relatively few recipes in this book call for the use of taste powder.” “Other common flavorers are oyster sauce, sesame oil, and soy bean cheese (*fu-yü*) (p. 27-28).

Chapter 6, “Methods of cooking,” includes a discussion of red-cooking (stewing with soy sauce, which gives a reddish color. “Red-cooking is the typical family cooking.” Cooking time varies from 2-6 hours) and clear simmering (without soy sauce).

Soy-related recipes include: Bean curd stirs meat slices (p. 61). Bean curd stirs shelled shrimps (p. 118). Meat sauce meets lobsters (“Variation: As done in Chinese restaurants in America—Get from Chinatown 2 tb-sp salted small black beans [fermented black soybeans]. Wash off visible salt, boil 10 minutes, crush, and add to the stirring sauce,” p. 125). Arhat’s fast or Vegetarian’s ten varieties (with wheat gluten, bean curd skin [yuba], fried puffy bean curd, soy sauce, etc., p. 156-57).

Note 5. This is the earliest English-language document seen (April 2013) that contains the term “fried puffy bean curd.” It refers to a type of Chinese deep-fried tofu. “Get in Chinatown. The best is to get them ready fried,...”

Plain stirred bean curd (p. 158-59). Oyster sauce bean curd. Mushrooms stir bean curd. Scallions stir bean curd (p. 159-60). Pot-stuck bean curd (p. 160). Bean curd and meat-slice soup (p. 164). Huichou pot (with fried bean curd [large triangles or small cubes], p. 181-82). Sandy-pot bean curd (p. 183). Soy jam noodles (p. 201-02, with ½ can *yünshi* soy jam {get in Chinatown}); this is typical northern food).

Page 158 states: “Bean curd is made of soy beans. It has only a faint flavor of its own. That is why it can be easily

combined with other materials. Bean curd has the same nourishment value as bean, but in a much more digestible and palatable state and forms an important ingredient of the food for the poor people in China. It is cheap and easy to prepare. Those who can afford fancy dishes often combine it with meat, fish, and other sea foods. But just plain (Chinese) cabbage and bean curd connotes home sweet home. Bean curd is a versatile cooking thing. It can be boiled plain, with a little of any flavoring. It can be fried in deep oil by whole pieces so that the outer surface will become browned. We often stuff seasoned ground meat inside it like stuffed cucumber and then red-cook the whole thing. Bean curd can even be eaten as part of an American salad.” The Chinese characters for all recipe names are given on pages 232-46. Address: Cambridge, Massachusetts.

4057. Diehl, Harold S. 1945. Textbook of healthful living. 3rd ed. New York and London: McGraw-Hill Book Co. 707 p. Illust. Index. 20 cm. [150+* ref]

• **Summary:** In Chapter 7, titled “Dietary Dangers,” in the section on “Dietary Fads and Fallacies,” page 147 states: “*Vegetarianism*. The disciples of this fad usually follow it either because they consider animal foods deleterious to health or because they object to the destruction of animals to supply food for man. This latter reason is purely sentimental; but the former merits consideration.”

“Professor E. V. McCollum, leading authority on nutrition, has written that “a vegetarian diet, supplemented with fairly liberal amounts of milk, is the most satisfactory type of diet that a man can take.” [Prof. McCollum continues: “Palatable and attractive as they [meats] may be, I feel confident they are not very satisfactory as human foods when adhered to over appreciable periods.”] “But this is not true vegetarianism. In fact, milk, butter, eggs, cheese, and other dairy and animal products are rarely left out of the diets of vegetarians. Hence, most ‘vegetarians’ are not really vegetarians but only abstainers from meat.”

In the section titled “Milk—A Potentially Dangerous Food,” the author begins by stating: “Of all foods in the dietary of man milk is the most perfect. Unfortunately, however, it is an ideal food not only for man but for many of his microscopic enemies as well... Disease-producing germs may get into milk either from a diseased animal or from human beings who have contact with milk.

“The diseases of animal origin which one may get through milk are tuberculosis, undulant (malta) fever, foot and mouth disease, and intestinal ailments resulting in diarrheal conditions, especially in children... The diseases of human origin most commonly spread by milk are typhoid fever, septic sore throat, scarlet fever, and diphtheria. In the twenty years from 1908 to 1927, 429 milk-borne outbreaks of typhoid fever with a total of approximately 15,000 cases were reported in the United States.”

Fortunately the disease-producing germs found in milk

are easily killed by a heating process called “pasteurization.” “At the present time approximately 90 per cent of the milk used in American cities of 10,000 population and over is pasteurized, but all too many smaller communities are still exposed to the hazard of raw milk.”

Note: This is the earliest document seen (July 1999) with the term “Preventive Medicine” in the author’s title in the USA—at the University of Minnesota. Address: Prof. of Preventive Medicine and Public Health, and Dean of the Medical Sciences, Univ. of Minnesota.

4058. Lager, Mildred. 1945. The useful soybean: A plus factor in modern living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. Illust. General index. Index of recipes. 22 cm.

• **Summary:** One of the most important and innovative books on soyfoods ever written. Contents: Preface. 1. Agriculture’s Cinderella: America discovers the soybean, our wonder beans, soy as a food in the United States, soy in rehabilitation food programs, soybeans as an emergency crop, soybean terminology. 2. World-wide use of soybeans: A real antique, monarch of Manchuria, soybeans in mechanized warfare—Germany, soybeans in other countries (USSR, Italy, Spain, Belgium, Holland, Norway, Denmark, Sweden, Great Britain, Canada), soybeans in Lend-Lease and United States Agricultural Marketing Administration, Food for Greece, soybeans and the Mexican Indian, soybeans in Hawaii (Mr. C.G. Lennox). 3. Soybeans and industry: The versatile soy, uses of soybean in industry, soybean paint (from soy oil, incl. Duco finishing), soybean protein (used in making plywood, plastics, water paints, paper sizing, leather finishes, and insecticide sprays), Henry Ford and soybeans, soybean glue (I.F. Laucks and the firms he has licensed turn out some 30,000 tons of soybean glue annually), rubber substitute (Norepol), paper industry (Glidden), plastics, soy-cotton helmets, firefighting compounds, lecithin, fertilizers. 4. Nutritional nuggets: Food value of soybeans and soy products (vegetable or edible types of soybeans, protein, fat & carbohydrate, minerals, vitamins, lecithin, alkaline ash, economy, exaggerated claims), principal uses of soybeans and soy products (meat substitutes, meat enrichers, fortifying foods with soy flour). 5. From soup to nuts: Green beans, dry beans, frozen beans, roasted soybeans, sprouted soybeans, the cow of China—soy milk, the meat without a bone—tofu or soy cheese, the little giant among protein foods—soy flour, soy grits, puffed grits, soy oil, miscellaneous soy products (soy butter [soynut butter, p. 99-100], sandwich spreads, malts, coffee substitutes, soy sauce, soy albumen—a new product, greatly improved during the past two years, is now used to “replace egg albumen in candy manufacture” [as in marshmallows]).

Note 1. This is the second earliest document seen (Aug. 2002) in which the soybean is called the “cow of China.”

Note 2. This is the earliest English-language document

seen (Dec. 2015) that uses the term “soy albumen” (or “soy albumens”) to refer to isolated soy protein as a product.

6. The blazed trail: Introduction (history and pioneers), our tardy acceptance, food pioneers (health-food stores, Dr. W.D. Sansum of Santa Barbara and soy bread, allergy studies, vegetarians, Seventh-day Adventist food companies, meatlike products, Madison College of Tennessee, Loma Linda Food Co., the International Nutrition Laboratory and Dr. H.W. Miller, special dietary concerns and diabetic diets), establishing soybeans in the kitchen (The Edison Institute and Henry Ford, the USDA and the U.S. Bureau of Home Economics, the Agricultural Marketing Administration, U.S. railroads, the Soy Products Division of the Glidden Co., the Soy Flour Association). 7. The challenge of nutrition: The dangers of hidden hungers, nutrition and health, corrective nutrition, starch-restricted diets, meatless diets, allergy diets, bland diets, building diets, reducing diets, acidophilus culture, lecithin. 8. Our wonder crop: Jack and the beanstalk, early history, new varieties, aids to the industry (Regional Soybean Industrial Products Laboratory, American railroads, American Soybean Association, Fouts Brothers of Indiana, *Soybean Digest* and George Strayer in Hudson, Iowa, Soy Flour Association with Edward Kahl as first president, Soya Kitchen in Chicago (Illinois) opened in Jan. 1943, National Soybean Processors Assoc., National Farm Chemurgic Council), educational program, restrictive regulations. 9. Soybeans and the farmer: Varieties, sources of information, seeding and inoculating, harvesting, grading, soybean diseases, crop rotation, damaged beans. 10. Tomorrow: Acreage and production, soybeans on the farm, soybeans in nutrition, postwar industrial uses, future improvements. 11. A few suggestions for better living: Kitchen diplomacy, personal opinions, soybeans for everyone. Recipes: Green soybeans, dry soybeans, sprouted soybeans, roasted or toasted soybeans, meat-substitute dishes, soy-enriched meat dishes, soy noodles, macaroni, spaghetti, sauces and gravies, soups, salads, dressings, soy spreads, soy milk, tofu or soy cheese, soy butter, soy cereals, soy desserts, soy candies, soy beverages, soy-flour recipes, bread and muffins, pancakes and waffles, soy gluten recipes, baking-powder biscuits, pastry, cookies and doughnuts, cakes.

Contains recipes for “Soy milk molasses shake (p. 238). Soy puddings. Soy ice cream (p. 250; “Soy milk may be used in place of regular milk in ice-cream recipes... adding whipped cream”). Soy fruit ice cream. Soy chocolate dessert (Eggless) (p. 250-51). Soy shake “(p. 254, made in a “liquefier or mixer”).

The story of Allied aid to Greece [p. 24-26] is one of the great mercy stories of World War II. Starting in March 1942, as many Greeks were starving, the first mercy ship sailed to Greece with food and medicine. Up to Nov. 1943, the United States through Lend-Lease sent 82 million pounds of food to Greece. A number of these foods (including soup powders, stew mixes, and spaghetti) were based on soy flour and grits,

and specifically developed to suit Greek tastes.

Concerning Henry Ford (p. 35-38), his “first experiments were made in a laboratory in connection with the Edison Institute in 1930. In these experiments, several tons of wheat were used, also several thousand bushels of carrots; sunflower seeds, which have a high oil content; cabbages; onions; and cornstalks. It was not until December, 1931, after a long series of experiments with the soybean, that Mr. Ford and his chemists felt that they were at last approaching a solution to the problem of finding a basic farm material from which the ordinary farmer could develop a commercially profitable product.”

Note 3. This is the earliest published English-language document seen (Sept. 2013) that uses the term “Soy ice cream” (p. 250).

Note 4. This is the earliest document seen (July 2007, one of two) that uses the word “Cinderella” in connection with the soybean. The author, however, does not elaborate on this idea.

Note 5. This is the earliest English-language document seen (Jan. 2019) that contains the term “soy-flour”—however it is used as an adjective. Address: Southern California.

4059. Lager, Mildred. 1945. Loma Linda Foods (Document part). In: Mildred Lager. 1945. *The Useful Soybean: A Plus Factor in Modern Living*. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. See p. 107-08.

• **Summary:** “The Loma Linda Food Company of California was originally established to supply nutritious vegetarian foods to institutions and hospitals, but it soon outgrew that field. Its sales in the last 3 years has grown by leaps and bounds. The first 6 months of 1943 almost double 1942; and today the company has national distribution of a complete group of soy products including canned beans, soy milk, cheese, several meat substitutes, a soy coffeelike beverage, and soy-fortified cereals.” Address: Southern California.

• **Summary:** This article appears in each issue from January to August.

4064. Semple, Dugald. 1946. Why food reform? *Vegetarian News* (London) 24:84-85. Winter 1945-46. *

• **Summary:** Discusses changes in diet and food consumption patterns brought about by war-time food shortages and rationing.

4065. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. Dr. M. Hindhede (1862-1945). Feb. p. 35-36. [1 ref]

• **Summary:** Dr. Mikkel of Copenhagen died on 18 Dec. 1945 at age 84. A great dietician and scientist, he understood the health benefits of a vegetarian diet.

4066. Bidwell, Randolph G. 1946. A pioneer vegetarian. *Vegetarian Messenger and Health Review* (Manchester, England). March. p. 59-61.

• **Summary:** The author believes this ancient manuscript to contain the earliest known account of a conversion to vegetarianism apart from religious or ascetic reasons. The convert was a knight, who probably lived near Canterbury, England, and who became sick after feasting on flesh foods and wine. The document was originally in the Latin of the early 1200s, then was translated into English in the late 1200s. Address: D.Litt (Princeton), PhD (Munich), Sometime Lecturer in Ecclesiastical History at the Univ. of Michigan.

4067. Hegsted, D.M.; Tsongas, A.G.; Abbott, D.B.; Stare, F.J. 1946. Protein requirements of adults. *J. of Laboratory and Clinical Medicine* 31(3):261-84. March. [38 ref]

• **Summary:** This is a comprehensive study of nitrogen balance, digestibility, and biological value of low-protein diets, one of which was devoid of animal protein, and the other which replaced one-third of the protein by meat. It concludes (p. 282): "It is most unlikely that protein deficiency will develop in apparently healthy adults on a diet in which cereals and vegetables supply adequate calories." i.e. on a diet containing no animal products.

There has been an unwarranted emphasis on the need for animal foods to meet protein requirements. The authors correctly show that as long as caloric needs are adequately

met, protein needs will also almost always be met; this is particularly true for adults. They suggest that the RDA of 70 gm of protein daily for a man weighing 70 kg could be safely lowered to 30-50 gm. Address: Dep. of Nutrition, Harvard School of Public Health, and the Dep. of Biological Chemistry, Harvard Medical Center, Boston, Massachusetts.

4068. Lager, Mildred. 1946. The meat without a bone. *Soybean Digest*. April. p. 22.

• **Summary:** "To anyone interested in unusual foods soy cheese is indeed fascinating. While it will never become popular in this country it is worth knowing about and trying at least once.

"Soy cheese or curd is known to the Chinese as tofu and it has been aptly described by them as 'the meat without a bone.'... The bean curd or soy cheese is the coagulated casein of the soybean and is made from soy milk very much as we make cottage cheese. The result is a white, very soft, watery substance, that can be pressed into a cake or soft cube. It is an easily digested food, fairly high in protein, and can be used as a meat, egg, or fish substitute, as a cheese, or as a topping or dessert.

"Every Oriental settlement has its tofu factory or factories which supply the restaurants and markets with fresh cheese. The methods used in some of them are very crude and primitive but the result is an excellent cake of cheese. There is an interesting little place in the heart of new Chinatown in Los Angeles run by two old Chinese who claim no knowledge of English, and can't be bothered with curious visitors. They did, however, allow me to watch from a distance. A large size coffee mill run by a little motor ground the beans. The curds were cooked in a clean wash tub and the cakes were pressed between two boards held down by a wooden bar which was attached to the wall at one end and weighted at the other end with a pail of sand. Naturally their output was limited but their product was excellent. Here was the old world working in the midst of the new making an ancient food that was yet new and novel."

Describes how to make tofu at home (vaguely), how to store it, basic preparatory techniques, and serving suggestions. It is delicious as a dessert "Some ingenious cooks even use it for cheese cake." Canned tofu is more in demand than fresh because it is more widely available. "Canned it is known as soy cheese, soy food or soy curd and the taste, texture and moisture varies with the different brands."

"Soy cheese will never become popular in this country. A certain amount will always be used, however, by the vegetarian, especially by those who do not use any animal products whatsoever [i.e., vegans], and by those who have developed a taste for it. It is an unusual food that does not appeal to everyone. It is becoming more and more popular in corrective nutrition because it often fills a need in the special diet.

“‘The meat without a bone’ is one of the interesting variations of the versatile bean. This ancient food is gaining a toe hold in our American diet and is filling a dietary need for many persons.”

A photo shows a woman in a Korean market selling cakes of tofu on a round woven bamboo tray. Address: Author of “The Useful Soybean” [California].

4069. Reid, Marion. 1946. The Doukhobors (Fighters of the Spirit). *Vegetarian Messenger and Health Review* (Manchester, England). April. p. 72-73.

• **Summary:** “In 1924 the German-Swiss writer, Werner Zimmerman, visited the colony of the Doukhobors in British Columbia [Canada] and reported what he saw and heard there in his book ‘Weltheimat’ (The World is My Home).”

The author’s name is written simply as “M.R.” We are guessing that it is Marion Reid.

4070. *Vegan (The) (England)*. 1946-- . Serial/periodical. England: Vegan Society. Frequency: Quarterly.

• **Summary:** *Vegetarian Messenger and Health Review* (Manchester, England). 1946. April. p. 82. The title of this periodical was changed in 1946 from *The Vegan News* (a newsletter published 1944-45) to *The Vegan*. It is now an attractive magazine dedicated largely to “the propagation of a non-animal dietary.” By August 1946 it had a circulation of 1,500 copies.

The Leicester Vegetarian Society, was instrumental in forming “The Vegan Society.” The first issue of *The Vegan News*, a quarterly bulletin, was issued in Nov. 1944. *Ulrich’s International Periodicals Directory* 1990-91 notes that this magazine is now published by the Vegan Society at 33-35 George St., Oxford OX1 2AY, England. Editor: Colin Howlett. Does book reviews. Circulation: 6,000. Back issues available. Description: Information on animal rights, vegan nutrition, health, and ecology.

The spring 1951 issue of *The Vegan* (Vol. 7, No. 1) has the subtitle “Advocating living without exploitation.” A copy of the Vegan Society’s new constitution was sent out to all members with this issue (see p. 2-3).

Note: In 2021 *The Vegan* was still publishing 4 issues a year—and going strong. See issuu.com/vegan_society Address: England.

4071. Henderson, F.K. 1946. Substitutes for dairy produce. *Vegetarian News* (London) 24:96-97. Spring. *

4072. Moore-Patalieka, B. 1946. What not to eat: The bad aspects of English diet. *Vegetarian News* (London) 24:110-11. Spring. *

4073. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. Animal or man? May. p. 87-88.

• **Summary:** Though food is still scarce after World War II, large amounts of grain are still fed to animals or used to make alcoholic beverages in the UK, Canada, and the USA. The utilization of cereal grains in the UK during the last year was as follows: Animal feeds 3,704,000 tons, human food 2,051,000 tons, brewing 819,000 tons, and distilling 130,000 tons.

4074. Semple, Dugald. 1946. The Doukhobors. *Vegetarian Messenger and Health Review* (Manchester, England). June. p. 124.

• **Summary:** “Sir—The writer of the most interesting article on the Doukhobors truly says ‘There is much to tell of these wonderful people who have elected to live according to their highest ideals.’ Many years ago when they decided to give up flesh-eating they recorded their decision in the following words:- ‘All relationship to living beings not based upon love is opposed to conscience and the will of God.’”

“Perhaps few know that it was the late Arthur St. John who pioneered thousands of the Doukhobors from Russia to Canada. He himself abandoned a military career and was imprisoned several times during his visits to Tolstoy in order to help these poor persecuted pacifist vegetarians. Later he organized a vegetarian restaurant in London, was editor of the Midland Herald, and was the founder of the Penal Reform League. During his retiral [sic] at his Scottish home, he devoted much of his time to writing an idealist book called ‘Why Not Now?’ It is a spiritual Utopia and describes how we might solve our social problems upon a religious conviction of the power of love and the futility of force. The book* contains a facsimile letter from Tolstoy, and I had the pleasure of writing an introductory note.

“Yours, etc., Dugald Semple.

* “‘Why Not Now?’ is obtainable at 6/6, post free, from Mr. Dugald Semple, Wheelhouse, Beith, Ayrshire.”

4075. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. Cookery demonstration. June. p. 115.

• **Summary:** On May 6 a public cookery demonstration was given at Croyden by Mrs. Fay K. Henderson of London. She prepared four nutritious savouries without meat and three sweets without eggs or milk. Of the latter 3 dishes, one was a Semolina Mold in which soya flour was whisked to a milk in a pint of warm water, and another was Date Cake which contained 2 oz of soya flour.

4076. Bidwell, Randolph G. 1946. An early vegetarian society. *Vegetarian Messenger and Health Review* (Manchester, England). July. p. 136-38 (8th Series).

• **Summary:** Discusses a little-known vegetarian religious community in England nearly 500 years ago (during the 1400s) named “the Company of the Seekers of the fruit of the Earth” and located in the parish of Tickencote in

Plashymede and Withydale. Address: Ph.D., Sometime Lecturer in Ecclesiastical History at the Univ. of Michigan.

4077. Pottenger, Francis M., Jr. 1946. The effect of heat-processed foods and metabolized vitamin D milk on the dentofacial structures of experimental animals. *American J. of Orthodontics and Oral Surgery* 32(7):467-85. [12 ref]

• **Summary:** Feeding experiments with 900 cats over a period of 10 years showed that cats thrived on raw foods (meat, milk) but not on cooked. Dr. Pottenger also discovered that the cat pens where the animals received the heat treated foods were incapable of growing weeds or crops, the cat manure being toxic to plants. When beans were planted in the outdoor cat pens, the crop was luxuriant and normal in the pens where raw milk and cooked meat had been fed, but in the pens where pasteurized milk and cooked meats had been fed, he hardly received his seed back in the 'harvest.' The soil had been ruined, agriculturally speaking. Address: M.D., FACP, Monrovia, California.

4078. Sherman, Henry Clapp. 1946. The nutritional improvement of life. *J. of the American Dietetic Association* 22(7):577-81. July.

• **Summary:** "Undoubtedly the more open minded we are in using the guidance of the newer knowledge of nutrition for greater efficiency in food management, the more intensively will we meet our needs through grain products, fruits, vegetables and milk" [i.e. through a vegetarian diet]. Address: Dep. of Chemistry, Columbia Univ., New York, NY.

4079. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. Soya bean in bread. July. p. 131.

• **Summary:** "It is of interest to learn that in the Kenya Colony it is proposed to incorporate 10 per cent. of soya bean flour into their wholemeal loaves." This fortification will make the bread more nutritious, and is expected to make each loaf less expensive. The soybeans will be sent from Uganda, where they are grown, to Kenya.

"In view of the widespread use of the soya bean during the recent war we may expect many countries will be planting considerable acres of a legume the valuable uses of which have only been fully appreciated during the past decade."

4080. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. Bernard Shaw: 90 years. July. p. 139-41.

• **Summary:** Only 26 July 1946 Bernard Shaw celebrated his 90th birthday. He has been a vegetarian for the past 66 years. A large photo shows Shaw.

4081. Worthington Foods, Inc. 1946. Dealer order blank.

Worthington, Ohio. 1 p. Catalog. Aug. 1.

• **Summary:** See next page. Products include: Mung bean sprouts. Soy beans in tomato sauce. Beta Broth. Tastex. Tastex food yeast. Protein foods (Alternates for meat): Choplets (vegetable fillets packed in savory sauce). Choplet-Burger (vegetarian ground meat with a texture like hamburger). Proast and Numete (dark or light vegetable meatloaf). Soy sauce (table). Wheatlets (Delicious whole wheat cooked breakfast cereal). A fairly detailed description of each product is given. Address: Worthington, Ohio. Phone: 2-5359.

4082. Harris, G. Kingsland. 1946. Natural diet. *Vegetarian News* (London) 25:124-25. Summer. *

• **Summary:** Advocates a vegetarian diet based on fresh foods. Address: England.

4083. Lawrance, Hannah E. 1946. Feeding the school child. *Vegetarian News* (London) 25:121-23. Summer. *

• **Summary:** Discusses problems experienced by the food service in British schools during the austerities of World War II. Address: England.

4084. Pink, C.V. 1946. Vegetarianism in infancy. *Vegetarian News* (London) 25:136-37. Summer. *

• **Summary:** The author, having observed nearly 3,000 vegetarian babies and children, concludes that they tend to be healthier, freer from childhood ailments, satisfactory in growth, and more physically and mentally alert than omnivorous children.

4085. Semple, Dugald. 1946. The food crisis. *Vegetarian Messenger and Health Review* (Manchester, England). Aug. p. 158-59.

• **Summary:** In view of food shortages, rationing, and other privations during the period after World War II, the author calls for reductions in food waste, both individually and nationally. Some say the cereal shortage will last until 1948. "Drastic cuts in rations for livestock have been announced, which will mean not only less bacon and eggs, but less milk and butter." A vegetarian diet makes the best use of limited food supplies.

4086. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. The Vegan Society. Aug. p. 151-52.

• **Summary:** The Society has about 100 members and its periodical, *The Vegan*, has a circulation of 1,500 copies.

4087. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. In Switzerland during the war. Aug. p. 152-53.

• **Summary:** Werner Zimmermann, of Berne, describes how World War II affected food supplies and vegetarianism in

WORTHINGTON FOODS:

Every one of the items offered under the Worthington label is guaranteed to be pure, wholesome, and of superior quality. Worthington Foods are famous for their distinctive taste appeal.

You can speak with confidence when you tell your customers, "There's nothing but Worthington Foods!"

SOY BEANS IN TOMATO SAUCE:

Select quality soy beans, cooked and packed in delicious tomato sauce. Serve like baked beans. Excellent for either lunches or dinners.

BETA BROTH:

Instant broth at its finest! Full-bodied, meat-like flavor, but meat free. Made from Brewer's yeast and vegetable extract. It's granulated to dissolve instantly. Makes an excellent gravy stock!

TASTEX:

Tastex makes wonderful gravy, bouillon, soup. TASTEX keeps indefinitely without refrigeration, has a definite meatlike flavor, and is made in a concentrated paste form. It's rich in the Vitamin B complex. Economical!

TASTEX FOOD YEAST:

Many cooked dishes, as well as pastries and baked goods, can be enriched by adding a small amount of this pleasant tasting yeast. Contains all the natural B complex as found in yeast and a 42-46% protein. Send for a sample.

CHOPLETS:

Delicious, high protein, vegetable fillets packed in savory sauce! Easily prepared in numerous ways and economical, too. They provide the sturdy main course which is so often lacking in vegetable plates. Recommended for meatless diets, Friday menus, Lenten dishes, vegetable plates, sandwiches. Choplets never fail to satisfy!

CHOPLET-BURGER:

This product answers the many calls for a vegetarian "ground meat." It's coarse in texture, like hamburger, and can be shaped into patties for frying. With the popular Choplet flavor and the convenient "burger" style, this item meets hearty approval of customers.

PROAST AND NUMETE:

For a delightful vegetable "meat loaf," your customers will appreciate Proast (dark) or Numete (light). Both are distinctive in flavor and rich in pure, nutritious protein. They are excellent sandwich fillers, or can be diced and used in salads.

SOY SAUCE:

The finest available soy sauce, packed attractively in a convenient table-size bottle.

WHEATLETS:

A toasted, whole wheat cereal which can be quickly cooked for a wholesome, healthful breakfast dish!

4088. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. A vegetarian colony in the tropics. Aug. p. 153.

• **Summary:** In October 1947 Mr. Harold B. Clark (of New Orleans, Louisiana), the originator of the project, and a few other vegetarians plan to take up residence on the island of Morat, Bay Islands, Honduras, to form "The Vegetarian Co-operative of Morat." The colony will be limited to 20 families.

4089. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. The word "vegan." Aug. p. 168-70.

• **Summary:** Two separate letters, one from J.F. Criddle and one from Leslie J. Cross, contend that the term "vegan" is a useful one. They are written in response to a "Round Table Talk" in the June issue of this magazine in which Smith and Robinson agreed that the word "vegan" was unnecessary.

4090. Bolt, J.H. 1946. Felix Ortt. *Vegetarian Messenger and Health Review* (Manchester, England). Sept. p. 187.

• **Summary:** Felix Ortt, who celebrated his 80th birthday this year, is the most distinguished vegetarian in the Netherlands. He has written more than 100 books and pamphlets. Address: Hon. Treasurer of the Dutch Vegetarian Society.

4091. Egerod, Oluf. 1946. Vegetarianism in Denmark. *Vegetarian Messenger and Health Review* (Manchester, England). Sept. p. 187-88.

• **Summary:** The Danish Vegetarian Society was founded in 1896 by the physician, Mich. Larsen, a man many years before his time. His main work, *Naturhelbredelsen* (The Nature Cure), sets forth all the fundamental rules of vegetarian living. This year the Society is celebrating its 50th anniversary. During World War I and II, many Danes took a greater interest in vegetarianism. Discusses the history, organization, and activities of the Danish Vegetarian Society. Address: Hon. Treasurer of the International Vegetarian Union.

4092. Stoddard, Alan. 1946. A vegetarian in the merchant navy. *Vegetarian Messenger and Health Review* (Manchester, England). Sept. p. 176-78.

• **Summary:** Describes the adventures of a British vegetarian ship's surgeon during World War II. He also gives his impressions of vegetarianism in India, which he visited.

4093. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. The centenary of The Vegetarian Society. Sept. p. 173.

• **Summary:** "On the 1st of September, 1946, The Vegetarian Society enters upon its 100th year." However

the celebrations will not begin until the Society's May 1947 meeting to be held in Glasgow, Scotland.

4094. *Vegetarian Messenger and Health Review* (Manchester, England). 1946. In memoriam: Anna Kingsford, b. 1846–d. 1888. Sept. p. 179-83.

• **Summary:** "On the 16th of September of this year, we celebrate the Centenary of the birth of Anna Kingsford, who on that day in 1846, was born at Maryland Point, Stratford, in Essex... She was so fragile on birth that she was laid aside for dead... She was born with a mission." A biography follows.

4095. *New Yorker*. 1946. Vegetarian practitioner in the East. 22:23-24. Oct. 5. *

• **Summary:** A profile of Dr. Max Warmbrand, a vegetarian physiotherapist.

4096. Bolt, J.H. 1946. The aim of vegetarianism. *Vegetarian Messenger and Health Review* (Manchester, England). Oct. p. 197-99.

• **Summary:** A man once asked many people "What are you living for?" He arrived at the started conclusion that many people, even the well educated, had never considered this problem seriously. Beginning on the individual level, vegetarianism endeavors to extend feelings of responsibility beyond one's own self and species to animals, plants, and the cosmos. Address: Hon. Secretary, Dutch Vegetarian Society.

4097. Maynard, L.A. 1946. The role and efficiency of animals in utilizing feed to produce human food. *J. of Nutrition* 32(4):345-60. Oct. [18 ref]

• **Summary:** The efficiency of converting feed protein into edible protein is milk (dairy cows) 14.5%, pork 14.5%, poultry meat 13.4%, eggs 9.5%, beef 8.4%, and lamb 4.4%. Address: Cornell Univ., Ithaca, New York.

4098. *New York Times*. 1946. Oscar and a vegetarian at odds on holiday fare. Nov. 29. p. 30, col. 3.

• **Summary:** Two contrasting styles of vegetarian dinners were served by Oscar of the Waldorf and Neil Ehmke of the Vegetarian Society of New York. Each insisted that his dinner was the traditional one. Each menu is listed. The 250 vegetarians met in Caravan Hall. Among the foods they enjoyed was "soy blueberry and whole wheat date and raisin muffins."

4099. Levinson, Samuel A. 1946. The effect of a relief vegetable protein diet on "normal" human subjects. *J. of the American Dietetic Association* 22(11):987-94. Nov. [20 ref]

• **Summary:** Describes the vegetable protein diet designed for starving people in post-World War II Europe. Following extensive clinical investigation, the diet was found to be adequate in all respects. Address: The Hospital Laboratories,

Research and Educational Hospitals and the Dep. of Pathology, Univ. of Illinois College of Medicine, Chicago.

4100. Taylor, S.; Farrington, W.M. 1946. Annual report of the Vegetarian Society for the year ended 31 August, 1946. *Vegetarian Messenger and Health Review* (Manchester, England). Dec. p. 238-45.

• **Summary:** Contents: Introduction. Vegetarians and rationing. Obituaries. Annual meetings and May meetings. Affiliated societies (names of the 23 are given). Lectures presented. Literature published. Vegetarian Messenger and Health Review (now in its 98th year). Health food store. Financial statements of The Vegetarian Society (of the U.K.). The future.

The Society's expenses were £5,536. Of these, the main ones were for salaries and wages (£1,616), and printing of Vegetarian Messenger (£843). Cash in bank was £1,065. Address: 1. Chairman; 2. Hon. Secretary.

4101. Barahal, Hyman S. 1946. The cruel vegetarian. *Psychiatric Quarterly* 20(1):3-13. Supplement.

• **Summary:** The author sees vegetarianism as a "good example of an eccentric fad which, though definitely not in the domain of the abnormal, attracts to its colors a great many cranks, fanatics, and others who may be considered to be on the fringe of mental imbalance."

"What interests us more is why a person of apparently normal mental make-up endowed with good intellect and not restrained by any religious dogma, will set up for himself extremely inconvenient and, according to the best medical authority, unhealthful food barriers... From the medical viewpoint there is little doubt that, everything else being equal, the meat-eater has the advantages both physically and mentally over the vegetarian in handling the difficult situations in life... It is also a matter of note that our greatest moral teachers, Jesus, Moses, Solomon and David, were meat eaters." The author is especially interested in the question: "What is there in the psychological make-up of a certain individual that produce [sic] in him such a curiously exaggerated compassion for animals?"

He begins with a description of the psychology of eccentrics in general. The eccentric display of one emotion often masks its underlying opposite. The psychiatric profile of vegetarians that follows characterizes them as eccentric, idiosyncratic, with underlying tendencies toward cruelty, sadism, and maliciousness. Hitler is cited as an example. During the years of his most brutal and inhumane acts toward human beings, stringent laws were being enacted throughout the Reich to protect animals, including the marked curtailment of the use of animals in medical experimentation. "At the time of Hitler's assumption of power, the central organ of the German vegetarian league came out with the flaming headline: 'First Great Victory of German Vegetarians—Hitler Becomes Chancellor.'"

Concludes that generally speaking, "most of the followers of this cult, particularly those who exploit the humanitarian angle, are basically cruel and unnecessarily malicious... I can truthfully say that in my experience with vegetarians, I have rarely encountered one who could be considered an entirely normal, well-adjusted individual. The average vegetarian is eccentric, not only as regards his food, but in many other spheres as well. In short, the average vegetarian is not definitely 'a lunatic,' but he certainly fringes on it." Address: Major, Chief, Psychiatric Section, Mason General Hospital, Brentwood, New York.

4102. Bayly, Maurice Beddow. 1946. Diet in relation to health and disease. Wilmslow, Manchester, England: The Vegetarian Society. *
Address: England.

4103. Bircher-Benner, Maximilian Oskar; Bircher, Max Edwin. 1946. Fruit dishes & raw vegetables (Sunlight–vitamin–food). Revised translation. Ashingdon, England: C.W. Daniel Co. 47 p. 19 cm. *

4104. Cruickshank, Ernest William Henderson. 1946. Food and nutrition: the physiological bases of human nutrition. Edinburgh: E. & S. Livingstone, Ltd.; Baltimore, Maryland: Williams. vii + 326 p. Illust. Plates. [200+ ref]

• **Summary:** This book was written shortly after World War II, when hunger and malnutrition were still prevalent in Great Britain. The Preface notes: "A strong belief in the value of historical knowledge in understanding the development and significance of modern scientific investigation..."

Chapter 6, "The protein requirements of the body" is based on the belief that "the proteins animal foods are better than those in foods of plant origin. The best proteins are obtained from milk, eggs and glandular tissues (kidney, liver, pancreas, etc.)." Table 9 mentions soya bean, but not Table 11, "Foods rich in protein."

Chapter 13, "Protein rich foods" (p. 193-203) is about cheese, eggs, meat and fish (9 references at the end).

Chapter 14, "Vegetarianism" (p. 204-14; 2 refs) states: "Vegetarianism generally refers to a diet from which fish, flesh and fowl have been excluded; more particularly it demands the further exclusion of milk, eggs and cheese." "There are few races and religious sects who live upon such a strict diet; high caste and strictly orthodox Hindus and Trappist Monks are amongst them. "True vegetarianism demands that nothing that is of animal origin be eaten" The "chief difficulty associated with a vegetarian diet... is to secure an adequate amount of calcium and iron, the fat soluble vitamins and complete proteins... With regard to the proteins, the vegetables richest in these are the legumes, i.e. peas, beans and lentils... but many of their proteins are incomplete, they are not of such high quality nor are they so easily digested as the animal proteins" (p. 204-05).

Also in this chapter. Table 37, “The comparative value of certain vegetables, fruits and nuts” (p. 212-13) mentions “Soya bean.”

On pages 307-08 we read: “The first United Nations Conference on Food and Agriculture was held at Hot Springs, Virginia, U.S.A., from 18th May to 3rd June 1943. Representatives of all the United Nations, 44 in number, with an observer from Denmark, representing 75 per cent of the total population of the world, met together to discuss plans for the production, distribution, transport and consumption of food all over the world.” The conference was called by President Franklin D. Roosevelt of the United States.

Note: Ernest Cruickshank was born in 1888. Address: M.D. (Aberdeen), D.Sc. (London), PhD (Cambridge), Regius Prof. of Physiology, Marischal College, Aberdeen, Scotland.

• **Summary:** About vegetarianism. The 7th edition was published in 1971, and the 8th edition in 1955.

4108. Pink, Cyril Valentine. 1946. *Vegetarianism in the nursery.* Wilmslow, Manchester, England: The Vegetarian Society. *

Address: Dr.

4109. Schweitzer, Albert. 1946. *Civilization and ethics.* 3rd ed. Translated by C.T. Campion and revised by Mrs. Charles E.B. Russell. London: Adam and Charles Black. xxviii + 284 p. Index. 23 cm. [50+* ref]

• **Summary:** Albert Schweitzer lived 1875-1965. Address: D. Theol., D. Phil, D. Med., Strasbourg, Alsace, France.

4110. Sikingier, Maximilian. 1946. *Classical nutrition.* Calabasas, California: Published by the author. 34 p. No index. 19 cm. [Eng]

• **Summary:** This concise little book is about live vegetarian foods, meditation, breathing, sunshine, the creative powers of the universe, and the purpose of our existence. “Classical Nutrition embraces the laws of life and nature to reciprocate

in harmony to the highest attainment of health.” On the cover is a photo of Sikingier kneeling on a rock by a stream.

Contents: The goal of civilization and the human race is the preservation of life; simplicity is the fact and staff of life (Eat mostly raw foods. Eat only natural foods. Eat simply, only 1-3 kinds of food at each meal. Eat foods in season. The four principal groups of foods). Protein foods (incl. Soy beans, raw peanuts, garvanza [garbanzo] beans). Carbohydrates. Natural sweets (esp. fruits; white sugar causes poisoning). Hydrocarbons or fats. Food combinations and food combining rules. Minerals: Magnesium, calcium, chlorine, fluorine, hydrogen, iodine, iron, manganese, nitrogen, oxygen, potassium, sodium, silicon, sulphur. Vitamines: Vitamin A, vitamin B complex, vitamine D, vitamine E, vitamine K, vitamine P. Summary. Soil deficiency is life deficiency. Therapeutic fasting.

Gordon Kennedy writes in *Children of the Sun* (198, p. 165): Maximilian was born in Augsburg, Germany, on 5 Feb. 1913. “This unique little book sold thousands of copies and helped to spread the *naturmensch* (natural men and women) ideas to many Americans. A trained masseur, physical therapist, dietary counselor and body builder, Maximilian has worked with the holistic community and continues to lead an active life on his ranch in the Santa Monica Mountains, where he lives with his beautiful wife, Carla.” Address: Calabasas, California.

4111. *SoyaScan Notes.* 1946. Chronology of Paul and Betty Keene of Walnut Acres, Pennsylvania (1910-1946). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Chronology: 1910 Oct. 12—Paul Kershner Keene is born in Lititz, Lancaster County, Pennsylvania, the third son of James Edward Keen (1878-1966; formerly Kühn, of German ancestry) and Nora Mary Kershner (1878-1957). James Keene was a minister in the United Brethren Church and, as a result, his family moved from town to town in southeastern Pennsylvania. Paul lived in Lancaster, Monte Clare and Pine Grove during his early years.

1928—Paul graduates from Pine Grove High School and enrolls in Lebanon Valley College (in Annville, Lebanon County, Pennsylvania) where he majored in math and physics.

1932—He earns a B.A. degree in mathematics.

1932—He enrolls in Yale University (New Haven, Connecticut).

1936—He earns a master’s degree in mathematics from Yale, and plans an academic career. 1936-37—He teaches mathematics at Brothers College, Drew University (a private university in Madison, New Jersey, affiliated with the United Methodist Church), eventually becoming head of the mathematics department. Then wanderlust struck.

1938—Applying to the school’s Methodist missionary board, he is assigned to the Woodstock School in Dehra Dun, northern India. Woodstock School in Landour, Mussoorie,

India—with a two-year teaching contract. Woodstock was a boarding school started many years ago to educate children of all races whose parents were missionaries, business people and government officials. It was begun and run primarily by American and British citizens, and it prepared pupils for entrance to colleges in the United States, Great Britain and Canada.

This time in India (18 months) was pivotal in his life. He taught various subjects, traveled widely, and in 1938 met his wife to be, Enid Betty Morgan, also a teacher at Woodstock, and the daughter of Rev. David Thomas Morgan (1872-1953) and Edith Mannington Morgan (1871-1941), Welsh and English Baptist missionaries, respectively, in India.

During his two years in India, he discovered the work of Sir Albert Howard, founder of the worldwide organic farming movement, and he visited (for a few days) Mohandas K. Gandhi, who lived in a simple mud house at Wardha [in today's Maharashtra state], India. Strolling with Gandhi along a dusty road, Paul asked: "How can a young person best serve humanity and his world?" Gandhi replied: "Ah, my friend, when you return to your home in America, you must give away everything you have... Then you will be free to talk and act. Doors will open for you." Paul later wrote that his teaching work in the USA had come to seem "somehow flat and empty. At unreality about it gnawed at my spirit. Had I become too separated from life at the roots? It was Gandhi—his simple life, his powerful personality, and his philosophy—who inspired me upon return to the States to spend four years studying and learning homesteading and organic food production."

In addition to learning about rural living, agriculture, and nutrition, he also became involved in India's struggle to free itself of British rule. He even talked with Nehru in his rooms after meetings of the Congress Party.

1940 Jan. 22—Paul and Betty are married in Bangalore, India, in the Ebenezer Baptist Church, where her father is pastor.

1940 March 23—Paul and his bride return to the United States, landing in San Pedro, California, on board the Japanese ship *Tatuta Maru*. He was a different person. The drive across country, sightseeing on the way for a few weeks, then stay with Paul's parents in Avon, Pennsylvania (PA), where Paul's father was pastor.

1940 summer—They live on the farm of a friend, Bill Simpson, in the Catskill Mountains of New York. There they encounter pamphlets by Ralph Borsodi discussing the School of Living.

1940 Sept.—Although mathematics no longer interested him, he taught math and physics for a year (until spring 1941) at Drew University in New Jersey. He tried unsuccessfully to write a doctoral thesis.

1941 spring—The couple (with friends recently returned from India) goes to live at economist Ralph Borsodi's School of Living near Suffern, New York—for almost two years.

Paul later recalled: "There we learned organic gardening, flour grinding, bread baking, butter and cheese making, food preserving, weaving, homestead arts and crafts. With a marvelous library we had hundreds of thinkers and doers by our sides as we both theorized and practiced. Here we were paid five dollars a week, plus room and board." Here Paul ran a cooperative store and taught homesteading. Before long they learned about the Threefold Farm in Spring Valley, New York, based on the teachings of Rudolph Steiner. The Keene's began teaching Steiner's principles and composting to their students.

1942 July—Their first child, Marjorie Ann Keene is born in New York.

1943 early—The Keene family moves to Kimberton Farm School (now nonexistent), near Philadelphia where they had two wonderful years of work and study with Dr. Ehrenfried Pfeiffer who had come from Switzerland to direct the school. About 10-15 men and women managed 1,000 acres. Of Dr. Pfeiffer, who is one of the foremost authorities on natural and biodynamic farming, Paul later said, 'he helped bring all of life together for us in a definite coherent pattern.' He also later recalled: "For two more years, to learn full-time farming, we attended Kimberton Farms organic farm school near Philadelphia. Here we learned the use of both horses and tractors as power sources for field-scale growing of crops. Studying under Dr. Pfeiffer from Europe, these were days of revelation in which love of the soil grew into a deep, rewarding, abiding part of our lives. We learned by doing the work on this farm of over one thousand acres, where milk cows, beef cattle and grain and vegetable production were paramount. Of course no chemicals or poisons were ever used. We were paid fifty dollars a month for our labor, and lived rent free in the top story of an ancient, freezing farmhouse. Nothing seemed really to matter, in our exuberance and sturdiness, as long as we continued to learn who we were!"

1944 Sept.—Paul goes to work on a farm in Easton, R.D. 4, Pennsylvania, to renovate the place so it will provide adequate shelter and a kitchen for Betty and baby Marjorie. The first night there he sleeps in the barn. Betty is about 8½ months pregnant with their next child. Betty and Marjorie stay with Paul's parents in Avon, Pennsylvania.

1944 Oct.—Betty and Marjorie move to Easton, PA. Here the family lives for more than a year on a farm they rent. After tragic losses there from heavy hail- and rainstorms, they decide to try to locate a farm of their own which is relatively inexpensive.

1945 Oct.—Their second child, Ruth Carol Keene is born shortly after the move to Easton.

1946 May 18—Paul and Betty purchase the first of several farms (as the deed of sale shows). They borrow \$5,000 to buy slightly more than 104 rocky acres (142 acres and 142 perches) and some dilapidated buildings on the walnut-lined banks of Penns Creek, near the tiny crossroads

village of Penns Creek, Pennsylvania, about 50 miles north of Harrisburg, PA—the capital of the Commonwealth of PA. The sign at the entrance to the lane said: “Long’s. Walnut Acres. Pigs for Sale.” The lettering was quickly abbreviated to “Walnut Acres.”

In 1988 Paul remembered: “Finally, penniless except for two hundred dollars, a team of horses, an old rusting horse plow and harrow, second-hand furniture, an ancient car, and two small daughters, we were able to get a long term loan [\$5,000] from government sources to purchase our very, very own farm of one hundred acres. Here our feet trod a portion of the earth leased for our lifetimes from the universe, to have and to hold precious and beloved until death do us part.”

“There was no furnace for central heating, no water heater except the kitchen range, no bathroom, no clothes-or-dish washers, no telephone, no refrigerator no freezer, no air conditioner, no T.V. For years we used a cast-iron kitchen range for heating both house and water.” During the winter, the bedroom was freezing cold.

In the Prelude to his book “Fear Not to Sow Because of the Birds,” Paul wrote (p. 3-4): “Since that beginning, things have always come as they were truly needed. A surprised observer, I have been swept along by life as in a miraculous stream.

“I have found that answers do not come by concentrating on one’s own desires or fancied wants or needs. Somehow, by seeking out the larger framework, as Gandhi did, one rises here and there above the choking limits of self into a freer, fresher atmosphere, to where one simply sees farther, through an expanded, more beautiful landscape.”

“In our chosen work we have been greatly upheld by life. Had we known beforehand what lay ahead we would have been scared to death. But nature kindly keeps our destinies from us. One grows but gradually into one’s future.”

4112. *Herald of Health and Naturopath* (San Francisco & Washington, DC). 1947-1957. Serial/periodical.

• **Summary:** The National College of Natural Medicine (NCCNM, Portland, Oregon) owns most of these issues. From Jan. 1947 (Vol. 52, No. 1) to April 1957 (Vol. 62, No. 4) are not bound. The publisher was the Herald of Health Publishing Company, most likely started by Benedict Lust (1872-1945).

4113. Chin, Kuo-Chun. 1947. Nature du lait végétal de Soja et précautions à prendre dans son emploi [The nature of soymilk and precautions to take when using it]. *Comptes Rendus des Seances de l’Academie des Sciences (Paris)* 224(4):288-90. Jan. 27. [2 ref. Fre]

• **Summary:** Soymilk was prepared by the Chinese philosopher Whai-Nan-Tze well before the Christian era. Its production was described by Champion (1885), Li Yu-Ying

(1905), Miller (1941), Mildred Lager (1946), and others. Starting in 1888 many authors (Balland, Cazalis, Dujardin-Beaumetz, Graux, Labbé, Lecerf, Maurel) and other partisans of vegetarianism, right up until the present (1930-46, Dr. Dresses, Donela, and Yen 1933) have recommended the use of soy flour or milk in infant feeding (*dans l’alimentation des nourrissons*).

Tables show: (1) A nutritional analysis of soymilk conducted by the Municipal Laboratory of Paris (*le Laboratoire Municipal de Paris*). (2) A nutritional analysis of cow’s milk. (3) A nutritional analysis of soymilk conducted by Prinsen (1896). (4) Two nutritional analyses of soymilk conducted by Li Yu-Ying in the factory *caseo-sojaïne*.

Conclusion: It appears that the chemical composition of soymilk varies considerably.

4114. *Vegetarian Messenger and Health Review* (Manchester, England). 1947. Centenary of The Vegetarian Society—1947. Jan. p. 1-2.

• **Summary:** Gives a brief history of the society.

4115. Halliday, H. 1947. Meat-eaters and vegetarians. *Vegetarian Messenger and Health Review* (Manchester, England). Feb. p. 32.

• **Summary:** From *The Sri Lanka* (1946): “I claim to speak with some authority on this subject because I have been practising surgery in India for the last twenty-four years, and had an admirable opportunity of comparing the relative resistance of meat-eaters and vegetarians during the great war. I was surgical specialist in charge of Indian troops for the greater part of the war. There was a remarkable consensus of opinion from all who had served with both races and classes that the Indian wounded healed more rapidly, were less amenable to infection and recovered from infected wounds more readily than did the French, British, and Australian troops. In civic life they show a remarkable freedom from certain diseases such as gastric and duodenal ulcers, gall-bladder diseases and appendicitis. As regards the latter I have some figures relating to the relative incidence of appendicitis in Indian and British troops respectively, in India. I find that this disease is about ten times as frequent in the British as compared with the Indian army.

“The rarity of cancer is so striking that a surgeon might practise for many years amongst this people and never see a case. I am speaking for the Punjab, not India as a whole. The Punjab diet is wheat bread, wholemeal, pulses, vegetables, milk and some fruit. I may add that their physique will compare favourably with that of any people in the world. When it was decided after the Boxer rising to recruit a regiment in the Punjab specially for service in Hong-Kong, there was no difficulty in raising a thousand men of an average chest measurement of 40 inches and an average height of 5 feet 11 inches.” Address: Lieut-Colonel.

4116. Powell, Milton. 1947. Veganism critically examined. *Vegetarian Messenger and Health Review* (Manchester, England). Feb. p. 33-37.

• **Summary:** In this first public article to question the soundness of certain vegan precepts, the author discusses problems he finds with some of the publications and claims made by vegans in England. He questions two vegan claims: (1) that a vegan diet is the most effective means of ending animal exploitation; and (2) that milk is deleterious to good health.

He especially challenges statements in a pamphlet by Dr. J.A. Goodfellow titled "Is Milk a Curse?," issued by the Vegan Society. The real problem of impure or contaminated milk should be dealt with by the public authorities. "Years of vegan and anti-milk propaganda appear to have produced only" 100 to 200 converts. Dr. Henry Lindlahr, the great Nature Cure pioneer, gave milk a primary place in his system of Natural Dietetics.

During World War I (1917-1918) the people of Denmark had to kill off one third of their cows. The milk and dairy products normally exported were added to their diet, so that they lived mainly on milk and dairy produce, coarse wholemeal bread made from wheat and rye, barley porridge, and potatoes. This change of diet was accompanied by a decrease of 17% in the mortality of the entire country down to the lowest level ever recorded in any country.

This article proves to be the opening salvo in a debate carried on in future issues of this magazine. Note: This is the earliest English-language document seen (March 2022) with the word "veganism" in the title or in the document. Address: England.

4117. *Vegetarian Messenger and Health Review* (Manchester, England). 1947. A vegetarian soirée in 1851. March. p. 62-64. [1 ref]

• **Summary:** This early gathering was reported in *The Times* (London) on 2 Aug. 1851; a long excerpt is given. A full page is devoted to a facsimile copy of the Vegetarian Society's original notice announcing the meeting. Mr. Joseph Brotherton, Salford's first member of Parliament, occupied the chair. The soirée took place on 1 Aug. 1851 at Freemason's Hall, Great Queen Street, London. Address: England.

4118. *Vegetarian Messenger and Health Review* (Manchester, England). 1947. A veteran vegetarian cyclist: G.A. Olley. March. p. 65. [1 ref]

• **Summary:** Olley, a robust vegetarian man of age 65, died on 29 Jan. 1946, after a short illness. This obituary, with a nice photo of Olley on his bicycle, is extracted from *Cycling* magazine (5 Feb. 1947). It notes that "Olley was, perhaps, the most versatile of all famous cyclists. He broke records at distances ranging from one to 1,000 miles... he proved to be one of the greatest long-distance riders we have known... it is

as a road rider that George Olley will always be remembered best." Address: England.

4119. Watson, Donald. 1947. Veganism—A reply to Milton Powell. *Vegetarian Messenger and Health Review* (Manchester, England). March. p. 55-60.

• **Summary:** Powell's article, "Veganism Critically Examined," appeared in the February issue of this periodical. This carefully examined rebuttal is based on the conviction that humans could feed, clothe, and generally provide for themselves without the use of animal foods or materials, and that doing so they would be to the benefit of all because of "better hygiene, sounder agricultural economy, and the wider implications of a more determined effort to live humanely."

The reason that 2 years of vegan propaganda have produced only 100-200 converts is that "these years have not been propitious for the launching of a restrictive dietetic idea." In the U.K. more than 2,000 children die annually from tuberculosis originating in cows. Address: England.

4120. Batliwalla, K.C. 1947. The incidence and causation of glycosuria in pregnancy. I. *Indian Medical Gazette* 82(4):191-93. April. [11 ref]

• **Summary:** Indian vegetarian women and those with low calcium and vitamin C intakes had greater incidence of glucose in their urine during pregnancy. Address: Dep. of Physiology, Seth G.S. Medical College, Parel, Bombay 12, India.

4121. Ledermann, E.K. 1947. Food in relation to character, taste, and health. *Vegetarian Messenger and Health Review* (Manchester, England). April. p. 76-80.

• **Summary:** Attempts to clarify the 3 fundamental issues which arise in connection with food—The ethical, the sensuous, and the scientific. The ethical should overcome the sensuous. This is the summary of an address given to the Welwyn Garden City Vegetarian Society on 28 Sept. 1946. Address: L.R.C.P.&S. (Ed.), L.R.F.P.&S (Glas.), M.D.

4122. Powell, Milton. 1947. Veganism. Mr. Milton Powell replies to Mr. Donald Watson. *Vegetarian Messenger and Health Review* (Manchester, England). April. p. 80-82.

• **Summary:** A reply to the criticism of Donald Watson (March 1947, p. 55-60) in this periodical concerning the author's negative views on veganism.

"No lacto-vegetarian opposes the humanitarian aims of vegans. But vegan propaganda methods are an essential part of their movement. If those methods seem unwise and unsound they should be criticized. The vegan goal will not be brought a day nearer by wild unscientific scaremongering against milk. A Royal Commission on tuberculosis found 'no evidence that either bovine or human tuberculosis bacilli could be altered so as to take on the characters and virulence of the other.' The National Anti-Vaccination Society in 'Milk

Never Proved to Cause Tuberculosis' says: 'the allegations against milk have never been proved; they are based on assumptions.' This leaflet quotes a doctor as attributing 600 (not 2,000) deaths to bovine tuberculosis, but repudiates bovine tuberculosis as the cause of death. The U.S.A. have reduced tuberculosis in cows to 0.5 per cent. (Encyclopaedia Britannica): Great Britain must follow suit, or will suffer American eclipse.

"Mr. Watson is badly informed about recent gastro-enteritis epidemics in maternity wards. The *British Medical Journal* reports that 'breast-fed babies are not immune. Our worst case was a breast-fed infant.' The mother develops the toxin and it escapes through the breast-milk to the baby. Not milk, but frozen meat was thought to be involved. 'Six vegan children escape infection.' Not very conclusive! Are not vegan parents, on the whole, more health-conscious, careful and prudent? It is not a simple issue between milk and no milk.

"Mr. Watson finds fault with milk because it does not contain all the vitamins and all the minerals! What vegan food does? A man with a constricted gullet lived an active healthy life for thirty years solely on milk. Even fruit juice did not suit the gullet, scarred by swallowing corrosive acid. Can the vegans equal or surpass this? And can they explain how this man could have survived at all for so long a time if milk is the deadly poisonous cancer-forming food vegan extremists make out?

"If Dr. Sutherland knows that *other* factors besides milk produce adenoids, enlarged tonsils, weak-minded children, imperfect dentition and deficiencies of the nervous system, why were we not told of this in the quotation? If this doctor believes that these troubles are due entirely to milk then he is unfit to practice as a physician. There are a score of causes of the foregoing complaints, excluding milk.

"The ratios of mineral salts, fats and vitamins in diluted cow's milk can be preserved by the humanized milk as supplied by our all-too-few municipal milk depots; or mothers can prepare it by a simple formula. The result is a product almost indistinguishable from human milk. It should be of the first ethical importance that the graver a charge brought against a food the weightier the evidence in support. But vegans offer us flimsy guesses and inaccurate statements. 'No cancer where cow' milk is not taken.' The Home Doctor states that cancer occurs in primitive uncivilized tribes, and in wild animals. 'Switzerland and Scotland have a higher incidence of cancer than England and Wales.' But more flesh-foods are used in those two agricultural countries; moreover, mountainous countries have more valleys and rivers, and damp inundated areas encourage cancer. Not 'milky porridge' but the widespread vicious substitution of strong tea and white flour causing intestinal stasis is a far more likely explanation of cancer increase.

"Lactic acid has nothing whatever to do with causing cancer. Bacteriologists tell us that lactic acid bacilli are non-

pathogenic; lactic acid is one of the easiest acids to neutralize and eliminate; sour milk and buttermilk (lactic acid rich) have been used successfully in the cure of ulcerative colitis and beneficially in bowel cancer. Mr. Watson links lactic acid with mammary-gland cancer in women. Yet human mothers do not secrete lactic acid which is actually not a normal ingredient of fresh milk at all, but is derived from air-borne organisms. Vegan diet may, as Dr. Black said, afford relief of pain, but not cure of cancer. Since there are over forty known possible causative factors in cancer, many of which have nothing to do with food, only a vegan utopist could believe that veganism is a complete insurance against cancer.

"Mr. Watson is not satisfied there is no cancer-auxetic in milk. This suggests he hopes one will be found—to make a vegan argument? He ascribes the reduced mortality in Denmark under Hindhede as due to a lowered consumption of flesh-foods, sugar, confectionery, tobacco, white flour and alcohol, but he fails to take account of the fact that these deleterious imports were also reduced in neighbouring countries in which the mortality rate went up because they did not enjoy the extra dairy produce which sent Denmark's mortality rate down.

"Mr. Watson sees the 'undignified spectacle' of man parasitically dependent on the cow. Does he not see that in the modern world we are all parasitic, vegans included? Vegans use wheat, rice, tea, raisins, dates, citrus fruits, lentils, soya beans, peanuts. All these are obtained cheaply by a foreign-produce system based on the ruthless exploitation and degradation of hundreds of millions of 'human animals'—coolies, fellaheens, peasants. We have not yet seen even a mention in vegan literature of this unparalleled parasitism. What is needed is not so much a separatist select band of pure nondairy vegans keeping themselves unspotted from the world, as a unified active participation in the world food-crisis, a unified crusade which aims at putting an end to all exploitation of man or beast so that all may eat and drink without parasitic plunder and food-guiltiness.

"If vegans will confine their efforts to producing superior substitutes for dairy foods, and to demonstrating that healthy and long life can be maintained on vegan diet in civilized environments they will do more to convert people to veganism than by ill-founded propaganda against foods of which they disapprove."

4123. Reid, Marion. 1947. Psychology and vegetarianism. *Vegetarian Messenger and Health Review* (Manchester, England). April. p. 82-84.

• **Summary:** The eating of flesh foods may have powerful negative effects on the unconscious mind—as when children who love animals learn the origins of the meat they eat. A number of stories are given to support her contention.

4124. *Vegetarian Messenger and Health Review* (Manchester, England). 1947. Vegans and the vegetarian

society. April. p. 73-74. [1 ref]

• **Summary:** “Since the formation of the Vegan Society there seems to have been considerable misunderstanding as to the attitude of The Vegetarian Society towards vegetarians who do not take dairy produce. The position of The Vegetarian Society has always been quite clear on this point and ever since 1847 has defined vegetarianism as ‘the practice of living on the products of the vegetable kingdom, with or without the addition of eggs and of milk and its products (butter and cheese), to the exclusion of fish, flesh and fowl.’ The Vegetarian Society, therefore, has always included ‘vegans’ when there were any. It would be conceded by many vegetarians that, in general, the vegan standpoint is the next logical step to take on ethical grounds. With this in mind it may be asked why The Vegetarian Society has not placed non-dairy produce propaganda in the forefront of its work. The important reasons are:

“(a) The Vegetarian Society is primarily concerned with making vegetarians—whether vegans or not.

“(b) A nation schooled for years in the habits of flesh-eating will not pass easily from one extreme to the other, and therefore more progress is possible by getting people to give up the consumption of fish, flesh and fowl.

“(c) Experience has shown that it would be expecting too much from members of the general public to ask them, in the first place, to become vegans. If this were done it would involve much wasted effort on the part of active workers who would be able to do more effective work in those quarters where vegetarianism, but not veganism, would be a possible outcome.

“(d) The general public is influenced to a larger extent by expediency rather than principle. As it is not widely possible to obtain vegan substitutes for what the public are accustomed to, the approach to vegetarianism can be made more effectively from The Vegetarian Society’s angle.

“(e) The question of numbers is an important one from the point of view of abolishing much of the slaughter which now goes on. Many people would prefer a vegetarian diet to what they are having at present, if it could be obtained more easily. These people are not particularly concerned with the principle involved, and once they get into the habit of giving preference to vegetarian meals, the demand for flesh (and therefore slaughtering) is materially reduced.

“(f) In general, manufacturers do not care to produce commodities for which there is only a very small demand. This is a further instance of the importance of numbers in providing the every-day requirements of the vegetarian—whether vegan or otherwise.

“(g) The Vegetarian Society feels that, from the point of view of its propaganda, it must concentrate, for many years to come, not on the vegan aspect of vegetarianism, but in an endeavour to get people to abstain from the use, as food, of fish, flesh and fowl as being the gateway to a great social, moral, and economic reform.” Address: England.

4125. *Vegetarian (The) (England)*. 1947-1950. Serial/periodical. Bournemouth, England. Vol. 1, No. 1. Spring, 1947. Frequency: Quarterly. Editor: Geoffrey L. Rudd. 4°. *

• **Summary:** Ceased publication with Vol. 4, No. 4 in the winter of 1950. Continued by: World Forum, in the spring of 1951.

Vegetarian Messenger. 1947. June. p. 133. “A new quarterly magazine, *The Vegetarian*, made its appearance with the spring issue this year. It is ably edited by Geoffrey L. Rudd, of Bournemouth, and will be wider in its scope than the official organs of existing societies could be... We extend to Mr. Rudd our good wishes for the success of *The Vegetarian*.” Address: Bournemouth, England.

4126. McCay, C.M. 1947. Four pioneers in the science of nutrition—Lind, Rumford, Chadwick, and Graham. *J. of the American Dietetic Association* 23(5):397-402. May. [18 ref]

• **Summary:** The article begins with this quotation: “But still, O Lady Bountiful, do not give your spare and skim milk to the store pig, when there are half a dozen children growing up bow-legged and crooked within half a mile of your lodge gate for lack of it.”—T.K. Chambers in *A Manual of Diet in Health and Disease* (London, 1875).

James Lind (1716-1794), a Scotch physician, was the father of naval hygiene. “Due to the large number of cases of scurvy found in the navy, he revived the use of citrus juices which had been recommended in the sixteenth century. Lind was the author of three texts: *A Treatise on Scurvy* (1754), *On the Most Effectual Means of Preserving the Health of Seamen* (1757), and *Essay on Diseases of Europeans in Hot Climates* (1768).”

Count Rumford (1753-1814) was born in Concord, New Hampshire [sic, Woburn, Massachusetts] (United States). A Loyalist during the American Revolution, he fled to the British lines, and moved to London at the conclusion of the war. The writings of Count Rumford in the field of physics are well known, but those in the field of food and nutrition are abundant and of great importance. His interest in food seems to have attained its peak during his eleven years of service in Bavaria (1784-1795). “His practical mind soon grasped the great economic importance of the potato.” He introduced potato culture throughout Bavaria. He was buried in Paris, France.

Sylvester Graham was (1794-1851) was an American preacher, who worked to reform bread making, to “convert Americans to his vegetarian diet, and to his faith in bathing and fresh air. During his life, he was ridiculed, but today much of his teaching about hygiene is accepted and practiced.” Address: Lab. of Animal Nutrition, Cornell Univ., Ithaca, New York.

4127. *Vegetarian Messenger and Health Review (Manchester, England)*. 1947. The vegan controversy. May.

p. 99-100.

• **Summary:** “Arising out of the article on Veganism by Mr. Milton Powell, a number of letters have been received which contain points that have already been dealt with or repetitions of principles about which both vegetarians and vegans agree. The articles by Mr. Milton Powell and Mr. Donald Watson have served a very useful purpose in so far as the subject of veganism has been discussed from several angles, and in summing up the various points raised both in the articles and the correspondence we arrive at the following conclusions: -

“(a) No one has doubted the logic of the humanitarian views of the vegan. In this respect Mr. Henry Cooper, of Northampton, says: ‘It appears to me that this is the parting of the ways between the food reform vegetarians and the humanitarian vegans, and I can see no good reason why the two parties should be opposed to each other.’ We agree with Mr. Cooper that there should be no division between the two sections, but Mr. Cooper appears to leave out of account the much larger body of humanitarian vegetarians who do not practice the vegan way of life because they consider their vegetarian practice will point the way to putting an end to the exploitation of animal life sooner than by expecting converts from flesh-eating to accept a situation for which they are not ready. Realizing that milk production is likely to remain for some considerable time (not to mention flesh-eating), the suggestion for improving the conditions under which it is produced is obviously desirable, but should not be taken as being a solution to the problem. Mr. Milton Powell would be the last person to consider it as such.

“(b) The health arguments tend to be somewhat confused and unsupported by facts. For example, one of our correspondents says ‘Milk and milk production has been and continues to be the cause of thousands of endless epidemic cattle diseases and thousands upon thousands of human deaths from tuberculosis, typhoid and innumerable other diseases that could be easily prevented by a sane and natural diet and hygienic conditions.’ Many factors, unrelated to milk production, are involved in the circumstances quoted, and consequently his case is considerably weakened when he puts all the results down to milk production. That the continued intensive production of milk has its disastrous consequences, few would doubt but nothing is gained by overstating the position. In a similar way the statement made by another correspondent that ‘Milk consumption results in cancer’ is quite inaccurate in the light of actual facts. There are milk consumers who get cancer and those who don’t.

“(c) Mr. Ivor H. Sercombe says: ‘How can this exploitation of the animals be ended save by a realization nationally that dairy products are not only unnecessary, but undesirable for human beings?’ That is the practical issue, but even if the nation realizes that dairy products are unnecessary and even undesirable, the fact that habit has a stronger appeal than reason will prevent the nation accepting an alternative until another equally attractive habit

replaces the old one. In this respect there is an opening for vegetarians, and especially vegans, to popularize and aim at an improvement in the substitutes for milk and cheese.

“(d) Veganism has not been attacked, even by Mr. Milton Powell, on the grounds that it is inadequate, nor has it been necessary to defend it. The only grounds of attack have been in regard to statements—some exaggerated—which could not be substantiated, and this is a weakness in advocating any reform.

“(e) In this very imperfect world the reformer is faced with compromise at some point or other. The degree of compromise is determined by (a) deep personal conviction, (b) expediency, (c) a combination of both (a) and (b), in which there is a further compromise in regard to (a) with the object of propagating certain ideas and bringing about a change more speedily.

“Complete consistency is impossible, and therefore our actions will be influenced by our desire (i) to accept a high ethical standard irrespective of whether others follow or not; (ii) to accept a less high standard in the hope that others, seeing its advantages, may thereby be attracted. Both attitudes of mind will persist, and if this is realized, the many irrelevant remarks concerning vegetarians and vegans (whose ultimate aims are the same) should disappear.

“(We are obliged for letters on the subject of veganism from Mr. Henry E. Cooper (Northampton), Miss Grace James (Colne), Mrs. Amy Little (Winscombe, Somerset), Mr. Wright Miller (Paignton), Mr. Ivor H. Sercombe (Devizes), and Mr. and Mrs. Turnbull (Newcastle-upon-Tyne), and L.A.R. (Claygate)).”

4133. *Vegetarian Messenger and Health Review* (Manchester, England). 1947. The late Professor Irving Fisher. Aug. p. 154.

• **Summary:** Prof. Fisher was best known to the world as a brilliant economist, but he will be remembered by vegetarians for the endurance tests that he conducted in the early 1900s. The results of these tests were published in March 1907 under the title “The Influence of Flesh-eating on Endurance” in the *Yale Medical Journal*. Shortly after his appointment at Yale University, he acquired tuberculosis, which left him debilitated and able to work only a few hours each day. Although he consulted several leading American physicians, it was not until he visited Dr. John Harvey Kellogg (a vegetarian at Battle Creek Sanitarium in Michigan) that his condition was largely cured, giving him a busy and useful life for the next 50 years. This experience gave Prof. Fisher a special interest in natural methods of living, and he devoted much of his time to writing and lecturing on the subject, in addition to his duties as Professor of Political Economy.

4135. Malayan Vegetarian Society. 1947. New vegetarian society. Singapore.

• **Summary:** The *Malayan Vegetarian* (a periodical) was published in Singapore by the Malayan Vegetarian Society. The British Library Catalog states that vol. 3, no. 1 was Jan/March 1949. So the society may have existed by early 1947.

Australian Vegetarian (Sydney). 1948. “How the society was formed.” 1(1):1, 3. July/Sept. “The first vegetarian society in Australia was formed on April 8 [1948] in Sydney after a lecture ‘The Humane Aspect of Vegetarianism,’ delivered under the auspices of the Australian Branch of the World League for the Protection of Animals. Lecturer was Mr. Sten von Krusentierne, formerly Vice-President of the Malayan Vegetarian Society in Singapore. After the lecture a discussion was invited with a view to forming a vegetarian society in Sidney.”

Note: This Asian society almost certainly advocated the use of soyfoods among its members—although we have no proof of that. Address: Singapore.

4136. Axon, William E.A.; Axon, Ernest. 1947. One hundred years of the Vegetarian Society, 1847-1947. Manchester, England: The Vegetarian Society. 8 p. 18 cm.

• **Summary:** One of the best histories seen of the Vegetarian Society of the UK. Contents: Origin and definition of the terms “vegetarian” and “vegetarianism.” Introduction. Historic testimony. Inception of the Society. A vegetarian church. The mission of the Society. The presidential chair (past presidents of the Society; James Simpson of Accrington [1847-1859], William Harvey of Salford [1859-1870], James Haughton of Dublin [1870-1873], Prof. Francis William Newman of Weston-super-Mare [1873-1884], John E.B. Mayor a distinguished Cambridge scholar [1884-1910], William E.A. Axon of Manchester [1911-1913], Ernest Bell of London [1914-1933], Peter Freeman of Cardiff [1933-1938], W.A. Sibley head of Wycliffe College [1938 -]). Officers: Treasurers and secretaries (The first treasurer was William Oldham from 1847; the first secretaries were T.H. Barker and the Rev. James Clark (jointly) elected 1859). Annual May meetings (since 1876). Not a local society (Locations). Affiliated societies. The International Vegetarian Union. Concerning income. Map of the UK showing percentage distribution of members of the Vegetarian Society by 6 regions: Northern Counties 35.4%, Southern Counties 34.8%, Wales, Midland, and Eastern Counties 19.8%, Scotland 4.7%, Abroad 4.3%. Map showing centres at which May meetings have been held. The Society as a charity. The Society’s literature. The Society’s magazine. Practical demonstration (incl. Vegetarian Cycling and Athletic Club founded in 1887, and Summer School which began in 1901). The Society in War-Time (both world wars). The aims of the Society. Legacies.

The Vegetarian Society presently has offices at Bank

Square, Wilmslow, Manchester, and food stores at 39 Wilmslow Road, Rusholme, Manchester 14, England.

This article was originally written by Dr. Axon for the Society's 50th anniversary in 1897. It was revised by him for the 60th anniversary; it was revised by his son in 1923 for the 75th, in 1933 for the 85th, in 1938 for the 98th, in 1939 for the 92nd, and in 1947 for the 100th anniversary. A copy in booklet form was included in the July 1947 issue of *The Vegetarian Messenger*. Address: 1. LL.D., President, 1911 to 1913; 2. Vice-president; Both: England.

• **Summary:** Discusses vegetarianism and raw foods salads. Norwalk makes the Norwalk juicer. Address: Anaheim, California.

4142. *Vegetarier-Rundschau: Zeitschrift zur Vertiefung vegetar. Gedankengutes und zur Sicherung vegetar. Lebensfuehrung*. 1947- . Serial/periodical. Hauptschriftl. (Main writer): Oswald Kiehne. Vol. 4 is 1940. 12 issues per year. Sontra (Hessen): Deutsche Vegetarier-Zentrale [Ger]*

• **Summary:** Union List of Serials says "Sontraer

Gesundheitsbote (Deutsche Vegetarier-Zentrale) Sontra. 1 April 1947+. 1947-57? as Vegetarier Rundschau?" Address: Sontra (Hessen), Germany.

4143. Székely, Edmond Bordeaux. 1947? The gospel of peace of Jesus Christ by the disciple John: The Aramaic and ancient Slav texts compared and edited by Edmond Székely. Translated by Edmond Székely and Purcell Weaver. London: C.W. Daniel Company, Ltd. 62 p. 18 cm. *

• **Summary:** This inspiring book, considered by the British Library to be an apocryphal work, argues that Jesus and the early Essenes were vegetarians. The original Aramaic document is said to be in the Vatican library. A German translation was also published in 1940. Purcell also wrote several books on naturopathy.

4144. Carlson, Anton J.; Hoelzel, Frederick. 1948. Effect of vegetarian self-selection diets on reproduction and the growth of offspring of rats. *J. of Nutrition* 35(1):49-55. Jan. [5 ref]

• **Summary:** The omnivorous rats were superior to the vegetarian rats in all respects. Address: Dep. of Physiology, Univ. of Chicago, Chicago, Illinois.

4145. Snider, A.J. 1948. Vegetarian diet cuts life span of rats. *Science Digest* 23:31. Jan. *

4146. *Soybean Digest*. 1948. Grits and flakes... from the world of soy: Bee Gee Products, Oak Park, Illinois is featuring a meatless chop suey dinner... Jan. p. 36.

• **Summary:** "... as an economical, tasty and easy-to-serve meal. The dinner is a complete meal for four persons and includes tea and soy sauce."

4147. Jaap, R. George. 1948. Discuss estrogenic hormones in poultry meat production tests: Study presented to the 1947 Cornell Nutrition Conference of Feed Manufacturers shows that males take on female characteristics and both become fat. *American Egg and Poultry Review* 9(2):82-83. Feb.

• **Summary:** Contents: Introduction. Source of natural estrogens (incl. DES). Absorption stimulates fattening. Synthetic estrogens listed. Restricts blood fat.

Estrogens "are substances which bring forth estrus, the so-called 'heat period' of mammals. But they are responsible for much more than estrus, for they produce distinct bodily changes." They feminize. "Thus the entire female behavior pattern has been produced by administration of these chemicals in growing chickens, capons, or roosters." The roosters stop crowing and begin to make a song like hens.

"The diethylstilbestrol pellet is now permitted by the Federal Food and Drug Administration for use in fattening poultry..." "Estrogens in concentrated form can be absorbed through the skin." Address: Ohio State Univ.

4148. Axon, Geoffrey R. 1948. What is a vegetarian? *Vegetarian Messenger and Health Review (Manchester, England)*. March. p. 64-65.

• **Summary:** Explains that a vegetarian is one who subscribes to “the practice of living on the products of the vegetable kingdom, with or without the addition of eggs and milk and its products (butter and cheese), to the exclusion of fish, flesh and fowl.” Address: A.L.A.

4149. *Chemurgic Digest*. 1948. Sex hormones are fed for fattening poultry. March. p. 18.

• **Summary:** “Scientific hormone studies at Ohio State University indicate the quality of the nation’s poultry meat production may be boosted appreciably by addition of certain chemicals to the chicken’s diet, but the old barnyard rooster may lose his crowing ability in the process.

“Professor R. George Jaap of the university poultry husbandry department reports that poultry of either sex and almost any age can be fattened rapidly and without extra feeding by treatment with feminizing hormones known as estrogens.”

“Although estrogens cause somewhat similar responses in all animals, the fattening effect, due to an increase in the fat and fat-like compounds of the blood, appears only in birds.

“Several estrogenic compounds have been employed in Professor Jaap’s research by injection, feeding, and implanting pellets under the chicken’s skin. One chemical, diethylstilbestrol [DES], produces maximum fattening results in about four weeks’ time when introduced by the pellet method. Use of this pellet for poultry fattening has been approved by the Federal Food and Drug Administration. However, employment of this group of chemicals in poultry feed is not yet permitted.”

Professor Jaap adds a note of caution: “Since estrogens, when they enter the body in sufficient quantity over a sufficiently long period of time, produce a feminine response,... it is highly desirable that they be proven harmless to man before they be permitted for use in the poultry industry.”

4150. *Chopletter: The Magazine of Worthington Foods News and Views*. 1948-1969. Serial/periodical. Worthington, Ohio: Worthington Foods, Inc. Vol. 1, No. 1. April 1948. Quarterly.

• **Summary:** See next page. By April 1960 the circulation was about 65,000. Beneath the title on page 1 was written: “The Magazine of Worthington Foods News and Views.” Worthington bills itself as “Makers of Famous Choplets.” The editor is Opal Hoover Young. It is published quarterly. The last issue was March/April 1969. The title changed in May/June 1969 to *Tomorrow’s Foods for Today’s Homemaker*. Address: Worthington, Ohio.

4151. *New York Times*. 1948. Vegetarian, 85, in race:

Restaurant operator outlines his platform for the presidency. May 27. p. 18, col. 3.

• **Summary:** The Vegetarian Party presidential candidate, Dr. J. Maxwell, opens his campaign with a radio speech.

• **Summary:** Discusses the successes and difficulties experienced by a dietician in a vegetarian boarding school.

4153. Retlaw, George S. 1948. The vegetarian miracle. *Vegetarian Messenger and Health Review (Manchester, England)*. June. p. 121-22.

• **Summary:** Describes an incident in West Africa in the early 1900s in which a worker’s life was saved through a vegetarian diet.

4154. *Vegetarian Messenger and Health Review (Manchester, England)*. 1948. Dr. Barry: The first woman doctor—a vegetarian (circa 1788–1865). June. p. 120-21.

• **Summary:** It is widely but incorrectly believed that Dr. Elizabeth Garrett Anderson was the first woman doctor to qualify in great Britain. “Dr. Barry won her medical degree at the University of Edinburgh [Scotland] in 1812. Her name appears on the records as James Miranda Stuart Barry.” Thus she successfully disguised her identity, pretending to be a man, until the time of her death. The medical profession was not open to women in those days. In 1813 she joined the army as a hospital assistant. In 1858 this brilliant woman was appointed to the exalted position of Inspector General of Hospitals in Cape Town, South Africa. Moreover, Dr. Barry was a vegetarian at a time when such a way of life was either unknown or ridiculed.

4155. *Australian Vegetarian: Official Organ of the Australian Vegetarian Society*. 1948-- . Serial/periodical. Sydney, NSW, Australia. Vol. 1, No. 1 July/Sept. 1948. Quarterly. Published by the Society. 21 cm.

• **Summary:** On the first page of Volume 1, No. 1 are three articles: (1) “To all vegetarians in Australia,” an invitation to membership and statement of the society’s five main aims. (2) “How the Society was formed.” Continued on p. 3. (3) “In union is strength,” by Geoffrey Hodson, President, The New Zealand Vegetarian Society. Continued on p. 6.

4156. *New York Times*. 1948. G.B.S.’s liver oil stirs vegetarians: Playwright’s defense fails to convince editor running on no-meat ticket here. Aug. 24. p. 25, col. 6.

• **Summary:** George Bernard Shaw attacked for apostasy by S. Gould, the U.S. Vegetarian Party Vice Presidential candidate. Shaw replies in a letter.

Published by WORTHINGTON FOODS, INC., Worthington, Ohio, Makers of Famous Choplets - Editor, Opal Hoover Young

VOL. VI

JUNE 1953

NO. 2

Aerial View of Worthington Foods Factory

• **Summary:** “Carefully prepared home cooked meals. Freshly made salads. Continental coffee.” Address: 25 Bligh Street, Sydney (Basement, Savoy Theatre).

4158. *Australian Vegetarian (Sydney)*. 1948. How the society was formed. 1(1):1, 3. July/Sept.

• **Summary:** “The first vegetarian society in Australia was formed on April 8 [1948] in Sydney after a lecture ‘The Humane Aspect of Vegetarianism,’ delivered under the auspices of the Australian Branch of the World League for the Protection of Animals. Lecturer was Mr. Sten von Krusentierna, formerly Vice-President of the Malayan Vegetarian Society in Singapore. After the lecture a discussion was invited with a view to forming a vegetarian society in Sydney. The final result of this discussion was the formation of the first vegetarian society in Australia, unanimously decided upon by those present.

“The first General Meeting of the new Society was held six weeks later, on 20th May, at the premises of Mr. W.E. Roberts (Naturopath).” He has generously offered rooms “at 17A Pitt Street for all meetings to be held by the society. Twenty-seven members...”

Note: Another Naturopath in Australia with the surname Roberts is F.G. Roberts. Could they be related?

4159. Executive Committee of the Australian Vegetarian Society. 1948. To all vegetarians in Australia. *Australian Vegetarian (Sydney)* 1(1):1. July/Sept.

• **Summary:** An invitation to membership and statement of the society’s five main aims: (1) “To spread the principles and advantages of Vegetarianism and the ideal of a humanitarian mode of life.” (2) “To advocate, extend and organise Vegetarianism in Australia and to form branches and groups in any part of the country.” (3) “To encourage co-operation between vegetarians throughout the world.” (4) “To organize public meetings, lectures and discussions; to establish libraries, and to publish and distribute literature and a periodical magazine.” (5) “To facilitate the supply of vegetarian food.

“We appeal to all vegetarians in Australia to join the Society and to help the work of the Society as generously as possible. Only a strong Society will be able to represent the interests of vegetarians adequately.”

4160. International Nutrition Laboratory, Inc. 1948. Question: How do I make delightful Meatless Meals based on sound nutritional practice? (Ad). *Soybean Digest*. Sept. p. 48.

• **Summary:** “Answer: Follow the Basic 7 Plan of nutrition and use in the place of meat one or more of the 7 ready-made foods illustrated here. * For Basic 7 Plan see below.”

The foods are: Miller’s Meaty Cutlets, Cutletburgers, Chop Suey, Vegetarian Chili Con Carne, Giant Green Soya Beans, Tender Edible Soya Beans in Tomato Sauce. Address:

Mt. Vernon, Ohio.

4161. Roberts, W.E. 1948. Vegetarian health camp (Ad). *Australian Vegetarian (Sydney)* 1(1):8. July/Sept.

• **Summary:** “10 ? miles from Sydney—1,000 miles from care. In beautiful ?, near lake, main road, and Ocean. Boating, hiking, swimming, sun and air bathing. Vegetarian foods, health lectures, exercise. Inquire now. Book early: ? starting October 1st.” Phone, write to, or call on the principal, W.E. Roberts. Address: N.D., 17a Pitt St., Sydney. Phone: BW2411.

4162. *Vegetarian News Digest*. 1948-1953. Serial/periodical. Los Angeles, California. Vol. 1, Oct. 1948. Monthly. Joel V. Streigel, editor and publisher. 22 cm.

• **Summary:** The cover of Volume 1, No. 1 (with an illustration of a woman holding a cornucopia) states: “A monthly magazine devoted to natural living, vegetarian diet and ideals, news and views on health, hygiene, humane living.” On page 2 is the masthead and an editorial. Above the masthead: “Food will be the medicine of the future”—Harvey Wiley, M.D. Yearly subscription: \$1.00. Single copy: 10 cents.

The last issue was apparently spring 1953 (vol. 2, no. 12). May later also have been called *The Christian Vegetarian*. Address: P.O. Box 1851, Los Angeles 53, California. Phone: PRospect 2687.

4163. Christiansen, Raymond P. 1948. Efficient use of food resources in the United States. *USDA Technical Bulletin* No. 963. 98 p. Oct. [39 ref]

• **Summary:** The author calculated the number of days of protein requirements that will be provided for a moderately active man by one acre of land used to produce various plant and animal proteins, as follows: Beef 77 days per acre, milk 236, wheat flour 527, soybeans (edible) 2,224 days/acre.

Thus soybeans make the most efficient use of land in producing protein for human beings. An acre of land devoted to growing soybeans can produce 28.8 times as much usable protein as an acre of land used for raising beef, and 9.4 times as much as an acre of land used for producing cow’s milk. Address: Agricultural Economist, Bureau of Agricultural Economics, USDA.

4164. Streigel, Joel V. 1948. Eden Ahbez—Nature’s boy. *Vegetarian News Digest (Los Angeles)* 1(1):3-4. Oct.

• **Summary:** “It took but a few minutes of my exclusive interview with Eden Ahbez to discover that he was more than a successful tunesmith, writing America’s No. 1 hit song on his first attempt. I found the author of ‘Nature Boy’ to be a humanitarian, a sage, a philosopher with a poetic soul, besides being the bearded mystic and student of Yoga that he is.

“Ahbez, the humanitarian, and naturally a vegetarian,

told me of the time during his early youth when he had occasion to help a farmer with his slaughtering. He was holding a chicken in his arms and waiting for the hatchetman to take it from him and sever its head on the chopping block. But his love and compassion for all living things, even then, when not actually a vegetarian, caused him to release the fowl and to let the farmer think it escaped accidentally. This was one of many humane experiences that Ahbez had in his thirty-odd years of harmless living. He believes fervently that 'Love is the law of life,' which he expresses in these simple lines: There is One Life—Eternal / There is One World—Universal / There is One Law—Love

"Another verse which he penned for me conveys this beautiful thought: God is my Father, / Nature, my Mother, / All things that live—/ My sisters and brothers.

"Ahbez, the sage, has this message for a distraught, confused, unhappy world: 'Man has an inner life as well as an outer life, and the more he finds within himself the less he needs without. If one wants to be happy he must find that part of himself which is Eternal, and nothing will ever take away his happiness.'

"Ahbez, the philosopher, knows from his long, enjoyable experience with outdoor living that the beauty of Nature brings inspiration, and says he, 'Inspiration is conscious contact with God. Therefore, through the infinite beauty of Nature, man is led to the Divine Reality of God.'

"Ahbez, the naturalist, and a great admirer of the late Mahatma Gandhi, has this to add to his philosophy of life: 'Nature is an outer symbol of an inner truth. That Truth is Unity—Oneness; to come to this is the beginning of the return to Nature.'"

"Probably the greatest truth that Brooklyn-born, blue-eyed Eden Ahbez can offer to our present divorce-ridden, sophisticated society is contained in the closing lines of the song that has made him famous: 'The greatest thing you'll ever learn / Is just to love and be loved in return.'

"Eden Ahbez and his young wife, Anna Jacobson, who fully shares his love of Nature, are living that truth. A baby is on the way as this is being written. The coming 'Blessed Event,' however, will make no changes in their lives and habits. 'We'll wait until he—or she—comes,' Anna explained. 'Then we'll try to be like him—or her—instead of trying to make our child like us. That seems the natural and simple thing to do.'"

4165. *Vegetarian News Digest* (Los Angeles). 1948. Was Jesus Christ a vegetarian? 1(1):5-6. Oct.

• **Summary:** "New light was cast on this controversial, perplexing question at a recent meeting in Los Angeles of a small but growing discussion group. This was led by Raymond York, metaphysical student and exponent of the Bible.

"Joel Striegel offered to read some research material on the affirmative side of the question. He stated he believed

Jesus Christ was a consistent teacher and meant it when He uttered, 'Blessed are the merciful,' and 'The meek shall inherit the earth.' He declared Christ could have been but a vegetarian, because He taught love and compassion for all creatures. He next read from a brochure titled, 'The Iron Curtain of Religious Doctrine,' by F.C. Hornberger * I will mention one book that has been published and offered for sale in the United States for nearly sixty years; yet I am sure it is almost unknown in the orthodox Christian world, and it should be as well known as our own New Testament. This book is Historical Records, concerning Jesus Christ, Messiah-Records copied from the official manuscripts and scrolls made by the Senatorial Courts of Tiberius Caesar, and by the Sanhedrim, in the days of Jesus, entitled Christ found in libraries at Rome and Constantinople, compiled by Rev. W. D. Mahan, between the years 1858 and 1883. Translated by Drs. McIntosh and Twyman of the Antiquarian Lodge, Genoa, Italy.

"These historical and official records are in agreement and in harmony with our present New Testament Gospels. The only slight differences are that Historical Records prove that Jesus had forbidden the slaying of the Paschal Lamb, and that Jesus showed His love for wild animals, even much more so than did St. Francis, all of which was omitted from our present New Testament.

"W.W. Lindsey, president of the Vegetarian Society, Inc. of Los Angeles, explained that where the Bible mentions the word 'meat' it does not mean 'flesh' necessarily, declaring that Webster's dictionary defines 'meat' as 'anything eaten as food.'

"Mrs. Hale, a church member, inquiring during the interesting discussion as to why the ministers rarely, if ever, quote Gen. 1:29, which clearly states, 'Behold, I have given you every herb bearing seed, which is upon the face of the earth, and every tree in the which is the fruit of a tree yielding seed; to you it shall be for meat.' To this question, Raymond York replied, scathingly, 'Of course not; that would tend to interfere with their Sunday chicken dinners!'

"The excellent text book on the subject of non meat-eating from a Biblical viewpoint, 'Why I Do Not Eat Meat,' by Alma White, founder of the Pillar of Fire Faith, was recommended by one of the group as containing many answers to difficult questions. (Note: The editor has this enlightening book in his library and highly recommends it.)

"In summarizing the subject of the evening, Mr. York concluded:

"Nothing that was later given in the Bible altered the command in Gen. 1:29. When the law was given through Moses 'Thou Shalt Not Kill' it meant just that; but to make it even plainer, through the mouths of various prophets, it was said, 'He who slayeth an ox is as if he slayeth a man.'

"It is plain that Jesus who came not to destroy the law but to fulfill it did not eat dead corpses and so make an open sepulchre of his throat and a graveyard of his stomach.

"There is no record in the Gospels that says Jesus ate meat or fish although it shows many of His followers did.

"Jesus had the power to give life and had He wanted to take the life of a creature it would have been lawful for Him because He had power to replace it. Man does not have that power so when he eats meat he becomes both a thief and a murderer.

"These discussion meetings take place on the first and third Thursdays of each month at 7:30 p.m. in the Rainbow Room, at 3210 W. Pico Blvd., corner of St. Andrews Place. Subjects are very varied. The public is invited. Freewill offering."

4166. *Vegetarian News Digest (Los Angeles)*. 1948.

Prominent vegetarian leaves for conference. 1(1):7-8. Oct.

• **Summary:** "Mr. Kaj Dessau, secretary of the International Union of Vegetarians [International Vegetarian Union],... is now completing his trip through the United States, Canada and Mexico. The purpose is to study conditions of vegetarianism in North America and to report to the American Vegetarian Conference which will meet in November at Camp Hygiology, Rhinebeck, New York." The conference chairman is Dr. Jesse M. Gehman, P.O. Box 1725, Paterson, New Jersey.

"During his fortuitous visit to California, Mr. Kaj met such distinguished American vegetarians as Mr. and Mrs. E.L. Pratt, of Pismo Beach, publishers of the *American Vegetarian*, Dr. K. Nimmo of Oceano, formerly secretary of Vegetarians International of Los Angeles, and Dr. Norman Walker, inventor of the famous juicing machines, an author and accomplished lecturer on the raw food diet and Nature Cure.

"Just before Mr. Dessau left the City of the Angels, a welcoming-farewell dinner was tendered him by Dr. Pietro Rotondi at the latter's home, 1854 Winona Boulevard, on Thursday evening, Aug. 12."

4167. *New York Times*. 1948. Vegetarian Party to make plans. Nov. 6. p. 3, col. 1.

• **Summary:** Discusses the U.S. Vegetarian Party's conference plans.

4168. Coates, Paul V. 1948. Dining around town. *Mirror News (Los Angeles, California)*. Nov. 16. p. 39.

• **Summary:** "There are about ten thousand vegetarians in Los Angeles. One of them advised me to call Clarke Irvine for further information on the local fruit and nut set.

"Mr. Irvine is a health lecturer. Some years ago he was a publicity man for MGM [Metro Goldwyn Mayer]. He left to journey to the South Seas... When he returned he was a firm student of 'Back-to-Nature' living.

"I called Mr. Irvine at Normandy 9017 and was greeted by a soft feminine voice which purred, 'Let's Live!'"

That was the "title of Irvine's official publication. I

learned there that he frequently lectures before the Los Angeles Vegetarian society which holds monthly clam-bakes (without the clams, of course) at a place called Sanfords.

"Sanfords cafeteria has been feeding the health faddists in L.A. for years. Their intriguing menu offers such items as Vegetarian cutlet (protein of wheat baked or grilled in egg batter), and soy cheese scallop. This is made from the milk of the soy bean and served as a meatless meatball.

"The one hundred percent, true-blue vegetarian will not eat butter or drink milk..."

4169. *Los Angeles Times*. 1948. Thanksgiving fetes planned in Southland: Churches schedule special services to mark holiday. Nov. 24. p. A1. Nov. 25. p. A14.

• **Summary:** The Vegetarian Society, instead of killing Tom Turkey, will offer a Thanksgiving dinner at 4 p.m. at the Unitarian Church, 2936 W. 8th St. It will include mixed fruit-cup, green salad, vegetable salad, baked squash with protein dressing, green peas, red cabbage, cranberry sauce, pumpkin pie, apples, dates and other fruit. After the feast there will be folk dancing and square dancing in Channing Hall.

4170. *New York Times*. 1948. All the 'trimmin's,' with turkey absent, give vegetarians a joyous Thanksgiving. Nov. 26. p. 25, col. 6.

• **Summary:** The 17th annual Thanksgiving dinner held by the Vegetarian Society of New York was attended by about 150 members at the Farmfood Restaurant, 104 West 40th Street in New York City. The main course was "nut meat roast" accompanied by cranberry sauce and pumpkin pie. The principal speaker at the dinner was Dr. Jesse Mercer Gehman, a naturopath physician from Paterson, New Jersey, and president of the American Vegetarian Union.

Note: The first annual Thanksgiving dinner held by this society was apparently in Nov. 1932.

4171. *Madison Health Messenger (Madison, Tennessee)*.

1948. Soybeans—A wonder food: Madison College works with the soybean. Fall. p. 1, 3-4.

• **Summary:** The soybean originated in China. However this "food of the ancients now seems destined to turn its antiquity into one of the most valuable foods in the modern world.

"The first actual mention in the literature of this wonder bean is recorded in Emperor Chen Nung's *Materia Medica*, written under date 3838 B.C. In the Legendary period of China the story of bandits attacking a merchant caravan has been handed down through generations in which it is said that the miracle wonder food, soybeans, were the lifesavers of some merchants, who, being surrounded and besieged by bandits until their own provisions were exhausted, noticed a vinelike plant bearing a legume which they had never seen before from which they made flour and baked cakes. Energized therewith, they fought off the enemy until help came. So the legend goes, soybeans became the staff-of-

life in the great nation of China which still ranks first in population in all the world.”

Soybean “oil is used extensively in Margarine in which it is used up to 80% in certain brands (Sure Good, sold by A. & P., and Nu-Maid, sold by Kroger).” Many brands of margarine contain 20-80% soybean oil.

Discusses the work of Henry Ford with soybeans and soyfoods. “His research staff made soybean milk and cheese, soybean-nuts, canned green soybeans, soybean sprouts, and a hundred other things.”

“With the knowledge of widespread disease in the animals used for food by man, the founders of Madison College adopted a vegetarian diet supplemented with dairy products and eggs. For over 44 years this has been strictly adhered to in the food preparation for the students, faculty, workers, and patients at its 165 bed sanitarium and hospital... For over 30 years [since 1918 or before] Madison has been growing soybeans. They have occupied a place of prominence in its menus for many years.” Then Madison began to manufacture soybean food for the public. More and large equipment was added. “In 1941 a new plant was started and today Madison Foods are produced in a fine daylight plant of modern design and construction...”

A list of Madison’s foods is given, together with the weight of the can or bag in which each is sold: Kreme O’Soy, Zoy-Koff, Stake-Lets, Yum, Zoyburger, Vigorost, Not-Meat, Soy Cheese [Tofu].

4172. Striegel, Joel V. 1948. Nature boys I know. *Vegetarian News Digest* (Los Angeles) 1(3):3-4, 18. Dec.

• **Summary:** “Ever since Eden Ahbez wrote America’s No. 1 hot tune, the song that has made him famous, the Nature Boy idea has spread epidemically... Several Los Angeles naturists who were already inclined that way began to live as Nature Boys.”

Another Nature Boy is Gene Mariani (“Gypsy Gene”), who often travels on his bicycle, and is frequently seen at “Muscle Beach” in Santa Monica. “He keeps in physical fitness by following a regimen of rising at daybreak, retreating at sunset, avoiding not only meat, fish and fowl but coffee, tea, milk, dairy products and packaged foods, also any foods touched by fire. He sleeps on the ground in the open under the stars. He smiles often and maintains a jolly spirit in spite of the gibes he receives from jokesters.”

Buddy Rose, age 41, like Ahbez, came from Brooklyn, New York; he was attracted to California because of its varied topography, climate, and spiritual environment. Fifteen years ago he was very ill but more than a “decade of natural living has brought him health of body and peace of mind. Wherever he goes, Buddy Rose makes friends; he believes in upliftment, ‘in expanding someone’s joy in life.’”

“Robert Bootzin, about 30, known as ‘Boots,’ is one of Nature’s Boys who never drank or smoked. Bearded, rugged, athletic, Bootzin can play in professional football but does

not prefer professional sports. He loves to sing, and shows his respect for Nature quite frequently. He works at fruit-picking in the summertime and eats only natural food.

“Emile Zimmerman, also about 30, who came to California from Michigan over a year ago, is the adonis type of Nature Boy. Blond, six foot tall, with a fine physique, Zimmerman is making great strides in developing his body toward perfection by exercise, outdoor living and proper food. Musical, quiet and contemplative, he, like Bootzin, speaks of Nature with great respect.

“A different type of Nature Boy who inclines strongly toward the religious life is that of Forrest Nannery, also known as Bob Wallace, and that of Sam Price. Both full-bearded, raw food vegetarians, they wear sackcloth robes as a symbol of simplicity, sleep outdoors, and walk barefooted. They eschew root vegetables and eat all their natural foods whole without cutting into them; thereby preventing oxidation and loss of vitamins. Both these naturists are said to come from rather wealthy parents.”

A small photo shows Robert Bootzin [“Gypsy Boots”], Forrest Nannery, and Emile Zimmerman.

4173. *Vegetarian News Digest* (Los Angeles). 1948.

Vegetarian Party to enter politics. 1(3):10-11. Dec.

• **Summary:** New York, NY: With the 1948 elections now over, Symon Gould announces that the Vegetarian Party “has already launched a program for the national campaign.” A conference of leading vegetarians and natural hygienists will appoint state organizers “to prepare the ground for national campaigns to be conducted for local offices and the 1950 Congressional contests.

“Mr. Gould also suggests that overtures be made to such groups as the prohibitionists, anti-vivisectionists, Townsendites and anti-tobaccoists to unite their forces under the standard of the Vegetarian Party in 1952.” “Mr. Gould also announces the inaugural issue of *The International Vegetarian and Progressive Health Journal*, which will be the official publication of the American Vegetarian Party with offices at 117 West 48th Street, New York.”

4174. *Vegetarisches Universum* (Das). 1948-- . Serial/periodical. Reutlingen, Germany. [Ger]*

• **Summary:** In Dec. 1969 this periodical described itself as “the big reform paper.” Address: Reutlingen, Germany.

4175. Ahbez, Eden. 1948. Nature boy (Song, with music and lyrics).

• **Summary:** This song by “eden ahbez” was made famous by Nat King Cole. Talk with Gordon Kennedy of Ojai, California. 2002. Sept. 10. The writer’s surname is pronounced “AH-bay.” Eden was killed in an accident. Eden’s personal papers are in the possession of a man named David who lives in Desert Hot Springs, California. Address: Los Angeles, California.

4176. Bircher-Mueller, Martha. 1948. *Das kleine Bircher-Kochbuch: 200 fleischlose Rezepte fuer die Jetztzeit* [The little Bircher cookbook: 200 meatless recipes for the present time]. Haag, Netherlands and Munich, Germany: Verlag Hermann Linck. 90 p. 21 cm. [Ger]

• **Summary:** A vegetarian cookbook in the Bircher-Benner tradition.

4177. London Vegetarian Society. 1948. *The earliest writings of Mohandas Karamchand Gandhi from The Vegetarian* 1891. London. Folio. *

4178. Rotondi, Pietro. 1948. *Vegetarian cookery*. 2nd ed. Hollywood, California: Published by the author. 150 p. Recipe index. 21 cm. 1st edition was 1942.

• **Summary:** This book is identical to the original 1942 edition except that: (1) It is now published in paperback by the author; (2) A color photo of the smiling author, standing at the door of his office by a sign “Dr. P. Rotondi, Chiropractor, Nature Cure,” appears on the front cover; (3) The author’s business card, which includes the address of his chiropractic office, appears at the bottom of the copyright page; (4) The last page of the index, p. 151, was accidentally not printed. Address: 1916 Vista Del Mar Ave., Hollywood, California. Phone: 463-2972.

4179. Sherman, Henry Clapp. 1948. *Food products*. 4th ed. New York, NY: The Macmillan Co. vii + 428 p. Illust. Index. 22 cm. [400+* ref]

• **Summary:** The author is one of America’s leading nutritionists. The dry residue of foods consists of combustible matters (organic substances) and ash (non-combustible, the “so-called mineral elements”) (p. 1). The fats are all glycerides, i.e., substances consisting of combinations of glycerol with fatty acids. As the molecular weight of fats increases, so does their boiling or melting points, while their solubility decreases. Butter is the only fat that contains all the fatty acids. Seed oils used for food include cottonseed oil, soybean oil, peanut oil, corn oil, etc. After food fat is digested and absorbed by the body, it appears in the blood in the form of “glycerides collectively called neutral fat” (p. 810).

The three basic types of proteins are: Simple proteins (albumins, globulins, glutelins, etc.), conjugated proteins (nucleoproteins, glycoproteins, phosphoproteins, lecithoproteins, etc.), and derived proteins (primary {proteans} or secondary {proteoses, peptones, peptides}) (p. 11-13).

Children from ages 3 to 13 should drink a quart of milk a day (p. 82-83). Pork is the main meat produced in America, followed by beef. Veal is mainly a by-product of the dairy industry. In the USA, veal calves must be at least 3 weeks old when slaughtered; in most parts of Europe they may be

younger. The term “meat packing” derives from the “early days of the industry when farmers or local butchers cured and smoked surplus meat, packing it largely in barrels, for local use, for supplying ships, and for export trade.” This industry began in about 1830, with companies packing pork in Cincinnati, Ohio, which was the center of the corn belt.” For a full account of the history of the industry see *American Livestock and Meat Industry*, by Clemens. (p. 137-39). Table 13 shows the percentage of free, bound, and total purines in different meats (p. 155).

In Chapter 9, titled “Vegetables,” the section on “legumes” (p. 233) states: “Soybean flour and related products (“soya”) constitutes in the United States a ‘new’ addition to the dry-legume food group; but one of great potential importance. As yet this important potential resource has been given but slight and slow recognition as human food by the peoples of either the United Kingdom or the United States.” Soybean flour typically contains 30-45% protein. The “chemical composition or amino-acid make-up of soybean and peanut proteins is much like that of meat proteins...” Table 26 shows the “Percentages of individual amino acids in legume proteins” including glycinin (soybean). The large increase in soybean production in the USA during World War II “has shown that our supply of mature legumes and their products as human food can readily be increased several-fold whenever this seems likely to meet the needed support of consumer demand.” In 1946 soybean flour was recognized by the Food and Drug Administration as an alternative to added wheat gluten, “gum gluten,” in macaroni products.

A major theme of this book is the “balance of acids and bases” or of “acid-forming and base-forming elements,” however it is given less space than in the 1917 edition. The base-forming elements are sodium, potassium, calcium, and magnesium (p. 76). Eggs have a “considerable preponderance of the acid-forming elements...” (p. 128). “Meats contain a decided excess of the acid-forming over the base-forming elements” (p. 156). Fruits and vegetables “render the body two important services in helping it to maintain a good intestinal hygiene and a wholesomely liberal level of alkaline reserve (or surplus of potentially base-forming mineral elements) (p. 281-82).

Oils can be classified according to the way they are pressed. Peanut oil is prepared from the less choice nuts and from the germs, which are a by-product of making peanut butter. “In the *expeller press*, the nut meats are only slightly heated in the conveyor which carries them to the press. The meats are run through rolls which crush them and release the oil from the oil cells. By this method there is produced a small quantity of high quality oil known as *cold-press* or *virgin* peanut oil which when filtered is suitable for table purposes without any drastic refining treatment. With the *hydraulic press*, the ground nuts are heated thoroughly to facilitate expulsion of the oil.” Peanut butter was first

produced commercially in about 1907 (p. 293).

Chapter 12, "Edible fats and oils" notes that "peanut (arachis) oil and soya bean oil" come from the seeds of leguminous plants (p. 303). Before the war, cottonseed oil and coconut oils were the vegetable oils most used in margarine manufacture in the USA. "During the Second World War the supply of coconut oil was almost entirely cut off, while our domestic production of peanut oil was notably increased and that of *soybean oil* was very greatly accelerated." In fact more than 3 times as much soybean oil was used on average each year during 1943-46 as in 1937-41 (p. 312). Important edible vegetable oils in the USA are the oils of coconut, corn, cottonseed, olive, peanut, sesame seed, palm kernel, poppy seed, rape seed, soybean, and sunflower. There follows a long discussion of only two of these oils: olive oil then of cottonseed oil. The term "salad oil" when used alone is understood by law to mean olive oil. Under cottonseed oil: The two main types of expression equipment in general use in this country are the hydraulic press and the Anderson expeller. "The latter is more modern and is continuous in operation. It depends for its action on a spiral screw..." "The so-called *cold-pressed* or expeller oil differs mainly for the *hot-pressed* (hydraulic presses) oil in that the former requires longer agitation with caustic soda solution before heating in the subsequent refining operation." Refining, wintering, and hydrogenation / hardening are then described (p. 314-16). Table 45 (p. 408) gives the thiamine content of various foods, including soybeans.

Also discusses: Peanuts, peanut butter, and peanut oil (p. 291-96, 299-301). Almonds. Margarine (p. 310-12). Shortenings (p. 317). Address: PhD, ScD, Mitchell Prof. Emeritus of Chemistry, Columbia Univ. [New York City].

4180. *Cadernos Culturais Naturistas (Journal of Natural Culture)*. 1948?-. Serial/periodical. Lisboa [Lisbon], Portugal: Editorial Natura. 17 cm. [Por]

• **Summary:** Each issue seems to focus on one subject. For example, issue no. 3, 1948, is about aloe (alho). Address: Lisbon, Portugal.

4181. Koch, Carrie Funk. 1949. The soy bean—health and beauty value. *Vegetarian News Digest (Los Angeles)* 1(4):6-7. Jan.

• **Summary:** Gives a brief history of the soy bean, and its nutritional value. *Good Health* magazine (Sept. 1936) reported that the Dionne quintuplets were saved by a new type of lacto-bacillus bifidus acidophilus grown in soy bean milk.

4182. *Vegetarian News Digest (Los Angeles)*. 1949. First American vegetarian conference. 1(4):12. Jan.

• **Summary:** On 11-14 Nov. 1948, thirty-six conferees from across the United States and Canada assembled at Hygiology Country Club in Rhinebeck, New York, for the "most dynamic and inspiring conference ever held in the United

States." First, it wrote a basic four-point platform which would serve to unify vegetarians throughout North America.

Then it established the seven goals of an organization tentatively called The American Vegetarian Union.

4183. *Vegetarian News Digest (Los Angeles)*. 1949. Newsy notes... [Clifton's cafeterias in Los Angeles]. 1(4):19. Jan.

• **Summary:** "I recently wrote to Clifford E. Clinton of Clifton's cafeterias telling him that beautiful as they are there is one thing that mars the delightful atmosphere—the serving and consumption of the decaying flesh of murdered animals..."

4184. Taylor, Geoffrey F.; Chhuttani, P.N.; Kumar, Shiv. 1949. The meat ration and blood levels: Investigation of Indian soldiers in Persia and Iraq, 1944. *British Medical Journal*. i(4596):219-21. Feb. 5. [7 ref]

• **Summary:** In 1945 Taylor and Chhuttani reported a striking contrast between the vegetarians and the meat-eaters of the Indian soldier population (Iraq) in terms of the incidence, severity, and type of anemia suffered. This prompted an investigation into the blood levels of the apparently healthy men on full duty. The garrison had about 17,000 meat-eaters and 1,188 vegetarians, the latter of whom showed a high hospital admission rate of nutritional macrocytic anaemia. The haematological investigation "revealed that on average the vegetarians exhibited a statistically significant lower blood level, with macrocytosis. A number were suffering from frank nutritional macrocytic anaemia. The vegetarians' sternal-marrow nucleated red cell percentages were also significantly different from those of the meat eaters and had a higher megaloblast-erythroblast level."

4185. Gandhi, M.K. 1949. Food shortage & agriculture. Ahmedabad, India: Navajivan Publishing House. xii + 227 p. May. See p. 36-39, 126, 142. 22 cm. [2 ref]

• **Summary:** This anthology contains mostly reprints of articles by Mohandas Karamchand Gandhi. "Editor's note [by Bharatan Kumarappa]. The aim of this book is to bring together Gandhiji's writings and the writings also of others published in his weekly, the *Harijan* on how we should cope with food shortage, and in this connection also, on what should be done to improve our agriculture.

"Most of his suggestions regarding food shortage were made in 1946 and 1947, although food scarcity of more than the usual type existed in India for three or four years before that date. The reason for his silence between 1942 and 1946 is that it was only in 1946 that he was permitted by the [British-run] government to resume publication of the *Harijan* which remained under a government ban from August, 1942.

"One thought which runs through all Gandhiji's writings is that we must be self-reliant, and solve our problems ourselves without looking for aid from outside... An

agricultural country like India should, he holds, be able to feed itself, and not only itself but also help to feed others... True democracy requires that the people should manage their own affairs." Address: India.

4186. Billig, Herbert. 1949. Die deutsche Volksernaehrung; leben wir heute vegetarisch? [The German diet: Do we live vegetarian today?]. *Natur und Nahrung* 3(11-12):17-18. June. [Ger]*

4187. *Vegetarian News Digest (Los Angeles)*. 1949. The First American Vegetarian Convention. 1(7):12. May/June.

• **Summary:** "It is with profound pleasure, mingled with a feeling of great responsibility, that the Committee of the First American Vegetarian Conference at Rhinebeck, New York, formed November 13, 14, 15, 1948, now the Promotional Committee of the First American Vegetarian Convention, announces the date and site of the convention.

"We are desirous of reaching as many as possible of the estimated three to five millions of vegetarians in this country in order to extend a hearty invitation to as wide a field as we can; the purpose is to have a large representation to help organize the American vegetarians on a national basis for the first time in our history.

"The work accomplished at the First American Vegetarian Conference at Dr. Anderson's Camp Hygiology at Rhinebeck, N.Y., last November, laid the ground work.

"We are therefore appealing to the readers of the VEGETARIAN NEWS DIGEST, knowing that many of them are vegetarians, and that they will want to assist in making the First American Vegetarian Convention a success and bring into being a national organization.

"The facilities we have been able to procure are the most appealing both from the standpoint of convenience and price.

"The convention will be held at beautiful Ayres Estate, on Lake Geneva, Wisconsin, 13 hours north of Chicago. Register NOW!

"The cost of accommodation for the entire week, including room and food, is \$18.50 to \$30.00. Begin saving now for this event [Aug. 21-27], the greatest occasion in vegetarian history.

"There are upwards of 400 acres of beautiful woodland and trails for walking, hiking, and hill climbing; and there are equestrian trails and good horses available. Situated on the lake, boating—both speed and sail, and water sports are available, not to mention bathing. The spacious grounds provide for a variety of outdoor sports. Moreover, there will be ample opportunity for sun and air bathing, camp fire groups, singfests, old fashioned hay rides, and dancing, according to desire.

"Food will be vegetarian and natural. Our own nutritional and culinary experts, Dr. John Maxwell, proprietor of the famous Maxwell Health Center and Vegetarian Restaurant at 238 South Wabash Avenue,

Chicago, and Dr. Robert H. Anderson, director of Camp Hygiology at Rhinebeck, New York, will be on hand to supervise. Special attention is being given to the planting of the very vegetables desired for harvesting at the time for the Convention.

"No effort is being spared to make this the most glorious event in the history of the vegetarian movement. Milk, butter, cheese, eggs, and other farm products from two well-run farms will be available to those desiring these foods.

"For those who have always wanted a national vegetarian organization, here is the opportunity to cooperate and make it possible.

"Register Now by sending \$3.00 to:

"Mr. Howard Bishop, Treasurer

"First American Vegetarian Convention

"Summit, New Jersey

"Scheduled travel facilities and approximate cost will be published at a later date.

"First American Vegetarian Convention Committee

"Dr. Jesse Mercer Gehman, Chairman

"Mr. Kaj Dessau, Co-Chairman and Secretary

"Mr. Neil Ehmke, Vice Chairman

"Mr. Howard Bishop, Treasurer."

4188. *Vegetarian News Digest (Los Angeles)*. 1949. Newsy Notes... [Oakland]. 1(7):21. May/June.

• **Summary:** Walter Gordon, Secretary, The Oakland Vegetarian Health Society, advises its meetings will now be held on the third Sunday of each month, the San Francisco group meeting on the second Sunday of the month. Mr. Gordon publishes an informative, monthly bulletin of interest to vegetarians in the northern part of California. You may write to him at 1737 101st Ave., Oakland 3, Calif., and have your name placed on the mailing list. He also publishes monthly a sheet titled *The California Cooperative Colonies News*.

4189. *Vegetarian News Digest (Los Angeles)*. 1949. Attention! Vegetarians! [National American Vegetarian Census]. 1(7):13. May/June.

• **Summary:** "Identify yourself in the National American Vegetarian Census now being taken. Fill out the form below. Paste it on a penny post card, and send it off today to our headquarters.

"For 1¢, you can do so much. You can help to make the vegetarian philosophy a vital factor in the social and economic life of America. You can help us to organize all scattered forces.

"If you send us the form, filled in, we will keep you informed of the work we are doing—about the convention—the beginning of the American Vegetarian Union, and so forth.

"Invest 1¢ and two minutes of your time. Now! Today!

"Write our address on the face of the card, and information about yourself on the reverse side.

“National American Vegetarian Census
“Dr. Jesse Mercer Gehman
“First American Vegetarian Convention
“P.O. Box 1725
“Paterson, N.J.”

• **Summary:** “Tel Aviv; Israel, Sept. 7—Symon Gould, who ran for the United States Vice Presidency on a vegetarian ticket in 1948, has invited the Israeli Cabinet members to a dinner next week on canned vegetable substitutes for meat. He has also invited physicians, farmers and restaurant owners. The idea of the dinner is to demonstrate that the Israelis can do without meat.”

“Mr. Gould has met the Israeli vegetarians who are promoting a naturalist agricultural settlement near Haifa where dairying and poultry farming will be banned.”

4198. Adolph, William H. 1949. Important aspects of nutrition research in China. *Science and Technology in China* (Nanking) 2(5):80-83. Oct. [53 ref]

• **Summary:** One section titled “Vegetarian diets” discusses the nutritional value of soybeans and soybean milk. Table 1 shows the percentage of total calorie intake provided by four food groups: Cereals and legumes 88%, vegetables 5%,

fats 4%, meat and eggs 3%. Table 2 shows the average per capita daily nutrient intake: Calories 2,500, protein 80 gm, fat 30 gm (11% of calories from fats), carbohydrates 480 gm, calcium 400 mg, phosphorus 1,200 mg, iron 20 mg. Address: Peking Union Medical College, Peking, China.

4199. *Vegetarian News Digest (Los Angeles)*. 1949. The case for vegetarianism in the Bible, Part I. 1(9):5-8. Sept/Oct.

• **Summary:** “(Roy Garrison, author of this treatise, is an avid student of the Bible and a staunch exponent of vegetarianism from a religious viewpoint. He is now serving in the United States Merchant Marine, having traveled around the world seven times, visiting about sixty countries—besides 48 of our own states. During his peregrinations he has collected a vast amount of material that supports vegetarianism in all its phases. He has been particularly disturbed, however, by the fact that while there are 700,000,000 Christians in the world not one per cent of them are vegetarians. Through the medium of this Digest he is anxious to do something about this deplorable condition. When the following treatise is completed in three issues, Roy Garrison proposes having 3000 or more copies reprinted in booklet form, with an attractive cloth cover, and distributed to 300 or more public libraries in the larger cities of each state and to about 200 libraries in outside territories. He is convinced that these Words of God—contained in a handy booklet for worldwide distribution—will exert a tremendous influence in turning Christian-thinking people toward vegetarianism. We agree, and will cooperate with him in his noble endeavors.—Editor).

“Science, archaeology and fulfilled prophecies prove that the Words of God, as given to us in the Bible, are true; they are a positive guide, a wonderful help, and an abundant source of wisdom for everyone. We may rejoice in knowing that the Bible endorses and emphasizes living the vegetarian way, that it is in perfect accord with scientific research and experiment, and that it confirm: vegetarianism as being the best way of life for health, strength, efficiency and happiness.

“The Creator of all life is plainly and emphatically against the killing of his animal creations and declares that man’s food is to be fruits and vegetables: ‘I have given you every herb bearing seed, which is upon the face of all the earth, and every tree, in the which is the fruit of a tree yielding seed; to you it shall be for meat.’ (Gen. 1:29)...”

4200. *Vegetarian News Digest (Los Angeles)*. 1949. Interesting personalities at the Vegetarian Convention (Lake Geneva, Wisconsin—Aug. 21-27, 1949). 1(9):15-16. Sept/Oct.

• **Summary:** Speakers included: Gunnar Hedfors (came from Sweden), George Hebdan Corsan (age 92, of Toronto, Canada, a vegetarian of more than 50 years), Scott Nearing (lives mostly on his farm in Jamaica, Vermont. Author of *Revolution of our Times*, *Tragedy of Empires*, *Democracy*

is Not Enough, and *War or Peace*), Prof. F.H. Behncke (age 81), Alwella Finnicum, Christian Denzler, Geoffrey L. Rudd (publisher and editor of *The Vegetarian* in England).

The section titled “Some highlights of the conference” (p. 16) gives the titles of noteworthy talks and the speakers.

4201. *Vegetarian News Digest (Los Angeles)*. 1949. Dr. Jesse Mercer Gehman, Chairman of the First American Vegetarian Convention, was elected president of the newly-formed American Vegetarian Union. 1(9):16. Sept/Oct.

4214. Loma Linda University, School of Dietetics. 1949. Lesson outlines in nutrition & cookery. 2nd ed. Mountain View, California; Brookfield, Illinois; Cristobal, Canal Zone; Omaha, Nebraska; Portland, Oregon: Pacific Press Publishing Assoc. 128 p. 20 cm. [13 ref]

• **Summary:** "Foreword: The purpose of this little book is to serve as a guide in the study of simple facts about nutrition and healthful cookery, primarily prepared to be used in community nutrition classes." The guidelines, in outline format, are also helpful in teaching the principles of healthful vegetarian nutrition and cookery.

Also discusses: Soybeans as a good source of high quality protein (p. 29). The meatless diet: Meat is not a nutritional necessity, disadvantages of flesh foods (animals are diseased; rich in nitrogenous waste products, which kidneys must eliminate. These act as a stimulant; poor source of most vitamins and calcium; expensive), importance of knowing how to make proper substitution when discontinuing a meat diet, protein content of average servings of some [non-flesh] foods (including soybeans) (p. 31-33). Homemade Vegex (with ½ pint soya sauce, p. 113). Protein foods (gives the composition of soybeans, p. 118). Loma Linda Foods (nutritional composition of their commercial products; Vegemeat Burger, Vegemeat Steaks, Nuteena, Proteena, Peanut butter, Vegex; p. 119). Calcium content of foods (incl. turnip greens, mustard greens, soy bean curd, kale, dry soybeans; p. 120). Iron content of foods (incl. mustard greens, soybean curd). Address: Loma Linda, California.

4215. Schweitzer, Albert. 1949. *The philosophy of civilization*. Translated by C.T. Campion. New York, NY: The Macmillan Co. xvii + 347 p. First American edition. Based on the original 1923 London edition. Index. 22 cm.

• **Summary:** This volume has two parts: (1) The decay and restoration of civilization (p. 1-64, in which he argues that philosophy is responsible for the collapse of civilization. Civilization is basically ethical in nature; we no longer have a vital or compelling world-view) and (2) Civilization and ethics (p. 67-344).

The key chapters, in which Schweitzer introduces his central ethical principle of "reverence for life" are the author's preface to the first English edition (p. xi-xvi), chapter 26 ("The Ethics of Reverence for Life," p. 307-29), and chapter 27 ("The Civilizing Power of the Ethics of Reverence for Life, p. 330-44). For details, see the 1923 edition.

Schweitzer develops a cosmic, mystical, spiritual, and ethical worldview emphasizing world-and-life affirmation permeated by a deep respect for all life. In Chapter 26, he states (p. 310-11): "A man is truly ethical only when he obeys the compulsion to help all life which he is able to assist, and shrinks from injuring anything that lives. He does not ask how far this or that life deserves one's sympathy as being valuable, nor, beyond that, whether and to what degree it is capable of feeling. Life as such is sacred to him. He tears no leaf from a tree, plucks no flower, and takes care to crush no insect. If in summer he is working by lamplight, he prefers to keep the window shut and breathe a stuffy atmosphere rather than see one insect after another fall with singed winged upon his table.

"If he walks on the road after a shower and sees an earthworm which has strayed onto it, he bethinks himself that it must get dried up in the sun, if it does not return soon enough to ground into which it can burrow, so he lifts it from the deadly stone surface, and puts it on the grass. If he comes to an insect which has fallen into a puddle, he stops a moment to hold out a leaf or stalk on which it can save itself.

"He is not afraid of being laughed at as sentimental. It is the fate of every truth to be a subject for laughter until it is generally recognized. Once it was considered folly to assume that men of color were really men and ought to be treated as such, but the folly has become an accepted truth. To-day it is thought to be going too far to declare that constant regard for everything that lives, down to the lowest manifestations of life, is a demand made by rational ethics. The time is coming, however, when people will be astonished that mankind needed so long a time to learn to regard thoughtless injury to life as incompatible with ethics.

"Ethics are responsibility without limits towards all that lives." Address: Strasbourg, Alsace, France.

4216. Schweitzer, Albert. 1949. Out of my life and thought: An autobiography, translated by C.T. Campion. New York, NY: Henry Holt and Company. 274 p. Postscript by Everett Skillings. Portrait. 21 cm. *

• **Summary:** "Late on the third day, at the very moment when, at sunset, we were making our way through a herd of hippopotamuses, there flashed through my mind, unforeseen and unsought, the phrase, 'Reverence for Life.'"

"Affirmation of life is the spiritual act by which man ceases to live unreflectively and begins to devote himself to his life with reverence in order to raise it to its true value. To affirm life is to deepen, to make more inward, and to exalt the will to live."

"Truth has no special time of its own. Its hour is now—always."

"But man comes again and again into the position of being able to preserve his own life and life generally only at the cost of other life. If he has been touched by the ethic of reverence for life, he injures and destroys life only

under a necessity which he cannot avoid, and never from thoughtlessness. So far as he is a free man he uses every opportunity of tasting the blessedness of being able to assist life and avert it from its suffering and destruction" (p. 234).

Note: The author lived 1875-1965. Address: Strasbourg, Alsace, France.

4217. Schweitzer, Albert. 1949. Author's preface to the first English edition (Document part). In: Albert Schweitzer. 1949. The Philosophy of Civilization. Translated by C.T. Campion. New York, NY: The Macmillan Co. xvii + 347 p. See p. xi-xvi. First American edition. Based on the original 1923 London edition.

• **Summary:** This preface was written by Schweitzer in Feb. 1923 at Strasbourg, Alsace. He states the conclusion of his thinking over the past 23 years, and especially during World War I, that the real essential nature of civilization is ultimately ethical and moral, and depends on the mental disposition of the individuals in that civilization. "Creative, artistic, intellectual, and material attainments can only show their full and true effects when the continued existence and development of civilization have been secured by founding civilization itself on a mental disposition which is truly ethical... If the ethical foundation is lacking, then civilization collapses, even when in other directions creative and intellectual forces of the strongest nature are at work."

"This moral conception of civilization... makes me almost a stranger amidst the intellectual life of my time." To re-establish our civilization on an enduring basis, we must "give ourselves up again to the ethical view which obtained in the 18th century.

"The second point which I desire should obtain currency is that of the connection between civilization and our worldview (*Weltanschauung*). At the present time no regard is paid to this connection. In fact, the period in which we are living altogether misses the significance of having a worldview. It is the common conviction nowadays, of educated and uneducated alike, that humanity will progress quite satisfactorily without any worldview at all.

"The real fact is that all human progress depends on progress in its worldview, whilst, conversely, decadence is conditioned by a similar decadence in this worldview. Our loss of real civilization is due to our lack of a worldview."

"Only as we again succeed in attaining a strong and worthy worldview, and find in it strong and worthy convictions, shall we again become capable of producing a new civilization. It is this apparently abstract and paradoxical truth of which I proclaim myself the champion." For civilization to thrive, firstly "we must be prepared to act affirmatively toward the world and life; secondly, we must become ethical. Only when we are able to attribute a real meaning to the world and life shall we be able to give ourselves to such action as will produce results of real value."

"Nothing of real value in the world is ever accomplished without enthusiasm and self-sacrifice.

"But it is impossible to convince men of the truth of world- and life-affirmation and of the real value of ethics by mere declamation. The affirmative and ethical mentality which characterizes these beliefs must originate in man himself as the result of an inner spiritual relation to the world. Only then will they accompany him as strong, clear, and constant convictions, and condition his every thought and action."

"How is it that we have gotten into this state of lacking a worldview? It is because hitherto the world- and life-affirming and ethical worldview had no convincing and permanent foundation in thought. We thought again and again that we had found such a basis for it; but it lost its power again and again without our being aware that it was doing so, until finally, we have been obliged, for more than a generation past, to resign ourselves more and more to a complete lack of any worldview at all."

"Thus, in this introductory part of my work, I proclaim two truths and conclude with a great note of interrogation. The truths are the following: The basic ethical character of civilization, and the connection between civilization and our worldviews. The question with which I conclude is this: Is it at all possible to find a real and permanent foundation in thought for a worldview which shall be both ethical and affirmative of the world and life?" Address: Strasbourg, Alsace, France.

4221. Walker, Norman Wardhaugh. 1949. Become younger. St. George, Utah: Norwalk Press. 204 p. Illust. 22 cm. Introduction by Howard John Zitko.

• **Summary:** Discusses vegetarianism, diet, naturopathy, and naturopathic healing. Chapter 1 is titled "You are Never Too Old to Become Younger." The book is written in an evangelistic style, with the words "Become Younger"

appearing in bold type at least twice on each page. The author was born in 1876. Address: Doctor of Science, etc.

4222. *Malayan Vegetarian (The)*. 1949--.. Serial/periodical. Singapore: Malayan Vegetarian Society. *

• **Summary:** The British Library Catalog states that vol. 3, no. 1 was Jan/March 1949. So the society may have existed by early 1947. Address: Singapore.

4223. Bell, Ernest. 1950. Vegetarianism: An essential step. *Vegetarian Messenger and Health Review (Manchester, England)*. Jan. p. 12-13.

• **Summary:** "The adoption of vegetarianism is, in my opinion, a great and essential step because this question of using our fellow-creatures for food underlies and stands between us and so many essential reforms." Address: M.A., England.

4224. Bolt, J.H. 1950. The Netherlands and the Dutch Vegetarian Society. *Vegetarian Messenger and Health Review (Manchester, England)*. Feb. p. 58-62.

• **Summary:** Discusses the historical and cultural development, and the current status of vegetarianism in the Netherlands. Nearly 56 years ago (i.e. in about 1894) the Dutch Vegetarian Society was founded by a small group of ethical vegetarians. Their key figure was Felix Ortt, a very learned man, an excellent writer and speaker, a promoter of pure living, a well known anti-vivisectionist, and a scientifically trained psychologist and philosopher. He is still active at age 84.

Before World War II, there were only 1,200 members. During the war, when membership was compulsory for participating in the advantages allowed to vegetarians, the number rapidly increased to nearly 6,000. There are presently about 5,500 members in 27 branches nationwide. The branches receive 25% of annual income, so the headquarters is unable to even afford its own offices. The administration has its seat in Amsterdam, the editor of the monthly *Vegetarische Bode* lives in Amersfoort, the secretary in Haarlem, and Felix Ortt in Soest. Address: Editor of the *Vegetarische Bode*.

4225. Trueman, Kenneth. 1950. Vegetarianism—England, 1888. *Vegetarian News (London)* 29:103-08. Winter. *

• **Summary:** Examines the social, political, and economic climate for vegetarianism in 1888 in England.

4226. *Vegetarian News Digest (Los Angeles)*. 1950. Organic vegetarian community started in southern California. 1(11):22. Jan/Feb.

• **Summary:** "In view of ever-increasing economic uncertainty and disturbed world condition, thinking vegetarians are planning to secure their future by settling on the land in subsistence homesteads.

“Such a group is attempting to do so in Southern California’s Morongo Valley, called the Valley of Destiny because it is believed to be the future home of New Age pioneers who will settle here away from a worried world.

“Morongo Valley is 17 miles above Palm Springs, situated in a secluded valley completely surrounded by mountains, at an elevation of 2650 feet, which provides it with an ideal year-round climate.”

“A new vegetarian community along organic lines is now in development in Morongo Valley,” 17 miles above Palm Springs, completely surrounded by mountains at an elevation of 2,650 feet.

“Interested persons may write to Roy Sandsberry, P.O. Box 131, Morongo Valley, California, for further information.” Note: Morongo Valley is in today’s (March 2004) San Bernardino County, California.

4227. *Vegetarian News Digest (Los Angeles)*. 1950. Book review: *Vegetarian Cookery* by Pietro Rotondi. 1(11):30. Jan/Feb.

• **Summary:** Recipes include: Soy bean chocolate ice cream.

4228. *Vegetarian News Digest (Los Angeles)*. 1950. Thanksgiving day dinner held by L.A. vegetarians. 1(11):23. Jan/Feb.

• **Summary:** The Los Angeles Vegetarian Society held this dinner, attended by 150 people at Channing Hall, 2936 West 8th Street, Los Angeles. The president, Bertram Newman, opened the dinner with an invocation offering “thanks for this good, pure and beneficent food...” Ann Lindham, a longtime member, performed a beautiful ballet. “After the dinner, folk dancing was afforded the audience through the cooperation of Hans Madlener, a raw fooder, who is more than 70 years old... Jeanne Zelinka, secretary, recited one of her scintillating poems.”

Note: This is the earliest English-language document seen (April 2005) that contains the term “raw fooder.” It refers to a person whose diet consists solely of raw foods.

4229. Liebstein, A.M.; Ehmke, Neil L. 1950. The case for vegetarianism. *American Mercury* 70:398-407. April.

• **Summary:** “There are between 3 and 4 million vegetarians in the United States. In Europe, the proportion is slightly higher, and in Asia whole multitudes will never eat the bodies of fellow creatures.” The authors give the health, religious, ethical, and economic arguments in favor of a vegetarian diet. Address: 1. M.D., New York; 2. President, Vegetarian Society of New York.

4230. Lief, Stanley. 1950. How to eat for health: Diet reform simplified. Enlarged and completely revised. London: Health for All Publishing Co. 104 p. April. Index. 20 cm.

• **Summary:** First published in Sept. 1933 under the title *Diet Reform Simplified*. “Fifth impression, April 1950.” The

author is a member of the British Naturopathic Association, principal of Lief’s Nature Cure Resort (Chamneys, Tring), and editor of *Health for All* magazine. Address: England.

4231. Porras, G.F. 1950. Well done, with onions. *Science Digest* 2:35. April. *

4232. Wassersug, Joseph D. 1950. The case against vegetarianism. *American Mercury* 70:407-13. April.

• **Summary:** The author, who tries to refute the reputed health benefits of a vegetarian diet, believes there is no scientific proof that consumption of animal foods is harmful to human beings. “It is from the medical standpoint that vegetarians have least justification for their position... Most plants do not have all the amino acids the human body needs. Unless the vegetarian diet is exceedingly well thought out, nutritional deficiencies are likely to occur... The contention that cancer is related to the diet of the individual is without scientific proof.”

According to a recent report from the Milk and Food Section of the U.S. Public Health Service, milk-borne diseases have led to 804 deaths and 40,177 illnesses in the last 20 years in America. “These include typhoid fever (7,449 cases, 541 deaths), streptococcal infections such as scarlet fever and septic sore throat (182 deaths), gastroenteritis, undulant fever, dysentery, diphtheria, and other illnesses.” Moreover milk and eggs are rich in cholesterol. “In recent years, scientists have found more and more reason to believe that cholesterol is a causative factor in hardening of the arteries.” Address: Instructor in medicine, Tufts Medical School [Boston, Massachusetts].

4233. *Vegetarian News Digest (Los Angeles)*. 1950. The coming vegetarian revolution. 1(12):2, 47. Spring.

• **Summary:** “The use of the flesh of animals for food tends to the physical, Moral and intellectual injury of mankind.’ This truth was uttered almost a century ago by Henry Stephen Clubb, a friend and follower of Sylvester Graham, and one of the most zealous and staunch proponents of vegetarianism the movement has ever known. The Rev. Henry S. Clubb was a steadfast reformer, and for forty years held the pastorate of the Bible Christian Church in Philadelphia; one of the requirements for membership in this church was complete abstention from flesh, fish and fowl. He knew that real spirituality called for reverence of animal life, that killing and flesh-eating were serious departures from the true faith, that these practices were as wrong and as harmful as the consumption of liquor or the use of tobacco.”

4234. *Vegetarian News Digest (Los Angeles)*. 1950. News from afar... [Congress of the International Vegetarian Union, July 11-17 in Amersfoort, Netherlands]. 1(12):21. Spring.

• **Summary:** “Mr. J.H. Bolt, editor of the Dutch Vegetarian Messenger, (*Vegetarische Bode*), Pursonlaan 14, Amersfoort,

Netherlands, wishes all readers of this Digest to know of the Congress of the International Vegetarian Union to be held July 11-17, 1950, at a beautiful spot near Arnhem, Oosterbeek, Holland. He sends the following information:..."

4235. *Vegetarian News Digest (Los Angeles)*. 1950. Morongo Valley community growing rapidly. 1(12):26. Spring.

• **Summary:** "The new vegetarian community in Southern California's Morongo Valley 17 miles above Palm Springs, where an ideal year-round climate exists, is now in process of development; new settlers are arriving weekly. Among the settlers already there and those who have visited the place to consider settling later are: Esther Sandsberry, Olga Woerner, Emilie Ross, Victor Darling, Fanny Tikiob, Rusel Jaque, Martha Boettcher, Emil Zimmerman, Peter Feigley, J.F. Rowny, William P. Weldon, John and Clara Tipton, Paul and Susan DeSousa, Helen and Harold Priebe, Morris and Dorothy Reingold, and Eden "Nature Boy" Ahbez, with his wife and baby.

"Plastic houses, costing less than \$200 to build, and affording solar heat all winter, while cool in the summer at the valley's altitude of 2650 feet, will be a feature of the New Age community."

"Ray Sandsberry, an experienced organic gardener, is directing the agricultural development. He is an expert carpenter and the originator of the new plastic houses, and will construct organic tank gardens for settlers. Inquiries should be directed to him at P.O. Box 131, Morongo Valley, Calif."

4238. Gould, Symon; Chase, Alice. 1950. Open forum: The debate on vegetarianism. *American Mercury* 70(318):761-763, 766. June.

• **Summary:** These two letters present the case for a vegetarian diet, opposing the viewpoints expressed in an article by Dr. Wassersug (anti-vegetarian) and Dr. Liebsstein, Mr. Ehmke (pro-vegetarian), in the April issue of this magazine.

Gould, a former associate editor of the *American Vegetarian*, has noticed over a period of many years that "the average vegetarian does not enjoy a high standard of health." He feels that the strength of vegetarianism lies in its ethical position. "The bogey of not enough protein in our meals, so often raised by the medicos and the Meat Institute, was laid low a few years ago by exhaustive tests at the Harvard Medical School. It was proven that 50 grams of protein daily is ample to supply all the proteins an individual needs, no matter how active he is; and only 5 grams have to be 'complete protein.' The rest can be obtained from such 'incomplete' protein sources as whole grains and legumes, and even the 'complete' supply could be derived from cheese, milk, soy beans and green leafy vegetables."

Alice Chase, a practicing osteopathic physician and a vegetarian for 35 years, argues that "Vegetarianism is not a healing system as such. It is a hygienic and ethical way of living. It is true, nevertheless, that people the world over who live mainly on vegetable diets have greater endurance than people who live mainly on carnivorous diets... Vegetarians, as a large group, enjoy better health than equally large carnivorous groups." Address: 1. New York City, NY; 2. Nanuet, NY.

• **Summary:** Describes what the 300 members of the Vegetarian Society of New York enjoyed for their annual Thanksgiving Day dinner, at the Empire Hotel. Among other things they enjoyed Nuttose (a mixture of ground raw peanuts, barley, and wheat), and yogurt ("sour, raw milk"). "Neil Ehmke, president of the society, said the dinner was dedicated 'to the memory of the late George Bernard Shaw, the greatest vegetarian of our age.'"

4245. Lasser, Ferne. 1950. Vegetarians plan activity in Chicago. *Vegetarian News Digest (Los Angeles)* 2(2):31. Fall.

• **Summary:** The Chicago Vegetarian Society enjoyed an excursion to the Bergholz Health Institute in Milwaukee, Wisconsin on Aug. 19.

4246. *Soybean Digest*. 1950. Soy foods from a unique college [Madison]: This little Tennessee college has long been noted for its soy foods. Nov. p. 14-15.

• **Summary:** This is the second in a series of articles by the Soya Food Research Council. Photos show: (1) "Attractive packaging of soy foods which have been pioneered by Madison College." These include: Kreme O'Soy (sliced bread), Stake-Lets, Kreme O'Soy (canned soymilk), Cheeze-O-Soy, Zoy-Koff, Yum, Not-Meat, Zoyburger, Vigorost, Kreme O'Soy Muffins. (2) Dr. E.A. Sutherland, standing, writing in a notebook. (3) A young man operating an homogenizer that is homogenizing Kreme O'Soy.

"Down in Tennessee nearly a half century ago Dr. E.A. Sutherland was obsessed with an irrepressible idea. He believed that any boy or girl willing to work for a college education should not be denied the right. He set out to achieve that end and succeeded against overwhelming odds.

"Madison College, at that time styled Nashville Agricultural Normal Institute, had only these assets: 11 students, some tumbled down buildings, and 400 acres of tired, soil-depleted land. Those acres had been bought by Dr. Sutherland and a small group of teachers with their last dollars.

"Today Madison College at Madison, Tennessee, has 400 students from 40 odd states and many foreign lands. Without endowment, as such for operating expenses, it has poured almost a million dollars from its own earnings into buildings, lands and farm equipment. Down south it is referred to as 'the college with a soul.'

"Soy Spotlighted: Of course Madison College lacks some of the gay social activities and other distractions that drain time and energy of students in many big-name

institutions of learning. But students at Madison enjoy life. They are a determined lot, dead set on acquiring an education. The curriculum includes a variety of campus industries, in which students cooperate to support the college and themselves. Soy has a spot-lighted place in the over-all program.

"Under the Madison plan as set up by Dr. Sutherland every student must work for at least half, and preferably all of his academic expenses. Two-thirds of the students enter the college with only the required fee of \$50. They complete a 4-year college course for a B.S. degree and may graduate with the original deposit intact. In all that time the efficient hard-working student need receive no outside help. Moreover, he will leave the college well equipped to do more than a single job.

"Before launching his experiments at Madison, busy Dr. Sutherland had been president of two colleges. At the outset his chief problem was to provide an income for the new school. This he did by farming and establishing a sanitarium. This permitted the training of health workers as well as the care of ill students. To do the job right, he discovered, he should be fully qualified as a medical scientist. He had set a rugged course for his students—they work 5 hours and study 5 hours a day the year round—and he was even less considerate of his own schedule. On top of all other duties he studied medicine for 4 years at Vanderbilt University Medical School and the University of Tennessee Medical School and finally, at the age of 50, received his M.D. It is inspiring today to go through the Madison Rural Sanitarium and Hospital with its large staff of physicians, its patient capacity of 165 and its complete modern medical equipment. Much of the work of the institution is done by students who earn while they learn. The best hospitals snap up the graduate nurses. Many of its students have matriculated in medical schools, colleges and universities and have been awarded Baccalaureate, Masters, and Doctorate degrees.

"Of the foresighted Dr. Sutherland it has been said: 'In any field, in any land, he would have been a great success.'

"By Student Effort: His enthusiasm and determination were infectious. That helps explain how the many college and sanitarium buildings, cottages and dormitories on the 900-acre grounds have been built with students supplying much of the brawn and brain; how the biology class grows many of its excellent specimens; how physics students have built much of their own equipment; and why there are more student applicants than can be admitted.

"Madison is justly proud of its school farm, which is as important economically as its Sanitarium, with its sprawling acres of gardens, fruit trees, vineyards, its greenhouses of flowers for hospital rooms, and its fine dairy.

"Madison is also noted for its 27 years of practical research in special foods development. This research has distinguished the institution as a unique center and pioneer of soy food development primarily intended for human use.

“Long ago it became evident that the new foods being fashioned at Madison—where good health and strong bodies always have been a chief aim—were too useful to be confined to campus menus. Accordingly, Madison Foods was founded, and has grown steadily over the years.

“It came about in this way. Dr. Sutherland and his associates believed in a simple life. They were convinced that plain wholesome foods—such as whole wheat bread and whole grain cereals, fresh fruits and vegetables, nuts, dates, honey and soy protein—helped patients to early recovery and contributed to permanent good health. Many of these patients, after returning to their homes, ordered these foods in ever-increasing volume. Demand grew until it became necessary to put them into retail stores and now they may be purchased in all 48 states.

“Convinced long ago of the high nutritive value of soy protein, Madison food chemists experimented with more than 200 varieties of soybeans. They solved the taste factors, and went on with the creation of savory breakfast foods, bread, coffee substitutes, soy milk, various meat substitutes, and other products.

“Through measured scientific research they developed soy milk until now it is not only as economical as special formula cow’s milk but, according to the American Medical Association Journal, better for some babies. From Africa, India, and other countries where dairy cows and cattle are scarce, observers have come to study the methods of Madison’s soy milk ‘dairy’ and its ‘vegetarian slaughter house.’

“Today many authorities believe that a properly prepared dry soy milk powder would help to solve the child feeding problems in protein-starved nations of the Orient and in Latin-American countries, and research to that end is in progress.

“More Frontiers: Food scientists at Madison, dipping deeper and deeper into the protein mysteries of the soybean, are convinced that new frontiers will be pierced, and that the astonishing progress already made is but a prelude to a much greater future.

“Meantime, 85-year-old Dr. Sutherland, the man who made a dream come true, has lightened his daily load, but still carries on many duties. He is president of the Layman Foundation, member of the board of directors of Madison College and of a half dozen other rural schools in the South which he was instrumental in developing.

“In Dixieland they say ‘the college with a soul’ is but the lengthened shadow of a great man, a man with the courage to fight for an ideal.”

4247. *Vegetarian News Digest (Los Angeles)*. 1950. How Annette Kellerman keeps fit. 2(2):5-6. Fall.

• **Summary:** Annette Kellerman, now in her 60s and living in Pacific Palisades, was a champion swimmer a generation ago and a physical culturist of today. “Never having tasted

a cocktail nor having smoked a cigaret, this Australian-born example of clean living will tell you that she owes her splendid health to two things—good food and exercise.” A famous doctor advised her to give up the rich French food her mother cooked, and meat. “She followed his wise counsel, and since then has touched neither alcohol nor meat. Thus she became a vegetarian at the tender age of seven, and remains one today.

In Australia, she holds swimming records for 2, 5, 20, and 13 miles. She became a champion when she was only 12. Today, she and her husband are proprietors of a health food store at 145 East 4th Street in Long Beach, California.

A photo, taken during World War II, shows Annette Kellerman in a swim suit.

4250. *Vegetarian News Digest (Los Angeles)*. 1950. Vegetable protein needed for India. 2(2):31. Fall.

• **Summary:** From *Los Angeles Times*: “If India’s 400,000,000 people can be taught to eat peanuts, many of the diseases which plague that country could be wiped out.

“So declares Dr. P.K. Vijayaraghavan, biochemist from India’s nutrition research laboratory, who is doing special protein research at the University of California at Los Angeles.

“He points out that India is starved for proteins of good nutritional value because of her traditional cattle worship. While modern Indians do not today hold rigidly to the religious beliefs which deify the animals, age-old customs, have made vegetarians of them.

“India’s protein starvation is the basic cause of many diseases which afflict her teeming millions. Indians do not get enough proteins in their diets. As a result malnutrition and dietary deficiencies are widespread.

“Dr. Vijayaraghavan believes it would be easier to introduce a vegetable high in protein value—such as the peanut—into the Indian diet—than to try to make meat-eaters out of his countrymen. -

“At the present time, peanuts are one of India’s biggest crops. However, most of the crop is fed to cattle. Dr. Vijayaraghavan is convinced that if Indians can be induced to eat peanuts instead of feeding them to cattle, a major battle in the war against malnutrition will have been won.”

4251. *Vegetarian News Digest (Los Angeles)*. 1950.

Partial list of health food stores and distributors selling the

Vegetarian News Digest. 2(2):37. Fall.

• **Summary:** More than half of these are in California.

• **Summary:** Largely about vegetarianism. The author is a naturopathic doctor. In chapter 10 the author discusses the pioneers of naturopathy (and vegetarianism): Baltzer, G. Schlickeysen, Sylvester Graham, Kuhne, Reclus, Tolstoy, Rikli, and Kneipp. Address: Dr., Naturopata, Torrente, Valencia.

4256. Colborn, William H. 1950. Why let them die? Los Angeles, California: DeVorss and Co. 116 p. No index. 20 cm.

• **Summary:** "Disease is an unbalanced chemical condition." Lack of sodium and chlorine, and an excess of uric acid ("the most destructive substance in our bodies") and carbonic acid are seen as the causes of disease, which may be corrected by a vegetarian diet.

On pages 73-76 the author summarizes information compiled by Dr. George K. Abbott in his book titled *High Blood Pressure*. Experiments on feeding rabbits high protein diets for nearly 3 years were conducted at the Potter Memorial Clinic of Santa Barbara, California. There were four groups of 12 rabbits each. One group was fed a diet containing 38% protein, chiefly from soy beans. Within 4 months (relatively late), elevation of blood pressure occurred. The urines remained alkaline. "The meat and grain protein diets contributed to acidosis, that is, increased acids in the blood. This was not true of the soy protein diet."

• **Summary:** During World War II, from 1940 to 1945, there was a blockade of Norway. It became necessary to make drastic cuts in the consumption of popular animal foods (meats, dairy products, eggs), plus fats, total protein, and total calories—and to increase the use of fish, cereals, potatoes, and vegetables. The authors reported that despite nervous stress and anxiety, Norway experienced a well-documented, significant decline in deaths from heart disease and stroke, which was associated with change in diet. And there was a prompt return of these diseases to prewar levels when Norway returned to its prewar diet and the end of hostilities. The experience was quite similar to that of nearby Denmark during World War I (see M. Hindhede, 1920). Address: 1. Prof. of Hygiene; 2. Asst. Physician, Inst. of Hygiene. Both: Univ. of Oslo, Norway.

4268. Cross, Leslie. 1951. Veganism defined (Letter to the editor). *World Forum (Bournemouth, England)* 5(1):6-7. Spring.

• **Summary:** "Recently the Vegan Society [UK] adopted revised and extended rules which among other things clarify the goal towards which the movement aspires.

"The Society's object and meaning of the word 'veganism,' have until now been matters of inference and personal predilection, are now defined as follows:

"The object of the Society shall be to end the exploitation of animals by man"; and 'The word veganism shall mean the doctrine that man should live without

exploiting animals.'

"The Society pledges itself 'in pursuance of its object' to 'seek to end the use of animals by man for food, commodities, work, hunting, vivisection and all other uses involving exploitation of animal life by man.'"

Note: A similar article by Leslie Cross titled "The new constitution," appears in *The Vegan*, spring 1951, p. 2-3.

Note 2. This quarterly periodical whose subtitle is "A magazine of living reform," is edited and produced [published] by Goeffrey L. Rudd Ltd., 7 Fernside Road, Bournemouth, England. Address: Vice-President, Vegan Society, 39, Willow Crescent East, Uxbridge, Middlesex, England.

4269. Cross, Leslie J. 1951. The new constitution. *Vegan (The) (England)*. Spring. p. 2-3. [1 ref]

• **Summary:** "Enclosed with each copy of this issue of *The Vegan* sent to members is a copy of the new rules..."

"This article is intended to explain the important points about the new rules which The Vegan Society adopted at a Special General Meeting in London on November 11th, 1950. We have to remember that when the Society was founded in 1944 there were no rules, and that this position remained until March 1947, when rules were adopted which have served until now."

"Our rules are not mere regulations... they enshrine and safeguard our ideals. They state precisely and with the corporate authority of the Society behind them, the ultimate goal to which we aspire. Lack of such a statement was the most serious deficiency of the earlier rules;..."

"By stating our agreed goal, and by defining the word 'veganism' officially, we have found a permanent common ground, and brought to an end the dangerous and ever-present possibility of disintegration.

"The object of the Vegan Movement ('to end the exploitation of animals by man') is clarified as to the meaning of exploitation by Rule 4 (a), which pledges the Society to 'seek to end the use and all other uses involving exploitation of animal life by man.' By the adoption of this rule, the Society has clearly come out on the side of the liberators; it is not so much welfare that we seek, as freedom. Our aim is not to make the present relationship between man and animal (which if honestly viewed is mostly one of master and slave) more tolerable, but to abolish it and replace it by something more worthy of man's high estate. In short, our aim is to *set the creatures free*—to return them to the balance and sanity of nature, which is their rightful place, and so to end the historic wrong perpetrated when man first decided he had the right to exploit and enslave them.

"The second broad aspect of the vegan aim is its effect upon human evolution. Apart from the abolition of an enormous burden of cruelty which is bound constantly to return like a boomerang upon humanity's own head, it has to be remembered that in any relationship of master and slave,

the greatest and deepest harm is suffered not by the slave, but by the master. Until the present relationship between man and his fellow creatures is replaced by one of companionship on a *relatively* equal footing, the pursuit of happiness by man is foredoomed to a painful and tragic frustration.” Address: Vice-President, The Vegan Society.

4270. *Vegetarian News Digest (Los Angeles)*. 1951. News from afar... [*The Australian Vegetarian*, quarterly journal of the Australian Vegetarian Society]. 2(4):16. Spring.

• **Summary:** “The great continent of Australia is learning of the Vegetarian Way of Life, thanks to *The Australian Vegetarian*, quarterly journal of the Australian Vegetarian Society, with headquarters at 2 Ash Street, Sydney. Mary E. Foley, Associate Editor, gives forceful and logical reasons for adoption of vegetarianism in her article appearing in the society’s second issue of 1950: “Vegetarianism has come to Australia, and it has come to stay. Contrary to the fear of those who get their living from the meat trade, vegetarianism will not impoverish but greatly enrich this fair land. In England, thanks to some enterprising firms, the soya bean has at last come to full recognition. The only value of meat is its protein content. Experts generally recognize now that there is much more protein in soya beans than in meat and that it has the great advantage over all other proteins in that it is alkaline as well. Large acreages are being devoted to the culture of soya beans and one of the advantages is that they will grow in poor soil just as well as in rich soil. Think then of the giant cultivations that could take place in Australia of this famous bean, used not only for the very best possible food but for oils, sauces, and all

“manner of products. Think of the waste in Australia of thousands of acres of good ground used only for cattle production which could be used for agricultural purposes. Think of the time it takes for an animal to come to maturity and before it is able to be realized upon financially. Think, too, of the terrible cruelty involved in their slaughter for food.

“Even if it was not more profitable to devote Australian ground to agriculture than to meat, we would still fight for our Cause, because of humane reasons. Think of the financial loss incurred when slavery was given up in America. Did it deter the liberators in their noble work? Not at all, and neither would it deter us, but just in passing I have mentioned that vegetarianism will actually benefit Australia; it will make many rich people here. It benefits those who give up meat, in the return of health, and in increased stamina and health and happiness to those who are in good health.”

Note: Unfortunately the writer does not know the history of vegetarianism in Australia.

4273. Adolph, Wm. H. 1951. Nutrition under the Chinese communist government. *Scientific Monthly* 73(2):128-30. Aug. [3 ref]

• **Summary:** “The first action of the new regime when it came into power in 1949 was to lower the standard of living, not only in respect to food, but also in respect to clothing and manner of life. This was not a gradual development; it was immediate, brought about in part by decree, but carried into effect by an overwhelming wave of patriotic feeling that made it unbecoming for anyone to be found eating food better than that available to laborers and farmers... The dietary of the Chinese people has been the subject of considerable study. It is essentially vegetarian, with approximately 90% of the calorie intake in the form of cereals; in south China the cereal is rice, in north China, wheat, millet, maize, and kaoliang. The amount of meat or animal food is in general very small, and only about 5% of the protein intake is animal protein... The amount of milk and milk products consumed is practically nil... The average intake has been estimated at 2,200-2,400 calories per capita per day.” Address: Dep. of Biochemistry, Peking Union Medical College; Then School of Medicine, Yale Univ., Connecticut.

4277. *Vegetarian News Digest (Los Angeles)*. 1951. News

from afar... [farcical report in Germany's *Vegetarian Universum*]. 2(5):16. Summer.

• **Summary:** "Germany is receiving its share of publicity on vegetarianism. A Digest reader, Mrs. Gertrude Martin, sends us a report that sounded 'too good to be true.' It appeared in *Vegetarian Universum* for April 1951, and was titled 'Western Germany Is Going Vegetarian. A Promising Start Toward the New World Order.' Purportedly the Federal Government had resolved to accept a ten year plan for vegetarianizing all western Europe. It read beautifully, idealistically; then we learn in the next issue that it was a farcical report; the editor had indulged in some grandstand daydreaming."

4278. *Vegetarian News Digest (Los Angeles)*. 1951. Organic gardening idea growing in New York. 2(5):24. Summer.

• **Summary:** "One of the initial projects included in the program of the newly-organized New York Natural Hygiene Society is the establishment of a cooperative market to distribute organically-grown vegetables, fruits and cereals to its members and to other health-minded individuals resident in the Greater New York area.

"Starting with 200 members, this Society hopes to develop the plan so that it may serve as a model for organic-food-conscious groups throughout the country. Its purpose is to locate its market in a central part of New York City so that it can be easily reached from all parts of the metropolitan areas as well as New Jersey and the suburban sections of New York.

"The New York Natural Hygiene Society has sent out a call to organic farmers and gardeners to communicate with its representative and aid in gathering all data of crops, seasons, production quantities, prices and other data so that it will be in a position to make wholesale purchases for the requirements of its members. The Society can be reached at 117 West 48th Street, New York 19, N.Y."

4284. *Vegetarian News Digest (Los Angeles)*. 1951. People in the news: The man who dared to live, part II. 2(6):32. Fall.

• **Summary:** This is a continuation of the biography of G.M. Bartlett, age 90, of Azusa, California: "During the early 1930's, Bartlett decided to make a beverage using soybeans, wheat and certain vegetables. He tested over 300 varieties of soybeans for nutritive values and flavor, finally choosing two varieties. This new product was to be a well-balanced food, containing all the natural minerals and vitamins required for the upbuilding of the human body, and possessing an artificial chocolate flavor that would taste like the real thing. 'Impossible,' said the food chemists. But several years of research and experimenting produced a beverage with a delightful, convincing chocolate-like flavor, yet containing no real chocolate. A special treatment of a certain variety of soybean and dehydrated W.H.Y. brought about the flavor. Since this beverage was primarily designed to give quick energy for busy people, a good peppy name was needed. Bartlett decided upon the name Kevo and the slogan, 'Kevo Puts Pep in Your Step.'"
